The Nation says of PANCOAST'S INTRODUCTION TO AMERICAN LITERATURE.

With portraits, "study lists," etc. 16mo, \$1 net.

"It is quite the best brief manual of his subject that we know—even better, for its humbler purpose, than the companion volume on English literature. National traits are well brought out without neglecting organic connections with the mother country. Forces and movements are as well handled as personalities, the influence of writers hardly less than their individuality. The book is patriotic without the scream of the eagle."

KOREA AND HER NEIGHBORS.

By ISABELLA L. BIRD BISHOP, P.R.G.S.

A Narrative of Travel, with an Account of the Recent Vicissitudes and Present Position of the Country. *Second Edition*, with enlarged Index. 34 Illustrations from original photographs, two Maps, and Appendices. Preface by Sir W. C. HILLIER, late British Consul-General for Korea. 8vo, cloth, \$2.00.

"No other book on Korea is so satisfying in its presentation of the facts of nature and man in Korea as they are to-day. This is not a work of history, but of travel and observation. Yet, in its discussions of the forces and environment which have made the native what he is, it is thorough and illuminating. . . . Mrs. Bishop, as all readers of her books know, has a fascinating style; she tells of her travels both in Korea and among the Russians with all the arts of rhetoric and the merit of wonderful directness. No book yet printed gives so clear a picture of Russian enterprise at Vladivostok and along the new railway, which brings in a thousand excellent families every year. . . . Pictures, maps, index, and all that is necessary to equip the book for the student as well as general reader, make this an unusually interesting and valuable work."—*The Nation*.

The Gist of Japan.

The Islands, Their People, and Missions. By Rev. R. B. PERRY, A.M. *2d Edition*, with Index. Illustrated. 8vo, cloth, \$1.25.

"In sixteen short and well-constructed chapters the author, rich in reading of the best authorities and in actual experience, tells of the people and their country, and of Christian mission work. The tone is that of a catholic mind, and of a modest and scholarly person who is charitable and cautious."—*The Nation*.

"This is one of that number of books, ever too few, born with characteristics that assure it at once, and for a generation at least, a popular place in general reading circles."—*Chicago Evening Post*.

From Far Formosa.

The Island, Its People and Missions. By Rev. G. L. MACKEY, D.D. twenty three years a missionary on the island. Well indexed. With many illustrations from photographs of the author, and several Maps. *5th Thousand. Popular Edition*. 8vo, cloth, \$1.25.

"Undoubtedly the man who knows most about Formosa."—*The Review of Reviews*.

"It is the best work on Formosa in the language. The style is crisp, terse, vigorous. . . . Reading this book one can realize that he is a power in Formosa."—*The Brooklyn Eagle*.

A Cycle of Cathay;

Or, China, South and North. With Personal Reminiscences. By W. A. F. MARTIN, D.D., LL.D., President Emeritus of the Imperial Tungwen College, Peking. With 70 illustrations from photographs and native drawings, a Map, and an Index. *3d Edition*. 8vo, cloth, decorated, \$2.00.

Ex-President Martin is well qualified by long residence and unusually varied experience as missionary, diplomatist, and educator, to tell us of the real life and thought of China."—*Congregationalist*.

"No student of Eastern affairs can afford to neglect this work, which will take its place with Dr. Williams's 'Middle Kingdom,' as an authoritative work on China."—*Outlook*.

Chinese Characteristics.

By Rev. ARTHUR H. SMITH, D.D., for twenty-five years a missionary in China. With 16 full-page original illustrations, and Index. *6th thousand. Popular Edition*. 8vo, cloth, \$1.25.

"The best book on the Chinese people."—*Examiner*.

"It is scarcely enough to say about this book that it is both interesting and valuable. Those best informed call it without exception the best book on the Chinese that is before the public, and a pretty careful survey of it confirms that opinion."—*Independent*.

HOUGHTON, MIFFLIN & CO.'S NEW BOOKS

Cheerful Yesterdays.

A most charming autobiographical book, by THOMAS WENTWORTH HIGGINSON, giving in a very delightful style the most interesting experiences of his remarkably interesting life, including his years and associates at Harvard; his aims and efforts as a reformer, writer, and speaker; the fateful years of the Fugitive Slave Law, the Kansas struggle, and the Civil War, and his views of famous Englishmen and Frenchmen. 12mo, \$2.00.

At the Sign of the Silver Crescent.

A very well written, wholesome story of modern French life, by HELEN CHOATE PRINCE, author of "The Story of Christine Rochefort" and "A Transatlantic Châtelaine." 16mo, \$1.25.

The Pilgrims in their Three Homes—England, Holland, and America.

A fresh and interesting book on the Pilgrims in their several homes, by WILLIAM ELLIOT GRIFFIS, D.D., author of "Brave Little Holland," "Japan," "Townsend Harris," etc. With illustrations. 16mo, \$1.25. In Riverside Library for Young People. Small 16mo, 75 cents.

Poems.

By FLORENCE EARLE COATES. 12mo, gilt top, \$1.25.

A welcome addition to American verse. Not a few of these poems are well known to readers of the best periodicals. All of them are thoughtful and lyrical, with fine variety of theme and distinct poetic charm.

Sold by all Booksellers. Sent, postpaid, by HOUGHTON, MIFFLIN & CO., Boston, 11 East 17th St., New York.

A NEW BOOK BY TOURGÉE.

The Man Who Outlived Himself.

By ALBION W. TOURGÉE, Author of "A Fool's Errand, by One of the Fools." A strange story, and quite a new departure for this powerful and ingenious writer of fiction. 16mo, Cloth decorated, gilt top, 75 cents.

The New Puritanism.

Papers by LYMAN ABBOTT, AMORY H. BRADFORD, CHARLES A. BERRY, GEO. A. GORDON, WASHINGTON GLADEN, WM. J. TUCKER. Introduction by R. W. RAYMOND.

The Nation.

NEW YORK, THURSDAY, MARCH 24, 1898.

The Week.

Those who think a war with Spain would make Republican candidates for Congress run like wildfire next fall, should not forget that in Spain also the question of war has its political aspects. Spain will undoubtedly go all reasonable lengths to avoid war, but many things might be worse for her politically than war. If she were to sell the island of Cuba, or to acknowledge its independence, close observers of Spanish politics think there would be instant revolution. The monarchy would be gravely imperilled, and would probably fall. From two sides would the revolt against it come—from the Carlists, in the north, and from the socialistic or anarchistic Republicans in the cities. A very likely result would be a military dictatorship, under Gen. Weyler or some officer like him. This is an ending that the Spanish authorities would be justified in bending every effort to avert, and a war with the United States would avert it. Such a war might bring disaster upon disaster, it might result in the loss of Cuba, but it would consolidate the nation even in its calamities; it would make possible the continuance of the present form of government as one that had manfully stood for the national honor. War, or a feint at war, as an electioneering device is not, in fact, confined to American politics. We have nothing to teach the Spaniards in that political art.

Congressman Tayler of Ohio, who fills the seat formerly occupied by President McKinley, made a speech at the dinner of the Sons of the American Revolution at Delmonico's on Saturday evening, taking for his text the admirable behavior of President Washington when a streak of popular frenzy ran through the country in favor of plunging into a war of sympathy with the French Revolution. He pictured the arrival of Citizen Genet, the Ambassador of France, at Charleston, his triumphal march northward, his reception at Philadelphia, where nearly the whole population attended his steps, and where he proceeded to issue letters of marque and to direct how French prizes should be treated in American waters, and, because Washington did not move fast enough to suit him, finally took an appeal from the President to the people of the United States, and then, to his infinite surprise, found his functions summarily terminated. Any weaker man than Washington would have quailed before this storm, and even Washington shook. When Mr. Tayler made his application

of this historic example to the present occupant of the White House, as a man who feels his responsibilities to the American people, to the world, and to posterity, and who considers not merely the passions of the moment, but the reflection which must come later, the whole room burst into applause. This was only one instance during the evening when the temper of the thoughtful public, represented by this patriotic society, was proved to be heartily in sympathy with the President and opposed to war, except in obedience to clearly defined duty and after peaceful methods have been exhausted.

The paper read by Senator Proctor of Vermont on Thursday, giving to his fellow-Senators and the country the result of his observations in Cuba, was a calm presentation of facts highly interesting in themselves, although mostly known before. It was put forth on his own responsibility solely. His own character is a sufficient guarantee of its truthfulness as to all matters of which he speaks from knowledge, and as to probabilities where he merely draws inferences from what he has personally witnessed. As regards the military situation, Mr. Proctor tells us that the Spanish army holds only the ground that it has enclosed with some species of fortification or trocha; that each railroad station is within such a trocha; that each railroad train has an armored freight-car loopholed for musketry; that small villages and block-houses to hold the inhabitants of the country districts are seen at intervals along the railroad tracks, each enclosed in a trocha; that there is no human life or habitation visible from the railroads except these. The cities along the coast are in the hands of the Spaniards, but much the greater part of the eastern provinces and the greater part of the country taken as a whole, are either in possession of the rebels or so exposed to their ravages that the ordinary industrial pursuits, which depend upon peace and protection, are impossible. Even in the western provinces, the Spaniards, he says, "hold just what their army sits on." The "reconcentrados" are the country people who have been driven in by the troops lest they should furnish aid to the rebels voluntarily or involuntarily. This was a war measure, cruel undoubtedly, as war measures generally are, and we are now contributing the necessities of life to its victims.

More important, perhaps, although less touching, are Mr. Proctor's statements concerning the political prospects of the island. Autonomy he considers now impossible, because it comes too late. Gen.

Blanco is acting in good faith, he says, but the army and the Spanish citizens do not want autonomy. The men of influence and capital, the business community, are agreed that although autonomy might have been acceptable and successful in the beginning, the time for it is now passed. To sum up, the island is ruined and there is nothing to look forward to but the complete exhaustion of one side or the other. Does this pitiful condition concern us in any other way than by appealing to us as a Christian people to relieve human distress by furnishing food to the hungry and clothing to the naked? In other words, does it warrant us in declaring war against Spain? Perhaps this question may be answered best by asking whether we should think of interfering in case Cuba were a colony of France?

The letter from Mr. Theodore Roosevelt, the Assistant Secretary of the Navy, to a yellow journal which had invented an interview with him, a frequent yellow practice, is a model under similar circumstances, not only to all public men and public officials, but to all respectable citizens. Nothing has done more to promote yellow journalism than the connivance at its frauds involved in the silence of the victims about bogus interviews with them. Conversations with prominent persons have now become one of the principal journalistic modes of influencing public opinion. As long as these conversations are reported in a conscientious and decent way, and have been held with persons whose opinion about the matter in hand is really of importance, they may be very useful. The usual tendency of journalism to excess has, it is true, led to the practice of having interviews with men prominent for any reason, on all sorts of subjects, whether they know anything about them or not. But as long as these interviews are faithfully reported, the worst one can say of the practice is that it is silly. But the yellow journals have long ceased to report anything conscientiously, and this devilish industry is directly promoted by the habit of nearly all public men of letting fraudulent interviews with them, or invented stories about them, pass without notice.

There could not be a better illustration of the depths of iniquity and degradation to which this connivance—for connivance it is—leads than the impudent request of the yellow rascal in Washington, to a gentleman like Mr. Roosevelt, to refrain from exposing a lie, about himself, in order not to injure "sales"; followed by an announcement that he may have to "change his opinion" about

him. This is, in the mouth of a yellow journalist, a slightly veiled threat. It means that if you do not do what he wants, he will lie about you, distort what you say, depreciate you, or "keep your name out of his paper." This is the way yellow journalists punish a refusal to help their business, and it is generally so effective that some of our honest men are afraid to refuse to serve on their advertising committees, or accept board in their advertising yachts, and, much more, to refute their lies about themselves. Talk of the "white terror" or "red terror"; neither of them can approach the "yellow terror" among us. A letter like Mr. Roosevelt's is, therefore, of great value in setting an example of courage and patriotism. A gentleman telling a yellow scoundrel to do his worst, but that he will get no help from him in his crimes, is something which some of us would dread more than heading an assault on Morro Castle.

The abandonment of the Hawaiian treaty, after the pompous announcement, last fall, that its confirmation would be the first duty of the Senate when Congress met, is an excellent illustration both of the value of discussion and of the uncertainty of human affairs. The discussion was valuable and effective because it forced the friends of annexation to talk in terms of politics and political economy, and to abandon the missionary chatter about the wickedness of the natives and the unchastity of the Queen. They were constrained to tell us, willy-nilly, what would be the advantages of annexation to the people of the United States, and this, of course, gave its enemies their first clear opportunity of pointing out its disadvantages. The first disaster which overtook the missionary Government was the failure of the "key" theory, which was ruined in a day by Capt. Mahan's acknowledgment that to make a "key" of any use, you must have a large navy to take care of it. But the final blow came from the massacre of the colored postmaster and his family at Lake City, S. C., and close upon it the Cuban trouble. These two events have brought home to the popular mind the enormous difficulties into which we should be plunged by an attempt to rule dependencies inhabited by ignorant and inferior races, with whom it would apparently be impossible to get Americans to make any other union than would be necessary for purposes of carpet-baggery and corruption. When we got close to the problem, the prospect of two or three more "Southern States," to be policed, regulated, and kept civilized by lynch law, naturally appalled people. It appalls them still, and, in our opinion, their horror will dispose of the "joint resolution" as readily as it has disposed of the treaty.

The interesting information comes

from London that the British Government is surprised by the formal assertion of our Senate committee on foreign affairs that "Great Britain is plotting for the absorption of Hawaii," and a "high official of the British Foreign Office" is quoted as saying: "It is unfortunate that the committee has such an erroneous impression." We should say rather that it is unfortunate that the committee should have for chairman such a man as Senator Davis. Neither he nor any member of the committee believes for a second that Great Britain is plotting to gain possession of Hawaii. They have no "erroneous impression" on this point. What they have done has been to put into a formal report a silly old humbug about British designs and British grabbing propensities which has been doing duty in this country for a quarter of a century. When an annexation scheme has been devised and argument in support of it has been scarce, the assertion that if we did not take Hawaii England would, has been put forward to fill the gap. None of the statesmen who have used it has believed it himself, any more than Senator Davis and his associates believe it now. Perhaps now that it has attracted attention and found contradiction from the British Government, it will be abandoned, but we are not sanguine of this.

The foreign service of our Government is again held up to contempt before the world, through the performances of another man who was given an office solely for political services. The United States Consul at Amoy, China, has just published in a San Francisco newspaper a letter in which he practically accuses Germany of grabbing a large territory in China, upon what he deems a trivial pretext; ridicules Germany's Emperor and his brother, Prince Henry; and, in relating the circumstances of England's objection to Russia's occupation of Port Arthur, says: "It has been so long since England fought a nation whose men wore pantaloons, that the sight of an anticipated enemy that is not dressed in breech-cloth, tunic, or turban would cause palpitation of the heart." This able representative of American statesmanship comes from Grand Junction, Col., and the sole reason for sending him to speak for our Government in China was the fact that "he was the Secretary of the Republican State central committee of Colorado during the McKinley campaign."

The result of the Republican primaries in Lancaster County, Pa., last Saturday had been awaited with great curiosity throughout the State, by both the supporters and the opponents of Quay. The opposition entered the contest with unusual advantages, its spokesman, State Senator Kauffman, who sought a re-

nomination on his independent record in the last Legislature, being a worthy leader, while the great demonstration at the recent anti-Quay meeting in Lancaster, which was addressed by Mr. Wanamaker, had been full of encouragement. Despite all these advantages, however, the opponents of Quay were overwhelmingly beaten, a Quay man for the Senate distancing Mr. Kauffman by about 1,300 votes, and all the other Quay candidates for the various offices being successful by larger or smaller majorities. Nor can the anti-Quay people find any consolation in the explanation that this was a "snap judgment," which represents the opinion of only a small element in the party. The primaries everywhere were fully attended, and the vote closely approached the party strength, aggregating over 20,000, while in 1896 McKinley had only 24,337, including his Sound-Money Democratic supporters. Various explanations of the result are given. The anti-Quay people complain that the primaries were called before the usual time, and they allege that the machine had a big corruption fund, which was sent out into the towns and villages on Saturday morning, \$4,000 going into Columbia alone, a place of about 10,000 people. They also point out that the Quay people had a perfect organization, and that most of the "practical politicians" in the county worked on that side. But none of these excuses will serve. The Quay people make the better claim when they declare that "the result shows that the majority of the Republicans of the county are well satisfied with Quay's rule."

Gov. Black's new civil-service law for New York State has been in operation for something more than six months, and the Civil Service Reform Association has satisfied a distinct public want in supplying a circumstantial account of the results achieved. The Association's report, made through its Secretary, Mr. McAneny, is based upon a careful examination of official records, and its accuracy cannot be questioned. It shows that the law is working precisely as its friends hoped, and as its opponents predicted that it would. The chief feature of the law was that which provided separate examinations for "merit" and "fitness," the former to be conducted by the civil-service boards and the latter by the appointing officers. The rating in each examination was not to exceed 50 per cent. The merit examinations were to be competitive and written, the latter written or oral, according to the wish of the appointing officer. When the new law went into operation in September last, there were in existence 75 eligible lists, containing 1,888 names. These were of persons who had passed the examinations and had been found fit for positions in the service. These lists were cancelled, and new ones called "merit"

lists, containing 1,426 names, were formed in their stead. Under the old law, when the head of a department wished to make an appointment, he had to apply to the Civil Service Commission for names from which to make it, and was obliged to select from the three highest on the eligible list. Under the Black law he sends notice to all those who have passed "merit" examinations that he is going to hold "fitness" examinations in person in order to decide upon which person or persons he will select. The result is that candidates are put to the expense of journeying to Albany for every new vacancy, with the prospect of not getting an appointment in the end. The appointing officer can rate any candidate's "fitness" as high as 50 per cent., and in this way can give a candidate with a low "merit" mark an average mark which will move him from the bottom to the top of the list. This power has been used so uniformly in favor of the lowest ranking candidates on the "merit" list that the attendance upon the "fitness" examinations grows smaller with every recurrence.

As might have been expected, Mr. Aldridge of the Public Works Department has especially distinguished himself as a rater of "fitness." He has, in full accordance with the provisions of the Black law, selected for Superintendent of the Middle Division of the canals a man who has served a term in the penitentiary, who has been fined also for petit larceny, and has, further, conducted a faro bank. As Superintendent this man has selected as subordinates two men who had served terms in the penitentiary, another who had been a letter-carrier and had been discharged from the Government service for drunkenness, and three others who are liquor-dealers. Next to Mr. Aldridge, the "best work" under the law seems to have been done by Lou Payn in the Insurance Department. Under that section of the act which permits the Executive to decide when competition is "practicable" and when not, the Governor excepted for Mr. Payn the position of "confidential examiner." The result is that while in 1896 there were two confidential examiners, there are to-day fifteen, thirteen of whom have been appointed since the first of last July. Another illustration of the use to which "excepted" positions are put is found in the creation of useless places like attorneys to State hospitals. These pay from \$1,200 to \$4,000 a year each.

The *Manufacturer* of Philadelphia takes up the subject of our trade with Canada in a very reasonable spirit, and gives some good reasons for believing that the time has come for a new treaty of reciprocity with that country. The immediate occasion for the expression of

these views in a circle of high protective influence is the adoption of the preferential system of tariff duties by our neighbors under which Great Britain, or any other country which grants favors to Canadian exports, shall be entitled to a reduction of duties equal to 25 per cent., as against countries which do not grant such favors. This system has not yet gone into full effect. The Canadian law provides that the preferential tariff shall be 12½ per cent. the first year and 25 per cent. the second year and thereafter. Any country which chooses to avail itself of the preference under the conditions named, is at liberty to do so at any time. The question what we are to do about it is becoming important, and the *Manufacturer* has no hesitation in saying that we ought to open negotiations for reciprocal trade. "They [the Canadians] need what we have to sell," it continues, "and yet, strong as our industries are, we wrap ourselves up in a high tariff against Canadian goods and reject every overture which is made for reciprocal trade. What we are asked to protect is the poor American agriculturist!" And then it proceeds to show that "the Agrarian" has the best of it now in the Canadian market, seeing that he sells more than 12 per cent. of all the things that Canada takes from us, or 20 per cent. if we include raw cotton and tobacco. "Why should he," the *Manufacturer* asks, "have any fear of the Canadian producer?" Views of this kind coming from the very hot-bed of protection rather take our breath away.

The later accounts from London magnify greatly the effect of the victory of the Progressives at the London Council election. It is considered a tremendous slap in the face, particularly for Lord Salisbury and Mr. Chamberlain. The latter in particular raised Liberal wrath to boiling point by taking the stump in favor of the treatment of the election as a political struggle, and urging people to vote for the Moderates, as a mark of approval of Conservative policy in imperial matters. The district in which he did this most vigorously rolled up a tremendous Progressive majority. The Tories hate him so thoroughly that the party rather chuckles over such reverses. It seems to be generally acknowledged that the election has put an end to the Salisbury scheme of little municipalities. There could not be a better way of making the existing Council a small parliament, and the rival of that sitting at Westminster, than treating it as the representative of radicalism in imperial politics. Besides this, the vote is really an answer to the canzonettes which have been put forth during the canvass about its administration of municipal affairs. This is generally acknowledged to have been very good, except by the high-and-dry partisans of the West-End policy.

One of Caran d'Ache's recent political cartoons represented the French Admiral arriving breathless in China, only to be confronted by a rueful John Chinaman displaying empty pockets and exclaiming, "You are too late. There is nothing left." In the distance were Russian, German, and English figures marching off with their garnered spoils. The new English concessions in China have not, perhaps, been sufficiently appreciated, owing to the fear that Russia was getting, or was about to get, still better terms. But the advantages gained for British trade and influence are by no means trifling. In the first place, beginning with next summer, all Chinese rivers are to be freely opened to British steamers. This means that English merchandise in English bottoms may be taken not merely to the treaty ports, but to every riverside town and station in the whole interior of China. The value of this grant is at once obvious. Then there were provisions guaranteeing that no part of the Yang-tse valley, where English influence has been predominant, should ever be alienated to any other Power; that the Inspector-General of Customs should always be an Englishman so long as British trade in China is larger than that of any other nation (it is now 82 per cent. of the total); and that a port in Hu-nan should be given Great Britain in two years' time. These very considerable concessions show that England will not be outstripped in the commercial development of China.

The question of getting security for costs for plaintiffs in libel suits has come into active discussion in England again, owing to the introduction of a bill dealing with the subject in the House of Commons by Sir John Wilcox. It is hardly likely, however, to pass in the present session. The difficulties of the matter were brought out recently by an interview between the Lord Chancellor and deputations from the Institute of Journalists and the Newspaper Society. The Lord Chancellor had really nothing to say against the Wilcox bill, except that it might deprive penniless or bankrupt persons of redress if libelled, which is, of course, a strong point. The *London Times* proposes to meet this by leaving discretion to the judge to whom application is made for the order for security. Let him decide whether the suit is frivolous or serious. The Lord Chief Justice did this substantially the other day, but too late, by laughing two cases out of court. But the defendant had already been heavily fined by having to pay the plaintiff's costs and his own. The question is becoming more and more serious for the newspaper world, by the business which has sprung up among speculating lawyers of watching newspapers in order to fasten on small bits of libellous news and get somebody to bring a libel suit on them.

"READY" FOR WAR.

In a more or less official way, the country was assured last week that it is "ready" for war, if war must come. Admiral Sicard at Key West, Gen. Miles, and the Navy Department and the Executive at Washington, all were quoted as declaring themselves satisfied that we are "prepared" for the war which all devoutly hope may be averted. But what is it to be ready for war? What is it that the country must provide and endure, face and suffer, if the smouldering flames of war, so long fuelled and fanned by rash hands, at last break fiercely out?

First, of course, comes the material enginery of war. This is easiest of all to make ready, though it is, too, the easiest place for awful mistakes and cruel deceptions to occur. The French thought they were fully ready for war in 1870. Ollivier's declaration that he would go into the war *à cœur léger* was made because he trusted the assurances of the Minister of War that the army was supremely ready, down to the last gaiter-button. Yet the same Marshal Lebœuf who had described France as *archiprête*, was in a few days sending frantic telegrams to Paris on account of the horrible confusion of the army even before the Germans made their lion-leap upon it. It is not probable that any such terrible awakening lies before us, though we must remember the new element of uncertainty that enters into a naval war—the uncertainty, that is, how modern battle-ships will behave in action. But it may fairly be said that, if it comes to a race for the bottom, the Spanish men-of-war will get there as soon as ours. This whole question of armament, however, is but a trifle in the serious preparation for war. Any rich nation can build or buy ships and guns. The real difficulties of being ready for war lie elsewhere.

If we are ready for war, we must be ready for a new unbridling of political corruption in connection with it. What is it that most dims the story of a just and necessary war like our civil war? It is the record of the harpies who fed themselves fat on the nation's suffering. The fraudulent army contracts, the scamped equipment and the cheating supplies, the swindling traders and the bounty-jumpers and the cotton frauds—these are the things that add a new disgrace, if not a new terror, to war. But it is perfectly certain that the things done in the green tree of the civil war would be nothing to what we should see in the dry tree of a war to free (that is, to annex) Cuba. The opportunities for a corruption which has in the meantime become systematized and scientific would be enormous. What a general unloading on the Government there would be—what contracts with a generous margin for all, what smuggling of tobacco, what stealing of sugar, what looting of

land, what buying up of rich concessions in Cuba for a song! Every political corruptionist in the country would see wealth beyond the dreams of even his avarice, and would fly to Washington (never to the front) to get his share of the plunder. Even if the war were to be righteous in intent and glorious in result, the page of history narrating it would have all these foul stains on it, we may be absolutely certain.

More than this, while thus arming ourselves against a supposed foreign enemy, we should be throwing away the only weapons we have against the deadlier foes of our own household. New forms of corruption would run riot in case of war, and the old forms would laugh us to scorn in recovered insolence and security. Who, while the war lasted, could get a hearing for civil-service reform? Who would lift up the standard of municipal purity, or who would rally to it if anybody did? Does anybody doubt how Platt and Croker would welcome war? No man could be more furious than they would be to strike off the shackles from Cubans, in order to fasten them more securely on Americans. It is not only laws that are silent in the midst of arms. Rational discussion is silent; reform is silent; civic questions are not allowed to speak; the public conscience is dumb. Everything that we have been working for during the past thirty years—a civilized taxation, a civilized standard of value and a currency system not benighted, the rescue of our cities from the spoiler—all this would have to be thrown into the fiery crucible of war and would come out we know not what. Are we "ready" for a war which means all that?

But in addition to this military and political readiness for war, something else is necessary. No nation is ready for war unless it is morally ready. It must have a cause of war which its own conscience pronounces just, which will command the approval of the enlightened judgment of mankind, and on which appeal can confidently be taken to the God of battles. Without this there is no real readiness; with it, all the rest can be risked and faced. In spite of all the corruption and the civic debauch which the civil war entailed, it rises on the whole a grand event in the life of our nation because it was a just war. But suppose we are now to have another war like the Mexican, of which a future general of our army will have to write, as Gen. Grant wrote of the Mexican war, that it was a war of unjust aggression—where, then, can our children hide their shame of their fathers? So the great question of all, the overlooked question, is, Are we morally ready for war with Spain? Have we a cause of war so clear, so loftily imperative that all the hideousness of carnage and the fearful blow to civic progress must be hazarded in order to vindicate humanity

and righteousness? We do not say that such a cause of war may not appear later, but we do say that it has not yet appeared. The moral cause enlisting the moral sense of this people for a war with Spain has not been presented. Until it is presented, let the President and all in authority at Washington be well assured that their "ready" is but the wicked "ready" of the duellist, prepared to risk and take life needlessly.

KING GEORGE; KING MATTHEW.

"It is often a question, to me, whether we live in a republic or a monarchy. One hundred and twenty-two years ago we threw off the yoke of King George, but to-day we find the yoke of King Matthew more unbearable. If the people of the State knew their strength and their power, now is the time to dethrone King Matthew First."

Thus spoke Rudolph Blankenburg, a prominent citizen of Pennsylvania, after a speech by John Wanamaker in Lancaster last week. The indignant outburst was fully justified by what Mr. Wanamaker had said. No such picture of tyranny, under the forms of democracy, in an American State, was ever before drawn; and everybody knew that every word was true, because it was the confession of a man who has always supported King Matthew, who, in his own words, "from my boyhood to this day have never voted any other than the Republican ticket, neither have I scratched it or bolted it"—even when, in 1890, the monarch named that offensive tool, Delamater, for Governor.

Mr. Wanamaker's picture of the tyranny which all these years he has been helping to saddle upon the people of Pennsylvania, deserves the attention of the whole country. We have space to reproduce only a few of the boldest strokes of the artist. "Corruption is at its worst," said Mr. Wanamaker, "and the commercialism of politics is the chief characteristic of Pennsylvania." Turning for a parallel to the period of Rome's decadence, he recalled that in "the fourth century of Rome, in the time of the Emperor Theodosius, Hellebicus was Master of the Forces and Cæsarius was Count of the Offices"; and declared that "in the nineteenth century M. S. Quay is Count of the Offices, and W. H. Andrews, Prince of Lexow, is Master of the Forces in Pennsylvania, and we have come through the iron age and the silver age to the worst of all ages, the degraded, evil age of conscienceless, debauched politics." Assuring his hearers that they need not go away from home to be convinced of this, he said:

"In our city [Philadelphia] the air to-day is full of councilmanic recrimination. What is the truth about your own county? Witness the scenes here this week of trains loading and unloading from all parts of the county, and strange men lying around to get money to be carried off for distribution to tempt their neighbors; desperate men—criminals in the eyes of the law—cheating your leaders, and, worse, cheating themselves, as they will find in the final accounting."

Devoting himself for a moment specifically to the county in which he spoke, Mr. Wanamaker pointed out that, by the multiplication of indictments, the District Attorney has multiplied his fees far beyond the joint salaries of both the Judges; that a Clerk of the Courts has managed to swell his income beyond the salary of the Vice-President of the United States; that the administration of justice before the Magistrates has degenerated into organized raids on the county treasury; and that the county tax-rate has just been increased, and for 1898 will be heavier than at any time during the present decade. He proceeded:

"I am told that the most shameless corruption of voters attends every important primary election, and men sell their political birthright for less than a mess of pottage. Voters are corruptly influenced or forcibly coerced to do the bidding of the bosses, and thus forge the fetters of political vassalage on the freemen of the Old Guard. School directors, supervisors, assessors, constables, and magistrates, and the whole machinery of local government, are involved and dominated by this accursed system. As, in the early part of the century, national legislation and the execution of the laws were dominated by the slave power, so, at the close of the same century, State and county, city and township affairs are dominated by the boss power. I am told that political promises have been made this week, in your county, which will cost the taxpayers tens of thousands of dollars, solely for the purpose of perpetuating the power of the bosses, to elect a Quay Legislature and a Quay delegation to the State convention."

Mr. Wanamaker told the people of Lancaster County that they not only have just raised their tax-rate, but will have to raise it again, because of the ever-increasing expenses of their reckless and defiant rings, and he asserted that what is true of one county is true of many other counties. "Who can tell the plain story of the last Legislature?" he asked, and he thus opened the answer to his own question:

"The stream cannot rise higher than its source." The genius that selected and directed the Pennsylvania Legislature of '97, moulded and shaped it, and proudly and publicly proclaimed absolute ownership of it, has gone into written history. Its record of promises broken and party pledges ignored; its abuse of public trust, and insatiable desire for public plunder; of legislation born of injustice, iniquity, and crime, driven through under the 'whip and spur' of the Boss; of Trusts fostered and protected, and legitimate commercial interests assaulted; of placing the brewery paramount to the school-house, and the interests of beer predominant over the crying demands of charity and popular education, bear distinctly the character and indelible imprint of its master spirit."

Mr. Wanamaker set forth in detail the offences of the lawmakers, from the loss of nearly a month at the opening of the session "by the presiding officers of the Senate and House delaying the appointment of the seventy-eight standing committees, that choice chairmanships and places might be found to reward the voters for the machine's candidate for United States Senator." We cannot follow him at length here, but we must quote his remark that "the Legislature

of '97 was not worse than its predecessors have been under the same control"—predecessors, by the way, that he himself always helped to elect.

The scandal of the State Treasury was set forth in all its enormity. "For fifteen years," said Mr. Wanamaker, "the control of the office of State Treasurer has been the citadel of Senator Quay's power; it is believed to have yielded annually a campaign fund of not less than \$100,000, mortgaging influential bankers, and affording unlimited credit to borrow vast sums for personal campaigns, and exhibiting incumbents entering upon the office of State Treasurer poor, and on a \$5,000 salary in two years retiring with a competency." To give a better conception of the great loss sustained by the State, he quoted the Treasurer's official monthly statement, bearing date of July 1, 1893, during the height of the panic, which showed a balance of \$8,123,747.69 in favored State banks paying no interest to the State, while he was obliged to pay a premium of 3 per cent. for cash with which to pay wages. To show to what extent the fund is manipulated for political purposes, Mr. Wanamaker said that "a Philadelphia bank capitalized at \$150,000, a private institution [the People's Bank], whose president is Quay's old lieutenant, has continuously carried a deposit ranging from \$300,000 to \$1,200,000, while school districts are waiting in vain for school money long past due"; and he noted the interesting fact that the People's Bank is the first place that Senator Quay visits when he goes to Philadelphia.

The victory of beer over education must be cited. The Legislature had been so extravagant, for the benefit of the King's retainers, that toward the end of the session he issued orders to save money by reducing the appropriations for schools, and \$1,000,000 was subtracted from the usual grant. "It was a question," said Mr. Wanamaker, "between schools and saloons, books and breweries—and beer won. The Quay people had agreed to protect the brewers, and they killed the Bliss beer bills." Nor do the schools alone suffer. Mr. Wanamaker stated that there is insufficient accommodation for the insane poor in existing buildings; that on the stone floors and corridors of these buildings several thousand of the poor, chronic sufferers are scattered about in the most wretched way; and that the failure promptly to provide appropriated money and proper places for the insane poor adopted by the State will turn the county poor-houses into mad-houses.

Mr. Wanamaker expressed the opinion that "a large part of the nearly 6,000,000 of Pennsylvanians are tired of the ring rule, and unwilling to submit tamely to the surrender of State affairs to Quay and W. H. Andrews; that the State is too young to go out of business alto-

gether for herself; that we are ready for another Declaration of Independence." This may be so. But King George's sway over the colonists would never have been broken if they had assured the monarch that, much as they disliked him, they would submit after "freeing their minds."

TEN YEARS OF FEDERAL RAILWAY REGULATION.

Prof. H. C. Adams, the Secretary and Statistician of the Interstate Commerce Commission, publishes in the *Atlantic Monthly* for April an article on the work of the commission since its creation in 1887. The object of the article is to direct the attention of the public to the necessity for more legislation by Congress, in order to give the commission greater powers; and the practical question presented by it is, Does Mr. Adams make out his case? Are greater powers needed, and if so, what are they? We shall endeavor to explain what light the article throws on this question.

The interstate-commerce act was passed for only one reason, namely, because the decisions of the courts held that the Constitution allows Congress to regulate interstate commerce, while the States have sole jurisdiction over transportation within their borders. In the fifteen years preceding the passage of the interstate-commerce act, numerous State commissions had been created in the various States, with authority of some sort over railroads; in 1887 Congress undertook the supervision of interstate business. But Congress, in its act, imitated at many points the previous State legislation. This, indeed, it could not fail to do, inasmuch as the objects in view were the same—to exercise some control over rates, to prevent injustice in rates, to insure publicity, accessibility, and uniformity in charges and accounts. We have read with great care Prof. Adams's résumé, as we have read many reports of State railway commissions during the past twenty-five years, in order to see what he makes out to have been the actual effect of this legislation, and of the work of the commission under it, and we must frankly say that, except in one particular, we can find no definite claim made and supported by evidence that anything whatever has been accomplished. Indeed, his article is in the main an assertion that nothing has been accomplished because the commission has not had enough power. This is because "the courts have thought it necessary" to deny certain authority claimed by the commission, and because Congress "has not shown itself jealous for the dignity of the administrative body which it created." What new powers are demanded is left to be inferred rather than stated.

Before going any further, it is worth while to say that the powers already

conferred upon the commission are on their face very extensive. The act prohibits all "unjust and unreasonable" rates, makes unlawful every "unjust discrimination" and "undue preference," forbids the receipt of greater compensation for transportation of passengers and property, under like conditions, for a shorter than for a longer distance, and all "pooling" of earnings between competing railroads. The penalties for violations of the act extend to a fine of \$5,000 and imprisonment for two years for each offence. Extensive as these powers are, however, it is quite apparent from Mr. Adams's review that they are inadequate to the purposes he has in mind, for his account of what the commission has accomplished is pitiful indeed. Its opinions fill five volumes of reports, and as a specimen of its labors we are given a half-page of opinions which are mentioned as "fairly typical." The first three are as follows:

"It has been decided that a just schedule of rates will not tend to destroy the natural advantages for the production and sale of goods possessed by localities; but in judging of local advantages, care must be taken not to confound those that are artificial with those that are natural. Not only must a just schedule of rates rest on a just base, but the relative rates on competitive articles must be such as not to disturb the natural order of competition. A just schedule of rates will conform to the competitive equities that exist between goods shipped at different stages in the process of their manufacture."

It is obvious that such decisions are mere abstract propositions which might be evolved from one's inner consciousness *ad libitum*, without any act of Congress or commission. They have no force; they cannot lower or alter rates by the value of a cent, and are couched in such vague language as to apply to almost any conceivable state of facts. They are little more than mere words. After examining them, the reader is quite ready to agree with the writer when he says substantially that, beyond securing publicity, uniformity, and accessibility of charges and accounts, the act has accomplished little or nothing. So far as the criminal machinery of the act is concerned—the main hope of its promoters—he expressly declares that it "can never be effectively administered." The evidence produced also shows that there is no doubt as to the quarter in which the obstacles to the enforcement of the act have appeared. It is in the judicial decisions of the federal courts which have been made from time to time. In these it has been decided that the investigations of the commission are not final as to matters of fact, and that the commission cannot prescribe rates.

Mr. Adams seems to be under the impression that these obstacles can be readily overcome if Congress makes up its mind to uphold the dignity of the commission. But here he makes the mistake which so many make of imagining that the United States, its busi-

ness, and the liberty, property, and contracts of its citizens, are at the mercy of Congress. Fortunately, they are not. Very fortunately for us, no way has yet been found of getting rid of the control of the courts over legislation intrusted to them by the Constitution. If it were not for this, Congress could, no doubt, do what it has been the aim of railway commissioners to do for twenty-five years—fix rates or decide upon their justice as fixed, and determine what profit, if any, capital should derive from railway investments. But the courts have thus far proved, and, we believe, will for ever prove, an insurmountable obstacle. So long as they do their duty, they will continue to hold that neither Congress nor any commission under it can exercise, under the forms of a judicial inquiry, any arbitrary or despotic power whatever. The attempt to regulate the interstate business of railways has broken down, just as the State attempts broke down, because it is opposed to the supreme law of this country, which, by the agency of the courts, guarantees to every man—and to every corporation—the right to manage his own business. When the Constitution says that no one shall be deprived of life, liberty, and property without "due process of law," it means, without what *the courts say* is due process of law, ascertained through judicial inquiry. Consequently, the time will never come when a political or administrative body will be allowed to fix rates and decide that they are "just." Until our system of civilization disappears, what is just will be determined by a court of justice according to principles laid down by judges, and not by Legislatures or their delegates. The Nebraska freight-rate decision, made the other day, emphasizes this principle, which lies at the bottom of our system of government. When the Populists have remodelled the Constitution, the sources of their public law will be in just such speculations as underlie Mr. Adams's suggestion for a removal of the obstacles in the way of the commission. A Bryan unhampered by the Supreme Court could solve railway problems as fast as Mr. Adams could state them.

TAXATION OF PERSONAL PROPERTY.

The recent report of the Massachusetts Tax Commission and the more recent speech of ex-President Harrison at Chicago have set on foot a very profitable discussion. The bill now pending at Albany for the appointment of a tax commission in this State took its rise earlier than either of these publications, but the general interest in it has been much enhanced by them. Gov. Pingree of Michigan has called a special session of the Legislature of that State to consider the subject of taxation of railroad,

express, telegraph, and telephone companies. The *Detroit Free Press* considers the Governor's call a part of his political campaign for reelection, and this seems to be tacitly conceded by the *Detroit Tribune*, although the latter holds that the Governor's action is founded upon a substantial public need.

At the bottom of all the agitation on these subjects lies the fact that personal property does not bear its just proportion of the public burdens. Coupled with this is the fact, demonstrated a thousand times in this country and abroad, that the "general-property tax" cannot be enforced justly and equally. By general-property tax is meant the system under which each man is required to pay taxes in proportion to his means, real and personal. That each man should do so is an accepted maxim in law and morals. That no machinery has ever been devised to enforce such a tax, has been proved so often that it is now the opinion of the best and most impartial investigators that it never can be, and that recourse must be had to other means to reach the same result. The Massachusetts Commission, it will be remembered, recommends as a substitute for the general-property tax a tax on the rental value of dwellings as being the best outward indication of the means of the occupier—a system recommended by the Wells-Dodge-Cuyler Commission in this State twenty-five years ago, and one which has been actually in operation in France for fifty years.

There is a general concurrence of opinion among economists that the actual value of personal property is at least equal to the value of real estate in the entire country—and this is certainly so in the Eastern States. Yet it is a fact that the amount of taxes collected from personal property for State and municipal purposes has been declining for twenty or thirty years, while everybody knows that the actual value of such property has been enormously increasing. Thus the amount of personal property on the assessment rolls in the State of New York in the year 1871 was \$452,607,732. In 1886 it had fallen to \$335,898,389. A more striking proof of the laxity of the assessment of personal property is furnished in the last report of the State Comptroller, from which it appears that 107 decedent estates were appraised in the surrogates' courts, at \$215,891,568, while the appraisal of the same estates for taxable purposes had been only \$3,471,413. A large part of this discrepancy must have consisted of corporate securities taxable directly by the State, and therefore justly exempted from the general-property tax; but that there was still a large residue unaccounted for cannot be doubted. This is made apparent by the fact that in the wealthy county of Westchester the proportion of personal property to real on the assessment rolls was only 3.8-10 per

cent., and in the whole State was only 12.6-10 per cent. The widest variations are found in the different counties and in the different towns of the same county, where the outward evidences of wealth are the same. "In some localities," says the Comptroller, "personal property escapes taxation entirely."

New York is not peculiar in this respect. In New Jersey the proportion of personal property to realty paying taxes is 17.4-10 per cent., in Illinois it is 17 per cent., in Indiana 26 per cent., in Massachusetts 22.7-10 per cent., in Pennsylvania 20.8-10 per cent. By this is meant that the whole amount collected from personal property for State and municipal purposes, including the taxes levied on corporations directly, is only the percentage named in the several States. But the injustice does not end here. Some persons and corporations pay more than they ought to under an equitable system, because they are particularly exposed to the scrutiny of the assessors. Banks come under this category, also the estates of decedents in course of settlement, and personal property in the hands of trustees who have no motive to conceal what they hold for the benefit of others. In this category come widows and orphans, who notoriously pay far more than their just proportion under the general-property tax.

A late contribution to the literature of taxation, and one of high merit, is a book entitled "Taxation for State Purposes in Pennsylvania," by Frank Marshall Eastman, a member of the staff of the Auditor-General of that State. Mr. Eastman is a firm believer in the Pennsylvania system, which aims to, and does, obtain the entire sum needed for state purposes from other sources than real estate, *i. e.*, from corporations, from gross receipts, from insurance premiums, from banks and building and loan associations, from personal property, from inheritances and successions, from licenses, from fees of public officers, etc. Mr. Eastman maintains that the system, although, perhaps, open to further improvement, is an excellent one, and that it ought not to be abandoned for any untried one devised by theorists—from which we infer that somebody is trying to upset it and put something different in its place. In our own State the chief aim of tax reformers is to get into the happy position of Pennsylvania, and thus be enabled to adopt the "local-option system" under which each county may elect its own method of raising its local revenue. All such reformers will be glad to have Mr. Eastman's book within their reach, for it supplies a vast fund of information on the practical side of the matter in hand. It gives us the history of each tax law in the Pennsylvania system, an account of the method of its enforcement, of the judicial decisions under it,

and of its relative value and acceptableness as a part of the system.

The bill pending at Albany for a tax commission will undoubtedly become a law. It is to be hoped that the Commissioners appointed under it may be men who have made a reputation as economists and practical administrators, who will be able to show us how the existing inequalities in taxation may be avoided, and how personal property may be made to pay its fair share of the public burdens. As for the "general-property tax," it ought to be stricken out of the statute book as non-enforceable.

CHARAVAY'S LAFAYETTE.—II.

PARIS, March 10, 1898.

The forced return of Louis XVI. from Versailles to the Tuilleries was in reality the beginning of the Revolution. Lafayette had been named commander of the troops in and around Paris. He entered into relations with Mirabeau, though he had no esteem for his character and his morality. Mirabeau, on his side, had only a mediocre idea of the intellectual capacity of Lafayette; but he was obliged to reckon with the General's popularity, which was immense at that time. Count de la Marck was their common friend, and tried to unite them in the interest of the monarchy. Gouverneur Morris and Talleyrand also played a part in the negotiations which took place between them, with various alternations. Morris warned Lafayette against the dangers of an alliance with Mirabeau; curiously enough, Talleyrand, who was still Bishop of Autun, spoke to Lafayette in the same vein. These negotiations came to an end when the Assembly passed a decree forbidding its members to enter the cabinet. There could be no longer any talk of a Lafayette-Mirabeau cabinet. Their relations came to a close, and, at a dinner given by Morris, Lafayette freely expressed his opinion of Mirabeau, calling him "an active and clever *coquin*." Some time afterwards, he refused to enter into fresh negotiations with him, and said to his friends: "I neither like him nor esteem him; nor do I fear him. I do not see why I should try to have an understanding with him." Lafayette often asked himself afterwards whether he had not done wrong to disdain the repeated offers of Mirabeau; eloquence is a great power in public assemblies, and Mirabeau was the most eloquent man of his time. He belonged, as did Lafayette himself, to the French nobility; they were both very well placed to serve as a sort of connecting link between the old régime and the new order of things, which was the début of a constitutional government.

The history of the relations of Lafayette and Mirabeau is certainly one of the most interesting portions of M. Charavay's work. The author has used the valuable correspondence between Mirabeau and Lamarch. Mirabeau's insistence is striking.

"Oh, M. Lafayette," he says in a letter, "Richelieu was against the nation for the court, and though Richelieu did much harm to the public liberties, he did much good to the monarchy. Be a Richelieu against the court for the nation, and you will rebuild the monarchy and consolidate at the same time the public liberties. But Richelieu had his Capuchin Joseph; have also your 'Eminence grise,' or else you will lose yourself without saving us. Your great qualities have need of my impulsion; my im-

pulsion has need of your great qualities; do not believe the little men who, for petty considerations, by petty manoeuvres, try to make us useless to each other. Don't you see that you ought to marry me and believe in me all the more because your stupid partisans try to push me aside? Ah! you are unfaithful to your destiny!"

This written eloquence had not much effect. Lafayette probably took the comparison of himself with Richelieu as a bit of irony. We can, nevertheless, only regret, from an historical point of view, that two forces which together might have prevented much evil, found themselves disunited by a sort of fatality.

Lafayette's popularity was at its height in 1790, at the moment of the great Festival of the Federation. He was the true hero of this festival. The *fédérés* of the provinces kissed his hands, his boots, the harness of his horse, and the horse itself, and M. Charavay reproduces in his book a popular engraving of the time, in which Lafayette is represented near the altar of the Federation, by the side of the King. Mirabeau foresaw that this popularity could not last. "Popular risings are wine to M. de Lafayette." "It is possible that the shame of tolerating an insurrection beside an army of thirty thousand men will oblige M. de Lafayette some day to fire on the people." The day came which brought this terrible necessity. On Sunday, July 17, 1791, Lafayette had to proclaim martial law, and the troops fired on the people in the Champ de Mars. M. Charavay coolly says that "Lafayette's popularity was definitely lost in this useless bloodshed"; but we must remember that M. Charavay belongs to a school which, though it pretends to historical impartiality, has great difficulty in criticising anything in the Revolution and its actors. What was called the "massacre" of the Champ de Mars took place after the flight to Varennes and the return of the King to Paris and to the Tuilleries, escorted by Lafayette and the National Guards.

The National Assembly separated on the 30th of September, 1791, and Lafayette, thinking that his work had come to an end, resolved to imitate Washington and retire. He left for Chavaniac, in Auvergne; but rumors of impending war forced him to leave his retreat. He was placed at the head of an army of 50,000 men; Rochambeau and Luckner commanded two other corps. At Metz, on the Belgian frontier, Lafayette was as much occupied with the news of Paris as with the command of his troops; he had sometimes to go to Paris and take part in the political deliberations. He tried to play the rôle of a moderator and arbiter between the parties; but passions were already too strong, and he was denounced on all sides as a traitor and an enemy.

The revolution of the 10th of August, 1792, was the end of all his hopes and aspirations; it was a fatal blow to the cause of constitutional monarchy. Lafayette heard of it at Sedan, and had to announce to his troops that the King had been deposed. He passed them in review and asked them to take the oath to "the nation, the law, and the King." He was assuming the position of a constitutional general, and stood by the monarchy in the abstract, though the King had momentarily been deprived of his authority. The executive council appointed by the Assembly after the 10th of August ordered him to surrender the command of the army of the North to Dumouriez, and sum-

moned him to Paris; he was accused of high treason and his arrest ordered. He was, on the 19th of August, at Bouillon, where he found Alexandre Lameth; he resolved to leave France, and was followed by twenty-one officers of his staff. He was arrested, with his companions, at Rochefort, a little town in the neighborhood of Liège, by the Austrian sentries, and conducted to Namur and afterwards to Nivelles. He wished to retire first to England, and wrote to his wife to join him there, and to settle afterwards in America, where he was "sure to find a liberty which existed no longer in France."

The French refugees were treated as prisoners, in violation of the law of nations; the aides-de-camp of Lafayette were kept in the citadel of Antwerp; Lafayette, Latour-Maubourg, Alexandre Lameth, and Bureaux de Pusy were transferred to Arlon. They were looked upon as great criminals, as they had all four been members of the Constituent Assembly, which had inaugurated the French Revolution and deprived Louis XVI. of his power, and were held as hostages, answerable for the lives of the King and Queen of France. Lafayette was transferred to Wesel, where he remained in the strictest captivity, and afterwards to Magdeburg and to Neisse in Silesia, where he arrived on the 16th of January, 1794. He was afterwards delivered to the Austrians and conducted to Olmütz, where a daring but futile attempt was made to rescue him by Justus Erich Bollmann, assisted by an American, Francis Kinlock Huger. Madame de Lafayette was incessant in her efforts to mitigate his captivity. She corresponded with Gouverneur Morris, with Washington. Washington and Morris behaved with the greatest generosity with regard to her, but could not do anything for Lafayette himself. She succeeded finally in obtaining an audience from the Emperor of Austria and an authorization to be allowed to share with her daughters the captivity of her husband. She joined him in October, 1795.

Lafayette was never forgotten during his hard captivity. It is due to the memory of Washington to say that he was constantly faithful to the Frenchman who had stood by him in the trial hour of the American republic. Madame de Staël, who, with all her imperfections, possessed a noble and generous nature, Fox, Sheridan, and many others may be cited among those who protested against the prolonged captivity of Lafayette. The French Directory charged Gen. Bonaparte to ask of the Austrian Government the release of the prisoners of Olmütz. Bonaparte and Clarke specified in a note given to the German plenipotentiary that the prisoners should not, for the time being, reside in France or in Italy. It was, in consequence, agreed that the captives should be delivered to the American Consul at Hamburg. Lafayette and his companions left Olmütz on the 19th of September, 1797, and arrived in Hamburg on the 4th of October, by way of Dresden and Leipzig. They were received by the American Consul, Parish, and in delivering them the Austrian agent declared that the Empress had set them at liberty out of consideration for the United States.

Lafayette, freed after six years of the hardest captivity, was still an exile from his country. His estates in Brittany had been sold, like the estates of the émigrés. He had incurred debts. He took up his residence with his family (as did Latour-Maubourg and his family) at a château near

Wittmoldt, in Schleswig-Holstein, and wrote his 'Souvenirs en sortant de prison,' which have been published in his Memoirs. They are important documents for the history of the constitutional party. Lafayette blames with energy the condemnation of Louis XVI., the executions of the Terrorist period; he is very severe on the Jacobins—on Danton, whom he accuses of venality, on Robespierre, and all the Mountain.

Lafayette established himself afterwards at Vianen, near Utrecht. M. Charavay gives minute details of the life which he led there. He prophesied the great fortune of Bonaparte: "As for Bonaparte, he is the Constable of the Conventional party; he can become the master of France. He is probably the man whom Sieyès and his friends are waiting for, as the man who took part in the siege of Toulon, in the events of Vendémiaire, who stands well with Barras, Tallien, Fréron, and is not embarrassing to scrutinize. His halo of glory gives him immense advantages." This was written while Bonaparte was in Egypt. After his return, Lafayette writes: "The moment is very favorable for Bonaparte. . . . His desire ought to be that the Republic should establish itself on a solid basis of liberty and of justice. Perhaps he desires to be made President for life. I should approve of this arrangement; it would be an interesting experiment to make." Mme. de Lafayette saw Bonaparte in Paris, and was well received. A few days afterwards Lafayette received the news of the coup d'état of the Eighteenth Brumaire, and from the hands of a friend a passport under a fictitious name. He started immediately for Paris, where he arrived in November, 1799. He announced his arrival to Sieyès and to Bonaparte, who did not conceal his anger on hearing of this sudden return. Talleyrand and Regnault de St-Jean d'Angély advised Lafayette to return to Holland; he refused to do so, and went to reside at the château of La Grange (now inhabited by the Marquis de Lasteyrie, one of his descendants). It was at La Grange that he heard with great grief of the death of Gen. Washington. "The pair of finely wrought steel pistols taken from the enemy in the Revolutionary war," which Washington left him in his will, are still preserved at La Grange.

For a while Lafayette gave himself entirely to agricultural pursuits; he became a gentleman farmer of Brié. Bonaparte's anger was not of long duration; he gave a lieutenancy in the Hussars to the son of Lafayette. Talleyrand offered Lafayette the embassy to the United States, which he refused, being determined, for the time, to live in complete retirement.

FRANKLIN AND THE ROYAL SOCIETY.

LONDON, February, 1898.

In connection with one of his earlier contributions to the Royal Society, Franklin says, in his delightful Autobiography: "One paper which I wrote for Mr. Kinnersley, on the sameness of Lightning with Electricity, I sent to Dr. Mitchel, an acquaintance of mine, and one of the members also of that society, who wrote me word that it had been read, but was laughed at by the connoisseurs." Franklin then proceeds to tell how amply the Royal Society had made amends for its early slighting of him by its subsequent handsome recognition. In 1748, John Mitchell, M.D., appears on the published list of Fellows.

The result of the statement so made to Franklin and his own record of it in the Autobiography has been the reproduction by biographers, one after the other, of the reflection upon the Royal Society that it had slighted the philosopher at the outset of his scientific career. If, however, confirmation of Mitchell's statement can be found elsewhere, it is not forthcoming in the records of the Society itself. An examination of the minutes of the Council, of the Journal of the general meetings of the Fellows, and of the *Philosophical Transactions* of the Society, fails to give any support to the allegation of Mitchell. What those records do show, let us note.

On the 21st of January, 1748 (N. S.), William Watson, afterwards Sir William, read a paper to the Royal Society upon "Some Further Inquiries into the Nature and Properties of Electricity." In his essay, Watson mentioned that Collinson had received a paper concerning electricity from "an ingenious gentleman, Mr. Franklin, a friend of his in Pennsylvania." Watson (who had announced the theory of Positive and Negative Electricity, subsequently elaborated by Franklin) mentioned that Franklin's paper, which was dated June, 1747, had been lately perused by him, "by favour of our most worthy President." He went on to observe that though Franklin had made his experiments with a tube instead of a globe, the difference in results was in no way material. Watson quoted at length from Franklin's paper, and remarked that, owing to the distance at which Franklin was living, the latter could not possibly have been acquainted with what had been observed in England. Franklin seemed, said Watson, "very conversant in this part of Natural Philosophy."

On the 6th of June, 1751, Watson read "An Account of Mr. Benjamin Franklin's Treatise, lately published, entitled 'Experiments and Observations on Electricity, made at Philadelphia, in America.'" Watson observed that while he differed from him on some points, he thought that scarcely any one was better acquainted with the subject of electricity than Franklin.

On the 14th of November, 1751, a letter from Franklin, dated Philadelphia, June 20, 1751, addressed to Peter Collinson, concerning the effects of lightning, was read before the Royal Society. On the 21st of December, 1752, another letter from Franklin (dated at Philadelphia, October 1, 1752), also addressed to Collinson, was read. On the 18th of December, 1755, there were two communications from Franklin. One was upon "Electrical Experiments made in pursuance of those by Mr. Canton, dated December 3, 1753; with explanations by Mr. Benjamin Franklin," communicated by Peter Collinson. This was dated Philadelphia, March 14, 1755. The other was an "Extract of a letter concerning Electricity, from Mr. B. Franklin, to Mons. Delibard, inclosed in a letter to Mr. Peter Collinson." The date of this was June 29, 1755.

In connection with the papers above mentioned there is nothing on record at Burlington House, the home of the Royal Society, to confirm the alleged slighting of Franklin. On the other hand, there are the following notes of appreciation:

The Council met on the 15th of November, 1753, under the Presidency of the Earl of Macclesfield. The Minutes record that—

"The Strong Box was unlocked, and one of

the Gold Medals taken out, in order to the giving it to the person on whom the Council shall bestow the prize for this year, pursuant to the Will of Sir Godfrey Copley, Baronet, and the remaining medals were locked up in the box.

"The Council, in regard they had then no copy of the aforesaid will, adjourned the consideration of the bestowing this Prize to the next meeting."

At its meeting, on the 20th of the same month, the Council "ordered on a Balot that the Prize Medal in consequence of Sir Godfrey Copley's benefaction, be bestowed on Benjamin Franklin of Philadelphia, Esq., for his curious Experiments in Electricity, and that his name be engraven on the said medal."

The handsome terms in which the President of the Royal Society, the scientific Earl of Macclesfield, spoke of Franklin's services to science, in his address to the Fellows at the annual meeting on the 30th of November, 1753, are recorded in the Society's Journal. Jared Sparks has reprinted Lord Macclesfield's encomium in Volume V. of the Works of Benjamin Franklin, published at Boston in 1837.

At a meeting of the Council on July 15, 1756, "Mr. Watson moved that the name of Mr. Benjamin Franklin, who has deserved so highly of the Society, and whose affairs oblige him to reside at Philadelphia, be inserted in the Lists before his admission, and without any Fee, or other payment to the Society, and that such name be continued in the Lists, so long as he shall continue to reside abroad. Which upon a Ballot was carried in the affirmative, *nemine contradicente*." Accordingly, Franklin's name appeared in the List of Fellows published in 1757. In the List for 1760, the letters LL.D. follow the name. In the List for 1767, the Council includes, "Benjamin Franklin, LL.D., S. Gotting, Soc."

Among the papers preserved at Burlington House are some letters from Franklin to his friend Canton. These, with the permission of the Council of the Royal Society, are now published for the first time in the *Nation*. The original spelling has been faithfully reproduced. D. D.

MR. LETTERS FROM THE CANTON COLLECTION.

DEAR SIR, Dr. Priestly left these Specimens of the Circles with me to be produc'd to the Society. As I cannot be there this Evening, when I understand the Paper is to be read, I enclose them to you.—Those that look at them should be caution'd not to rub them, lest they should be defac'd before the Company have all had a Sight of them. I am, Yours, &c.,

(Signed) B. FRANKLIN.
March 9,—68.

PHILADA., March 14, 1764.

DEAR SIR, When I left London I promis'd myself the Pleasure of a regular Correspondence with you and some others of the ingenious Gentlemen that compos'd our Club. But after so long an Absence from my Family and Affairs, I found, as you will easily conceive, so much Occupation, that philosophical Matters could not be attended to; and my last Summer was almost wholly taken up in long Journeys. I am now a little better settled, and take the Liberty of Beginning that Commerce of Letters with you, in which I am sure to be the Gainer.

I have little that is new at present to offer you. I have made no Experiments myself. Mr. Kinnerley has shewn me one, that I think is mention'd in a Letter of his home, which I left in London, and it is a beautiful one to see. By a Stroke from his Case of Bottles pass'd thro' a fine Iron Wire, the Wire appears first red hot, and then falls in Drops, which burn

themselves into the Surface of the Table or Floor. The Drops cool round like very small Shot. I enclose some of them. This proves that the Fusion of Iron by a Stroke of Lightning may be a hot and not a cold Fusion as we formerly suppos'd, and is agreeable to the Acct. publish'd some Years since in the Transactions, of the Effects of Lightning on a Bell Wire in Southwark.

Mr. Kinnerley told me of a much stranger Experiment, to wit, that when he had sometimes electrify'd the Air in his Room, he open'd the Windows and Doors, and suffer'd the Wind to blow through, which made no Alteration in the electric State of the Room tho' the whole Air must have been changed; That he had even try'd the same abroad in the open Air on a windy Day, and found the Electricity remain'd long after the Operation, tho' the Air first electrify'd must have all been driven away. This surpris'd me, as it seem'd to indicate that some fix'd Medium subsisted between the Particles of Air, thro' which Medium they might pass as Sand can thro' Water; and that such fix'd Medium was capable of Electrification. I went to see it, but had however my Doubts that there might be some Deception in the Experiment; and tho' at first it seem'd to succeed astonishingly, I afterwards found what I thought might occasion the Deception. As your little Balls, which were us'd to discover the Electricity by their Separation, would be too much disturb'd by the Wind when it blow'd fresh, Mr. Kinnerley had put them into a Phial suspended from the Bottom of the Cork. They were as easily affected there, by any Electricity in the outward Air as if they had not been enclos'd; but I suspect that the Glass receives some Degree of Electricity from the electrify'd Air, and so kept the Balls separated after the electrify'd Air was blown away. I think Mr. Kinnerley was not quite satisfy'd with that Solution of the Phenomenon. I wish you would try it when you have Leisure, and let me know the Result.

An ingenious Gentleman in Boston, who is a Friend of mine, desired me when there last Summer, to recommend a good Instrument-maker to him, to make a Pedestal of a new Construction for his Reflecting Telescope. I accordingly recommended our Friend Nairne; but as it was a new Thing to Mr. Nairne, it might be well for preventing Mistakes, to get some Gentleman accustomed to the Use of Telescopes in Astronomical Observations, to inspect the Execution, and I took the Liberty to mention you, as one who would be good enough to take that Trouble if he requested it. I find he has accordingly wrote to you, and sent his Telescope. If it may not be too much Trouble, I hope you will oblige him in it, and I shall take it as a Favour to me. I send you enclos'd a second Letter of his. The Charge of Postage that you pay, should be put into his Account. I have no Improvement to propose. The whole is submitted to you.

Please to present my respectful Compliments to Lord Charles Cavendish and Mr. Cavendish when you see them, to whom I am much oblig'd for their Civilities to me when I was in England. Also to Mr. Price, Mr. Burgh, Mr. Rose, and the rest of that happy Company with whom I pass'd so many agreeable Evenings that I shall always think of with Pleasure. My best Regards to Mrs. Canton, and believe me, with sincere Regard, Dear Sir, Your most obedient and most humble Servant

(Signed) B. FRANKLIN.
To Mr. John Canton, Spital Square, Bishopsgate Street, London.

Here there should be a half-dollar note of the American Congress. [Missing 23 Oct. 1879.]

FRIDAY, Nov. 27, [1767].

DEAR SIR, After the Society was gone, my Lord Moreton said, (when I offer'd him the Paper) that it ought to have been deliver'd before and read to the Society; he however desir'd me to produce it to the Council. There the Reading of it was oppos'd as not being re-

ferr'd to them by the Society. But this was at last got over by Dr. Moreton's proposing that the giving a Medal to Dr. Priestly should be taken into Consideration, and that in order to judge the better of the Propriety of the Proposal, the Paper should be read. It was accordingly read. I was then desired, as the best Judge present, to give my Opinion of the Merit of the Experiments as to the Medal; which I did in plain Terms, declaring it as my Judgment that the great Pains and Expence the Doctor had been at in making them, and the Importance of the Experiments themselves, well desir'd that Encouragement from the Society; and that it was a Mark of Distinction justly due to so much philosophical Industry and Sagacity, &c. One that sat near me told me he was surpris'd at the Acct. I had given as he had been assur'd the Medal was intended to be bestow'd on the Doctor only for writing a History, which was thought wrong; but it now appear'd he had made many valuable new Experiments; &c. Then a Question arose how far it was proper to give a Medal for Experiments that had not been sent to the Society till they were published; and this occasioned a Search for Sir Godfrey Copley's Will which could not be found; but an Agreement was found recorded between the Society and his Executors, that the 5£ should be given for the best Experiment within the Year, proposed and directed to be made by the Society, and made in their Presence.—This not having been the Practice of late Years, it began to be whisper'd that most of the Medals had been irregularly given and that no more could be so given. A subsequent Resolution was however found, to print the Clause of Sir Godfrey's Will in every number of the Transactions for the Encouragement of Foreigners to endeavour obtaining the Reward, as there was reason to fear a Failure of Experiments on the former Plan.

By this Time it grew late, and it was concluded that the Books should be searched, to find all the Steps that had been taken in disposing of this Prize whether in Money or in Medals from the Instance in 1717 to the last; with Reasons and Grounds on which the Council had proceeded; and that a Copy of that Part of Sir Godfrey's Will should be obtained from the Commons; when at the next Council the Matter might be re-considered, and the Medal then given to Dr. Priestly if the Council thought fit, and it should be found not contrary to the Will so to do. Thus the Business ended for that time; and how it will conclude at last seems an Uncertainty; for I think some Persons are busy in an Opposition to the Measure. But I hope it will end in favour of Merit, in which case I think our Friend cannot miss it. I am, Dear Sir, Your obdt. Servant,

(Signed) B. FRANKLIN.

P. S.—I return the Dr.'s Letter. I imagine his Difficulty has arisen partly from his Supposition that the Electric Matter goes in a Ball with a Projective Force, which I think is not the Case but that it is a Constant Stream from the Inside to the Outside; of the Bottle thro' the best Conductors and in such Direction as it can best pass, and in which Path strait or crooked it actually begins to pass as soon as the Conducting Wire begins to approach in order to make the Discharge, which would be done silently or with only a hissing Noise if the Conducting Wire were kept a little farther off than the striking Distance.

AUGT. 15. —71—

DEAR SIR, I have just received the enclos'd from Dr. Priestly, And as it contains an Acct. of a new Discovery of his, which is very curious, and, if it holds, will open a new Field of Knowledge, I send it to you immediately. Please communicate it to Dr. Price when he returns. I am just about taking a Trip for a few Weeks to Ireland. I hope I shall find you well at my Return. I am, with great Esteem, Dear Sir, Your most obedient humble Servant,

(Signed)

B. FRANKLIN.

To Mr. Canton, at the Academy, Spital Square, Bps. Gate Street.

Mr. Franklin's Compliments to Mr. Canton, and acquaints him that Business prevents his having the Pleasure of Visiting Mr. Canton this Afternoon as intended.—Mr. Collinson too is out of Town who was to have accompanied Mr. F.—and will do so some Day next Week.

CRAVEN STREET, Aug. 25, 1769.

DEAR SIR, When I was at Paris about 10 Days since, I was told that a Comet was then visible with a Tail of considerable Length. If it has not been yet observed or heard of here, perhaps this little Notice may be agreeable to you. I return'd but last Night, I hope you and yours are well, being very sincerely Your affectionate Friend and Servant

(Signed)

B. FRANKLIN.

I think it was said to be in some Part of the Bull, and in its Progress towards the Sun. M. Monnier discover'd and observ'd it.

Dr. Franklin's Compliments to Mr. Canton, and begs a little of his Preparation for the Electric Cushion.—If it would not be too much trouble, Dr. F. would be glad of his Company at Tea this Afternoon, when Mr. Canton might show him the manner of applying it, and they could afterwards go together to the Club.

Thursday morning—

DEAR SIR, What passed at the Society last Thursday night, was chiefly, a Motion for our Address to the King, which was agreed to, and a Committee appointed to make a Draft. The Society adjourn'd to Monday night, to hear the Address and agree upon it, which was also done. On Thursday next at the Meeting we are to be inform'd when it is to be presented. I hope I shall have the Pleasure of seeing you there at that time; and am Sir, Your most obedient Servant

(Signed)

B. FRANKLIN.

Wednesday, Nov. 12:

P. S. I doubt I shall not be ready with the Paper, but have other Reasons for desiring you not to be absent.

Mr. Franklin's Compliments to Mr. Canton, and requests he would procure for him two more of the long Glass Tubes such as he formerly did him the favour to procure for him.

Tuesday—

Mr. Franklin's Compliments to Mr. Canton, and is sorry to find that he cannot have the Pleasure of waiting on him this Evening, being oblig'd to attend a Committee at the Society of Arts;—but as he expects to see Mr. Canton on Thursday at the Royal Society; some other Evening convenient to Mr. Canton may be agreed on.

Monday morn'g. Nov. 24.

Correspondence.

THE BRITISH CAPTURE OF HAVANA.

TO THE EDITOR OF THE NATION:

SIR: The following summary of the only successful attack ever made on Havana since it was first fortified against the French and English pirates in 1665, may be of interest at the present time. The facts have been taken partly from the Life of Lord Albemarle, grandson of an early royal Governor of Virginia, but chiefly from the 'History of the Late War in North America,' printed at London in 1772, by Thomas Mante, an engineer officer present at the siege.

Soon after the declaration of war in 1762, Lord Albemarle sailed from England with but four sail of the line and four regiments on transports, but his concentration was so skillfully made that he was able, without the previous knowledge of the Spaniards, to appear off Havana on the 6th of June, with

nine ships of the line (afterwards considerably reinforced from Jamaica), a number of frigates, several hundred transports, and a land force of about 14,000 men, including 2,000 American provincials, who proved to be among the most efficient of his troops.

The Spanish Governor, Prado, at this stage, probably misled respecting the strength of his opponents, committed the irrevocable mistake of withdrawing a superior naval force into the harbor, which was closed by a boom and three sunken vessels. The error was fatal, because if he had attacked the arriving English at once, even if he failed to defeat and disperse them, any well-fought action must have inflicted such injuries on both ships and crews as to break up the force and defeat the expedition, while by shutting his own fleet up in the harbor he risked everything on the successful defence of the town, since its surrender inevitably involved the loss of all vessels in the harbor. The British landing was effected expeditiously and without loss, in face of superior naval and equal land forces, by a feint on the west side of the entrance, and a real landing five miles east of it.

Regular siege operations were commenced against the "Moro," and pushed from the site now occupied by the Cabafias, which had not then been constructed. The Moro, being well covered on the land side by the crown of the glacis, was breached with difficulty. Siege materials were scanty, and the ditch, which was too large and deep to be filled, was mined and blown up with both scarpes, the assault delivered through a very narrow breach, and the fort carried by storm after forty-four days of open trenches. The loss of life was large on both sides, and included Velasco, the Spanish commandant, whose family was ennobled by the title of Viscount Moro for his gallant defence, and a standing order made that ever after there should be a ship in the Spanish Navy called by his name. Its guns were then turned against the town and minor defences, which capitulated sixty-seven days after the British landing. The loss by death in the attacking force was 2,764 of all ranks. The capitulation included ten Spanish ships of the line, six having been destroyed during the siege.

Havana was at that time the place of arms and the naval and commercial centre for all the Spanish colonies in both Americas. It possessed dock-yards where the largest ships of the line were built and fitted, and the Crown property in merchandise there accumulated and captured was transported to and sold in London for an amount exceeding £700,000 sterling. The essential difference between then and now is the present existence of the Cabafias fortress, which is generally regarded as the strongest feature of the present defence. It is, however, probable that no military man would now recommend a direct attack on Havana from the sea, in order to accomplish what can be so much more easily gained by simpler and less expensive strategic methods. Nevertheless, as the history of this ancient struggle is an interesting part of the problem, it may be interesting to some of your readers.—Yours respectfully,

I. J. W.

PHILADELPHIA, March 19, 1898.

AMERICA AS SHE IS REPRESENTED.

TO THE EDITOR OF THE NATION:

SIR: You have frequently had occasion to

animadvert upon the notorious incompetence and ignorance of our diplomatic and consular representatives abroad, which have contributed so much to make us a laughing-stock among the nations. To all who are in any way familiar with the facts, your statements have needed no reinforcement. If you required support, however, it is at hand from an unexpected quarter.

The Supreme Court of the United States has lately, in one of its opinions, embalmed and preserved for the admiration of future ages a choice specimen of American diplomatic literature. In the case of *United States vs. Eaton*, decided February 28 last, and reported in *Supreme Court Reporter*, Vol. 18, page 374, it is stated that in 1892 one Sempronius H. Boyd, appointed in 1890, was Minister Resident and Consul General of the United States to the Court of Siam, at a salary of five thousand dollars a year. On June 21, 1892, Sempronius addressed to the Government to which he was accredited the following letter:

"U.S. LEGATION AND CONSULATE GENERAL, BANGKOK, June 21, 1892.

"Krom Luang Devawongsee Varopprokan, Minister for Foreign Affairs—Monsieur le Ministre: It is with exceeding regret to me to be forced to abandon my diplomatic and consular duties at the court of his majesty, with the enjoyment, pleasure, comfort, and genuine friendship so marked and distinguished, which the representative of the United States fully appreciated and imparted to his government.

"All the physicians advise me to go soon to a cold climate. The president has wired me to that effect. In 20 or 30 days I may be strong enough for a sea voyage, of which I will avail myself. I am authorized to designate L. A. Eaton vice consul-general until I am able to assume. If not incompatible with public affairs, I beg you to so regard him.

"Monsieur le Ministre, I am too weak and feeble to call in person, which I would so much like to have done, and expressed my thanks and that of my government to the foreign office and attachés.

"With assurance of my high consideration, I have the honor to be, Monsieur le Ministre, Your obedient servant."

No doubt Sempronius was a great man in his ward, and a very valiant patriot; or, if he was one of those editors whom Mr. Harrison so plentifully rewarded with diplomatic appointments, beyond peradventure he amply atoned, by the size and vigor of his headlines, for any syntactical or grammatical peculiarities in mere reading matter. Moreover, we can "lick" Siam at any time, so why should we not address her in any jargon that suits Sempronius?

HOWARD LESLIE SMITH.

CHICAGO, March 17, 1898.

CAUSE AND EFFECT.

TO THE EDITOR OF THE NATION:

SIR: Is there anything significant in the statement of the proprietor of a morphine cure, on page 48 of *Printer's Ink* for March 16, that his best advertising results are from newspapers—names given—notorious in the domain of yellow and Jingo journalism?

A READER.

MARCH 17, 1898.

Notes.

R. H. Russell, who has just removed his publishing-house to No. 3 West Twenty-ninth Street, announces a spring list which includes 'Two Prisoners,' by Thomas Nelson

Page, illustrated by E. W. Kemble; 'The Nightingale,' by Hans Christian Andersen, illustrated by M. J. Newill; 'Poems,' by Robert Burns Willson, illustrated from nature by C. Grant La Farge; 'Shapes and Shadows,' poems by Madison Cawein; and 'The Pinero Birthday-book,' with quotations from Arthur Pinero's plays.

'The Handbook of Sole Whist,' by A. S. Wilkes, will be published directly by Brentano's.

Dodd, Mead & Co. will issue 'The Bookman's Literary Year-book,' an illustrated guide to American and English literature during 1897.

The 'Annual Literary Index' for 1897 (office of the *Publishers' Weekly*) is, as usual, a worthy supplement to the indispensable 'Poole's Index.' The list of bibliographies, the necrology, and the index to dates of principal events of the year are very convenient. In one particular it is open to objection. Why should the references to periodicals and the references to books be in two separate alphabets? They are used by the same people at the same time for the same purpose. If I want to find some article on Women, why should I be obliged to look on p. 142 and again on p. 158? I want to know all that is to be had, whether it be in the *Forum* or in Miss Repplier's 'Varia.' When I have found three articles on Matthew Arnold on pp. 6 and 7, why should I be obliged to turn over to p. 148 to see if there is not something else there? And, worse than all, why should I be exposed to the danger of missing the best reference of all by forgetting to look in both places? We suspect some obstacle in the collaboration, but it may be typographical. There is more apparent reason for separating the bibliographies.

The "Temple Edition" of Scott's Novels will, by its very name, suggest to all who are acquainted with Dent's publications the handy pocket form, the limp cover, the excellent print and generally dainty finish of the productions of this London house (New York: Scribners). The transparent cover-guard tells the story succinctly: "This edition . . . is printed verbatim from the author's favorite edition, with all the notes, etc., . . . on a thin paper with large type, and contains 40 topographical frontispieces by Herbert Railton in photogravure, and 8 portraits, . . . bound in lambskin." The pretty illustrations are overweighted by the heavy arabesque border, and a similar border (here as in the Temple Editions generally) on the title-page detracts from the tastefulness elsewhere exhibited. But these are the only defects in most companionable volumes. The editor is Clement K. Shorter, Clement Shorter, or C. K. S., as he variously signs the brief introductions. Thus far we have received 'Rob Roy,' 'The Antiquary,' 'Old Mortality,' 'Guy Mannering,' and 'Heart of Midlothian,' in two volumes each, and 'The Black Dwarf.'

We can heartily commend 'The Poetry of Samuel Taylor Coleridge,' the latest volume in the capital "Muses' Library" (London: Lawrence & Bullen; New York: Scribners). Dr. Garnett's Introduction is alone worth the price of the book, and his selection (i. e., exclusion) is beyond reproach, much as remains that is fine in parts of what is omitted, to say nothing of the dramas, which would have occupied too much room. In other words, this anthology is not sacrificed to the "familiar quotation." The notes are

chronological and illustrative. Dr. Garnett's point of view in discussing Coleridge's genius is to regard him "as the incarnate transition, so to speak, from the eighteenth to the nineteenth century," and as "the greatest of English critics," whose verdict, "evinced by the surest of tests, his own practice, has been given in favor of the poetry of the nineteenth as compared with that of the eighteenth century." We can hardly agree that were eleven enumerated poems "removed from his works, he would lose all title to be esteemed a great poet," because we cannot, for example, name a poet so great that the "Ode to Tranquillity," for one, if ascribed to him, would seem beneath him. But we will not quarrel with Dr. Garnett's dictum that "any one of his [Coleridge's] best poems would suffice for the immortality of any poet."

To Henry Holt & Co's series of "English Readings for Students," Prof. Lewis E. Gates of Harvard has contributed a volume of 'Selections from the Prose Writings of Matthew Arnold.' A good deal of the beauty of Arnold's essays and treatises lies in their structure and proportion, and this makes the selection of extracts a particularly difficult task. Mr. Gates has accomplished it as well as 294 pages of a 16mo volume will allow. The rest of the volume is devoted to a preface, an introductory essay, and a commentary. The essay is admirable—hardly inferior to Arnold himself, save in its derivatory character. Neither has Mr. Gates failed to appreciate the great extra-literary significance of his subject. Many will find the essay morally helpful as well as critically illuminating. One might quote it almost anywhere with an assurance of felicity. The notes are full of excellent illustrations, and show the art of a true commentator; thoroughly terse, seeking less to engage than to avoid unprofitably detaining the reader's attention, yet conveying a deal of helpful information.

'Bibliography of Education,' by Will S. Monroe (vol. 52 of Appleton's International Education Series), contains the titles of a goodly number of works in the English language on the various branches of educational science and history and on subjects more or less closely related to education. But the list is neither sufficiently complete nor compiled with all the care necessary to make it quite trustworthy for reference. The trouble with such works is that they are likely to mislead those very readers most in need of bibliographical aid. If each section of the book had been submitted to a competent specialist, with a view to desirable omissions as well as additions, its present utility (which is not denied) would have been greatly enhanced.

No one who ever read Ambrose Bierce's 'Tales of Soldiers and Civilians,' published originally under this title in San Francisco in 1891, and now reissued, with a few additions, by G. P. Putnam's Sons (as it has meanwhile been in London and Leipzig) under the major title of 'In the Midst of Life'—no one, we say, could forget the impression of these grimly powerful vignettes chiefly of our civil war. Tolstol himself might praise the psychology of dying in "One of the Missing" or in "The Occurrence at Owl Creek Bridge"; and what an allegory is "Chickamauga," with the strayed child, wooden sword in hand, leading the crawling troop of hideously wounded men to the blaspheming ruins of his own home and the mangled

body of his own mother! This little volume could not have been revived at a more opportune moment, and deserves the widest circulation as a peace tract of the first order, in the present craze for bloodshed. Mr. Bierce's imagination, his poetic feeling, his humor (which can be sardonic on occasion) have long been known to be above the ordinary. They are here fitly and truthfully applied in the depiction of organized human slaughter.

In default of a full record of the general orders issued by Washington during the Revolution, a part is welcome. Under the editorship of Mr. Appleton P. C. Griffin, the orders issued in May and June, 1778, are printed from Major Shaw's MS. in the Boston Athenæum. The record opens with the well-intentioned effort of Congress to induce men to enlist or serve for the war by an offer of half-pay for seven years; and, a few days later, persons in the army "who understand making thin paper, such as bank-notes are struck upon," are in demand—a somewhat suggestive juxtaposition in the light of after events. Considering the evil times and the distresses of the army, the proportion of courts-martial is not excessive, and discipline was well preserved by the punishment of a few. Some of the precautions against sickness are peculiar, such as the burning of the powder of a musket cartridge daily in each hut to purify the air, or "a little tar, if it can be procured." One feature is deserving of notice—the frequent disagreement of Washington with the decisions of military trials. An officer who took two mares and a barrel of tools on the lines and sold them for his own profit was acquitted by the court; but Washington interfered, with a severe reprimand, being "far from satisfied of the propriety of Lieut. McDonald's conduct." In another case an officer is condemned by the court to dismissal for taking a pair of mittens, for gaming, and for abusive language. Washington sets aside the mittens, but comments on the "pernicious practice of gaming, which will invariably meet with every mark of his disapprobation." In two cases men are sentenced to receive four hundred lashes each, a very severe punishment, and one little calculated to prevent a repetition of the crimes—desertion, re-enlisting, and perjury. Such a record as this is invaluable to the historian of the Revolution.

'A Godchild of Washington,' by Katherine Schuyler Baxter (Neely), is a pretentious volume, containing nearly everything that could be gathered in a disorderly way to foster family pride and an unreasoning magnifying of ancestry. Its purport is not very clear, for it rambles from a sketch of Alexander Pope to the Erie Canal, and is illustrated in a wonderful manner. After reading its 650 pages, well padded out, even by extracts from "the shelves of old books," we are at a loss to account for its existence. The only redeeming feature is that it is "published by subscription for private circulation only."

A small edition of a 'Reconnaissance of the Gold Fields of Southern Alaska' and of 'Geology of the Yukon Gold District' has just been issued by the United States Geological Survey at Washington, and is distributable only upon special recommendation; but three-fourths of the 40,000 copies of the Map of Alaska, showing gold-bearing rocks, with descriptive text, are for distribution through Senators and Representatives. The

Superintendent of Public Documents (Government Printing-Office) has just put forth Catalogue No. 37 of United States Public Documents, with a partial reference list of United States Government publications on Alaska, filling fourteen pages.

In 'Les Demoiselles Danaïdes,' by Roger Dombre (Paris: Colin & Cie.), Parisian life is prettily described. The little tale has an engaging lightness and gayety suitable to the locality. It is the common subject of sudden smiting by Cupid, subsequent misunderstanding, and the ending, "So they married and lived happy ever after." Young people who read it will find graceful colloquial French of the best sort in its pages, and a simple story besides.

Charles de Rouvre's 'Princesse Eseline' (Colin) hardly seems a book for the young: it is more for elder people who might have patience to read the long analyses of parental affection and the descriptions of travel and scenery. There is a true poetic feeling in the delineation of the young Eseline's life—petted and indulged, yet sweet, loving, and unspoiled; but it is a poetry, we fancy, which will not appeal much to youth. The action is placid and agreeable, but sadly lacks vivacity.

'Die Frau im Altertum: Ein Kulturgeschichtliches Bild,' by Karl Heinrich Schauble, M.D. (Karlsruhe: Braun), is a brochure of ninety-three pages, containing the substance of two lectures originally delivered before the Deutscher Verein für Kunst und Wissenschaft in London, and treating of the position of woman in Egypt, Greece, Rome, Palestine, Asia Minor, India, ancient Germany, and Gaul. The writer maintains that the rights of woman were practically more nearly equal to those of man in Egypt than in any other country of antiquity. In the introduction he discusses the influence of the different ancient religions in this respect, and gives in the ninth and concluding chapter an historical survey of the marriage relation, showing the degrading effects of polygamy and the elevating effects of monogamy as enjoined by Christianity and enforced by the example of the primitive Germans, whose esteem for woman, verging toward veneration, took a quixotic and romantic form in mediæval knight-errantry. The conclusion at which Dr. Schauble arrives is that the condition of woman is the truest test of a people's civilization, and that the present movement in favor of her higher education indicates a higher stage of general culture.

The last issue of Prof. Karl Hilty's 'Politisches Jahrbuch der Schweizerischen Eidgenossenschaft,' just published by K. J. Wyss in Berne, is a volume of 790 pages, beginning with an article by the editor entitled "De Senectute," and embodying some suitable and sympathetic reflections on old age. "Vor 50 Jahren" is a picture of political events half a century ago, as reflected in the letters of prominent Swiss statesmen, with an introduction by Prof. Dr. Blösch. "Das Tagebuch des Schweizerischen Abgesandten Hirzel bei seiner Sendung in das Hauptquartier der Alliierten, Nov., 1813," by Prof. Dr. Oechel, is a diary of value for the period immediately following the defeat of Napoleon at Leipzig. "Frauenstimmrecht" is a succinct survey of the female suffrage movement in Switzerland by the editor, who also contributes "Jahresbericht 1897," which fills about one-half of the volume and forms unquestionably the most interesting part of

it. It is a carefully prepared report of the principal occurrences of the past year in Switzerland, including foreign and domestic affairs, legislative enactments, administrative measures, political parties, social questions, as well as art and literature, together with the text of political programmes, treaties, proposed laws, and other documents valuable to the historian.

In the current issue of the *Harvard Graduate Magazine*, nothing suggests comment more than the pictorial frontispiece in connection with Prof. de Sumichrast's account of the production, under his direction, of Racine's "Athalie" at the Sanders Theatre in December last. For the first time in the history of the college, a play was given in which the female parts were not borne by male students. To effect this innovation, Radcliffe College was drawn upon, and some Boston ladies were also invited to a share in the performance. The incident advertises the fact that co-education in all but the narrowest sense is firmly established at Harvard, side by side with the survival, in the Hasty Pudding theatre, of the old classical and mediæval-monastic idea at once of the stage and of education.

Of all the tributes to the memory of Daudet published since his death, the sincerest and most tender, perhaps, is that by the aged Friedrich Spielhagen, in *Cosmopolis* for February. "Was mir Alphonse Daudet ist" are the words which he puts at the head of his brief *in memoriam* to the younger French writer, whom he never met, with whom he never exchanged letters, who never read a line of his, but whom he loved as a friend, and whose poetic views and aspirations he shared, though there is this difference between them (he modestly and generously admits in his closing sentence): "Was er wollte, das konnte er . . . durchführen. Ich werde mich wol mit dem *magna voluisse* begnügen müssen."

Admirers of "Caran d'Ache" will find an account of this humorist in the *International Studio* for March (John Lane), with many illustrations not caricatures, of a striking kind. There is, as usual with this handsome magazine, much else to repay perusal.

Antarctic exploration was the subject before a special meeting of the Royal Society held in the last week of February. The discussion was opened by Dr. John Murray of the *Challenger* expedition, who stated the main objects of research for an expedition so equipped as to be able to spend one or more winters in Antarctica. These were, especially, observations of the atmosphere and the condition and distribution of the sea-ice in the winter months; the investigation of the interior ice-cap, for light upon the glacial-period theory; and the fauna. Among other speakers, Sir Joseph Hooker, one of the few survivors of the Ross expedition more than half a century ago, said that "he looked to a comparison of the oceanic life of the Arctic and Antarctic regions as the heralding of an epoch in the history of biology." Dr. Neumayer, director of the Hamburg Observatory, spoke of the absolute necessity of obtaining data from the Antarctic in order to form a physical theory of terrestrial magnetism. The advantages to geology of an exploration were presented by Sir Archibald Geikie, who referred to the region as probably one of the most interesting volcanic tracts on the face of the globe, of which we could hardly be said to know more than its mere existence. Dr. Nansen believed that

it might be difficult to get upon the inland ice, but not at all impossible, and added that if an expedition went from Great Britain, he was sure that Norway would be willing to send out an expedition for coöperation upon the land.

Some time in April the first Handelshochschule in Germany will be opened at Leipzig, as the result of the energetic efforts of the German Association for Commercial Instruction. The Saxon Government has, of course, sanctioned the enterprise and also promised a very small sum towards its financial support. The new institution is intended more especially for those who expect to occupy leading positions in commercial and industrial life, in the consular service, as members of chambers of commerce, etc. The conditions for admission therefore provide that candidates shall have completed a course in some secondary school, or give other evidence of suitable preparation. Foreigners can be admitted on similar terms. A seminary for commercial teachers will be formed in connection with the institution. Arrangements will also be made for the admission of members of the Hochschule to certain lectures in the University of Leipzig. With a view to such an agreement, the Ministry suggests that the senate of the Hochschule endeavor at the start to forestall the dangers to the new class of students arising from certain unfavorable peculiarities of academic life "which, though indulged in to excess only by a minority of students, are, nevertheless, on account of their publicity, regarded as general academic institutions." The Minister also deems the question of vacations in the new school worthy of careful consideration, lest the customary proportion of twenty-two weeks of vacation to thirty weeks of study should awaken scruples in the minds of the business class.

—A paper by Prof. Newcomb on "Recent Astronomical Progress," in the *Forum* for March, calls for particular notice on account of its general interest. An important part of the paper is devoted to the discussion of the question of life in other planets than our own. This is a subject that is perennially interesting to all mankind. Men of science know that this question is still very far indeed from solution. The present inquiry of science is, Are the planets habitable—do they present the conditions of habitability?—and not, Are the planets, or any of them, in fact, inhabited? Even this latter question has not been definitively solved for a single planet except our own. The much larger question, whether life actually exists in any planet but our own, is not yet within the field of scientific inquiry, notwithstanding its paramount interest. Prof. Newcomb points out that the hope of finding some indication of intelligent life on the planets has excited public curiosity ever since the telescope was first invented, and he remarks that our experience has proved that no increase of telescopic power is likely to carry us much further than we are now. Telescopes may, in the future, be vastly improved, but the obstacles to better vision appear to be insuperable. They lie, not in the imperfections of the telescope, but in the disturbing effects of the unquiet air that surrounds the earth. So long as astronomers must work within the atmosphere, so long the unsteadiness of the air will prevent the use of very high magnifiers. It is, of course, possible that new instruments may be invented, based on new prin-

ciples, and that, by their use, we may attain the desired knowledge. But there is no present reason to hope for such inventions.

—These matters are familiar to astronomers. But the general public is not so well informed. So many fanciful stories have been printed describing the particularities of life on Mars, for example, that general readers have come to admit some kind of life there, and to consider that the only matters open for discussion concern these particularities. Every one comprehends that there can be no human life on the moon. It is not so generally understood that the conditions on Mars are remarkably like to those on the moon. As Prof. Newcomb remarks: "Mars has little or no atmosphere"; "there are few or no clouds on Mars"; it is "by no means certain" that the polar "ice-caps" are ice at all. They "may be due to some other substance—solid carbonic acid, for example. Indeed, it would seem hardly possible that the sun's rays would suffice to melt more than a few inches of ice or snow on the poles of Mars. The whiteness [of the polar-caps] may, however, be produced by a layer no thicker than hoar-frost." What follows from these conditions on our sister planet? If there are no clouds, there can be no water, for water or snow would evaporate to form a layer of clouds. Hence, there can be no "seas," no "lakes," no "canals," with water in them. Channels, cracks in the soil, there may be, of course. It is certain from other considerations that the so-called "canals," which are simply dark, narrow streaks, cannot be water. At the Lick Observatory these dark "canals" have been found all over the planet, in its so-called "seas" as well as on its "land." A "canal" running through an "ocean" is, of course, an absurdity. What is seen is merely a darker, narrow streak lying on a less dark region. The explanation is yet to seek. A summary of our present knowledge like this paper of Prof. Newcomb's is of especial value. It not only describes the actual advances that have been made (and they are many), but it frankly details the points yet unsettled. His remarks on life in the planets, and especially in the planet Mars, are commended to popular writers on astronomical matters.

—Readers of the *Nation* will remember the mission of Metlakatla in British Columbia conducted by the Rev. William Duncan, which was described in a little book by Mr. H. B. Wellcombe reviewed in the *Nation* some years since. Its trials from religious narrowness, and the final exodus of the great majority of the Indians from their homes on the Canadian side of the line, and their settlement on Annette Island, Alaska, under the leadership of their devoted teacher, are familiar to all interested in missions. After a year or two of uncertainty, Congress reserved the island for their use and the use of those Alaskan natives who might be led to join the colony. Secure in their faith that a permanent refuge was provided for them, the colony set at work to build homes, schools, and churches, as well as to establish industries by which they could maintain themselves in comfort. Mr. Duncan, a few personal friends, and a few of the Indians who had some means of their own, put into the machinery of a salmon cannery their capital, amounting to some \$40,000, and have made of their industry a great success. The Mission brand of salmon brings several cents a can more than any

other Alaskan brand, and the returns have been sufficient to pay good wages to the workers and a fair dividend on the capital advanced. By the use of ordinary prudence, the colony promises to continue self-sustaining if left undisturbed.

—An attempt has been recently made to bring ruin upon them and disgrace upon the legislators who assured them of protection. On the plea that mineral deposits exist on the island, a bill has been introduced into Congress to deprive them of nine-tenths of the island, cutting off their fishery privileges, their access to water for the town supply, the use of the timber, and that isolation from vicious whites which is essential to the well-being of the settlement. It says nothing of compensation for the loss of vested rights and the breach of faith involved. It means merely the destruction of almost the last independent cannery by the Alaska Salmon Trust; the invasion of the colony by liquor and vice; the ruin of the most successful mission ever known on the Northwest coast; and the loss of the last remnant of belief in the honor and good faith of the whites by the natives of the region. And all this that a handful of speculators may exploit some alleged quartz veins of unknown and very doubtful value. It is satisfactory to know that the Secretary of the Interior has denounced the scheme, and that Mr. Duncan's friends have rallied to his support; nevertheless, the ultimate issue is doubtful unless the voices of those who desire to maintain the rights of the weak against organized greed make themselves heard with no uncertain tone.

—Interest in the Pre-Shaksperian drama is decidedly on the increase. We have already spoken of the plan of a series of representative English comedies under the general editorship of Prof. Gayley, which will include some twelve or fourteen plays from this period. A volume of plays in the same period, edited by Prof. Brandl of Berlin, to contain mostly reprints of plays now generally inaccessible, is announced to appear presently. Mr. A. W. Pollard's 'English Miracle Plays, Moralities, and Interludes' is passing to a new and revised edition. And now Prof. J. M. Manly of Brown University has edited two volumes of 'Specimens of the Pre-Shaksperian Drama' for the Athenæum Press series (Boston: Ginn & Co.). The selections given in Prof. Manly's volumes seem excellently chosen for the purpose of illustrating in typical specimens the growth of the English drama from its beginnings down to Shakspeare. In Part I. is presented, in some fourteen pageants, a sufficiently representative composite cycle of mystery plays, from the Creation to the Judgment Day. The eight plays comprised in Parts II. and III. will come as a novelty to most readers, while their historical interest and importance will be apparent at once. In Part IV., among other Moralities, we are given the hitherto unpublished "Mankind," from the Gurney MS. Volume II. presents eight pieces, from "Roister Doister" to "The Spanish Tragedie," more easily accessible and more commonly known. The texts here given are important, however, as presenting carefully edited literatim reprints of the original editions. The two volumes bear evidence of a very large amount of scholarly labor on the editor's part. A third volume, to contain Notes and Glossary, as well as an Introduction which will present a new treat-

ment of the History of the Pre-Shaksperian Drama, is to follow presently. We shall hope to speak more fully of the work when that volume appears.

—It is necessary to warn the reader whose interest in Donne is directed to his fascinating personality and to his alternately fascinating and repellent poetry, that he will not find his account in the long-expected 'Life of Donne' (London: Methuen & Co.), by Dr. Jessopp. Mr. Gosse has, after all, no share in the work, which is strictly a book written to order for the "Leaders of Religion" series. If this be borne in mind, the author's attitude, which is that of a theologian of the Church of England type (read, for example, the discussion of the condition of English theology in the seventeenth century, pp. 53 ff.), becomes perfectly explicable, and one even ceases to resent the too parochial atmosphere of the book, which, however, it must be said, even within its own limits, in tone of feeling as in literary treatment, is far from being adequate or up to Donne's own height. This is borne home to the reader all the more by the inevitable, if inevitably unfair, comparison which immediately suggests itself with Walton's pious and beautiful 'Life of Donne.' Dr. Jessopp, however, deserves our gratitude for his laborious research, of which the volume bears ample evidence, into the obscurer passages in the life of Donne both in correction of Walton and in addition to other previous knowledge. This gratitude, nevertheless, is somewhat tempered by the author's failure in most cases to indicate the sources of his information, and to make fuller and more adequate use of Donne's interesting and to-day generally inaccessible correspondence. Donne's life, rightly read, would provide all the materials for a subtle and moving psychological novel. In criticism it is a subject made to the hands of a Sainte-Beuve, but no Sainte-Beuve has as yet attempted it.

—In Mr. Arthur H. Norway's 'Highways and Byways in Devon and Cornwall' (Macmillan), a curious story is told of a visit that the author paid to an old Cornishwoman, to whom he happened to mention the approaching marriage of a relative of his named Margaretta. This she at once pronounced to be a lucky name, and begged Mr. Norway most earnestly to let the bridegroom know how to reap the full advantage of the luck. He must, it seems, pluck a daisy on the eve of the marriage, draw it three times through the wedding-ring, and repeat each time, very slowly, the words: "Saint Margaretta or her noba." Some time afterwards it flashed into the author's mind that this mystic sentence was nothing more than a corrupt form of "Sancta Margaretta, ora pro nobis"—a bit of Middle Age devotion which had held its own in Cornwall until now. "A somewhat similar fragment of antiquity," Mr. Norway goes on to say, "lingers in the neighborhood of Redruth, where the country people, when they see a ghost, say: 'Numny dunny,'" and he adds: "I leave the riddle to be solved by any one who is curious enough to undertake a useful piece of practice in unravelling the corruption of language." The task that Mr. Norway proposes is certainly not a very difficult one. "Numny dunny" is obviously a corruption of "In nomine Domini"—a shortened form of the invocation used in blessing one's self with the sign of the cross.

—M. Émile Berr has transferred his useful "Petite Chronique des Lettres" from the *Figaro* to the *Revue Bleue*, where it occupies the greater part of the space usually devoted to the "Mouvement Littéraire." In the issue of February 19 M. Berr gives the results of an interesting inquiry that he has been making among the publishers as to the effect upon their business of the Dreyfus affair. The publishers are far from happy. The *affaire* has greatly disturbed the book trade and upset their calculations for this spring. Since the middle of January the sale of books at retail at Flammarion's has lowered by at least 25 per cent. Zola's pamphlets have aggravated this dullness: every time that one has appeared, the falling off in the regular trade has increased from a quarter to a third. As to new books, they simply have to wait. "The newspapers take up the whole of the readers' time." At Charpentier's the same story is told. Pamphlets accumulate. M. Fasquelle is absent, occupied every day at the *Cour d'Assises*, and his collaborators groan in inaction. "The first book that we shall publish is precisely a novel of Clémenceau's—his first novel, 'Les Plus Forts'; but who cares for a novel of Clémenceau's when everybody is waiting to hear his plea at the trial?" At Calmann's, M. Émile Berr was told that they have in hand more new books than they know what to do with, and must wait until the present glut is relieved before they go on printing. At Ollendorff's, masses of printed paper are heaping up, and no one dares to launch a volume. "Here is a novel by M. Pierre de Coulevain, 'Noblesse Américaine,' and a volume by M. Edmond Fazy, 'Les Turcs d'Aujourd'hui,' which is destined to make some stir. M. Fazy is a professor who lived for a long while at Constantinople and saw the people of whom he writes at close range; his book is severe, very severe, and very amusing. Unhappily, just at this moment, no amusing book holds the public, and nothing counts outside of what concerns 'l'affaire.'" So M. Berr finds all his interlocutors of the same mind: to wit, that the season for the booksellers is nearly spoiled. The winter draws to its end, and this is just the one instant of the year in which the French, who are not generally wide or swift readers, find time to read a little. Later—when settled fine weather comes—sports, the bicycle, and travel will absorb the leisure of everybody, and reading, together with the book trade, will go into retreat for six months.

THIRTY YEARS OF AMERICAN FINANCE.

Thirty Years of American Finance: A Short Financial History of the Government and People of the United States since the Civil War, 1865-1896. By Alexander Dana Noyes. G. P. Putnam's Sons. 1898. Pp. 277.

We have other books which cover the same period of time as this and much more. We have none that go into the minutiae of this particular period in the way that Mr. Noyes does. We have no other that brings together all the commercial facts which are necessary to explain and illuminate the course of our checkered financial history as this does. Nor has Mr. Noyes limited himself altogether to commercial and financial matters. He points out their effects on political parties and events, and the reactions of politics on commerce and finance. It is needless

to say that this is an inviting field for a competent writer. Some peculiar gifts are required for its due treatment—a grasp of abstract economics, ability to handle statistics and not to be overthrown by them, practical acquaintance with the business world, and ability to express one's thoughts in language plain to the non-technical reader. That Mr. Noyes possesses these qualifications is known to those who have made his acquaintance in the pages of the *Political Science Quarterly*, where he began his treatment of this subject. The volume before us is not a reprint of those articles, or of any of them, but a fresh examination of the whole matter.

The period under consideration begins where the war ends. The country had an interest-bearing debt of about \$2,400,000,000, and a non-interest-bearing debt of \$400,000,000, the latter consisting of legal-tender notes. The first important event was Secretary McCulloch's recommendation that the legal-tender notes be retired and cancelled, which was agreed to by the House (December 18, 1865) by a vote of 144 to 6, and confirmed in a modified form by both branches of Congress in April, 1866. The next event of importance was the repeal of this act (February, 1868), and the third was the reissue (September, 1873) of \$26,000,000 of the notes that had been actually retired—the last step having been taken by Secretary Richardson without the authority of law. Next came President Grant's veto of the inflation bill, followed, as a desperate political necessity, by the specie-resumption act. The only accessible fact wanting in Mr. Noyes's recital is a letter of the late Hamilton Fish to the late George W. Childs, describing in some detail the struggle in Gen. Grant's Cabinet and in Gen. Grant's own mind over the question whether the bill should be approved or vetoed. According to this letter, which was published soon after Mr. Fish's death, the President was convinced of the badness of the measure while trying to compose a message to Congress to accompany his approval of it. The story current at the time, that he had two messages in his desk, both of his own sole production, one approving and the other disapproving it, was true, but it was true also that his determination to send the latter to Congress was not due to hap-hazard, but to deliberate and reasoned choice.

Necessarily much space is given to Secretary Sherman's public life, and to the steps taken by him in carrying the resumption act into effect. High praise is awarded to him, and none too much, for this executive act, while his weathercock behavior in the Senate and on the stump, both discreditable and dangerous at times, is not overlooked or condoned. Mr. Sherman's letter virtually endorsing the wild and demagogical project of paying the bonds in greenbacks might have been appropriately introduced here. It adds something to the credit of the Hayes Administration, but none to that of Mr. Sherman himself, that the silver agitation, and the Matthews resolution, and the Bland-Allison bill came athwart the execution of the resumption act, but did not prevent or even delay it. Mr. Sherman wrote a letter expressing the opinion that silver dollars would be an aid to resumption. It would have been well to introduce the text of this letter also. President Hayes did not agree with his Secretary. He vetoed the Bland bill.

Resumption having been effected at the appointed time (January 1, 1879), the question whether it could be maintained without further sales of bonds was a vital one. Here came to our aid one of those "streaks of luck" that have so often helped the American republic over a rough bit of road. During two successive years (1880 and 1881), we had enormous wheat crops which happened to correspond with enormous deficiencies abroad. The critical period was bridged for us by importations of \$175,000,000 gold, due to commercial causes solely, in those years. Mr. Noyes goes into this subject fully. He deals also with the concurrent expansion of domestic trade, railroad building, land speculation, and eventual collapse in 1884. This is one of the most exciting periods in our financial history, and it deserves the ample space given to it. The harvests both here and abroad during all the subsequent years receive most careful attention at Mr. Noyes's hands. The fact is recognized that they lie at the bottom of everything of a commercial character, and that they have a preponderant influence on finance and a large influence on politics as well.

The passage of the silver-coinage act of 1878 and its consequences are traced with clearness and accuracy, and the reasons why the bad consequences were so long in showing themselves are pointed out. These were of more than one kind. There was a large surplus revenue which could be disposed of only by redeeming outstanding bonds or buying them at a premium. If redeemed at maturity, they were, in part, taken from the national banks which had deposited them as security for their circulation. If bought in the open market, the banks were tempted by the high premium which the Government's purchases caused, to sell them. The 4's of 1907 eventually sold as high as 129. In either case the circulation of the banks must be retired in a corresponding ratio, and thus a vacuum was created for the new silver currency. Moreover, the Treasury Department, during Mr. Cleveland's first term, found means to withdraw from circulation the legal-tender notes of smaller denomination than five dollars, thus making a vacuum for silver certificates. As the silver coinage was at the rate of only \$25,000,000 per year or thereabout, these two operations, coupled with a real demand for currency due to the country's growth, served as an antidote to the poison for the time being. But these favorable conditions were coming to an end, as they must have done some time, when suddenly three acts of Congress were passed almost simultaneously which brought things to a climax. These were the McKinley tariff "to reduce revenue," the new pension bill, and the so-called Sherman silver act. The bill to reduce revenue exceeded the expectations of its promoters. They estimated a reduction of about \$42,000,000, but the first year after the law went into effect the reduction was \$52,000,000 and two years later it was a round \$100,000,000. Public expenditures, on the other hand, rose by leaps and bounds, \$79,000,000 being added the first year and \$35,000,000 more the following year. The Harrison Administration, which had recommended liberality in appropriations, became alarmed, and tried to put on the brakes, but could not do so. Simultaneously with this disaster came another and greater one. The Windom plan of settling the silver question, out of which the Sherman act was evolved, is analyzed

with merciless severity by Mr. Noyes, and President Harrison's naive concurrence with it does not escape censure. The history of the Sherman act is given in detail, for the first time, we believe. It makes very interesting reading in connection with the tariff bill of the same year. The plight in which Mr. Sherman himself is left floundering deserves a quotation:

"When Secretary Sherman was defending, in 1879 and 1880, his own plan of legal-tender issues, he was reminded of the possibility that a heavy revenue deficit might some time leave the Treasury with nothing but its gold reserve from which to meet expenses. To this he answered that it was 'not to be presumed that Congress will omit to provide ample revenues.' He cited further the objection that the amount of notes 'may be enlarged by Congress, and that this power is liable to abuse,' but his reply was that under resumption of specie payments 'there is no temptation to over issue.' Fourteen years had passed, and Congress now had suddenly enacted one law destined to force a deficit in the Treasury and another to increase without assignable limit the issues of legal-tender notes. That Mr. Sherman himself should have voted for both these measures and constructed one of them, is another notable instance of the irony of history."

The expulsion of gold from the country after the passage of the Sherman act is the next event of importance. That this would be the inevitable sequence of the forced injection of new legal-tender notes into the circulation was foreseen by the commercial world. The needs of business were already satisfied. If more notes were introduced, the operation would be like pouring water into a cup already full. In fact, more gold ran out than notes poured in. Foreigners saw what was coming, and began to withdraw their capital. This movement was accelerated by the Baring panic in England. We exported \$70,000,000 of gold during the first six months of 1891. Here occurred again one of the freaks of fortune which have so often masked our financial blunders and postponed our punishment for them. Both Russia and France had disastrous failures of their wheat crops in 1891, while we had the most enormous harvest in our history either before or since. Europe's shortage was 150,000,000 bushels, and our excess over the previous year was 250,000,000 bushels. The result was that we soon began to import gold, and took back \$50,000,000 of the \$70,000,000 that we had exported earlier in the same year. This streak of luck, however, could not last always. When the wheat account was settled with Europe, the tide began to move against us once more. The outflow of gold during the first six months of 1892 was \$41,000,000. The Government's gold reserve fell to \$114,000,000 in May of that year. The deficit produced by the legislation of 1890, already referred to, was now running heavily against the Treasury. Everybody could see that we were nearing the danger point. The Government's receipts began to drop, and its gold payments were soon to increase by the presentation of legal-tender notes for redemption. This was not exactly a new phenomenon, but it came upon the business world as new when, on the 30th of June, 1892, \$3,200,000 of legal tenders were presented for redemption in gold because it was needed for export and could not be obtained elsewhere. No wonder that the Secretary of the Treasury made a despondent report in December, 1892, and confessed that a heavy deficit was impending. The deficit came, but it was not to plague him or the Harrison Administra-

tion. They went out of office just in time to escape the consequences of their own bad financiering, consisting, as we have said, of the bill "to reduce revenue," alias the McKinley tariff, the various bills to increase expenditures, and the Sherman silver bill—three furies, whose wrath was discharged on the head of the Cleveland Administration, through no fault of its own.

We have made this brief synopsis of Mr. Noyes's chapter vii. by way of indicating the thoroughness of his work. No fact of importance is omitted, nor is the sense of proportion lost in the treatment of the events. They lead up to the panic of 1893 and the repeal of the Sherman act at the special session of Congress in 1893. When Mr. Carlisle, the new Secretary of the Treasury, came into office, the gold in the Treasury, over and above the greenback-redemption fund, was less than one million dollars, and the money of all kinds was less than \$25,000,000, with a monthly deficit rolling up. Here were all the materials for a panic, which, in Mr. Noyes's opinion, would have come during the previous autumn but for the "streak of luck" arising from the peculiar harvest conditions of 1892 here and in Europe. The trouble in 1893 was, perhaps, hastened a little by Mr. Carlisle's hesitation in reference to his legal power to redeem the Sherman notes of 1890 out of the \$100,000,000 greenback-redemption fund. Some little time was lost by hesitating to have recourse to a sale of bonds—the first increase of the Government's interest-bearing debt that had been made since the civil war. The case was one requiring prompt action, yet no blame, we think, can be justly imputed to the Administration for the delay. The validity of the law authorizing the issue of bonds under the circumstances was disputed. Although Secretary Foster had given an order in writing to the Bureau of Engraving and Printing on the 20th of February, 1893, to prepare plates for a bond issue, he managed, by borrowing gold temporarily from the banks, to stave off the evil day till his own term of office had expired. (As the existence of that order has been denied, it would have been well to print it.) The question was a fresh one when the new Secretary came in, and, humanly speaking, it was not to be decided offhand, nor till events forced a decision. When the time came, only one decision was possible: it was bond sale or bankruptcy. The panic of 1893 is carefully analyzed by Mr. Noyes. He also recounts with sufficient detail the struggle over the repeal of the Sherman act, and the subsequent staggering of the business world in its efforts to regain its feet after the shock. The reasons why the recovery was not more rapid receive due attention.

After the repeal of the Sherman act, Congress lapsed into sullen imbecility. Its attitude with regard to the issuing of bonds to avert national bankruptcy and to pay the salaries of its own members was that if the Secretary of the Treasury could find any authority of law to do so, then Congress would not absolutely revoke such authority. It would restrict itself to growls, grimaces, and open threats tending to frighten lenders and to spoil his market. The result was that the first and second loans were virtually extorted from the banks under a species of terrorism. Really the banks had no choice. They were told to take those bonds, or the Government would go down and they would be buried in the ruins. So they took \$50,000,000 of 4 per cent. bonds on the 1st of

February, 1894, and paid \$58,660,000 gold therefor. But some of the subscribers, to prepare themselves to meet their subscriptions, withdrew gold from the Treasury to the amount of \$24,000,000 by the presentation of legal-tender notes for redemption. Mr. Noyes condemns this transaction, without sufficient reason, we think:

"The bond subscribers," he says, "had consented to a contract under which they received a full consideration, while they knew the tacit consideration in the Government's behalf to be the adding of \$53,000,000 to the actual gold reserve. The use of coin obtained on note redemption was therefore an undoubted subterfuge. Its justification, if it can be justified at all, lies in the fact that the New York banks were reluctant and unwilling subscribers," etc. (p. 215).

Mr. Noyes does not show that the Government was injured by the withdrawal of this gold by the banks, but rather leaves it to be inferred that such was the fact. We cannot assent to that proposition. The Government had a certain amount of demand liabilities outstanding, and it could make no possible difference whether those liabilities were lessened by handing them over to the Government or by providing it with the means of paying them. It may be said (and this is apparently Mr. Noyes's opinion) that if the Government had been able to show \$130,000,000 gold in the Treasury after the loan was completed, instead of \$106,000,000 gold and \$24,000,000 greenbacks, the public imagination would have been more agreeably affected by the glamour of the metal, and the inclination to draw gold would have been lessened. This is a matter of conjecture. What the public will do or think in any given circumstances is always a matter of some doubt, but it has been pretty well established in the treatment of money panics that if the debtor bank or other financial institution keeps cool, maintains a bold front, and invites all creditors to exercise their legal rights, the chances of a run are very much lessened. On the other hand, if it shows signs of alarm, if it puts impediments in the way of its creditors obtaining their dues, if it blacklists them for demanding what they are entitled to, it thereby multiplies the fears of the community and intensifies instead of allaying the run. This is what the Government officials did during the whole series of big and little panics down to the last bond issue. They ought to have proclaimed by the loudest speaking-trumpet at their command that the greenbacks were just as good as gold, instead of which they said, as plainly as possible, that gold was preferable to greenbacks. A financial institution which exists by the forbearance of its creditors is already bankrupt. It may be "tided over," it is most desirable that it should be, especially if it is the Federal Treasury; but the principles which apply to an ordinary bank of issue apply to it, and one of these is that the more it "squeals" when asked to redeem its paper, the more copiously will such paper be presented for redemption. In the worst view that can be taken of the banks that drew this gold, it was a case of what the lawyers call *damnum absque injuria*, an injury to which no legal blame attaches. This Mr. Noyes himself concedes. The question whether it was morally wrong although legally blameless and actually harmless (or at all events not proved to be harmful), we need not discuss.

The bond syndicate operation of February.

1895, receives adequate treatment at Mr. Noyes's hands. That part which relates the undertaking of the syndicate to protect the Treasury as far as possible against gold withdrawals by themselves supplying the purchasers of foreign exchange, is extremely interesting, but we have not left ourselves space to go into details. It is not mentioned, as we think it should have been, that this loan was made under an act of Congress passed in 1862 and still in force, although forgotten—a different one from that under which the two previous loans had been negotiated. The last loan, that of February, 1896, and the events subsequent to it until the present time, form the conclusion of the book. Mr. Noyes has grouped together in moderate compass, with good taste and sound judgment, the facts and deductions which are necessary to an intelligent discussion of the most important problem now before the people—one which will probably continue uppermost for some years to come. The book has a copious index.

"BOBS."

Forty-one Years in India, from Subaltern to Commander-in-Chief. By Field-Marshal Lord Roberts of Kandahar. In two volumes. Longmans, Green & Co. 1897.

"Always barrin' me little frind Bobs Bahadur, I know as much about the Army as most men." So said Private Terence Mulvaney to Mr. Rudyard Kipling before he proceeded to narrate the startling story of "The Taking of Lungtungpen." And he went on to draw a very disrespectful comparison between the present commander-in-chief of the British army and the favorite general of the British soldier in India. The crowds in the London streets during the Diamond Jubilee procession, which cheered Lord Roberts more heartily than any of the other actors in that splendid pageant, simply expressed the sentiments held by the vast majority of the English people as well as of the army. Lord Wolseley has never been a popular hero, and the reason, perhaps, is partly to be found, not in the greater splendor of the military exploits of Lord Roberts, but in the fact that his rival is a little apt to talk too much about himself. Private Mulvaney says as much in the comparison between the two generals just alluded to, and Rudyard Kipling echoes the prevailing sentiment when he puts into the mouth of Tommy Atkins, in one of his "Barrack Room Ballads" entitled "Bobs," the following words of praise:

"An' 'e does not advertise,
Do yer, Bobs!"

Were it not for such testimony as this, and for the conspicuous modesty which Lord Roberts, better known to thousands as "Little Bobs," shows in writing of his own exploits, one might be tempted to say that he has advertised himself on a large scale in the two handsome volumes of reminiscences, whose title we give above. His career has been a most interesting one. Arriving in India as a subaltern, just in time to learn his business in the old East India Company's Bengal artillery before the Indian Mutiny broke out, he has seen grow up before his eyes the new India of the Queen-Empress, ruled under different conditions and defended by a different army. The siege of Delhi, Sir Colin Campbell's campaign in Oudh, and the operations which led to the final rout

of the insurgent Sepoys, afforded excellent schooling for a young officer, and Frederick Roberts came out of the fiery trial, not only with the Victoria Cross "for valour," but with a reputation for coolness and administrative ability in important staff situations. From that time onwards, Roberts held various staff appointments, and he was generally envied by all the officers of the line as "the luckiest man in India." But no one ever ventured to say that Roberts did not deserve his luck, and it was generally held that if another great military crisis should arise in India, he would be one of the fittest men to cope with it. Not merely was he during these years a diligent, headquarters staff-officer, doing conscientiously the desk-work that falls to such a position, but he was given occasional opportunities to show his merit in the field, as in the Umbeyla campaign of 1863, the Abyssinian expedition of 1867, and the Lushai war of 1871. In 1875, after having officiated more than once in that capacity, Col. Frederick Roberts, though an officer of only twenty years' standing, was appointed Quartermaster-General to the forces in India, an unexampled promotion for so young an officer. In 1878, he was moved to the command of the Punjab Frontier Force, and in that year he had his first chance to show his capacity as a commander of troops. The history of the Afghan war of 1878-80 is largely the history of the exploits of Roberts, and his military fame as a general rests to-day upon his achievements in the Afghan war. In each of its phases he was the most conspicuous actor. He it was who forced the Kurram Pass, and advanced on Kabul after fighting the most successful action of the campaign in 1878; he it was who, after the murder of Sir Louis Cavagnari, led the army of retribution to the Afghan capital, and in the camp of Sherpur withstood the winter attack of the fanatic Afghan hordes, and met them more successfully than Elphinstone had done in 1841; and he it was who, upon the news of the terrible British defeat at Mairwand, marched safely from Kabul to Kandahar, rescued the beleaguered city, and wiped out the disgrace of Mairwand by his utter defeat of the army of Ayub Khan.

The fame of Roberts was safely established by these feats of arms, and his later career in India was one of high command. From 1880 to 1885 he was commander-in-chief in the Madras Presidency, and from 1885 to 1893 commander-in-chief in India, and the gratitude of the British Government was shown by his being created a peer of the realm for his excellent services in the latter most responsible position. It was Lord Roberts who organized the present defensive position upon the northwest frontier of India, a position which, indeed, in the light of recent events, does not seem to be as effective as he hoped; but he will be more gratefully remembered by all who served under him for his persistent efforts to raise the character and to increase the comforts of the British soldier in India. This it is which has made him the idol of the English soldiers, even more than the recollection of his campaigns in Afghanistan.

The sketch just given of the salient points in the career of Lord Roberts indicates the nature of his reminiscences. Naturally the largest part of the first volume is taken up with a record of the events of the Indian Mutiny; and of the second volume, by an

account of the Afghan War. It may be said at once that the description of the Mutiny is disappointing, for Lord Roberts, instead of confining himself to his personal reminiscences, has attempted, mainly from the well-known 'Chaplain's Narrative' of Mr. Rotton, to rewrite the story of the siege and capture of Delhi. He has not done this particularly well, for he does not possess the training of an historian, and shows himself unable in places to deal with the opposing evidence that confronts him. His account of the siege, indeed, is far inferior to that given by Colonel Malleon in his 'History of the Indian Mutiny,' which itself now needs to be revised in many particulars from the volume of documents edited in 1893 by Mr. G. W. Forrest and published by the Government of India. Far better and more valuable, as a primary authority upon the subject, is the account Lord Roberts has given of his Afghan campaigns. The anxieties of the commander-in-chief during the terrible weeks of siege in the Sherpur cantonments, and during the daring march from Kabul to Kandahar, are vividly depicted, and Lord Roberts certainly does not deserve the censure so justly meted out to the Duke of Wellington of not fully recognizing the services of his subordinates. It might have been wished, indeed, that he would have dealt a little more at length with his disagreement with General Dunham Maass, but it is, perhaps, too much to expect that such a personal question as this should be definitively settled during the lifetime of the principal actors. It may be worth while noting, however, that there are distinguished soldiers who warmly support General Maass's cause and think that he was hardly dealt with—a view which, of course, does not find expression in Lord Roberts's remarks upon the subject. A few words, too, on the asserted misconduct of certain troops on the occasion of the death of Lieutenant Montanaro would not have been out of place, the more especially since Mr. Kipling has set the example of abandoning the practice of ignoring instances of British military misconduct, both in prose (as in the story of "The Drums of the Fore and Aft") and in verse (in "That Day").

No one can rise from a perusal of these interesting volumes without a fuller knowledge of the new India of the Queen-Empress and of one of its chief creators. Singularly prophetic—and at the same time cleverly inclusive of a hint at one of the weak spots in the character of the general, and of an allusion to his well-known dislike of cats, which, as Sir Charles Macgregor relates, nearly spoilt the dignity of a ceremonious interview between General Roberts and the Ameer Abdur Rahman—are the following lines from Mr. Kipling's parody of Browning, entitled "One Viceroy Resigns." Lord Dufferin is made to say to Lord Lansdowne in 1888:

"Look to one—
I work with him—the smallest of them all,
White-haired, red-faced, who sat the plunging
horse
Out in the garden. He's your right-hand man,
And dreams of tilting W-l-s-y from the throne;
But while he dreams gives work we cannot buy;
He has his Reputation—wants the Lords
By way of Frontier Roads. Meantime, I think,
He values very much the hand that falls
Upon his shoulder at the Council table—
Hates cats, and knows his business: which is
yours."

A History of French Literature. By Edward Dowden. D. Appleton & Co. 1897.

In this volume of the series entitled "Literatures of the World," Prof. Dowden seeks

to present a complete critical survey of his subject from the Middle Ages to the end of the Romantic period; and if in some cases the facts and opinions put forward appear to have received rather summary treatment, the cause lies less in the dispatch of Prof. Dowden's method than in the compression forced on the material by the limits of a popular manual. Of this the most obvious signs are in such pages as 258, 259, 305, etc., which are little more than catalogues slightly expanded with descriptive phrases. Although important matter rarely suffers, one cannot but notice an occasional insufficiency in the judgments expressed. Why, for instance, is Diderot characterized as "the least French of eighteenth-century French authors" (p. 307) without adequate explanation of the grounds of the proposition? Again, 'Le Dernier Jour d'un Condamné' is briefly styled "a prose study in the pathology of passion." To most readers Hugo's pamphlet gives the impression of an *ad-captandum* plea against capital punishment. Also, the innuendo in the following sentence might well have been spared: "When the Prussian assault was intended to the city, when Regnault gave away his life as a soldier, Gautier in the muses' bower sat pondering his epithets and filing his phrases." "Le pauvre Théo" in 1871 was all but sixty years of age, as well as broken in health; and, if we may trust Maxime Du Camp's biography, "La guerre, la révolution du 4 Septembre, l'investissement de Paris, la Commune l'assommèrent. Il mit deux ans à en mourir, mais il en mourut."

Prof. Dowden's literary competence is so well known that we need hardly insist on the generous breadth and accuracy with which he judges all the great movements and famous names of French literature. Naturally, as he himself acknowledges, his indebtedness to other critics is large; but in all cases calling for personal examination of text or authority, the reader feels that every deliverance of the critic has been fully verified. No better summary of the seventeenth century, with its admirable running commentary on "Literary Freedom and Literary Order," could be put into a student's hands. As might have been expected, Prof. Dowden takes the traditional English view of the "oratorical" character of much of the poetry produced in "le grand siècle." The discussion is so trite, and further so hopeless, that one shrinks from again reminding English readers that what strikes them as rhetorical in French poetry often produces no such effect on those for whom French is a mother-tongue. Of equal merit and interest are the examinations of the respective philosophical positions of Montaigne, Descartes, and Pascal, although the critic seems to have studiously avoided applying the term "mystic" to the religious belief of the last named. As regards other great French writers it is curious to observe how rigorously the defects of Voltaire's character are once again shown up, in contrast with the comparative leniency meted out to the many failings and shortcomings of Rousseau.

But where Prof. Dowden seems most thoroughly at home on congenial ground is in the discussion of the Romantic movement of 1830. Each division of this is an admirably fair summary of the work accomplished by a great poetical leader of the time, and an estimate of what still endures for posterity. We should, however, have liked to find in a succeeding passage a little more em-

phatic insistence on the colossal proportions of Balzac's achievement, as well as on the influence which his startlingly vivid realism has exercised on the strictly *Parisian* fiction of the later school.

Being warned in the preface that the dates in this book may at times show a discrepancy in comparison with those given in other authorities, we need not dwell on the few unimportant disagreements we may have noted; but Prof. Dowden will surely not deem it hypercriticism if we submit that "M. Barine," whom he quotes in connection with Bernardin de St. Pierre (p. 327), is quite as frequently spoken of in France as "*Madame Arvède Barine*"—the well-known pseudonym of a "woman" of letters. Perhaps the only omission of any consequence among writers of lesser importance is that of Barbey d'Aurevilly. It is truly gratifying to think that students of French literature can now at last study that vast field under the guidance of an English authority, the general soundness of whose opinions is rendered doubly attractive by the uniform excellence of the style in which they are presented.

Modern Mythology. By Andrew Lang. Longmans. 1897.

The Evolution of the Idea of God. By Grant Allen. Henry Holt & Co. 1897.

Of these two books, Mr. Andrew Lang's is the important one. In a desultory manner, for which he convincingly apologizes, Mr. Lang has here performed a considerable service. "Finally" is a word not to be rashly used, least of all in the storm-swept regions of modern mythology; and yet there is a note of finality attaching to Mr. Lang's courteous and restrained arguments directed against Prof. Max Müller's notorious view—that mythology is a "disease of language"—and the theory of "universal human degradation" implied in the acceptance of that *mot d'ordre*.

"We hold," says Mr. Lang, speaking as an acknowledged leader of the "anthropological" school, "that man thought all things animated and expressed his belief in gender-terminations. Mr. Max Müller holds that because man used gender-terminations, therefore he thought all things animated, and so became mythopœic."

Though it would be interesting to follow Mr. Lang in detail through the fourteen chapters of his guerilla war, the task is too desultory for a review. It is enough here to mark the singularly chastened mood which animates him throughout. "It is with no enthusiasm," he writes, "that I take the opportunity of Mr. Max Müller's reply to me 'by name,' in 'Contributions to the Science of Mythology.' Mr. Lang, in this, his last encounter with his once too formidable antagonist, is sobered by the knowledge that his victory is fairly won, and shows himself a dangerous foe. Everywhere he pays his court to the "Right Hon." Professor's "vast erudition" and "enviable style," and exhibits a rare gift for appreciating, and appropriating to his own opposing argument, the many flashes of real insight by which, until lately, Mr. Müller's now ruinous fabric of theory has been so ingeniously propped. Furthermore, Mr. Lang is most candid in admitting the errors and indiscretions of his own school. His sixth chapter is a development of a self-accusing admission: "I well know that I myself am apt to press a theory of totems too

far." His fourth makes good, among other things, the admission that "a tendency to seek for exclusively vegetable origins of gods is to be observed in some of the most recent speculations." Here he had Mr. Fraser, and doubtless also Mr. Farnell, in mind. All scholars will do well to heed his recommendation of great reserve in their "hypotheses of origins."

Mr. Lang's criticism, also offered in his Introduction, "of the prevalent anthropological theory of the ghost-origin of religion," which might, he urges, "be advanced with caution . . . till we know a little more about ghosts, and a great deal more about psychology," applies prophetically to Mr. Grant Allen's 'Evolution of the Idea of God,' a book effectually discredited by the absence of specific references and by Mr. Lang—shortly after the publication of 'Modern Mythology'—in the *Contemporary Review* of December, 1897. Mr. Allen here comes very near to being one of those "sweet anthropological enthusiasts" whose "excesses," according to Mr. Lang, have given so many opportunities to Mr. Müller's attack upon the new school. Unfortunately, Mr. Allen, though excessive, is not sweet, and in his own opinion he should not be classed off-hand as of the anthropologists. He is dogmatic and irresponsible, in both his manner and his matter. He possesses the "key to all mysteries," a very large key of modern material, but antiquated pattern; so he does not resist temptation to belabor nervous inquirers with it. Meanwhile, he forgets to open the door.

Christian Missions and Social Progress. Vol. I. By Rev. James S. Dennis, D.D. Fleming H. Revell Co.

In this work we have a sincere attempt, made by a scholar, a man of culture, and an observer during many years of life in a Mohammedan country, to treat the subject of missions from the view-point of science. The dogmatic or merely propagandist argument is scarcely mentioned, but the sociological facts are canvassed with great breadth and thoroughness. The excellent bibliographies show the scope of the author's inquiries and observations, and his ability to select from them and assimilate what is to the purpose is manifest. The bulk of this first volume is devoted to the social evils of the non-Christian world. If there be any "conflict" between "science" and either "religion" or "dogmatic theology," it is not visible to the author. Organized Christianity is here shown to be the relentless enemy of dirt, drunkenness, idleness, gambling, slavery, cannibalism, witchcraft, and to be the reformer of evils, the bringer in of a better time, and the promoter of nobler living for the individual and of prosperity to the nation. With both acuteness and learning, and a marvelous wealth of information digested from whole libraries, Dr. Dennis pictures these social evils with a clearness and fascination that must delight the earnest student of reality, whatever may be his religious opinions.

These chapters have been delivered as lectures in several of the schools in which young men receive the theological part of their training as missionaries. The matter has, however, been wholly recast, and reference to the points made is easy because of the excellent analytical table of contents. In

his opening chapter on the sociological scope of Christian missions, the author claims for sociology that it is an inclusive and comprehensive science, and that in its constructive aspects it is predominantly ethical. In his eyes Christianity is a militant social force, because a majestic power of social transformation is inherent in Christ's teachings. Yet he would not supplant the evangelical spirit and aim of missions, but rather broaden and deepen their power by the sociological method.

In the second lecture we have a vivid picture of the social evils of the various civilizations of the world. The existence of serious defects in Christendom is not denied, nor is the good in the ethnic religions ignored; but civilization as a whole, whether Christian or non-Christian, is tested by its active antagonism to moral evils. So far as it is possible, the author would pass judgment in the case of each nation on ethical principles only. Such evils as self-torture, the degradation of women, the traffic in human flesh, witchcraft, massacre, lack of business confidence, the scandalous lives of religious leaders—to select but one evil out of each group treated—show that as long as such immoralities are nourished by a system of religion, that religion must be supplanted by something better that is antagonistic to these evils. The enlightened sense of mankind is against them and in favor of their abolition.

In lecture III. the author considers ineffectual remedies and the causes of their failure. He is unable to discover any sure guarantee of social reform in education, material civilization, state legislation, patriotism, or the social power of ethnic religion, when these are employed singly. The authorities which he cites in confirmation of his views are formidable. To him Christianity is the social hope of the nations. Having a different estimate of man, it introduces new moral forces. Among the first and greatest of civilizing agencies are Christian missions. In a final chapter, Dr. Dennis considers the objections of those who distrust historic Christianity as a social power. In his mind there has never yet been an adequate expression of the truth inherent in the Christian faith. He believes that universal mastery is the final heritage of Christ and his religion.

Several score of illustrations reproduced from photographs, and exhibiting phases of the various non-Christian religions and the educational and philanthropic work of Christian missionaries in many parts of the world, form a pleasing commentary upon Dr. Dennis's text. The fairness and thoroughness of the author, together with his ability and originality of treatment, will win for his book attention from many who have only vague or hostile notions about a work that increasingly claims the attention of the nations which are in the forefront of civilization.

Emerson, and Other Essays. By John Jay Chapman. Charles Scribner's Sons. 1898.

The personal equation is evident throughout Mr. Chapman's work. He is a pronounced individualist, and is possessed by a spirit of hatred and contempt for the tyranny of our democratic masses, their suppression of all wholesome variations from the conventional type; and his attraction to Emerson, Whitman, and Browning is determined by their sympathy with his revolt.

They are his stalking-horses from behind which he shoots his invectives at the pachydermatous creatures whom he particularly abominates, and some of them are sharp enough to pierce the thickest hide. The essay upon Stevenson, which concludes the book, has the same inspiration as its principal companions, but the subject illustrates Mr. Chapman's central theme by way of opposition and contrast; Stevenson being shaken as a bundle of imitations, both in the style and in the substance of his various books. But Mr. Chapman's prophetic zeal does not prevent his criticism from being remarkably interesting and often valuable. It is certainly fresher than it would have seemed possible to make it where so much had been already written. It is one of his ideas that the first thing necessary is to attract a man's attention, and if you can do this only by knocking him down, why, then, knock him down; and it must be confessed that there is here much knocking down, if not of people, of their conventional opinions. At times this business seems overdone, and it is necessary frequently to remind ourselves that it is a means to an ulterior end, deliberately chosen.

The essays are of unequal value and uneven workmanship; the "Emerson," which is much longer than any others, being in every respect the most important. It takes for its text Emerson's most sweeping indictment of the masses, and comes round to this at the end: "If a soul be taken and crushed by democracy till it utter a cry, that cry will be Emerson." But between the beginning and the end there is much that is only loosely related to the main contention, and may win a cordial assent where that fails to do so. There is much that is interesting concerning the methods of Emerson's intellectual activity and the forms into which it ran. His coherency is found to have been greatest in his earliest writings. "They were written for a purpose and were perhaps struck off all at once." His biographer, Mr. Cabot, has told us that this was the case with the Divinity School address, but that address was represented as unique in this respect. Emerson was not a writer, we are told, but a speaker, and Lowell's judgment is repeated—that his manner of speaking, with its hesitations and apparent naturalness, was deliberate art. Lowell is quoted at length, but not even Lowell has described the manner of Emerson's speaking so well as Alcott in a most memorable passage. "English Traits" is denominated by Mr. Chapman as "the rudest book he ever wrote." It is a capital illustration of Emerson's patriotism, which manifested itself in an exclusive interest in those English qualities which America does not possess. Like Dr. Arnold, his devotion to an institution was in proportion to his desire to improve it. The weakness of Emerson's system of aesthetics is much insisted on, but not too much. His new commandment was, "Thou shalt not preach"; but he admired "the antique sculpture" because it was "as ethical as Marcus Aurelius." On the other hand, Mr. Chapman's judgment of Emerson as having no conception of growth, of evolution, is not well made up. His poetic anticipation of Spencer and Darwin was, in fact, remarkable. Tyn-dall could go to him for such mottoes as that which Emerson prefixed to "Nature," and we read in "The Problem":

"These temples grew as grows the grass."

When Mr. Chapman comes to speak of Emerson's relation to the abolitionists, we are reminded that our essayist's name unites two names of great distinction in the abolition movement, namely, those of the Jays, William and John, and Maria Weston Chapman, Garrison's inspiring friend; and this conjunction of names betrays his lineage. Appreciative of the abolitionists, he does not disguise Emerson's distrust of them in the earlier stages of the agitation. "It was the defection of Daniel Webster that completed the conversion of Emerson, and turned him from an adherent into a propagandist of abolition." But he always wore his abolitionism with an individual difference from the regular stripe, and his formal identification with the movement was never quite complete. It is certainly a gross exaggeration to say that Emerson was "in no way responsible" for the Transcendental movement; and in the minimizing of its practical outcome, Parker, and Higginson, and Johnson, and Weiss, and Samuel Longfellow, and James Freeman Clarke, and many others of their kind seem to be entirely forgotten. The narrowness of Emerson's sensuous range is more aptly criticised, and especially the frigidity of his doctrine of love and marriage: "There is in Emerson's theory of the relation between the senses neither good sense, nor manly feeling, nor sound psychology." But, whatever the deductions, Mr. Chapman's general review of Emerson abounds in cordial admiration for the social courage he exhibits and inspires.

Of Whitman it is said that, "as for his real merits and his true mission, too much can hardly be said in his favor"; but his seamy side is exposed in a manner that will be very shocking to his worshippers. In all that concerns human relations, he is set down as utterly unreal, and, while no one talked so much about America, no one knew it less. "A Study of Romeo" sounds an unusual note, and one that deserves attention. Even here Mr. Chapman is still harping on "our formal manners, our bloodless complexions, our perpetual decorum and self-suppression." The translations of Michael Angelo's sonnets do not impress us as better than Symonds's upon the whole, though doubtless they reproduce more closely the ruggedness of the originals. The translation of the fourth Canto of Dante's "Inferno" is a more notable achievement. It is in *terza rima*, and yet, with one glaring exception, very literal, contrary to the prevailing notion that Dante's own rhyme-system cannot be successfully reproduced in English verse. The criticism of Browning is sympathetic, on the ground that Browning finds himself everywhere at war with our conventional morality. As for Stevenson, it is well that his readers generally cannot discover those perpetual reminiscences of plot and style which deduct so much from Mr. Chapman's enjoyment of his work.

Cent Ans d'Histoire Intérieure, 1789-1895. Par André Lebon. Paris: Armand, Colin & Cie. 1898.

Modern France, 1789-1895. By André Lebon. [The Story of the Nations.] G. P. Putnam's Sons. 1898.

In estimating the volume on "Modern France," which appears in the "Story of the Nations" series, we have the advantage of being able to follow M. Lebon's own text side by side with the translation. If we

omit three chapters on literature and the arts, the substance of the book as published in Paris is identical with that of the London and New York version. Once or twice a sentence seems to have been added or subtracted, but we have ample material for judging whether, on the whole, M. Lebon has been fairly interpreted to his English readers. We regret to say that while most of the text has been reproduced in comprehensible form, solecisms, uncouth turns of phrase, and actual errors abound. What sort of an impression is produced by the term "Committee of Public Salvation," those only can tell who have in the course of their reading encountered its Gallic equivalent, "le Comité de Salut Public." This remarkable title of a famous board is even dignified by a headline to face a full-page portrait of Robespierre. The river Main is given "Mein," although the English tongue has in this case kept the original German form instead of following French usage. "Bonaparte chercha à se donner de l'air en terre ferme" becomes "Bonaparte had perforce to seek an issue in *terra firma*." M. Lebon says that Guizot's vacillation "le laissait désarmé devant les sollicitations les plus suspectes." His translator renders this, "left him unable to refuse the most ambiguous sollicitations." Besides the use of questionable language, we have noticed two cases where dates given correctly in the original have been altered, either by inadvertence or by design; it is hard to tell which. In a word, though we have seen much worse translations than the present one, we find nothing in it to commend.

Coming to the substance, we may observe that the French title, 'Cent Ans d'Histoire Intérieure,' gives a more precise definition of contents than 'Modern France.' M. Lebon fastens his attention so closely on domestic affairs that he permits the foreign relations of his country to remain matter for conjecture. Thus, when describing the part of Napoleon III. in Italian liberation, he does not once mention the name of Cavour. His notice of the Vienna Congress would be very inadequate in a book which professed to cover the whole ground; and if we go back to 1809 it is clear that the battle of Esling, viewed from the standpoint of general European politics, was more than "a fruitless massacre." We could multiply illustrations to show that M. Lebon is tethered to internal politics. While forced every now and then to treat of campaigns, he returns from them at his earliest convenience to Paris and her experiments in constitution building.

The effect produced by a short historical sketch is seldom determined by the bulk of fact which it contains. This is in any case so small, and so much the common property of all writers, that method, ideas, and style become the main considerations. As we are chiefly concerned with M. Lebon's book in its English form, we shall confine our few remarks to his method and general ideas. With respect to the first of these matters it may be said that he claims the merit of extreme simplicity. He limits himself to what has actually happened, and in seeking an explanation pays regard to patent rather than to obscure reasons. To put the matter in another way, he shuns the strategy of parties and follows the main travelled road of political issues. Translated into terms of modern France, this means that he leaves the process of agitation aside and

concentrates on revolutions. In noting the fall of one governmental type after another, he writes its epitaph: "Where a political system has failed, I have tried to show its obvious defects and not its hidden virtues."

An historical student who has also a seat in the Chamber of Deputies is sure to hold and profess fixed views. But M. Lebon's English readers are not his constituents, and all that one gathers of his own convictions is that they are moderately republican. Since the Revolution, the love of liberty has swept France more than once, and at other times the love of glory has proved a magic spell. M. Lebon, though doubtless taking as great an interest in the violent oscillations of his native land as a foreigner might, cannot be expected to accentuate them in vivid colors. He longs for stability, and concludes his preface with the hope that his pages may give an object-lesson of its advantages. "It is not by flying from one excess to another that a great people can achieve freedom and occupy a becoming place in the world." M. Lebon, then, keeps the contest between democracy and the craving for national greatness out of sight, and takes his leading contrast from the relations between civil equality and public liberty. After all that the Revolution and Empire achieved in shaping a code, the most delicate part of the business remained to be wrought. M. Lebon traces the downfall of the bourgeoisie to its constant selfishness under the restored Bourbons and the July monarchy. He impartially condemns the strictly guarded franchise of Louis Philippe and the fatuous use to which the proletariat turned its votes in 1848. The Second Empire, in spite of its ruin and shame, did not destroy equality; and, liberty having been restored by the Third Republic, France is still striving to find a *modus vivendi* for both. Such, stripped of their illustrations, are the salient points which run through this interesting epitome of French history since 1789. To indicate a single unusual feature of the book, we may remark that it handles constitutional subjects with greater care and knowledge than one expects to meet with in a general survey.

We have already criticised certain slips of the anonymous translator. We shall conclude by finding a little fault with M. Lebon himself. Our items against him, however, are not numerous, and some of them might be excused on the ground that limits of space were rigidly fixed by the publishers. His reference to the League of Pilnitz is so brief and bald that it conveys an incorrect idea of what took place. The single statement made, namely, that Leopold and Frederick William there "proclaimed their intention of intervening to restore Louis XVI. to his former rights," is open to stricture. Likewise the scope and methods of the September massacres are badly indicated. The episode is not called by any name, and the sole allusion to it runs in this wise: "On the arrival of the news that Longwy and Verdun were occupied, the populace stormed the prisons and murdered nearly a thousand aristocrats and priests, thus inaugurating the Terror." A few pages further on we are told that the execution of Louis XVI. "ushered in the sanguinary Reign of Terror." Dumouriez's attempt to lead his troops on Paris after the battle of Neerwinden is unnoticed, and the account of Louis Philippe's overthrow is so huddled that it becomes a

trap for the unwary. The inclusion of Herbert Spencer among English Positivists shows that M. Lebon has missed his controversy with Frederick Harrison. This is our budget of complaints—a short one, considering that the author of a popular treatise has to steer his hazardous course between the Scylla of diffuseness and the Charybdis of obscurity.

The Life and Writings of James Clarence Mangan. By D. J. O'Donoghue. Edinburgh: Patrick Geddes & Co. Pp. xxiv. 250. Portrait and illustrations.

Mr. O'Donoghue has bestowed care and labor upon this book, yet we doubt whether he has brightened the character of Mangan, or is likely to increase the circle of his admirers. He has not materially added to our stock of information concerning the poet. He has brought together a considerable quantity of material, but has not done enough in the way of selection and arrangement. Mangan was undoubtedly the most original of Irish-born poets. His reputation out of Ireland will never rest upon more than a few pieces; and in Ireland he is not likely ever to be so fully appreciated as by those who passed through the feelings and the stress of the Young Ireland movement. Those who knew him best had, after his decease, "no heart to write" his "personal history." They felt with regard to him the "most certain truth that" he "who will not save himself, all mankind banded together cannot save." "There is hardly anything more profoundly affecting in English literature," writes Alfred M. Williams in his admirable 'Poets and Poetry of Ireland,' "than such a poem as 'The Nameless One' read with a knowledge of the life of which it was a confession." By his "Dark Rosaleen" and his "O Woman of the Piercing Wall" he is likely to be appreciated in Ireland for generations to come. Mr. O'Donoghue has resuscitated a mass of information and anecdote concerning literary life in Dublin through the first half of the century. If London has since those days absorbed too much provincial talent, it has given back much in broadened interests and higher standards.

A History of the English Poor Law

In connection with the State of the Country and the Condition of the People. By Sir GEORGE NICHOLLS, K.C.B., Poor Law Commissioner and Secretary to the Poor Law Board. New Edition, containing the revisions made by the author. Edited, with a Biography, by H. G. WILLINK, Chairman Bradford Poor Law Union.

In two volumes. Large 8vo, cloth extra, \$10.00 net.

At this time of revived interest in all social questions, when the principles of all Poor Laws are in danger of being called in question, no student of the subject should be without this excellent standard work, which explains with the utmost clearness the foundations upon which all sound legislation must rest. It will be found of especial value to the American student of Social and Political Science, as it presents clearly the various social movements from which the author has pursued his investigations almost to the beginnings of English History, and he approaches the study of the progress of the English people by a graphic portrayal of the condition, from century to century, of the substratum on which society is built.

The Nation.

NEW YORK, THURSDAY, MARCH 31, 1898.

The Week.

The situation at Washington has not grown worse in consequence of the official report on the *Maine* disaster. Instead of a violent outburst of wrath following the conclusions of the court of inquiry, there has been a comparative calm. The report itself is marked by calmness of tone, and is not conclusive as to the causes of the disaster, and does not purport to be so. It expresses the opinion that the destruction of the *Maine* was due to an external explosion, which caused an internal explosion of two magazines. The operations of the divers revealed nothing from which an opinion could be certainly formed in reference to the condition of the wreck. The condition of the ship's bottom has not been ascertained, and no evidence has been found to fix responsibility for the accident. Consequently, the public temper is not as deeply stirred by that event as it would otherwise have been.

The report that the Bank of Spain has agreed to find \$40,000,000 more for the Government, if not true, ought to be. Common gratitude, to say nothing of the instinct of self-preservation and patriotism, should impel the Bank to such a course. According to its report for the year 1897, its business would have shown a loss had it not been for "the profits drawn from the advances to the Treasury and from the interest of the state and Treasury stock held by the Bank." The exact amount of these profits is set down in the report as \$2,780,000 from discounts of Treasury paper, \$6,125,000 from interest on Government securities held by it, and \$290,000 in commissions. Independent financiers and some of the newspapers of Spain have severely criticised the gradual absorption of Government finance by the Bank.

The authoritative and instructive article in the last number of *Harper's Weekly* on "The Public Finance of Spain, 1895-1898," is in no respect more valuable than in showing the actual amount of indebtedness incurred by Spain on Cuban account. Upwards of \$300,000,000 of Cuban bonds have been issued since the outbreak of the revolution in 1895. Reckoning the Cuban debt as it stood before the war at \$150,000,000, we get a total of \$450,000,000 for which Spain is liable on account of Cuba. These are figures which must not be forgotten in all questions about buying Cuba from Spain, or about suggesting to her to retire from the island with an indemnity of \$100,000,000. They also show the great

money stake Spain has, if desperate, in a war meaning to her the loss of Cuba. With Cuba would go the Cuban debt of \$450,000,000 or more, and this would be a wonderful help in balancing the books.

Any hope which the Spanish may have cherished of active European support, in case of a war with the United States, must have been dispelled by the speech of M. Hanotaux in the French Chamber on Saturday. France is the nation which was most likely to come to the aid of Spain; but it is clear now, as it really has been all along to the discerning, that France will do nothing beyond expressing good wishes and sympathy. Some days ago the *Temps* expressed this opinion, positively though reluctantly, including not only France, but Austria also in its view. Dynastic reasons have been thought by some as likely to lead Francis Joseph to offer material aid to Spain, but this is not to be looked for. Austria is in no need of searching for political problems abroad. No European Power, in fact, would do anything to disturb peaceful relations with the United States, except under the strongest provocation. If our interference in Cuba is put on such imperative humane and moral grounds as now seem certain to be urged, and if that interference leads to war, Spain will be left to stand absolutely alone in the civilized world.

It is the expected which always happens in elections in Spain, and the result of the choice on Sunday of new Deputies in the Cortes was according to programme. The dispatches say that Sagasta will have 300 Deputies—a figure which, curiously enough, was the precise one fixed upon and announced some weeks ago. The final returns may show a slight change from this number, either way, but the smooth working of the Spanish political machine is in any case sufficiently displayed again. Doubtless the desire of the Spanish people to uphold their Government at this critical time enabled Sagasta to get his great majority more easily. The best-informed correspondents in Madrid represent the nation as, in fact, absolutely united in the determination to assert what it believes to be its rights and dignity, at all hazards. Spain, of course, has its own yellow journals and *Furiosos*, who indulge in wild and foolish talk; but her serious newspapers and responsible public men have no illusions on the subject of a war with the United States. Yet they are willing to face its inevitable disasters if national pride requires it. With the best men of both countries earnestly hoping that war may be avoided, it would seem that diplomacy should find

some way of avoiding it; though fate and the chapter of accidents often mock the hopes and plans of statesmen.

Chairman Dingley is not saying anything about war, but is giving his mind to the great concomitant of war—taxes. That new ones must be laid to cover the war expenditures already authorized is clear. In addition to the \$50,000,000 voted out of the borrowed money in the Treasury, a \$40,000,000 naval bill has passed the House, and other military appropriations on a similar scale are on its heels. All this means deficit upon deficit—especially with revenue winking under the glare of war rumors—and Mr. Dingley is said to admit that new forms of taxation must speedily be devised. He can retreat gracefully enough, asserting that his original estimates remain as beautiful as ever, but that the war preparations have changed all that. As long as it was only an ordinary deficit, he could let the legions thunder by and plunge in thought again; but a deficit arising from extraordinary causes justifies extraordinary taxes to cover it, and these cannot be laid before Congress too soon. Equally timely is it that the Secretary of the Interior should have to ask Congress for an extra appropriation of over \$8,000,000 to meet a deficiency for the current fiscal year in the pension account growing out of our last war. The \$8,000,000 now asked for the twelve months ending next June is in addition to the nearly \$140,000,000 a year called for by the roll as it stood last June. Moreover, the Commissioner of Pensions is of the opinion that the outlay on this account must continue to increase for some time to come, although it is thirty-three years this spring since the close of the civil war. The astonishing fact is certified to officially that the number of pensioners has almost doubled since 1890, at which time a quarter of a century had elapsed since the end of the contest. In that year the total was 537,944, while it is now about 996,000; and the increase in the amount required to pay them has been proportionately great.

There is an old French proverb which says that "a gentleman is always a gentleman, especially in need or in danger." We would paraphrase this by saying that a patriot is always a patriot, in peace as well as in war. This is doubly true of a democracy, in which tendencies derive such force from numbers, and in which both morality and religion have so small a chance if the multitude are not kept on the true road by all the arts and influences of persuasion. We are reminded of this by a correspondence between Mr. Cleveland and the pro-

prietor of a yellow journal which sought to use his name in order to procure more credence for its lies and perversions. No better example of patriotism could be offered than Mr. Cleveland's attitude. He would not allow his sorrow for the *Maine* disaster, any more than his piety or his rhetoric, to be used to promote a debauching enterprise. He had not to wait for the sound of hostile guns to proclaim that he loved America, simply because he loved truth and decency and civilization all the time. He is as good a citizen at Princeton as he was at Washington.

The passage of the new primary bill by a virtually unanimous vote in both houses of the New York Legislature is a proceeding which is calculated to make reformers rub their eyes and ask what it means. Why should the politicians of both machines favor a measure which was designed to diminish if not destroy their power? We give it up. Probably they feel confident of their ability to "beat" it in operation, and thus be in a position to get all the "kickers" back into the party fold, under conditions which will make it difficult for them to complain of unfair treatment. Of one thing we may feel assured, and that is that the new system will give us a final test of the primary system. If, under this law, voters will not take part in the primaries, then it will be useless to advocate the continuance of this method of nomination in any form. If this plan fails, we must look to other methods for getting candidates into the field.

The doings of the new Tammany Commissioners of Accounts should attract the serious attention of the Civil-Service Reform Association. These Commissioners, who exist solely for the purpose of investigating the methods of municipal departments in order that the Mayor may be convinced of their efficiency and integrity, have been openly violating the civil-service law by abolishing positions in their own department in order to get rid of their incumbents, immediately re-creating the same positions and putting new men in their places. They have also, in at least one instance, abolished one office and created a new one in its stead in order to raise the salary of the Tammany incumbent, and they have also increased salaries in ten other instances. If this kind of thing can go on under the civil-service law, then it is a useless statute and should be repealed. The spectacle of officials, whose duty it is to see that other officials obey the law, openly violating it themselves, is peculiarly Tammanyish. No rebuke is heard from the Mayor, although the debt limit, which alarms him so that he cannot allow a public library to be built, is threatened by the increased expenditure which the course of the Commissioners entails.

The indictment of nine officials of the last Brooklyn city government for conspiring to defraud the city is the most serious blow which has yet fallen upon the Platt form of government. Mr. Willis, the former Commissioner of City Works, and Mr. Phillips, formerly chairman of the Republican organization in Brooklyn, were the chief agents of Platt in "downing" Jacob Worth and thus preventing the support of Seth Low for Mayor by the regular Republican organization of Brooklyn. They did such valiant service in helping Platt turn the new city of New York over to Tammany, that Croker had Mayor Van Wyck appoint Phillips a Police Commissioner, and he holds that position today. They are now indicted on charges of extravagant and illegal use of the public money in the execution of public work in the city. It is said that Gen. Tracy will appear as counsel for them, and this would be an eminently fit thing for him to do. These men were his most devoted supporters in Brooklyn during the late campaign, and helped more than any one else to delude enough persons into voting for him to make certain Mr. Low's defeat and Tammany's triumph. Gen. Tracy, as chief member of the Platt family law firm, should defend them without a fee, for they are in trouble because of their zeal in the Platt cause. Tammany's conduct in the matter is most ungrateful. The indictments are due to inquiries set in motion by the Comptroller, and were started because of the Tammany desire to show that the debt limit was being reached. After they had been started, it became impossible to check them, and it is possible that the present outcome was not foreseen by the Comptroller. Still, the indictment of so many good Platt men through Tammany agency, after the great service rendered by them to Croker last year, is one of the basest acts of ingratitude known to the history of political "deals."

The People's Bank of Philadelphia, which has just failed after its defaulting cashier had committed suicide, was a political institution, which was organized to make money out of the control over the State Treasury that was exercised by its managers. It was the institution to which Mr. Wanamaker referred, in his recent arraignment of the Quay ring, when he said that "a Philadelphia bank capitalized at \$150,000, a private institution whose president is Quay's old lieutenant, has continuously carried a deposit from the State Treasury ranging from \$300,000 to \$1,200,000, while school districts are waiting in vain for school money long past due"; and it was this institution regarding which he noted the interesting fact that it was the first place that Senator Quay visited whenever he went to Philadelphia. The defalcation of the cashier

should surprise nobody. He had a notable precedent for tampering with funds committed to his charge in the case of a State Treasurer who had done the same thing with the public money, and who, despite the exposure of his crime, had risen to the greatest power. Moreover, he seems to have been only the tool of the politicians who ran the bank, for Philadelphia people accept his dying statement that, after these politicians had led him into his original offence, and thus had him in their power, they obliged him to lend them money which he had no right to lend in order to keep another of their enterprises afloat.

A coroner's inquest has been held in the case of the colored postmaster at Lake City, S. C., who was shot dead at night last month by a large mob of white men, who had previously set his house on fire, and who also shot at the members of his family as they were driven from their home by the flames. The solicitor of the circuit had been instructed by the Governor of the State to use his utmost diligence to bring the murderers to justice, and a thorough investigation seems to have been made; but not a single witness could be found who would name any member of the mob, and the jury returned the not unexpected verdict that the postmaster and his youngest child came to their deaths "by gunshot wounds from the hands of parties unknown to the jury." An appeal has since been made to the President, and he has given assurances that both the Post-Office Department and the Department of Justice are doing all in their power to ferret out and punish the members of the mob, and that the Attorney-General is now considering what further steps the Government can take within the limits of federal jurisdiction. But nobody who has observed the repeated failures to punish lynchers in many States, both North and South, really expects that the federal authorities will prove any more successful in this case than the State. Nothing was accomplished by these authorities last year when they investigated the shooting of a colored postmaster in Georgia.

The editor of the *Augusta (Ga.) Chronicle*, Mr. Patrick Walsh, has never been known as a civil-service reformer. Indeed, he has generally been regarded as a practical politician, and he lived up to that reputation, as the Georgia member of the Democratic national committee, for some years. But he is at last waking up to the absurdity and disgrace of a system under which, as he says, "we have been content to regard with apathy the appointment to the American residences at Tripoli or Singapore or Hong Kong whatever loyal national committeeman or successful ward politician it might please the honorable

Congressman or Senator furtively to nominate." He has learned that the result of this policy is that "Americans abroad are sometimes mortified at the representatives sent out by their Congressmen," and he quotes a gentleman just returned from Japan as reflecting rather bitterly on the officials of our consular and diplomatic service in that empire. This observer reports that they are "often men of the diamond pin, red-striped shirt-front, heavy black moustache, and husky voice description, uneducated and incompetent, representative of nothing save the influence of the Bowery element in American politics"; and he adds that "the worst of it is that Englishmen and Frenchmen abroad form, as men will, their opinion of the whole people of the United States from these discreditable representatives." The editor of the *Chronicle* is now ready to admit that we ought to learn a lesson in this matter from England and France, which send no man as minister, consul, or attaché of legation until he has completed a long and severe preparation in the Government school of training for diplomatic service, until he has become thoroughly acquainted with the history, language, manners, and habits of thought of the people among whom he is to be thrown. Such an article as this in the *Chronicle*, considering its source, is both significant and encouraging.

Anton Seidl, the greatest dramatic conductor of the century, who died suddenly on Monday, was every inch an artist, never satisfied with mere financial success, if he felt that his ideals had not been approximated. Though the most generous of men (he has been known on various occasions to return his check to managers who had suffered losses), he would not even conduct a charity concert unless it could be done in a way that would not discredit the work or deceive the public. Another of his traits—remarkable among musicians—was his modesty. He knew perfectly well what he could do, but he never acted in a way to show that he was conscious of it. During the years of his eclipse he never complained, except to his friends. He was, indeed, too modest; he lacked the quality of "push," so necessary in this country; and but for the zeal of his admirers he might have been kept in the background still longer. Others intrigued against him, but he never stooped to intrigue against a rival. Quite as remarkable as his artistic honesty and his modesty was his enthusiasm. During the first years of his sojourn in America he looked upon himself chiefly as a Wagner missionary. This created the impression that he was a Wagnerian conductor and nothing else—an impression which it took years to eradicate. As a matter of fact, Seidl was a remarkably many-sided musician. Schubert and Schumann did not seem

to appeal specially to him, but he was a splendid Bach conductor. Beethoven's seventh and ninth symphonies have never been more superbly rendered than under his baton. His Liszt conducting was perfect in its rubato and spirit. He had a great liking for dainty French music, and conducted it exquisitely, whenever he had a chance for sufficient rehearsals. His recent performances of Tchaikovsky's "Pathetic" and Dvorák's "New World" symphonies will always be remembered by those who were so fortunate as to hear them. His loss is a public calamity.

An interesting libel case is promised in a proceeding which took place in the City Magistrate's Court before Judge Cornell last week. Charles T. Russell, President of the Connecticut Granite Company, brought a charge of criminal libel against Percy T. Applegate, Secretary of the company, because of information which the latter had given to two reporters who had accepted it as authentic and had published it. The information reflected unfavorably upon Mr. Russell and is pronounced by him to be wilfully false. The reporters make affidavit that Mr. Applegate, knowing them to be reporters, gave them the information, which they accepted as truthful because of his position as Secretary. Instead of suing the newspapers, which were misled unknowingly, Mr. Russell has sued the real offender, under section A 254 of the Penal Code, which makes "any person who wilfully states, delivers, or transmits, by any means whatever, to the manager, editor, publisher, or reporter of any newspaper . . . any libellous statement concerning any person or corporation, and thereby secures the actual publication of the same," guilty of a misdemeanor, and liable to fine or imprisonment or both. Judge Cornell held Mr. Applegate for trial, and it is to be hoped that Mr. Russell will push the case to a verdict. Every reputable newspaper will thank him for his course in the matter, for all such have suffered repeatedly from the consequences of publishing in good faith what was really malicious misinformation. The number of persons who supply false news for malicious purposes and then put the blame upon the "lying reporters," is much larger than people suppose.

M. Ferdinand Brunetière attempts, in the *Revue des Deux Mondes*, to give the anti-Zola party an intellectual standing. Boiled down, his argument resolves itself into the question if the first man in the street (*le premier venu*, meaning, of course Zola) is to be allowed, without proof or the shadow of proof, to insult grossly the administration of justice and the army. There ought to be no division of opinion, he says, on so simple a ques-

tion, yet there has been a great and unfortunate division. This has been due to three causes, affirms M. Brunetière—the anti-Semitic fury, the fear that an all-powerful army, sacredly guarded from every criticism, is a danger to a pure democracy, and the unhappy decision of certain "intellectuals," as Brunetière sneeringly calls them, to identify Zola's cause with that of liberty and justice. This is surely a painful spectacle—an intellectual man pouring contempt upon intellectual men for asserting what they believe to be the most precious rights of freedom. Not a word comes from Brunetière about the way in which Zola's proofs were not permitted to go before the jury; not a word about the overwhelming evidence, which M. Labori succeeded in accumulating, that Dreyfus was, as Zola declared, condemned on the strength of a document which he never saw; not a word about the immense success of Zola's bold challenging of the authorities, in so far as it makes it certain that judicial abuses of the kind complained of will not speedily be repeated in France. Brunetière has never concealed his intense dislike of Zola; he is now committed to the thick-and-thin defence of the powers that be in Church and State; but it does seem that he need not have gone out of his way to take a position so unworthy of him as is this effort of his to dignify the anti-Zola mob.

The unforeseen difficulties of Prince Henry in getting his "mailed fist" to China for lack of coal, led *Punch* to represent him running about from friend to friend with the anxious inquiry, "You haven't got such a thing as a ton of coal about you, have you?" The scrambling for coal for naval purposes in the Orient has had the effect of almost doubling the price. England, with her customary meanness, bought up all that was in sight, and none can be had now in Shanghai and Hong Kong short of \$10 the ton. This is a great change from the time when Japanese coal at \$5 controlled the market; and, for the time being at least, is one of the most striking of recent economic changes in Japan and in the Far East. If the world-wide craze for coaling-stations continues, it should have a marked effect on the world-wide demand for coal. But if Capt. Mahan's advice is followed, it will be "an inviolable resolution of our national policy that no foreign state should henceforth acquire a coaling-station within three thousand miles of San Francisco." This will be as bad news for our coal-miners who would like to supply coaling-stations, as for foreign states. "Modern monsters of the deep die of inanition," writes Capt. Mahan, meaning that warships without coal become helpless hulks; but, what is worse, coal-miners with their markets cut off also die of inanition.

THE WAR IN ITS RIGHT PLACE.

War with the Spaniards about Cuba has long been one of the "cards" of American party politics. For over fifty years one party or another has proposed to help itself by the deliverance of Cuba from Spanish rule, beginning with Soulé's plan of annexing it, in the interest of slavery, in 1854. During Mr. Cleveland's administration, it was particularly useful in enabling the Republicans to tease him without going further. They were constantly desirous of making Cuba a belligerent without becoming belligerent themselves. The result has been that in the minds of many politicians a war with Spain about Cuba has lost the character of a war, and come to seem merely a "shrewd move" intended to put the other party "in a hole." It has become something to threaten with, not to enact. It finally became simply a business enterprise. The sufferings of the Cubans were wholly lost sight of in the hope of making some money out of a conflict in their behalf. When the present crisis arose, the business view of war was what was chiefly present to the Jingo mind. One of the earliest expressions of this view saw the light about three weeks ago in the *Detroit Tribune*. That journal urged war as good for the real-estate men and the bankers especially, and added, "That there is profit in war could not be so widely believed if it were not true." In fact, it treated war as a purely business enterprise, just like the Buccaneers of the Spanish Main in the seventeenth century. These men went to war and sacked cities simply because they were in need of money, or, in other words, because their business was dull. Among the more rampant Jingoes, such as Thurston of Nebraska, this view still prevails. He said in the Senate on Thursday last:

"War with Spain would increase the business and the earnings of every American railroad, it would increase the output of every American factory, it would stimulate every branch of industry and domestic commerce, it would greatly increase the demand for American labor, and in the end every certificate that represented a share in an American business enterprise would be worth more money than it is to-day. But in the meantime the spectre of war would stride through the stock exchanges, and many of the gamblers around the board would find their ill-gotten gains passing to the other side of the table."

Similar views found expression in various newspapers all over the country, showing what, a month ago, there was behind the ebullient patriotism. In fact, these open avowals of readiness to kill people and destroy property for purposes of private gain were probably the most grotesque outcome of Christianity and civilization that the Western world has ever had, and it has had many.

It was this kind of war that we have steadily opposed. It was no more possible for us to support it than to join in a plan of murder and robbery. But our

opposition would have availed little had it not been for the firmness and courage of the President in keeping the eyes of Congress and of the public on the real object of a war with Spain—the relief, and, if possible, the final deliverance of the Cuban population. He put the war in the place it should always hold among civilized men, a last resort, when negotiation in a just cause and for a reasonable end has been plainly exhausted. He refused to rush into war, or, as the swashbucklers say, to become a "fighter from the word go," until he had found out whether there was no other way—to send our young men to death before he had found out whether it was absolutely necessary. This is the true position for the civilized and Christian ruler. We acknowledge the necessity of war under certain circumstances, if for no other reason in order that the higher civilization, which in our day is apt to find its expression in superior strength, shall have its due influence in the ordering of human affairs. But to fight for the sake of fighting, and above all to fight in order to make business lively, sinks civilized man below the savage. The savage fights under the influence of inherited passions and devilish instincts and an animal view of the ends of life; but even he is not so degraded as to fight in order to make money in trade.

Mr. McKinley proposes now to spend money out of the abundance of which we are so proud, and of which we boasted so much the other day, in the very work for which we have professed to long, about which the fighting parsons and the sham patriots have shed tears—the relief of the hungry and the naked and the ending of their suffering. The war he speaks of is a war, not to make dry goods lively or raise the price of iron, but a war to enable beneficence to reach this suffering and allay it. It will be a war against those who impede our bounty, and not a war to humiliate any one, or show any one how we hate him, or to enable us to gloat over his mutilated corpse.

If the Spaniards, as Mr. McKinley seems to expect, admit our relief freely, it is hardly possible that coöperation in philanthropy should not bring about calm, mutual discussion of the situation, and a mutual desire to end it without further loss of life. War ought to be always the statesman's last resource. It is essentially the art of barbarians and duellists. Diplomacy is the art of civilization, and the highest diplomatic skill consists in making it easy for the other party to yield your demands. To irritate him, to humiliate him, to put him on his mettle or offend his pride unnecessarily, is a blunder, especially if your main object is to lure him into a position in which you can stab him or split his skull. Every means should be exhausted in winning him over to your way of thinking before you announce to him

that you must try to kill him. If you have to try to kill him, you should be able to say to him with a clear conscience, "It is my duty to try to kill and impoverish you, not because dry goods are low, or cottons are dull, or because many of us prefer war to industry, but because you deliberately stand in the way of relief which I wish to carry to people whom you have plunged in misery and whom, you confess yourself, you are unable to help. Having made this acknowledgment, it behooves you to take yourself out of my way. My errand is peaceful and humane, and you surely remember that before being a Spaniard or a ruler of Cuba, you are, as I am, a man."

"THE FLAG COVERS THE CARGO."

There is some curiosity, as well as a variety of opinions, concerning the position our commerce would occupy on the seas, both in our own and in neutral ships, in case of war with Spain. The matter is really plain enough. Under international law, as interpreted by the admiralty courts for ages, and as accepted by most nations until 1856, a belligerent can seize his enemy's goods in neutral bottoms on paying the freight due to the carrier. In fact, in the days when war was in more credit than it is now, and when every Power expected to be a belligerent next month, international law was formed largely with a view of helping the belligerent to do his enemy as much damage as he could. As civilization has gained ground and commerce has grown in importance, however, there has been an increasing disposition to be easy with the neutral, and to deny the right of the belligerent to seize his cargo, no matter to whom it belongs. Out of this disposition has grown the long controversy, which began nearly a century ago, in favor of "free ships making free goods," or, in other words, of the doctrine that "the flag covers the cargo." We, as the great carriers of the world during the Napoleonic wars, were vigorous advocates of this, but England, as the great sea Power, was unwilling to concede it. But at last even she gave in, and when the Powers met in Paris after the Crimean war, they all—that is, England, France, Russia, Prussia, and Italy—agreed that free ships should make free goods; that is, an enemy's goods should always be safe in a neutral vessel.

Neither Spain nor the United States signed this declaration, nor the declaration against privateering. Powers with small navies are, as a rule, reluctant to give up privateering. Therefore, under the law of nations, American goods, no matter by what ships carried, would be exposed to capture by Spanish cruisers. Although most of our exports go in British ships, these ships could be stopped on the high seas, and their cargoes,

if belonging to Americans, be taken from them. Our only defence would be the use of the telegraph to make the purchases on this side. But they would have to be bona-fide purchases. The courts of admiralty have always been very strict about fictitious or evasive sales. This would doubtless be an impediment to trade, but it would, probably, in the main, hold us harmless.

But Spain, by a treaty of trade and commerce concluded with us October 27, 1795, explained and ratified by another treaty concluded in 1819, agreed not only that "free ships should make free goods" as between Spain and the United States—that is, that neither of them would seize the other's goods, in case of war, on board a neutral vessel—but also that they would not seize the goods of any Power at war with them on board a neutral vessel, if the government of this neutral vessel had acknowledged this principle—i. e., that free ships make free goods. Now England and France have both acknowledged this principle, so that American goods on the vessels of either of these Powers would be safe from Spanish capture. In fact, both America and Spain have virtually acknowledged the principle, by mutual agreement, and the agreement is such as to cover the signers of the declaration of Paris.

As most exports of grain are purchased on this side, they would on the seas be foreign property; but if captured in an American ship, the ownership would have to be proved in a court of admiralty. The Spaniards would almost certainly take an American prize before one of their own courts. But if found on board a neutral ship, there could, under the treaties, be no inquiry. "The flag would cover the cargo." The result of this would probably be that whatever remains of our foreign carrying trade would be transferred to British ships. But, as regards our coasting trade, since the British are prohibited, under our navigation law, from carrying it on, we should have no resource but to keep a bright lookout for Spanish privateers. We should have to rely on our navy to keep these privateers away from our shores.

Although, therefore, our foreign commerce would be comparatively secure, the state of the moral atmosphere would not be very auspicious for business. Probably a large proportion of our business men would pass much of their time reading yellow journals; nobody would engage in ventures needing time for their completion, and interest in the sufferings of the Cubans would be a daily diminishing quantity. War is not a thing to prophesy about, unluckily. If it were, the number of wars would be greatly diminished. Had the people of the United States, either North or South, foreseen in 1860 that the war would last four years in-

stead of sixty days, that it would cost 700,000 lives, and would make a debt alone more than the value of all the slaves, who can doubt that the efforts even of the anti-slavery men to avoid it in some way would have been more strenuous? The fact is, that there is never such a disturbance of judgment in any human concern as takes place when war is talked of. Important as the matter is, the people about to engage in it lose a large part of their reasoning power, and become little better than irate animals. So that offensive wars are rarely undertaken by men in their normal mental state.

THE BANKING COMMITTEE'S BILL.

The committee on banking and currency of the House of Representatives is the body in which any effective legislation for currency reform must take its start. Other persons may make suggestions and direct public opinion and take the needful steps to bring about legislation of some kind, but the only organs through which these movements can exercise authoritative influence are the committees of Senate and House which have special charge of the subject. Of the two, that of the House is the more important at the present time, and is the only one to which we can look for anything like a forward movement. Several bills have been before this committee during the whole of the present session, some of them being the work of individual members. Of the measures not prepared by members, the ones which have engaged most attention are those of Secretary Gage and of the Monetary Commission appointed by the Indianapolis convention. These have been so fully considered in our columns that a recapitulation of their features is hardly necessary.

Two or three weeks ago a sub-committee of three members of the general committee, consisting of Messrs. McCleary of Minnesota, Prince of Illinois, and Mitchell of New York, was appointed to consider the various bills and report one for the consideration of the whole committee. This task has been done, and an outline of the work has been given to the press. It embraces features of Secretary Gage's plan, of the plan of Mr. Walker of Massachusetts, the committee's chairman, and of the Monetary Commission's bill, and has some new features not found in previous bills. It begins with that part of Secretary Gage's plan which contemplates the separation of the banking functions of the Treasury from its other functions. It provides for a division of issue and redemption in the Treasury, for which the Secretary is authorized to set aside the general cash balances in excess of \$50,000,000. This excess, on March 17, 1898, was \$176,139,532. United States notes received by this division for

redemption in gold are to be cancelled and retired in proportion as certain substitute currency is issued. No note redeemed in gold is to be again paid out unless under exceptional conditions.

The bill proceeds upon the idea that gold is the basis of our monetary system. Everything which relates to redemption of paper money, by either banks or Government, looks to gold redemption. This is a capital point. It makes an issue, from which it is not possible to escape, between the gold standard and the silver standard. It recognizes the fact that the time has come to settle this question, that there can be no more dodging, that the question must be fought out now. This is an immense gain. If the republic is to suffer eternal infamy by legalizing repudiation, let us know it as soon as possible. The committee has done right to put this question in the forefront.

The next feature of the bill embraces the leading idea of Chairman Walker's bill, which is that the national banks shall relieve the national Government of the task of redeeming the outstanding legal-tender notes, in return for certain privileges which are offered to them. Under the bill, the banks are required to assume the current redemption of United States demand notes in order to obtain circulation based upon their commercial assets. A new class of notes, called national reserve notes, is to be issued in lieu of legal-tender notes deposited by the banks with the Treasury, and these reserve notes are to be redeemed upon demand by the banks out of the redemption fund, which they are required to maintain in gold. These reserve notes are not treated in any respect as banknotes, because the banks are not liable for their ultimate redemption. The Government is liable for their ultimate redemption, but meanwhile they are available as bank reserves, and are legal tender exactly like the greenbacks which are deposited in the Treasury against them. The reserve notes can be identified as having been issued to particular banks, while the greenbacks cannot. Hence the need of the substitution of the one for the other under the plan. After the expiration of one year the banks will be allowed to issue their own notes against their commercial assets to an amount equal to the reserve notes issued to them in exchange for greenbacks deposited by them in the Treasury, but they must deposit a guarantee fund equal to 5 per cent. of all banknotes outstanding, applicable to the redemption of the notes of failed banks, and this guarantee fund must be kept good; but no greater tax than 1 per cent. on circulation can be levied in any one year for this purpose.

This is the crucial feature of the bill, and the question arises, Will the banks consent to assume the current redemption of the greenbacks in return for the

privileges offered to them? As the bill stands, they are required to do so, willy nilly, if they remain in the national system, but they can resign their national charters and return to the State system, relinquishing the privilege of issuing notes. We think that the first impulse of the banks will be to reject the plan, but that upon further reflection they will accept it.

Of course the main idea of the committee is to relieve the Government of the constant menace to public and private credit involved in the instant redemption of its demand notes, and to do this in such a way as not to encounter political opposition, which an issue of interest-bearing bonds would be sure to create. The Monetary Commission's plan is the ideal one, but it is pretty plain that Congress will not accept it as a whole. The bill under consideration embraces that part of it which looks to the issue of banknotes against commercial assets under Governmental regulation, with a guarantee fund of 5 per cent. and a first lien upon assets. So much, at all events, will go to the credit of the Indianapolis movement, besides the credit of having stirred up the country to demand currency reform. Our judgment upon the bill of the sub-committee as a whole is that it is well worth fighting for, and that it has a good prospect of passing the House, and that it will meet with favor the more it is studied. We say this while expressing our preference for the Monetary Commission's bill.

MUNICIPAL ADVERTISING.

At one of the early meetings of the committee formed for the "Birth Celebration," the orator of the occasion, Mr. Washington, dwelt on the importance of the celebration as a means of advertising New York as a city to the cities of the Old World. We pointed out then, and have done the same thing since, that no city on the globe, not even London or Paris, was already, without any special effort for that purpose, as well advertised as New York. London, Paris, Berlin, and Vienna are moderately advertised by things which interest foreigners—architecture, art collections, statues, parks, libraries, historical associations, and reminiscences. Tens of thousands of foreigners who care nothing about English or German or French politics, are drawn to these cities by these attractions every year. They do not care how they are governed; what interests them is the results of the government. With these results the earth resounds. The inhabitants do not need to hold meetings or "celebrations," or fly kites or send up balloons, in order to remind the world of their existence. Foreigners go to London, or Paris, or Berlin, or Vienna because in these places their eyes and tastes are gratified, and

they are made proud of their race when they see the way in which these Englishmen, Frenchmen, and Germans, through their respect for civilization, for science and art, but above all for character, have given themselves dwelling-places of which they are proud, and which draw pilgrims and pleasure-seekers from every quarter of the globe, which they leave with difficulty, and to which they come back with joy.

But good as these advertisements are, they are not equal to ours. They draw better than ours—there is perhaps more money in them; but, for making places talked about, they cannot compare with our modes of calling attention to ourselves. To begin with, we have what no other city has, a boss who holds no office, and yet directs and controls the government. Not only this, but the boss, if he existed in any European city, would probably be a man of education and good manners, who had followed with more or less success some lawful occupation, who associated, on equal and friendly terms, with the principal persons of the community, and association with whom, although it might be disagreeable, nobody would consider disgraceful. In all European cities our boss would be simply inconceivable. If you describe him in exact terms, the Englishmen, or Frenchmen, or Germans, or Italians, will listen to you very much as the King of Siam listened to the travellers' stories about ice. If you tell them that this boss, thus depicted, dally "sauces" the leading merchants of the place and its people of intelligence and education, tells them the government of the city is no affair of theirs, and that he will let them know what is best for them, they will at once inquire how large is the armed force at his command. On your assuring them that he has no armed force at command, but does it all by sheer impudence, and that the chief inhabitants are all afraid to offend him, and are very meek when he gives them orders, they will explode with laughter, and shout, "Git out; we are liars ourselves!" or use words to that effect in their own language.

If, after they have recovered, you go on to tell them that this boss has followers in the Legislature, ignorant and red-nosed blackguards from the slums and public houses, who, when leading merchants and citizens go up to consult with the Legislature about public affairs, regularly abuse them, ask them what they have to do with public affairs, and call them names, they will probably ask whether New York is on the sea, whether it is a port of entry, whether its size and prosperity is not due to trade and commerce, and whether the trade and commerce are not carried on by these merchants, and what contributions the ignorant and red-nosed blackguards in question make to the public wealth. When you reply that the red-nosed

blackguards have never rendered the smallest service to the community, that they get their subsistence through salaries levied on the taxpayers through the orders of the boss, you will make a deeper impression on them about New York than six months of "celebration," or processions, or kite-flying.

In fact, the government of New York is a better advertisement than could be devised by the wit of man. If anything as original could be concocted by the advertisement agents of any of the great houses, Wanamaker, Macy, or the Siegel-Cooper Company, it would make the fortune of their employers. Cities have been known to the world, and have been the best expressions of contemporary human civilization, as far back as records go. They have been the glory of each succeeding age of the world's history. But it is we who have first produced a great city governed by its ignorant, corrupt, and vicious classes, with a dictator who hardly knows how to write, has never exercised an honest trade, has been in the criminal courts as an indicted prisoner, and thinks he has a divine right to his power. Our advice to the "Birth Committee" is, if they want to have an advertisement which will make a lasting sensation, to hold a four days' pageant with the following "floats": (1) Croker at his Club, surrounded by his Henchmen; (2) The Municipal Assembly in Session; (3) Mayor Van Wyck in Paint and Feathers, delivering himself on Art, Literature, and Science; (4) Tom Grady and Tom Creamer giving the Chamber of Commerce a bit of their minds. Here is an advertisement which will make New York the wonder of the world.

FELICE CAVALLOTTI.

FLORENCE, March 26, 1898.

Abbasso il duello! Moralists have preached, patriots have protested, against duelling; advanced parties, republicans, and socialists have made the abolition of the duel their watchword of late years, yet this outcome of barbarism, this relic of the Middle Ages, this senseless, useless appeal from right and reason to brute force or blind luck, has kept its hold in Italy with a strength and tenacity that has outlived the very essence of chivalry which gave it birth. Many causes have contributed to prolong the superstitious veneration that surrounds the duel.

(1.) Example is one. Think of a fight between the Minister Cavour and the Deputy Avigdor, the Ministers Lanza and Rattazzi, in the halcyon days of the Piedmontese Parliament; of Emilio Visconti-Venosta, now Minister for Foreign Affairs, and Maurizio Quadrio, Mazzini's second self, fighting it out in Switzerland; of Alberto Mario, after several duels, challenging on his death-bed a scurrilous calumniator, and you find the sanction of example hallowing the duel. (2.) A standing army is a breeder and fosterer of duels. There, as the code of honor goes, an officer challenged must fight; if insulted, must challenge or quit the army.

in disgrace. (3.) The new penal code, abolishing capital punishment for murder, and substituting in its stead solitary confinement for ten years and imprisonment for life, or for a certain number of years, is more than lenient towards duellists. The present law awards six months' arrest for a simple duel, five years' imprisonment at the utmost when one of the combatants succumbs. But the worst feature of the case is that duels are fought daily in public places; the police take no steps to prevent them; the newspapers announce the hour and spot when and where a duel will take place. In the case of duelling Deputies, the sanction of the House must be obtained before the law can take its course, and this sanction has been invariably refused hitherto. In February, 1893, authorisation to prosecute twelve Deputies who had fought duels was refused by the House. The Socialists, who have taken the lead in the crusade against duelling, and, with one exception, refused all challenges, have now presented a bill to Parliament for the abolition of the existing law, and the substitution of the articles applying to wounding and killing in ordinary crimes. The preface to the bill is noteworthy:

"We do not believe that public manners can be regenerated by the corrective virtue of laws, but we do hold that the office of law is to ameliorate civic conduct by opposing all that deteriorates or corrupts it through ignorance or traditional prejudices. The duel is a disgrace to modern society, an offence to reason, to right, to liberty, to the principle of social equality. It is one of the many aspects under which medieval barbarism survives. And if it is a disgrace to the society which tolerates, even while condemning, this brutal method of settling private quarrels, it is an unpardonable sin in the legislator to honor this form of wounding and killing (which is often but a cloak for ferocious and premeditated crime) with a special title, treating it as a misdemeanor, not against persons, but against the administration of justice, a misdemeanor punished lightly, if punished at all, and never, despite the notoriety of preliminaries, forestalled or hindered. For this reason, with the consciousness of performing a civic duty, we present the following bill, for which, at this hour, when Italy, weighed down by the burden of an irreparable catastrophe, vents her grief in execrating the fatal prejudice, we trust that you will recognize the urgency and accord to it your sanction."

Of the numerous, too numerous, funeral orations pronounced over Cavallotti, slain in his thirty-third duel—in Rome, throughout the provinces and in Milan—that of Colajanni (the first reveler of the Bank scandals) struck the truest note:

"Not words but deeds this bier demands—an active protest against this barbarous system which, consciously or unconsciously, has become a fatal instrument in swaying the destinies of Italy. Let Milan cry *Basta!* and there shall be an end of it. Italy will answer *Basta!* and those who would fain use the barbarous dagger against the representatives of right and justice will be disarmed."

And Milan's protest is unequivocal even as was Rome's. Cavallotti's death calls, not for vengeance but for expiation. "This shall be my last duel," he promised on the eve of the catastrophe. God grant that it may be the last in Italy.

With Cavallotti the last living representative of the Garibaldian legend is sent into the tomb. He was not a Socialist; he cannot truly be called a republican. Italy for the Italians—the Italians for humanity—was his ideal; a people, all the people, freed

from foreign oppression and from native tyrants, free to choose their form of government, with power to enforce its just administration, to extend its benefits to all ranks and classes, to insure the moral, social, and intellectual progress of the entire nation. Cavallotti's family name is inscribed in the golden book of the Venetian Serenissima. His father and mother settled in Milan, where Felice was born on November 6, 1842. At the age of nine he knew all Rossetti, Nicolini, and Prati's revolutionary poems by heart, and at twelve his squibs and satires against the Austrians were the delight of his schoolfellows. Rejected as too young by the chiefs of the second Garibaldian *Mille*, by presenting his cousin's *compé* of 1895 he succeeded in starting with Medici's second expedition, and I remember a war hymn that he composed during the voyage, which had a truer ring than Mercantini's. Next we found him at Milazzo, weeping bitterly for his colonel, Migliavacca, who fell in action. After the battle of the Volturno, he joined the elder Dumas at Naples in the editorship of the *Indipendente*. Though he took his degree as an advocate, he never exercised his profession, devoting himself to literature and poetry, taking classic, not Romantic, authors for his model. In 1866 he fought together with Garibaldi in the Tyrol, and, after Mentana, foretold the Franco-Prussian war and the unity of Germany in a fine ballad.

From that moment commenced his journalistic battles. The *Gazzettino Rosso*, which he edited when Bizzoni, his second in the fatal duel, was imprisoned, was always sequestered, and his articles and ballads led to various challenges, always accepted, while once he challenged an entire regiment of hussars, and in a single day at Bologna fought three duels, wounding all his adversaries. In a later duel with Lieutenant Ambrosini, in his impetuous onrush he was literally spitted on his adversary's sword, but recovered from what was deemed a fatal wound. In vain his friends protested, pleaded, urged him to renounce a system unworthy of his genius, pernicious as an example; his shortsightedness and impetuosity causing them each time to tremble for the issue. The tobacco-jobbery crusade when Lanza, the Speaker of the House, left the chair to combat the immorality of his own party, found in Cavallotti a fierce champion of public morality. In 1870 he refused to fight for France with Garibaldi against Prussia, but his only brother fell at Dijon, as did Imbriani's, the "knightly, noble Giorgio." It fell to my lot to tell them both of their bereavement, and Felice's sorrow for this, his first loss, was heartrending, but it did not alter his views as to the justice of the cause, and his poem "For Germany" is one of his finest. Nevertheless, he was one of the staunchest opponents of the Triple Alliance. Even as he protested against France when, under the Second Empire, she posed as dictator of Europe, so he deplored the coalition of the Continental Powers for the subjugation of France. Friendship with all nations, subservience to none, was his motto for Italy in Europe. His very last political letter was a protest against the attitude of the Italians in the Dreyfus scandal.

"The Dreyfus trial ought to be revised," he wrote. "Zola has done his duty as a Frenchman; but Italy, after the massacres in Sicily, the wholesale deportation of innocent and noble men, without a legal trial,

should have imposed silence on herself. The French may fairly answer, 'Physician, heal thyself.' No nation ever rights its own wrong-doings because of the condemnation of another; such interference irritates, but does not conduce to repentance."

Cavallotti's crusade against Crispi was too personal, too violent, often unjust. Neither the Triple Alliance nor the African muddle was originated by Crispi, though he carried them to excess, owing to his temperament, violent as Cavallotti's own. When the results of the inquiry into the Bank scandals by the Committee of Seven were made known, had Cavallotti promoted a general legal agitation for the trial and punishment of the proved offenders, he might have succeeded; but his twelve columns of execration, of vituperation, the raking-up of old grievances against Crispi, not only overshot the mark, but aroused in men shocked and saddened by the revelations the memory of what the man had once been, what the patriot had done. Browning, in his "Lost Leader," fairly expresses their feelings, their sorrowful regret, their conviction that he "must never come back to us," but they could not gloat over his fall, and were all alienated from Cavallotti for his conduct throughout. Now he is silent in death, and all that he too was and did for Italy comes back to them with a rush of tenderness, not untouched by a shadow of remorse. Carducci's short but eloquent commemoration of Cavallotti embodies these feelings. The catastrophe had impressed him most painfully. He was glad that quite lately (after a long estrangement to which he did not allude) Cavallotti, on meeting him at Pistoja, had presented his son, a lad of fourteen, studying in the lyceum there. He spoke of Cavallotti's lofty (*intemerato*) character, of his genius, praising his lyrical poetry, his dramas, but expressing his belief that his posthumous fame will rest on his parliamentary eloquence. No one who has read the four volumes of his speeches in the Chamber of Deputies, his commemorations of Garibaldi, etc., will differ from this judgment. Carducci did him the justice to affirm that his love of country, his habit of sacrificing himself, parties, even political ideals, to her welfare, was supreme. He regretted "the violence of his campaign against Crispi, the aged patriot, one of the last great statesmen left to Italy," and expressed his opinion that Felice Cavallotti would very soon have been invited to share in the government. I do not think that Cavallotti would ever have accepted office, though many attribute his late political conduct to disappointed ambition. No! He gave his support to the Rudini Ministry, because it was composed of honest men, to prevent the return of what he called the "Crispi crew," and there is no doubt he has been instrumental in preventing the presentation of certain bills on deportation, the rights of public meetings, etc. But he was too jealous of his spotless political reputation, too indignant at the charges of ambition brought against him, to give a handle to his accusers. Then his past acts speak for him. When extremely poor—i. e., before his literary works brought him in a fair income—Perez, Minister of Public Instruction, offered him the chair of Italian literature in the University of Palermo. He regretfully declined the honor, saying that Italy does not yet understand that office is the gift of the nation, not of a party: "By accepting, I should have given my adversaries the right to question my disinterestedness as a

Deputy, my consistency as a man and as a writer. We have but one conscience, one name, and a short life in this world."

It is impossible to give any idea of Cavallotti's literary productions in so short a space. They fill twelve large volumes, lately revised by himself. Of his serious dramas, his "Pezzenti" is the most popular, "Alcibiades" the most highly esteemed by competent critics. His political speeches in the House and on the platform alone occupy four volumes. He had just completed a new drama in two acts, which will be given at the Manzoni Theatre in Milan. He was calming down, occupying himself with social questions, though openly opposed to the methods by which avowed Socialists propose to solve them. The King has been profoundly distressed by his death. Ministers, Deputies, all the authorities of Rome and Milan, followed his bier. The offer to inter him at the expense of the state was declined by his friends; it is probable that he will be buried in the little cemetery of Dagnente, where his sister and his daughter lie, and where, in a very modest house, his best work was done, his better self trained, strengthened, and moulded for the battle of life.

J. W. M.

LAST YEAR'S FICTION CROP IN ITALY.

ALASSIO, March 12, 1898.

The year 1897 was not one of great production among the novelists of Italy—at least as far as regards quality. Gabriele d'Annunzio has given the world time to forget the tediousness of the 'Vergine delle Roccie,' and has occupied himself with a play, to say nothing of politics and other things foreign to literature. The play, "La Ville Morte," written for Mme. Sarah Bernhardt and brought out in French at Paris in advance of its publication in Italian, seems, in despite of no end of skilful indiscretions and other modes of stimulating the palate of theatre-goers, à la *Scribe et Meyerbeer*, to have met with but scant success, though all critics seem agreed that, with even more than the usual unpleasantness of subject, the work is distinguished by poetical qualities of a high order. Its beauties probably combine with its defects to remove it far from the sympathies of the general public of the theatre.

The one novel of these later months that can be put alongside the best of former years, is 'Piccolo Mondo Antico,' by Antonio Fogazzaro. It came out already in 1896, but late enough to be counted with the work of the period under consideration. The "little world" was on the Italian shore of the Lake of Lugano, and its antiquity was but relative—a matter of forty years, in fact, or just before the struggle that freed Italy from the foreign yoke. Railways and telegraph existed already, most of the elements of modern life were there, but yet how different it all was! Many of us in a quiet hour can shut our eyes and recall a time when the persons of our acquaintance seemed full of individuality; they were odder, quainter, more gracious, nobler, and, above all, more themselves than their successors of to-day. It may be that distance lends much of the enchantment, and it is certain that the exquisite landscape setting of Val Solda and the delightful humor of which Sig. Fogazzaro is a master, go far toward making an Arcadia of this little old-time world. And yet there were the Austrians and the *Austriacanti* to turn the idyll into

a tragedy at a moment's notice. 1848 had not been forgotten, and the foreign rule, vexatious at the best, was exasperating and insufferable at the worst. It could not be otherwise; conspiracies (real and fancied) stimulated rigor, and that in turn kept alive the ferment of conspiracy. The action of the book goes on within this vicious circle, and yet the story is not one of plots, nor even mainly of patriotic endeavor. It is simply the story of two lives and the picture of a society that has passed away. Such as it is, it is thoroughly charming; it may be doubted whether the author of 'Daniele Cortis' has ever done anything more admirable than the earlier chapters of this book.

About four years ago Federico De Roberto published a novel, 'I Vicerè,' which, according to my mind, is the strongest of all performances in recent Italian fiction. De Roberto, who is still young, began to publish when scarcely arrived at man's estate, and his work, remarkable from the beginning, steadily increased in value up to the volume just mentioned. This was the story of a great Sicilian family that, in the days of Spanish rule, had furnished Viceroy to the country, and still ranks among the highest in the land. The story begins in the later years of the Bourbon régime, and through the vicissitudes of the family one sees the changes in Sicilian society from the golden days of King Bomba down to those of the present vulgar parliamentarism. The picture is vast and complicated and yet of the most vivid truthfulness—one of those portraits that convince the observer at a glance that the original could not have been otherwise than as here represented: you can no more doubt than you can doubt the truthfulness of Holbein's "Thomas Morett." Parenthetically, I take this opportunity of recommending all who are interested in Italian literature, or in Sicily, or in the novelist's art, to read this remarkable book.

Naturally it is a disappointment to find the contribution of De Roberto to the fiction of the year by no means on the high level of the 'Vicerè.' 'Spasimo' is far from being a bad novel—from another author it might be called a good one, something out of the common; but *noblesse oblige*, and De Roberto is held to the standard he has himself created. But, although a disappointment to one who looks for a companion to the 'Vicerè,' 'Spasimo' is another evidence of the power and versatility of its writer. A murder has been committed, of course in very interesting and puzzling circumstances, and the book is occupied with the unravelling of the mystery, not after the manner of Gaboriau, nor yet of the valiant Sherlock Holmes; it is only when a portentous array of the most ingenious reasoning has failed to discover the culprit that the guilty conscience finally charges itself with the office of *deus ex machina*. De Roberto has also published within the year two volumes, 'Amori' and 'Gli Amori,' which are not novels but studies, physiological, psychological, and moral, and as such have no place in this report.

From Catania we have a reprint of an early novel of Giovanni Verga, 'Una Peccatrice.' It is curious only as showing how rubbishy a work could be written by the author of 'I Malavoglia' and 'Mastro Don Gesualdo' before he had found where his strength lay. It may be that there was promise in the very badness of it. One is tempted to think that in cutting loose from all restraints of possibility and common sense,

and in exaggerating all the peculiarities of the old Romantic school, Verga must have been a follower of Cervantes. But the caricature, if it be such, is too solemn; there is not a hint of a smile from beginning to end, and one is forced to conclude that the book is bad simply because its author was trying to do something for which he was utterly unfitted. It is, however, worth buying, not only as coming from one of the foremost writers of fiction of our day, but also for the portrait of Verga which it contains, and which, with its clear-cut features and the fine irony of its expression, increases our bewilderment in reading the pages that follow it.

The name of E. A. Butti is among the newer in Italian literature. After one or two trials he attracted attention a few years ago with a clever novel, 'L'Immorale.' He is one of the "psychological" school, and, one may add, "for better or for worse." Two years ago it was for the latter. 'L'Anima' was a study of morbid psychology—so morbid that it was almost as bad as interesting one's self in the loves of two of the creatures that are to be seen in glass jars in a natural-history museum. At the beginning of last year he gave in the pages of the *Nuova Antologia*, and afterward published in a volume, a performance of a better order. 'L'Incantesimo' is full of pleasant landscapes of the eastern shore of Lago Maggiore, and has to do with human beings. The secondary characters are in a way, though lightly sketched, full of relief and life. The book is decidedly pleasant reading up to the last pages. Without being squeamish, one may feel that the manner in which the protagonists come to final union is, in the circumstances, unnecessarily brutal. In both these books of Butti there is something to be demonstrated; in 'L'Anima' it is the existence of the soul (though it may be doubted if any creatures above the level of those depicted in the book would consider the demonstration satisfactory), while in 'L'Incantesimo' the aim is more difficult to formulate. It may, however, be roughly stated that it is to show the necessity of marriage, even to those who aspire to lead a life of pure intelligence. Without disputing the thesis, we lay down the book more than ever convinced that a novel is not, and can never be, a demonstration. There is, perhaps, no use in trying to make the novelists see this fact, as long, at least, as painters think that pictures are made for telling stories, and graceful essayists pose as critics of art. After all is said, it must be owned that Butti in this volume does not obtrude the lesson as he did in the preceding one. Partly in consequence of this—though chiefly for many other reasons—'L'Incantesimo' is far and away a pleasanter book than was 'L'Anima.'

Among the writers whose names are known outside of Italy, Luigi Capuana has this year given a small volume, 'La Sfinge,' which, like 'L'Incantesimo' and 'L'Idolo,' first appeared in the pages of the *Nuova Antologia*. I will confess to feeling but little sympathy for the art of Sig. Capuana, and the reader can take this fact into account in reading what I say of his book. He is a follower of the naturalistic school of France, in its extreme *recherche* of finish in style, in its unrelieved pessimism, and in its predilection for the disgusting—graces that are rather gone out of fashion and un-

chant many of us no more. In *'La Sfinge'* there is no single page that, like some in the works of his masters, turns the stomach, but the flabby unwholesomeness of the general effect goes far toward making up for this want. Of course the subject is the animal passion of a young man for a young woman, and the only thing, as far as I can see, to differentiate this passion from thousands of others is that the young man has over his writing-desk an extraordinary water-color sketch of a Sphinx, with multitudes of victims of her fatal charms lying dead or falling about her, while others, fascinated, are struggling to reach her. Well, the young man gets it into his foolish head that his young woman is another such Sphinx, and so at the end he blows out what brains he had, or takes poison, or jumps from a fourth-story window (I forget which), and—that is all. If any reader of this thinks that my account savors of blind prejudice, let him read the book and judge for himself; there are graces of style in it which may give him pleasure.

The show for the year is thus far not a brilliant one. *'Piccolo Mondo Antico'*, which, I repeat, seems to me worthy of a place among the books that are not to be forgotten, does not exactly belong to 1897, having already appeared in the autumn of 1896. But there is still one performance in the number of those before me which stands head and shoulders above its followers, *'L'Idolo'* of Girolamo Rovetta. No novel of Rovetta is dull; without exception they are interesting from beginning to end, and one of them at least, *'La Baraonda'*, of which I gave an insufficient account in the *Nation* at the time of its publication, has many of the qualities of a great work. For some reason or other, which I have never succeeded in defining, there always remains a doubt in my mind as to the intrinsic value and durability of the unquestionable charm of these stories. Also in *'L'Idolo'* (which, with nothing in it quite as striking as some parts of *'La Baraonda'*, is yet perhaps more evenly sustained), after having had good entertainment from beginning to end, after having admired the force and truthfulness of the observation, felt the impression of movement in the society and of life in the individuals, after having yielded repeatedly to sudden enthusiasms, as over something really first rate, the old doubt comes back to torment me and to attack the validity of Sig. Rovetta's eminence. Perhaps it is only the inevitable recoil from the tension in which one has been kept; or, rather, perhaps, it is that *'La Baraonda'* and *'L'Idolo'* have the air of the *roman à clef* that delights and then exasperates in some of the work of Daudet. These are novels of society, of the world that is so limited that everybody in it is more or less known to all the others, and the characters are portrayed so exactly that one cannot help fancying that everybody in Milan must infallibly recognize each one and refer it to its original. I am inclined to think that it is this suggestion of the scandalous that is at the bottom of the doubt—a half feeling that one has no right to have all these persons shown up so intimately for one's amusement. At any rate, the fact remains that the books of Sig. Rovetta are uncommonly good reading. The present one is, as far as possible, in the form of a play—mere dialogue, with the necessary stage directions; a form that,

avoiding tedious descriptions and more tedious commentary, gives remarkable liveliness to the narration.

Carlo Placchi, of whose first novel, *'Un Furto'*, I had the pleasure of saying in these pages much that was good, has lately issued a volume of stories. There is nothing to be said about them here, as, in answer to my demand for the book, I was told that the edition was completely exhausted—*Sit omen faustum*. Had my want been satisfied, space would still have been too scant for a proper notice of these stories, as it is also for the latest works of Emilio De Marchi, Matilde Serao, and others more or less well worth knowing. S. K.

Correspondence.

COURTS VS. LEGISLATURES.

TO THE EDITOR OF THE NATION:

SIR: In your issue of the 10th inst. (p. 176) you refer to the statute passed by the Legislature in Washington in 1897, enacting that all debts are payable in lawful money of the United States regardless of any provision for payment in any specific form of money. You apparently are not aware that the Supreme Court of this State, on the 15th ult., in the case of Dennis vs. Moses, held this statute unconstitutional on the ground that the subject is one "upon which a State cannot legislate, but it belongs exclusively to the general Government." This is apparently the first decision directly on the power of a State to make such an enactment. The opinion says: "The precise point whether a State can provide that the contract can be discharged in any kind of lawful money regardless of the stipulations of the parties, does not seem to have been decided elsewhere. . . . It follows that this contract must be enforced according to its terms and that the act is inoperative." The contract here was a gold-clause contract similar to almost every written contract that is made anywhere west of the Missouri River, and was made since the statute was enacted.

In the same case the court also held that two other statutes passed by the same Legislature under the impetus of the Populist wave are unconstitutional. One act, forbidding judgments for deficiency on foreclosure, was held wholly void, and the other, providing a cumbrous system of appraisal, designed to force the mortgagee to take the mortgaged property at an appraised valuation, partly so; and as to the rest of this latter statute the court construed it in a reasonable and business-like way so as to take the sting out of it.

After all, the courts are generally our sure refuge. Our liberties are often stabbed in the house of their professed friends, but rarely when they seek safety at the altar of justice. The word of the stern old Roman is as true as ever: "Tu cole justitiam. Tibi et aliis manet ultor."

CHARLES E. SHEPARD.

SEATTLE, March 17, 1898.

AMERICA AS SHE IS REPRESENTED.

TO THE EDITOR OF THE NATION:

SIR: In your issue of March 24, 1898, I read, among the correspondence, a letter, signed by Mr. Howard Leslie Smith of Chi-

cago, in which he sets forth a letter from the United States Minister Resident and Consul-General to the court of Siam. Merely for the sake of information, I should like to learn from you whether this letter to the court of Siam was, when so sent, written in English, Siamese, or French. If in English, Mr. Smith's criticism is well-deserved; if in Siamese, or, more probably, French, should not the criticism fall upon the translator, rather than the author? Our consular service has a heavy enough burden to bear for the shortcomings of its representatives, Heaven knows; but in justice to the particular representative who is the subject of Mr. Smith's scathing criticism, ought he to bear the responsibility of what is apparently a literal translation from some foreign language into "English as she is wrote"?—Yours respectfully,

W. M. STOCKBRIDGE.

UNIVERSITY CLUB, BOSTON, March 25, 1898.

[We have no information in the premises.—ED. NATION.]

TO THE EDITOR OF THE NATION:

SIR: Permit me to point out that the United States Consul at Amoy, whom you quote as saying, "It is so long since England fought a nation whose men wore pantaloons that the sight of an anticipated army that is not dressed in breech-cloth, tunic, or turban would cause palpitation of the heart," is lacking, not only in official good breeding, but in accuracy. In 1880, or thereabouts, England made war against the Boers—a nation whose men certainly wore pantaloons (sometimes, like their Dutch ancestors, three or four pairs of them at once), and who do not fight with clubs or tomahawks or assegais. The laurels won by "Tommy Atkins" in that struggle are yet green.

W. R. K.

MARCH 26, 1898.

WHO WILL TEACH THE TEACHERS?

TO THE EDITOR OF THE NATION:

SIR: The secondary-school teacher may perhaps congratulate himself that Dr. Botsford's letter, which appeared in the *Nation* of March 17, is the dawn of a better era for him—of an era when the college teacher, with his wider opportunities for study and his more specific field of work, will turn his attention to the needs of the secondary school, and will use his powers that these needs may be adequately met.

Dr. Botsford attacks the accuracy of statement of certain details of Greek history used incidentally to illustrate methods recommended by the committee on methods of study of the New England History Teachers' Association, and counsels "grubbing in Oman." The teacher obediently turns to Oman and finds, singularly, that Oman seems to justify the report! The points in discussion which Oman omits are supported by the other books upon the teachers' shelf—Greenidge, Curtius, Gow (helped by Aristotle's *'Constitution of Athens'*), etc. Although no secondary authority can establish a fact, yet since Dr. Botsford specifically orders Oman, since Harvard College in its various courses counsels the reading of Curtius, Gow, etc., since Greenidge is "Lecturer in Ancient History at Brasenose College, Oxford," since Aristotle's name is somewhat widely known, though hardly as "secondary authority," it may be

well to compare their statements with those of Dr. Botsford.

(1.) Oman represents the Peloponnesian war as a final phase of the Confederacy of Delos (pp. 290, 341, 376, 407, 408); says that the Lacedæmonians subjugated the whole of the Peloponnesus (pp. 79, 80), and that Solon substituted a timocracy for an aristocracy: "The first of the four Solonian classes was called. . . . The second, . . ." etc. (p. 109).

(2.) Greenidge, p. 172: "Legislation, therefore, was a wall of coöperation between the two great popular bodies, the ecclesia and the heliasa."

(3.) Curtius, I., 403-6, describes the family combinations in tribes for political purposes, and the new divisions which were "called Phylæ, i. e., tribes like the old; but in them there was no question as to birth and descent." (The extremely condensed form of digest packed the reference to "family," "birth and descent," as influences in the old tribes, in the word "blood.")

(4.) Gow, III: "Every official, on laying down his office, was subject to account before public auditors (*elphores*)." (Note.) "The several duties of these boards are obscure, but they certainly reported on each official to a jury of 501 members, who adjudicated on the case." Aristotle's 'Constitution of Athens,' p. 13: "For the absolute freedom with which the people vote as jurors makes them absolute masters of the Constitution." (The ecclesia, as a political unit did not control magistrates directly by *elphores*; the ecclesia, as a collection of all "free citizens," and therefore identical with Athenian "people," controlled magistrates indirectly through jurors. The digest wished to indicate in condensed form the sovereignty of the "people.")

(5.) Dr. Botsford will doubtless admit that the formation of the Confederacy of Delos marks an epoch in the constitutional history of Athens when under so-called "democratic government." A phase of federalism may also be a phase in the development of a democratic state.

Evidently, if Dr. Botsford is right, the books now in the hands of secondary teachers are wrong, and the crying need of the times is better books—books which shall put before us the latest results of scholarship. The teacher of history in the secondary school cannot be a specialist because of the wide range of subjects he must teach and the many hours of class-room work expected from him. He is at the mercy of writers of reputable text-books. In the present state of Greek history he cannot teach "facts," because he cannot get "facts." No one is more conscious of ignorance than he; no one longs more ardently to know the truth that shall set him free from the possibility of doing sham work. Will not the college experts help instead of scold; prove the inaccuracy of existing books, and give us better ones?

We must not, however, confuse the question of the accuracy of certain given details with the broader question of the proper method of studying history. Dr. Botsford's letter is a proof that he sympathizes cordially with the central position of the committee—viz., that since history, like life, is a collection of problems, not a simple statement of simple facts, the study of history should be a training of the powers of thought, not a memory-cram. The nature of history dictates the methods by which it

must be studied; and since history is always history, these methods remain essentially the same whether in secondary school or in college. From the beginning the pupil should be warned that "being in a book" is no proof of the truth of a statement; he should be taught to compare books, weigh their assertions, use his judgment—in fact, to do in miniature what Dr. Botsford presumably does with the sources of Greek history. The pupil who had most industriously "grubbed in Oman," and done nothing else in the secondary school, would be obviously the one in whom Dr. Botsford would find the least joy in college, the one who would the least contribute to his serenity of spirit and sweetness of temper.

We thank Dr. Botsford once more for his onslaught upon existing text-books, and beg him and his colleagues to heed the cry for help which goes up from the secondary school to the college.

ANNA BOYNTON THOMPSON.

THE THAYER ACADEMY,
SOUTH BRAINTREE, MASS., March 24, 1898.

A VERSE VULGARISM.

TO THE EDITOR OF THE NATION:

SIR: It seems to me strange that the "verse vulgarism" of elision of the final *g* should not have found its explanation at once in the fact that in some quarters in England, even in well-bred circles, this elision is a sign of good breeding. *Willin'* is invariably pronounced "willin'," etc., and I can remember that my father—a Rhode Islander and a schoolmaster in his early life—invariably elided the final *g*. I could mention a most noble English family in which the elision of final *g* is as much a sign of good speech as is the pronunciation of *Abergavenny* as "Aberginny," or *Beaulieu* as "Bewly."

And, by the way, "F. T., jr." quotes Poe as saying "we would wish," etc., a vulgarism which has not the excuse of that which Poe complains of. If he "would wish," why don't he? Wishes are not horses and don't need stables.—Yours truly,

W. J. STILLMAN.

ROME, March 14, 1898.

Notes.

As publishers of the *American Journal of Archaeology*, the Macmillan Co. solicit subscriptions to the facsimile of the Catullus MS. rediscovered last year in the Vatican library by Prof. Hale, Director of the American School of Classical Studies in Rome, as already intimated in these columns. The publication is by the Vatican, under the direction of Signor Danesi, and a certain number of copies have been engaged for America at \$4.50, bound in fourteenth-century style.

Dr. Elliott Coues, whose editorial appetite grows with feeding, has undertaken, through Francis P. Harper, a new set of historical works, to be entitled "The American Explorers' Series." Nearly ready is the Journal of Major Jacob Fowler, describing his travels from Fort Smith to the Rocky Mountains and return in 1821-23, printed verbatim from his original MS. Dr. Coues copiously edits and indexes this. Another manuscript to follow is 'Forty Years a Fur-Trader on the Upper Missouri,' the personal narrative of Charles Larpenteur.

'The-Making of the Canadian West,' by the Rev. R. G. Macbeth, will be issued on April 15 by William Briggs, Toronto.

The Marlon Press, Jamaica, N. Y., announces a small pamphlet in a limited edition, 'The Courting of Dinah Shadd: A Contribution to a Bibliography of the Writings of Rudyard Kipling,' being a reprint of letters from Kipling, Besant, and other authors to the London *Athenæum* in 1891, respecting the ethics of American book piracy in the good old days.

A useful work for children on the dispersion of seeds, 'Seed-Travellers,' by Clarence Moores Weed, is announced by Ginn & Co.

G. P. Putnam's Sons have in press 'Lost Man's Lane,' a sequel to 'That Affair Next Door,' by Anna Katharine Green.

Harper & Bros. will shortly publish 'Social Pictorial Satire,' by George Du Maurier; 'Through the Gold-Fields of Alaska to Bering Straits,' by Harry de Windt; and 'Vanity Fair,' the first volume of the "biographical edition" of Thackeray's complete works.

The first number of the bound volume of *Harper's Weekly* for 1897 is introduced with a cartoon showing how Uncle Sam's horse Business Revival is discomposed in starting by the Jingo brass band—not for the first time. Views of the Philippine Islands and their insurgents follow, and the second number transports us to the insurgents in Cuba. To all appearances, a whole year has been but as a day. But, going deeper into this huge volume, we are reminded of Greece's humiliation, of McKinley's inauguration, of Queen Victoria's Jubilee and the fresh outbreak on the Indian frontier; of the consummation of Greater New York and the return of Tammany to power; of Hawaii, the Klondike craze, and (in an admirable series of views) Russia's fateful advance Eastward along her own Siberian iron highway. Such a twelvemonth has not lacked for sensation or for pageants. Some notable monuments have been dedicated and are here depicted—Grant's tomb, the Shaw memorial in Boston, the Washington statue in Philadelphia, the Peter Cooper in New York, the Gen. Logan in Chicago.

Pictorially, *Harper's Bazar* for the same term makes the impression of a more rigid attention than hitherto to the main objects of this fashions and woman's journal. A few glimpses of royalty—of perennial interest—some of Gibson's London cartoons, a little of the Queen and her Jubilee, a taste of Nansen, the Mississippi floods (for pity's sake), a bit of the Congressional Library—these sum up public interests. Portraits of the ladies of the new and the outgoing Administrations, and of great numbers of officers of women's social, literary, and patriotic organizations, are noticeable for their abundance. As Carl Schurz in *Harper's Weekly*, so Col. Higginson in the *Bazar* continues to be a constant signed contributor.

The Smith tribe fill 168 pages of the fifty-third volume of the 'Dictionary of National Biography' (Macmillan). Two of the more famous of these, Adam Smith and Sydney Smith, fall to the pen of Leslie Stephen, who shows a warm feeling for the witty Canon, and records many noble traits of character which have been obscured by his reputation as a humorist. In his writings on the Established Church, says Mr. Stephen, Smith "assumes that a clergyman is simply a human being in a surplice, and the church a branch of the civil service." Few Americans could

be found who remember that "his last literary performance was a petition to the United States Congress in 1843 complaining of the State of Pennsylvania, which had suspended the interest on its bond." Mr. Stephen gives also an affectionate sketch of James Spedding, the Baconian scholar, and friend of Tennyson, Carlyle, and Fitzgerald. And Spedding, too, has an American aspect, for he accompanied Lord Ashburton to this country in 1842, in connection with the northeast boundary settlement. Captain John Smith, Miles Standish, and Gov. Spotswood of Virginia are the chief Anglo-American worthies commemorated in this volume; but we must not omit to couple with these the name of the founder of the Smithsonian Institution. Arago records of Smithsonian that he "regularly" divided his day between interesting scientific researches and gaming. He was, in fact, "unable to forego the stimulus of play."

There is not a somnolent line in Mr. Charles F. Lummis's "The Awakening of a Nation: Mexico of To-day" (Harpers). Thoroughly grounded in Spanish-American history, with Spanish at tongue and pen's end, and with an extensive personal acquaintance with the lands to the south of us, Mr. Lummis has made it his task, in this volume, to show how in Mexico the past score of years has projected a vast new structure against the historic background. His record is a vivid one of municipal adornment and sanitation, of educational and industrial development, of political solidification in a period of unprecedented peace. When one reads of a moral quickening rivalling the material, and is given to understand that the corrupt officials of the recent past have disappeared utterly, one remembers his *Nemo repente*, and remains in a scepticism which may not be healthy, but is inevitable. Certainly if Diaz has been so astonishing a moral regenerator of Mexico, as well as her pacificator, the cry for such a benevolent tyranny as his will become exceeding great and bitter in other lands.

The success of Mrs. Steel's novel, 'On the Face of the Waters,' has caused a demand for more correct knowledge of the facts of the Sepoy Mutiny in India, which formed the background of her exciting romance. The standard history commenced by Sir John Kaye and finished by Colonel Mallett is in six volumes, and goes too much into detail for any but specialists in Anglo-Indian history. More convenient in size, and not so detailed, is 'A History of the Indian Mutiny,' by T. Rice Holmes, of which a fifth edition has just been published by the Macmillan Co. The book was first issued in 1883, and the mere fact that a fifth edition should be demanded fifteen years after its appearance is a clear proof of its merits. There is no need to review at length a volume which has thus justified its existence, but it may be worth while to draw attention to some of the additions that the author has made to it. The text has been carefully revised, and the references at the foot of the pages considerably increased in the light of recent Mutiny literature, notably of Forrest's 'Selections from the Indian State Papers.' More important are the new appendices which Mr. Holmes has added on disputed questions. From nine appendices in the fourth edition, the number has risen to twenty-three, and they now fill seventy-six pages, as against eighteen in the previous edition. The new appendices deal

largely with questions raised in recent publications, such as Sir Auckland Colvin's 'Life of his father,' and Sir Owen Burne's 'Life of Strathairn' in the "Rulers of India Series," Lord Roberts's 'Forty-one Years in India,' and General M'Leod Innes's 'Lucknow and Oudh in the Mutiny' and 'The Sepoy Revolt.' The longest appendix, however, is devoted to the character and career of that celebrated leader of Indian Irregular Cavalry, Hodson of Hodson's Horse. Mr. Holmes has formed a very bad opinion of Hodson, but it seems a pity to rake up old scandals.

The firms of Armand Colin and of Calmann Lévy have been engaged for some time in bringing out a series of selections from "Great French Writers." The entry of some writers into this series is surprising to outsiders. France, for instance, beside Chateaubriand, Loti beside Renan. The last three volumes are devoted to Dumas, Guizot, and France. The only preface worthy of notice is that to the Dumas volume, and mainly because M. Parigot, who writes it, has caught something of the style of his author in writing about him.

A solid and useful book is the 'Chronologie Moliéresque' of Georges Monval, the Moliériste par excellence. It is a full and detailed chronology, year by year and day by day, of all the facts in the life of the great comic dramatist, and also of all events in any way connected with his life and work. It is beautifully printed, and there is an admirable reproduction of Mignard's portrait of Molière by way of frontispiece.

Armand Colin & Cie. have brought out a dictionary useful to foreigners as well as to Frenchmen: Paul Rouaix's 'Dictionnaire-manuel des Idées.' It is simply a French form of Roget's 'Thesaurus,' a kind of work much needed by students of French and now placed within their reach at a moderate cost.

'Alberto Mario: Scrittore e Giornalista, 1848-1861,' is a monograph by Giosuè Carducci, reprinted from the *Nuova Antologia*, which has several claims on the attention of readers interested in the story of modern Italy. Mario was in some degree a typical member of the revolutionary party—intellectual, ardent, high-minded, personally spotless and disinterested. He enjoyed at different times very intimate relations with Mazzini and with Garibaldi, yet his own individuality was strong enough to prevent his being a mere satellite of either. He was not so doctrinaire as not to be able to enlarge his views after the failure of republicanism in 1849 and the coming forward of the Piedmontese monarchy as the leader of the Italian movement. Needless to say, Carducci writes with his well-known fervor, all the more that Mario was one of his friends (Rome: Forzani).

Alfredo Niceforo's 'Criminali e Degenerati dell' Inferno Dantesco' (Turin: Fratelli Bocca) is an attempt to discover anticipations of modern criminological theories in Dante's 'Divina Commedia.' In a lengthy introduction the author discusses "The Psychology of Dante," maintaining the thesis that "genius knows neither time nor space," and that the poet's imagination not only "bodies forth the forms of things unknown," but actually exercises prophet functions and foresees the scientific achievements of future ages. Thus, the atomic theory was held by Kanāda (*kana-ada*, atom-eater), the founder of the Vaiseshika school of philosophy in India, and by Leucippus and Democritus in Greece, and

the doctrine of organic evolution by Lucretius and Nemestus. In Dante's 'Inferno,' Niceforo finds examples of criminality and degeneracy foreshadowing and illustrating the teachings of Lombroso: the adulterous pair Paolo and Francesca, the treacherous Argenti, the sacrilegious thief Vanni Fucci, the simoniac Nicolò III., Master Adam the falsifier, and the "fiera compagna" as diabolical types.

Col. Higginson's "Galatea Collection of Books relating to the History of Woman," his gift to the Boston Public Library, catalogued in the March *Bulletin* of that institution. It reckons somewhat more than 1,000 volumes, embracing a large number of individual biographies, along with works grouped under such rubrics as "Relations and Comparisons of the Sexes," "Rights of Women," "Work and Influence of Women," etc. These are in many languages and some old. They are intended to serve as a nucleus for future growth.

"The Current Proceedings of the American Antiquarian Society" (Worcester, Mass., vol. xi., part 3) contains a descriptive list and text of early American broadsides (1680-1800) in the Society's possession, of greater or less historical value. More noticeable is Mr. Lécien Carr's compendious account of the "Dress and Ornaments of Certain Indians" (namely, east of the Mississippi), with copious citation of authorities and much curious information not strictly in line with the theme, which is nevertheless kept well in hand. We recommend this paper, which has been printed separately, to book-illustrators having to depict the savage of old in connection with the first settlers of this country.

Thanks to Mr. Henry C. Mercer, the Bucks County (Pa.) Historical Society's Museum contains a considerable collection of tools and utensils illustrating "the disused arts and crafts, professions and amusements of colonial times." Among these a hideous paint-box points to a survival of illuminative writing (*Fraktur*) among the German settlers of the region in question. The art was taught by schoolmasters, was oftentimes in black and white, and applied either to school or religious books and apparatus. The curious will find the story set forth, with interesting plates, by Mr. Mercer, in No. 2 of the above society's "Contributions to American History." The tardy establishment of the English school system in Bucks County, in 1854, marked the beginning of the end of *Fraktur*, and broke one more link between Pennsylvania and the Rhine valley.

A correspondent points out that in an article on Rufford Abbey (a fine old Nottinghamshire country seat), by Lord Saville, presumably its present owner, in the *Pall Mall Magazine* for April, it is stated that "George IV., when Prince of Wales, paid a visit to Rufford. During this visit, Charles Dibdin, the poet, who had accompanied his Royal Highness as master of the ceremonies, wrote his celebrated song 'Woodman, Spare that Tree,' after having witnessed the falling of an oak in the park." Not only, however, was the song notoriously written by George P. Morris, a native of Philadelphia, but the tree was spared.

The Royal Geographical Society's 'Year-book and Record' contains a brief history of the Society, including an account of its house and library of 31,000 volumes, 100,000 maps, and 100,000 photographs. The list

of one hundred and more expeditions aided begins with that of Capt. Back's Arctic land expedition in 1832, while the first medal awarded was to Richard Lander, in the same year, for the discovery of the course of the Niger, the last to Nansen. The American medallists whom we have noted were the Rev. Dr. E. Robinson for his 'Biblical Researches in Palestine,' Gen. Frémont for his explorations in the Rocky Mountains and California, and Drs. Kane and Hayes. There are also lists of the 3,929 fellows and the referees, arranged alphabetically and again under the various countries.

The recommendation of the committee of the Norwegian Storting appointed to revise the Constitution, to grant universal suffrage to all men above twenty-five years of age, does away with property and other qualifications in a manner to extend the franchise far beyond its present limits. Under the Constitution, the age limit is the same. Further stipulations, however, are that the right of suffrage can be enjoyed only by those who have lived in Norway for five years, and who either (a) have held public office, or (b), in the country, have been in the use—as proprietors or tenants—of land on which they have paid taxes for more than five years, or (c), in the towns, have the right of citizenship, or (d) own realty to the value of at least 600 crowns (\$160), or, finally, according to the amendment of 1884, (e) have paid the preceding year a direct tax upon an estimated income of at least 500 crowns (\$134) in the country, or 800 crowns (\$214) in the towns, and have resided a year in the election district.

Zacharias (or Zakris) Topellius, the well-known Finnish writer, whose death occurred on the 13th of March, was born near Ny Karleby, Finland, January 14, 1818, the same year as Strandberg and Jolin. Soon after graduating from the University of Helsingfors, he became the editor of the Helsingfors *Tidningar*, a position which he continued to fill for almost twenty years. In 1864 he was appointed professor of Finnish history at his alma mater. His earliest publications were songs and poems in the style of Runeberg, who was at that time the controlling literary force in Finland. Later he published several dramas which achieved considerable success. It is by his *Finskärens Berättelser* ('The Surgeon's Stories'), however, that Topellius is known to English readers. This work consists of a series of six romances, or cycles, dealing with the fortunes of a Finnish family during the 17th and 18th centuries. The series began in 1872, the same year as Freytag's similar work, 'Die Ahnen,' and was completed in 1874. The central historical figures are Gustavus Adolphus and Charles XII., whom the author has delineated with an enthusiasm tempered by judgment. Many passages in the cycles treating of these heroes remind one of the prose epic style of Stenkwicz. Topellius was also very successful as a writer of children's stories.

Mr. William I. Fletcher, the librarian of Amherst College, will open a session of six weeks (July 11 to August 19) at Amherst, in connection with the Sauveur Summer School (Department of Library Economy). As heretofore, no special requirements for admission are exacted, but a certain degree of education and aptitude is presupposed. Further information may be had of Mr. Fletcher.

—The Hawaiian agitation has added two books to the literature of the Sandwich Islands, one of which has some local historical value. This is the volume popularly known as "Queen Lil's book," the proper title of which is 'Hawaii's Story, by Hawaii's Queen, Liliuokalani' (Boston: Lee & Shepard). It is an illustrated volume of some 400 pages, and gives a good presentation of the Queen's case. The book ends with an appeal to "honest Americans" to hear the plaint of a downtrodden people "whose form of government is as dear to them as yours is precious to you"—a statement on the accuracy of which some portions of the Queen's narrative throw the shadow of a doubt; her account is not of a people tenacious of its political rights. The other book, which presents the case for the Sons of the Missionaries, is by John R. Musick, author of the "Columbian Historical Novels." It is significantly called 'Hawaii—Our New Possessions,' is copiously illustrated, and is published by the Funk & Wagnalls Co. It contains an account of the author's travels and adventures on the islands (this part of the book has some value), with sketches of their scenery, customs and manners, mythology, and history. It also has a good map. Mr. Musick's readers will find no trace here of those curious parallelisms between his style and the styles of writers like Bernardin de St. Pierre and Dickens, which critics think they have detected elsewhere. The book is written in pure American, and is not in the least imitative. It is chiefly remarkable for its peculiar political terminology. A "missionary" in Hawaii does not merely mean a preacher of the word, but corresponds with "reformer" in South Africa, and has for the student of the science of government connections with "flibuster," insurgent, and even rebel. We were not prepared, however, to find the idea carried so far as to make the upholders of the monarchy "agnostics" (pp. 54, 55, 205); but, with the author, agnostic and monarchist are convertible terms. When we meet Col. Norris, described as a "rank royalist," he displays his political sympathies by beating the ground with his stick, and angrily exclaiming, "No missionary shall stay on my ranch." When a Honolulu business man is asked about churches in the city, he bursts out: "Churches be —." The author tersely says: "One could see at first glance that my informant was an agnostic. He was not in sympathy with the present rulers of the islands."

—The Jesuit Relations (Cleveland: Burrows Brothers Co.) are coming thick and fast, with the issue of two volumes together, for the second time. Volume xiii. contains the first section of Le Mercier's Huron budget for 1637. No explanation is offered with regard to the authorship, to account for Brébeuf's silence. He is still, one can see from constant allusions, the animating spirit and right arm of the mission. Le Mercier, however, writes well, and we are indebted to him for various touches which Brébeuf could hardly add about himself. While on the subject of personnel, we must mention the coming to Ihonatriia of Father Isaac Jogues, destined to become the hero of the Jesuits in New York State, the man after whom Lake George should have been named. One characteristic touch is that he was given a fine chance to exercise charity along the route he came. He encumbered himself with the care of a sick child, and had a hard

time of it at the portages. He was in good health on his arrival, but soon fell ill of a fever, and was forced to undergo the cast-iron treatment of bleeding—performed, in his case, by the lancet of the Father Superior. A lurid light is cast upon Le Mercier's pages by his long and detailed description of how an Iroquois captive suffered torture at the hands of the Hurons. We have had before in this work mention and even accounts of the hideous practices in which the soul of the aboriginal savage took delight. Now we come upon a picture painted with all the care of the realist in fiction, and, though the incident is perfectly familiar to every one, the harrowing effect which a minute reproduction of it creates lingers in the reader's mind until he has finished the book. Indeed, he is lucky if he gets rid of it then. Le Mercier gains solace from the thought that the Iroquois died, if not the death of a Christian martyr, at least the death of a genuine convert. The fact would seem to be that the poor wretch saw the missionaries' kindness of heart, and felt that they were his only friends amid the flames and knives and yells of those about him. Of considerably more intrinsic importance than this incident is the candid statement which Le Jeune makes of the reasons why the Hurons find difficulty in accepting the Christian faith and joining the Christian church. One of them is as old as the conversion of the German tribes during the period of the Inroads. It will be remembered that a Visigothic warrior stepped back from the font on hearing that in Paradise he would be separated from his own kindred. The Hurons shared the same prejudice in favor of their relatives, one of their excuses being that they should find no acquaintances in heaven, and that the French who were there would give them nothing to eat.

—Rather more than one-third of volume xiv. is occupied with the concluding chapters of Le Mercier's Huron narrative. The remainder contains the first part of Le Jeune's Relation for 1638, dealing with Quebec, Three Rivers, and the missions of the Lower St. Lawrence. Le Mercier has already, in volume xiii., dwelt upon the ravages of the plague among the Hurons, and the subject is continued at some length. Several features are brought out by the influence of pestilence upon the savages—their suspicion that the black gowns have come among them to spread disease; their readiness to profess belief for the sake of getting certain medicines, and, in general, their total lack of means to meet the foe which is playing havoc with their race. During this season the Jesuits were trying to reach the Tobacco Nation through Garnier, and to patch up the differences which had made a breach between the main body of Hurons and the Bear tribe. They were clearly anxious to gather fruit after their trying toil. Brébeuf's desire to get at something tangible is shown by a series of propositions which he laid in this year before one of the principal chiefs. He wished to know, first, whether the people had not made up their minds to believe what had been preached to them and to accept the faith; secondly, whether they would look with favor on marriages between the French and themselves; and, thirdly, whether they would reunite with the people of Ossosané. The answer to the last two of these questions was more favorable than to the first. It leaked out in the

course of parley that a plot against the lives of the missionaries had been discussed during the previous winter. Altogether, 1837 was a twelvemonth of disillusion, bridging over a space between the earlier period of hope and the serious dangers which were soon to come. Le Jeune's part of the Relation for 1638 is shorter than usual because his life has settled down to routine and he has less that is unusual to tell. His chief cares now are to develop the seminary and to encourage sedentary habits among such tribes as are within reach of his influence. A spot on the river bank, a few miles above Quebec, has become the centre of an Algonquin colony, through the endowment of Noël de Sillery. Chapter vii., "De quelques Sauvages Errants devenus Sedentaires," is the most valuable section of Le Jeune's reports on this subject up to the present point.

—A writer in a recent number of the London *Times* gives some interesting facts about the operations of the post-office in India. In spite of the fact that only about 4 per cent. of the population of India can read and write, the postal system has shown itself, in comparison with that of Great Britain, remarkably progressive. Instead of enlarging the facilities as the demands of the public increased, the postal authorities have from the beginning made great efforts to encourage the use of the post-office. Recognizing, for example, the native love of secrecy, as well as the habit of using small or thin pieces of paper for writing, a uniform halfpenny rate for sealed letters of light weight was early made. The "value-payable post" transmits parcels deliverable only on payment of a sum specified by the sender, this sum when received being forwarded to the latter by post—a system similar to that employed by express companies in this country. The object is to increase the amount of cash trading, and to give persons in remote districts the benefit of prices in the leading business centres. A special arrangement is provided for the payment of the land tax through the post-office, and another for the payment of rents by cultivators "who wish to avoid the delays and petty exactions incident to their attending in person at their landlord's office." In the Punjab, copies of legal documents from the courts may be had through the agency of the post, and the same service is used for paying military pensions. The postal savings banks, more than 90 per cent. of whose depositors are natives, furnished eleven million money orders during the past year. A particularly striking instance of the use of the post-office, wherever possible, in direct dealings between the Government and the people, occurred in 1892. The Lieutenant-Governor of Bengal, desiring to combat the prevalent malarial fever by offering quinine to the peasantry at cost, had the remedy prepared in single-dose packages, bearing directions for use, which were sold at the post-office in every village at a pie, or farthing, each. In the last two years, the writer in question states, nearly six million such packages have been sold in Lower Bengal alone, and the system has been successfully extended to other malarial provinces.

—The latest issue of the *Zeitschrift* of the German Oriental Society (Vol. 51, No. 4) contains interesting information with reference to two important ventures in the line of Oriental publications on a grand scale. There are a *Lexicon of the Egyptian Lan-*

guage, and a *Mohammedan Encyclopædia*. Both projects received the approval and commendation of the International Congress of Orientalists at their Paris convention last summer. With regard to the former work, the German Emperor, by a decree of May 10, 1897, furnished the funds for its publication. An appeal for coöperation appears in the *Zeitschrift*, signed by the editorial committee, Ebers, Erman, Pietschmann, and Steinkopf, appointees of the Royal Academies of Sciences in Berlin, Göttingen, Leipzig, and Munich, to whom conjointly the task of preparing this lexicon has been intrusted. The appeal states that the lexicon is to contain the entire *corpus verborum* found in hieroglyphic or hieratic writing, while the demotic and Coptic texts are to be used only as secondary helps. The materials are to be collected after the manner pursued in the preparation of the "Thesaurus Lingue Latine," which means the gathering of all pertinent passages under a particular word, the sifting to be done by the editorial committee. This body proposes to have the work ready in eleven years, and asks for the voluntary assistance of scholars and learned societies in furnishing materials, especially from unpublished sources. The report on the status of the Mohammedan Encyclopædia is furnished by Prof. Socin of Leipzig. In this case, the enterprise is not in such a forward state, yet a hopeful beginning has been made. The publication has been provisionally undertaken by the firm of E. J. Brill of Leyden, and a young Arabist, Dr. Paul Herzsohn, has published a specimen pamphlet of the proposed work, entitled "Erste Sammlung von Stichwörtern für eine Encyclopædie des Islam," in which certain words taken from the departments of geography, history, mythology, etc., are treated for examination and criticism by scholars. The report is published chiefly for the purpose of enlisting further interest and coöperation, especially on the financial side.

—The four hundredth anniversary of the martyrdom of Girolamo Savonarola will fall upon the 23d of May, 1898. The city of Florence proposes to celebrate this event in a becoming manner, and has appointed a number of committees to make the arrangements. The committee on speakers had requested the poet Carducci to deliver the leading address, but he declined, assigning, among other reasons, the following: "For me, Savonarola is the iconoclast, who aimed to destroy the arts and the literature of the Renaissance. His historical and political importance consisted in this, that he tried to establish a democracy of monks, and to transform Florence into a cloister. I have thought a year over the matter, and have not been able to find any reason for changing my opinion. I cannot, therefore, deliver a memorial address on this man to the citizens of his own city. Viewing Savonarola as a man, it is my opinion that the Roman Catholics—and here I have in mind those who are such conscientiously, honestly, and earnestly—are the only persons who have a call to become the interpreters and protagonists of his ideas and life." In Florence a clerical committee was organized to arrange for a celebration of the anniversary in the interests of the Church. The committee was careful enough to ask for the views of the Vatican on the subject, and received the reply that the authorities there looked upon the project with "benevolent neutrality." As the

Protestants of Italy are also getting ready to celebrate, there will be three distinct memorial festivities in honor of Savonarola in Florence in May.

SIDGWICK'S PRACTICAL ETHICS.

Practical Ethics: A Collection of Addresses and Essays. By Henry Sidgwick. London: Swan Sonnenschein & Co.; New York: The Macmillan Co. 1898.

Prof. Sidgwick's "Practical Ethics" did not probably cost him a tenth of the labor expended on his "Methods of Ethics" or his "Elements of Politics"; but this series of addresses and essays, making up not more than 260 small pages, gives to ordinary readers a better idea of its author's rare genius than do his longer and more elaborate writings. His book is marked throughout by two qualities rarely to be found in ethical disquisitions—veracity and reality. Perfect veracity or truthfulness is indeed the characteristic not only of these essays, but of every line which Prof. Sidgwick has ever written; and veracity includes, if the matter be carefully examined, far more than the mere desire to speak the truth, or than the capacity for seeing what is true. Truthfulness, in this its narrower sense, is, one may hope, aimed at, though it is certainly not always attained by every man who seriously discusses the moral problems presented by human life. But perfect veracity implies, in addition to the desire to see and express what is true, the open-eyed fairness which makes a man determined to see the truth all round, and to give weight, not only to the arguments in favor of his beliefs, but also to the reasons by which doctrines opposed to his own—opinions, that is to say, which, on the whole, he believes not to be true—may be supported.

This truthfulness, which, with Mr. Sidgwick, rises into perfect equity, is constantly lacking in eminent and earnest moralists. Bentham, for example, never even tried to do full justice to the foes of utilitarianism. They were, in his mind, knaves or fools, and the only justice they deserved was to be placed intellectually in the pillory for the scorn and derision of honest men. Maurice, with all his subtlety of intellect and saintliness of character, and with all his ardent desire to be fair and equitable, never was just to teachers who opposed his profoundest convictions. He never understood the strength of the utilitarian position; he met the arguments or fallacies of a dialectician such as Mansel with moral denunciation instead of logical confutation. Maurice was too much of a prophet to be an impartial controversialist. If ever there was a writer who wished and tried to deal fairly with the questions to which he devoted his attention, it was J. S. Mill; yet even those, of whom we may hope there are still many living, who owe a debt of gratitude to Mill both for the intellectual and for the moral aid which they derived from him in their youth, must admit that among his gifts is not to be found the capacity for really entering into doctrines with which he did not sympathize. In plain truth, both Mill and his readers are the dupes of his inimitable style. His language is always lucid, calm, temperate, logical, and judicial, and it is difficult to believe that the unimpassioned manner of the judgment-seat conceals the bias of fervent enthusiasm, and at times of vehement partisanship. Yet that this is so will become appa-

rent to any reader who considers, with a coolness which was almost unattainable by the generation to whom Mill appealed, the most striking of Mill's writings—his treatise 'On Liberty.' Of the merit of the book this is not the occasion to speak. The point which for our present purpose is important is, that Mill did not weigh the force of the arguments which might be opposed to his teaching. Sir James Stephen's 'Liberty, Equality, and Fraternity' is not a real confutation of Mill's 'Liberty,' but it assuredly does establish that logic was in Mill's hands often a form of rhetoric, and that his celebrated treatise was a most impressive apology for freedom, but was not a logical demonstration of the principle that "the sole end for which mankind are warranted individually or collectively in interfering with the liberty of action of any of their number is self-protection." This doctrine may possibly be true, but Mill did not state or weigh anything like all the arguments by which its validity may be impugned.

T. H. Green, again, was as incapable of untruth as Maurice or Mill, but he was likewise as incapable of judicial impartiality or indifference. He held, and advocated with the firmest faith, his own ethical creed. He fought dissentients with all the force of logical dogmatism. He was by nature a controversialist, not a critic: it was his aim to confute error; it was not his aim to appreciate with candor the strength of the reasoning by which doctrines that he deemed erroneous might be supported. It is a great thing to say of Prof. Sidgwick that where men of the eminence and honesty of Bentham, Maurice, Mill, and Green have failed, he has succeeded. Yet no one who impartially examines his 'Practical Ethics' can doubt that Mr. Sidgwick has attained to a kind of judicial sincerity not possessed by any of the writers whose names we have referred to for the sake of illustration.

Take, for example, the essays on Religious Conformity and on Clerical Veracity, which both, indeed, deal with the same subject. The problem of which they treat is how far a man may rightly belong, either as a lay member or a clergyman, to a church maintaining doctrines many of which are in his judgment untrue. No question demands for its treatment a more difficult display of fairness. It is, further, a question on which Mr. Sidgwick obviously feels strongly. His natural bias, as any one can see, is towards the strictest view of an individual's obligations. If on such a matter a thinker were at liberty to follow the impulse of his own feelings, or obey what many moralists would call his intuitions, our author would, we may be sure, lay down the simple doctrine that no honest man ought to belong to a religious society when he has ceased to believe in the truth of doctrines which, if words are taken in their most natural sense, clearly form part of that society's creed. Let us further add, to prevent even momentary misconception, that the object of the essays on conformity is in fact to enforce the obvious but constantly forgotten principle that, in matters of religious belief as in all other concerns, men ought to cultivate plain honesty, and ought not, from motives however good, to avow their belief in doctrines which they do not hold to be true, or in the reality of events which they believe never to have happened. But though Mr. Sidgwick's feelings are all in favor of the practice of bare and

simple truthfulness, he enters with thoroughness into the position of persons who continue members of a church whereof they can hardly be said to share the creed, and shows the fullest appreciation of the circumstances which may sometimes make it possible to repeat without dishonesty formulas with which, if taken in their original and most obvious sense, the speaker does not agree.

Thus, as to the lay members of a church, he shows that in many cases their continuing to belong to a body into which they were born, but with the main doctrines of which they do not agree, deceives no one, and therefore does not partake of dishonesty, and he brings forward an argument in favor of continued membership which is not often used, but assuredly tells for a great deal with good men. "One moral advantage" he instances "of membership of a church for ordinary men—which remains even when the authoritative creed of the church no longer seriously affects their belief as to the moral order of the world—namely, that it constrains them, gently but effectively, to a regular and solemn profession of a morality higher than their ordinary practice." Then, again, while holding up to the clergy a standard of veracity which to some clergymen seems unduly severe, or, as one critic expresses it, "almost what might have been expected from a Kantian rigorist," Mr. Sidgwick is careful to point out that expressions used in creeds or formulas often do, as a matter of fact, actually change their meaning, and that such expressions may therefore with perfect honesty be repeated by the clergy and others in a sense which they did not originally bear. A change has, he writes, "taken place in the common understanding of the phrase 'descended into Hell,' which has lost the idea of downward movement, and even perhaps of spacial movement altogether, and come to mean simply 'passed to the abode of departed spirits,'" whence follows the result that a clergyman may repeat this statement of the creed without pledging himself to a belief as to the locality of this abode which is inconsistent with the physical science of modern times.

This idea of the real and insensible change in the meaning of words in connection with its bearing on religious honesty has great subtlety and originality, but the reason for dwelling on it here is that it illustrates the candor with which Mr. Sidgwick considers every plea which can be urged in favor of doctrines or courses of action to which he is himself opposed. Any clergyman who thinks that our author is too much of a rigorist, should, after reading the treatise on clerical veracity, ask himself calmly whether he can produce a single plausible argument, against our author's conclusions, to which Mr. Sidgwick has not given due consideration. We firmly believe that any fair critic will be compelled to answer this question with a negative. Prof. Sidgwick has the exhaustiveness and truthfulness of Butler.

A writer, however, may be in the highest degree truthful and candid without possessing the capacity for dealing with the real, and, so to speak, tangible problems presented by the lives of ordinary men. He may lack what for want of a better term we may recall the sense of reality; and, to speak with perfect truth, we may say that it is on this side that Professor Sidgwick's moral speculations are, in our judgment, occasion-

ally open to criticism. He is such a devotee of reason that he does not always realize how small a part reason and reasoning play in the lives of ordinary men. We should not be surprised to find that many readers closed the 'Methods of Ethics' with the feeling, however expressed, "It may be reason, but it is not man"; and we are certain that few, indeed, are the men who are seriously troubled by the dread which Mr. Sidgwick apparently entertains, of dwelling in an intellectual and moral chaos—which seems to mean pursuing the course that all of us have to pursue, of following moral principles which we cannot fit in to any quite satisfactory logical system. But if our author, in his more elaborate works, thinks too much of reason and rather underestimates the importance of the non-rational element in human nature, it must at once be admitted that, in these essays on practical morality, there is little or no trace of this failing. Mr. Sidgwick shows in them a firm grasp of the matters which actually concern living men and women. His treatment thereof, even when he is considering problems of rather a speculative character, has the vital merit of reality.

Thus, the essays on conformity raise a question which touches the conduct of thousands in every civilized community. We may be certain that, of the millions throughout England and the United States, who wish to lead and in fact do lead a life higher than that of mere worldlings, there are thousands who are troubled by not being able to satisfy themselves as to their right relation towards the religious communities of which they hardly share the creeds, but to which they are firmly attached by habit, by association, by sympathy, and by the need for the common expression of moral and religious feeling. We may be equally certain that, among the clergy of all denominations, there are hundreds who are tormented by the conflicting convictions that, on the one hand, the work of ministers is the work for which they are fitted, and that, on the other hand, they can hardly, with a quiet conscience, repeat day by day formulas which to them either are meaningless, or mean something quite different from the signification attached to such prayers and formulas by an ordinary congregation. Now laymen and ministers alike who are tormented by what are called the difficulties of belief (though better described as difficulties of conduct in relation to belief), will find in Mr. Sidgwick's 'Practical Ethics' much of the aid which they require. Whatever other complaint they can make, they can never say that their teacher is not dealing with the real problem in hand. At lowest, he brings questions to a decided issue. If his two essays on conformity were only worked up into a small book of the size, say, of Mill's 'On Liberty,' which would allow the subject under discussion to be amply illustrated, we are convinced that Mr. Sidgwick's teaching might produce throughout the English-speaking world as considerable an effect as did Mill's treatise.

But of these essays on conformity enough has here been said; and whoever wishes merely as a critic to appreciate what we have called the reality of the 'Practical Ethics,' would do well to turn to a very curious and striking essay entitled "Unreasonable Action." Professor Sidgwick in this article raises and attempts to answer two inquiries which are very closely interconnected. Is it

the case that a man often acts unreasonably, in the sense that he pursues a course of conduct which he himself knows will not conduce to his own benefit or happiness? The second is, if we assume the first to be answered in the affirmative, what is the explanation of this practical paradox?

We are quite aware some critical reader will say that such inquiries are very far indeed removed from the sphere of actual life; that they harass no man of common sense, and can occupy the attention only of inveterate casuists. Now we undertake to say that whoever reads with intelligence the twenty-five pages which Mr. Sidgwick has devoted to the examination of unreasonable action, will conclude that the topic, as treated by our author, has as much practical as speculative interest. The paradox that a man acts against his own view of his interest does really exist, and its existence makes it necessary considerably to modify the mode in which theories of morality, and especially (though not only) the utilitarian theory, must be stated. The student will further see that the recognition of unreasonable action does much more than qualify many received ethical formulas; it suggests a whole set of considerations as to the conduct of life, in so far as unreasonable action depends on a man's yielding to logical fallacies. In so far as unreasonable action arises, as we suspect in the main it does, not from a man's being deceived by fallacies, but from the tendency to shrink at all costs from immediate pain, the peril has to be encountered by strengthening the habit of obedience to reason. But the various questions connected with unreasonable action are far too complicated for even cursory consideration at the end of an article. Our aim is here to insist upon one fact only, namely, that Mr. Sidgwick, in the last of his essays, which looks like the most speculative of them all, deals with no question of abstract and unreal casuistry, but with an inquiry which, as he shows, tells upon the daily conduct of every man who desires to pursue the higher aims of human existence.

Life and Progress in Australasia. By Michael Davitt, M.P. London: Methuen & Co. 1898. Pp. xx, 470. Maps.

One of the most grinding and mentally severe systems of penal servitude is that of Great Britain. If among those who for long years had been subjected to it there had appeared many men who, like Mr. Davitt, had broadened and deepened in character after its application to them, it would be difficult to argue in favor of change. We cannot follow him in many of his single-tax and labor theories; but even where we least understand or most differ, we are glad to recognize his candor and fairness. He would probably modify many of his ideas were he charged with the necessity of applying them in practice. These are the impressions with which we close this interesting volume—the best handbook that has yet appeared on the condition and prospects of the seven self-governing colonies of Australasia.

It is based on personal observation and inquiry during an extended tour in 1896-1896. Personal narrative is kept well within bounds; were it less so, it might commend the book to a wider circle of readers. Ways and means of life, statistics, constitutions, methods of government, scenery, prison discipline, the fate of aboriginal people, thrilling re-

miniscences of prison life, escapes such as those of John Boyle O'Reilly, are judiciously blended. Not to be taken up for mere amusement, the book is more entertaining than most written with a like grave intent. "Labor" settlements are fully described, and "labor" questions fully treated, as established, or as they find themselves in essentially democratic communities unfettered by written constitutions, and under circumstances of sparsity of population, plethora of land, and favorable climatic conditions that do not exist in older-settled countries. Human nature appears the same everywhere, and we find nothing in Mr. Davitt's experiences to lead us to expect that legislation can ever do much to divert the channels of life and method which that nature has graven out for itself. Writing of one of the Murray settlements, Mr. Davitt says:

"There was no 'boss' or master. Nobody walked off with the major portion of the value of a worker's daily efforts. The 'unearned increment' of the little community remained with those to whose sweat and toil and requirements it owed its creation. . . . Land and water were as free as air. . . . Surely no conditions of industrial life could be much more favorable to labor!"

Yet two pages further we find the admission:

"This camp has decreased in membership since the period of my visit. The latest report issued by the Surveyor-General of Lands gives the present population as 186. It was originally 300."

Again, concerning another settlement:

"Here was labor left to its own laws, unfettered by any landlord or capitalistic right, rule, or authority. All the right and all the law and all the land here belonged to the workers."

Yet at an election which Mr. Davitt attended, a

"speaker spoke as if the retiring committee had been a board of capitalistic autocrats, deserving of impeachment for not having made the pumping-station complete in half the time, and the grain to grow and the fruit trees to ripen before the seasons had time to perform their share of the work of the harvest."

Of Moorook camp we read:

"The character of their work, the dry and healthful climate, the pleasant outlook over the river and the forest, together with the feeling that what they were doing daily in their labor was for themselves and their families, and not for the stevedores or ship-pers of Port Adelaide, rendered the new life in the bush an experience as happy in its moral results as it was hopeful of future material prosperity for these ex-dock laborers."

Yet Mr. Davitt, with his usual candor, is compelled to add a note:

"This camp has since ceased to be an association, and is now worked by some of the settlers on a lease of the land from the State."

The view of these communities expressed by a neighboring independent settler will be shared in by many of Mr. Davitt's readers:

"Am I a commonist? Not much. I works for myself, and them there bush lawyers up at Pysp will all be for themselves in a short time. It's all very well to talk and read about this commonism, but it's another thing when you come to work it out with pick and shovel or fishing-boat. I'm no believer in these new-fangled ideas, I'm not. I'm a Cornishman, I am. I have enough to do to work for my missus and

myself. No, sir, I'm no commonist. Good-by."

In various parts of the book Mr. Davitt refers to the disastrous outcome of the great Australian maritime strike of 1890, not as warning against the folly of the irremediable disasters then brought to the trade of Melbourne and other ports, but as pointing the necessity of "Labor" seeking to attain the ends it then aimed at by political means. A "Labor" party appears to have been established in most of the colonies. The "Conciliation and Arbitration Act" of New Zealand is the most practical outcome of their efforts. It is much to be doubted whether the trade organizations of the more settled countries would be in any degree satisfied with many of the awards cited. Its future working will, however, be watched with interest. One of the many advantages the world is likely to derive from the practice of home rule in the Australian States, so vast in extent, so meagre in population, is that many political and social experiments, entailing evils (where failure may result) upon but small communities are likely to be tried out.

Upon all humanitarian questions Mr. Davitt is clear and true. We have seldom read more scathing denunciations of the base treatment of aboriginal peoples by white settlers. Rising from the perusal of this volume, it would be difficult to hymn praises in glory of empire. We must rejoice at the spread of civilization and well-ordered peace and comfort over such wide areas, once giving sustenance but to animals and wandering nomads in the lowest stages of barbarism; it is impossible to justify or glory in the initial stages of the change. Mr. Davitt carefully investigated the condition of the unhappy imported South Sea Island laborers in Queensland, and emphatically pronounces against the system. Australasian prison systems, generally humane, are fully treated. Each scene visited appears more lovely than the other, each country town-ship more charming. One portion of our author's route he travelled with Mark Twain, and details some amusing conversations. His estimate of many of the places he visited is little below that of Mark Twain's of Dunedin, New Zealand, "as a place which was visited by some people from Scotland who were on their way to heaven, and who, believing they had reached their destination, remained." Readers who have borne the hot winds, sand storms, and insect plagues of Australia and the semi-tropical climate of northern New Zealand, will know how to qualify some of the writer's enthusiasms. Mr. Davitt does not unfairly obtrude his religious opinions; yet it is interesting to note the degree in which a sincere Catholic associates the spread of conventual institutions and hierarchical government with the spread of civilization and enlightenment. Surely never was there greater irony of circumstances than that the means by which it was hoped to eradicate Catholicism in Ireland has led to its spread and establishment in every portion of the English-speaking world. An index would have added to the value of the book.

King Pontius and the Fair Sidone: A Prose Romance translated from the French about the year 1450, now first edited from the unique MS. Digby 185 of the Bodleian Library. By Frank Jewett Mather, jr. Bal-

timore: The Modern Language Association of America.

By universal consent the 14th and 15th centuries are adjudged the most sterile in the history of French literature. The creative impulses and the imaginative traditions of the Middle Ages had then run out, and the new interests of the Renaissance had not yet distinctly asserted themselves. The literary historians are wont to mention a few stock names—Froissart and Eustache Deschamps from the 14th century; Commines, Charles d'Orléans, and Villon from the 15th. But the critical treatment of the period has come to be almost conventional in its character, and it is probable that there are not a dozen persons living who have a detailed first-hand acquaintance with the literary documents of the time. Current sources of information as to what was taking place in French letters during those long years are consequently almost entirely lacking. And yet now and then we stumble upon some literary phenomenon that makes us ask if, after all, this neglect has been wise. It is almost as dangerous to draw an indictment against a whole period as against a whole people.

Such a phenomenon, for example, is a group of romances (or, better, romantic novels) composed in the main in the last half of the 14th and the first half of the 15th century, which are noteworthy both because of certain distinct literary qualities they have, and because of their large diffusion in other European literatures in the form of translations. One of these tales is that known as 'Mélusine,' composed in its most widely current prose form at the very close of the 14th century, as a glorification of the family of Lusignan. Another is the delightful story of 'Pierre de Provence et la belle Maguelonne,' written towards 1459. A third is the tale of 'Pontus et Sidoine,' of about the same date as 'Pierre de Provence,' and similar to 'Mélusine' in that it was composed in honor of a great family, that of La Tour Landry in Anjou. In spite of their general neglect by the historians of French literature, we cannot but think that these romances deserve the careful attention of students.

For, to begin with, the manner of them is distinctly removed from that of the great romantic compilations of the 13th and 14th centuries, in which the already bewildering mass of adventurous and marvellous incident of the Arthurian and other romantic compositions of the 12th century was diluted to a veritable sea of fantastic inventions. The 14th century 'Perceforest,' for example, which served as a stop-gap between the Arthurian romances of the Middle Ages and the 'Amadis de Gaula' and its congeners in the Renaissance, is indeed, in its vagueness and indecision, its diffuseness and formlessness, the acme of literary fatuity. The author has neither a story nor actors for a story; no living fact appears in his pages. The outworn mediæval stuff simply goes echoing on until the reader sinks into a very drowse of attention. There is some excuse, therefore, for those who, judging all French narration of the period by examples like this, reject it as meaningless and valueless. It is too hasty a judgment, however, for the tales we have mentioned. In them we have essays in a new direction, an effort to use the imaginative stuff of mediæval romance in such wise as to make it verisimilar. Romantic adventure and even the marvellous find ample employment, and yet

the dramatis personæ are vascular, to use Emerson's expression—if you stick a pin into them, they will bleed. The realism of the mediæval *fabliaux*, which was in the main due to the unromantic and often actually vulgar material employed in them, here strives to associate with itself the delights of the imagination.

Now, this fusion of the real and the romantic happens to be the quality which more than any other has given permanent success to literary narrations, from the 'Odyssey' to the works of the present day. In earlier modern literature, particularly in the great creative period of the Renaissance, we find this quality mainly in tales that had passed through Italian hands. But it is not uninteresting and not without significance that in France, before the influence of the Italian *novelle* had been perceptibly felt there, an attempt should have been made to reach the same goal. To be sure, we are obliged to confess that the result was indecisive in many ways, that the experiment was not clearly and purposefully carried out. And yet it remains true that the tales which illustrate the experiment are both gracious and persuasive.

Another source of interest in these tales is their wide diffusion in translations or versions. As the biography of them is gradually brought into shape, we find that they were known from one end of Europe to the other. Indeed, it is hard to understand how stories so universally familiar should have dropped so entirely out of sight within so brief a space of time. Is such to be the fate of our Stevensons and Maupassants? To go into the details of this widespread diffusion would take us far afield, and we must refrain. It is enough for our present purpose to note that in England no less than on the Continent these stories were gladly received.

It is one of the two English translations of the 'Pontus et Sidoine' that Mr. Mather has printed in the present volume. The other, a version not completely independent of this, as Mr. Mather has judiciously shown, was printed by Wynkyn de Worde in 1511. As, however, only a single copy of this quarto, that in the Bodleian Library, is known to exist, Mr. Mather has the credit of being the first to make the story in its English form accessible to the modern reader. It was a task, as we have endeavored to indicate, well worth doing, and Mr. Mather seems to have accomplished it in a highly creditable fashion. His text, based upon the unique Digby MS. in the Bodleian, has been judiciously handled in the light of the French tale and of Wynkyn de Worde's English version. The introduction clearly sets forth the obligations of the original story to the Anglo-Norman tale of 'Horn et Rimel,' and discusses the known versions of it. Of interest here is Dr. W. H. Schofield's contribution of an account of the little-known Icelandic 'Pontus-Rímur,' of which we have as yet no edition. In short, Mr. Mather's book bears the marks of sound and industrious scholarship. There is but one serious criticism which we are disposed to make upon it, though we are far from certain that Mr. Mather deserves the blame. The proof-reading of the introduction, particularly in quotations from the French, is really very bad indeed, which is the more to be regretted since it throws a degree of suspicion upon the accuracy of the text as well. We doubt if the suspicion is justified, but we cannot honestly say

that we do not feel something of it ourselves.

Social and Ethical Interpretations in Mental Development. By James Mark Baldwin. Macmillan. 1897. 8vo, pp. 574.

Prof. Baldwin here puts forth a sequel to his remarkable work on 'Mental Development in the Child and the Race,' which our readers will remember contained a most valuable body of observations upon two children. The aim of the present volume is "to inquire to what extent the principles of the development of the individual mind apply also to the evolution of society." But no insignificant part of the former volume was devoted to this same subject; so that the contents of the present work were largely anticipated in their outlines in the former publication. About five-sixths of this new book is occupied with the development of the individual consciousness, and is substantially a restatement of the author's previous results, without any gain in clearness.

The general position of the author, that the individual mind is produced by intercourse with other persons, while on the other hand society is the composite of the individuals, so that the two factors are inseparably conjugate, is certainly far from being novel, and no doubt Hegelians will see in it a new instance of the permeation of their master's doctrine. In point of fact, there are in these pages many indications of the great interest that Prof. Royce has felt in the labors of Prof. Baldwin. But what is entirely fresh is the discussion of that proposition upon the basis of rich stores of scientific observations.

In the previous volume the author showed how his observations had led him to admit three distinct stages in a child's knowledge of personality, those of persons as "projects, subject, and ejects." The first of these is the most difficult to understand, and it is itself subdivided into three imperfectly distinguished stages. The baby first distinguishes persons from inanimate things, according to Prof. Baldwin, by their moving about; and by the character of these movements it distinguishes one person from another. This is the state of consciousness during the first half-year of its life. But gradually it becomes impressed by the irregularities of some of the movables. The pendulum goes tick-tack with perfect uniformity, while the father sometimes notices the child and sometimes does not. Thus, persons become known as movables that are eccentric. In this irregularity Prof. Baldwin thinks that the child recognizes Agency; and after the second half-year and up to the age of two years, it is learning to recognize a special uniformity, or characteristic, in the peculiarities of each movable eccentric. This is a recognition of Personal Character. So far, persons are known merely as "projects." But now the child is beginning to act, and in acting it recognizes its own person as similar to the agents that are already familiar to it. It thus attains the second stage of knowledge of personality, that which connects its own feelings with the idea of agency previously acquired, bringing it to a sense of its own subjectivity, and a knowledge of Self, as subject. Finally, it hypothesizes for each of the other agents a corresponding subjectivity, and thus converts them into ejects.

Such is Prof. Baldwin's theory of the development of self-consciousness. As the ti-

the implies, the present book is largely an interpretation of phenomena connected with personal and social growth in the light of that theory. Great weight must certainly be attached not only to the describable observations of Prof. Baldwin, but also to those subtler intuitions which can only express themselves as his convictions that such and such are the thoughts and feelings of the child. But the above theory contains more than such observations, as we will venture to show. In the first place, it does not appear from the observations that, during the first half-year, the baby pays any attention at all to things that do not move. If it does not, then motion cannot serve to separate persons from things, but only to individualize the differently moving objects. In the second place, Prof. Baldwin may be quite correct in his insight into the infant's mind, so far as to perceive that the irregularity of persons is perplexing its mind, and also that some idea allied to that of Agency is present to it. Yet whether or not it is the former idea which suggests the latter, is not a question of observation but of inference.

There are several different ideas, mostly of an intellectual character, which might be denoted by the word Agency, but none of them have any logical connection with irregularity, which is mostly associated with the absence of any definite Agency. Now, although it is certainly conceivable that one idea should suggest another with which it has no logical connection, yet the hypothesis that any particular such illogical suggestion has taken place must remain quite gratuitous, unless a mass of facts can be adduced to support such an irrational connection. There is a great gulf between the idea of an eccentric, surprising thing and that of agency in any sense. We cannot help suspecting that, notwithstanding the close observation of Prof. Baldwin, the child has made innumerable efforts before the age of two, which the author assigns as the commencement of the subject-knowledge. If these efforts have escaped his keen eye, it is because they were so futile. Not only does the sense of effort necessarily involve a sense of resistance so as to objectify itself immediately as an I and a not-I, however rudimentary these conceptions may be; a sense of failure, which is sure to accompany the first efforts, must magnify the effort and the resistance, and thus stimulate the subjective tendency. It is very doubtful whether there is any earlier idea of agency than that which must thus come from futile effort. If not, Prof. Baldwin's "projects" are merely ideas of queer, eccentric, startling movables—the only distinct objects of the baby's world—and are in no proper sense ideas of personality. If we remove from the author's philosophy of society all that is said about "projects," it may lose a good deal of its freshness, but it will become more widely acceptable.

Prof. Baldwin has a great deal to say of the influence of the child's own actions, particularly in his games, in shaping for him clear conceptions; and he rightly regards this truth as highly important. He adds that these very actions are for the most part imitations of the conduct of his elders, and thus the child's understanding becomes formed after the pattern of the grown-up people about him. All this he terms social heredity. Whether or not this begs a question will be a point sure to be discussed. The individual, says Prof. Baldwin, is the

product of society, while on the other hand to all which he "inherits" from his family he imparts his own personal signature. Invention invariably accompanies imitation, although in very variable proportions.

Prof. Baldwin thinks that the "project" is recognized as the master of the "subject," and the "subject" in its turn of the "eject," and that the disposition of children to domineer over weaker children is a case under that rule. There are, he declares, two sorts of social influences, that which produces social organization and that which appears in particularizing and synthesizing actions of individuals. All individual variations are particularizations of earlier generalizations. The author is thus working his way toward the conception of a public self, and the further he proceeds the more he seems to be influenced by Hegel or Hegelians.

The matter of social organization consists, he says, of imaginations, knowledges, informations—a statement which, in its desire to minimize the individuality of things, betrays already the incipient sway of Hegelian tendencies. He uses the term "self-thought-situation" for the social situation implicated in the thought of self, where a dialectic process productive of the thought of self is plainly recognized. After that we are not surprised to be told that "every socially available thought implies a public self-thought-situation which is strictly analogous in its rise and progress to the self-thought-situation of the individual member of society." The author differs from Hegel only concerning a matter of detail, namely, in recognising imitation as the bridge from the private thought to the public thought, which enables the self-thought-situation to become public. He considers that all that has been written by the School of Moral Sentiments concerning sympathy as imagining one's self to be in another's situation, is so much in favor of his own doctrine of the importance of the imitative process in the development of public consciousness.

The application of this to ethics, as developed in the chapter devoted to Rules of Conduct, is sufficiently smooth sailing. To those who think that in Morals, at any rate, conservatism is the safest course, and who are sceptical about the desirability of carrying any system of philosophy into practical applications until there can be a little more agreement among philosophers as to what is proved and what is not, the present volume, however interesting and important, will be deemed inferior to its predecessor in almost every respect. That it richly deserves the gold medal of the Danish Academy with which it has been crowned, there can be no doubt.

A Short History of the Royal Navy—1217 to 1688. By David Hannay. London: Methuen & Co. 1898.

This is the first volume of a history of the British Navy, which, commencing about 1217, is to finish with the end of the Napoleonic wars in a second volume. Much of the period covered by the volume just published has been somewhat obscure; but as of late years new matter has been published by the Navy Record Society, as well as derived from other sources, an opportunity for fresh treatment has been afforded to the author which he has not neglected. For one disposed to investigate more exhaustively the subjects treated, the author affords facility by

giving at the head of each chapter the authorities drawn upon.

Although this history of the British Navy covers the same ground as the small one by Mr. Hamilton Williams, entitled 'Britain's Naval Power,' it is more exhaustive and detailed, and from its critical treatment appeals to an older and more professional class of readers. Still, notwithstanding its consecutive narrative, it maintains a popular character, wisely illustrating the various conditions and times by interesting incidents as well as by general descriptions and narrations.

It was in the years 1213 and 1217, from which this book dates, that began, properly speaking, the history of the British Navy. Previous to the earlier date, the royal ships had been used as transports and carriers between portions of the same dominion. With the loss of the Continental portion of this dominion during the reign of King John came another state of affairs. The French coast became that of an enemy, and for many a year afterwards the source of a possible invasion and attack. The two attempted invasions of 1213 and 1217 gave to the royal navy a different task, which it met successfully, not by waiting for the enemy's approach in its own waters, but by proceeding to sea and there meeting him. The success of the offensive-defensive expedition of the later date under Herbert de Burgh shows once and for all how Great Britain should meet such attempts at invasion or attack. As a rule, the lesson has been learned, and Englishmen rely upon their navy as the first line of defence, and the protection has never failed them, when the navy has been loyal and efficient, during a period covering nearly seven hundred years. While it is true that the great maritime Powers of the early and middle ages that preceded Great Britain were on the mainland, still the insular position that relieved her from invasions and the necessity of large standing armies has always counted much for her growth and stability as a sea Power. To this can be added her position towards the Atlantic Ocean. With the evolution of the sea-going ship and its growth in size and sea-keeping power, this ocean disappears as a barrier, and becomes the road which led and still leads to wealth and empire the world over.

The story of the mediæval navy of Great Britain is one of struggles against pirates and the neighboring French and Spanish. The nature of the seas and the weather about the British isles gave no scope for the galleys of the Mediterranean, and the ships developed into crafts of stouter build and greater radii of action. The fights of this period were affairs of no great moment, except those known as the battle of Hûys and that of "les Espagnols sur mer." These two partook of the nature of regular engagements, and were not without elements of the picturesque. The seamen of those days were much given to acts of license and brutality, which became almost monotonous in repetition. To Henry VIII. much credit is due for his measures for improving the royal navy, both as to its material and as to its personnel, though it seems strange to us at this day, used to the British seamen and shipwrights as the first of their craft, to read that Italians were brought to England to serve both as seamen and as shipbuilders. Henry did not, however, propose to be dependent upon out-

HYGEIA HOTEL,

OLD POINT COMFORT, VA.

A quiet, refined, homelike hotel, affording every comfort, convenience, and luxury. Fronting directly on the beach for nearly an eighth of a mile, and commanding a full and unobstructed view of Hampton Roads and the lower Chesapeake, the location is incomparably superior to that of any other hotel at the Point.

The HYGEIA has all the paraphernalia of the modern hotel, such as electric lights, elevators, electric bells and annunciators, steam heat, open fireplaces, telegraph, bicycle livery, sun parlors, rooms en suite, consisting of parlor, bedroom, and bath, manicure parlors, etc.

It is the only hotel at the Point which provides Turkish, Russian, Electric, and Pine Needle Baths. The table is also irreproachable.

"Brilliant and delightful." From the Other Side.

Stories of Transatlantic Travel.

By HENRY B. FULLER. \$1.25.

Mr. Fuller has made himself charming in the field of authorship, already, in his "With the Procession," "The Chevalier of Pensieri-Vani," and other works. In this new book we have four stories—three of them sparkling, humorous, with the daintiest kind of humor, and the fourth, "Pasquale's Picture," touching, tender, and full of the very soul of pathos.—*Home Journal*, New York.

Wholly delightful, a treat that is seldom offered. Every phrase is picked and adjusted with precision; nothing is left to chance, and there is never a suggestion of overdoing.—*Chicago Evening Post*.

Sold by all Booksellers. Sent, postpaid, by
HOUGHTON, MIFFLIN & CO., Boston,

MT. DESERT.—Furnished Houses at \$150, \$350, \$500, \$400, and \$450, previously occupied by Cornell, Dartmouth, Hopkins, and Yale professors. Perfect water supply; no pumping; slate tubs; fireplaces. W: M. GRISWOLD, Cambridge, Mass.

APPLETON'S

Popular Science Monthly.

APRIL, 1898.

An Industrial Object Lesson. S. N. D. NORTH.
Points out the economic lesson to be learned from the recent engineering strike in England.

The Electric Transmission of Water Power. WILLIAM BAXTER, JR. Illustrated.

A fully illustrated article describing this method of conveying energy, which has already obtained an important place in modern industrial economics.

The Question of Wheat. WORTHINGTON C. FORD.
Shows the great importance which the future wheat supply of the world has for civilization.

Evolution and Teleology. REV. J. A. ZAHM.
Shows that the theory of evolution is not contradictory of the fundamental doctrines of the church.

A Spring Visit to Nassau. EMMA G. CUMMINGS. Illustrated.

Describes the curious animal and vegetable population and the quaint methods of "commerce" still existent in this out-of-the-way corner.

Migration. W. K. BROOKS.

A study of this phenomenon from an evolutionary standpoint, showing that the adaptations of Nature are rather for the advantage of the species than of the individual.

Criminal Anthropology in Italy. HELEN ZIMMER. Illustrated.

A general biographical sketch of the more prominent of the Italian criminologists.

Other articles: Principles of Taxation, XVII, The Case of Kirtland vs. Hotchkiss; The Significance of Language; Discovery of New Chemical Elements; and Sketch (with Portrait) of Carl Semper, sociologist.

Editor's Table; Scientific Literature; Fragments of Science; Notes.

50 cents a number; \$5.00 a year.

SEX WORSHIP.

An Exposition of the Phallic Origin of Religion

By CLIFFORD HOWARD.

The object of this work is to demonstrate that all religions have had a common origin, and are founded upon a natural, material basis—the worship of life in its phenomena of creation and reproduction. The work includes a description of the beliefs and rites of the principal sex-worshipping nations of antiquity, whereby it is shown that our present theological beliefs, as well as all of our most important church emblems and religious festivals (as the cross, altar, and wine, the celebration of Christmas and of Easter) were originally of sexual significance, and were familiar features of religious worship thousands of years before the Christian era.

"A remarkable book."—[*Allegheny Record*.]

"Intensely interesting."—[*Medical Standard*.]

Second edition (revised and enlarged), to which is appended a bibliography of phallicism, 6vo, cloth, \$1.50 net. Sent postpaid on receipt of price.

The Week.

Trunkfuls of Cuban bonds are said to be in the possession of yellow journalists and other persons supposed to be influential. These "securities," says the *Chicago Record's* Washington correspondent, "are among the greatest embarrassments felt by the President in dealing with this matter." Obviously, these bonds are a fund for bribery. They cost nothing to the issuers; consequently, they can be distributed in any amount. Being issued by no recognized government, they can be repudiated at any time, but the holders can afford to take this risk, since they pay nothing for them. The bonds purport to become valid upon the recognition of the Cuban republic by Congress. Consequently, every holder of them has a motive to work for such recognition. "Many of the bonds," says the *Record's* correspondent, "have been given away to Cuban sympathizers, and millions have been sold for 3, 4, 5, and 10 cents on the dollar to raise funds to carry on the war. The members of the Junta have trunks full of them, and it is said that nobody knows the amount outstanding."

We have not yet heard from Mr. Dingley regarding the product of his revenue law in March. This is the month when import tariffs traditionally do their largest work. It is also the month upon which Dingley himself had fixed for a generous exhibit this season; in fact, the promise of a heavy surplus had originally been made for January, and was postponed only through stress of circumstances to March. What is the result? Customs receipts show decrease of \$6,353,000 from March of 1897; they exceed only slightly the same month's yield in the worst years of trade prostration after the panic of 1893, and they run short of the March returns in years such as 1889 and 1890 by twenty to twenty-five per cent. Meantime expenditures are, of course, enlarged again; the Government's disbursements last month being, in fact, the heaviest ever made in that period during the present generation. The result, naturally, is another monthly deficit in income, not rendered any more cheerful from the fact that April's quarterly disbursements leave in a normal year a deficit of four to eight million dollars. We must therefore again remind the enlightened Dingley that a new explanation is in order, and that a new and more distant date for the inevitable surplus must be fixed. He surely will not leave the *Tribune* and

his other faithful allies to meet this fresh discouragement alone.

Mr. Bryan has kept pretty quiet on the subject of war since the present excitement began, but he made a significant remark the other day, that if we have war the Republicans will be sorry that they upset the income tax. Now, it is not quite true that the Republicans upset the tax, although more of them than of Democrats may have contributed to that end. The tax was upset by the Supreme Court, and in that tribunal politics did not cut any figure whatever. The opinion of the court was rendered by Chief Justice Fuller, a Democrat, and the dissenting opinion by Justice Harlan, a Republican. Nevertheless, Mr. Bryan's remark has a deal of significance. In case of war it will be necessary to impose war taxes. It is well to cast a look backward at the war period in order to see what sources of revenue are available that are not now resorted to. First is the internal tax on manufactures, which yielded in one year during the civil war \$127,000,000. Licenses came next with \$61,000,000. Incomes other than liquor and tobacco, yielded \$14,000,000, stamps \$15,000,000, gross receipts \$11,000,000, and so on. There were taxes on sales, on salaries, on railroads, on banks, on pianos, billiard tables, watches, carriages, and horses, on perfumery and patent medicines, and on friction matches, and the tobacco tax was much heavier than it is now. The whole amount realized from taxes that have since been repealed was in one year \$256,000,000. Now, if an income tax is impossible, at all events the other abolished taxes would have to be revived, because the tariff cannot be made to yield more than it is now yielding. In fact, war would cut down importation, and therefore customs duties, enormously, thus requiring a greater proportion of receipts from internal revenue. It is well to look these facts in the face.

The change of opinion among the people of California on the subject of Hawaiian annexation is highly important. It was essential to the success of the scheme that it should be favored by the State of the Union which is in closest relations with the islands. One plan of bringing about annexation which has been much discussed was to make the islands a county of California, giving it one member of the State Senate and two of the Assembly. A Washington letter in the last issue of the *Hawaiian Gazette* received in this office says that not only Speaker Reed, but many members of both branches of Congress, fear that a State will be created soon, and two Senators and

members of Congress given to the newly acquired territory; that "some advocates of the county plan are urging that it will disarm the objections of those who foresee statehood in a short time, and secure their assent to the proposition." But this project is impracticable unless the California people want Hawaii for a county, and it is now clear that they do not. The *Gazette* gets the same news that we do regarding public sentiment in California, reporting that "the labor unions of the rural districts of the State will oppose it strongly, the farmers will also oppose it, and probably the sugar-beet men will follow them"; and it concludes that "the proposition to annex the islands as a county of the State of California does not appear to be, as matters now are, a very practicable matter."

The persons who have been favoring the bill to rob the Duncan Mission in Alaska of nine-tenths of its reservation and all of its means for productive industry, have found the road more thorny than they anticipated. A considerable and influential sentiment against the perpetration of any such injustice has been aroused. This may explain the introduction on March 25 of a new bill (H. R. 9481) by Mr. Dovener, entitled: "A bill to create a permanent reservation on Annette Island, southeastern Alaska, for the use of the Metlakatla Indians and other natives of Alaska." Upon this promising title follows a text which, with immaterial modifications, confirms to the Indians about one-tenth of their present reservation, as in the previous bill, and concludes by repealing the provision of the Revised Statutes establishing the present reservation. The contrast between the title and the real intent of the bill is regarded by land pirates and Indian harriers generally as an exquisite bit of humor.

Mr. Wanamaker continues to expose the rottenness of boss government in Pennsylvania. He delivered another speech Saturday night, at Conshohocken, in which he declared that "the cause of the recent collapse of four banks and trust companies in Philadelphia may be put down to scrofulous politics." The banks which have failed had held a large amount of State money without paying interest on it, and Mr. Wanamaker told his hearers that "the taxes paid by you and others for your schools, charities, and State maintenance, have, to nearly a million, gone down in the wreck, only to be recovered by the assessment of derelict directors and trustful stockholders." He set forth the intimate relations that existed between the People's Bank (the Quay bank) and the Guarantors' Finance Company, and

said that these relations should surprise no one, "as the same political friendship, the same dangerous relations, the same baneful influences, and the same daring men were the controlling power around and within both institutions." Mr. Wanamaker proceeded to describe in detail one of the most extraordinary performances ever known in an American State—the visit of a United States Senator to Harrisburg, "where, for a night and a day, he lobbied to pass what was known as the infamous Guarantors' Insurance bill, which was intended to give this insolvent company the right to amend its own charter by a vote of its directors; to change its plan and classes of insurance without authority of the State Insurance Department, thereby placing it beyond the jurisdiction of the State insurance officials, and making this particular company unanswerable to the protective insurance laws of the State." He told how from the Speaker's room this United States Senator directed the fight for the bill; how, while the House was in session, he summoned members to him, and on political and personal grounds urged them to vote for the iniquitous measure; how every branch of the State political machine, under his direction, was put in motion—requests, promises, and threats being freely used.

Mr. Wanamaker declared further that "only once in twenty years has a State Treasurer been elected that Quay did not own politically, and but once in all these years have we had a glimpse of the methods employed." This was in 1879, when Samuel Butler was elected as an anti-machine man, and upon examining the accounts of his predecessor he "found due-bills, orders, and worthless securities amounting, it is alleged, to several hundred thousand dollars, which he refused to receive as good assets." Mr. Wanamaker proceeded:

"The story has been told in the New York Evening Post and several other metropolitan journals, and never yet has been denied, of how Quay, the political boss, and Walters, Cashier of the State Treasury, speculated in stocks with money belonging to the State Treasury, and substituted practically worthless securities for cash they had used; of how the approaching time for Treasurer-elect Butler to take his seat rendered it necessary to make good a shortage of what is commonly reported to be \$300,000; of how an exposure was imminent when a friend came to the rescue and raised the money. The details of all this were known to but few until long after. Walters died by his own hand, and before he died he wrote a letter telling all. During the administration of Henry K. Boyer, Treasurer, now Director of the Mint, a threatened investigation forced his chief clerk to leave the country, and he is to-day a fugitive from justice. The State was saved from loss, it is alleged, by the liberal contributions from corporations and individuals who have long since received their reward by favorable legislation, secured through the influence of the machine."

It is a great thing for the cause of good government to have such revelations of boss rule in Pennsylvania as these from such a source. It is no Mugwump or doctrinaire who tells the story; it is a

life-long Republican, who has never bolted the regular ticket, and who has been "on the inside," so that he "knows what he is talking about."

The people of the State owe it to Gov. Black that the session of the Legislature which ended on Thursday was one of the least harmful that we have had for many years. Not since Mr. Cleveland was Governor, have we had as the result of a winter's work a smaller amount of positively bad legislation than is to be found in the bills now awaiting executive action. This is due entirely to the position which Gov. Black took openly at the beginning of the session, when he declared that he would not give his approval to any measures amending the Greater New York charter except such as might be found essential to its actual working, and would not sanction "deal" measures of any kind. The flood of bills amending the charter was tremendous, reaching nearly or quite 100 during the first few weeks, but few of them got through both houses and none of them will become law. The great value of this service to orderly and honest government lies in the fact that the bulk of this legislation consists of what are known as "deal" bills. When a Republican Legislature proposes to interfere with the government of this city by Democrats, the main object in view is to get a share in the patronage of the government. The new charter placed an enormous amount of patronage in the hands of Tammany Hall, and as the placing of it there was due entirely to the course of the Platt Republicans in running a candidate of their own for Mayor, it was only natural for those Republicans to desire to secure what they considered their fair share of the spoils of victory. Their flood of charter amendments was designed to extort this, and but for the Governor's opposition they would have succeeded in passing their bills, thus meddling with our new city government before it had had an opportunity of being tested by practice, or would have compelled Tammany to give "terms" as the price of withdrawing them. Extreme examples of these measures were to be found in a proposal to abolish the new City Magistrates' Court, restoring the old Police-Justice system, and to abolish the Rapid-Transit Commission and substitute in its place a bi-partisan commission appointed by Tammany's Mayor.

Gov. Black's course is all the more commendable since, in taking it, he placed himself in direct antagonism to Mr. Platt, who is supposed to control absolutely the question of the Governor's renomination. He not only planted himself squarely in the way of all "deal" measures, but he exerted his power as Governor to force through the Legislature a revolutionary system of primary control which was bitterly dis-

tasteful to the Platt machine. What the law embodying this system will secure for us in practice remains to be seen, but there is no question that its passage is one of the most notable victories for independent party action ever achieved in this State. Its inventors and advocates were Republicans who revolted from machine leadership in this city last year, and the course of the Governor in cordially and efficiently supporting their ideas for purer party methods was a recognition of their power in the politics of the State which of itself is a distinct set-back to bossism. A bossed Legislature has been compelled to pass a reform primary law which contains a specific recognition of the right to disregard machine party obligations and orders in municipal campaigns and elections.

We called attention in last week's issue to a suit which had been instituted in this city, on a charge of criminal libel, against a man accused of furnishing reporters with false information for publication. A similar suit has recently been before the Appellate Division of the Supreme Court, Fourth Department, and a verdict against the defendant has been affirmed with costs. The facts in this case are very interesting. In May, 1895, Senator Coffey, who represented Kings County in the Legislature, furnished the reporters with some extremely damaging statements about two members of the Assembly who were pushing a bill which Mr. Coffey was opposing. One of these sued him for libel and got a verdict of \$6,500. Mr. Coffey carried the case to the Appellate Division, which held that while the evidence did not warrant the conclusion that the defendant was guilty of express malice in giving the information to the reporters, still it did "permit the inference that such statement was made carelessly and recklessly, and if the jury took that view of it, as they undoubtedly did, they were furnished sufficient justification for awarding punitive as well as compensatory damages." In their opinion the court called attention to an amendment to the section of the Penal Code, made in 1894, which renders it much more stringent than it was in its original form. Originally it provided that anybody who in any way transmits libelous information to a newspaper "for publication," and "thereby secures actual publication of the same," is guilty of a misdemeanor. As amended, the transmission of information, "which, if published, would be a libel," is made a misdemeanor. This makes the business of "stuffing" reporters with malicious information extremely dangerous.

A new law in relation to newspaper libel has been passed by the New Jersey Legislature. It contains some provisions very like those in the New York

penal code, though less stringent in character. Any person who transmits libellous information to any newspaper or other publication, and thereby secures its actual publication, is declared guilty of a misdemeanor and liable to a fine not exceeding \$500, or imprisonment at hard labor not exceeding two years, or both. A valuable provision for the press is the second section of the law, which provides that, in every civil action for libel, "unless the plaintiff shall prove either malice in fact, or that the defendant, after having been requested by him in writing to retract the libellous charge in as public a manner as that in which it was made, failed to do so within reasonable time, he shall recover only his actual damage proved and specially alleged in the declaration." This is in marked contrast to the kind of law which Croker and Platt tried to have enacted in this State, for it is designed to furnish reputable newspapers with an opportunity to make full reparation for errors into which they are led by malicious or careless informants.

The war on department stores has pretty much died out in this part of the country. In Chicago it has entered on a curious phase. An appeal was first made to the Legislature for the passage of a State law to break up the big establishments, but nothing was done at Springfield. Then the City Council was attacked, and an ordinance was passed by that body from which much was hoped. But the result has been disappointing, and the promoters of the movement have concluded that relief cannot be secured in this way. The next step in the campaign is very curious. The complaint against the big stores has always been that they undersell the small stores. A number of small dealers have now agreed to "pool their issues" and try to undersell the undersellers. They propose to open a large store in the heart of the city, which will be supplied with goods by the cooperating merchants, each of whom is to get a percentage of profits from all sales to customers living in his district. The "district" notion is an odd one, but the fundamental idea underlying the enterprise is sound—that the only effective way to fight cheap stores is with cheaper.

Prof. Briggs's final decision to cast anchor in the roomy harbor of the Episcopal Church will be variously received by Presbyterians. The militant brethren will profess satisfaction that they have finally got rid of him that troubled Israel. They will, however, not be innocent of inward quakings lest other troublemakers arise in his stead, and they will not be nearly as happy as they pretend to be over the fact that a man of the broadest scholarship and most sincere and undoubted piety has not

been able to live and work in their communion. On the other hand, the liberal wing in the Presbyterian Church, some of the leaders of which were earnestly hoping that the ecclesiastical ban might soon be lifted from Prof. Briggs, will both grieve at his departure and probably be all the bolder in asserting that his views should be and, in fact, are tolerated in Presbyterian clergymen. The denomination, in truth, seems to have exhausted itself in casting out Prof. Briggs, and to be in no mood to pursue others for the same offences. He has gone, but his heresy remains, is openly avowed by prominent Presbyterians, and is in a fair way to become orthodoxy, as usual. But his loss can but be considered as the severest which American Presbyterianism has ever sustained.

The rejection by the Dominion Senate of the bill to ratify the contract entered into last January by the Canadian Government for the construction of a railway from Telegraph Creek to Lake Teslin in the Yukon district, has been a foregone conclusion for some time, and it appears, notwithstanding the utterance of partisan papers, to meet with very general approval, or at any rate acquiescence, among our neighbors. It is true that the majority of the Senate belong to the party now in Opposition in Canadian politics, but the unbiassed Canadian does not appear to consider their present course prompted by partisan feelings, but rather reluctantly taken in what they have deemed the best interests of the country. The fact is, the secret manner in which the contract was entered into, the neglect to afford an opportunity for tenders from other quarters, the enormous land subsidy (at least 3,750,000 acres, with all mineral rights), to be granted to the contractors, and the extraordinary prerogatives proposed to be given in the selection of blocks of land to make up this amount—all these things have caused the "deal" to be less liked the more it was looked at. Nevertheless, the action of the Senate is a bold one, probably the boldest taken by it since its origin at the confederation in 1867. The Dominion Senate holds a very different constitutional position from our own, which, as every one knows, represents preëminently the federal element in the Constitution. The Canadian Senate is intended as far as possible to hold a position similar to that of the House of Lords in the United Kingdom; for the framers of the Dominion scheme of confederation sought in every way to reflect the forms and preserve the principles of the modern British Constitution. All the constitutional rules and conventions which regulate the relations of the two houses in Great Britain regulate those of the two houses in Canada. Hence, to throw out a bill which has passed the popular House by a substan-

tial majority, in a matter of urgency and of great popular interest, is a courageous act.

The conduct of the English press during the present crisis in British affairs is worthy of all praise. This crisis is ten times more serious for them than the Cuban crisis is for us. They are threatened with a war which would task all their resources, and might end in depriving them of their maritime supremacy. We, according to our most excited patriots, have nothing to fear but a petty sixty-day conflict, which can have no effect whatever on our national fortunes. Yet there has been the utmost calm and rationality among English newspapers—no shrieking, yelling, blithering, lying. Neither Salisbury nor Balfour nor Chamberlain has agreed to serve on the advertising committee of the *Halfpenny Blatherskite*, nor has any member of either house agreed to produce blatherskite in debate under contract in order to promote war. The spectacle is an impressive and ought to be a useful one. It is true the British ought all to be killed, and the monarchy broken up, but their way of meeting crises like the present is worthy of imitation.

The passage of the naval bill in the German Reichstag without any opposition, in spite of all the former mutterings and protests, shows how completely the Emperor's "mailed fist" policy has triumphed. The scanty support given to the attempt to honor the memory of the men who fell in the insurrection of 1848, and the presence of several of the sons of these men in the Conservative ranks, in some cases as agents of William's absolutist policy, is a striking illustration of the way Germany has fallen away from the liberal ranks. Fifty years ago she was abreast of France as a supporter of liberal political ideas; to-day she apparently cares nothing about them. "More markets" is now the cry, instead of "more liberties." The whole youth of a country cannot be put under arms without enormously strengthening the principle of authority, and discrediting discussion, and rendering the bulk of the population less fit for the conduct of a democratic government. Moreover, it must not be forgotten how much liberal institutions have been discredited, in sober German eyes, by the career run by democracy in France, here, and in Austria. The corruption, the disappearance of leading men, the rise of the "bosses," the fights in legislative assemblies, the absurdities promulgated in wild waves of passion, have turned the German heart perceptibly towards the monarchical régime, as the surest, the safest and most money-making. "Consecrated persons" are again on top, a century after "divine right" became ridiculous.

DELIBERATION.

The most striking feature of the Declaration of Independence is the spirit of deliberation which it breathes. It was no hasty step which the representatives of the colonies took in severing the bonds with the mother country. Nor did the statesmen of that day consider that the mere announcement that our people wanted to be free would suffice. In the impressive language of that great instrument, they recognized that, when so grave a step was to be taken, "a decent respect to the opinions of mankind requires that they should declare the causes which impel them to the separation." History has fully justified their action.

There is to-day danger of war between the United States and Spain, and the most astonishing feature of the situation is the lack of deliberation which has thus far characterized the members of the war-making body at Washington. The President has from the first shown the clearest perception of the tremendous responsibility which would rest upon any man in this republic who should precipitate a war which might honorably have been avoided. But in both Senate and House there have been plenty of members who have not dissembled their desire for war, and who could not conceal their fear that the Executive might secure what this nation has sought in Cuba without war.

There is overwhelming evidence that the people have been with the President in his policy of deliberation, as against the Congressmen who are for rushing into war. Every day, in spite of the continuance of false rumors, and in spite of the possibility that the latest peace news may also be false or exaggerated, brings fresh justification of the President's policy. Every day's events strengthen the position he has taken, and make peace more probable. The nearer the time comes when, according to the Jingoese, "something must be done," and men are to begin to die for Cuba, the stronger becomes the wish that the controversy may be ended without killing anybody or destroying any property. Every day makes Spain less able to fight, more willing to treat and yield. The more she thinks over the issue of an armed conflict with the United States, and the more she hears from the rest of Europe about it, the less valiant she feels. That she may fight still is, of course, possible. Our contention is simply that the longer fighting is postponed, the less likely it becomes. For this reason, it is not impossible that when President McKinley's account is made up at the last great day, he will find the saving of thousands of lives, the prevention of thousands of sorrows put down to his credit. He, more than any other man in public life, has realized the great truth that war is something that rarely suffers from delay; that the occasions are

few when more talk and more consideration may not prevent it altogether.

On our side we see evidences every day of progress, not towards war, but towards peace, of increasing confidence in the President's policy. Such, conspicuously, was the speech made last Thursday in the House by Mr. Johnson of Indiana, in deprecation of war, in which he was not afraid to hurl defiance at war hisses in the gallery, on behalf of humanity and civilization. Mr. Frye of Maine, who has been very Jingoistic, telegraphs to the Maine State Board of Trade:

"Their confidence in our Chief Magistrate does not exceed mine. I am well informed of his purposes, his conduct, and his hopes: know that diplomatic negotiations are about concluded and their purport; have hopes that the result may be what we all desire, an honorable peace, but propose, so far as I can, to be prepared for disappointment. The committee on foreign relations, of which I have the honor to be a member, will do nothing rashly, will give to the resolutions referred to it careful, conscientious, and deliberate consideration; will be in constant communication with the President, and without doubt act in entire harmony with him."

He would not have said anything publicly about "hopes" of peace, or "careful, conscientious, and deliberate consideration," three weeks before. His talk would then have been about the "national honor" and the need of prompt action. Then, we must remember that three weeks have immensely diminished the influence of the yellow journals, which were in the beginning the chief promoters of the war fever. Their lies and exaggerations have been among the chief influences against which the President had to contend in following his own judgment. Had he been influenced by the excitement they stirred up in the beginning, about five thousand young men would have been killed or maimed and a ship or two sunk by this time. They have, however, overdone the thing and reduced themselves to impotence. Sounder notions of "national honor" have begun to circulate. This phrase "honor" is borrowed from the duellists, but has really no meaning in the international relations of a community like ours. In the duellist terminology, a man's "honor" means his reputation for physical courage. It is to prevent any doubts about this courage that he fights. Accordingly, we often find that a man who has fought many duels declines to fight another, on the ground that he has "made his proofs"; that is, has shown conclusively that he is brave. In the duelling world, therefore, fighting about anything and everything, is absolutely necessary. The question, Are you right or are you wrong? is of no consequence. The one question is, Are you afraid of being shot at or stabbed?

The adoption of the term "honor," as used by duellists, by a nation like ours, in dealing with a nation like Spain, is, therefore, ridiculous. Saying that our honor in the bellicose sense requires us to fight Spain is absurd. It

is like saying that a brawny pugilist's "honor" requires him to meet a slight and consumptive youth in the "twelve-foot ring." We cannot be suspected of fear in the duellist's sense, as a motive for going to war with a declining and distracted people like the Spaniards. "Honor" of that kind is useless baggage for a rich and puissant nation 70,000,000 strong. The only honor she needs to possess is the honor of a respectable and respected business man; that is, a reputation for living honestly, fulfilling all obligations faithfully, injuring no man, and giving every man his due. This duellistic honor goes strictly with war patriotism. The man who has most "honor" for war is generally the man who has least patriotism for peace, who does not care how his country is governed, or to what bad influences she is exposed. He will cheat, steal, read yellow journals, go to the country on election day, make fraudulent contracts, and invite Croker to dinner, in time of peace; but the minute the fierce blasts of war blow in his ears, his patriotism infuriates him, and he wants to kill anybody who doubts it. As Capt. Mahan pointed out the other day in the *Evening Post*, the honor of a strong people lies simply in doing right. Its strength gives it the luxury of a moral sense; and the moral sense of a Christian people covers love of all things which make for peace, and nothing makes more for peace than slow negotiations.

AMERICAN FINANCE.

The hot-heads in Congress who want to plunge the country into war without adequate cause and without sufficient military or naval preparation, could not be expected to have much regard for financial preparation. Nevertheless that would be the first question to be considered, and the most pressing one from start to finish. Fortunately we have at the head of the Treasury Department a man of financial experience and not a tyro. In this respect we are in better shape than we were at the beginning of the civil war, when we had in that position, indeed, a man of high character, fine legal attainments, and lofty patriotism, but one wholly destitute of financial training, and who caused a suspension of specie payments quite unnecessarily at the very beginning of the struggle.

The first thing to be considered is the present financial situation. This must be considered precarious. The Government has demand liabilities outstanding to the amount of nearly \$900,000,000. This includes silver certificates and silver dollars. As these must be kept at par with gold, under penalty of a general smash, they must be reckoned in the same category as the greenbacks and Treasury notes. The two latter amount to \$450,000,000 in round numbers. In normal times and in a condition of fairly

good business, none of these notes would be presented for payment unless gold were wanted for export, which is not the case now. The fact remains, however, that those notes are liable to be presented for redemption. The amount of gold in the Treasury is only \$150,000,000 or thereabout.

The next element in the situation is the ominous fact that the public receipts are not equal to the expenses on a peace establishment; that the Government is now, and has been for a long time, living in part on a reserve borrowed by the last administration. This reserve has been diminishing gradually, but would have served for a sufficient time to determine whether the Dingley bill would furnish the needed amount. If not, then new taxes would be required and would be enacted in due time. If we plunge into war, three consequences will follow: the demands on the Treasury will be vastly increased; importations, and consequently customs receipts, will fall off enormously; the Government will be compelled to have recourse to the gold reserve, and the holders of greenbacks will have a powerful incentive to present them for redemption lest specie payments be suspended. Who are the holders of greenbacks? Every man and woman in the United States who has a dollar in pocket or in bank. All these dollars are resolvable into legal-tender money, and all legal-tender money is resolvable into gold as long as the Treasury has gold to pay. The drain would be manifested in New York because here the bulk of the gold is stored, but it would most likely start in Minnesota or Texas, whose bankers, anticipating a run, would order their New York balances to be remitted to them in gold. If their New York correspondents should tender them greenbacks instead, they would take these around the corner to the sub-treasury and draw the gold themselves. Refusal on the part of the New York banks to draw gold at the request of the country banks would cause not more than one day's delay in getting at the Government's hoard. Probably, in such a *mêlée*, we should hear a good deal of unmeaning gabble about the lack of patriotism on the part of bankers, as though bankers could exercise any volition to prevent their depositors from taking what they are entitled to have. The element of danger in all cases of this kind is that each man fears that somebody else will get ahead of him in the race for self-protection, and therefore each will want to take an early start.

Fortunately we are not engaged in war yet, but if war comes we shall be on a paper basis, which means that the Government will be bankrupt, within thirty days, unless a large loan is authorized and negotiated promptly. What kind of a loan shall this be? Under present circumstances it is doubtful if

anything short of a gold bond could be sold except at a ruinous discount. Certainly none could be sold abroad unless made specifically payable in gold. What view might be taken by capitalists at home is a matter of doubt. Capitalists are generally opposed to war except in self-defence. They are much opposed to an emotional war, a Jingo war, an unnecessary war, and they would take the most mercenary and businesslike view of a war pushed upon an unwilling President by a Congress that had given no mature consideration beforehand to the means for carrying it on. They would look at the subject as a matter of investment strictly, and would buy the bonds or not buy them according as they might consider them safe or not safe. They could not avoid considering the fact that a large party, claiming to be a majority of the nation, are in favor of paying all the public obligations in silver worth less than half the value of the present standard. They could not avoid considering the fact that war is an uncertain factor in the polity of governments, that the most unexpected things may happen both internally and externally—things which need not be considered now—and hence that it would be the part of prudence to insist upon having a gold bond in exchange for gold. Would our silverite Senate ever pass a bill for an issue of bonds payable in gold? We pause for a reply.

SPANISH FINANCE.

The cost of the Cuban insurrection is charged against the Cuban treasury, but this is a fiction of bookkeeping, as the Cuban treasury has long been bankrupt, and even in years of peace could not meet the heavy charges imposed upon it by former insurrections. To sell in foreign markets bonds with a Cuban guarantee only was out of the question, and a Spanish backing was necessary. As the more profitable sources of revenue in Spain outside of the customs had been pledged or farmed out, and could not be hypothecated more than they were, the customs revenue was made the foundation of a new loan, the evidences of which were to be "Cuban" bonds, guaranteed by a pledge of the "Spanish customs." Even this combined and somewhat mongrel scheme did not appeal to the investors of France and Belgium, and the Spanish Government was thrown back upon internal loans.

To what extent was the Spanish customs revenue available for credit? The receipts from this source in 1896-'97 were \$24,195,520, which would pay the interest at 5 per cent. on about \$500,000,000. But the full amount cannot be thus employed, as a sum must be set aside each year for extinguishing a part of the capital of the debt. Since May, 1897, when authority to use this customs re-

venue for credit purposes was conferred on the ministry, nearly three-fourths of the possibilities it contained have been exhausted. A first issue of 400,000 bonds pledged nearly one-half (\$11,826,558) and a second issue, 200,000 bonds, again took its full quota of one-fourth (\$5,913,279), leaving available the sum of \$6,455,715. At the end of December, 1897, the cabinet decided to create a third issue, to be of 400,000 bonds, to be held against any emergency that might arise, the special emergency being trouble with the United States. Although this third issue more than exhausts the revenue from customs, assurance is given of a further pledge of the taxes on colonial merchandise, on spirits, and on foreign and colonial sugars—taxes which produced in 1896-'97 about \$4,613,000. Beyond this it does not seem possible for Spain to go in pledging her existing revenue. Only a drastic reform of her revenue system can provide new resources.

Having established the credit for a loan and determined the nature of the security to represent it, the question of disposing of the bonds was still to be met. A 5 per cent. bond at 60 should be a tempting purchase, provided there was any confidence in the ability of the borrower to meet the full obligations of the contract. Unfortunately, no foreign investors held this confidence to such a degree as to warrant the purchase of large blocks of the Spanish-Cuban bonds; and, indeed, the older securities of the Peninsula, bearing only 4 per cent. interest, were rapidly returning to domestic markets. In this dilemma, the first two issues of the new bonds were sold at home, and largely to the Bank of Spain. This operation is, however, considered as a temporary expedient, as the Bank passes the securities on to its clients, and thus is enabled to make a fair showing in its balance-sheets. At the end of December, 1896, the Bank held of the 4 per cent. stock, \$79,340,000, and in December, 1897, \$77,310,000. The large transactions in Spanish-Cuban bonds had left no trace in that item of state securities in the Bank's reports, and must be sought in the loans and discounts. That item had risen from \$75,600,000 in January, 1897, to \$128,550,000 at the end of December, 1897, and on March 5, 1898, stood at the high figure of \$143,595,000.

This shows how Spain is meeting the expenses of the war. Were it not for the Bank, she could not obtain funds, and every recourse to the Bank weakens the position of that institution. Already on a paper-money basis, it is only by increasing its issues that the demands of Government can be met; and every new issue makes necessary the form of a security. As it is, the Administration is depositing with the Bank the Spanish-Cuban bonds and receiving advances in banknotes. The "reserve" of gold and

silver still represents a good proportion to the circulation, but in the last year the Bank felt called upon to purchase gold to place in the reserve, and this purchase involved a heavy loss. In January, 1895, a month before the insurrection broke out in Cuba, the Bank held \$38,951,466 in gold and \$54,154,412 in silver, against a circulation of \$177,890,041. In January, 1898, the gold had increased to \$45,895,962; the silver had fallen to \$50,193,081, and the circulation had mounted to \$236,098,248. The movement since the beginning of the year is of particular interest, as it marks the extraordinary activity in issuing bank-notes incident to the steady demands of the Government on the Bank.

The following table gives in millions the specie and the circulation of the Bank of Spain each week since the first week in 1898:

		Gold.	Silver.	Circulation.
January	8.....	\$47.2	\$51.5	\$242.6
January	15.....	47.2	51.6	245.3
January	22.....	47.2	52.4	245.8
January	29.....	47.2	52.8	246.9
February	5.....	47.5	52.8	248.5
February	12.....	47.5	53.3	250.3
February	19.....	47.6	53.5	249.3
February	26.....	47.7	54.4	249.8
March	5.....	47.8	54.4	250.9
March	12.....	47.9	54.3	251.9

Evidently this operation cannot go on much longer. As soon as the Spanish-Cuban bonds are exhausted, the Government must create some new revenue or credit. The first would require time, and the second will not check the vicious involving of the Bank in the bankruptcy of the nation. As it is, the Bank is authorized to issue \$300,000,000 of its notes, provided a reserve of one-third the amount issued be kept in specie. There is sufficient gold and silver now in the vaults of the Bank to constitute a reserve for the full amount of issue authorized. In a few months of actual war the limit of issue will have been reached, and, with the currency already at 34 per cent. discount, a removal of every limitation on the amount will precipitate a depreciation that must involve a financial cataclysm and temporary paralysis of all commerce and industry.

The very basis on which these bonds are issued is suffering a contraction, and so affecting the value of the securities; for the customs receipts in the first seven months of 1897-'98 were more than \$2,400,000 less than in the corresponding period of 1896-'97. Another significant move is the fall in the quotations of Spanish securities other than Government issues. Indeed, the fluctuations in the railroad stocks are of greater moment than the variations in the Government securities, for the railroad obligations have a certain guarantee or value behind them, while the worth of the national stocks is dependent on the resources of the Treasury. Whatever financial institutions rest upon movements in these Government and railroad bonds have suffered in credit. The larger part of the assets of the *Crédit Mobilier Espagnol* consists of these obligations, and

has always consisted of them. The shares of this society were quoted at 190 in 1890; 80, in 1893; 63, in 1895; and are now selling at 52, having touched the extremely low mark of 40 in 1897. Spain is expending \$9,650,000 a month in Cuba, and had a total debt of \$1,649,475,737 on January 1, 1898, of which nearly one-sixth was a floating debt, certain to prove troublesome when it must be met or funded. The charges on this great debt take two-thirds of the entire revenue of the state (\$101,746,832 out of a budget of \$152,970,000), leaving less than \$50,759,000 to meet the current expenses of the Administration, a costly war in Cuba, and extraordinary demands in the Philippine Islands. It follows that Spain is conducting her wars entirely on credit, and, as foreign money markets are closed to her, on credit of the worst and most dangerous description—internal loans at ruinous rates, a floating debt, already large, and bank issues at greatly depreciated values.

THE NEBRASKA FREIGHT-RATE DECISION.

The unanimous opinion of the United States Supreme Court handed down on March 7, prohibiting the enforcement of the Nebraska maximum freight-rate act of 1893, is the last of a long line of important cases affecting railway property, the first of which were the so-called Granger decisions (*Munn vs. Illinois*, 94 U. S., 113). Down to the period of the Granger agitation it had always been assumed that railway property in the United States was protected against invasion by State authority, through the clause in the Constitution which prohibits interference with the "obligation of contracts" (art. 1, sec. 10). This was owing to the authority of the *Dartmouth College* case (4 Wheat., 518), according to which charters were contracts, with which the States could not tamper. In the Granger cases, however, while this principle was neither overruled nor avowedly qualified, a new principle was resorted to which was adapted to impair most seriously the defences of property against legislative attack. Under this ruling, all property was held subject to a right of legislative supervision and regulation, provided it was "affected with a public interest." Many people suppose that the Supreme Court applied this only to railroads, on the ground that railroads were "monopolies" and had an arbitrary power over rates; but in reality they made it cover all property, whether in the nature of an exclusive legislative franchise or not, in which the public had an interest that the exactions of the property-owner should be reasonable. *Munn vs. Illinois* itself was not the case of a railroad, but of property invested in private grain elevators.

It was manifest that if the Legislature of a State had the right, in the in-

terest of the public, to regulate, not merely transportation charges, but the price demanded for every article which was "affected with a public interest," a principle existed most dangerous to property. There is no property of any sort, from the most primitive and universal to the most artificial and refined, that is not affected by a public interest. The idea underlying the opinion in *Munn vs. Illinois* was that only such property was affected by a public interest as required an invitation to the public to put it to use, *e. g.*, a railroad charter, a ferry franchise, anything from which a toll is taken; but the fact is that the public has to be called in whenever a price for any property or its proceeds is to be got. The right to sell labor, or service of any kind, or food, or books, or newspapers, or to get rent from the use of land, is what gives the "property" its life; and hence the logical deduction from the decision was that of a general legislative power to fix prices, or at least maximum prices, in all cases. That in this decision lay some of the seeds of the later development of "Populism" there can be little doubt.

It became very soon obvious that if the constitutional guarantees which protect the citizen against the Legislature were to be of any avail, and the position of the Federal courts in our system was to be upheld, some way must be found to qualify the control over property conceded to it by the Granger cases. A long line of decisions, culminating in the Nebraska case, have been rendered which have gradually established the doctrine that while the Legislature may regulate the charges to be exacted by the owners of railroads, elevators, ferries, and other property "affected by a public interest," they derive this right from the supreme "police power" of the State, and must exercise it reasonably, so as not to violate those provisions of the Constitution which guard the citizen against being deprived of his property by a State without due process of law (Const. U. S., 14th amendment). Applying this principle to railroads, it follows that while a State can by legislation and through legislative commissions fix the rates at which persons and property shall be transported, if it fixes these rates at such an unreasonable figure as to operate as destruction or confiscation or deprivation of capital invested, the regulation is void and of no effect, and that this is wholly a judicial and not a legislative question; and, further, that such unjust regulation can be prevented by injunction.

The importance of this conclusion can hardly be overstated. In the Nebraska case, though the action was nominally against certain officers of the State, the decision was in effect to uphold an injunction against the State itself, absolutely forbidding the enforcement of its whole freight tariff, on the ground of its injustice. It is true that the case leaves

it open to the State to remodel its tariff and then apply to the court again; but if this is done, the final decision will still rest with the court. In other words, the State Legislature can never in any case decide the question what it is reasonable for railroads to charge, so as to preclude a judicial examination of its action by the Federal courts. It cannot even leave the matter to its own courts, for in almost every conceivable case (as in this) some circumstance, such as a difference of citizenship in the parties, will arise, to give Federal jurisdiction.

If we ask how the court undertakes to determine what are and what are not reasonable rates, the answer is, by the same means that a perfectly just and omnipotent ruler would decide such a question. The cost of the railroad, its running expenses, the average return on similarly invested capital, are all to be taken into the account, and the court then decides whether the rate is fair or unfair. In the Nebraska case the court prepared a table showing the effect of the tariff, year by year, from 1891 to 1893, supposing it to be in operation on the seven railroads affected. In the last column the result is shown, and the result was that the profits would have been swept away.

To sum up the principles of the decision, which the court explicitly states will apply to future cases, it is not enough to show that a State tariff prevents a railroad from paying its operating expenses, fixed charges, and a dividend upon its stock. This would make the profit to the railroad the sole consideration. A railroad is a public highway, and the "rights of the public" would be ignored if other matters were not taken into the account. These other matters are the fair value of the property invested, fictitious capitalization, and the question whether the rates exacted by the company in order to pay dividends, would "impose upon the public" a burden "for the purpose of realizing profits upon such excessive valuation or fictitious capitalization." What evidence is relevant to such an inquiry? The court says: "The original cost of construction, the amount expended in permanent improvements, the amount and market value of its bonds and stock, the present as compared with the original cost of construction, the probable earning capacity of the property under particular rates prescribed by statute, and the sum required to meet operating expenses," are all matters for consideration; but "we do not say that there may not be other matters."

Many observations might be made on this decision, but practically the most important point about it is that it makes the law perfectly plain, and makes railway property much more secure from attacks through State legislation than it has hitherto been.

CHARAVAY'S LAFAYETTE.—III.

PARIS, March 24, 1893.

Lafayette's relations with Bonaparte have been told with very interesting details by Lafayette himself in 'Mes Rapports avec le Premier Consul.' They were at first very friendly, but became more distant when the Consulate for life was established. Lafayette was an incorrigible liberal; he voted against the Consulate for life, and his relations with the First Consul came to an end. He spent his time in the occupation of a gentleman-farmer; he refused a high rank among the dignitaries of the Legion of Honor when this new order was founded. Napoleon grew very angry with him and tried for a moment to connect him with the first conspiracy of Malet. All through the Empire, we find him living in retirement, going only occasionally to Paris, occupied with his own affairs, always keeping up a correspondence with his American friends.

When the evil days came, and when France was invaded, he offered his services, but they were not accepted. On the day when the Allies entered Paris (March 31, 1814), he shut himself up in his house in Paris and wept bitterly. He wrote a letter to the Count d'Artois, and presented himself, in uniform, to the King, who received him with politeness. The Duke d'Orléans gave him a warm reception; spoke to him of old times, of their common proscription, of the community of their views and principles. Lafayette met the King of Prussia and the Emperor of Russia. He saw Alexander at Madame de Staël's. The Emperor of Russia complained to him of the Bourbons and their prejudices. "It seems to me," said Lafayette, "that they ought to have been amended by their misfortunes." "Amended," said Alexander; "they are *incorrigés et incorrigibles*. There is but one, the Duke d'Orléans, who has liberal ideas; as for the others, you can hope for nothing from them." "If such be your opinion, sire, why have you brought them back?" "It is not my fault." The same evening Lafayette saw Talleyrand, and they exchanged views regarding the Bourbons.

Lafayette was in the country when he heard the news of the landing of Bonaparte in Provence. He had become very much dissatisfied with the royalists and the *émigrés* during the first Restoration; on the other hand, he did not believe in the new liberalism of Bonaparte: "Republican in Provence, half-republican at Lyons, absolute Emperor in Paris." He was elected a Deputy, and, after the disaster at Waterloo and the abdication of the Emperor, he was one of the six commissioners charged by the Chamber with the painful mission of entering into communication with the Allies. The Commissioners found the allied sovereigns at Hagenau, in Alsace, on June 30. They were not received, and their arrival caused some irritation. Lafayette wrote a letter to the Emperor Alexander, and asked to be received by him as a private person. All he could obtain was permission for the six delegates to enter into communication with four commissioners of the Allies, who were Capo d'Istria for Russia; Lord Stewart, for England; Gen. Knesebeck, for Prussia, and Gen. Wallmoden, for Austria. In the discussions which took place, Lord Stewart told Lafayette that peace with France was impossible if Bonaparte was not placed in the hands of the Allies. "I am surprised," said Lafayette,

"that, in proposing such an act to the French people, you should address yourself to a prisoner of Olmütz."

The delegates returned to Paris, where they arrived July 5, 1815, after the capitulation had been signed. There was nothing left for the Chamber to do; Blücher entered Paris, and the Prefect of Police, Decazes, closed the doors of the Palais Bourbon. After signing with his colleagues a vain protest, Lafayette retired to his country house, La Grange.

He took a dark view of the future of the second Restoration. In a letter addressed to Lord Holland, December 15, 1815, we read:

"I will not say with Charles Fox, in his Memoir on the reign of James II., that a restoration is the worst of revolutions, because it has the inconveniences of a revolution, and besides deprives the people of all that was advantageous in the preceding revolutions." . . . The present dynasty has unfortunately never desired to occupy itself with the general regeneration of France; it has stood a stranger to the principles, the successes, the politics of this country for more than twenty years. . . . I say with all sincerity, notwithstanding the acquired proof I have that the royal family will never cease to hate me and to try to harm me, I should still prefer them if I could persuade myself that they would at last bow to the evidence of their interests and their security, and that they would not incline, as they do now, to the destruction of all that I have passionately desired while consecrating myself to the defence of the rights and interests of my country, as well as of all mankind, throughout my life."

In 1818 Lafayette was elected a Deputy from the Department of La Sarthe. He took his place on the left side of the House and became one of the chiefs of the Liberal party. In 1821 he allowed himself to be involved in a secret conspiracy against the Government. A provisional government, of which he was to be a member, was to be proclaimed at Belfort and established at Colmar. It seems extraordinary that Lafayette should have consented to take part in such a dangerous and imprudent action; but he started in December for Alsace, and learned at Lure, in the Haute-Saône, that the Government had discovered the plot; no movement took place, and Lafayette returned to La Grange. Four sergeants of La Rochelle, Gen. Berton, and Col. Caron, were tried and executed. The Government did not institute proceedings against Lafayette, Benjamin Constant, Manuel, Gen. Foy, Lamotte, whom it suspected to be in sympathy with the conspirators.

Lafayette was re-elected a Deputy in 1823, at Meaux, but he lost his election in 1824, and carried out a project, which he had long cherished, of making a visit to the United States. His journey was a long ovation. Congress made him a gift of \$200,000 and of 24,000 acres. I shall not go into the details of this visit, during which Lafayette entered into friendly communication with President Monroe, John Quincy Adams, who was elected President during his sojourn; with Gallatin, Daniel Webster, John Adams. He was Jefferson's guest at Monticello. He left Havre on the 11th of July, 1824, and returned there on the 4th of October, 1825. On his return he received his portion of the famous "milliard des émigrés," though he had always repudiated all confusion of himself with the *émigrés*. But he had children and grandchildren, and he thought that he owed it to them to claim compensation for such of his estates as had been confiscated and sold while he was in exile. The share which he claimed amounted to 325,000 francs. He was elected a Deputy from Meaux in

1827 and again in 1830. He received at La Grange a copy of the *Moniteur* containing the famous ordinances which caused the Revolution of 1830. During the last years of the reign of Charles X., he had been in the head and front of the Opposition in the Chamber; he perceived at once that the insurrection in Paris was the signal of a revolution. He saw his colleagues of the Left in Paris, and assumed at once the direction of the movement. He accepted, on the 29th of July, the command of the National Guard. He installed himself at the Hôtel de Ville. On the 30th of July the Deputies met at the house of Lafitte, and afterwards at the Chamber, and decided to offer to the Duke d'Orléans the General-Lieutenancy of the kingdom. In vain did Charles X. withdraw the ordinances and dismiss the Polignac ministry. Lafayette declared that all reconciliation was impossible, and that the royal family had ceased to reign. Lafayette, M. Charavay says rightly, was undoubtedly at that moment the master of the situation. He could, if he had chosen, have proclaimed the republic and been named President. The eyes of the Liberal party were turned, however, on the Duke d'Orléans, who had never been associated with the illiberal policy of Charles X. Lafayette had a conference with the leaders of the Liberal party; he declared to them that, though the republican form of government had his sympathy, he believed that a constitutional monarchy was more suitable for France. This declaration was transmitted to the Duke d'Orléans, who went, on Saturday, July 31, to the Hôtel de Ville. Lafayette received him at the foot of the steps and conducted him into the building. The Hôtel de Ville and its surroundings were still full of people who bore arms and who had taken part in the struggle; and many of them were republicans. "No Bourbons!" was the cry of the populace. The General placed a tricolor flag in the hands of the Duke d'Orléans, led him to one of the windows, and embraced him. This demonstration was the solution of the problem, together with a word which went the round of Paris in an instant: "The Duke d'Orléans is the best of republicans." This famous scene was made popular by various engravings. Some of the leaders of the popular movement made stipulations with Lafayette, who guaranteed that the new monarchy should be subject to certain conditions. These conditions were never embodied in any written document; they were (under the name of the "Programme of the Hôtel de Ville," by which they were often alluded to afterwards): the recognition of the sovereignty of the people, the abolition of hereditary peerage, and several dispositions concerning the elections, etc. Lafayette summarized the programme when he said that "a popular throne would be surrounded with republican institutions."

On the 7th of August, 1830, the two Chambers called the Duke d'Orléans to the throne. At the sitting of the Chamber of Deputies, Lafayette insisted strongly on the abolition of the hereditary peerage. He had himself become again as popular as in the first days of the great Revolution. Louis-Philippe appointed him commander of all the national guards of France. He was present at the Champ de Mars, in that capacity, at the distribution made by the King of the new tricolor flags to the national guards. The Chamber a few months after passed a law placing the civic guards again under the

control of the Home Office. Lafayette thought himself insulted by the vote of the Chamber, and resigned his command. He wrote to his friend Ségur: "It is time that I should withdraw. I am, I know, a nightmare to the Palais-Royal; not to the King and his family, who like me, and who are the best people in the world, whom I myself tenderly love, but to their surroundings. Have I not heard Viennet say before the King, on seeing me enter the room, 'Here is the *Maire du Palais*'?" Nothing could alter the General's decision, and the King finally accepted his resignation. From that moment, Lafayette, feeling perfectly free, threw himself openly into the constitutional opposition; he persevered to the end in what he considered his mission, the defence of republican and democratic measures. As his friend Ségur says in his memoirs: "From his early years to the end, he seems to have obeyed a sort of predestination. He was candidly, invariably, unreservedly devoted to this terrible mission."

Lafayette died at the age of seventy-six years, in the Rue d'Anjou, in Paris. The Government gave him a splendid official funeral. He was buried in the little cemetery of Picpus, where some victims of the Revolution had been buried, and where his wife had been waiting for him for twenty-seven years.

Correspondence.

TIMELY INQUIRIES.

TO THE EDITOR OF THE NATION:

SIR: A pugnacious personage in Congreve's "Old Bachelor" declares that, for him,

"Fighting for fighting's sake's sufficient cause:
Fighting to me 's religion and the laws."

Persons of less ardent temperament, however, before they engage in a quarrel, wish to know clearly what they propose to fight for.

As an American citizen who, in this Cuban imbroglio, is anxious to bestow his sympathies on rational grounds, I beg you to inform me: (1.) How large a part of the people of Cuba really desire independence? (2.) What sort of people are these? (3.) What kind of independence do they want? (4.) What reason have we for thinking that they will be better off if they get it?

I have looked in vain, in the innumerable speeches and communications on Cuban affairs, for answers to these questions, which yet seem to me of considerable importance.

B.

THE FALLACY OF INTERVENTION.

TO THE EDITOR OF THE NATION:

SIR: If intervention by nation A in the affairs of nation B is to-day good law and justice, because of B's oppression of a portion of its people, then intervention in nation A's own affairs by nation C or D may to-morrow or next week become equally good law and justice. The right to meddle which we claim to-day must equally be conceded to others against ourselves when the time comes; and the time never fails to come to every nation. Take the condition of the blacks under slavery in our own country. That was a case of cruel oppression on an immense scale, as our civil war clearly conceded. But should

we have listened for a moment in the '50's to a British proposal to teach us our duty by stepping in to free the blacks by force? Did we not even treat it as an insult that the British should offer to feed the starving Southerners? When, as late as 1894, a British society was formed for a crusade against negro-lynching in the South, did we not serve notice that even such peaceable meddling in a most righteous cause would be resented? Would we, at any moment, now or in the past, have brooked any outside rebukes of our scandalous maltreatment and looting of our nation's wards, the Indians? In the winter of 1886 nearly 100,000 Chinese, in this civilized republic of liberty, gathered in California, fugitives from the frightful cruelty and oppression of the whites throughout the Northwest; but would we have conceded that this national dishonor was the business of any European state? The mere statement of the case shows how preposterous the notion of intervention becomes when once practically and consistently applied—as of course it must be. It would become the most prolific breeder of international discord ever invented. No nation could pass a decade of its life without giving cause for the self-righteous meddling of some other nation, blameless of that particular sin. The civilized world would be in a state of intermittent war, waged in the name of humanity. Let our neighbor's blood be upon his head and our own upon ours. We must all agree to stand firmly by this rule, for any other is absolutely incompatible with the peace of the world.

And yet our people, in these closing years of the century, inspired by the conceit of their own prosperity and power, are allowing themselves to lose sight of the world's experience and boldly assuming the seat of an international dispenser of righteousness, vested by their own mandate with the task of doing justice to the oppressed. First it was the Jews under the Czar that we reached out to encourage; then it was Venezuela against Great Britain, the Armenians and the Greeks against the Sultan, and now the Cubans against Spain. No one knows what distant community will be the next object of our sentimental frenzy. It is fortunate for us that each of these waves of romantic emotion speedily absorbs and abates the preceding one, else we might by this time have had half-a-dozen wars on our hands. Can we not learn the lesson that, however noble these sympathies may be, they do not confer on us the right to assume such an impossible function as that of international dictator of righteousness?

What of the other reason—that which tells us that we have as little duty as right to interfere? This rests upon an enlightened selfishness which realizes the chimerical impolicy of surrendering ourselves to the altruistic pleasure of meddling. There are individuals whose circumstances are so comfortable, and whose opportunities so manifold, that they may devote the better part of their time to righting the wrongs of other individuals. But of nations there is none such. The business of international reformer is a luxury in which no nation can afford to indulge. Its own problems are deep and fierce and pressing enough to engross its complete attention. It is simply a wicked neglect of duty to its own people when a nation allows itself to spend on suffering foreigners that energy and anxiety which is thus diverted from those who have

the first claim upon it. We are acquainted, among modern women, with that type of mother who seeks to fulfil her mission by assiduous attendance upon clubs for the improvement of other women and other women's children, and who meanwhile neglects her primary duties to her own children and home, and we justly ridicule such conduct. But are we not fast coming, as a people, to exemplify that type of conduct among nations? Are we not tending to become an international gadabout and charity-monger, while the increasing evils of our own household are complacently neglected? We have vitally interested ourselves in the affairs of a South American dictatorship; we have groaned over the Russian Jew-baiting and the Turkish misrule; and now we choose to think of nothing but Spanish misrule in Cuba.

Meanwhile, we are heedless of the approaching precipice of national repudiation and bankruptcy, the pregnant terror of the labor problem, the racial oppression of blacks and of Indians. Inspired by the love of foreign humanity, we are insensible to the stench of municipal corruption. Shocked by the photographs of starving Cubans, we lavish our money to buy food and appropriate millions to make war for them, while the thousands of starved and oppressed creatures within a stone's throw of us, in New York and in Chicago, beg for help in vain. They may live and die in their slums for all the help they will get from us when we are filled with fine frenzy for (foreign) humanity. Ask any worker in the slums, who knows the true conditions of our poor and oppressed, and he will tell you that, if the neglect of their condition is ever excusable, it ceased to be so when we so readily passed them over and poured out our wealth in abundance to a stranger community, whose sufferings, forsooth, were so much more romantic and heart-stirring because they were not so close to our own doors.

There is a dissipation in charity as well as in drink. This emotional and flighty altruism is as unhealthy as it is misguided. It violates the dictates of moral consistency, national duty, and international experience. We may as well come to realize that this sentimental dissipation of meddling in other nations' affairs is, in spite of its attractions, bad national morals and wicked neglect of home duties. We cannot afford it. The sooner we turn back our national energies into the channels of domestic duty, the greater the chances of the Republic mastering its own internal dangers and vindicating to its critics the mission of popular self-government.

J. H. W.

CHICAGO.

DREYFUS AND PRINCESS CAROLINE.

TO THE EDITOR OF THE NATION:

SIR: In the *Fortnightly Review*, for March, Baron de Coubertin, in an article entitled "The Contradictions of Modern France," has explained the reverence which the French have for the army. And, while admitting that, in the Dreyfus trial, "the strict forms of justice were somewhat distorted," yet he would not have the distortion remedied, for fear of destroying the prestige of the army.

Pertinent to this whole affair is the account of a famous trial in English history in the early part of the century. The Royal Family was involved, and the monarchy—an institution as dear to the English as the

army is to the French—was threatened with overthrow. The events which led up to this trial were as follows: The Princess Caroline of Brunswick had been married to her cousin, the Prince of Wales, afterward George IV., than whom a more graceless, brainless creature never existed. This "great simulacrum," as Thackeray has called him, was incapable of devotion, and, soon tiring of the Princess, resorted to the basest means in order that he might convict her of misconduct, and thereby afford himself ground for separation. Every humiliation was heaped upon her, and, to crown all, she was denied the privilege of living with her daughter.

At last the situation became so unendurable that the Princess left England and went to the Continent. But the length of Europe was not sufficient to protect her from her husband's malignity, and she encountered his spies wherever she went. Matters came to an issue upon the death of George III., when the Princess found herself a queen in a foreign land, with no arrangement made for her allowance, and no certainty as to the recognition that her title would receive. The King sent a statement of his terms, namely, that she would be allowed an annuity of £50,000, that she was to take up her residence abroad, and that she was not to take any title belonging to the Royal Family. All negotiations were to cease if she stepped foot on English soil.

The Queen refused the terms, and proceeded to England, where action was at once begun against her in the shape of a "bill of pains and penalties, with an attempt to degrade the queen-consort and deprive her of her rights." Brougham was counsel for the Queen, and his management of the case was masterly. All that he desired was to clear the Queen of calumny. However, had the bill passed the Lords, instead of being laid aside after its second reading, Brougham would have impeached the title of the King, for, by his marriage while heir-apparent with the Roman Catholic Mrs. Fitzherbert, he had placed his title in jeopardy, and of this fact Brougham had proof of the most damaging character.

A speech which Brougham made while the bill was pending illustrates his conservatism, and at the same time his determination that the majesty of the law should not be trifled with:

"My lords, . . . if I did not think the cause of the Queen, as attempted to be established by the evidence against her, not only does not require recrimination at present, not only imposes no duty of even uttering one whisper whether by way of attack or by way of insinuation against the conduct of her illustrious husband, I solemnly assure your lordships that, but for that conviction, my lips on that branch would not be closed; for, in discretionally abandoning the exercise of the power which I feel I have, in postponing for the present the statement of that case of which I am possessed, I feel confident that I am waiving a right which I possess, and abstaining from the use of materials which are mine. And let it not be thought, my lords, that if either now I did conceive, or if hereafter I should so far be disappointed in my expectation that the case against me will fall as to feel it necessary to exercise that right—let no man vainly suppose that I, or the youngest member of the profession, would hesitate one moment in the fearless discharge of his paramount duty. . . . An advocate, by the sacred duty which he owes his client, knows, in the discharge of that office, but one person in the world, *that client and none other*. To save that client by all expedient means—to protect that client at all hazards and costs to others—is the highest and most unquestioned of his duties.

. . . Nay, separating even the duties of a patriot from those of an advocate, and casting them, if need be, to the wind, he must go on reckless of the consequences, if his fate it should unhappily be to involve his country in confusion for his client's protection!"

MARY E. LANE.

BARRE, MASS., March 28, 1898.

A HINT FOR TOURISTS.

TO THE EDITOR OF THE NATION:

SIR: Now that a great many of your readers are, no doubt, planning a trip abroad for the summer, allow me to call their attention to a most interesting and unique place, and that is Königsfeld, near the Triberg waterfalls, in the Black Forest. Some years ago I had the pleasure of making a pedestrian tour with Mr. Archibald Forbes from Strassburg to the Odellenberg in the Vosges Mountains. On our return Mr. Forbes told me that he had several days at his disposal, and asked me where he should spend them. I suggested Königsfeld, of which he had never even heard the name. But he started next morning by the Kinzig Valley Railroad, and left the train at Peterzell, from which station Königsfeld is reached in half an hour by omnibus. The consequence of Mr. Forbes's visit was a most interesting four-column article in the *Daily News*, which, unfortunately, was not read by American sight-seers, or I am very sure many would have since been influenced to stop at Königsfeld, instead of hurrying on to Switzerland.

Your readers may ask what special attraction, more than any other village, has Königsfeld; to which I would reply that it is a Moravian community, as Bethlehem, Lititz, and Nazareth were a hundred years ago, when Washington, Lafayette, Adams, Lee, and others went from New York and Philadelphia to visit them. Although Königsfeld has remained unknown to American tourists, English, French, Swiss, and Germans in large numbers go there every summer for a longer or shorter stay. You find there professors from Heidelberg, Bâle, Tübingen, Berlin, etc., who enjoy studying the life among the Moravians. In fact, it has become a summer resort for the antiquarian and those interested in religious communistic life. There are excellent hotels and boarding-houses at Königsfeld. The principal one, the *Gemein-Logis*, carried on by the church authorities, is the best; but all are good and comfortable. Then, from Königsfeld as headquarters, delightful excursions to various points in the Black Forest can be made.

ARMIN DE BONNEHEUR.

"IN OUR MIDST."

TO THE EDITOR OF THE NATION:

SIR: In a cutting from the *Sun* of the 7th instant, sent to me by a friendly correspondent, I observe that I am called, "as a writer, . . . one of the most confused, tortuous, pedantic bunglers that ever set pen to paper." And why this shower of unsavory missiles? So far as appears, simply because of my having said, five and twenty years ago, after production of abundant proofs, that, "with reference to analogical principles, *in our midst* is altogether irreproachable." I found myself compelled, by facts, to differ from the ruling of Dr. Webster's editors, that *in our midst*, in *your midst*, etc., "seem contrary to the genius of the language."

As analogues of *in our midst*, I formerly brought forward *in my absence*, *in our despite*, and other locutions of the same stamp. But of this fact the *Sun* says nothing, and, moreover, pretty obviously, knows nothing. To be discredited at random is considered as being my appropriate desert. "Dr. Hall and his analogies," we are merely told, "must be thrown out"; following which notification of ejection come, with original logicity, the metaphorical dead cats and addled eggs aforesaid. So much for the *Sun*.

In her middis, equivalent to *in their midst*, I have adduced, in my 'Modern English,' from a treatise some four hundred years old. Similar expressions, I have reason to believe, however, were of rare occurrence down to about the middle of the current century. Some quotations for them may, accordingly, be acceptable to the curious; and here they are:

"He stuck, at last, yet *in their midst*, it seem'd." Chapman, *Cæsar and Pompey* (1631), Act III., in *Dramatic Works* (1873), Vol. III., p. 159.

"If we then could have had our dear Dr. Bell *in our midst*, our pleasures and improvements would have been greatly heightened." Rev. C. John (1794), in Southey's *Life of Andrew Bell* (1844), Vol. I., p. 205.

"We forget that these very errors would have remained invisible, but for the enduring light that broke out *in their midst*, intersecting, and contracting them." Rev. Dr. James Martineau (1846), *Essays Philosophical and Theological*, Second Series (1869), p. 133.

"We . . . looked upon the luxuriant plain, the glittering capital shining *in its midst*." Lawrence Oliphant, *A Journey to Katmandu* (1863), p. 132.

"We can only wish their authors success in the salutary though unattractive task of disclosing to Europe the cesspool of filth which lies *in their midst*." *Saturday Review* (1868), Vol. v., p. 46.

"*Out of its midst*." Bp. Samuel Wilberforce (1873), *Speeches* (1874), p. 326.

"The presence, *in our midst*, of what remains on earth," etc. Cardinal Newman (1873), in Robert Ormsby's *Memoirs of James Robert Hope-Scott* (1884), Vol. II., p. 253.

However it may be in the United States, *in our midst*, with the like, now rarely incurs any censure in England. One here sees it in passable writing, and even better than only passable, every day. Authorities for it I have long ceased to collect.

Of interest, as illustrating a use of *midst* which has become obsolete, are the following passages:

"Never Prince carried his life farther into death; for it seemed he past, without any *midst*, from one extreme unto the other death." Edward Grimston, Translation of P. Matthieu's *Heroyk Life*, etc. (1613), Part I., p. 145.

"It stood, indeed, in another *midst*." Abp. John Williams (1636), *The Holy Table* (1637), p. 210.

F. H.

MARLBOROUGH, ENGLAND, March 23, 1898.

A DISCLAIMER.

TO THE EDITOR OF THE NATION:

SIR: My attention has been called to a circular recently issued in behalf of the proposed National Art Club of New York, in which my name is included in the list of those who favor the establishment of the club. Will you permit me to say that this has been done absolutely without my knowledge, and in spite of a letter which I wrote to the Secretary expressing my doubts as to the advisability of increasing the number

of artistic organizations in New York city at the present time?

Very respectfully yours,
EDWARD ROBINSON.

MUSEUM OF FINE ARTS,
BOSTON, April 4, 1898.

Notes.

Copeland & Day are about to publish 'Songs from the Ghetto,' a German transcription from the original Yiddish of Morris Rosenfeld, with an English prose translation by Prof. Leo Wiener, of Harvard. Our readers are not unaware of this remarkable production of the sweat-shop. From the same firm will come 'Ireland, with Other Poems,' by Lionel Johnson; 'Impressions,' poems by Mrs. T. S. Perry; and 'On the Birds' Highway,' by Reginald Heber Howe, jr.

'Advanced Rules for Large Assemblies,' by Mrs. Harriette R. Shattuck, is announced by Lee & Shepard.

A new collection of poems by Bliss Carman, 'By the Aurelian Wall, and Other Elegies,' is being brought out by Lamson, Wolfe & Co.

T. Y. Crowell & Co. have undertaken a translation of Brunetière's 'Manual of the History of French Literature'; 'The Poems and Sonnets of Shakspeare,' edited by George Wyndham; and Tolstol's 'What is Art?'

'Tennyson's Debt to Environment' is the theme of a little book, by Prof. William G. Ward, which will have the imprint of Roberts Bros.

Through Dodd, Mead & Co., Prof. Harry Thurston Peck will issue a translation from Petronius, 'Trimalchio's Dinner.'

Mrs. Murray Macdonald's translation of 'Karl Marx, and the Close of his System,' by Prof. Böhm-Bawerk, will be shortly forthcoming from Macmillan Co.

Nearly ready, in Frederick Warne & Co.'s list, is 'Stories from Dante,' by Norley Chester.

In Waugh's "Pamphlet Library," published by Henry Holt & Co., the next volume is 'Religious Pamphlets,' by the Rev. Percy Dearmer.

Harper's June issues embrace 'George William Curtis at Brook Farm and Concord,' by George Willis Cooke; 'Collections and Recollections,' by an anonymous writer; 'Crooked Trails,' by Frederic Remington; 'The Moral Imbeciles,' by Mrs. S. P. McLean Greene; 'Phases of an Inferior Planet,' by Ellen Glasgow; 'A Romance of Summer Seas,' by Virginia Ann Jefferson Davis; and 'The Story of a Play,' by W. D. Howells.

Longmans, Green & Co. have in press 'Stonewall Jackson,' by Col. G. F. N. Henderson; 'The Life of Admiral Duncan, First Viscount of Camperdown,' by his grandson, the present Earl; a 'Memoir of Major-General Sir Henry Creswick Rawlinson,' by Canon Rawlinson; 'The Story of the Malakand Force, 1897,' by Winston L. Spencer Churchill; and 'The Life and Letters of Henry Reeve,' late editor of the *Edinburgh Review*, by J. K. Laughton.

The third and concluding volume of the 'Letters and Times of the Tylers,' by President Lyon G. Tyler, of William and Mary, is now obtainable of Henley T. Jones, Williamsburg, Va. The edition is, unfortunately, limited to 250 copies, and should readily be absorbed by the public libraries alone.

A. N. Marquis & Co., Chicago, announce

as in a forward state of preparation, 'Who's Who, the Country Through'—a dictionary of the living celebrities of the United States, of both sexes. It might be difficult to explain why our publishers have hitherto looked askance at a project like this, with contemplated periodic revision and reissue. Across our northern border, Mr. Henry James Morgan, a practised biographer and prolific author of excellent hand-books, has just got out, through William Briggs, Toronto, 'The Canadian Men and Women of the Time,' of more than a thousand pages, which he hopes to work over three years hence, and indefinitely thereafter, at the same interval. The compiler's scope includes Canadians abroad as well as at home. His sketches are highly praiseworthy for their compactness and the lack of such fulsome eulogy as our own cyclopædias often tolerate as the result of gratuitous assistance from relatives and friends. Mr. Morgan ingeniously substitutes for this quotations, in appreciation, from the press and other sources. He takes pains, however, to show each character's relation to the questions and movements of the day—as, politics, temperance, imperial federation, etc. An innovation much to be commended is the regular mention of wife or husband as a necessary part of the subject's life and connection. Finally, the present address of each personage is appended. So far as we have tested this work, it is eminently satisfactory in execution, and we trust the compiler and publisher will find their account in it.

The 'Directory of Titled Persons' ventured last year as a companion to 'Whitaker's Almanack' (New York: Brentano's) has proved a success, and is indeed a most handy compendium. The issue for the present year profits by the absorption of Walford's 'Windsor Peerage,' and is swollen with "the exceptional number of the Jubilee honors." A grouping of each peer's issue and other titled relatives is a distinct improvement. The convenient index to country seats and residences cited in the Directory fills twenty-eight pages.

Those Americans who have laid their plans for a summer in Spain cannot be many, in the present strained relations of the two countries; but such as venture can now avail themselves of the brand-new Baedeker, 'Spain and Portugal' (Charles Scribner's Sons), in rivalry with O'Shea's 'Guide to Spain and Portugal,' which six years ago was in its ninth edition. In wealth of detail and abundance of maps and plans, this volume parallels the other members of a series whose quality is beyond the need of advertising or of praise. There is a list of the artists mentioned in the handbook, and this is the only appendix. Under Barcelona, mention is made of the steamers which ply to Port Mahon and to Palma; but, by an omission which decidedly needs to be repaired, the Balearic Isles are excluded from the editor's scope. Their delightful scenery and their attractiveness as a sanitarium merit a better acquaintance on the part of tourists. Palma might well, in time, become a port of call for the German steamers from New York to Genoa, which now pass in sight of the islands.

The bound volume of the 'Cumulative Index to a Selected List of Periodicals: Authors, Subjects, Titles, Reviews, Portraits,' for 1897, forms the second in this remarkable enterprise of the Cleveland Public Li-

brary. It is cumulative not only in the sense of a serial issue which contains in each succeeding part all that has gone before, but in its growing comprehensiveness. As compared with volume one, 100 periodicals have been indexed, against 70, and the bulk increased from 384 pages to 635. Book reviews and portraits have been still more carefully looked after, and a new heading, Poetry, gathers up the verse heretofore scattered in the main alphabet. *Literature* and the *American Journal of Archaeology* will be included in the current index, which is now the promptest of all keys to the periodical literature of the day.

Benj. R. Tucker has fulfilled his promise to print 'The Trial of Émile Zola: A detailed report of the fifteen days' proceedings in the Assize Court at Paris'; but, large as the event was, a smaller type would have been more legible, and we could have spared the eccentricity of a ragged right-hand edge, the result of not spacing out the lines.

Pascal forms the subject of two recent publications; the first being a new edition of his 'Pensées,' edited by the Abbé Margival, and preceded by an interesting study of the author and his much discussed work. The editor has taken as the basis of the text (which is intended for use in colleges and schools of a higher grade, as well as for the students of Pascal in general), the Bossut edition as revised by Havet. His preference is clearly for the original Port-Royal edition, but it could not be accommodated to his purpose. The second book is a study of Pascal and his work, great space being given to the 'Provinciales,' and greater still, as is proper, to the 'Pensées.' It is entitled 'Pascal,' is written by a competent scholar, M. Maurice Souriau, and published in the Leconte-Oudin series of 'Classiques Populaires.' Admirably composed, it reads as easily as a work of fiction, though a very serious study of a very serious author. M. Souriau's style makes even the drier parts of the subject interesting and attractive. He does not exhibit partisanship or undue enthusiasm in striving to give his readers a true portrait of Pascal, and a correct view of his purpose in the composition of his famous works. He has a theory, which he develops and maintains very strongly, that Pascal intended his 'Apologie,' of which we have only the fragmentary materials in the 'Pensées,' to defend not Christianity so much as Jansenism in particular.

When Emin Pasha was murdered five years ago, it was known that he had left a large abundance of manuscript matter that would throw considerable light on his unique personality and career. These sources have now been used in the preparation of a biography by his nephew, Georg Schweitzer. Emin, especially in his later years, was in steady and prolific correspondence with his sister, and in addition kept a diary down to almost the day of his death. The Life now published by Hermann Walther of Berlin is based chiefly upon these new sources of information. In spite of the most charitable construction naturally put on all Emin's doings, the work will doubtless become his standard biography. It shows that he was preëminently not a man of action or of statesmanship, and still less a soldier, but a savant, scholar, and specialist.

A little volume of select translations from Mrs. Browning's poetry ('Poésie Scelte di Elisabetta Barrett Browning'), avowedly

free, has just been made by an Italian whose versatility, as poet, painter, art critic, patriot, statesman, senator of the realm, philanthropist, recalls Massimo D'Azeglio. Tullio Massarani, now past sixty, has undertaken a task which might daunt a youth, and would, indeed, have been impossible if carried out in anything like a literal fashion. Not all the power of poetical compression which resides in his native tongue could, without omission and paraphrase, turn, for example, the five-line stanza of "Mother and Poet" into a four-line; and if the cisalpine imagination toys with such a line as

"And 'broider the long-clothes and neat little coat,"

it avoids altogether such another as

"'Twere imbecile hewing out roads to a wall."

In this poem, Massarani's changes in the original metres which his admiring colleague, G. Negri, animadverts upon in the Milan *Perscrvanza* for March 14, are exemplified to his disadvantage; but, as we have implied, he will be forgiven, considering the difficulty of the job. Negri asks whether the publication of this memorial of a devoted friend of Italy amid the fiftieth anniversary celebrations of the Revolution of 1848 was patriotically intentional; and sighs over the common absence of other signs of survival of the spirit of those glorious days. "Come tutto passa e si trasmuta quaggiù!" These translations may profitably be compared with the English. The publishers are Fratelli Treves, Milan.

The whole of the March number of the *Psychological Review* (Macmillan) is taken up with a notable bibliography of the literature of psychology and cognate subjects for 1897, compiled by Livingston Farrand of Columbia and Howard C. Warren of Princeton in coöperation with N. Vaschide, Paris, and B. Borchardt, Berlin. An author's index follows the classification by topics.

The *Land of Sunshine*, edited with so much spirit and independence by Mr. Charles F. Lummis at Los Angeles, Cal., has become incorporated, and now proclaims itself a "Magazine of California and the West." A number of well-known writers have united to make it worthy of the trans-Missouri portion of the continent, as appears in the April number.

The *Geographical Journal* for March opens with an account, by Lieut. Peary, of his four journeys to Greenland, together with his plans for his next expedition. These are, in brief, to establish a small Eskimo settlement as far north as a ship can take it, and then to transport it, if possible, with supplies, to "the most northerly point of land, wherever that may be." From thence (say, 85° N.) he will endeavor to reach the pole; and if the first attempt is unsuccessful, he will repeat it, being prepared to stay four or five years, if necessary. Not entirely dissimilar to the experiences of the American explorer were those described in the next article, by Dr. Sven Hedin, in his account of his four years' travel in Central Asia. Substitute camels for dogs, a tarantass for a sledge, Kirghiz for Eskimo, and deserts of driving sand for fields of drifting snow, and the differences between a journey at the end and on the "roof" of the world are not so very great. Here also there were ice-covered passes to be climbed, amid blinding snow-storms and an Arctic temperature, as well as interminable tracts frightful from their loneliness. But in Asia there was the added suffering from thirst

and from the swift transitions from freezing cold to scorching heat; and during the terrible crossing of the Takla-makan desert, most graphically described, Dr. Hedin was for six days without water. His most interesting discovery was the ruins of a city, probably more than ten centuries old.

The *Scottish Geographical Magazine* for March contains, besides the Hon. D. W. Carnegie's account of his Australian explorations, a description by Major Yates of life at Chaman, the present terminus of the Quetta and Kandahar Railway on the Afghan frontier. It is a dreary place on the edge of a vast desert, in which last year there was no rain from April 22 to December 7. There is some permanent cultivation, chiefly by means of irrigation, but the nomads plough the ground and sow the seed in the winter months, and harvest their wheat and barley in June, unless it is eaten by the locusts. Both papers are illustrated with reproductions of photographs of characteristic scenes.

Remembering the fame which Munich enjoyed as a literary centre in the sixth decade of the century, when King Maximilian II. had gathered around him the coryphæi of German poetry, a number of more or less eminent writers and poets, now living in the Bavarian capital, have recently formed the Munich Literary Society, with the distinct purpose of awakening the community from its somewhat unnatural lethargy. A lay membership of about a thousand, and several successful meetings during the first two or three months of its existence, seem to augur well for the future prosperity and usefulness of the Society. Its spirit is a catholic one. Not only are older dramatic productions, not generally found in the repertoires of the theatres, represented under its auspices, but its interest is directed to any new production of real poetic worth, regardless of form or tendency. Young talents may, therefore, look to the Society for that hospitable reception and mediating influence through which the *freie Bühne* in certain cities have opened a career to such dramatists as Gerhart Hauptmann and Max Halbe. Each reading, recitation, or stage representation is given but once, and only before the members of the Society, no guests or paying auditors being admitted. Thus, while members of the Munich stage take part in the performances, all competition with the public theatre is precluded. So far, representations have been given of Shakspeare's "Troilus and Cressida," of Tolstol's "Die Macht der Finsternisse," of Hartleben's "Die Erziehung zur Ehe" (a satire on European social customs), and a play by a still younger dramatist, Bruno Piper, a typical modern production, having for its painful subject the parting of George Sand from Chopin on the island of Majorca, and closing with an impressive scene in which the composer pours into passionate chords the sorrow from which his genius draws new inspiration.

In a catalogue of modern paintings to have been sold on March 30 at the Hôtel Drouot in Paris, we remark a photogravure after a picture by Manet, showing the *Alabama* in the offing at Cherbourg: a "kodak" of exceptional interest and value.

We have received the new Harvard University Catalogue for 1897-98. As this publication has served as a model for others, we will suggest one needed improvement. It is easy to refer from the index to each student in his department, but no such aid

is given in the case of the officers, whose arrangement (pp. 6-28) is by collegiate seniority and not alphabetical.

Senate Document No. 161 emanates from the Library of Congress, and is a list of books relating to Cuba, compiled by A. P. C. Griffin, Assistant Librarian, together with a bibliography of maps, compiled by P. Lee Phillips, superintendent of the maps and charts department. Mr. Griffin's list has an eye to periodicals as well as to books. It is mainly concerned with the political history of the island.

An International Congress of History will open at The Hague on September 12, when the Netherlands celebrate the majority and coronation of their Queen. It is organized under her auspices, and will be presided over by the Minister of Foreign Affairs and by M. de Maulde de La Clavière, General Secretary of the Paris Société d'Histoire Diplomatique. Membership, for women as for men, is procurable for a subscription of twenty francs (\$4.00), which insures the distribution of printed copies of the papers read before the Congress. Each nation may use its own language in papers and discussions. The organization of the United States section has been intrusted to Mr. James Gustavus Whiteley, No. 223 West Lanvale Street, Baltimore.

Mr. F. Gutekunst, Philadelphia, adds to his imperial-panel series of photographs of eminent Americans the late Gen. Rosecrans, in a very striking and lifelike reproduction.

—The *Atlantic Monthly* for April contains several articles of interest. Among the more purely literary are "Personal Impressions of Bjørnsen and Ibsen," by W. H. Schofield, who seems to have had many opportunities for observation. Ibsen is described chiefly by negatives. He will not talk of the "meaning" of his plays—professing in one case to have entirely forgotten what he meant; and on other subjects connected with literature he talks little because he knows little. He does not understand English or French as spoken languages, and cannot have been much influenced by French authors, for "he hardly knew of their existence." Of Shakspeare he knows nothing, and of Goethe (indeed, of anything German) he is no admirer. "His self-devotion seems almost to have blinded his eyes to merit in others." Of course he is at the opposite pole from Bjørnsen, whose son, by the way, married Ibsen's daughter. This circumstance has not brought the parents any nearer together in literary matters, Bjørnsen declaring emphatically of one of Ibsen's plays, "Oh, that is a piece I can't stand—entirely pessimistic and useless; not the kind of thing we want at all. It won't do anybody any good." Ibsen, it seems, was reluctant to believe that Shakspeare still "held the boards" in the United States and England. A most unusual piece of writing is W. J. McGee's description of the various stages of death by thirst, founded on observation in the Western desert. "Thirst in the Desert" will be found of interest by lovers of imaginative literature, as some of its most terrible description recalls strikingly portions of "The Rhymer of the Ancient Mariner." "Shall We Still Read Greek Tragedy?" is a valuable article by Prof. Thomas Dwight Goodell, who protests against Shakspeare being taken as "the norm of perfection, by which the world's drama is to be judged"; but he himself gives a powerful proof of the hold Shakspeare has upon the Anglo-Saxon mind by endeavoring

to draw a parallel between the Greek chorus and the secondary characters in such plays as "Hamlet" and "Romeo and Juliet."

—"England and Germany" is the subject of an article in *Harper's*, by Sidney Whitman, who knows both countries better than most of those who write about them. He points out that the feeling of contempt for everything German so commonly met with in England is nothing new. In 1825 Gen. Sir C. J. Napier speaks of finding "the people of every part of Germany stupid, slow, hard animals," without "even so much tact as to chat well." "Honor to Cæsar," he adds, "for killing so many of them." To-day an English journalistic critic, writing of a second visit to Germany, speaks of "dirty, dusty, nasty-smelling, unromantic Germany." Mr. Whitman points out that the English do not now write in this way of the French, though, if the record were searched, passages about "Johnny Crapaud" could be found which would prove that the French, too, have been at times pretty well exposed by John Bull. Mr. Whitman thinks that this sort of contemptuous abuse of one country by another cannot be found in German papers, books, or periodicals. He might have gone further and declared that nowhere on the continent of Europe is violent contempt for foreigners, or the expression of it, considered well-bred. The newspapers are introducing it where they can, but its native soil is Anglo-Saxon. It comes with the English and with us from a real belief in our superiority, not to this or that nation, but to the whole world, and from an abiding conviction that we can "lick" it. Owing to this fact, as soon as our interests clash with any particular set of foreigners, whether they happen to be German, or Spanish, or French foreigners, we frankly explain to them that we really despise them from the bottom of our souls; that they are bores, pirates, or monkeys, and that it is only our generosity and long-suffering meekness which prevents our "wiping them off the face of the earth." This may not be urbane, and Europeans do not think it is, but it is our way, and it accounts in part for a great many misunderstandings, such as that between England and Germany, which Mr. Whitman attempts to analyze. One of the most curious features of it is that the English are nowadays fond of inquiring why they are disliked on the Continent; and in the United States we are always overcome with wonder if we are told that our manners and our press do not lead foreigners to love us. Mr. Worthington G. Ford, the statistician, has a temperate article on "Commercial Aspects of the Panama Canal," in which he reaches the conclusion that the canal will be a "convenience," but not a "necessity," and that "the commercial interests of the United States in any event are of even less importance than the interests of Europe." The only noticeable illustrations in the number are Joseph Pennell's six sketches in an article about bicycling, and Frederick Remington's novel pictures of "Cavalry Tactics on the Plains." The snap-shots in the opening article, exhibiting an African buffalo in its death-throes, are surely too redolent of the slaughter-house to be admitted to a family magazine.

—The leading illustrated articles in the *Century* are on "A Pennsylvania Colliery Village." The first, describing "a polygot community," is by Henry Edward Rood; the second, by Jay Hamblidge, gives "an arti-

st's impression of the colliery region." Both together do not add much to our knowledge of the subject, but it is gratifying to know that, notwithstanding the tragedy of last year at Lattimer, there is ground for believing that there has been some improvement in twenty years. The period of the "Molly Maguires," when a sort of *mafia* held sway, has passed away, and there is something like law in the coal regions, though certainly not enough. The community still holds life pretty cheap, and, as has been often observed, there is no way to draw an indictment—or at any rate secure a conviction under an indictment drawn—against a whole community. Nor will even government by injunction prevent the private use of stillettos, stones, and pistols at christenings and weddings, when it is the sense of the guests that they should be used, and when, if trouble subsequently arises, there are always witnesses to be found who will swear that all concerned were ten miles away at the time of the fracas. A sort of criminal Trust exists for the purpose of assisting members when accused of crime. One thing is made very plain—that nine-tenths of the "oppression" from which the miners suffer is connected with the difficulty they find in not using up their credit at the company's store for wages; it comes from their own want of thrift, and not from the cruelty of capitalists, who really do very little for them one way or the other, beyond furnishing them with a job. The rest is their own work, but, like so many of their fellow-creatures, a miner is inclined to attribute whatever measure of success he attains to himself, but to impute all losses and disasters and failures to others. What is done is done by Labor; what goes wrong is the fault of Capital. "Heroes of the Life-Saving Service," by Gustav Kobbé, is the latest contribution to the "Heroes of Peace" series. The stories of self-sacrifice in the work of rescuing life along the coast are a marvellous proof of the capacity for endurance and fortitude latent in man. Comparing the anecdotes with stock stories of heroism in battle, one cannot help wondering whether in process of time the universal delight in glory through carnage and homicidal patriotism may not be replaced by a gentler courage; it is certainly not beyond the bounds of belief that mankind should come to recognize that there is a great deal of humbug in military heroism. Fifty years ago it was supposed to be the mission of American democracy to produce heroes of peace.

—So much has been written about the "New Sayings" of Christ that many readers will be interested in the Rev. Henry Van Dyke's poem in *Scribner's* called "The Tolling of Felix," designed to throw light on one of them. It is an elaborate legend, in ballad form, with a prelude and envoy, on the theme,

"Raise the stone and thou shalt find me; cleave the wood, and there am I."

The meaning given to the saying is that the secret of finding Christ lies in faithful work or drudgery. Such a reading excludes any more supersensual and imaginative rendering; but this is the privilege of exegesis. The pictures in Mr. Henry Cabot Lodge's "Story of the Revolution" continue to be one of the most attractive features of the magazine; the text will bear a little revision here and there before it appears as a book. For instance, is it not rhetorically a mistake to say of Frederick the Great

that he was "not only a great man, but a clear-sighted and efficient one"? Would it be correct to say of Washington that he was not only a good man, but a man of considerable rectitude, or of Solomon, that he not only was a wise man, but was considered by his friends and admirers to have a good deal of sense? Mr. Brander Matthews has an entertaining essay on "The Conventions of the Drama," which very cleverly demolishes scenic and "clothes" realism, partly by indirection. Mr. Matthews's thesis is not that realism is a bad thing—this nobody can successfully maintain—but that the art of acting is based on a series of conventions, which are known to all concerned to be the negation of reality. We agree beforehand that a passageway between flat paper walls shall be a street, and that ten men shall be an army, and the acting does the rest. More than this, experience shows that if we attempt to do away with the conventions, and substitute imitation, the illusion is actually impaired. A curious instance of the readiness with which a new convention may be introduced is found in the discovery that an audience will accommodate itself to actors representing a play in two different languages at the same time. Thus, Booth acted *Iago*, speaking English, with Devrient as a German *Othello*, while Frau Methua-Schiller played *Desdemona*, speaking English, except when she addressed *Othello*, to whom she always spoke German.

—Prof. Wrong's annual 'Review of Historical Publications relating to Canada' (The University of Toronto: Published by the Librarian) has entered its second year with increased bulk and a high standard of merit. The average length of articles is considerably less than before, for we find on comparison that while the number of pages is about one-fifth greater, the number of subjects treated has nearly doubled. Two facts will help to account for this difference. In the first place, fewer works of importance appeared in 1897 than in 1895-96 (and 1895 was drawn upon in the opening review). Secondly, the bibliographical search has on this occasion been very thorough, and thus many fugitive pieces are mentioned which deserve no more than the passing notice they receive. As for the literature itself, the falling off in point of quality from 1895-96 is noticeable in several large departments, particularly so in all that relates to French Canada. Dr. Drummond's 'Habitant,' which was issued in December, has made a great sale, but, whatever may be its value to the historian of the future, it cannot redeem the province of Quebec from a year of sterility in historical composition. On the other hand, interest in geographical discussion has been active. The longest papers in the present series relate, respectively, to the Cabot voyages and to westward migration, the one finding its text in nine and the other in three titles. The index shows evidence of the care taken to secure a complete survey. Lives from the 'National Dictionary of Biography,' historical novels, and even slight articles in the current magazines are remembered. Prof. Wrong continues to permit the members of his staff to avow their identity or not. The tendency, however, seems to be setting towards anonymous contribution. While pointing out the fact that the historical material in sight seems to be thinner than usual, we must not neglect to give Canada credit for economic progress.

The record of industrial advance falls within the scope of Prof. Wrong's project, and among other useful notices he has been able to secure from Dr. George Dawson a sketch of historical events in the Yukon District. While Canada's gold fields may prove a doubtful blessing, there is no denying the immediate interest of Klondike news from an authority who can give it at first hand. "The man who has been there" is often suspect, but, with the possible exception of Mr. W. Ogilvie, no returned prospector will be listened to with better attention than the Director of the Canadian Geological Survey. We fully recognize the merit of Prof. Wrong's publication, and feel sure that it will react favorably on historical studies in the Dominion. It should also be stated that the name of Mr. H. H. Langton, Librarian of the University of Toronto, appears on the title-page as that of assistant editor.

—Prof. Cunningham, in his 'Alien Immigrants in England' (Macmillan), has opened, rather than occupied, a new field in English social history. In the space at his disposal he has been able only to provide an introduction to the subject, which, while fairly adequate for the middle ages, is a mere outline for the seventeenth and eighteenth centuries. One rises from this sketch vividly impressed with the contribution made by alien immigrants to the industrial education of the English people. Almost every step of the transition from the sparsely settled agricultural frontier-community life of the middle ages to the industrial and commercial supremacy of the past century has been taken with the help or under the guidance of aliens. New processes of manufacture, new methods of management, and wholly new industries were continually introduced either by voluntary immigrants or by religious or political refugees. French Huguenots were the financial backers of the "glorious Revolution" of 1688. Their friends declared, in 1709, that they had invested more than £2,000,000 in the public funds, about £500,000 being in the newly established Bank of England. One must regret that the author has confined his attention so exclusively to the industrial side of the influence of the aliens as almost to ignore their contribution to the intellectual progress of the country and to the diffusion of English ideas on the Continent. If Huguenot capitalists contributed to the triumph of civil liberty in England, it was also a Huguenot historian, Rapin de Thoyras, who revealed to Europe the connected story of the rise of the English state in the best general history of England that had been written up to that time. Again, after another century of development, it was the Swiss exile Delolme who produced the best treatise of the age on the English Constitution. Examples need not be multiplied. There is plenty of material for a most instructive chapter in the history of English civilization.

—The decease of the Great Prime Father of Korea, usually known as the Tai Wen Kun, removes from the peninsular politics of the weakest state in the Far East its most impressive figure. Indirectly and unintentionally he was the means of opening the hermit kingdom to the world's notice and commerce. A telegram to the Foreign Office in Tokio, from the Japanese Minister in Seoul, announced that the patient, who had been ill during several months, died at 7 P. M. on February 22. A blood relative

to the King Hung Chong, who was succeeded by Chul Chong (who died in youth, January 15, 1864, and without issue), the Tai Wen Kun made himself virtual ruler of the kingdom when his second son was nominated King. Hitherto indifferent to politics, he became, in spite of the three royal widows living and the powerful Min clan, a true mayor of the palace. A rabid hater of Christianity, foreigners, and any progress which meant deviation from Confucianism and Korean precedents, he put down numerous insurrections with blood and iron. He lured the converts of the French priests to their ruin, and is believed to have put no fewer than ten thousand of them to torture and death. His high-handed proceedings brought the fleets of France, the United States, Japan, and Russia into Korean waters, with resultant battle and bloodshed by at least three of these Powers. His career as intriguer, assassin, reactionary, foiler of the unscrupulous plots of the unsleeping Min clan, to whom the Queen belonged, almost passes belief and reads more like fiction. In 1894, Li Hung Chang felt it necessary to deport the old gentleman to China for a couple of years. His last triumph was the killing and cremation by kerosene of Queen Min through Japanese ruffians, whom he led into the palace. He was a typical product of that old Korea which is as surely passing away as the old Japan has done. In his later days he had overcome most of his anti-foreign prejudices, gladly utilizing dynamite for his special purposes.

BODLEY'S FRANCE.

France. By John Edward Courtenay Bodley. Two volumes. The Macmillan Co. 1898.

Mr. Bodley takes care to have it understood that he is neither a holiday tourist just back from France, nor a compiler from the books of others. By way of fitting himself to criticize a nation which he calls "the most complicated product of civilization on the face of the globe," he went to live in its midst. "I came to France in May, 1890, and wrote the last lines of these volumes more than seven years later, having in the interval not spent seven weeks away from French soil, as I had soon perceived that uninterrupted residence in the land was the only means of accomplishing my self-imposed task." Life in Paris, numerous *voyages d'études* (which were extended to Algiers), and the tenancy of a château in the Brie were among the incidents of this period. Mr. Bodley has enjoyed a further advantage of great value—personal intercourse with eminent Frenchmen. Renan, Taine, Clémenceau, Comte Albert de Mun, and Mgr. Freppel were friends worth having at the outset of such an inquiry, and ever since he has moved up and down through the social strata, from members of the Institute and parliamentary leaders to peasants and shopkeepers. We are led to speak of his qualifications by the insistence which he lays on his method and means of study. While a sensitive and shrinking modesty might have refrained from giving all the details he offers, it is clear that Mr. Bodley undertook a heavy task seriously.

His "capital subject," according to the preface, "is Political France after a Century of Revolution." To state this in other words, our author is more occupied

with the Third Republic than with social traits and usage. But as the present form of government can be fitly considered only in the light of French vicissitude since 1789, he becomes, perforce, an interpreter of past politics for above a hundred years. Of the four books which follow his long introduction, that on "The Revolution and Modern France" stands first both in order and in general interest. The remaining three, though principally devoted to an account of public functions as they exist today, are also flavored with a dash of historical philosophy. They are entitled "The Constitution and the Chief of the State," "The Parliamentary System," and "Political Parties." By defining Mr. Bodley's real scope we at the same time limit the possible range of our comment.

One cannot mistake his two main conclusions. The first is that the régime which was set up after Sedan and confirmed during the presidency of Marshal MacMahon, has failed to bestow pure administration and to enlist national pride. Let alone affection, it has not even attracted the respect which an example of republican virtue would have claimed. The second is, that, amid the incessant change about them, Napoleonic institutions have stood firm and have wedded France to centralization. There is much in the book besides the proof of these points; but, taking our cue from Mr. Bodley's own lips, we shall consider them most prominently.

The Third Republic, he argues, is condemned by the political pessimism of its citizens, aristocrats and workingmen alike. We can illustrate his position by a contrast between the First Republic in its latter days and modern France. Between 1789 and 1798 many political idols were broken, and yet the French were interested in their public affairs. Despite the Terror, even despite the Assignat and Fructidor, they had hope. If the politicians were inept, what, after Campo Formio, could not be hoped from the army? Presently, the Directory fell, and the General for some years justified the confidence which the nation placed in him by conniving at the revolution of Brumaire. One gathers from Mr. Bodley's pages that France esteems her politicians very little higher in 1898 than she did a hundred years ago. The pessimism is blacker now because no martial glory is in immediate prospect. The parliamentary system, after a fair trial, has disappointed expectation; the masses are apathetic, and to chauvinists the Exposition of 1900 will be a poor equivalent for Marengo. Sufferers in the last stage of phthisis occasionally get relief from a mild, damp climate; only it is a pity that they should ever reach the stage where dry air is bad for them. So with politics. In certain cases it may be as well that citizens should not take the trouble to cast their votes; but one feels convinced that the body politic is consumptive when this symptom becomes pronounced. Mr. Bodley testifies that France is in a bad way by speaking thus of the electoral torpor:

"It might be thought that the wholesale abstention from the polls of hard-working, self-denying, and often highly civilized members of a society whose political representation sorely needs sanitation, is an evident evil. It would be so in a community which had adopted with the parliamentary system its necessary corollary, the party system; but, as things are in France, it is perhaps for the public good that so large a proportion voluntarily refrains from politics."

We may ascribe the common use of "je ne m'occupe pas de politique" to absence of the party system, or to that widespread indifference which M. Anatole France has observed and mentions in a passage quoted by Mr. Bodley from "L'Orme du Mail": "Public opinion, which was a reality under the Monarchy and the Empire, has no existence in our time, and the people, once ardent and generous, are now incapable either of love or of hatred, of admiration or of contempt." Thus Mr. Bodley detects among the French a want of political hope which is disclosed by cynical distrust in the value of universal suffrage, and he inclines to think that, as things are, it is "for the public good that so large a proportion voluntarily refrains from politics."

In conjunction with this stolid attitude of the masses, we must place as a bad symptom the vindictive hatred of politicians. Their corruption has been well known since the Panama trials; their savage slashing at each other is equally scandalous. Mr. Bodley sees on the one hand several thousand gladiators contesting violently for the palms of place and emolument; on the other, several million listless, however "free and independent," electors. The most famous and bitter contest of recent years was waged in the Var, when M. Clémenceau, driven to the wall, fought with a dash which had often enabled him to overthrow ministries. "But though, to assure his defeat, the forces of the boulevards were transported to Provence, the Department, which for a week was the talk of Europe, entered so tepidly into the fray that only one-half of its voters went to the poll." To atone for popular languor, Deputies and other candidates run to an excess of activity. Hence the scurrilous tone of newspapers and the long campaigns of abuse. Mr. Bodley adapts the phrase *homo homini lupus* to make it read *Gallus Gallo lupus*. Reprisals, either by arms or slander, have been the rule ever since Carrier proclaimed that the Jacobins would turn France into a cemetery rather than not regenerate it after their own fashion. On Ferry's death in 1893, M. Clovis Hugues gave as an obituary the Communist view of the late Senator: "Yesterday all-powerful, to-day Jules Ferry is but a corpse which the people have the right to execrate, and to-morrow the worms will eat him just as he had us eaten up by the Versailles troops in 1871." Should the typical Communist be called an *exagéré* like Hébert, Mr. Bodley, after seven years' study of the French press, might rejoin that the question of rancor is merely one of degree. "There is a nation to the members of which Frenchmen are more revengeful than to the Germans, more frascible than to Italians, more unjust than to English. It is to the French that Frenchmen display animosity more savage, more incessant, and more inequitable than to the people of any other race."

Fearing that passages like the last might have the ring of diatribe, Mr. Bodley declares that he is less severe than candid Frenchmen are. He claims warrant for every stricture he has made in a harsher criticism from some local source. For instance, according to M. Jules Roche, an ex-Minister: "We are the worst-governed country in the world—or, I will say, so as to hurt no one's feelings, one of the very worst." Despite his sense of republican shortcomings, Mr. Bodley will not allow the truth of this charge. On the contrary, he observes, "I should be perplexed to mention

three nations which on the whole are better governed than France."

We now reach the second matter we have already emphasized, Mr. Bodley's praise of the institutions that were created under the First Empire. "The well-organized daily life of the nation, which is but little affected by politics, is a striking sign of the excellence of Napoleon's administrative structure." But if the present democracy is a failure, and France owes her chief gratitude to a despotism, what becomes of the legacy which the First Revolution is vaunted to have left? Are Liberty, Equality, Fraternity, once an ideal, at present a reproach? Mr. Bodley derives evident satisfaction from using these picturesque watchwords as a standard whereby to measure French failings. He will allow the Revolution no praise for the political salvation of France, because that is still unattained. He implacably traces to its turmoil "a psychological or moral result," restlessness, which keeps the waters always agitated and muddy. Since 1789 the country "has never yet found a political government to soothe and weld together the elements unsettled by the great upheaval." Taine, from whom Mr. Bodley draws much—if not in actual detail, at least in disenchantment of outlook—might have taken a similar tone about constitutional matters. He would have disagreed with his admirer's estimate of Napoleon's part in harvesting the good influences of the Revolution. We remember to have seen shortly after Plon Plon's death a manifesto in favor of Prince Victor Bonaparte. The strongest point in it was that France is undoubtedly republican, but that she needs an imperial head. Mr. Bodley instances the gold coins of the First Empire from 1804 to 1807. "On their face is engraved 'Napoléon Empereur,' and on the reverse, 'République Française.'" This seeming inconsistency, he urges, may point towards the right issue of France from her political difficulties. Let her cease to imitate British institutions, which are alien to the Celtic spirit. She "should organize her own, under an appropriate headship, and thus an Emperor, as the chief of a Republic, far from being an anomaly, might under favoring circumstances solve the unravelled problem of the century."

An English critic would put himself in a very false position were he to champion the claims of any French pretender, and we must explain that Mr. Bodley means the "strong man" in general, not a member of the Napoleonic dynasty. He judges the Second Empire more leniently than many would, but he likewise spares a kind word to the July Monarchy. His real enthusiasm is reserved for the founder of the code and the administrative system under which France lives through all changes of leadership. He believes that the French have accepted centralization finally and—considering national temperament—to good purpose. It means stability in the midst of experiment, and its necessity can be appreciated only when one tries to imagine the state without it. "If the Napoleonic fabric of centralization, which has survived all the vicissitudes of the century, were demolished, it would bring down with it every institution in France, with havoc more ruinous than that of 1789; and to build another structure, another Napoleon would be needed."

In a country which is subject to sudden political change, the constitutional forms,

while they may be important, are less important to the world at large than the spirit and tendencies of the time. We have, therefore, tried to indicate the chief impressions which remain after a careful reading of Mr. Bodley's book, instead of fastening upon points which arise from his description of President, Chambers, and parties. We ought not, however, to dismiss the subject before we have given a fuller idea of his purpose and contents. As to aim, he is simply a scientific inquirer like Arthur Young, De Tocqueville, and Mr. Bryce. He has no belief that he can reconcile French and English, because, where types are clear-cut and aggressive, fuller knowledge but breeds the conviction that genuine sympathy is impossible. This mental attitude reacts well on his tone and temper. Where a man believes that he is an agent of public conciliation, he may even stoop to flatter that good may come. Mr. Bodley is saved from paying court to the French nation by a knowledge of the fact that the cause of peace and national fraternity does not hang upon his pen. Still, he deserves credit for his candor. After accepting kindness from so many classes of people, the truth could not always have been easy to speak.

Mr. Bodley presents a much smaller number of topics under 'France' than Mr. Bryce took up under 'The American Commonwealth,' and his essay is of narrower extent. Having already cited the titles of his four large divisions, we may state that the first examines the ideals of 1792 in the light of their fulfilment; that the second and third centre about such organic features as legislative and executive power; and that the fourth, with its eight subdivisions, enters fully into the group system of political parties. We are unable to single out any one heading for special notice, but we shall observe that Mr. Bodley regards constitutional matters with an eye to their flesh-and-blood purport, and not at all as metaphysical abstractions. He sometimes suggests De Tocqueville, never Sieyès.

One must distinguish between the Third Republic and the people of the country. Mr. Bodley's interest in the vital side of politics becomes plain whenever he speaks of the French themselves. Though disparaging a form of government, he admires many traits of the national character, and sets France far before Germany in her hold on the attention of mankind. The corrupt politicians, the outrageous press, the equally vapid and mischievous life of fashionable society are on the surface; let one break ground a little, and he will discover a hard-working army, a devout clergy, an austere and laborious university. Mr. Bodley never wearies of magnifying the Institute, whether in the case of individual members or of the whole body, and he seems to detect a saving remnant where one would least expect it—in the Chamber of Deputies. The Left Centre with Whig sentiments and a certain amount of *sang froid* preserves the best traditions of bourgeois rule during the reign of Louis Philippe. Only a small quota of just men was demanded from the cities of the plain, and followers of the late Léon Say will perhaps give a good account of themselves should the French Legislature ever develop into a political Sodom.

We shall add a final word concerning Mr. Bodley's value as a critic and as a writer. With a good command of historical and literary allusion to supplement careful research

and local knowledge, one can approach anything short of the Eastern Question in a mood of moderate confidence. We give Mr. Bodley credit for the virtues just catalogued, and also for the wish to put matters in a fair light. If he has a bias, it is towards aristocracy, taking that word in its original meaning, taking it in the sense which Aristotle contemplated when contrasting it with oligarchy. According to the poet, Merlin was amused at Vivien's foolish effrontery—

"And smiling as a master smiles at one
That is not of his school, nor any school,
But that where blind and naked Ignorance
Delivers brawling judgments unashamed
On all things all day long, he answered her."

A mage may smile at a fair maiden, but it implies a fund of philosophy to accept thus the antics of the self-seeking ignoramus in politics, and Mr. Bodley, a good deal put out with French office-hunters, becomes paradoxical in limiting the significance of the Revolution. At one extreme we may place Lord Beaconsfield's epigram that there are only two facts in history, the Trojan War and the French Revolution. Surely the truth lies somewhere between this "smart" speech and Mr. Bodley's more carefully considered judgment:

"The best that can be said of the French Revolution is that, just when civilization was on the point of making history colorless, it burst forth and produced for the student and the artist a collection of pictures and documents thrilling and pathetic, grandiose and revolting, such as no epoch of antiquity or modern times has supplied. But, to provide intellectual pleasure for the cultivated, it is hardly worth while that millions of the human race should have lamentably perished before their term."

The reader will see that such an estimate reveals a particular attitude of mind towards the ideas for which the movement stands, and that many parts of a work on modern France will be conditioned thereby.

Although he connects the 'Histoire Parlementaire' with the names of "Roux and Bouchez," and says that not one out of a million travellers in Switzerland knows the name of the actual President, Mr. Bodley is generally accurate and unexaggerated in statement. A wealth of anecdotal and biographical reference makes his chapters pleasant and lively to read. Claiming our right to find fault, we may suggest that much reiteration could have been saved by a more compact arrangement of leading points. The style has been closely looked after, and an abundance of neat phrases awaits the amateur of terse speech. In this respect the work is so creditable that we wonder how the following sentence could have escaped revision:

"On the former [highway] stands the village of Boissy St. Léger, where Madame de Staël, arriving from Switzerland on November 9, 1799, made her last change of horses before entering Paris, just as Barras passed on his way to Gros Bois hard by, the château then occupied by him, but soon to be given to another son of the Revolution, Berthier, afterwards Prince de Wagram, whose descendant still lives there."

While differing from Mr. Bodley on certain fundamental questions, we can freely avow that he has not spent his seven years in vain.

NETTLESHIP'S REMAINS.

Philosophical Lectures and Remains of Richard Lewis Nettleship, Fellow and Tutor of Balliol College, Oxford. Edited, with a biographical sketch, by A. C. Bradley.

Professor of English Literature in the University of Glasgow, formerly Fellow and Lecturer of Balliol College, Oxford, and G. R. Benson of Balliol College, Oxford. 2 volumes, with portraits. Macmillan.

A confusion between Lewis Nettleship and his elder brothers, the late Corpus Professor of Latin, Henry Nettleship, the distinguished consulting oculist, Edward Nettleship, and John Nettleship, the well-known animal painter, is possible among us, to whom Lewis must be known, if at all, by the little that he actually published: (1) *The Arnold Prize Essay on 'The Normans in Italy and Sicily'* (1873); (2) "An Italian Study of Bunyan's Pilgrim's Progress" (*Macmillan's Magazine*, November, 1878); (3) "The Theory of Education in the Republic of Plato" (written in 1879 for Mr. Evelyn Abbott's 'Hellenica,' Rivingtons, 1880); (4) an article on T. H. Green's philosophy (in the *Contemporary* for May, 1882); and (5) the Memoir of the late Professor T. H. Green in Nettleship's edition of that philosopher's works (Longmans, 1888). The need of such an explanation is due chiefly to the disaster on Mont Blanc in August, 1892, which abruptly closed his life before he had yet completed his forty-sixth year. To those whom personal friendship enables to read between the lines of Prof. Bradley's sketch, the brief memoir prefixed to these volumes will seem a model of what such an account should be; but, for others, Prof. Bradley might well have attempted a connected survey of Lewis Nettleship's interpretation of Plato. Also, by a little different treatment of his correspondence, and one or two extracts from Nettleship's unprinted MSS. on 'The Normans in Italy,' Prof. Bradley could probably have given the general reading public a more telling picture and a fuller suggestion of his really noteworthy genius for the pleasures of genuine comradeship with his pupils. Though the biography here given will be found exceptionally interesting, its effect upon many will be that of something too esoteric for the uninitiated.

This defect is all the more to be regretted because the sense of an imperfect contact with Nettleship's personal and uncommon quality can hardly be removed by reading what our editors have to give us from Nettleship himself. All of these Lectures and Remains come to us in an esoteric shape, and not as Nettleship would have prepared them for publication. The first volume, for which Prof. Bradley is responsible, comprises at the outset five notable though extremely brief papers on Immortality, Pleasure, Spirit, Individuality, and the Atonement. These papers make Nettleship most nearly accessible to "the general." They are untechnical discussions of topics of vital interest, modern difficulties, religious and ethical, illustrated by an insight which is not less but more of our own day because perfected by a lifelong study of Plato. The next item consists in accounts of travel and extracts from Nettleship's correspondence with six of his friends. Then follow Lectures on Logic, compiled chiefly from notes made by pupils. The volume closes with portions of a long projected but never completed book on Plato. Mr. Godfrey Benson's second volume is entirely occupied by his compilation (also from pupils' notes) of Nettleship's much frequented Balliol Lectures on the 'Republic' of Plato. Mr. Benson has been extremely successful in the performance of a difficult task, but he could

neither hope nor attempt to alter the off-hand manner used by Nettleship in lecturing, but never tolerated by him in anything intended for publication. His Lectures on the 'Republic' were unwritten; each year they were different, and were always growing better. Those who have heard the lectures of Prof. Alfred Croiset in Paris will have some idea of the effect achieved by Nettleship's conscientiously prepared and finished improvisations. Something to give greater pungency and relief to Prof. Bradley's picture of Lewis Nettleship could perhaps have been gained by inquiry among his occasional correspondents.

"I am afraid circumstances are too much for me," he wrote in 1886 to an American pupil, "and it is no good promising to write regularly to my friends. I still enjoy producing a letter when I have the time and the mood; but the longer one goes without seeing people, the harder it is to think about them continuously, and the less common material there is for intercommunication. And so I find my correspondence has dwindled down to one or two people, and even with those threatens to become intermittent. . . . I am still a Balliol Tutor, and though I live in a house with my mother, I spend most of my time and energy in College. I sometimes try to think how it has changed since your time [1878]. It has changed, no doubt, and yet it is very hard to put one's finger on the precise points. There is a good deal of interest now among the men in what they call 'Social Questions,' which I think is healthy, though of course it has its aberrations."

A very different but an equally characteristic side of Nettleship shows in a letter to the same correspondent, written from Drontheim, in August, 1881:

"I have just returned from a month's struggle in the wilderness with the Norwegian devil, and have been trying to work at Plato in latitude 69. In my journeyings I met a Mrs. — and Miss —, who said they knew you. They were very friendly to me, and Mrs. —, under a complication of asthma, rheumatism, and general disease, displayed a vigor such as I never see except in your countrywomen."

This letter closes with a reminiscence which speaks volumes for the easy and almost boyish intimacy that subsisted between Lewis Nettleship and his pupils: "Heavens, how it all comes back again—those morning 'bathes' with you, and little — and — enormous in the sunrise." In the earliest letter of this same correspondence, written on Christmas Day, 1878, Nettleship announces the death of a common friend, also his former pupil—one who was so passionately attached to him that he refused to leave Oxford without giving Nettleship certain keepsakes.

"Poor D—p," exclaims Nettleship, "I have seen nothing of him since last winter, when R— and V— and he and I dined together in Town. Then I had one or two letters, and since the summer . . . I have known nothing about him. I am glad to think that I have got his clock and 'jor-rocks' to remind me of him, though I don't know any one whom I should be so little likely to forget. One cannot help feeling that he and M— were two as representative Oxford men as one could find; the one rejecting all the obvious good of the place, the other drinking it all in; and yet both meeting on a common ground in something which could not be expressed in class-lists, but which yet is of the essence of Oxford. It is sad work, these young deaths."

Passing then to the American phase of the "Greek Question," Nettleship goes on to say:

"I always hope that America may eventually help to shew us old-fashioned people

the way to reconcile classical education with modern life. The problem in England is appallingly difficult. So many elements other than purely educational ones enter into it that it is almost impossible to get people to look at it straight. . . . The difficulty seems to be to find methods for gradually diverting the enormous wealth and talent which are now spent on teaching it into other channels. And there is always a danger of playing into the hands of the mere *paravers*, if one is too much in a hurry to diminish the demands of classics. I quite believe myself that the real interests of classical literature are sufficient to guarantee that the most cultivated minds will always study it; and I don't see why many of the ideas which it contains should not come to be a real power in modern life; there are certainly signs of this. But the more this is felt to be true, the less it seems to me will able men be ready to apply these literatures as mere mechanical contrivances for extracting a certain amount of effort out of the average boy. Nor can I think that it is natural for any boy to begin to get his first ideas from books which can have to him little more meaning than counters."

Here Nettleship, for special reasons, puts the case against the classics; a rather more adequate suggestion of his views may be gathered from an extract given by Prof. Bradley (l. 85), and can be gleaned from his memoir of T. H. Green. Indeed, his deliberate mind on this subject is indicated in the 'Hellenica' (p. 171), where, after admitting that we cannot bring back days like those in which systems were constructed by discussion in the streets of Athens or the gardens of the Academy, he declares that it is "all the more important that the few men in each generation who might have taken part in such discussions should make the works of the great thinkers of the world not a dead letter, but a living voice, by entering into their spirit, interpreting their speech, and carrying on their thought."

How well he himself ended by accomplishing this most difficult task appears repeatedly in these volumes; nowhere more strikingly than in his account of the 'Philebus' (l. 325 ff.). After mentioning the inevitable irritation caused in a modern reader by the drift of this Dialogue, he attributes it to "the length and rapidity" of Plato's "mental stride," and to "the comparatively unoccupied state of the ground which he had to traverse." And then he adds: "It would take a modern philosopher much more time and trouble to pass from an analysis of heat or of itching to the conception of a divine mind or of an absolute good." But he finds our chief stumbling-block in "the fusion (some will say the confusion), already noticed in the 'Gorgias,' of the scientific and moral aspects of life." Another instance of our author's gift as a "revivalist" of Platonic thought may be found in his remark ('Hellenica,' p. 125) that "if the Duke of Wellington could say that the battle of Waterloo was won on the playing-fields at Eton, we need not be surprised at Plato when he speaks of children 'receiving the spirit of law through their music.'" Again he says (ll. 141): "Plato's belief that changes in the fashion of popular music are signs of great political change, seems exaggerated merely because it is stated so simply. A modern writer would establish the connection between these things at greater length, but the idea is certainly not foreign to modern thought."

Lewis Nettleship spent his life piercing each year more completely through "the veil of conventional platitudes, pretentious antiquarianism, and sentimental finery" which obscures the modern eye in contem-

plating Plato. The study of his progress often has a dramatic interest like that of the gradual cementing of a friendship. Indeed, he himself has said, in speaking of the 'Republic': "Every great book has characteristics of its own, which have to be studied like the characteristics of a person" (l. 4). Pater went a step further, and said that the Platonic ideas were in some sense "persons to be known as persons must be, and to be loved for the perfections . . . of their being." Just how Nettleship worked out in his own mind this personal conception of the 'Republic' is suggested by his definition of it as "an ideal picture of the rise and fall of the human soul; its rise to its highest stage of development, and its fall to its lowest depth" (ll. 5).

At the close of this account of a great teacher, the real record of whose life must fatally remain inaccessible to the larger public, should stand words concerning him written by Prof. Bradley, and inscribed on the wall of Balliol College chapel, above the recently erected memorial of Jowett: "He loved great things, and thought little of himself; desiring neither fame nor influence, he won the devotion of men and was a power in their lives; and, seeking no disciples, he taught to many the greatness of the world and of man's mind."

Picturesque Sicily. By William Agnew Paton. Harper & Brothers. 1898. Pp. xii, 381.

In 1896 M. Gaston Vuillier published a sumptuous quarto on Sicily, the contents of which he had already given to the world in the pages of the *Tour du Monde*. Were it not that its price puts it beyond the reach of many modest purses, there would have been but little occasion for Mr. Paton's book, coming so soon as it does after its splendid predecessor. For a moment we were tempted to think that there was no occasion at all, and that Mr. Paton might have spared himself the trouble of writing. To show what we mean, we cite a passage from p. 153 of Vuillier:

"Lorsque l'empire byzantin tomba sous la domination musulmane, l'Albanie seule, soutenue par l'ardent patriotisme de Scanderbeg, lutta quelques années. En 1488, voyant leur perte inévitable, les Albanais résolurent d'abandonner leur patrie et leurs biens plutôt que de subir la loi du vainqueur. Ils demandèrent asile à Ferdinand d'Aragon, roi de Naples, qui les accueillit avec faveur et les fit passer en Sicile, où ils fondèrent les colonies de *Piana dei Greci*, *Palazzo Adriano*, *Contessa* et *Mazara*. Ils ont vécu là depuis, isolés, en pleine montagne, se transmettant pieusement de père en fils les coutumes de leur ancienne patrie et les superbes costumes des ancêtres."

On p. 137 of Paton one finds the following:

"When the Byzantine empire fell under the dominion of the Mussulmans, Albania alone, inspired by the ardent patriotism of Scanderbeg, continued for some years to offer effectual resistance to the power of her enemies. In 1488 A. D. overcome by overwhelming numbers, the Albanians resolved to abandon their unhappy country, at no matter what sacrifice of worldly goods, rather than submit to the oppression of their conquerors. Ferdinand of Aragon, King of Naples, received the Albanian ambassadors and showed them favor, and granted to their nation the privilege of founding in Sicily four colonies of exiled people, who crossed the seas, as did the later Pilgrim Fathers, seeking 'freedom to worship God' and liberty to manage their temporal affairs. Certain of these exiles settled in Sicily, at *Piana dei Greci*, *Palazzo Adriano*, *Contessa*, and at

Mezzojuso. There these brave people made homes for themselves, and in the lonely valleys where they built their cities their descendants have continued to dwell, cherishing the traditions of an ancient race, preserving the manners and customs and regulating their living according to the habits and laws of their ancestors."

A little further on is another passage, in the description of the costumes of Pianna dei Greci, which bears the same strange resemblance to a passage in Vuillier. There are, it is true, differences. In describing the clasp of the girdle of a wedding dress, Vuillier says that it is "ciselée," and he speaks again of its "ciselure." Mr. Paton's description reads like a free translation of Vuillier, except that he says the clasp is "engraved" instead of *ciselée*, and he speaks of its "re-poussée work" instead of its *ciselure*. To be sure, there is a doubt permissible as to his knowing the precise signification of the words he employs.

Mr. Paton can scarcely be pleased at hearing that certain of his passages have been anticipated in so nearly identical a fashion. It seems like a waste of time to tell the same thing twice in the same words, and, besides, the first telling robs the second of its air of originality. We do not accuse him of appropriating what is not his: there is that happy touch about the Pilgrim Fathers—it gives relief to what might appear otherwise a vain repetition; his "lonely valleys" gives the other side of Vuillier's "en pleine montagne"; and then the quotation-marks enclosing "freedom to worship God" show a praiseworthy scrupulousness in the acknowledgment of borrowings.

And, to speak more seriously, we do not find that Mr. Paton has taken very much from Vuillier. In the first place, the two follow different lines in describing Sicily. Vuillier is a friend and disciple of Pitré, and, next to the account of places, it is the superstitions, the traditions, the folk-lore of Sicily that most interest him. Mr. Paton, after his own personal experiences (which, to one who knows Sicily, form the freshest and pleasantest part of his book) and his bits of topography, turns his attention, as was the way of the late Mr. Freeman, to history. And as his is the work of a simple tourist, it goes without saying that his history and statistics are given at second hand. There need be no quarrel with him on that score, so long as he chooses his authorities well, and in some way acknowledges his indebtedness. This he has quite sufficiently done except in the case of M. Vuillier, whom he has not mentioned, and of the late John Addington Symonds, for whose first name he invariably substitutes the initial T.

There are, however, two or three vexatious peculiarities in the book. The first that one notices is that the author almost invariably gives the Italian article with the names of streets, places, etc., e. g., "On Il Corso Vittorio Emanuele, near Porta Nuova, is La Piazza del Duomo, to which Il Duomo di Palermo presents its right flank" (p. 59). He does this with such insistence that, when thoroughly exasperated by it, one is tempted to think that he knows but little Italian and has inordinate joy in the flavor of that little. Unhappily, the proof of this is not far to seek. A glance at a dictionary might have saved him from translating plumb-trees into *carrubi* (p. 127), and a little more grammar would not have allowed him to substitute the third person indicative for the first (and more than once) in quoting the

children who tell him they are dying of hunger. The Conca d'Oro changes its gender as often as he mentions it, article included. One wishes he would not talk about "una signora inglese" and "una francese," and one absolutely feels sorry for him in both his transcription and his translation of a sign over the door of a wine-shop. They are respectively as follows: "Sinchero il trovi sempre, e di valore, e avrai sana, la verità, e lieto il cuore," which, he says, "may be paraphrased, 'In wine are sincerity, valor, health, truth, and lightness of heart'" (p. 90)! It is no sin not to know Italian, but in such case it is an indiscretion to attempt to write it.

Of course, the errors and blunders that every tourist inevitably falls into are not wanting here, but, as they are mostly of slight moment, it is not necessary to enumerate such as we have marked. Do we not daily meet persons who have passed not months but years in Italy, and who still are constantly discovering the most astounding mare's-nests in Italian life and character? Alongside of the average *forestiere*, Mr. Paton appears of an almost meticulous accuracy. We could, however, wish that, besides such knowledge of the Italian and of the Sicilian dialect as are necessary to a real understanding of the people he is trying to judge, he had also been able to enrich his book with an adequate account of the monuments of architecture that are perhaps the chief glory of the country. Viollet-le-Duc went far towards accomplishing this service for its Greek temples, but there is room for a new work on that fusion of elements that resulted in a style of singular beauty and completeness, but which, confined to a narrow territory, has left very few examples of itself.

For the true lover of Sicily no description is sufficient which does not convey a sense of the exquisite poetry in which the Sicilian landscape is steeped—partly a result of moisture and partly also of the southern sun—where the subtle transitions of English and Dutch scenery and the tender melancholy of Venice are blended with something which is of none of these, but of Sicily alone. It is in landscape what in music is the tenor of which we say that it has tears in it. It is a merit of M. Vuillier's book that it suggests this charm. Mr. Paton may, however, be congratulated, after all exceptions have been taken, on a work that has been conscientiously put together, giving a fair enough representation of many aspects of the little world of Sicily, and that is pleasant to read. The appendices on the Mafia, on brigandage and the Sicilian question are, especially the first named, worth attention. The volume is a goodly one to look upon, and the illustrations, taken from photographs, are really good. It is only to be objected to them that they are uniformly spaced at intervals of eight pages, and that, as a consequence, they rarely coincide with the text they should supplement.

Historic Ornament: Treatise on Decorative Art and Architectural Ornament. By James Ward, author of 'The Principles of Ornament.' Charles Scribner's Sons. 1897. \$3.00.

This is a useful book of reference, if for its illustrations alone. Four hundred and thirty-six of them scattered over four hundred and nine pages do not leave a very

great deal of text for the reader, but what text there is, is extremely intelligible; at once simple and direct. Being so brief, the text has to deal in general principles boldly asserted, and cannot give much delicate hair-splitting in the way of the statement of half-truths and the refinements of critical examinations. A general proposition, being accepted as true, has to be stated as if it were always true, and the reader is left to his belief that no exceptions exist until he consults other and more critical works.

More than one-eighth of the whole book is devoted to prehistoric art. More than one-third is devoted to Egypt, Chaldea, ancient Persia, and the like, and the subject of Romanesque architecture and ornament is not reached until the three hundred and thirtieth page. We have then, necessarily, the most hurried treatment of the great mediæval styles; and finally, and most remarkable of all, the art of the Renaissance and of all the epochs that have succeeded that epoch is inadequately gone over in forty pages crowded with cuts. Whether this proportionate length and fulness of treatment of different epochs is the result of the author's preference does not certainly appear. It may be merely the result of a lack of care in laying out the work, or in a change of plan which has caused the cutting down of a much larger book to one of the present size. However that may be, there is but little to be got from the later pages, and it is hardly worth while to read in them about the revived classic styles. On the other hand, the treatment of the Phœnician and Chaldean art is good, considering the popular character of the book and the limited nature of the materials from which the author could make his compilations.

A great deal of space, relatively speaking, has been given to the mythological legends of the peoples whose art is treated of. Thus, there are many pages devoted to an account of the Greek and Græco-Roman deities, less with regard to the quality and character of the works of art supposed to represent those deities, their attributes and actions, than as to their purely literary legend. It seems to have been thought that all the information must be given together and within the same pair of covers, and that the reader who might wish to know about the Apollo Belvidere might feel slighted if he were not told all about Apollo that could be found in a mythological dictionary. To the student who desires information about Grecian decorative art, it is certainly irritating to find so little concerning the ornaments of the great times, and so much about Jupiter and his wives and children, Apollo and his various potentialities, nymphs, graces, and heroes. These personages have little to do with the decorative art of the Greeks; indeed, one has to abandon at once the idea that the title-page is accurately descriptive of a book which like this truly undertakes to treat of all the fine art of the periods in question, except the larger and more elaborate paintings, where such exist. As to the Greek and Græco-Roman gods, it is most uncritical, most inaccurate, to state, as it is stated here, that they are one and the same, and that Zeus may be treated indifferently under that name or as Jupiter. The existence in early Latin legend of gods of truly Italian origin, some of which were identified afterwards with Greek divinities, but others not so confused, is never suggested.

On the whole, however, the bold state-

ments of general truths may be accepted as truthful enough, in the main; but that these general statements are treated as if they were universal in their application, is unfortunate and misleading. Thus, it is true that the Byzantine builders of the fifth century, and subsequent centuries, did wonderful things with the cupola or dome, and roofed many buildings in part by the use of that kind of vault; but to say (page 295) that "the timber-roofed and vaulted style of architecture now gave place to the dome," is to make a totally false statement. So the assumption that, in the earliest Christian buildings, paintings were used instead of sculpture, because of the religious objection to sculpture, which latter art was considered as identified with heathen worship, is wholly to ignore the use of paintings in heathen worship, and also to ignore the complete decay of the art of sculpture in Europe during the years just preceding the triumph of Latin Christianity. Such rash assertions might be culled from these pages by scores, but it would be to do injustice to the book, which is far more remarkable for the general accuracy of its statements, however hastily made, than for the erroneous boldness of a comparatively small proportion. The conclusion would seem to be that the author has used the best authorities in an intelligent way, but that the determination to make the book serve for easy reference, and for the use of hurried people consulting country libraries, has caused him to state as always true that which strikes him as true in the main. The moral is that the statement of these general truths is unsafe, except by a writer of real and profound knowledge of the subjects treated.

A certain carelessness of diction, as where Lazarus is said to be "represented as a mummy," and as where the statue of Zeus at Olympia is said to have been "made of, or probably covered over with, plates of ivory and gold (Chryselephantine); the ivory plates covered the exposed parts of the flesh," may be noted. There are many such instances, but in the second of the two above given, there is reached, perhaps, the culmination of careless wording. The uninstructed reader might ask in vain what is meant by the word *Chryselephantine*, enclosed in the parenthesis and floating in the sentence to which it cannot be made to belong, and he would wonder what kind of protection or clothing the ivory plates might be to the "exposed part of the flesh." The fact that the word *Chryselephantine* is an adjective, and the fact that the modern archaeologists infer that the nude parts of the statue were made of ivory, and the clothed, or draped, parts, of gold, with or without enamelling, needs, of course, to be stated; but it is not stated in the above or in other sentences of this description.

Different passages in the text point to the appearance of a second volume, and a star on the back indicates that another volume will appear with two stars. Moreover, a sentence in the preface says that in the succeeding volume "the various divisions of the industrial arts and crafts will be treated in their historical developments." Final conclusions as to the value of the work should, therefore, be deferred until the appearance of the second volume.

Christina Rossetti: A Biographical and Critical Study. By Mackenzie Bell. With six

portraits and facsimiles. Boston: Roberts Brothers. 1898.

It is easy to imagine that another writer would have done much better with Mr. Bell's materials than he has done with them; but, at the same time, it is evident that his materials were not of the kind that lend themselves heartily to the making of a good biography. We may trust an admiration so great as his for Miss Rossetti to have left no stone unturned which might conceal some item of importance to her memory and fame; but his utmost care and patience have made late discovery of few precious things. Her life was hardly less reclusive than that of her sister Francesca, who entered an Anglican religious house. Its events were her poems, and of these Mr. Bell has not written with any critical perception of their quality. It is true that she had two offers of marriage, but these have been treated with a reserve that could not have been more delicate if Miss Rossetti had herself dictated the words. Her own piety tended so strongly to the Roman Catholic type that it is strange to find her refusing her first suitor, a painter, because he was a Roman Catholic. This was in 1849, when she was in her nineteenth year, and in 1866 a second offer was rejected because her lover was "either not a Christian at all, or else was a Christian of undefined and heterodox views." While her sister Maria Francesca was an Anglican nun, her brother Dante Gabriel was a free-thinker. But for her devotion to her mother and other members of her family, she would probably have followed her sister into the nunnery. She was, says Dante Gabriel, "an outer sister," and in one respect she was less Puritan and more Romanist than Francesca, who would not look at William Blake's illustrations of the Book of Job for fear of breaking the second commandment, while Christina's mysticism, which was intense and all-pervading, must have made her sympathetic with the whole range of Roman Catholic art, however frank its representations of the Deity.

Her difference from Dante Gabriel was a very interesting one. His liberal use of mediæval pieties in his paintings and poems was altogether sentimental and æsthetic. He believed nothing of the Roman Catholic doctrine or legend. But Christina pounced upon nothing in this field that was not her own as a sincere and vital part of her religious life. It was the opinion of her brother William that she wrote nothing as a poet which she did not believe as a saint. She served a long apprenticeship, and, while her poetical self-consciousness was developed at an early age, it was not until 1862 that her first volume of poems was fairly published. We say "fairly published" because in 1847 her maternal grandfather, G. Polldori, privately printed a volume of her 'Verses.' Between this time and the publication of her first and most significant volume in 1862, many of the poems collected in that volume appeared in various magazines, a large proportion of the many in *Macmillan's Magazine*. Mr. Bell has given us an elaborate bibliography both of her separate publications and her works. The former is somewhat confusing, because it is not chronological; one magazine is reported on and then another. Until 1890 her income from her writings was never more than £45 a year, and often less; after that it rapidly increased. It did so, we infer, less because of a growing appreciation of her poetry than because of her manuals of piety, 'Time

Flies' and 'The Face of the Deep,' the latter "A Devotional Commentary on the Apocalypse." There were several others of the same kind, and all of them together secured her an extensive following of such pious souls as dote on Keble's 'Christian Year,' though it is interesting that she herself thought nothing of Keble's poetry, or rather of Keble as a poet. The favor which she met with as a religious writer did much for her reputation as a poet in Anglican Church circles, and possibly something to injure it among those who think that "beauty is its own excuse for being." She became more and more the poet of a special cult, of those "readers who," as her brother William aptly wrote, "drawing the deepest delight from such poetry as specially appeals to them, never read any other, and have but small knowledge of poetry as a fine art."

She suffered much from ill health, and the effect of this upon her verse was not agreeable to those who cared more for her poetry than for her piety. Mr. Bell has concluded the story of her life in five chapters, after which he takes up her work, under its different aspects, in four more, ending with a "Critical Survey." Several of the pictures of her face are interesting, and one of those by her brother Dante is very lovely, but she warns us not to credit her with all its beauty. So many of her admirers have thought of her as "an unbodied joy" that they will be surprised and shocked to read of her increasing "portliness." Her habits of composition were eminently spontaneous. One friend writes that she seldom revised her work, but William Rossetti writes that, after the impulsive production of her poems, "she took whatever pains she deemed requisite for keeping them right in form and expression." Mrs. Meynell writes that Christina always approached her subjects from the poetic side. William Rossetti says, No; from the religious. It cannot be said that either her least or most religious poems are the most beautiful. The most beautiful are those in which the religious spirit is interfused through poems not specifically religious.

Mr. Bell's "Critical Survey" is made up for the most part of quotations from other writers, some of them of the rarest competency in such matters. Dante Rossetti found in some of his sister's poems the "falsetto muscularity of the Barrett-Browning style," but Mr. Bell thinks the impeachment has no warrant. There have been many comparisons between the Italianized English-woman and the Anglicized Italian. There were both virtues and faults in Miss Rossetti's verses which had the color of her Italian blood. Mrs. Browning was much the more human of the two, and Mr. Bell's criticism, that some of her poems "owe their success, not to their qualities as poems, but to their vividness and insight in depicting the conditions they describe," is a peculiar one, as if such vividness and insight did not have much to do with the making of true poems. It is interesting to imagine what the comparative fame of Mrs. Browning would have been if she had written for high churchmen instead of for the low and broad—her special paradox, to which few have since attained, while the commingling of High-Church ritualism with Broad Church criticism has come to be a commonplace affair. It is interesting, on the other hand, to imagine what poems Miss Rossetti would have given us if she had had Mrs. Browning's experience of full and satisfying love.

None of her poems has so keen a personal note as Mrs. Browning's "Portuguese Sonnets"; and yet it is her sonnets which approach the region of their personal sentiment that are Miss Rossetti's most memorable and perfect things.

Manuel de l'Histoire de la Littérature française. Par Ferdinand Brunetière, de l'Académie française. Paris: Ch. Delagrave.

A new book by M. Brunetière must of necessity command attention; and when it turns out to be a book in form and purpose differing from those which have already appeared under his name, the interest of curiosity is increased. It is not, however, strictly accurate to say that the purpose of the present Manual is different from that which the writer has hitherto set before himself. M. Brunetière has always sought to make French literature known better and in a more intelligent way. So far, then, the Manual carries out the same idea. It is distinct in this, that criticism such as we are accustomed to connect with the author's name does not occupy the most prominent place or fill up the greater part of the book. There is plenty of criticism in it, of the right kind, coming at the right time, but the chief object is to give the reader a clear and vivid view of French literature through the ages. In this M. Brunetière has succeeded beyond expectation, and his book is one of the most useful additions to the student's stock in trade and to the teacher's resources which have been published in many years. Indeed, it would be difficult to point to any other history or manual or primer of French literature which does for us just what this one accomplishes. There are plenty of excellent works in which one may find catalogues of writers and their works, with dates of everything relating to them, and with the stock estimate of their rank in history. There are others in which dates and accuracy are scarce, but in which the anecdote replaces them to the perfect satisfaction of a certain class of teachers and students. Others, again, like Faguet's 'Études,' are admirable studies of the prominent writers of an epoch, but do not profess to do more than to study those particular writers and that particular age. M. Brunetière's 'Manuel' is better than all of its class in this, that it gives us a "vue d'ensemble" of the whole literary movement in France from the origins to the present day. For this alone we should be greatly beholden to it, and for this alone we should be grateful to the author, for he has done in a brilliant and philosophical way what no other author has done so well or so thoroughly. When, in addition, the work provides us with a satisfactory substitute for the catalogue style of history, and a substitute which, like the syncretical view of the movement of thought, is full of suggestions and ideas, it is hard to say what more the teacher or student can ask for.

Here is another peculiarity of the 'Manuel': it is at once a broad and comprehensive review and a mine of information. The result has been obtained by separating the two parts, including in the former the history of thought and its expression, in the latter the abundant details concerning the life and works of the chief authors recognized as classical and important. This latter portion is perhaps the more fruitful in suggestions of subjects for inquiry and re-

search, as may be seen at a glance by referring to the articles on Molière, La Fontaine, Voltaire, and others—men about whom it might have been supposed that "tout est dit," but about whom or whose works M. Brunetière has the art of finding or suggesting something new.

The style of the book has a charm of its own. It may as well be owned that not always has M. Brunetière written in a style which, without losing any of the power and authority which mark him, has at the same time grace and vivacity. To this we are not accustomed in his writings. The book reads trippingly; the arguments are clear and usually cogent; the reasons stated luminously, and the conclusions set forth in such fashion that blind indeed must be he who does not know the author's opinion, and strong indeed he who is not made to share it in part if not in whole.

The Wound-Dresser: A Series of Letters Written from the Hospitals in Washington during the War of the Rebellion by Walt Whitman. Edited by Richard Maurice Bucke, M.D., one of Whitman's Literary Executors. Boston: Small, Maynard & Co. 1898.

The title of Dr. Bucke's present collection of Whitman's letters is, possibly, intended as a tribute to that bad taste of the poet which was one of the most conspicuous aspects of his mind. Two letters written by Whitman in February and March, 1863, to the *New York Times* and the *Brooklyn Eagle* give his general conception of the condition of affairs in the Washington hospitals to which the letters following furnish many special illustrations. It is easy to understand, from both the public and the private letters, why he was not always *persona grata* to the officers, physicians, and nurses having the hospital in charge. His comments tend to adverse criticism with a persistent gravitation, notwithstanding his general recognition of the efficient fidelity of the army surgeons. His conception of his own function is expressed when he writes, "There is something in personal love, caresses, and the magnetic flood of sympathy and friendship, that does, in its way, more good than all the medicine in the world. . . . I believe that even the moving around among the men, or through the ward, of a hearty, healthy, clean, strong, generous-souled person, man or woman, full of humanity and love, sending out invisible, constant currents thereof, does immense good to the sick and wounded." The author of "Calamus" speaks audibly in these phrases. At the same time it must be said that Whitman does not seem to have spared himself any disagreeable duty, or, rather, anything that would have been disagreeable but for his poetic doctrine that there is nothing common or unclean. The test for the reality of his doctrine must have been a severe one, and it would be interesting to know if he was satisfied with the result. His sympathy with the sufferings of the soldiers and their homesick yearnings brightens every page. The letters in their continuity give a more graphic picture of hospital life and death than we have seen elsewhere, and we have here a human document that may be particularly commended to those who differ from Prof. Drummond as to "The Greatest Thing in the World," confident that that is not love but war.

These letters are instructive not only with regard to Whitman's hospital service, but with regard to his devotion to his mother and other members of his family. Writing to his mother, there is hardly a sentence that does not begin "Mother." If the word is omitted at the beginning of the sentence, it is put in further on. If this form smacks of affectation, it is impossible to doubt the reality and warmth of the affection which permitted itself an artificial trait. Possibly it was a concession to the mother's simple heart, and the appearance of illiteracy here and there may have the same excuse. The heliotype picture of the mother is that of a most comfortable soul, deserving of all filial loyalty. How much of a dandy Whitman was in his personal attire has here fresh illustration. The highest collar could not delight the wearer more than his opposite extreme. He trampled on the pride of dandyism, but with greater pride.

Southern Soldier Stories. By George Cary Eggleston. With illustrations by R. F. Zogbaum. The Macmillan Co. 12mo, pp. 251.

Mr. Eggleston has already proved his gift at telling the experiences and incidents of the civil war. This series of short stories of the Confederate camp is full of the spirit of camp life, with its quick alternations of grave and gay. The stories are very short ones, generally—many of them only three or four pages long; but the writer comes to the point at once, and wastes no time in preliminaries or in moralizing afterward. The thread on which they are strung is the service of a Confederate soldier, in Stuart's cavalry at the beginning of the war, and then in the artillery. Chronology is openly disregarded, the scene shifting from Beaufort Harbor, on the South Carolina coast, to the front of Washington in 1861, or to the Wilderness campaign in 1864, the lines of Petersburg, or back to the Carolinas. The veteran is supposed to be telling his tales as they happen to occur to him, whether from his own experience or that of his comrades; the first person, as he says, meaning no more than that he gives them as he got them, illustrative of the Southern soldier's life, whether his own or another's. A few turns on the heroic devotion of mothers and maidens to the cause for which the boys were fighting, and some have touching bits of sentimental romance, more or less probable. The best work is done in very realistic scenes, like the "Rather Bad Night" at Bluffton, where the officer visits the artillery outpost fronting Hilton Head, while the Union gunboats were feeling their way up the inlet in a night "dark as a pocket."

The book is a very taking one to pick up at odd minutes, the brisk stories being rattled off so quickly that we get a lively sensation to carry away with us at a glance, as it were. There is no question of the verisimilitude of the situations. The author speaks from the fulness of genuine soldierly experience, and his genial comradeship and freedom from bitterness will make his tales as pleasing to the Union soldier as to his fellow-artillerists in Lambkin's Battery.

Trail and Camp-fire: The Book of the Boone and Crockett Club. Editors, George B. Grinnell, Theodore Roosevelt. New York: Forest and Stream Publishing Co.

The lover of books on hunting learns with

sorrow that the Boone and Crockett Club proposes to issue one every two years; for, as is stated in the excellent chapter in this volume on the literature of big game, there are multitudes of books on the subject and most of them are bad. This adjective does not apply to 'Trail and Camp-fire,' the marked inequality of whose contents nevertheless forcibly suggests such applicability to its successors, should time rather than material become the basis of publication. Furthermore, the reader feels that a skilful compiler, with full authority to reject and condense, could produce from this book and its two predecessors, 'American Big-Game Hunting' and 'Hunting in Many Lands,' a single volume that would without hesitation be pronounced good.

The five objects of the Club, to promote sport with the rifle, travel and exploration, preservation of large game, observation of their habits, and interchange of opinions on these subjects, are well illustrated in the dozen articles that form a small octavo of 350 pages, neither printed nor bound in a manner commensurate with its price. Two articles set forth the successful efforts of certain members of the Club to establish a zoological garden in New York city, and to protect the deer of the Adirondack forest. Two others give detailed accounts of hunting trips in East Africa and in Newfoundland. A fifth, the description of a Canadian lake, is reprinted from the *Atlantic Monthly*. The remainder of the book is alike the more instructive and the more entertaining half. It contains a concise but admirable summary, by A. P. Low of the Canadian Geological Survey, of recent exploration in what has been the least known portion of North America, the interior of the Labrador peninsula. The student of American geography will appreciate his explanation of the wondrous reports of an inland sea, second only to Lake Superior, and of a mighty cataract, the rival of Niagara—reports which are reflected in the maps of the United States

Land Office and in the latest editions of popular encyclopædias.

Two papers on the nature and habits of the wolf and of the bear, contributed by the editors, compete in interest with the character sketch, by Lewis S. Thompson, of the Guide Cherry, whose "falling was the careless manner in which he handled the truth." Once Cherry found himself in a narrow trail on the side of a precipice, unarmed, between two grizzlies, one following and the other approaching. His resourcefulness was equal to the occasion. Throwing his clothes over the cliff, he advanced on all fours, and, thanks to the unusual amount of hair on his body, personated with such success his foe's fellow-bear that, after a complimentary growl, each went his way in peace.

BOOKS OF THE WEEK.

A Dictionary of the Bible. Vol. I. A—Feasts. Scribners.
Baldwin, James. School Reading by Grades. 6 vols. American Book Co.
Banks, Rev. L. A. Heroic Personalities. Eaton & Mains. \$1.
Billroth, Dr. Th. The Care of the Sick. 4th ed. London: Low, Marston & Co.; New York: Scribners. \$1.50.
Blondelle-Burton, John. Across the Salt Seas. Chicago: H. S. Stone & Co.
Bremen Lectures on Great Religious Questions of To-Day. New ed. Philadelphia: Baptist Publication Society.
Bryant, W. M. Life, Death, and Immortality. Baker & Taylor Co. \$1.75.
Cudet, Félix. Port-Royal Education. Scribners. \$1.50.
Cheiro's Language of the Hand. 7th ed. F. T. Neely.
Clarke, M. Story of Æneas. American Book Co. 40c.
Conrad, Joseph. The Children of the Sea. Dodd, Mead & Co. \$1.25.
Conrad, Joseph. Tales of Unrest. Scribners. \$1.25.
Cooper, T. V. The New Equality. Philadelphia: Fireside Publishing Co. 10c.
Crowell, J. F. The Logical Process of Social Development. Henry Holt & Co. \$1.75.
Davis, D. W. 'Weh Down Souf, and Other Poems. Cleveland, O.: Helman-Taylor Co. \$1.
Dearmer, Rev. Percy. Religious Pamphlets. London: Kegan Paul, Trench, Trübner & Co.; New York: Henry Holt & Co. \$1.75.
Dix, Rev. Morgan. Blessing and Ban from the Cross of Christ. James Pott & Co. \$1.
Donaldson, Thomas. The House in which Jefferson Wrote the Declaration of Independence. Philadelphia: Avil Printing Co.
Doran, James. In the Depths of the First Degree. A Romance of Bull Run. Buffalo: Peter Paul Book Co. \$1.50.
D'Orléans, Prince Henry. From Tonkin to India. January, '96—January, '96. Dodd, Mead & Co. \$5.

Dryden, John. Palamon and Arcite. Maynard, Merrill & Co. 24c.
Encyclopædia of Sport. Parts XII. and XIII. Putnam. Each \$1.
Essays of Schopenhauer. Translated by Mrs. Rudolf Dircks. London: Walter Scott; New York: A. Lovell & Co. 40c.
Flint, Grover. Marching with Gomez. Boston: Lamson, Wolfe & Co. \$1.50.
Gissing, George. Charles Dickens. A Critical Study. Dodd, Mead & Co. \$2.
Gleason, C. W. The Cyclopædia of Xenophon. Abridged for Schools. American Book Co. \$1.25.
Goos, O. F. The Philopoliast; or, City Lover. Cincinnati: Robert Clarke Co.
Gould, S. Baring. Bladya Stewponey. F. A. Stokes Co. \$1.25.
Halévy, L. Autumn Manœuvres: Stories and Sketches. G. H. Richmond & Son.
Harrison, Mrs. Belle E. Poems. G. W. Dillingham Co. \$1.25.
Hutcheson, Rev. J. T. A View of the Atonement. James Pott & Co. \$1.
Julliville, Prof. L. Petit de. Histoire de la Langue et de la Littérature Française. Tome V. Dix-septième siècle (1681-1700). Paris: Colin & Cie.
Le Gallienne, Richard. The Romance of Zion Chapel. John Lane. \$1.50.
MacLay, E. S. Reminiscences of the Old Navy. Putnam. \$2.50.
Mason, Caroline A. A Minister of the World. Doubleday & McClure Co. 50c.
Nicholls, Sir George. A History of the English Poor Law. 2 vols. Putnam. \$10.
Pearl Necklace of Thoughts of Women. From the French by Henri Pène du Bois. Meyer Bros. & Co.
Phillips, Melville. The Senator's Wife. F. T. Neely.
Pugh, Edwin. King Circumstance. Henry Holt & Co. \$1.25.
Robert, Gustave. La Musique à Paris, 1896-1897. Paris: Delagrave.
Robertson, Morgan. Spun-Yarn; Sea Stories. Harpers. \$1.25.
Robertson, T. S. The Progress of Art in English Church Architecture. London: Gay & Bird.
Russell, H. B. International Monetary Conferences. Harpers. \$2.50.
Samelson, Moses. How to Right a Wrong. F. T. Neely.
Seaton, R. C. Sir Hudson Lowe and Napoleon. London: David Nutt.
Sheldon, C. M. Malcolm Kirk. Chicago: The Church Press. 50c.
Steevens, G. W. With the Conquering Turk: Confessions of a Bashli-Bazouk. Dodd, Mead & Co. \$2.
Strong, Rev. Josiah. The Twentieth Century City. Baker & Taylor Co. 50c.
Tarbet, W. G. Fighting for Favor. Henry Holt & Co. \$1.25.
Thanksgivings After the Communion. New York: R. H. Russell.
The Living Age. Jan.-March, 1898. Boston: Living Age Co.
The Spectator. Vols III., IV., and V. Scribners. Each \$1.50.
Webster, Daniel. Representative Speeches. [Little Masterpieces.] Doubleday & McClure Co. 30c.
Weir, Dr. James, jr. The Psychological Correlation of Religious Emotion and Sexual Desire. 2d ed. Louisville, Ky.: Courier-Journal Printing Co.
Wells, J. Oxford and its Colleges. 2d ed. London: Methuen & Co.
Whitman, Walt. Complete Prose Works. Boston: Small, Maynard & Co. \$2.
Wood, Joanna E. Judith Moore; or, Fashioning a Pipe. Toronto: Ontario Publishing Co.

NEW FICTION.

TARBET'S FIGHTING FOR FAVOUR. \$1.25.

A spirited and picturesque tale of adventures in Scotland in the sixteenth century. Some of the chapters are *We Fuh! Our A's, or Tit for Tat—the Foe—the Bit Fight on the Deck—My Deal with You Manneva—the Marie! Among Pirates—Murder at the Ford*, etc.

PUGH'S KING CIRCUMSTANCE. \$1.25.

A volume of stories of humble English life by a new writer of unusual promise. Sincerity, vigor, and humor are conspicuous in his work.

The publishers have in preparation Mr. Pugh's *Tony Drum, A Cockney Boy*, with colored illustrations by Nicholson, the illustrator of Kipling's *Almanac of Sports*.

MISS ELLIOTT'S THE DURKET SPERRET. \$1.25.

This romance of the Cumberland Mountains is notable among other things, for its striking heroine, through whom the proud and plucky "sperret" of the Durkets is shown. It was well received during its appearance as a serial in *Scribner's*.

Miss Elliott's earlier books, *Jerry, J. H. Page* and *The Felmores*, uniform with the above. \$1.25 each.

VOYNICH'S THE GADFLY. Eighth impression. \$1.25.

HENRY HOLT & CO., 29 WEST 23D ST., NEW YORK.

A YALE GRADUATE OF '95, excellent address, thorough student, musical, athletic, who can give fine references, would act as tutor in family during summer or fall, or longer. Would travel. Write UNIVERSITY, Box 404, Greenfield, Mass.

COMPLETION OF WYLIE'S ENGLAND.

History of England Under Henry the Fourth.

By JAMES HAMILTON WYLIE, M.A., One of Her Majesty's Inspectors of Schools. Vol. IV., 1411-1413. With 30 Appendices, a Glossary of Rare and Obsolete Words, and a very Complete Index (205 pages). Crown 8vo, 585 pages, \$7.00. [Just Ready.]

PREVIOUSLY PUBLISHED:

Vol. I. 1399-1404. Crown 8vo, \$3.50. | Vol. II. 1405-1406. Crown 8vo, \$5.00.
Vol. III. 1407-1410. Crown 8vo, \$5.00.

LONGMANS, GREEN, & CO., 91 and 93 Fifth Ave., - - - New York.

YALE MIXTURE.

The choicest tobacco made, and preëminently
a gentleman's smoke.

Marburg Bros., The American Tobacco Co., Successor, Baltimore, Md.

The Nation.

NEW YORK, THURSDAY, APRIL 14, 1898.

The Week.

Under the circumstances, the joint note of the Powers presented on Thursday to the United States and to Spain amounted only to the last desperate appeals of the friends of two men bent on a duel. It expressed the hope that "further negotiations" would lead to peace. But Mr. McKinley, in his reply, brushed negotiations aside, and spoke only of the intention of this Government to end the insufferable situation in Cuba. The Spanish Minister of Foreign Affairs also repelled the intimation that further concessions could be made by Spain. The Powers appealed to the "feelings of humanity and moderation of the President and the American people," but learned that it was precisely to "fulfil a duty to humanity" that we were going to war. This may have surprised the Ambassadors, but if so they diplomatically concealed it.

In the President's message, so anxiously and so long expected, a large portion of space is taken up in the beginning with a calm if not always consecutive historical narrative of the negotiations as far as they have gone—yet without specifying the grounds of the negotiations hitherto carried on with Spain. As to these, the public is still left in the dark. The President concedes the Spanish compliance with our demands for the cessation of the Weyler style of warfare, and argues, with some assistance from President Jackson in the case of Texas (which, *absit omen!* ended in annexation), against recognition of the insurgents as belligerents. He shows the burdens and inconvenience which any such recognition would entail. He is also opposed to the recognition of the independence of the so-called Cuban Republic. He maintains, however, that we are justified in forcible intervention, not for the purpose of according rights to either party, but for the purpose of putting an end to the disturbance to our peace and the injury to our commerce caused by the continuance of the contest, to say nothing of its outrages on humanity. He therefore recommends that he be empowered to use the army and navy of the United States to secure

"a full and final termination of hostilities between the government of Spain and the people of Cuba, and to secure in the island the establishment of a stable government capable of maintaining order and observing its international obligations, insuring peace and tranquillity and the security of its citizens, as well as our own."

He insists that Spain's failure in Cuba has been complete, and that "the war

must stop." His closing paragraph gives a blow between the eyes to the Jingoism by saying, apropos of the Queen's armistice proclaimed by Gen. Blanco on Monday:

"If this measure attains a successful result, then our aspirations as a Christian, peace-loving people will be realized. If it fails, it will be only another justification for our contemplated action."

The last ditch of the Jingoism is their demand for war "to avenge the destruction of the *Maine*." They propose that we shall assume that the vessel was destroyed by the complicity of the Spanish authorities, in the face of the verdict of our own board of inquiry, that "no evidence has been obtainable fixing the responsibility for the destruction of the *Maine* upon any person or persons"; and that we shall go to war, not in hot blood and without a moment's reflection, as a quick-tempered man hits somebody whom he suspects of having hurt him, but after eight weeks of deliberation, during which we ourselves admit that we have been unable to find out who was to blame. Merely to state such a proposition is to expose its gross absurdity. The President, while *ex officio* adopting the theory of his board that the explosion was external, and doubtless finding it a welcome make-weight in his interference platform, nevertheless leaves the way open for acceptance of the proper and reasonable suggestion of the Spanish Government that "the facts be ascertained by an impartial investigation by experts, whose decision Spain accepts in advance."

One of the most troublesome aspects of the Cuban question, as Mr. McKinley has had to confront it, is that it was a legacy to him from the preceding Administration. He had not a clean slate to begin with. Mr. Cleveland had kept his hands off Cuban interference, but he had plainly told Congress and told Spain that interference would soon come unless there should be a great change for the better in Cuba. He had thus committed this Government to a policy with which Mr. McKinley could not absolutely break. It was necessary for the new President to take up the negotiations where he found them, and do the best he could with the situation as it had been made for him. We thus see Mr. Cleveland handing on a most dangerous gift to Mr. McKinley, just as Mr. Harrison had transmitted to Mr. Cleveland the acutest embarrassments which the latter had to meet during his term of office. The McKinley deficit-making tariff and the Sherman silver-purchase law were the things that wrecked Mr. Cleveland politically; and the cruel di-

lemma in which the Republican party now finds itself arises in like manner from conditions for which it had no direct party responsibility. Call it poetic justice, repaying fatal legacy with fatal legacy, or what you will, the parallel is suggestive.

It is one of the historical presumptions of American politics that the second year after a Presidential election will bring out majorities against the party in power. This has been long feared by the Republican party. They have thought it not improbable that they would lose the House on existing issues. The recent elections have done much to justify this anxiety. Now here is the remedy. Mr. Grosvenor, the President's right-hand man, asked in the House on March 31: "Do you think that this great party in power to-day is going to be unfaithful to a trust which, as the gentleman from Texas intimates, will, if properly discharged, bring glory to the Administration? Will the Administration now in power run away from the most brilliant opportunity that any administration since the days of Abraham Lincoln has had to establish itself and its party in the praise and honor and glory of a mighty people?" The same mouthpiece a week later declared: "This war will be fought under the banner of the Republican administration of this Government, or it will never be fought at all." We see it is to be a Republican war, if there is to be a war at all. Suffering Cuba is to be saved by good Republicans, if she is to be saved at all. It would never do to let her be relieved by Democrats, and it must be admitted the Democrats are ready to do it, by a good war if necessary. Congress is not going to be "euchred" again, as it was by Mr. Cleveland, who got ahead of it so splendidly in 1895. He discovered "a good thing" in the Venezuelan forests, and he soon had them all "standing behind" him, sheepish-looking, but mute.

During the past eight weeks Congress has been fuming like a volcano just ready to spout lava and overwhelm villages and corn fields. The subject of its fumes has been war—war with Spain—yet when the military committee of the House, after long cogitation, brought in the results of its labor in the form of a bill to put us on a war footing of equality with Spain, the bill was rejected by a vote of 155 to 61—that is, by more than a two-thirds majority. So our situation to-day as regards the army is just what it was before the fuming began. Although our regular army is small, it is commonly supposed that we have a great force of militia ready to be called into

action in an emergency. This force is usually called the National Guard, although that term is not found in any law of the United States. There is a law in reference to the militia. It is found under title xvi. of the Revised Statutes. The public is not aware, and it is doubtful if Congress is, that the militia cannot be called into active service except for two specific objects, viz., to repel invasion or to suppress rebellion, and even then for only nine months' service. So it appears that the militia could not be called into service to invade Cuba or Spain, but only to repel the invasion of some foreign Power. It may be supposed that Congress can change the law on this subject, and authorize the President to call out the militia for aggressive purposes. Nothing of the kind. The Constitution forbids it. Article 1, sec. 8, clause 14, gives Congress power "to provide for calling forth the militia to execute the laws of the Union, suppress insurrections, and repel invasions." No authority here to send the militia outside of the United States. *Ne proelio unitus, exclusio alterius*. So it appears that for the purpose of a foreign war we have 26,010 soldiers and no more, and no lawful way of obtaining more.

A very important war consideration was called attention to by the *Tribune* on Thursday, when, in noting the facts that "enlistments in the navy are very slow and desertions are getting frequent," it said:

"Within the last day or two it has been reported that as much as \$250 has been paid civil officers for the apprehension of deserters in a single day at a Southern port. It has been found necessary, according to this report, to detail officers from war vessels in part to be in attendance each morning at the police courts and station-houses to return intending deserters to their ships. Taken in conjunction, these two circumstances would seem to indicate, first, that the dearth of men in the navy is not being filled as rapidly as it should be in a time like this, and, second, that an unusual proportion of those now in the service are anxious to escape from it."

The reason for this condition of affairs is obvious. Nobody wants to fight Spain in Cuba or its adjacent waters, but in some other place, like New York, or Nebraska, or South Dakota, or some entirely healthy region. The *Tribune* suggests that "some of the newspapers which have been howling for war with Spain and making war upon the President, should let up briefly in those two directions, and begin to vociferate upon the crying need of recruits for the navy." A better suggestion is that the editors themselves enlist, or, if they refuse to do so, be conscripted. So far as our observation goes, none of the advocates of war at any price expects to do any fighting himself. He expects somebody else to do that—who, he does not exactly know, but if you press him he will say that negroes will do better than anybody else, since the Cuban climate is

not so deadly to them. This self-sacrificing idea has found advocates even in the clerical profession. It far surpasses the noble self-sacrifice of Artemus Ward's offer of all his wife's relations.

Astonishing disclosures as to the difficulty of securing recruits for the army were made by the Philadelphia *Ledger* on Monday. Stations have been opened in that city, and on Saturday 100 applicants were examined. Only four of the 100 could pass the test and were accepted. Thousands of men have offered to enlist in Philadelphia since the war excitement began, but only about 125 have been accepted, all the rest having been turned away on account of mental or physical disability, principally the latter, since the mental requirements include nothing harder than simple mathematics, and previous experience is not essential as in the case of the navy. The *Ledger* thinks that such figures indicate a degree of physical stamina among the applicants so low that it should engage the attention of scientific students. "The only consolation it can offer is that 'it is not improbable that many of the applicants were of the sort that have failed to meet the physical requirements of ordinary trades and industries.'"

The condition of our friends the reconcentrados in Cuba in the event of war must be terrible. All of their supplies come from the United States. The sending of supplies has already stopped because the Ward Line steamers are no longer running. As these can get no mercantile freight, they cannot carry the contributions of the benevolent societies and individuals to the starving people whom we have set out to relieve. So their last estate will be worse than their first. In the meantime the insurgents are burning cane fields wherever they can apply the torch. A letter from Santiago de Cuba to the *Herald* says that the insurgents had given orders to the planters not to grind their crop. Not to grind is equivalent to losing it altogether. Not to grind is to throw out of employment all the laborers usually employed in that work, and leave them to starve also. The temptation to grind is so strong that it is likely in many cases to lead to disobedience of the order of the insurgents. So they are burning the cane in the fields. Thousands of acres have been consumed, and the work of destruction goes on daily. "Possibly," says the *Herald* correspondent, "the insurgent leaders have not fully considered all the effects resulting from a persistence in the line of policy which they have adopted, and it might be as well if they reflected upon the question of whether Cuba was not paying too dear a price in suffering humanity for the slight injury inflicted upon the

Spanish treasury." If any such appeal were addressed to them, they would probably say, "War is hell"—an appropriate answer at all events.

Nothing is heard nowadays about the annexation of Hawaii, and the promoters of that scheme have evidently concluded that there is no use in pushing it at present. The probability of war with Spain has made so plain the impolicy of our being forced to defend Hawaii that everybody recognizes the good fortune of the nation in having escaped that necessity. The probability of war with Spain has been brought forward by those who advocate annexing the Danish islands as a reason for rushing through that project without the slightest delay, and a fortnight ago they seemed hopeful that they might succeed before the public realized what they were about. But happily the opponents of the project in the Senate were not stampeded, and they stood so firm that its friends have felt constrained to abandon their attempt.

Now that the necessity of more revenue is admitted even by Mr. Dingley, the idea of raising \$30,000,000 to \$40,000,000 a year by the simple and reasonable device of doubling the tax on beer is again suggested. But the mere suggestion is sufficient to arouse organized opposition, and a delegation representing the United States Brewers' Association has already appeared before the House ways and means committee to protest against any such increase. There is every reason to fear that the protest will prove effectual. The reason was frankly stated by Senator Hoar of Massachusetts in a speech last December, when he pointed out that the brewing industry could easily stand an additional tax of a dollar a barrel on beer, but confessed that "we do not dare to compel that industry to pay a reasonable and proper tax, because we are afraid of the political power the brewers will exert, determining the political power in this country between different political parties."

Despite the excitement over the Cuban situation, Mr. Wanamaker continues to draw large audiences in his campaign against the perpetuation of Quay rule in Pennsylvania, and he makes some fresh revelation of the ring's rascality in every speech. At Williamsport his new exposure was of the wholesale swindling by the State printer, W. Stanley Ray, a Quay lieutenant, who was formerly clerk in the headquarters of the Republican State committee. He began his work July 1, 1897, and early in September filed an account of three months' work, amounting, it is alleged, to between \$11,000 and \$12,000. By direction of Gov. Hastings, the State Su-

perintendent of Printing submitted this bill to the Attorney-General's Department before approving it. The Deputy Attorney-General went over the bill carefully, found that Ray had overcharged the State to an amount said to exceed \$7,000, filed an opinion to this effect December 28, and the finding was approved by the Attorney-General and Governor. Mr. Wanamaker said that he had been informed that in one item alone the State printer overcharged the State \$6,420, on another bill \$743, on another \$277, and on still another \$186. Altogether, over 60 per cent. of the charges were unwarranted.

At Royersford and at Pottstown, Mr. Wanamaker went still further into details as to the corruption of Quay rule in Pennsylvania. On Friday night he drew up an indictment with ten counts, beginning with the assertion that "this State for nearly forty years has been under the control of the Camerons, father and son, and their successors, M. S. Quay and W. H. Andrews." He proceeded to charge that during this period "the expenses of the State and the taxes have steadily increased"; that "the prices of property and the means of making a living have been decreased right along"; and that "the methods of legislation at Harrisburg have, year after year, gone from worse to worse, until the name Pennsylvania Legislature is a hissing and reproach all over the United States." On Saturday night Mr. Wanamaker "showed up" the methods of legislation at Harrisburg, particularly in the Senate, of whose Republican members he declared that "at least thirty-five of the forty-four were controlled absolutely by W. H. Andrews and Senator Quay." Describing the upper branch as "an incubator to hatch the legislation that has alarmed the taxpayers and made the name of the last Legislature a reproach," he specified some of the things which the Quay organization did, and, in reference to the Bliss beer bill, declared that on the Saturday and Sunday preceding the change made in the bill in the Senate, by which many important Pennsylvania industries would have been crippled or destroyed, two car-loads of brewers from western Pennsylvania held a consultation with W. H. Andrews and other members of the Legislature at a Philadelphia hotel; that the fact of their visit was suppressed by the newspapers, their special cars were carefully guarded, and strict orders were given to the car porters that no one should know who the occupants of the cars were, or what was the nature of their business; and that within forty-eight hours after their departure the beer bill was changed to the mercantile-tax bill.

If we avoid a war with Spain, we may have a war with Tammany on our

hands, the object being full possession of all the municipal offices in spite of law. The gravity of the situation was increased on Friday by a notice which Mr. McAneny of the Civil-Service Reform Association sent to the Comptroller, warning him not to pay salaries to men who had been appointed under the new rules of the City Civil-Service Commissioners until these rules had been approved, as the law requires, by the State Civil-Service Commissioners. Mr. McAneny also called the Comptroller's attention to a perfectly devilish provision of the city charter which requires that the "incumbents of positions abolished or made unnecessary by this act shall be preferred for appointment to positions demanding their services," and directs the City Civil-Service Commissioners "to place the names of such persons on the proper eligible lists, and to give them on such lists the preference after veterans." No wonder Tammany feels like declaring war upon such a fiendish law as that. Tammany officials have been abolishing places in order to get rid of their incumbents, and then recreating them in order to fill them with Tammany men. Not only is this process illegal, but even if it were not, what is the good of it if the abolished officials must be given preference in the filling of all vacancies?

If our war-craze had not made us oblivious of everything else, the steady preparations of the English Government to establish the gold standard in India would have attracted much notice in our press. It is really an event of capital economic importance. India has been the chief bulwark of our silverites, lo, these many years. It was through India that we were to find the means of bringing England to her knees on the silver question. India was, in fact, the one country of the world wherein it appeared most difficult to give up the silver standard. By long habit and by the customs of trade, silver seemed too firmly entrenched in Indian finance ever to be dislodged. But the inexorable drift of exchange and the growing consensus of civilized nations made the change necessary; and it is now confessed that the closing of the Indian mints to silver was only a preliminary to the frank going over to the gold standard. Lord George Hamilton, Secretary for India, said as much in the Commons the other day, and the bimetallic Balfour did not rise to crush him.

Mr. Balfour's speech in the House of Commons touching the acquisition of Wei-Hai-Wei by Great Britain conveys more information in reference to the Chinese situation than everything that has gone before. It may be summed up in a few words. Great Britain recognizes the fact that the Chinese empire is falling asunder. Nothing can hold

it together, and the only question is who shall get the pieces. She has decided wisely to take one of them instead of fighting to make the other Powers relinquish what they have grabbed. She has made some other gains, namely, that the region of the Yang-tse-Kiang shall not be alienated to any foreign Power, that the successor of Sir Robert Hart as Director of the Chinese Imperial Maritime Customs is to be an Englishman, and that access to the inland waters is to be had by ships of all nations. A fourth concession is the opening of three new treaty ports—Funing, Yochau, and Chin-Wang. All these gains accrue equally to the advantage of the United States if we choose to avail ourselves of them—as we shall. On the face of things they depend for their validity and permanence on the ability of China to make them good. In fact, however, they depend upon England's ability to enforce them, and this is the reason why she has secured the port of Wei-Hai-Wei. This was done after negotiations with Russia, in which it was sought to dissuade her from taking Port Arthur. When this effort failed, Great Britain notified Russia that she should hold herself free to take steps to safeguard her own interests in that quarter, and, accordingly, negotiated for and obtained the lease of Wei-Hai-Wei on the same terms as those by which Russia obtained Port Arthur. Whatever the terms of the leases may be, the fact is that the two Powers will hold what they have got with the strong hand. There is no necessary conflict between them, but, as they are brought pretty near each other in the Gulf of Pe-Chi-Li, the chances of collision are somewhat increased.

• The battle the other day in the Sudan, in which the Mahdi's fortified camp was "rushed" by the British force, gave one an idea how different the history of the world might have been had Rome had that superiority over her assailants which science has given us over our modern barbarians. It ought, too, to fill us with admiration for the finally worn-out Titan, which subdued and civilized so many states with no other weapon than the pilum and the sword. Every modern nation is filled with admiration of a bayonet charge, and boasts greatly when its own men make one, even after the enemy has been demoralized, as last week in the Sudan, by an hour's bombardment by the artillery. But if this be great, what are we to say of the legions who for seven hundred years met all the existing barbarians of the earth and brought about finally the great "Roman peace" in hand-to-hand encounters, in which they had no advantage except training and discipline? Speaking of one of the most critical days in Gaul, Cæsar says that his soldiers "did the business with their swords."

LIGHT FROM THE JUNTA.

There has been a great deal of honest ignorance in this country about the kind of people the insurgent Cubans are. The stump - speech, political - platform, able-editor view of them has made them out a little lower than the angels—patriots fighting for all that mankind holds dearest. As we came nearer to the verge of war in their behalf, the more superhuman they seemed to be. But just as we were about, or thought we were, to take the fatal plunge, the official representatives in this country of the Cuban insurgents came out with such a clear and authentic description of their character, aims, and methods that ignorance any longer will be of that invincible kind which can expect no mercy. The Junta evidently made the greatest mistake of its life in so doing. Its true rôle was secrecy and the issuing of patriotic bulletins. In fact, there is something necessarily dark and mysterious about the very term Junta. Its personnel has to remain obscure in order that its name and acts may strike terror, its victories on paper obtain credence, and its bonds find gullible purchasers. The moment its members come out into the daylight, it is all up with them. The magic Junta vanishes like an exhalation, and in its room we see a set of patriots very like those mythical Cuban "majors," filled with bullets, whom Buffalo Bill exhibits at his show. It is generally believed that the mere sight of them in Washington has made the recognition of Cuban independence impossible.

The Junta has had a varied activity in this country for the past three years, but it does seem as if its mounting frenzy led it last week to commit suicide. Its angry official statement that it would turn its arms against the United States if we intervened to give them peace without recognition of their independence, has opened many blind eyes. The ridiculous heroics in which the Junta indulged were too much even for the battle-scarred reporters. "We will fight on, against American bayonets," said Mr. Palma, "sadly but determined." "We would resist with force of arms as bitterly and tenaciously as we have fought the armies of Spain," said Mr. Rubens—an American lawyer, speaking for hire, whose bitter and tenacious fighting has all been done in New York city. He appears to have been since convinced that he abused the privilege of counsel in order to hang himself and his clients, pleads that he was misunderstood, and that he made his statement on certain "indications" which had proved to be ill founded. But the mischief was done, and a powerful searchlight has been turned on the whole Cuban intrigue, its management and its purposes.

We do not in the least blame these Cuban agitators for clinging to their well-laid plans in desperation; we only blame those too-credulous Americans

who have taken them for demigods. For thirty years these Cubans have been working and praying for Cuban "independence"—that is, a government, or a simulacrum of government, in Cuba with themselves at the head of it. Latterly, they have been in full sight of the promised land, and were trembling with eager anticipation of the good time they soon would have helping themselves to the milk and honey. They had their resolutions recognizing independence all safely drawn and ready to be reported from the foreign-affairs committees of both House and Senate. Suddenly, to their affrighted ears came the news that the President was against recognition of Cuban independence, now as he was last December, and that he was going to intervene simply to give them peace and a stable government. This was too much for their self-control, and in their first transports of rage they uttered those wild threats against Americans which astounded the whole country, and sent a cold chill down the back of every man with a Cuban bond in his pocket.

The right to issue bonds, in fact, appears to be the only attribute of "independence" which the Junta cares to have the United States recognize. Peace and a settled government are the barrenest idealities in comparison. We have no doubt that the able jurists of the Junta have pondered long and deeply on that prime attribute of sovereignty—the right to borrow money. They have very carefully considered also the opinion of our Supreme Court that a sovereign may put out unlimited quantities of paper money. By way of anticipation of these delightful fruits of "independence," they have already issued a fine variety of Cuban bonds. There are the "green bonds" of 1869 (color nicely adapted to the dupes who bought them), and the "red" and "blue" bonds of 1872. These are all said by the *Herald* to be bought and sold every day in Wall Street. The latest bonds are of 1896. How many of them have been issued it is hard to find out. The "Treasurer" says only \$150,000, but the "Secretary of Legation" at Washington confesses to \$1,000,000 rather vaguely disposed of. But this is nothing to the discrepancies which would arise if the Cuban republic once got well established in Havana, with the printing-presses in good running order. The point is, however, that the Junta must have bonds to issue and to "quote," or it will fight. Peace, relief of the starving, the revival of industry and agriculture in Cuba under a settled government—these are secondary and trifling considerations.

The London *Standard* hopes that "the humor of the American people" will be stirred to good effect by the postereous statement of the Junta. We hope for something from the indignation of the American people. It has been imposed upon shamelessly by a set

of masqueraders, who were betrayed last week into unmasking for a moment. We caught a glimpse of the truth. Instead of humane, self-sacrificing patriots, willing to do anything to free their native land from cruelty and suffering, we saw selfish plotters driven by the lust of power and wealth. That illusion is for ever dispelled.

DURATION OF THE WAR.

In case we have a war with Spain, an important question will be, How long will it last? It is generally assumed that, since such a war would be begun on account of Cuba, the taking of that island by us would be the end of it. But that does not follow. Spain might be willing to drop Cuba, provided she could be rid of it without dishonor. She might not be sorry to have it wrested from her by superior force, since in that case she would be delivered of a woful expenditure of blood and treasure, to which at present she sees no end. If she could be rid of that burden involuntarily, so that her people could not reproach either the Government or themselves, she would certainly be a gainer. She has lost 100,000 men or more in vain attempts to put down the rebellion. She has spent \$200,000,000, and her present expenses there are at the rate of \$8,000,000 per month. Why should she not welcome any chance, which should appear honorable in her own eyes and in those of the world, to abandon the task?

Instead of being weaker after losing Cuba and, perhaps, Porto Rico, Spain would be stronger than before and in much better condition to fight. The war would then be prosecuted on the ocean, wherever any American or Spanish ships are to be found—war-ships and other. Spanish commerce would be swept from the ocean, and ours also. We have more to lose than Spain has, but, whether little or much, it would all go. It would not be necessary that any of our merchant ships be actually captured. The rates of marine insurance would be prohibitory, and that would settle the whole question. Our ships would not leave our own ports. Our goods would either be carried in foreign bottoms, both coastwise and otherwise, or not be carried at all. British commerce would be the principal gainer. The German, French, Norwegian, and Italian ship-owners would gain in proportion to their available tonnage. They would divide the spoils of both Spanish and American commerce among themselves, and rightly so. That would be one of the punishments that both combatants would suffer. It would be in proportion to the amount of their shipping and to the duration of the war.

Is there any reason why such a war should ever end? Other Powers might interfere, but we can see no reason why it should end at our option. Spain is so

far distant that we could not invade her even if we had an army; but we have no army, and it appears that Congress is not in favor of having one. Congress, we are told, wants a war, but wants it without soldiers, or at all events without trained officers. During the last administration it wanted to have its bills paid without money. It wants to have war-ships without steel plates. That is the reason why we are buying ships abroad now. Other nations go to war on the gold basis, and take great pains to have the gold in readiness. We should probably go about it on the silver basis, or reach it soon. The Democrats, or a majority of them, would perhaps favor war for that reason. Many droll conceptions find lodgment in the national capital, but the drollest of all is the conception that the war would naturally end with our taking Cuba.

In fact, it would only begin there. We should then stand in Spain's shoes so far as pacifying the island goes. The insurgents say that they will fight us, just as they have fought Spain, if we do not recognize their independence. That means that immediately after taking Cuba we should evacuate it. Undoubtedly that would be the best and cheapest thing for us to do, but we should feel rather sheepish, perhaps, when we came to cast up the account of profit and loss. Spain, as we have said, is too far distant to be invaded by us, even if we had an army. What else can we do to her? How can we compel her to stop fighting after we take Cuba? What form of coercion can we put upon her? She can send out "commerce-destroyers" till the crack of doom. Privateers are commerce-destroyers, and these go without being sent. It is with them a private speculation. They cost the Government nothing. Is it supposed that we can chase them off the ocean? One *Alabama* was sufficient to drive our mercantile flag from the high seas, in spite of all our war-ships. But Spain has a navy of her own. She is not in the plight that the Confederates were during the civil war. She has a recognized standing among nations, as the Confederates had not. She has ports. She has dry-docks, and that is more than we can boast of. She has nearly as many ships to begin with as we have, and she can build more according to her need—not as many as we can, perhaps, but enough to prolong the war indefinitely, since one cruiser afloat will annihilate more commerce than ten can protect. Have not our Jingoos been telling us for many years what havoc they could make with British commerce by means of half-a-dozen fast cruisers? And cannot Spain perform the same office for us, not to mention her volunteer fleet of privateers?

It may be said that we can blockade Spain, but nobody really believes that.

We cannot blockade her any more than she can blockade us. We have no coaling stations in the Mediterranean, and we shall get scant help in that way from any of the Powers of Europe if we show ourselves the disturbers of the world's peace by beginning the war. Spain has shown her prudence by withdrawing her war-ships from Havana, in order, perhaps, to let us fire the first gun. If we attack Havana while her ships are absent, there can never be any question as to how hostilities began. The Franco-Prussian war of 1870 demonstrated that the world's sympathy is a great factor in wars at the present day. Even when not accompanied by active help, it encourages one side and depresses the other. "Thrice is he armed that hath his quarrel just."

There is no means to localize the strife or confine it to West Indian waters. Modern wars between maritime nations rage over the four quarters of the globe, and they may rage as long as the combatants can keep anything afloat. We can imagine some surprise on the part of our Jingoos, after "clearing Spain out of Cuba," if the war should be found to be still active in the Pacific and Indian and other oceans, but we could hardly expect Spain to discontinue the fight because she had lost the first round. She would then have the \$8,000,000 per month which she is now spending in Cuba to spend on us, and she would be likely, judging by her temper, to use it in that way as long as she could procure it. In short, it rests with us to begin the war, but it does not rest with us to end it, and we should be very foolish to ask Spain to oblige us by stopping it merely because we had taken Cuba from her.

It may be supposed that the other Powers would not allow such a war to be prolonged indefinitely, since it would involve the stopping of ships by the belligerents on the high seas to determine the true character of vessels and cargoes. In many cases there would be doubts, which could be settled only by prize courts. That is what prize courts exist for. The commercial world would get tired eventually of such disturbances, disputes, and delays, and would take measures to end them, but in doing so it would be compelled to look at the original cause of the war, in the light of international law. In such a tribunal the verdict would almost certainly be against the nation that first broke the peace.

WAR AND FOREIGN TRADE.

M. Brunetière has come to the aid of the generals who tried Dreyfus and the judges who tried Zola, with an article in the *Revue des Deux Mondes* which will not add to his reputation as a literary man, and will certainly injure it as a publicist. He accounts for Anti-Semitism partly by the neglect of Frenchmen

to occupy the fields in which the Jews have become too prominent, and partly by the too great pretensions of the Jews themselves. He is, moreover, full of scorn for the "intellectuals," meaning the scientific and literary men who have considered Dreyfus's trial a failure of justice, and Zola's a farce. He thinks they cannot know as much about public affairs as the "generals"—an odd opinion to come from a *littérateur* and philosopher who gives tongue so freely himself on the whole situation.

With these things, however, we do not propose to concern ourselves to-day. What is of most importance to foreigners is his view of the value of a great army as a means of expanding trade in foreign parts. He is very positive about the truth of the old adage that "trade follows the flag," and that the merchant follows close behind the soldier. His main illustration is Germany. She was, before the great victories of 1870 and the establishment of the empire, a collection of poor and feeble states, occupied mainly with philosophy and literature, without manufactures to speak of, and but little foreign commerce. Since then she has become a Power, with a huge and apparently unconquerable army, and, consequently, M. Brunetière intimates, a great manufacturing and trading nation, which has to search the world over for markets; that is, her commercial triumphs are the results of her military triumphs.

There is a certain amount of truth in this, but so blended with error as to be quite deceptive. There is no denying that Germany owes it to the army that she is to-day a great nation, and that she occupies a position in the world to which she could make no pretence half a century ago. We cannot deny either that the education her young men receive through compulsory military service is useful for industrial purposes. Respect for knowledge, experience and authority, accuracy and persistence are undoubtedly learned in the army, and they follow the youth to the counting-house and the factory with admirable results. But the notion that the military power of a nation is what enables it to sell its goods is one of those fallacies in which Jingoos delight and is one of their main reliances. They constantly preach here in America that, with a larger navy to show in foreign ports, we should stimulate the sale of American products, and that when Chinamen and South Americans hear of our resources, in money, men, and ships, they will at once withdraw their custom from weaker Powers. This is part and parcel of the sophistry which in protectionist documents and speeches makes custom-house tables returns of the commercial transactions of the nation, and not of individuals. The importations of silk are large; the nation is, therefore, spending too much on silks. It is drink-

ing too much champagne, as any one may see by looking at the figures. Its dealings ought to support its foreign policy; therefore, it should buy of the big Powers and sell to the weak ones, and the weak ones will be only too glad to deal with such a wealthy and warlike customer, especially if it is a republic.

The greatest fact of trade is that it is carried on by individuals for individual profit. The Government rarely does anything for it except hinder it by taxation and record its figures. Buyers, wherever found, are not influenced by the fleets and armies, but, at the present day, by cheapness and goodness. They do not buy because a thing is French, or English, or American, or because it comes from a republic or a monarchy, but because it answers their needs. Of all the rubbish which the human mind has turned out in its day, the politics of trade is the greatest. German trade and manufacture have undoubtedly received a great stimulus from the foundation of the empire, but could not last a day if the buyers did not find the products either better or cheaper than those of other countries. The movement of Germany in China is a search for other markets, but the Chinamen will not buy because she has a larger army than England, but because other nations' commodities are not so good. The English trade is by far the largest in the world everywhere, but England has the smallest European army, and does not use her navy to help trade at all. Any nation may trade where she does. She has large colonies, not because she has won battles, but because her people emigrate. All the armies in the world will not make either French or German colonies good markets unless they can get Frenchmen and Germans to settle in them.

It is character, and not institutions, which make nations great, as M. Le Bon said to us the other day. The mistake of M. Brunetière and his confrères is in supposing that nations can be made great by contrivance, by enlarging the army and navy, or by changing the *scrutin de liste* for the *scrutin d'arrondissement*. They are made great by qualities, and qualities come from education and training in youth. Armies, as we have said, are excellent training-schools, if we could have them as training-schools and not as instruments for the destruction of life and property in quarrels of which the soldiers rarely know the cause. This ruins them for moral purposes. The young soldier acquires a great many traits which are very valuable for the citizen, but it is rare that any reference is made to this. He is never allowed to forget that killing is the chief end of his education; that what he is paid for and drilled for, is that he may be an effective instrument of force in the hands of other men, who may or

may not be unscrupulous, ignorant, vengeful, and corrupt. Thurston and Gallinger and Mason, for instance, have as much to say as to the uses to which an American soldier and sailor may be put as three of the most upright, conscientious, and cultivated men in the country. There is nothing for which the human conscience is more necessary than war; nothing which has less to do with war.

DUFFY'S MEMOIRS.

DUBLIN, March 29, 1898.

Sir Charles G. Duffy is the doyen of those who are or have been prominently engaged in Irish politics. Twenty years ago, when past sixty, and after a successful career in Australia, he, to a friend at home, declared himself "weary of new countries" and longing "for the green pastures where we wandered of old." He believed that in Ireland, politically, "all is as barren from Dan to Isaac [Daniel O'Connell to Isaac Butt] as from Dan to Beersheba," and he thought, "When Goethe, during the French Revolution, shut his ears to clamorous current politics, and wrote books that would live, he set a grand example, which humble people in their humble way may properly imitate." On returning to Europe, and settling down in the south of France, he has certainly followed Goethe's example—so far as quantity is concerned. His books are not likely to live like those of the great German; nor are they likely to have much influence on affairs. They, however, bring back vividly to the remembrance of us of the elder generation the events of stirring times through which we have lived, and they cannot but claim the attention of all interested in Ireland.

Besides 'Conversations with Carlyle' and minor works, we have had his 'Young Ireland,' his 'Four Years of Irish History,' his 'League of the North and South.' Many of less robust mind would have shrunk from thus having had to dwell upon such records of failure. We now have 'My Life in Two Hemispheres,' just published in two volumes by Macmillan. There is much that is new relating to himself, much that he has gone over with us already relating to his country. Half of the second volume is devoted to details of Australian politics likely to be passed over rapidly by readers who have not lived under the Southern Cross. These volumes are more worthy of a permanent place on library shelves than most of the author's previous works, for his general interests were wider than those of most Irish politicians, and he had intimate relations with a large number of the men of his time. Laceration of feeling isolates and withers up the life of many a disappointed patriot. With Duffy, success in a new country healed the wounds that rankled in the old—unless in so far as they disabled him from appreciating the devotion and sacrifices of others who in the old land had, impelled by like ideas, but upon different lines, taken up the work from which he felt himself driven. He continued on terms of the closest intimacy with old associates who had risen to place and title under the government he and they had once striven to subvert. He enjoyed the society of literary men and politicians, many of whom were opposed to the policy he still, in theory at

least, considered best for his country. His position as ex-Premier of a great colony and ex-Speaker of a Parliament opened up to him the best society in Europe.

Those volumes may often be turned to by searchers for biographical material concerning men of the last half of the century. Apart from Irish names, we find references to John Bright, Browning, Carlyle, Disraeli, John Forster, Gladstone, Mrs. Jameson, Frederick Lucas, Macaulay, Mill, Cardinal Newman, Sir Henry Parkes, Peel, and many other well-known names. It carries us far back, indeed, to read of the author's having been disturbed at editorial labors in Dublin by "a little, middle-aged man, with pleasant smile and lively eyes, but of a countenance far from comely, and so elaborately dressed that the primrose gloves which he wore did not seem out of harmony with the splendor of his attire." This was Thomas Moore. Strange incidents of strange times we are given in plenty. Imprisonment for political offences was, in those days of 1848, far different from what it has been made since and is now. We read of soirées given by convicted patriots in Richmond Bridewell. Smith O'Brien and his friends, sentenced to be hanged, drawn, and quartered, refused commutation of sentence to transportation; and to enable the change to be made without their consent, a special act of Parliament had to be passed.

Charles Gavan Duffy was born in Monaghan, of well-to-do Catholic parents, in 1816. We are given a vivid impression of the Orange prejudice and ascendancy rampant during his youth in the north of Ireland. He had from the first strong leanings towards literature. Interest in national politics was aroused by intercourse with surviving members—many of them Presbyterians—of the United Irish organization. The bitter wrongs of the land system, not effectually reformed for fifty years later, were brought home to him. Some of his father's property was confiscated because Charles, a lad, had taken part in an election against the landlord. When but twenty we find him sub-editor of a newspaper in Dublin. Five years later he was in full charge of one. He read for the bar. In 1842 he was mainly instrumental in establishing the *Dublin Nation*, which had so much to do in swelling the fierce current of agitation upon which he and so many others were borne to disaster in 1848. He alone of the prominent Young Irelanders who stuck to their guns escaped exile. After nine months' imprisonment and the failure of the Government to convict, he was set at liberty. For six years more, in and out of Parliament, he attempted to rally the scattered forces of his countrymen—if not with the hope of obtaining repeal, at least in the expectation of mitigating the wrongs of the land system. He found it impossible to make way against discouragement engendered by famine, depopulation, and failure of high hopes. At the 106th page of the second volume we find him in despair. "I determined to quit Ireland. . . . I could no longer promise the suffering people relief; and to witness injustice without curb, and wrong without remedy, would render life too painful. An Ireland where Mr. Keogh typified patriotism and Dr. [Archbishop] Cullen the church, was an Ireland in which I could not live." (He is generally credited with the expression of the belief at this period that "Ireland is as dead as a corpse upon a dissecting-table.") Upon Mr. Duffy's career in Australia it is not my

purpose here to dwell. It is fully set out in the volumes before us. He rose to be Prime Minister of Victoria and later Speaker of its Parliament. A knighthood was conferred upon him for services to the British Crown in materially advancing the fortunes of an integral portion of the empire.

His tendency is too much to trumpet his own services and criticize those of others. O'Connell is his peculiar aversion. It is impossible to explain away the evidences he lays before us of the great Tribune's readiness to make unworthy terms with the Government of the day and accept offices for his followers. Duffy does not appreciate the high qualities that led to O'Connell's consistent denunciations of American slavery. Ireland has already suffered to excess from a tendency on the part of her sons to expect sympathy from outsiders while they hold coldly aloof from sympathy with causes in which their own interests, or prejudices, do not appear to be concerned. His own leanings are widely liberal. As a good Catholic he is not able to see the Italian side of the Roman question; but, at least, he sympathized with Italian aspirations outside Papal territory, and he condemned John Mitchell's pro-slavery fanaticism. He appears unable to appreciate the generations of agitators that took his place on the Irish stage. As to the possibilities, there was little to choose between the chances of success of armed revolution in 1848 and in 1868. There were among the Fenians, the Home-Rulers, and the Land-Leaguers men of as pure intention and high character as there were among Duffy's political associates. These later generations have shown more endurance, more independence. He and his were in the main tried by the stress of but six or seven years. After that, they were, with one or two honorable exceptions, broken down or gathered into the Government fold. There are Home-Rulers struggling on now who enlisted nearly thirty years ago. The active Land League movement, up to the period of the Parnell split, lasted twelve years. Many have died, many have fallen back into private life, many, alas, are engaged in combating each other. Not one, that I am aware of, has taken place or pay. The Young Ireland movement left behind it a literature, poetry, oratory, and memories that will long endure. Later developments have produced little higher than "Murry Hynes," or, at the best, Kichham's "Irish Peasant Girl." The Young Irelanders effected nothing. It raises the saddest thoughts concerning the relations of England and Ireland that the appeals, the writings, and the sacrifices of this gallant band of educated gentlemen and noblemen, largely Protestant, neither induced nor moved the British public to effective reform of Irish affairs. The present quietude and crimelessness and undoubted rising prosperity of Ireland are due to two great changes brought about by the clear-sightedness of the great statesman who is now stricken down at Hawarden—the disestablishment of the Irish Protestant Church, the Land Act of 1882. The one was forced upon his attention by the state of feeling in Ireland revealed through the Fenian agitation, the other compelled through the Land League. The healing effect of Catholic emancipation in 1829 was as nothing compared to that of these measures.

Sir Charles brings his narrative to within but twenty years of our time. It would be

interesting to have his views on the present state of feeling in Ireland. To most readers his memoirs will be valued chiefly as enabling us to compare the past with the present. Each generation of Irish Nationalists since the Union has cherished the hope that each great subsidiary reform accomplished would rally more to their standard. The contrary appears to have been the case. Each wave of agitation has engaged fewer and fewer of the upper, the educated, the wealthy classes. (From appearances we might have judged differently ten years ago.) Thirty years back the Protestants appeared on the point of alienation on account of Disestablishment. They were never more united in their preference of Westminster to Dublin rule than at present. The Catholic Church has been conciliated. It finds itself, under British rule, freer to expand, less fearful of change from within, than anywhere upon the Continent. The farmers do not appear to believe that they can gain much more through legal changes. Trades-unionism, naturally in a minority in an agricultural country, depends more and more upon the support of British trades-unionism, naturally so strong. A powerful interest, that of the liquor-dealers, likewise finds itself safer in reliance upon its British friends. They realize that it has been easier to trammel the trade by appeals to Irish than to British feeling. The institutions of Ireland are mainly under Government control. The civil service of the United Kingdom is now open to all through competitive examination, and the young blood of the country, that was mainly relied upon for the furtherance of national aspirations, is pressing into it. The best spirit, the most conscientious, that which it would have been most desirable to hand on, is being more and more called into the service of religion and devoted to celibacy in the great conventual institutions that are being established in such numbers all over Ireland. Much of the capital, too, that, in a Protestant community so situated, would go to advance industry and commerce and supply the sinews of war for a great national movement, is being devoted to (materially) non-productive ecclesiastical purposes. Home rule, which appeared imminent some years ago, remains what it was, a conception by some of the best minds of what would be best for Ireland and for England. Ireland has now, what she had not fifty years ago, the proffered support of an English party in the accomplishment of a national ideal. She has education and wealth such as she had not in Sir Charles Gavan Duffy's time. If she were really in earnest, if the Irish people at the bottom of their hearts really desired home rule, as they show themselves eager in the support of their Church and the pursuit of amusements, no differences or shortcomings on the part of rival leaders would stand in their way.

Much energy will naturally be absorbed in the establishment and first workings of local-government institutions about to be conferred. When county councils are fully under way, when the period has passed that has usually supervened between the flood-tides of Irish unrest, we shall know what Irish desires really are. We shall know whether Sir Charles G. Duffy's writings have been a guide to liberty, or whether they have but helped to "point a moral and adorn a tale."

D. B.

Correspondence.

SPAIN AND THE UNITED STATES IN 1813-14.

TO THE EDITOR OF THE NATION:

SIR: The following copies of hitherto unpublished letters in my possession, written to Anthony Morris by President Madison and Mr. Monroe, his Secretary of State, may possibly be of interest to your readers, at the present time. The copies are exact, showing interlineations and corrections as they appear in the originals. Anthony Morris was a member of the Philadelphia bar, and a personal friend of Mr. Madison's. His father, Samuel Morris, served as Captain of the First City Troop of Philadelphia Light Horse under General Washington.

Yours truly, EFFINGHAM B. MORRIS.
PHILADELPHIA, April 11, 1898.

[For typographical reasons, we have bracketed the interlineations and corrections in a self-explanatory way. For the Chevalier Onis, see Prof. Hart's communication in the *Nation* of March 10.—ED. NATION.]

DEAR SIR

The decision of Adm'r Warren shuts the door to the [object] destination which my proposal to you had in view. I regret it the more, as the other Stations are provided for, and would besides be ineligible probably to yourself. Would a confidential service for a time at Cadix, in an informal character, be acceptable to you? The service is of an important nature and enjoins a respectable though unaccredited & in some respects unavowed agent. The allowance will be [at the rate of] upwards of \$2,000. It will be agreeable to know your determination as soon as convenient; and proper that this communication should rest with yourself for the present. Should the service in question be accepted, a trip hither will be necessary & the earlier the better, as will be your departure for Cadix.

Accept my friendly respects

(Signed) JAMES MADISON
A. MORRIS, Esq'r. May 6, 1813.

DEPARTMENT OF STATE, June 9, 1813.

SIR

The President having confided to you an agency of delicacy and importance at Cadix, it is desired that you should repair there, without delay, to commence the discharge of its duties. To enable you to do this with advantage to the United States, you will receive a copy of all the documents relating to Spain which have any connection with the interesting questions now depending with her government.

The United States have been invariably desirous of preserving peace and promoting friendship with that power whatever might be the result of the present contest for the Spanish monarchy. Friendship however between nations as well as individuals must be founded on the basis of justice. Where a sense of injury exists there may be peace but there can be no friendship. A retrospect of the conduct of the two nations towards each other, will shew that the United States have received many injuries from Spain, without retorting them; that they have on the contrary manifested great forbearance under a strong sense of injury, in the hope of producing a different disposition and policy on the part of the Spanish Government towards the United States.

The injuries remaining unredressed are those proceeding from the spoiliations of the last war and the suppression of the deposit at New Orleans in 1802. The former of these was intended to be provided for by a convention, which was concluded and signed by the minis-

ters of the two powers at Madrid on the 11th day of Aug't., 1802 but which was afterwards rejected by the Government of Spain.

To the latter injury the sensibility was diminished by the cession made of Louisiana by France in the following year. But in that transaction Spain had no merit, nor has she made any reparation for the injury proceeding from herself and which preceded the cession.

Since that event the Spanish Government has manifested a continuation of the same unfriendly disposition towards this country. By the treaty of Saint Ildefonso (October 1st, 1800) Louisiana was ceded to France in terms which evidently comprized West Florida, and by the treaty of 1808 France ceded to the U. S. in the same extent in which they had received it. It is distinctly understood had France retained the province that she would have claimed as being within its limits the whole territory between Perdido on the east and the river Bravo on the west, and that Spain would have acquiesced in those limits. Against the U. S. however her government has set up very different pretensions. It has insisted that west Florida on the Eastern and a vast extent of territory on the western side of the Mississippi Eastward of the Rio Bravo formed no part of the province as ceded to the United States.

Anxious to adjust all these differences amicably, this Government has set on foot several negotiations in which the most liberal conditions have been offered to Spain. In a compromise of their respective claims to territory, an offer was made in 1806 to the Spanish Government, in consideration of a cession to be made by it of the territory belonging to Spain Eastward of the Mississippi, to cede a large tract of country west of that [country] river, and to make such an estimate of the relative value of the territory so ceded by each party, as that the United States should be bound to pay, for a like sum acknowledged to be due by them to Spain, the sum which on a fair liquidation should appear to be due by her, to citizens of the United States. This proposition was rejected in every part the Spanish Government refusing to make any indemnity for injuries or to admit any boundary, which it did not dictate.

Prior to the negotiation of 1806, the United States had just cause of war against Spain but after its failure their abstaining from it could only be imputed to a sensibility to the situation of the Spanish Monarchy. Other powers would probably have seized the opportunity not simply to assert their rights and secure an indemnity for their wrongs, but availing themselves of the defenceless situation of the Spanish Provinces and disregarding the limit of a just redress, have taken possession of those most contiguous and expelled the authorities of Spain from the rest. The United States have pursued a very different policy towards Spain. It was not until very lately that they took possession of West Florida to the Perdido which belonged to them and as yet they have taken no step whatever on the principle of indemnity.

The connection which was formed some years past between the Spanish Cortes & the British Government, with its bearing on the United States, did not escape their attention. The hostility of the former was well known, and that of the latter more than suspected. There was much cause to apprehend that the British Government would under the pretext of aiding Spain take possession of East Florida and endeavour to retain it. To guard against such a disaster proceeding from any foreign power, a law was passed in 1805, authorizing the President in case there should be evident danger of such an event to take possession of the Province by the troops of the United States. The danger of British encroachments on that quarter were increased by the war, and the pernicious effects which would result from them great and certain. With the insurrection which took place in West Florida and the causes which finally induced the United States to take possession of it you are already acquainted as you are with those occurrences re-

lating to East Florida which is still retained by the Spanish authorities. Referring to the documents which illustrate fully all these transactions, I have thought it sufficient to present to your view the permanent features of them only.

The Special object of your agency to Cadiz, will be to impress the Regency with a just idea of the friendly policy which has been invariably pursued by the government of the United States towards Spain, under circumstances that were calculated to produce a different result and of their disposition to persevere in that policy; if the Regency by maintaining as it has hitherto done, the unjust system of the former government, does not prevent it. The question in regard to West Florida is settled. There can be no further discussion on that point nor can the U. S. suffer East Florida to pass into the possession of Great Britain or of any other power, as it would give to such power especially to Great Britain the means of annoying them thro' the war in their most vital interests. It would be difficult for the United States to preserve peace with any power, however well disposed, holding that province for any length of time, from the important relation it bears to the commerce & welfare of so many states. The United States have therefore been desirous of acquiring it by amicable arrangement and have still the same desire. Possessing it at a fair equivalent satisfying at the same time the just claims of our citizens, all cause of future controversy would be removed. Whatever may be the future relation of Spain to her [colonies] Provinces in America the friendship between the United States and Spain might be preserved.

It is presumed that it is eminently the interest of Spain to cultivate the friendship of the United States. The policy of her former government furnishes an instructive lesson to the present one. The right of the United States to the free Navigation of the Mississippi, was denied by it and resisted until they were prepared and resolved to take it by force. To avert this danger the Spanish Gov't. recognized the right and regulated its use by a treaty bearing date in 1795. That arrangement tho' far from being liberal preserved (notwithstanding the spoliation on our commerce) a good intelligence between the parties until it was violated in 1802 by the suppression of the deposit at New Orleans. In the interval the U. S. did no injury to Spain nor did they give her any cause of offense. These facts show how highly sensible they are to the manifestation of an amicable policy in any other power. Had the former government of Spain [in 1795] declined the treaty of 1795 and continued to resist the right of the United States to the free navigation of the Mississippi can any one doubt that the consequences of such resistance would have produced war or what the consequences of that war would have been? Can any one doubt should the Regency at Cadiz continue to resist the just claims of the United States, what will be the result of such a policy? Possessing so many and such vast provinces to the South, as Spain does, all of which it is in the power of the United States to separate from her, is it for her interest to expose herself to that danger by persevering in injustice? The President indulges the hope that you will be able, by your communications to convey to the Regency, a just view of the conduct of the United States, in all their transactions relating to Spain, since the treaty of 1795, and of their present friendly policy, and induce that body to adopt a similar policy towards them.

In the contest which has existed several years for the Spanish Monarchy, the United States have taken no part, nor will they do it nor in any other manner compromise themselves. In their intercourse with Spain and her Provinces they have [they have] managed their concerns with the persons in power in each part, without enquiring from whom they derived their authority. The Spanish provinces in America adhere to and acknowledge the

Regency. With the Regency therefore the United States are disposed in what concerns their welfare to communicate informally and to promote a good understanding. From it the President is willing to accept the Territory claimed by Spain & held by the Regency Eastward of the Mississippi, in discharge of the claims of the United States to indemnity or he will receive possession of & hold it in trust subject to future negotiation & adjustment. The effect of such an informal arrangement would be the same as if it were done by treaty. Peace would be preserved between the two countries on conditions satisfactory to both. The United States being thus secured against an imminent danger against which they cannot otherwise be secured pending the war, would cultivate that relation by all the acts belonging to a friendly policy. It will be easy to execute this arrangement. On receiving from the Regency an order to the Spanish Governor at St Augustine to deliver East Florida to the United States you may give assurances that it will be received either in discharge of the claims to indemnity or in trust as above stated as the case may be, which will be repeated in writing to the Governor on the delivery of the Province.

It is expected that you will soon be able to ascertain whether this arrangement will be entered into by the Regency, & in consequence what its real policy is towards the United States. Information has been received from authority deserving attention that the Regency has sold the Floridas to Great Britain for two million sterling. If this is true it will leave little doubt of its policy or of the obligation imposed by it on the United States. It is important to know the truth of the report and of the disposition of the Regency towards this country.

Many facts have been disclosed relative to the improper conduct of the Chevalier Oniz. Of his hostility to the United States and endeavours to embarrass their affairs the evidence is conclusive. Indeed in one instance it is of a nature essentially to compromise him, and serious notice would have been taken of it, had it not been prevented by a sensibility to the situation of Spain. I send you a copy of the document that you may know the precise nature of his offense. Other examples might be enumerated. The following deserves particular attention. Tho' not recognized by this government as a minister because the United States would not recognise either of the parties contending for the Spanish Monarchy pending the contest he has nevertheless assumed that character by issuing papers and granting documents which would have been very improper in a minister. Under these circumstances the moderation of this government towards him has been signally evinced yet it has not produced its merited effect. It is understood that in his communications to the Regency he has with a hostile spirit, misrepresented all the acts of the United States relating to Spain. It is proper that his government should be apprized of these [points] facts that it may ascribe to the true cause any steps that it may be necessary to take hereafter in regard to him.

It is advisable that your communications with the Regency should be oral and not written as far as may be practicable, & when written you will keep in mind that they cannot be official on your part. I enclose you a letter addressed to yourself which you may shew as the ground of your authority to communicate with that body.

As your agency is intended to promote a good understanding with the Regency by giving explanations where they may be necessary relative to the conduct and views of the United States, in the mode and for the purposes above stated, it will be temporary and it is hoped that it may not be of long continuance. Your own observations will enable you to communicate to this department useful information on the point. Your compensation will be at the rate of three thousand five hundred dollars per annum to commence on the day you left home.

for this city to cease when you may leave Cadiz on your return. The expense of your voyage [there] will be defrayed out of your salary; for your return, after the ceasing of your salary, you will be allowed one-fourth of the above mentioned sum.

I have the honor to be
Respectfully, Sir,
Your obedient servant
(Signed) JAS. MONROE.
To ANTHONY MORRIS, Esq.,
&c.

DEPARTMENT OF STATE.
October 11, 1814.

SIR

Mr. Erving having been appointed Minister Plenipotentiary of the United States to Spain, it is no longer necessary for you to remain in that country.

You will be pleased to repair to Madrid, if this letter should not find you there, and deliver to him the papers in your possession, connected with the public business committed to you, including, as well, copies of your communications to this Department, as the papers which you received from it. In doing this, I am sure you will take pleasure in giving him any information you may have collected relative to the state of affairs in Spain.

It gives me much pleasure to inform you, that your conduct has been entirely satisfactory to the President, who authorizes me to state, that in addition to your salary while employed in the public service, you will be allowed three months salary as an equivalent for your expenses in returning home.

I have the honor to be,
Sir,
Your most ob't serv't.
(Signed) JAS. MONROE.
ANTHONY MORRIS, Esq.

Notes.

In October next the Macmillan Co. will begin publication of four quarterly volumes of an 'Encyclopædia Biblica,' edited by the Rev. T. K. Cheyne and J. Sutherland Black, assisted by seventy of the leading living Biblical critics and scholars. Other and earlier publications by this firm will be new editions of 'Alice in Wonderland' and 'Alice through the Looking-glass,' with new prefaces by the late author; 'The Development of the Child,' by Nathan Oppenheim, M.D.; 'A Text-book of Botany,' from the German of Dr. E. Strasburger and others, by Dr. H. C. Porter of the University of Pennsylvania; and 'The General Manager's Story,' by Herbert E. Hamblen.

The light and airy tone of the preface to 'Chambers's Biographical Dictionary,' edited by David Patrick, LL.D., and Francis Hindes Groome (Philadelphia: Lippincott), is hardly becoming to so grave a work, which has, nevertheless, been executed seriously and carefully, with a due sense of proportion. Errors we have noticed, and omissions which might be contrasted with admissions, in the same grade of distinction; but not to an extent that should impair our welcome to this close-packed volume. Its pretensions to being up to date are well justified, and most of the younger reputations in belles-lettres will be found here, from Stevenson to Kipling, from Du Maurier to 'Ian Maclaren,' from Sienkiewicz to Alice Maynell, from Linley Sambourne to Aubrey Beardsley and Joseph Pennell. Ibsen and Sudermann lack the companionship of Hauptmann. Napoleon alone surpasses Gladstone in allotted space. The American field is fairly covered. The bibliographical directions are an excel-

lent feature, and so is the pronunciation of the more difficult names. Finally, a list of pseudonyms and of works for which the author might be sought is, if by no means exhaustive, useful as far as it goes. There are a thousand pages in double columns.

Students of language may be glad to know that the Holland professor Uhlenbeck of Amsterdam has rendered his serviceable Dutch treatise on Sanskrit philology more easily accessible to scholars by giving out an English translation of it, under the title, 'A Manual of Sanskrit Phonology, in comparison with the Indogermanic Mother-Language, for Students of Germanic and Classical Philology.' The manual makes a handy volume of a hundred or more pages; it is published by the enterprising young firm of Luzac & Co., London, and it is welcome.

Nearly all the modern works on Japan lack depth and perspective. It is refreshing to find a work which treats with competency and clearness of the archipelago, its people, and their neighbors from the stone age until near that of the Murata rifle and torpedo-boats. Such a work is 'Nippon: Archiv sur Beschreibung von Japan,' by Philipp Frans von Siebold and, in continuation, by his sons (Würzburg and Leipzig: Leo Woerl). Students of Japan are familiar with the bulky and costly 'Archiv' which has been accessible in libraries for nearly half a century. These two volumes in German, finely illustrated, form an excellent condensation of the 'Archiv,' and show the steady evolution of Japanese civilization, and the enormous debt of the islanders to both their Oriental neighbors and to Europe, especially the Netherlands. A biographical sketch of Siebold, his travels from Batavia and in Japan, in 1826, during the Shogunate, is added.

'Le Bilan Littéraire du Dix-neuvième Siècle,' by Georges Meunier (Paris: Charpentier), is an attempt to estimate the value of the literature of the epoch now closing. In a measure it recalls Pellissier's excellent work on 'The Literary Movement in France in the Nineteenth Century,' without coming up to it in value or weight. There are interesting pages in the book and some judicious appreciation of individual authors, but nothing strikingly original in the judgments of schools or in the views of the causes at work during the century. Perhaps the most attractive part is that devoted to the study of Naturalism and its effects. According to M. Meunier, this is the doctrine which will color the literature of the coming years; science being destined to enter more and more largely into letters, greatly to their advantage.

'Rachel et Samson' (Paris: Paul Ollendorff) is a somewhat disappointing book, though it does contain much interesting information concerning the great actress and her relations with the equally great teacher who discerned so clearly her wonderful histrionic gifts. That Rachel owed her success to Samson is known; that she behaved ungratefully towards him is known also, but that she could not have attained later to success without being constantly guided by him is not to be easily believed. Yet this is what Mme. Samson would have us think. She is more readily credited when she lays the blame for the quarrel upon the mercenary father of Rachel.

In a pamphlet, 'Der Universitätsunterricht und die Erfordernisse der Gegenwart' (Berlin: Calvary & Co.), Dr. Ernst Bernheim,

Professor of History in the University of Greifswald, presents some of the good and bad features of German academic instruction in a clear and forcible manner. The organization and development of the German university on traditional lines inadequately provide for the recent enormous growth of special knowledge, so unfavorable to the broad and general culture which it was the original aim of such an institution to impart; but the remedies proposed for this defect involve the danger of dissolving the university into a set of professional schools designed solely to promote "education for practical life." Prof. Bernheim protests against this pseudo-reform, and thinks the difficulty can be met without such a radical change. Owing to the marvellous progress of technical instruction during the past forty years in the fatherland of philosophies and phenomenologies, Germany has entered into earnest commercial and industrial competition with other nations in the marts of the world, so that the export of metaphysical systems "made in Germany" is now being rapidly superseded by manufactures bearing the same label. *Lehrfreiheit* offers as great advantages to students as *Lehrfreiheit* does to professors, but presupposes a lively sense of duty, love of learning, maturity of judgment, and a certain force of character in the young men who are to enjoy and profit by it. The one thing needful is less passive receptivity and more active individual investigation. Very suggestive are the remarks on private lectures, seminars, and other forms of academical instruction. The report of Prof. Conrad Halle on American universities and the superiority of their courses of study in some respects is cited.

The second publication of the Nantucket Historical Association consists of the Timothy White Papers (1725-1755), edited by the Rev. Myron Samuel Dudley. The Rev. Timothy White was a Harvard graduate of the class of 1730, a native of Haverhill, Mass., and connected by marriage with the Gardner family of Nantucket, where his pastorate covered the period bracketed above. His editor sets forth what is known of previous efforts to evangelize the Indians of the island, as well as to furnish religious teaching to the white settlers. Mr. White's journal and account-books as school-teacher and trader give this pamphlet a genealogical value. A few letters are appended, and there is a photographic frontispiece showing the Old North vestry. The Papers may be had of Miss Susan E. Brock, Nantucket, or of Littlefield, Boston.

Popular errors die hard, especially when they are picturesque. *Literature* (March 19, p. 304) can still speak, in a paragraph on New England Puritanism, of "that blasted fatal bough that bore the hanged Quaker *and burnt the witch*"; and again, "The folk of Miss Wilkins still possess *the faggot for the witch*, but the faggot serves to cook hot biscuit." But *Literature* would be unable to tell when and where in New England either the bough or the faggot burnt the witch.

The *National Geographic Magazine* for March contains illustrated accounts of dwellings of the saga-time in Iceland, Greenland, and Vineland, by Miss C. Horsford, and of a voyage up the Kuskokwim in Alaska by two Moravian missionaries in 1885. The frontispiece is a portrait of the new President of the National Geographic Society, Prof. Alex. Graham Bell.

The *Annales de Géographie* for March opens with a suggestive article by the edi-

tor, M. Vidal de la Blache, on political geography, with special reference to the works of Prof. F. Ratzel. There are also articles on the geological structure of the lands bordering on the Ægean, and on the climate of the Australian desert; and a comparative view, with charts, of the density of population in France in the years 1801, 1846, and 1896.

The principal contents of *Petermann's Mittheilungen*, No. 2, are articles upon the geology of Java and upon the native races of Formosa and the Loochoo Islands. One may read, besides, of an exploration of the Capim River in Pará. A description of the Bay of Kiau-chau is accompanied by a reproduction of a Japanese map of the peninsula, showing both the territory leased to Germany and that under German influence. A useful survey of the progress of railway construction in all parts of "savage" Africa is to be found in the monthly report.

On the 28th of January, 1892, on the occasion of the combined celebration of the anniversaries of the birth of Frederick II. and of William II., Du Bois-Reymond delivered before the Royal Academy of Sciences an address on Maupertuis (published in the then current *Rundschau*). At that date the correspondence between the philosopher and Frederick, appended to La Beaumelle's 'Vie de Maupertuis,' had for good reasons to be set down as untrustworthy. Since then, however, the original and authentic letters, which La Beaumelle had copied and falsified, have been transferred from the private collection of Feullet de Conches to the Prussian archives, whose director, Dr. Reinhard Koser, is at present engaged in preparing them for publication. The correspondence begins in 1738 with a letter from Frederick, then living as Crown Prince at Rheinsberg, and covers the whole period to Maupertuis's death in 1759. It consists of 176 letters, about half of which are from the King. Extracts from these letters are interspersed in the address on "Maupertuis and Frederick the Great" delivered by the present secretary of the Berlin Academy, Prof. Hermann Diels, on January 27 last, at the same place and on the same occasion as Du Bois-Reymond's six years ago. These fragments, few and brief as they are, leave no doubt of the extraordinary interest attaching to the letters, which, one readily believes, "will add to the character of the great King many brilliant and noble traits." Prof. Diels is a classical scholar and philologist, but this does not prevent him from giving in his address (see the *Rundschau* for March) an interesting and sympathetic account of the early successes and subsequent disappointments of the ambitious French mathematician and philosopher, and of the affectionate relations between him and his master, the heroic and sentimental King.

The tenth report of Mr. Robert T. Swan, Massachusetts Commissioner of Public Records, shows a gratifying progress in legislation favorable to his steady application on behalf of these long neglected documents. To this legislation general attention may be directed, as also to a new and efficient "Act relative to the registry and return of births, marriages, and deaths." Many old records have, by general advertisement, been recovered. Some towns and cities are printing their earliest. The bulk of the report consists of a noteworthy list, with historical data, of churches, parishes, precincts, and religious societies, present and past, in Mas-

sachusetts, arranged geographically. The Baptist, Congregational, Methodist Episcopal, Protestant Episcopal, Unitarian, and Universalist alone are considered. The Roman Catholics "have no form of organization necessary for the business transactions which are a part of the life of other denominations." Mr. Swan is sure that a very large percentage of so-called church organizations "would find it impossible to take action in business matters that could not be set aside for irregularity or illegality." Apropos of the famous Dedham case, in 1820, which led to the succession of Unitarian to Congregational church rights, Mr. Swan notices a suit now pending in Lowell between two churches of these denominations for possession of a meeting-house by legal succession. The Commissioner invites corrections and additions to his very valuable list, compiled out of chaos.

"Hawaiian Skulls" is the subject of the last memoir contributed by the lamented Dr. Harrison Allen to the Transactions of the Wagner Free Institute of Science of Philadelphia. The distinction between the social classes of the ancient Hawaiians seems to have extended to their methods of burial. The remains of chiefs and nobles were interred in lava-caves and subterranean caverns, while those of common people were placed in superficial graves near the coast. The cave skulls are, as a rule, free from disease, but commonly show defective nutrition. The coast skulls are of a lower structural type, and show a greater variety of diseased action. The author believed that "the differences between the crania are not due to race but to methods of living, and in some degree to differences of mental strength in individuals." Dr. D. G. Brinton, in a prefatory note, calls attention to the novel graphic method devised by Dr. Allen (called by him the "terrace" method), which is published for the first time in this memoir.

The Maryland Geological Survey has published the first volume of its Reports under the direction of Prof. William Bullock Clark, State Geologist. This introductory volume contains a preliminary account of the physiography, geology, and natural resources of the State. To this are appended a bibliography and a cartography of Maryland, by Dr. E. B. Mathews, and a report upon magnetic work, by Dr. L. A. Bauer. The book is attractive in appearance, and is furnished with excellent illustrations and maps. Volume two of these reports, which will contain a description of the building and decorative stones of the State, is in preparation.

In saying last week that the "Psychological Index" just issued took up the entire March issue of the *Psychological Review*, we overlooked the fact that the index is a supplement, and that the regular March number of the *Review* was issued as usual besides. It contains the notable address, on "The Psychology of Invention," delivered at the Ithaca meeting of the Psychological Association last December by Professor Royce; the detailed proceedings of the same meeting, an interesting discussion of "Physical and Mental Tests," by Professors Jastrow, Baldwin, and Cattell, together with the usual quota of signed book-reviews and notices. The editors of the *Review* are also publishing a series of longer "Monograph Supplements," of which Nos. 5 and 6 have appeared in the last three months—"Problems in the Psychology

of Reading," by J. O. Quants, and "The Fluctuation of Attention," by J. P. Hylan.

A short article in a recent number of the *Berlingske Tidende* of Copenhagen, by the well-known Danish specialist, Dr. E. Ehlers, gives an interesting account of the work on the new lepers' hospital for Iceland. As was announced earlier in these columns, the building has been constructed in Norway, whence it was to have been shipped last month. The hospital will be opened July 24, although the whole amount necessary to meet the expenses (some \$35,000) has not yet been raised. In view of the fact that, without isolation, the present annual increase of lepers in Iceland is about twenty, the committee feel that further delay would be little short of criminal. Dr. Ehlers states that in the Norwegian asylums the average time of treatment, before death comes to the relief of the sufferer, is 4.2 years. If this rate obtain in the Icelandic hospital (and there is no reason to suppose that it will vary greatly), there will be an entirely new set of patients about four years after the opening, and, with the present accommodation of seventy, it will, under the present conditions, take only about twenty years to root out the disease entirely.

The American Association for the Advancement of Science will celebrate in Boston, on August 22-27, its fiftieth anniversary. The Boston local committee has Gov. Wolcott for its honorary president. A great simultaneous gathering in Boston of the American Forestry Association, the American Geological Society, the American Chemical Society, the American Mathematical Society, the Society of Economic Entomologists, the Society for the Promotion of Agricultural Science, the Society for Promoting Engineering Education, and others, will give éclat to the occasion. The sessions will be held at the Massachusetts Institute of Technology, which is the address of Prof. H. W. Tyler, the local secretary for all correspondence. The Association will be the guest of Harvard College for a day, of the Essex Institute at Salem for another; and sundry other excursions—to the White Mountains, to Cape Cod—are contemplated. A large increase in membership is desired and anticipated.

The centenary celebration in honor of Amerigo Vespucci and of Toscanelli, the astronomer, cartographer, and correspondent of Columbus, will be inaugurated at Florence on April 28 by the unveiling of two commemorative statues of these famous Florentines by the King of Italy. There will also be an exhibition of valuable unpublished documents relating to their services in connection with the discovery of America.

—The Rev. E. M. Hale has often displayed his indifference to historical accuracy, but has seldom surpassed it as exhibited in the anecdotic biography of the poet Lowell which is appearing in the *Outlook*. The chapter published in the April number gives a readable account of the literary conditions in 1842-43, with a glance at the later career of the persons named, but the writer's errors are more amusing than his facts. For Dr. George B. Loring he invents a military career, remarking of him that he was "distinguished as a general in the war," and afterwards speaking of him as "General" Loring. Of his own brother Nathan he writes that "he made a negotiation with Duyckinck and 'Harry Franco' . . . by which their short-lived ma-

gazine [*Arcturus*] was transferred to him." Franco (C. F. Briggs) had nothing to do with this periodical; Mr. Hale means Cornelius Mathews. As an excuse for the fashion plates in the Boston *Miscellany*, we read that "there was no class of readers who could sustain creditably a purely literary magazine. The rate at which the poor *Knickerbocker* was [in 1842] expiring was evidence of this." As the *Knickerbocker* was published without interruption till 1865, the duration of its death-agony "beats the record." Of Hawthorne we are told that "his stories in the *Democratic Review* of this time are attributed to Monsieur d'Aubépine." Some of Hawthorne's tales in the *Tokens* were so signed, but not those in the *Review*. Mr. Hale also remembers what "glee there was in the counting-room [of his brother's magazine] when it was announced that a thousand copies . . . had been sold in Lowell." Small wonder that such an incident made an impression which has lasted fifty years; such a sale in such a place might well cause amazement. So successful an editor would have been worth his weight in gold, yet we have before us a letter from the publisher, written June 13, 1842, in which the editorship is offered to another litterateur: "We are decidedly of the opinion," says the writer, "that a change of editor is necessary for the permanent success of the work." Of bibliographical interest is the statement concerning Lowell's 'Old [English] Poets' that "forty-eight editions have since been published"—interesting because the author never permitted its republication after 1846, and the only edition now before the public is an unauthorized one. The *Liberty Bell* Mr. Hale describes as "an anti-slavery journal," though it was published as a bound volume and but once a year, and not regularly at that.

—Conspicuous by its absence is the word *campus* in the Oxford Dictionary (volume 3, 1893). The word, meaning 'college grounds,' occurs in Webster and the Century of 1889 or 1890. The Oxford Dictionary, however, admits the word *campo*, "Obs. school slang," with this citation: "1612. Brinsley, *Lud. Lil.* 299. Without running out to the campo (as they terme it) at schoole times. *Ibid.* There is no day but they will all looke for so much time at the Campo." The omission of *Campus* in Dr. Murray's vocabulary, which is twice as extensive as Webster's, is a strong proof that the existing usage is an Americanism pure and simple. Indeed, the Century defines it as descriptive of the grounds of American colleges. So far as we can ascertain, *Campus* was a word unknown in all dictionaries prior to the Century and the last revision of Webster, and yet was current long before in American educational institutions. You will not discover it in Worcester of 1890 nor in any previous issue. It is natural to ask how long it has been in vogue, and when and where the usage originated. The only citation in any dictionary to prove the existence of the word is in the Standard Dictionary (1894-5), and consists in a sentence from the *Cosmopolitan* of April, 1890. The earliest appearance in the West of *Campus* as noted by the present writer was in the *Racine (Wis.) Mercury* of August 5, 1868. Its words were: "The college Campus has been mowed." An advent of the term in the East some ten years earlier is said to be shown in a class poem printed among Harvard songs, and commencing,

"When we first came on this Campus
We were freshmen green as grass."

Both these instances prove that *Campus* was then no stranger either East or West, but had already been so long hospitably received as to be adopted among household words.

—That story of the man who applied for a pension on the ground of having read all the war articles in the *Century*, proves that now and then a reader of wholesale propensity lingers among us. On the whole, the tendency is towards epitome, and we are therefore not shocked to find that Motley's 'Dutch Republic' is now considered too long. Mr. W. E. Griffis has abridged the three volumes (Harper & Bros.) into enough less than one to permit of a supplemental sketch which covers, in above 200 pages, the years 1684-1897. Motley took great pains with the collection of his data, but a vivacious style gave him his audience. We do not mean altogether to condemn Mr. Griffis's piece of work when we say that Motley would never have made his reputation by a history executed in the present wise. Assuming that he used proper proportions, a considerable reduction of scale destroys the artistic character of the whole, and turns what was once literature into a book of reference. Still, the 'Dutch Republic' contains material for a good compendium, and Mr. Griffis has taken all the space required to contain the important facts. In cheapness, clearness of print, and quality of illustration his abstract is worthy of praise. While we should have preferred to the portrait of Margaret of Parma, which he gives, that by Sanchez Coello, we discern in his selection a familiarity with pictures and prints and a personal knowledge of Holland. We have examined his own sequel to Motley with more care than we have paid to his synopsis. It is a sketch marked by signs of conscientious inquiry and yet bearing traces of the amateur in historical composition. Else why should he say, p. 766, "The old formula of mediæval Europe, *ejus regio ejus religio*, was still observed"? Gardner for Gardiner, and Netsu for Metsu, are probably misprints, but we can less easily forgive the statement that Paul Potter was "the painter of one of the four great world's pictures." In citing French words Mr. Griffis goes a little astray, both as to the accents and spelling. Moreover, his account of operations conducted by the National Convention against Holland is so concise that one would imagine Dumouriez and Pichegru to have been engaged in the same winter campaign of 1794-'95. In strictly Dutch affairs, however, Mr. Griffis is well grounded, and his outline of events since the death of William the Silent fits into its context very serviceably.

—Pennsylvania derives her entire revenue from other sources than the taxation of real estate, leaving this source of income to local communities exclusively. In addition to the ordinary expenses of the State Government, she distributes \$5,500,000 to the local communities for public schools. We have already referred to a work explaining how she obtains income, by Frank M. Eastman, of the Auditor-General's staff, entitled 'Taxation for State Purposes in Pennsylvania' (Philadelphia: Kay & Brother). The arrangement of the matter is systematic. The legislative history of each existing tax, license, or other source of revenue,

is given, the method of administering it is described, and the rulings of the courts upon it, if any, are summarized and the volumes referred to. Experience derived from the letters of inquiry received by the Auditor-General has taught Mr. Eastman what things the public want to know about, and he has aimed to supply all such information. The only thing that we miss which we should like to have is a tabular statement of the amount derived from each tax in an average year, or in the latest fiscal year. A chapter on local taxation, i. e., taxation in counties, cities, boroughs, and townships, is added, giving an outline of the principles followed, not aiming, however, to deal with that subject thoroughly. Defects in the present laws of the State as revealed in practical administration form the concluding chapter. The book seems to us to be an admirable guide to legislatures in other States which are seeking to assimilate their own systems to that of Pennsylvania, and a valuable assistance to students of the science of taxation in general.

—Of great interest is the latest issue of the English Historical MSS. Commission, containing the MSS. of the Earl of Carlisle. One of that house, the fifth Earl, was on the reconciliation committee sent to America in 1778, and in his letters to his wife and friends we have a full account of the difficulties encountered in that ill-timed mission. Some of these invaluable records have been reproduced in Stevens's Facsimiles, but it is well to have them in a more accessible form. Although the Earl was only thirty years of age at the time of his visit to America, his papers are of a high quality, and his opinions, even in the face of disappointment, are balanced and moderate. Germain concealed from the commission the orders given to army and navy serving against the colonies, so that they found on arriving at Philadelphia the plan of campaign changed from an offensive to a defensive one, and such positive and repeated orders issued as must reduce to impotency the already much weakened military force. The appeals to Congress were made at a time when it was flushed by its treaty with France and the presence of a French fleet off the coast; it was useless, too, to expect success when the British army was leaving Philadelphia—a retreat. The letter to his tutor, Rev. Mr. Ekins, is a remarkable example of the Earl's ability to explain the failure of that commission. Nearly 100 pages of this volume are occupied with the letters and documents of this half-hearted effort to win the rebellious colonies by means other than arms. A record is made of the distribution of the manifesto and proclamation—ten English and five German copies going to Washington.

—On his return to England, the Earl continued for some time to receive "Intelligence" from America, but the most of it is from men firmly convinced that the war was nearly at an end, and Washington's army in its last ditch, as, indeed, it seemed to be. A recommendation to send out civil commissioners to govern the provinces as they should submit, was one of the more sanguine ideas communicated. More true were the predictions of disaster from the paper money, which now scarcely passed at all, being received only at twenty for one and rapidly falling in value. Naturally the quarrel in Congress over Deane, and the dif-

ferences between Arnold and the Executive Council of Pennsylvania, were made much of, but the news was too strongly colored to be of real service. Yet the intelligencers were William Smith, Chief Justice of the Province, and Andrew Elliott, who wished to be the civil Governor of New York, men of more than average ability. Of secondary interest are the several hundred letters from George Selwyn, which do not bear out his reputation as a wit, and are for the most part dreary reading. Of politics he says almost nothing, but of personal matter he is overflowing—the society reporter of the day. As a picture of the social habits and customs, his record will stand high, but he will never enjoy even a small part of the popularity that "Horry" Walpole holds. The descriptions of Charles Fox and the rage for Pharoah (faro) should be read—Fox running a bank at one end of the street and the bailiffs levying an execution on his belongings at the other. The flavor of Selwyn's political interest may be judged by this extract: "I went from dinner yesterday to the House of Commons, and came just in time enough to be in a division upon some American question, God knows what." That was written in 1781.

THE GREEK TRAGIC DRAMA.

The Tragic Drama of the Greeks. By A. H. Haigh, M.A. With illustrations. Oxford: Clarendon Press; New York: Henry Frowde. 1897.

Mr. Haigh's treatise is a natural sequel to his 'Attic Theatre,' which opportunely filled a niche in English classical scholarship and archæology that had stood waiting for many years. The general impression produced by it is that of good judgment and adequate information. Amid the bewildering richness of theories, he keeps a well-balanced and independent judgment; he rides no hobbies, and he avails himself with discretion of the excursions made by other people's hobbies. His work does not address itself to specialists alone; it is so framed that the very full citations from the Greek and the occasional technical discussions are relegated entirely to the footnotes. At the same time, both text and footnotes evince a comprehensive acquaintance with the enormous mass of research and speculation which has accumulated since the days of K. O. Müller and Donaldson and Patin.

It is now well understood that much of our modern drama—possibly even the Sanskrit—harks back to the Greek. The Greeks were practically the inventors of this literary form. They did not attain to it all at once—they built it, doubtless, on the ruins of many failures; but they brought it to perfection in a surprisingly short space of time, in the course of about fifty years from the early essays in Attica. If any one fancies this was a slight achievement on the part of those three Athenian playwrights who "knew to build the lofty rhyme," some reflection and study will change his opinion. It was, in fact, to be classed with the first scientific history, or with the earliest working-model of a democracy, both of which essays fell within the same fruitful period. Of all the wonders which resourceful man has devised, and which Sophocles names in his great ode in the "Antigone," not the least might be the superb contrivance and imagination of the drama which enshrines that meditative hymn in praise of civilisation.

There is a strong temptation to compare a Greek play to the modern opera, and in some respects the comparison will hold; but the differences are as striking as the analogies. The scenic effect of a Greek play resembled in some respects that of an opera: there was music, there were costumes and the semblance of a ballet. But in the opera the music is a primary aim, an end in itself; in the Greek tragedy it is quite secondary and ancillary. The music is, in fact, the humble servant of the poetry. The great odes of Æschylus and Sophocles, which are an integral part of the action, and which called on the highest intelligence of the auditors, must have been "syllabled" to the slender and passionate accompaniment of the flute-notes. The audience could not afford to miss a word of such song—not a word was meant to be lost. In our opera the words are blocks to be draped and hidden with the music; the opera delights in vain repetition. Precisely the same thing happened in the decadence of the Greek stage, when the musicians became virtuosos, and Euripides wrote monodies to suit this virtuosity. Then came runs and trills, repetitions and prolongations of syllables, the operatic fustian travestied by Aristophanes in his delicious gallimaufry, which invokes the powers of heaven to witness the nocturnal robbery of a hen-roost.

There was, however, a legitimate kinship between the opera and the drama to this extent: the drama grew out of the song and dance of the dithyramb and the recitation of a coryphæus. To this germ may be traced many peculiarities of structure; from this origin, as a theme or motif, expand the wonderful symphonic effects which recent research has revealed so clearly. Since the play is built and developed from the balanced antistrophes of the dithyramb, it tends to preserve this balance in the dialogue as well as in the lyric songs. In rapid and heated discussion the speakers bandy line for line; in longer argument, they exchange discourses of nearly equal length. Did this balancing go further? Was there an exact mathematical response between the larger divisions or members of the play? Mr. Haigh, like Bergk and other cautious scholars, decides in the negative. It cannot be proved, it could not have been perceived by the theatre; and indeed we should be sorry to learn that the great masters condemned themselves to the fetters of such fantastic slavery. Such chains as they carried were golden and loosely worn as graceful ornaments.

More than this, the lyric and musical origin of the drama to which it was possible and natural always to revert, gave the poet certain privileges which Shakspeare, if he did not miss, might at least occasionally have used with propriety and advantage. At any moment of passion, the ancient dialogue might break into a lyric form, with its special refined propriety of metre; at intervals of the highest excitement, the lyric utterance imposed itself on the chorus. The slightest varying shades of emotion found there their appropriate means of expression. Now there are scenes in "King Lear" and in "Romeo and Juliet" which, by common consent, are lyric rather than dramatic. These passages, in the hands of Sophocles or Euripides, would infallibly, according to the canons of the ancient drama, have found their rapturous or lofty expression in lyric songs. Nay, Shakspeare himself betrays the neces-

sity for such a relief in the snatches sung by the jester or by *Ophelia*.

In one respect at least, the ancient tragedians were freer than our playwrights. The breaks between the dialogue caused by the choral ode were the origin of our five-act division. But this particular number was an afterthought; in the beginning, neither the number nor the length of the "episodes" was fixed. The number varied from four to six, till with Euripides it tended towards five. The length varied according to the fancy or the will of the poet; he was under no compulsion to pad out the dialogue so as to attain a procrustean measure. As to "the unities of time and place," they really imposed on the playwright no such iron yoke as Horace and Boileau would have us believe. More recent and careful studies show this conclusively. The scene was occasionally changed, or a new scene was practically introduced by the device of a messenger to narrate distant occurrences. The shifting of time is sometimes masked by the interlude of a choral ode, as in the "Agamemnon"; for the same purpose, the interludes of Euripides are, says Croiset, "capable de tout."

One of the resources of the highest order of English poetry has always been its diction and vocabulary. In spite of the theories of Wordsworth—theories not borne out even in his own practice—the rarer geniuses have always sought words that are strange or rare or old, fraught with some far-brought expressiveness of association, to embroider or color the fabric of their poetic diction. French poetry has suffered from the lack of this; the verse of Pope and Dryden which lacks it most, is most pedestrian in tone and sentiment. This color and tone the Greek poets deliberately sought by the systematic creation of an appropriate vocabulary. The epic and the lyric poets at a very early day developed their diverse and conventional medium of expression; the dramatists, too, devised their own special language characterized by its due inheritance of associations and delicate proprieties. In their dialogue, it was a language slightly removed from the current form and syntax of the ordinary speech, redolent with some flavors of dignified archaism and slightly set apart, as the diction of King James's Bible is distinguished from that of our own day. But the noticeable point is that it hovered close to the purest and most elegant Attic speech of the day, on which it was based, and from which it continually drew freshness and grace and vigor. The dramatists did not forget that their personages were *talking*; they did not forget the conversation of the thoughtful and witty Athenian whose ease and good breeding and urbanity are not flattered out of all likeness by the opening scenes of the "Phædrus" and the "Republic." Toward this conversational tone and diction, their style tended steadily till it reached the inimitable charm and simplicity of Euripides. In Aristophanes and Menander, it has attained to the lively dialogue or the level tone of polite society. In this process, the tragedians gained what the French verse of the seventeenth century possessed—the merits of a spoken style. They gained this, but they preserved also, by virtue of an exquisite taste and a splendid poetic tradition, what Corneille and Racine never attained, what we, the fortunate inheritors of Spenser and Shakspeare and Milton, can

prize at its full value—the color, the richness, the poignant suggestiveness of a special poetic vocabulary.

In the Attic theatre there was a natural action and reaction. Poet and audience were *en rapport*. The poet taught his lesson or said his say; but never did playwright address himself to a keener-witted, juster set of listeners and critics. If we needed any proof of the quality of the "pit" at Athens, we have only to note the "Frogs" of Aristophanes, for the "Frogs" not only enshrines the wayward criticism of a master of his craft; it presupposes and postulates an audience competent to understand and enjoy literature and literary criticism. And this fact lets us into the secret of the *milieu* in which both tragedy and comedy sprang and flourished. "At Athens, as in France," says M. Brunetière in a recent article, "literature was in some sort a social institution"; the public and the literary workman were in the closest touch and partnership. No academy could have frowned more effectually on whims and oddities and individual eccentricity or affectation than that keen and impressionable public.

But they liked preaching from their tragedians. In their minds, the saying which Aristophanes puts in the mouth of *Æschylus* was not far from the truth: "Tragedy is a school of life for the older generation." In a later century they learned, too, to tolerate "art for art's sake." That kind of poetry came in the time of Theocritus and of Herodas. But the drama of the Periclean period is, in a high sense, like the plays of Shakespeare, a school of morals, because it is "a criticism of life." It deals in a lofty way with all the problems of life, of destiny, and of religion. When it ventured across the limits of a plain moral purpose, when it brought a *Cæmille* upon the stage, and Euripides painted his *Phædra* with more fidelity to the symptoms of her passion than its consequences, Aristophanes (who sticks at nothing in his comedy) grows squeamish, and cries out that the proprieties of tragedy have been invaded: "Away with your courtesans and your realism," he cries to Euripides; "baseness and sensuality exist, but they ought to be kept in the background; the dramatist is the teacher of high ideals to grown-up men and women." However mixed the motives of so singular a censor of morals, the theatre, in this instance at least, supported him with its verdict, and Euripides wrote his recantation in a revised study of his "Phædra." But in his general indictment of the art of Euripides, the comedian failed so ludicrously, so egregiously, that it might have tickled his own sense of humor could he have foreseen the fiasco. The whole Hellenistic and Roman world went against him, in passionate admiration of the great innovator.

Between *Æschylus* and Euripides the drama had moved rapidly in an inevitable course. One of the results of modern study of this development, intelligently set forth by Mr. Haigh, is a much clearer understanding of the position and merits of the last of the great tragedians, of the inevitable tendencies which he represented, of the limits and disadvantages under which he worked, and which marred the artistic quality of his work. Custom and convention obliged him to bring the heroes and heroines of Homeric or earlier legend upon the stage, while his own genius and the tendencies in the air impelled him, under the masks of these familiar names, to reveal the flesh and

blood, the men and women, he met with every day. At times they moved awkwardly trammelled by the costumes and the padding of an outgrown tradition. Hence that realism which, in spite of incongruities, was a stroke of genius and an inspired anticipation of the ideas of the modern world. Euripides was an observer, and had the insight to discover material for his tragedy and melodrama in his own democratic fellow-countrymen. His personages were no longer the royal or aristocratic type of heroic legend, but the actual figures of the middle class of Athens—its politicians, its commonplace women, with their pettiness and vulgarity, its nurses and gossips, its peasants, and even its slaves. They go about their ordinary tasks, they busy themselves with "pots and pans," with sweeping and washing; his princess *Electra* marries a laborer and lives in a cottage. He held the mirror up to this democratic society; and his townsmen, the "plain people," were delighted to see in it the reflection of themselves. He first condescended to explore the heart of woman and to sympathize with her lot. He committed a greater crime, in the eyes of Aristophanes: "He first dared to bring on the stage a woman in love." Worse than this, in his "Andromeda," he actually conceived the enormity of representing a young man and maiden in love with one another; and, strange to say, the people liked this risky experiment and found its unheard-of motif interesting. The play was pronounced beautiful, and was a favorite with Alexander the Great.

The women that the poet knew at Athens had the pettiness, the frailties, and the faults that were bred in this life of harem-like seclusion; and he touched these with the surgeon's knife. Yet he did not invent from the imagination solely his *Alceste* and *Medea*, or the enchanting prattle and the highbred heroism of his *Iphigenia*. We see no reason to concede to M. Decharme that such winning pictures are purely ideal creations of the poet, any more than his *Ion* and *Hippolytus*. His mind dwelt with delight amid such gracious images of purity and youth. If he painted the darker passions of jealousy and illegitimate love, yet his *Medea* and his *Phædra* have some saving graces, relentings, and qualms, and self-reproaches, which redeem them from the sordid types of a Herodas or a Zola.

In his humane thoughts for the slave and the oppressed, in his condemnation of war, in his large anticipation of a possible brotherhood of man, Euripides stood, if not alone, too nearly alone in his generation. In his rationalism he was a representative of the epoch of Thucydides and of the wave of Ionian thought, when most of the higher minds were sceptical, and of the lower were superstitious. The faith which could make high morality consist with the pagan pantheon—the faith of Pindar and *Æschylus* and Sophocles—was no longer possible to thinkers, though in truth these poets themselves had not scrupled to criticise, and to square traditions with their own notions of morality. Aristophanes, posing as a high-priest of orthodoxy and *laudator temporis ævi*, could make his cry of atheist stick, could libel Socrates, and throw dust in the eyes of his theatre, as he managed to blind the judgment of scholars and critics down to Schlegel. But, as Mr. Haigh well remarks, he never blinded the poets—a Milton, a Goethe, or a Browning. It is a lesson in

the history of thought to reflect that the scepticism of Euripides became orthodoxy with the Christian fathers; his plays became a storehouse of ethical sentiment and a model for the Christian Fathers. This means of course that he shared in the revolt of reasoned ethics against the blind conservatism of religious traditions, wherein he only carried to greater length a movement that was begun before. It does not mean that he utterly renounced and condemned the national religion. He was a reformer; but we have no sufficient evidence that his plays were dedicated to a secret crusade,—to sapping and mining so sly and Machiavellian that it has been hid from all the world except Dr. Verrall, that ingenious discoverer of "bird's milk" and kindred classical rarities. In this, as in many other matters, Mr. Haigh's judgment keeps a golden mean which commends itself to good sense and adheres strictly to facts.

To the originality and ingenuity of Euripides we moderns owe the earliest specimens of the complicated plot, the "peripetias" or surprises, the stage recognitions that are now so hackneyed but were then absolutely novel, or only faintly hinted at in the art of his predecessors. With his intimate knowledge of the stage, its "properties" and machinery, he sought "sensations," spectacular effects, and *coups de théâtre*. He pleased his audience with the display of deities *ex machinis*, as he tickled their fancies with his ingenious and sophistical rhetorical duels. These encounters, which in Sophocles were subordinated to the ends of art, became on his stage an exhibition of rhetorical skill as attractive to the audience as the apparition of his deities. But the tendency of all these devices is towards degeneracy.

Mr. Haigh closes with a curious sketch of the consequences of this degeneracy, of the closing days of the drama when "it flickered down to brainless pantomime,

'And those gilt gauds men-children swarm to see.'"

Euripides still held the stage, as numerous inscriptions and anecdotes attest, till the third century of our era. He was not then banished by the Church or the Christian fathers. He gave way to mere sensuous entertainments, the ballet, the harlequinade, and the pantomime. When we read that, for actresses in these, "little else was required but beauty and audacity," we seem to be rehearsing the history of our own stage and of its ebb-tide in the nineteenth century.

As to the Greek practice of excluding from its stage "the actual commission of atrocities," Mr. Haigh repeats the ordinary opinion (drawn first, perhaps, from Horace) that this avoidance was due to "a refinement of sentiment which regarded actual bodily violence as a sight too terrible for the feelings of the audience." They could look on *Agave* carrying the gory head of her son on a pike, or on *Olympia* brandishing her sword over her murdered husband, and "rejoicing in the gush of the blood as the cornland joys in the dew"; but their feelings would not endure the actual sight of the stroke. They could bear the prolonged spectacle of horrors when the deed was done, but they winced from the sight of murder in the doing. Now this very statement is enough to show that Mr. Haigh's explanation does not explain. Without any morbid thirst for horrors and "sensations," a Greek audience could certainly tolerate them when they

formed a legitimate part of the action. Perhaps the most satisfactory explanation of this puzzling inconsistency is that the avoidance of representing the actual murder arose first from a religious scruple against defiling the sanctuary (for a theatre was a sanctuary of Dionysus) with mimicry of the deed. There are only two exceptions to this rule in extant dramas.

BLUNDERING IN THE INDEX.

The Comprehensive Subject-Index to Universal Prose Fiction. Compiled and arranged by Zella Allen Dixon, A.M., Associate Librarian of the University of Chicago. Dodd, Mead & Company. 1897. 12mo, 421 pp.

No reference book is free from errors, but we think this will take the lead for carelessness and ignorance. To say that there are blunders on every page is to state the case inadequately, and that these are often due to negligence is proved by the fact that the incorrectness of the classification in a given case is often shown by some other title on the same page. As regards common blunders, it appears, from several entries, that 'St. Leon' was written not by William (but by Caleb Williams) Godwin (pp. 36, 57, 181, etc.); that the author of the 'Partisan Leader' was plain Beverley—not Beverley Tucker (p. 366); that the English writer for boys is not Stables but Stabbles (p. 7); that an American writer of the same sort of books is Mary Bunce (p. 15) instead of Mary Brush, as the name is generally written; that a popular Austrian novelist is named Sachermasoch (p. 33); that the early German writer is named Grimmelshausen (p. 120), and that 'John Inglesant' is by the notorious J. H. Ingraham (p. 48). Various books concerning Shakspeare are credited to Folk (instead of Folkstone) Williams (pp. 89, 98, 106, 119, 356-7); Gutakow is spelled Gutzkow (p. 140), and Jensen Jeessen (p. 178), while the pseudonym of a third is given as George Samarow (for Gregor Samarow, p. 188). On page 122 two books with the same title are entered, one by 'W. Alexis' and the other by H. Haering, but the reader is not warned that the books are the same—Alexis being Haering's pseudonym. Lady Gordon is given as the author of a book by Wally (pp. 230, 232); and to Mrs. Phelps Ward are credited her mother's 'Sunnyside' and 'Peep at No. 5.' We learn, also, that a novel called 'Tribby,' the history of which is fairly well known, is a translation (pp. 208, 293), as is also a book by one J. H. Mancur, a New York writer of fifty years back.

When we examine the classification the results are equally surprising: Thackeray's 'Four Georges' (pp. 107, 180, etc.), Daudet's 'Trente Ans,' and Miss O'Meara's account of Mme. Mohl and her friends (pp. 170, 279), it seems, are all novels. So, also, is 'Edmond Alton's' book about government (p. 303). The 'Jungle Book' is entered under Allegories. Under Abbey, real and imaginary abbeyes are entered in the same alphabet, as 'Melrose: Monastery [by] Sir Walter Scott; Nightmare: Nightmare Abbey [by] Thomas Love Peacock.' The same method is followed under Castle, the titles being divided into 'General and Imaginary' on the one hand, and such real structures as 'Castle Daly' on the other. There are no references under Greek Church, but we find Potapenko's 'Russian Priest' under Catholicism. Dumas's 'Black Tulip' (Holland) is found under

France; while Ebers's story of the siege of Leyden is entered under Germany. Werner's 'Hermann,' a tale of contemporary life, is put under Legends and Hermann, called by the Romans Arminius. 'The Hoosier Schoolmaster' is, despite its local title, found under Illinois, instead of Indiana, which loses also Eggleston's 'Roxy,' so that it has only two titles to thirteen for Illinois. Kipling's 'Light that Failed,' of which the scene is wholly in London, is entered under India. 'The Last Athenian,' according to Mrs. Dixon (p. 228), was an inhabitant of Italy in the seventh century, instead of Athens in the fourth, as the author would have us believe. Miss Yonge's 'Caged Lion,' who died 1437, is put under James L., '1603-'25.' Cooper's 'Pathfinder,' our compiler thinks, was Paul Jones, who, it may be remembered, was a salt-water hero, while Leather-Stocking in this book resolutely declines to go near that element. Thomas Didymus, otherwise one of the twelve apostles, is classed (p. 244) as an English hero. 'Gaut Gurley; or, The Trappers of Umbagog' is put under Massachusetts, to make up for which Dr. Holmes's novels are omitted. They are also wanting in the New England list. The time of a book relating to the storming of the Alamo (1836) is said (p. 400) to be the eighteenth century, and the book itself (p. 268) to be concerned with 'early Catholic missions in Florida'; on page 263 it is classed with novels on the Mexican war, '1845.' Miss Pool's 'Dike Shanty,' a clever description of life on the low lands at Marshfield, Mass., is placed under North Carolina, and 'Guenn' under Paris, as well as under Paris Student Life, where is not the most famous of such books, Mürger's 'Vie de Bohème.' Under Pennsylvania we do not find Bayard Taylor's excellent 'Story of Kennett,' but encounter 'In the [Mohawk] Valley,' which belongs under New York. 'The Cloister and the Hearth' figures under Reformation, England; 'Redgauntlet' under Rebellion of 1745. Under Revolution, 1775-'89,' we find 'The Bow of Orange Ribbon' (time 1756), 'The Cabin Book' (1846-'47), 'The Choir Invisible' (1795), 'The Conspirator' and 'The Rivals' (1806), 'Inez, a Tale of the Alamo' (1836), and De Forest's 'Overland' (1850). Some works of little merit, and not generally known, like Cooper's 'Pilot,' are missing. Under Salem we find 'Spectre of the Forest; or, Annals of the Housatonic,' but not 'House of the Seven Gables.'

Mrs. Dixon's reconstruction of biography and geography is equally radical. Thus, the heading Napoleon I. is accompanied by the descriptive note 'Reigned 1799-1814.' The father is naturally followed by the son, and we learn that 'Napoleon II. Reigned 1848-51,' though other authorities say he died in 1832. The great civil war of Great Britain, we are told on p. 64, began in 1635, our 'French and Indian' wars in 1756, and the Mexican war in 1845. A book dealing with Kett's insurrection in 1549 is here entered (p. 216) as 'Ker. 1708.' Three novels whose scene is Austrian Poland are put under Spain (pp. 172, 380), as is also Hauff's 'Lichtenstein.' We learn, p. 201, that Henry IV. of France married Bertha of Susa, though the lady antedated him by five centuries. To balance this, Mrs. Dixon takes from him the damsel who, according to Zschokke, was his first love, and puts her under Henry IV. of England. The 'Battle of Dorking' is treated as a real event of the war of 1870 (pp. 149, 167). Hadrian flourished in the second century before Christ (p.

21), Arius and Catiline in the first, St. Sebastian in the fifth, century after, according to the chronology of this volume. 'Lorna Doone' is called 'A Romance of Exmore'; the date of 'Kenilworth' is given as 1365, and Henry James's story of fashionable life called 'The Siege of London' is assigned to the year 994, when the kings of Denmark and Norway are recorded to have devastated Southern England. But while titles are slavishly followed in some cases, in others the information conveyed in them is ignored, as in the 'Blockade: An Episode of the Fall of the First Empire,' which is set down under 1870, and in the 'Maid of Stralsund: A Tale of the Thirty Years' War,' found under 1715. The compiler has evidently heard that Quebec was besieged in 1759, and therefore puts under this date Ingraham's 'Burton,' though the siege there described is that of 1775. Mrs. Child's 'Rebels' is credited to the seventeenth century.

We have referred to a few of the omissions, but these are so numerous that columns would be needed to do them justice. We find no mention of 'Don Quixote' or 'Gil Blas,' under Adventures, or Spain, or elsewhere. 'Wilhelm Meister' is likewise absent, though one would expect to find it under both Germany and Theatrical Life. A Trollope's admirable Barchester Series is not under England, or Politics (English), or Ministers (to which there is no cross-reference from Clergy); Mrs. Oliphant's long list is likewise conspicuous only by its absence; and neither England nor English History shelters 'John Halifax, Gentleman.' Books familiar to so many thousands of schoolgirls as 'Pippiola' and 'Corinne' are nowhere named. 'Consuelo' is not under Italy or Venice, but a book called 'Vittoria coronata' is supposed to give useful information concerning the history of the nineteenth century. One would have thought that Auerbach's novels were sufficiently known to merit inclusion under Germany. Cooper's 'Spy' is not mentioned under Washington, but his 'Lionel Lincoln,' in which the General does not figure, is. Under Agnosticism we miss 'We Two' and Mallock's amusing 'New Republic,' and, in connection with Altruism, 'Ideala.' In Ancient History is not to be found 'Salammbô,' or 'Marius the Epicurean,' or 'Fabiola,' or Tolstoi's 'Work While Ye Have the Light.' Under Connecticut are only four titles—all third-rate books—while the novels of Mrs. Stowe, D. G. Mitchell, and Mrs. Rose Terry Cooke are excluded. Under Dogmas one discovers neither 'John Ward' nor 'Robert Elsmere,' but that profound religious thinker 'L. Mühlbach' is represented, as well as various writers we never heard of. Under England (manners, etc.) are none of the novels of Thackeray, Dickens, Meredith, Miss Austen, Reade, or the Brontës; nor is 'Villette' under Belgium (which is not deemed worthy of a heading) or Netherlands. There is no rubric for Communities, in default of which we looked (in vain) under Socialism for 'The Blithedale Romance.' Nor is there any caption such as Christian Life or Religious Life for books like 'Joshua Davidson' and 'A Singular Life'; and, failing a department for the Literary Life or Profession, there is no specific place for 'Pendennis' or 'The Literary Shop.' Under France (manners, etc.) is nothing by Balzac, George Sand, Thérinet, or Daudet; and only one of their novels under Paris. Under Napoleon III. are two of Zola's, but none of Daudet's. From Ger-

many are excluded the novels of "Marlitt" and "Werner," as well as "The Initials," "Greifenstein," "Dr. Claudius," "Prince Otto," and "The First Violin." Equally noticeable are the omissions under Italy and Russia. Neither of Tolstol's books based on this subject is given under Marriage, nor under Pennsylvania do we see any of Mrs. Deland's books. Under Relations of the Sexes or Social Purity we particularly miss "Elective Affinities," "Hedged in," and "Griffith Gaunt."

The misprints, as might be expected, are innumerable. In speaking of Percy Russell's "Guide to English and American Novels" (London, 1894) we said that it was "difficult to prove the hopeless incapacity of the writer without giving the absurd volume more space than it deserves." But a work entitled "The Comprehensive Subject-Index . . .," and of which the "associate" librarian of the University of Chicago is the "author," is entitled to more attention.

Verdi: Man and Musician. By Frederick J. Crowest. Scribners. Pp. 306.

What Is Good Music? By W. J. Henderson. Scribners. Pp. 206.

Music: How It Came to Be What It Is. By Hannah Smith. Scribners. Pp. 254.

Wonder Tales from Wagner. By Anna Alice Chapin. Harper & Bros. Pp. 189.

Verdi's latest biographer complains that this composer is disposed of by Ritter, in his "History of Music," in eleven short lines; that of Naumann's 1,300 pages only two are devoted to him; while Parry, in his "Studies of the Great Composers," omits him altogether. This is the more to be regretted as the Verdi literature is rather meagre; Mr. Crowest gives a bibliography of it which is of value *per se*, and also helps to justify his writing another book on the life and works of Italy's greatest operatic composer. He has not produced a work of original research or acute criticism, but it is a useful compilation of facts regarding Verdi and his operas which will most interest the general public. He makes clear the difference in the three styles of the maestro, describing the plots and music of the principal operas belonging to each style. An entertaining account is given of Verdi's home life at Sant' Agata, and the key to his longevity is found in his habit of rising early, working in the garden, and living chiefly on cheese and eggs. Verdi, it seems, cares little for music at home, and seldom visits the opera save for business purposes. To the critic Filippi he once wrote: "At St. Agata we neither make nor talk about music; you will run the risk of finding a piano not only out of tune, but very likely without strings." He hates to "talk shop" or to be asked musical questions. Cards and billiards are his chief indoor amusements, and in the evening he reads chiefly poetry and philosophy.

It is somewhat difficult to conjecture for what class of readers Mr. Henderson's book was written. While not obscure to one who knows at least as much as he does, it is in many places altogether too technical and pedantic to be of any use to an amateur who needs to be told what good music is. He tells us, for instance, that "the listener to a fugue should identify the Subject and watch for the Answer. He should note whether it is direct or inverted, or whether it has been augmented or diminished. At the same time he should hear the Countersubject and bear it in mind." Such remarks are

intelligible only to students of harmony, and for them they are superfluous. Mr. Henderson labors under the delusion—which mars his whole book—that "the person who desires to cultivate a taste in music ought to be acquainted first of all with musical form and the history of music." You might as well say that a person who wishes to cultivate a taste in poetry must first of all learn the rules and subtleties of poetic construction. Not one reader of poetry in a thousand knows them, nor does he need to know them unless he intends to write poetry himself.

In a lucid moment Mr. Henderson himself admits that "more than ninety-nine out of every hundred critics err in judgment of a thing wholly new in music, because the majority of them base their judgments almost entirely on form and style." Precisely so. The general public, ignorant of the rules of musical form, knew "what is good music" when it heard Wagner and Liszt long before the critics and other experts in form did. Seriously to attribute to Liszt the remark (p. 156), "Three things are necessary to make a great pianist—First, technic; second, *technic*; and third, *TECHNIC*," is to show an amazing misconception of Liszt's genius and character. As a matter of fact, he seldom paid any attention whatever to the technique of his pupils, taking that for granted, and bestowing all his attention on interpretation, style, and expression. Mr. Henderson has a good deal to say about Paderewski and his art, yet can write (p. 171) that "Bach, Beethoven, and Schumann are better tests of a player's ability than the astonishing works of Liszt." This shows a startling lacuna in our author's knowledge of "what is good music."

"How Music Came to Be What It Is" is somewhat similar in scope to Mr. Henderson's book (having chapters on the piano, orchestra, oratorio, etc.), but it is more useful because it is intelligible throughout to beginners. It is simply a compilation of facts regarding acoustics, the history of music, the evolution of instruments, the "schools" of various countries, etc.; but the facts are so judiciously selected and so clearly grouped that the book can be highly commended. It is freely illustrated with examples in musical type, and pictures of obsolete forms of instruments. In view of the fact that the late Anton Seidl was often criticised by pedants for daring to infuse dramatic life into Beethoven's works, it is interesting to find (p. 191) the following citation from what Beethoven's friend Schindler wrote regarding that great composer; he laid the greatest stress on musical declamation, "for," said he, "although the poet in his monologue or dialogue follows a regular and definite rhythm, yet as the actor or reciter, to insure a perfect comprehension of the meaning of the poem, makes rests and pauses even where the poet would not venture to indicate them, so must a player employ his art of declamation in his performance of the music." "Almost any mature work of Beethoven," justly adds Miss Smith, "reveals this dramatic element"; and it was that element which Anton Seidl always emphasized, in accordance with Beethoven's intentions.

Less than a year ago a girl of seventeen wrote a book on Wagner's "Ring of the Nibelung" under the title of "The Story of Rheingold," which was cordially commended in this journal. The Harpers have now added a companion volume by the same author,

with the title "Wonder Tales from Wagner," which is dedicated "to the children who may hear Richard Wagner's operas, in the hope of aiding them to understand those masterpieces." It tells the stories of five operas—"The Flying Dutchman," "Tannhäuser," "Lohengrin," "Tristan and Isolde," and "Die Meistersinger." There is also a short preface discussing the sources of Wagner's legendary material. While this book is primarily intended for young folks, adults will find it most interesting. Miss Chapin has a remarkable talent for converting a drama into a story and telling it logically and fascinatingly. In some places great ingenuity is shown in overcoming perplexing details. It would not be strange if Miss Chapin should some day make her mark as an original story-teller.

Through Finland in Carts. By Mrs. Alec Tweedie. The Macmillan Co.

The reader of this very entertaining travel narrative need not despair if he seems to be rather long in coming to the carts which figure in the title. As a matter of fact, only two hundred miles of the journey were covered in that manner, while the other means of locomotion ranged from ordinary steamers to phenomenally slow Finnish railway trains, and even a tar-boat down dangerous rapids and through hair-breadth escapes of the most exciting character. Mrs. Tweedie and her sister were provided with good introductions, and accompanied by an accomplished Finnish lady. They were thus enabled to see many things, and to obtain many privileges, which the ordinary traveler who shall accept the author's enthusiastic recommendation to spend the summer there, will sadly lack. Without similar facilities, it is doubtful whether he could reach or enjoy the happy hunting and fishing-grounds which abound in that archipelagic land of islands and lakes, as the language is, of itself, a very formidable obstacle. Every noun has sixteen cases, and the suffixes vary so much that the original nominative becomes almost unrecognizable.

While professing to write merely a sketch of a pleasant summer trip, Mrs. Tweedie has thoughtfully added much interesting information about the products, education, and general statistics of Finland, very properly taking her facts from the best available sources, and duly crediting them. Thus, she quotes the educational report prepared for the Chicago Exposition, and gives long extracts from Mr. Crawford's translation of the Finnish Epic, the "Kalevala," to illustrate the antiquity of contemporary customs and beliefs. One striking point lies in the identity of many customs and institutions with those of Russia, from the vapor bath up and down the scale. Had the author been aware of this resemblance, she might have utilized her opportunities to settle the question as to whether one people borrowed from the other, which, and at what date. But she is, evidently, not familiar with Russia, despite the description of a baptism and the attendant ceremonies which she witnessed in St. Petersburg. It is not apparent whether her usually keen powers of observation failed her on that occasion, or whether the errors in that description and her assertions arose from an attempt to reproduce from memory something seen on a distant former occasion. The requisite and accurate knowledge, if applied to the ques-

tion of customs and the like, might lead to interesting results.

But there is enough of interest without that: the vivid account of a visit to the Russian monastery of Vaalam, and the meeting with the young novice there; the great Musical Festival at Sordavala (corresponding to the Welsh Eisteddfod), and the Runo singers; the baths in an ingeniously diverted waterfall; the trip to Uleaborg on one of the boats used for carrying tar-barrels, to which reference has already been made; the pictures of peasant life (as well as of high life), and of the cottages and equipments. Unfortunately, there are two drawbacks to the enticing picture of sport and splendid sunsets, novelty and hospitality; and the author frankly confesses it. In high life, the almost invisibly small midges render existence a burden, and in low life, insects nameless and otherwise, but innumerable, torture and disgust the non-native. Warned by their own experiences in Finland and by the counsels of their Finnish friends, Mrs. Tweedie and her sister abandoned their intention to explore Lapland, which even Finns pronounced unapproachable in summer because of the insects.

The volume is so full of miscellaneous information concerning trees, fruits, food, and the daily needs and pleasures, that quotation is impossible. There is not a dull page in it, and the style is very well adapted to the needs of such a book, which must combine the useful with the agreeable. Mrs. Tweedie is an experienced traveller, and readily adapts herself to circumstances—which in this case mean, chiefly, remarkable and very bad beds, ranging from the unalred box-bed of the peasant to makeshifts in ruined castles or the top of an antiquated spinet. Whether other travellers will be content to run the risk of similar or worse accommodations for the sake of sunsets, air, and scenery, and overrun Finland in the summer, remains to be seen. It seems probable that, as heretofore, Hango and Helsinki, for their baths, Imatra for its waterfall, Terioki as a diplomatic resort, and the Finnish suburbs of St. Petersburg will continue the most frequented places, despite their lack of novelty.

The Story of the Palatines: An Episode in Colonial History. By Sanford H. Cobb. G. P. Putnam's Sons. 1897.

To unravel the strands woven into that variegated fabric which we call the American people is a fascinating employment, and Mr. Cobb has selected a thread which has hitherto been generally overlooked. Prof. Baird's great work has shown how the Huguenots were driven to this country by religious intolerance, and it is largely to the same cause that the emigration of the "Pennsylvania Dutch" was due. These immigrants, Mr. Cobb contends, were chiefly from the Palatinate; they were at all events generally called here Palatines. It is not, however, the story of the Pennsylvania settlers that is told in this book. Its subject is the fortunes of that smaller band of which traces are to be found along the banks of the Hudson and Mohawk Rivers and in the region of Schoharie. Although this immigration has attracted little attention, it was at the time on a larger scale than any other, and was perhaps the most systematic attempt at colonization made by the English Government.

The merciless harrying of the Palatinate

by Louis XIV. forced the inhabitants to seek other homes, and, partly through the influence of land speculators who had obtained patents in America, some of the outflow was turned in this direction. It took its course through England, induced by the strong Protestant feeling of that country and its Naturalization Act of 1708; and in the records of the Board of Trade for that year there appears the petition of the Rev. Joshua Kockertal on behalf of himself and some other "poor Lutherans, come hither from the lower Palatinate, praying to be transferred to some of your Majesty's plantations in America; in number 41, viz.: 10 men, 10 women, and 21 children; in the utmost want, being reduced to this miserable condition by the ravages committed by the French when they lost all they had." This petition was favorably acted on, and resulted in the settlement of Kockertal's party, somewhat enlarged, in what is now Newburgh on the Hudson. Most of this party removed presently to Pennsylvania.

In the year 1709, it is asserted, no less than 13,000 of these Palatines had arrived in England, where they were treated with great liberality by the rulers, and in the Parish of Newington, at the west of London, four buildings were erected for their shelter which are yet known as "the Palatine Houses." Some of the immigrants enlisted in the British army, some were colonized in Ireland, but the majority were transported to America at the expense of the Government. Of these, some were established in North Carolina, and their descendants are numerous at New Bern; but nearly 3,000 of them were brought to New York, under the auspices of Gov. Hunter. It is with the fortunes of this colony that Mr. Cobb is chiefly concerned. We must content ourselves with noting that, after some expensive attempts to induce them to make tar for the English marine out of a species of pine not productive of that article, they were allowed to shift for themselves. For his part in this attempt to establish a valuable industry (which cost him his fortune), Gov. Hunter receives much praise from Mr. Cobb; and in spite of the hardships of the colonists, they probably fared better than most of the immigrants of that period.

Discontented with their lot in their first locations, at what were known as the West Camp and the East Camp, near Saugerties and on the Livingston Manor, and infatuated with the notion of a mythical grant to them by an Indian chief of the country of "Scorie," many of them emigrated to that region and the Mohawk valley. After much quarrelling over land titles, some of them departed to Pennsylvania; others made terms with their landlords, and their posterity are numerous in those parts. Of this stock was the sturdy Gen. Herkimer (Erghimer), and from it, by intermarriage, the Muhlenbergs and other distinguished families have sprung. It would be interesting to recount these names, and those of the towns and villages along the Mohawk and elsewhere which were taken directly from the Palatinate, but we must refer the curious in such matters to Mr. Cobb's book. Much of it is conjectural history, and there are many points on which light remains to be thrown; but it is a meritorious essay in a field which deserves more exploration than it has received.

La France d'après les Cahiers de 1789. Par Edme Champion. Paris: Armand Colin & Cie. 1897.

The name of M. Edme Champion is already familiar to students of the history of the French Revolution. He is one of the scholars associated with the greatest living authority upon the period, M. F. A. Aulard, and has edited for the publications of the Society for the History of the French Revolution a useful reprint of the Abbé Sieyès's famous pamphlet, "Qu'est-ce que le tiers état?" and, in coöperation with M. Brette, a facsimile of the celebrated "Oath of the Tennis-Court." His competent knowledge of the preliminaries of the French Revolution caused him to be intrusted by MM. Lavissee and Rambaud with the composition of the first chapter in the volume upon the French Revolution in the great "Histoire Générale," now being issued under their direction. For this chapter M. Champion made a complete study of the *cahiers* which were drawn up in every electoral assembly at the time of the elections to the States-General in 1789. The scale of the "Histoire Générale" did not allow him to do more than indicate the results of his studies, and he has now wisely concluded to publish them in a volume.

The *cahiers* of 1789 form a unique mass of documentary information as to the condition of France on the eve of the Revolution, and the ideals of reform which animated the men who elected the States-General that was destined, as the Constituent Assembly, to give to France the Constitution of 1791. More than three-quarters of the *cahiers* are, according to M. Champion, accessible either in the seven first volumes of the "Archives Parlementaires," or in separate publications, but they have up to the present time been more often alluded to than read. Two opposite views have been propounded as to their value. One school of writers has pointed out that most of the *cahiers* were not the real expression of the complaints and wishes of the French electors, as they purported to be, but were largely copies of printed models, with a few local additions; while the opposite view regards all the *cahiers* as the unbiased expression of the sentiments of the French people. Both positions are partly true. It is only necessary to read a very few of the *cahiers* to see a degree of sameness in their language which betrays the use of common models. But, on the other hand, some of them, especially those drawn up in the rural primary assemblies and by the guilds of the towns, bear unmistakable marks of originality. We know from other sources that many *cahiers* were written by individuals and accepted by the electoral assemblies, of which the most famous is the *cahier* of the cobblers of Arras, drawn up by Robespierre, then a young lawyer in the capital of Artois. It is difficult to allow fairly for the influence of models and individuals upon the *cahiers*, and M. Champion has perhaps done wisely in taking the *cahiers* as they stand, without investigating their origin too closely, as the basis of his work. But it must not be forgotten that this question of origin diminishes the value of any attempt to draw general conclusions, for seeming unanimity throughout the *cahiers* of a province or provinces may indicate nothing more than the use of a common model.

M. Champion approaches his work as a fervent admirer of the French Revolution,

as might be expected from the school of thinkers and writers to which he belongs, and he therefore naturally finds in the cahiers grounds for a sweeping condemnation of the old régime. But it must be borne in mind that an analysis of the cahiers from the point of view of an admirer of that régime could be made to bring out very different results. One special point may be alluded to, the strong provincial and local patriotism which existed in the France of the eighteenth century, and which finds such abundant illustration in the cahiers, as analyzed by M. Champion. In the face of this widespread sentiment, the student of the Revolution cannot but feel once more how great was the work done by the Constituent Assembly in breaking down the old provincial distinctions, and in creating a united France, divided only for administrative convenience into departments, in the place of the former congeries of provinces which called itself the kingdom of France.

A Handbook of European History, 476-1871. Chronologically arranged. By Arthur Hassall, M.A. Macmillan. 1897.

Of the 333 pages which make up this volume, 360 pages (about one-fourth of which space is left blank by virtue of the arrangement of the matter) are devoted to a syn-chronological table of European history from the fall of the Western Roman Empire to the close of the late Franco-German war. The remainder of the book consists of summaries, genealogies, and lists of sovereigns. The author offers no apology for breaking off his record with the year 1871. To truncate a structure like the one before us in this manner is materially to impair its utility, a condensed chronological view of recent events being especially a desideratum with students and readers. In addition to the tables contained in Part II., the body of the book is generously interspersed with genealogical matter, arranged in diagrams, which will serve to unravel many a knotted thread drawn through the tangled warp of mediæval and modern history. We are furnished, for example, with genealogical data regarding the Breton succession, the houses of Burgundy and Orleans, the house of Saxony, the dynasty of Wittelsbach, the Simmern line in the Palatinate, the house of Guise, and the line of Holstein-Gottorp.

The 180 double pages which the "Outlines of European History" occupy are divided each into four columns, the two inner being only half as wide as the exterior. Beginning with the middle of the ninth century, the four columns (from left to right) are respectively headed "Germany," "Eastern and Southern Europe" (to which, after the close of the sixteenth century, "Northern Europe" is added), "England," and "France." For the preceding period the fourth column bears the heading "Franks," the first is devoted to other Teutonic tribes, the second is assigned to the Eastern Empire, while the caption "England" naturally runs through the entire table. The principal space, it will be seen, is allotted to Germany and France, which occupy the wide columns. A synoptical table of political history like the present has unquestionably its uses. It serves as a matrix to hold together for the student the facts he has gathered, and supplies him at every step with a background, which enables him to view in better perspective the objects of his special study.

Minuteness in such a presentation is rather a defect than a virtue, and our author, whose endeavor has been "merely to bring into prominence the leading facts in the history of the principal states," does not altogether live up to his professions, allowing many an insignificant fact to crop up in his chronicle.

Regarding this volume merely in the light of a companion in one's studies and readings, and not as a source of information, it might perhaps be unfair to hold the compiler to an ideal standard of accuracy; but the shortcomings on this score of Mr. Hassall's rather pretentious work would be too much even for the most lenient critic. To begin with the last page, we encounter such mistakes or misprints as Oct. 23 for the capitulation of Basaine (Oct. 27), Feb. 2 for the meeting of the National Assembly at Bordeaux (Feb. 12), and Jan. 1 for the proclamation of William's imperial dignity (Jan. 18). Turning one leaf, we find the declaration of papal infallibility antedated by exactly one year. We do not mean to say, however, that the book is as faulty as this throughout. Of course, Mr. Hassall has not avoided the pitfalls which the Gregorian Calendar prepared for chronologists and encyclopedists, apparently for all time. The battles of the Boyne, La Hogue, Neerwinden, and Ramillies are entered according to the old style, and Steenkerk, Blenheim, Oudenarde, and Malplaquet according to the new. The volume teems with inadequate and infelicitous expressions. The Cuban insurrection "continues" in 1869, but no mention is made under 1868 of its having broken out. The death of Prim is entered without any hint of assassination, and the annexation of the Papal States to the kingdom of Italy is given without any mention of the dramatic coup of September 20. Under 1341 we read that "a Mongol invasion of Russia, Poland, and Hungary takes place." The Russians had had their share of the Asiatics before the year 1241 opened, the yoke of the Golden Horde having been fastened upon them in 1240. In spite of the generous scale on which this chronological table has been compiled, events of great importance have been overlooked, as, for example, the conquest of Rhodes by the Turks, and the battle of Marston. The book has the merit of considerable fullness of characterization and description, and the student who is not too particular about the style, and can stand the exasperating alternation of the historical present and the past (often in the same sentence), may spend an occasional half-hour over this attractively printed duodecimo pleasantly and not without profit.

The Life of Philip Schaff. In part autobiographical. By David S. Schaff, D.D., Professor of Church History in Lane Theological Seminary. With portraits. Charles Scribner's Sons. 1897.

The bias of his filial piety has not prevented Dr. Schaff's biographer from making a good book, and one which does not exaggerate the importance of his father's work as a scholar or his personal influence. The material was such as lent itself to the uses of the biographer better than the dull round of a scholar's life generally does. Particularly interesting are Dr. Philip Schaff's reminiscences of his early education in the German universities—an education which broadened his intellectual sympathies to an eminent

degree. He described himself as "a Swiss by birth, a German by education, and an American by choice." His first ambition was to be a soldier, his second to be a poet, his third and last to be a theologian; and this prefigured a remarkable success. His reminiscences of university life afford interesting glimpses of the giants of those days when Baur and Ewald and Strauss were at Tübingen, Tholuck was at Halle, and Neander and the redoubtable Hengstenberg were at Berlin. Young Schaff made trial of them all. Had he begun at Berlin with Hengstenberg and ended at Tübingen with Baur, his whole life would probably have been different. As it was, Tholuck and Neander did much to efface the impression that Baur made upon his mind. In happy contrast with the conventionally orthodox estimate of Baur, he wrote of him in 1888, "He was a great genius, a theological genius of the first order. What a stir he made in theological circles, and what a mighty impetus he gave to critical and theological investigation!" Dr. Schaff credits Baur with his first idea of theological development in Christian history. The picture of Ewald is a striking one: "He always spoke and wrote with oracular self-assurance, as if he himself had been consulted by Moses and the prophets, by the Elohist, Jahvist, Deuteronomist, and other writers of the Pentateuch, real or invented, before they composed their chapters." "He had no humor, but an unlimited amount of sarcasm." He denounced Baur as "no Christian, only a common literary Jew." It was in perfect keeping with his general character that in 1848 he wrote a public letter to the Pope, calling on him to resign his office, and that, the Pope not answering, he said, "He doesn't dare to!"

At the conclusion of his university studies, Dr. Schaff served a brief term as *privat-docent* at Berlin, having several Americans of subsequent repute among his pupils. One of these, Park of Andover, first brought Jonathan Edwards to his attention; and when, in 1854, Herzog wanted a writer on Edwards for his 'Encyclopædia,' Dr. Schaff suggested Park or Stowe; and "He chose Dr. Stowe on account of the fame of his wife's 'Uncle Tom's Cabin.'" In 1848 Dr. Schaff came to America and entered on the duties of a professorship at Mercersburg, Pa., in a theological school belonging to the German Reformed Church. He soon found himself in hot water. His inaugural address upon "The Protestant Principle" was denounced as heretical, and he was made subject to a trial for heresy, but was finally acquitted. Perhaps it was easier to regard him as a Romanizing Puseyite because he had paid Pusey a visit in England. The trouble was that he conceived the Roman Church to be a branch of the true vine, and no mere "scarlet woman" nor the Pope "a son of perdition." Dr. Schaff's heresy is now a commonplace in the German Reformed Church, though for a long time it was known as "the Mercersburg theology."

His next battle was with those who would keep the Germans German in America, and to that end enforce the habitual use of the German language in education and religion. Dr. Schaff came to America hoping to return and lead a university life in Germany, but his identification with America was finally complete. He fought a good fight for the Americanization of German Americans, though fully appreciating the sentiment of the elderly German woman who,

hearing him preach in German, as he did for a long time, said to him, "English is like cold water poured on my heart; German is like balsam." During his last years in Mercersburg, the seat of war moved into his vicinity, and the situation was sometimes critical, and sometimes the classrooms served as the wards of a hospital for wounded soldiers.

Resigning his professorship in 1863, he took up his residence in New York, but it was not until 1870 that he was made professor of church history in the Union Theological Seminary, where he would strike into the student's recitation, go on indefinitely, and then applaud the student's good success. He formally connected himself with the Presbyterians, explaining in advance his objections to the Westminster Confession, but finding the terms of subscription liberal enough to satisfy his scruples. Later he was one of the most prominent among those who contended vainly for the revision of the Confession. He never identified himself with the Presbyterian body as he had identified himself with the German Reformed, but devoted himself to the unification of the Christian Church. On this line he was the moving spirit of the Evangelical Alliance at its meeting in New York. His leadership was equally conspicuous in the revision of the English Bible. He was the chairman of the American Board of Revision, and did much to consummate its final relation with the English board on a basis of decent equality. A visit to the German universities in 1885 afforded him a good opportunity to compare the professorate of that date with that of his own youth. He wrote of Dr. Briggs as no more a heretic than himself, but lacking the *suaviter in modo*, having which he would offend no one except "old fogies who believe in the infallibility of John Calvin." Writing of Calvin and Servetus he concluded, "Heresy is an error; intolerance is a sin; persecution is a crime." It was only natural that he should be deeply interested in the Chi-

cago Parliament of Religions. Warned by his physicians not to go, he said, "If I die, I want to die in the Parliament of Religions." But, once there, he had not strength to read his elaborate plea for Christian unity.

His theological labors were immense, and a list of the books he wrote and edited and his other publications makes an appendix of eight pages. Among these publications was a 'History of the Christian Church' in seven volumes, 'The Creeds of Christendom' in three, and other things quite as voluminous. His influence, as a whole, made definitely for breadth of scholarship and liberal religious sentiment, while the personality behind the theologian is an attractive one from first to last.

Indian Frontier Warfare. By Brevet-Major G. J. Younghusband. [The Wolseley Series.] Charles Scribner's Sons. 8vo, pp. xvi, 264, with maps.

English military operations in Northern India, Afghanistan, and Burmah are very unlike those in Europe, and have many points of resemblance to our army work in this country. A mountain country, forest-covered, with no roads, and great distances between posts, with snow blockades on the high passes, and with wild tribes, brave but irregularly organized, to contend with, are conditions that are duplicated along our Rocky Mountain ranges. The jungles of Burmah, with their malarial, fever-and-cholera-stricken climate and tropical heats, would only too closely resemble the obstacles to campaigning in Cuba, should it be the fate of our army to operate in that island.

For these reasons Capt. Younghusband's book will be scarcely less instructive to the American than to the British officer. The author deals very intelligently and systematically with the peculiarities of such irregular warfare, in campaigns and expedi-

tions great and small; with offensive and defensive methods; with the commissariat, the transportation, and the medical service. Such lessons in the exercise of judgment to fit old rules, and organizations to new circumstances are of the greatest value to those who know how to profit by them. Of course they are not to be imitated in detail, but they suggest expedients, stimulate analogous inventions, and tend to make an officer a man rather than a machine, a self-reliant master of circumstances instead of their slave. Used in this way, the book is one of the most valuable lately published, and every soldier should be familiar with it. We can promise, too, that he will greatly enjoy the familiarity.

FORD'S FEDERALIST.

Edited by PAUL LEICESTER FORD, Editor of the Writings of Thomas Jefferson. 876 pp. (including Appendix, 149 pp., and Index, 86 pp.). 12mo. (Ready in May. Circular free.)

Among the special features of this edition are foot notes showing the relations of subsequent events to the views in the text and the full text of the Constitution, with the amendments and Senate "case references."

SEIGNOBOS' POLITICAL HISTORY OF MODERN EUROPE.

(In Preparation.)

The New, 1897, Edition of

JOHNSTON'S UNITED STATES.

With Maps and Illustrations. 499 pp., 12mo., 1/4 leather, \$1 net. (Descriptive Circular free.) Recommended by 30 colleges, including Harvard, Columbia, Princeton, Johns Hopkins, etc.

Third Impression of a Timely Book.

ROWAN AND RAMSAY'S CUBA.

With colored maps, points of international law, President Grant on Cuba, etc. 16mo., \$1.25.

"So graphic, at times picturesque, that reading for information is an intellectual delight."—Boston Advertiser.

HENRY HOLT & CO.,

29 WEST 23D ST., NEW YORK.

Study and Practice of French in School IN THREE PARTS.

By L. C. Boname. Philadelphia, 258 S. 16th St. Natural Method on a New Plan. With thorough drill in Pronunciation and Essentials of Grammar. From Education, Boston: "A well-made series. Teachers will find the three books helpful and interesting."

FRENCH BOOKS

at Wm. R. JENKINS', Publisher, 851 SIXTH AVENUE, NEW YORK. Complete Catalogue on application.

JUST COMPLETED.

A History of England.

FOR THE USE OF SCHOOLS. By F. YORK POWELL, M.A., and T. E. TOUT, M.A. In Three Parts. With Maps and Plans.

Part I. From the Earliest Times to the Death of Henry VII. By F. YORK POWELL, M.A. 12mo, 888 pages, \$1.00.

Part II. From the Accession of Henry VIII. to the Revolution of 1689. By T. F. TOUT, M.A. Crown 8vo, 390 pages, \$1.00. Just ready.

Part III. William and Mary to the Present Time. By T. F. TOUT, M.A. 12mo, 350 pages, \$1.00.

The completion of this series completes a work which covers English history rather more fully than most students' histories. It contains more detail, and is especially strong in the treatment of the social life of the people and of the growth of the language and literature. The volumes are illustrated with 57 maps and plans.

BOSTON PUBLIC SCHOOLS.

An examination of candidates for High School certificates, Classes A and B, and for certificates to teach Drawing, Penmanship, Bookkeeping, Photography, Typewriting, and Physical Training in the Boston Public Schools, will be held on Friday and Saturday, April 29 and 30, 1898, in the Girls' High School-house, West Newton Street. The examination will begin on Friday, at 9 o'clock A. M. Attendance will be required each day. Members of senior classes in colleges who are otherwise eligible by having had a year's experience in teaching school, or by being graduates of the Boston Normal School or of a Massachusetts State Normal School, or by having substantially completed a satisfactory course in pedagogy, will be permitted to take the High School Class A examination. All who desire to be candidates should send at once to the undersigned for a circular containing full information concerning the subjects and requirements of the examination.

THORNTON D. APOLLONIO, Secretary of the School Committee.

The Nation.

NEW YORK, THURSDAY, APRIL 21, 1898.

The Week.

The Senate resolutions, as modified and then assented to by the House, implicitly take from the President not only the power of recognizing foreign nations, but of commanding the army. The first resolution declares that the people of Cuba are free and independent. The second directly addresses a demand ("hereby") to a foreign government to abandon a portion of its territory, and to send away its naval forces from a certain portion of the ocean. In other words, it takes without the least hesitation the position of the French Directory in 1793. The third resolution "directs" the President as General of the United States forces to carry this ridiculous and un-American resolution into effect, apparently without any communication to the foreign government of what is going to happen to it. After this, all discussion of the grammar of the resolutions would be ridiculous. It would be like descanting on the want of courtesy of a man who had just committed a murder. The majority of the Senate to which we owe this lawlessness is made up of the very same class of persons who caused a panic in 1893 by opposition to the silver legislation, and have since supported the Bryan movement for a silver currency and for general disorganization of the government. In short, we are now suffering most seriously for having years ago admitted to the Senate a most dangerous class as representatives of morally fictitious States. This class have for years been engaged in the use of their legislative powers for purposes of pecuniary speculation. There is very little respect felt in the community for their character, there is none at all for their minds. Their resolutions have the air of having been written either by men who hate the American Government and wish to use their power to throw it into confusion, or by foreigners who are unacquainted with our Constitution, or question the force of its provisions.

The politics in this war business becomes clearer every day. Senator Hale of Maine gave expression to the feeling which prevails among Republicans as to what their party is to get out of it when he said on Saturday that, "if war must needs come, its conduct will not be in the hands of the Democratic party; it will not be by the Democratic party that the flag of the United States will be borne; that great soldier and statesman, the President of the United States, will conduct the war and bring it to a successful end,

and Senators, many of whom to-day have been free with their comments and criticisms of the President, when we are found in the situation that war is upon us, will be found opposing and impeding and obstructing the march of the President and the Republican party and of all good, conservative citizens in carrying on that war." Senator Platt of New York is even franker about the matter. After saying that war seemed "inevitable," and that there would be compensations for its horrors in the burial of the animosities growing out of the civil war and in the enthusiastic union of the people, he "came right down to business" in this final statement as to the great compensation for war: "It would prevent the Democratic party from going into the next Presidential campaign with 'Free Cuba' and 'Free Silver' emblazoned on its banner, and prevent the possibility of Populistic success in 1900."

On the other hand, the free-silverites see advantage for their cause in war. One of these men in the Senate is said to have served notice on the Administration men that any bond issue which may be authorized must call for payment in silver. This announcement is represented to have "somewhat staggered the Republican sound-money men," one of whom asked, "Do you mean to say that at this critical juncture you would force the President to either veto or to sign a measure that is absolutely against his every principle?" The reply, "delivered in the firmest manner," is reported to have been: "Yes, if any act is passed authorizing the issuance of bonds, it must provide for their payment in silver." Senator Teller of Colorado is quoted as saying that he does not think that the silverites would insist upon making bonds payable in silver, being content to have the word "coin" used, but that they will not consent to the issue of any bonds except in the last emergency. Before resorting to bonds, he would have the Government "coin the silver in the Treasury that secures the Treasury notes"—about \$100,000,000 at its cost price—and inflate the currency by the "issue of Treasury certificates redeemable in coin at the pleasure of the Government, which would not draw interest, and the Government could float them just as easily as bonds, and get all the money it needs." Such is the inviting financial prospect in face of war that is held out before us by the element which controls the United States Senate.

Congressman Boutelle of Maine deserves the warmest commendation from all right-minded men for the fine dis-

play of good sense and courage which he made when the Cuban resolutions came before the House on Wednesday week. Mr. Boutelle regarded these resolutions as altogether too radical, and tried to get a vote on an amendment making them much milder, but was refused an opportunity, whereupon he voted against their adoption. The reasons for his course are well stated in a Washington dispatch to his newspaper, the *Bangor Whig and Courier*. Spain had conceded nearly every one of our demands, and seemed plainly disposed to full concessions in the near future. The radical Jingoism in the House and Senate had insisted on incorporating in the resolutions a demand for the entire overthrow of Spain's relations to Cuba, notwithstanding the risk that such a declaration would be regarded as a menace by all the great Powers having large colonial possessions, and might incline them to sympathy with Spain instead of with us as hitherto. "They also seem determined to render it impossible that peace and our demands shall be attained through the efforts now making by the other nations." It required a great deal of independence and courage for a Republican Congressman to take such a position, in which he was supported by only one member of his party, Representative Johnson of Indiana. But Mr. Boutelle has the honor of having been the one Representative in the House to stand out against the Jingo wave which swept over that body when President Cleveland sent in his Venezuelan message two years ago last winter.

The people who are gayly talking of war with Spain as an agreeable diversion for thirty days will do well to read the views of Gen. George W. Wingate, who has had experience in an official position in the National Guard of this State. The picture which he draws of the militia of the nation as a whole is not an attractive one, and the lack of proper equipment and discipline in the forces of many Western States accentuates the absurdity of the eagerness for war reported to prevail in that part of the country. As bearing on this same question, what Gen. Wingate says as to the feeling among the National Guard regarding an invasion of Cuba—taking it for granted that the President could constitutionally send militia out of the country—is very interesting. "It may be," he says, "that the National Guard of the South and West is anxious to constitute a part of such an invading force, but no such desire exists among the National Guard in this section. On the contrary, the feeling among them is pronounced that, while they are ready to instantly respond to a call for service any-

where in the United States, without regard to the sacrifices which they will have to make in leaving their business and families, service as a part of such an invading army, and at this unhealthy season of the year, is one which should not be asked of them." By the way, does anybody happen to know people who are anxious to enlist as volunteers and invade Cuba at the opening of the wet season and the period for the yellow-fever epidemic?

The "rights of the militia" are engaging the attention of the War Department. It is conceded that the militia, whether organized or not, cannot be called out by the President for a war which does not come under the head of insurrection, invasion, or to enforce the laws of the United States. For the purposes of a war in Cuba only such members of the militia as should volunteer could be used. If in the course of a war in or about Cuba Spain should invade us, the President could lawfully call out the militia. It has been held by the courts also that the President may call out the militia if he sees preparations for invasion; but they can be used only to repel the invasion. On the false pretence that Mexico had invaded us in 1846, President Polk authorized Gen. Taylor to call for the services of two regiments of the militia of Louisiana, expressly to repel that invasion. It has been held by the courts, also, that in a case of doubt whether the country is in danger of invasion or not, the judgment of the President is decisive. As the power to decide must be lodged somewhere, and must be exercised in a summary manner, it must necessarily be in the President. It is not conceivable, however, that it should be exercised to call out the militia to invade a country separated from us by the ocean.

Don Francisco Silvela in the *Piçaro* advances some views as to Spain's course which seem to have a certain weight. Señor Silvela, we may remark, is the present head of the Conservative party of Spain, likely to be the next Prime Minister, and is a man whose opinions as to "what Spain will do" are at least worthy of mention in the same breath with wisdom about Spain derived from the American inner consciousness. Well, Silvela declares in the first place, that all parties in Spain are absolutely united in defence of Spanish sovereignty over Cuba. The Conservatives place themselves absolutely at Sagasta's disposal. They accept his plan of autonomy for Cuba, and, if they should be called to power, would consider "all that has been granted to the Cubans as a part of the Conservative policy." At any rate, the Government is certain of the heartiest support of the Conservative party in this Cuban matter, whether the result be an

honorable peace or a war forced upon Spain. And if it comes to war, says Señor Silvela, it is a great mistake to say that Spain will be prevented from fighting by financial weakness. Her resources are by no means exhausted. Many a long contest has Spain sustained in the past without money, and she will do it again if necessary. Finally, Silvela's account of the "dynastic" argument is somewhat different from the accepted American version. This may prove that it is necessarily wrong, but we can at least afford to listen, with a superior smile, to what Señor Silvela has to say. Asked if a serious disaster in war would not endanger the Spanish monarchy, he replied: "Not at all. The Queen Regent has the entire confidence of the Spanish nation. . . . Besides, everybody sees that the fall of the dynasty would be the most remediless of calamities. The army, you may take my word for it, will be immovable in its loyalty."

The notion that war will bring business prosperity has been chilled by reports coming in from all quarters of the cancellation of orders for goods and of the prospective closing of mills. The first blow falls upon the producers of textile goods, because people can wear their old clothes longer than they had intended to. Each man and woman begins to economize, and finds it easier to economize in clothing than in anything else that can be classed among the necessities of life. It is most desirable that the public mind should be rid of the crude conception that bloodshed and the destruction of property are good for trade. It took its start here during the civil war. A few speculators, contractors, and gold gamblers got rich. They kept themselves in evidence by vulgar display. They filled the public eye and gave an impression that the country was getting rich also. Meanwhile, the laboring classes were either fighting at wages of thirteen dollars per month, payable in depreciated currency, or working for less money, reckoned at gold value, than they received before. They were helped by soup kitchens more or less, but their groans were drowned by the roar of battle. When a national fallacy like the one under consideration takes root, it can be dislodged only by experience such as we are beginning to have. The fair form of prosperity which was rising out of the clouds of the past five years is, we fear, again sinking beneath them.

It has been evident, since the beginning of the present "war scare," that the mainstay of the financial situation was this country's enormous credit fund on international account, piled up as a result of our unprecedentedly heavy export trade. So long as our money mar-

ket continued easy, the foreign obligations on this account were met by borrowing on the American market. When, on the other hand, our markets grew uneasy, and banks felt the need of strengthening their cash reserves against a conceivable emergency, the settlement of these foreign dues was called for—resulting in the fifty to sixty million dollars of gold importations in the last eight weeks. Since the merchandise trade account has played so prominent a part in this extraordinary operation, the Government's report of our foreign trade for March, published on Thursday, is of peculiar interest. The statement is sufficiently interesting in itself. It shows another heavy increase in our exports and another heavy decrease in our imports; both changes being of such magnitude that the month's excess of merchandise exports over imports reaches \$51,810,000, against an excess of only \$10,930,000 in March of 1897, and of no more than \$3,225,000 in 1892, after the heavy grain crop of the previous season. For the nine completed months of the fiscal year, the export excess reaches the remarkable sum of \$470,961,000, exceeding by \$147,548,000 the record for the same nine months last year, which was even then unparalleled in our history.

A telegram from Jamaica says that there has been an assembling of British war-ships at Jamaica with the purpose of enforcing the neutrality of that island in the event of war between the United States and Spain. The important statement is made also that coal will not be considered contraband of war, but will be sold to any purchaser, Spanish or American, and that when war-ships of opposing belligerents are in British ports they will not be allowed to depart within twenty-four hours of each other. These rules are to remain in force in Jamaica unless specific instructions to the contrary are received from the home Government. It is important to note that coal has never been made contraband of war, either by treaty or by the consensus of nations. The general law of contraband, as stated by Woolsey, is that "nothing can be justly regarded as contraband unless so regarded by the law of nations or by express convention between certain parties, and that the definition of contraband must be clear and positive." In other words, all articles not clearly and positively defined as contraband may be freely bought and sold. As coal is not one of these articles, the Spanish cruisers may obtain supplies from either British or French islands in the West Indies, and we may do the same, subject to such regulations as their respective Governments may prescribe. As both of those Powers are strong enough to enforce such regulations as they make, it may turn out, contrary to our expectations,

that, in the event of war, Spain will have as convenient and abundant supplies of coal as ourselves.

Mr. Wayne McVeagh has raised his voice in denunciation of the corruption which rules in Pennsylvania, and in advocacy of a popular revolution against it. A reception was tendered the ex-Attorney-General by the Civil-Service-Reform Association of Philadelphia last week, and he made a speech in which he discussed the political conditions existing in the city and State, which "have reached a point where we ought all to agree, whether we support or oppose them, that they represent purely and simply in their last analysis government by bribery and corruption only." Discussing the question of a remedy, Mr. McVeagh expressed the opinion that "it is not to be found in furnishing additional evidence of the bribery and corruption admitted by everybody to exist, nor in pursuing the poorer victims of the degraded and sordid atmosphere with which we have surrounded them," and declared that "we ought not to blame them as much as ourselves," adding: "The receiver of stolen goods can hold up his head in his church, his club, his board of directors, his lawyer's office, or among his acquaintances, as the receiver of property or franchises or contracts stolen from the people by the bribery of their public servants." Summing up the whole matter, Mr. McVeagh reached "the homely conclusion that there is no remedy for wrong-doing but doing right, and the only hope of the purification of our public service in this city and State is in the growth of the public sentiment which will make it odious, uncomfortably odious, for anybody hereafter to be found in possession of property wrongfully taken from the people, or property indirectly taken by bribery and corruption."

In their deliverance on Thursday, the Pennsylvania Civil-Service-Reform Association pointed out that, while the President has done well in regard to the execution of the civil-service law, he has done ill in regard to such places as are not covered by that law. It refers to the open avowal of his intention to make appointments to Federal positions in the various States upon the recommendation of their Senators and Representatives, and traces the results of applying this principle to the heads of the Government offices in Philadelphia. "All of these have now been changed," it proceeds. "and it is perfectly fair to say that in not one instance has the old incumbent been dismissed or the new one appointed for the good of the service, or with the intention of filling the office with a more honest or more capable official than the man who was already there." Nor is this the worst that is to be said. The new postmaster is charged with "treat-

ing with little effect his obligations to the laws of his country, and trying, in defiance of those laws, to turn the office over which he presides into a machine for rewarding and punishing political friends and enemies"; and with having "practically nullified the order of President McKinley by reducing men against whom no charges had been made from high positions to lower ones, appointing to the vacant places, in some instances, men who are alleged to have been unfit for the positions." It appears that a full statement of these cases, with charges of other violations of official duty, has been made up by a committee of the National Civil Service Reform League, which came to Philadelphia in order to investigate the management of the post-office, and has been placed by that committee in the hands of the President. The Association say that "the grave crisis through which the country is now passing may well prevent Mr. McKinley from giving this matter immediate attention, but we hope that ultimately he will take such action as will at least prevent a repetition of similar malfeasance."

The voters of Pennsylvania are assured an opportunity to vote for a man worthy to be Governor of their State by the Rev. Dr. S. C. Swallow's acceptance of his nomination for Governor by "the Honest Government party." His letter reads like the message of an old Hebrew prophet. In a few sentences he draws a vivid picture of the despotism which has been established in Pennsylvania, and which has rendered the State "a very Gibraltar of corruption, compared with which the England of Charles the First was the embodiment of virtue." He declares that the only hope of the State is to end this corrupt despotism, and he accepts leadership in the contest against it as a religious duty. The single plank in his platform is "Honest Government," and his rallying cry is, "Thou shalt not steal." Dr. Swallow finds the necessity for his own candidacy in the assurance that no man will be nominated by the Republicans who is not acceptable to Quay, and no man by the Democrats who is not acceptable to a Democratic boss who is controlled by Quay, while he rightly dismisses Mr. Wanamaker as unacceptable to the friends of honest government, both because he has declared himself against independent candidacy, and because he has declared "his past endorsement, by an unscratched ballot, of the vilest boss methods his forceful language could describe."

It is very unfortunate that the first enrolment of voters under the new primary law should take place in the very crisis of the war excitement. The dates fixed for it are April 15 to April 30, in-

clusive. During that period any voter who was registered last year may have his name enrolled as a member of a party in his election district by signing and acknowledging before a notary public a declaration that his intention is to support generally the nominees of that party at the next election, and sending the declaration to the Bureau of Elections. His name will then be put on the lists of voters entitled to take part in the primary elections. Declaration blanks can be obtained at the five borough offices of the Bureau of Elections. We are informed that the Republican machine district leaders are sending out circulars asking for the declarations to be sent to them for filing, and we are asked to warn Republican voters against following this advice, the suspicion being that the machine leaders would fail, for reasons of their own, to file the declarations of anti-machine Republicans. There are certainly grounds for this suspicion. The conduct of these leaders in the past justifies the worst view that can be taken of the uses they might make of any power over the enrolment which shall be intrusted to them. The only safe method for Republican voters to follow is to send their declarations direct to the Bureau of Elections or to the Committee of Fifty-three.

With the increasing intensity of protectionism in France, the successive symptoms of the disease, with which we have been made painfully familiar in this country, are manifesting themselves. One of the latest of them is a sudden fury against professors of political economy. They teach free trade, the scoundrels, while the country is committed to the policy of protection. This is doubly intolerable in France, because the same state which votes protective duties, votes the salaries of the teachers who are saying that protective duties are folly. What a horrible inconsistency that is. Nay, what a public crime, cries the *Société des Agriculteurs de France*, and resolves that henceforth the public instruction in political economy shall be "in harmony with the legislation of the state." The French are famous for logic, and this is strictly logical, it must be confessed. Only it will have to be applied to many subjects besides political economy. The professors will have to read the latest election returns and resolves of Parliament before being able to decide if they are to teach that it was the Catholics or the Huguenots who were slaughtered on St. Bartholomew's Day, that alcohol is a stimulant or a narcotic, and that the earth goes round the sun or the sun round the earth. When universal suffrage and the legislation of the state get full control of the universities, we shall see some strange chairs of learning strangely filled.

WAR OR PEACE.

The die seems now to have been cast. The issues of peace or war have been remitted to the President's hands. The only possible escape from some resort to force is apparently the surrender of Spain to the American demands. This, Congress, in its wisdom, has made as difficult for the Spaniards as possible. We cannot recall any case in history in which one civilized nation has addressed another in such language as the congressional resolution before hostilities have actually commenced. We cordially endorse the *Philadelphia Press's* judgment on them. It says:

"But the Senate resolutions, even without the recognition of the insurgent Government, are untrue, illogical, inconsistent, self-contradictory, and self-stultifying. They will not bear intelligent analysis or examination."

To the President it now belongs to decide, as commander in chief of the army, when and where the war shall commence and in what manner and by what force it shall be carried on. He has been directed to get the Spaniards out of Cuba; but it is for him to decide when he shall resort to war, for this purpose, if at all. It will not be maintained, we trust, even by the Jingoists, that if the Spaniards offer to leave peaceably he is bound to attack them en route, although a good deal of the war talk would bear that interpretation. When the Spaniards discover that no prayers can pierce us, that we are determined to have a fight with them if we can, we cannot help believing that they will see that discretion is the better part of valor and find some way of escaping hostilities.

When the fighting begins, we must only hope that it will be short, sharp, and decisive. We are still of opinion that the dispute might have been ended—nay, may still be ended—without fighting at all. We could have tried the plan of autonomy which the Spaniards have offered to concede by perfectly peaceable means. The objection which has been made to this is, that the Spaniards cannot be trusted to keep their promises; that in four or five years they will withdraw what they concede, as they have often done before. The answer is that they have never before promised the withdrawal of their troops as part of the reform, and that they would find it impossible to go back to their old ways without soldiers. Moreover, it is, as we have often said, never too late to go to war. We could fight them just as well after they had broken their promises as now, if not better. What prevents our trying the autonomy plan is, in a very large degree, the desire of some of the Jingoists for a war, as one of them has said, "just or unjust, necessary or unnecessary, right or wrong." This is a painful confession for a civilized nation to make, but it must be made. It is an inevitable inference from the pro-

ceedings in Congress and the conduct of a portion of our press. It is the conclusion which the world at large now draws and which history will draw.

Spain is a third-rate and declining Power; we are one of the mightiest in the world. We shall never be able to "point with pride" to this war as we point to the Revolutionary war, or the war of the rebellion, or the war of 1812, when we engaged in contests which the world believed to be beyond our strength or resources. But the discredit of attacking a third-rate Power, be it small or great, will come nowhere near the discredit of our manner of getting ready for the contest. When one thinks of the blowing, the blatherskite, the mendacity of the most widely read portion of our press, of the steady fire of the lowest insults kept up against an adversary with whom we meant to engage in honorable, civilized warfare, by the Legislature of the nation, one involuntarily asks, Are there no gentlemen left in American public life?

We wish we could add that, now that we are approaching the stern arbitration of war, we believe that lying will cease or diminish. But we can hold out no such prospect. War is preëminently a state of things in which all human vices flourish or are encouraged, especially the vice of mendacity. We must be prepared for its exhibition on a greater scale than ever before witnessed by mankind, incessant, monstrous, and perfectly shameless.

THE EDUCATION OF WAR.

The influence which is being exerted on Congressmen at this crisis by their constituents may be all summed up by saying that the poor and ignorant men, who are to be the greatest sufferers by it in the end, are in favor of war, while the well-to-do and intelligent, or, in other words, the employers of labor, the men who understand the conditions of business, write or telegraph in favor of peace. Side by side with this comes the news from the recruiting offices that the sound and able-bodied are not offering themselves for enlistment. Out of one hundred men who wished to join the army, in Philadelphia, only four could pass the surgeon. The contrast this presents with 1861, when the national heart was really stirred by the impending conflict, seems to indicate that the men who have value in the labor market do not want to go to Cuba to fight, and expect better times at home if other people can be got to go. They have swallowed the stories told by some of the newspapers of the business profits of war, and their delusion on this subject is made serious by the fact that they have votes. The more unscrupulous or more ignorant Jingo papers have assured them that the brief stimulus given to trade by the Government demand for the supplies neces-

sary for hostilities, to be used in killing people and destroying property, is good for the poor man.

This doctrine, which is a favorite one with all Jingoists, speculators, and contractors—in fact, the whole class which seeks sudden fortunes and hopes to "get out" before the crash comes—is of comparatively modern origin. Before the French Revolution, wars were undertaken for "honor," or the glory of the monarchy, or the extension of the national territory. The doctrine that war is profitable from a business point of view, is an idea which has come in with the growth of manufactures and the growing power of money. The state of feeling which leads to war, or the popular interest in some war-bringing question, generally causes depression of trade and manufactures, throws many out of employment, and loads up factories with unsalable goods. That war will probably create a demand for these goods seems plain enough. The prospect of getting rid of them through a lively Government custom, or through the tremendous destruction which war always works, naturally fires the manufacturer's imagination, and through him fires the imagination of the workers, and they all become Jingoists together. No one looks forward to what will follow the close of the war. Every one wants something good now, and only the intelligent few foresee the pay-day. It is exactly the case of the spendthrift who borrows money on notes. He is so gratified by the possession of cash that he does not trouble himself about the way the notes will be met.

The war of the rebellion cost 700,000 lives and made a debt of \$2,000,000,000. It was necessary, but it would be ludicrous to speak of it as a good business enterprise for the generation which fought it. We say nothing of its effect on morals and manners. But the debt it created, in spite of the hearty popular support, has not yet been paid off. The disorder in our currency which it created has not yet been rectified, after the lapse of thirty-five years, and has filled the land with crazy notions about the nature and use of money which are clouds on our business future. The value of the labor of the 700,000 men who died can hardly be estimated, nor can the amount of property destroyed, but both were enormous. The infusion into the mind of a growing democracy of the doctrine that there is money in war would be, if successful, the most awful calamity that could befall the modern world; and hanging would be too good for the editor or business man who preached it. We shall some day be 300,000,000 strong, and we shall then wield an enormous force, such as no existing nation will come anywhere near possessing, except possibly Russia. The indications are, too, that we shall be in possession of a large fleet

and large army. Let us figure to ourselves the possibility of this force being at the disposal of a multitude easily excited by yellow journals, finding work slack, as it is apt to be when the number who want employment is great, and imbued with the idea that war would be peculiarly profitable. We should have here a great nation turned buccaneer and using enormous armaments to fill its pockets.

It must not be forgotten that we are to-day making precedents and concocting doctrines for what is practically a new people. No one denies that the national character, partly as a result of the war and partly as a result of the influence of greatly increased facility in making money, has undergone serious modifications. The old expectation of peaceful development and the self-reliance which were the chief characteristics of American society before the war, have well-nigh disappeared. A large portion of the population is filled with a desire to employ force to gratify our own desires and ambitions, to become a great military and naval power, and to use this power to have our own way, in disregard of law and precedent. The cheap press preaches these things incessantly, and the cheap press now has an influence on the government of the nation which no one dreamed of fifty years ago. It therefore behooves every man who uses either voice or pen for purposes of persuasion, and has a conscience and loves his country, to take heed what economy or morality he recommends.

NATIONAL HYSTERIA.

The *St. James's Gazette*, a London journal that has shown unexpected friendliness to the United States during the Cuban imbroglio, says that we are now passing through a period of national hysteria. This is said apropos of the series of speeches and reports in Congress touching the disaster to the *Maine*. It has been forgotten, apparently, that our naval court of inquiry came to the conclusion that there was nothing to fix direct responsibility upon Spain or upon anybody for the loss of the ship. How much substantial evidence there is for the belief that the disaster was due to an outside explosion, we shall not now consider. If we assume that it was due to an outside explosion, it is quite as likely that it was done by Cuban insurgents in order to embroil us with Spain as that it was done by a Spaniard or Spaniards. That there are insurgents in Havana holding office under the Spanish Government, is proved by the fact that one of them stole the De Lome letter out of the Havana post-office. Moreover, it is a matter of record that the Spanish authorities did not want the *Maine* to come to Havana, but tried to keep her away. They would not have done so if they had desired to blow her up. It is evidently the

opinion of Consul-General Lee that the ship was not blown up by a mine planted in the harbor beforehand. A ship moored to a buoy by a chain, in a harbor under tidal influence, swings around. It does not stay in one place. It would have been impossible for anybody on shore at nine o'clock at night to fix her position so as to determine the time for firing the mine, if there had been a mine there. The theory of an outside explosion, therefore, rests upon the hypothesis that some person or persons towed the mine or torpedo down to the ship with a small boat, exploded it, and got away unobserved. This is the view which Consul-General Lee seems to favor. This might as easily have been done by the man who stole the De Lome letter as by anybody else.

The American people are not unreasonable or cruel or cowardly, yet all of these qualities are united in the cry, "Remember the *Maine*!" It is unreasonable to assume that Spain is responsible for the disaster when our own court of inquiry says that it was not able to fix the responsibility. It is cruel to make war in order to gain what may be reached more surely and satisfactorily by peaceable means. It is cowardly, under such circumstances, to attack a weaker nation than ourselves. The attack of hysteria that swept over the Senate last week, and over a large portion of the country, is another instance of the well-known social phenomenon that a crowd will often do things which every member of the crowd would scorn to do as an individual, and that all would despise themselves for doing after a little time for reflection.

Among the manifestations of the prevailing craze is the oft-repeated statement that if the *Maine* had been a British ship, Havana would have been laid in ashes within twenty-four hours. This extravagant conceit was put forth by a yellow journalist a day or two after the disaster. It had not the slightest foundation. It was a mere random guess of a newspaper reporter, and was monstrously false, assuming that Great Britain would have bombarded a quarter of a million innocent men, women, and children without any evidence that either they or their rulers had done any wrong. Yet this wild conception has gained lodgment in the minds of an immense number of people, and it forms in their minds a justification for any cruelty they may be inclined to commit. Probably they would be reluctant to follow the example of Mr. Gladstone in the Transvaal war, when Great Britain turned back and sacrificed her prestige in order to avoid sheer blood-guiltiness.

Even our sedate contemporary, the *Financial Chronicle*, has tasted the insane root that takes the reason prisoner. Although it leans to the opinion that there was no submarine mine in the case, yet it holds that the Spanish Gov-

ernment has been remiss in the matter of expressions of regret. "The astounding shortsightedness of the Spanish authorities," it says, "may best be judged by supposing that the explosion of the *Maine* had been followed by formal and personal expressions of regret and sympathy from all public officers at Havana and Madrid; that the Spanish Government had instantly volunteered to send before our court of inquiry the harbor master of Havana and the pilot who brought the vessel to its moorings." A person reading this, and having no other information, would assume that Spain had given no expression of regret, and that the people of Havana had not turned out *en masse*, with every expression of sympathy, to the funeral of the dead sailors. The truth is, that the most ample expressions of regret were given by Spain and her officers at the time of the occurrence, and were repeated only one week ago by her Minister in Washington, who noted the fact that the previous expressions of the same feeling had been overlooked by the American people, saying:

"Public opinion in this country appears to ignore the fact that the loss of the *Maine* was immediately followed by official and reiterated expressions of sympathy from her Majesty the Queen, from her Government, from her Chargé d'Affaires in Washington, and from the authorities in Havana, all of which tended to affirm the horror which this disaster has caused to arise in Spanish hearts, as also the sympathy felt for the United States Government and navy and the American people."

It appears that our esteemed contemporary has ignored this second expression as well as the first.

THE MORALS OF MUNICIPAL CORRUPTION.

Miss Jane Addams of Hull House, Chicago, makes in the *Journal of Ethics* an important contribution to our knowledge of the sources of municipal corruption. Living for eight years in a Chicago ward where one of the most corrupt politicians of the city had his stronghold, and brought into daily contact, through her charitable and reformatory work, with the classes of the population that gave the local boss his invariable triumph at the polls, Miss Addams has observed him and them with the eye of an alert woman, and has written a most instructive paper on what may be called the natural history of municipal corruption.

Her quiet study of the actual facts, and that patiently from the inside, is the needed corrective to much hasty theorizing. There is, as we all know, a sort of apocalyptic theory of rotten politics in our cities. They are Satan's seat. Their vice, their coarseness, their indifference to political purity, their hasty return to the mire after one experience of what it is to be washed—all this is but the inherent vileness of mankind, displayed on a large scale as the opportunity for displaying it is large. Un-

til the devil is chained or the world burned up, there will be no such thing as effective municipal reform. But what Miss Addams has shown, in opposition to this millenarian school, is that the bad political conditions which we all so much deplore in our cities are intimately connected with rudimentary notions of morals; that it is not pure love of evil which makes the majority of voters in a ward steadily support a proved corruptionist, but the same instinctive and undeveloped code of morality which they follow in all their life.

In fact, as Miss Addams demonstrates, the desire of the Italian and Polish and Hungarian voters in an American city to be represented by "a good man" is not a whit less strenuous than that of the best native stock. Only their idea of the good man is somewhat different. He must be good according to their highest standards of goodness. He must be a man kind to the poor—not only in a general way, but with particular and unflinching attention to their every want and misfortune. Their joys he must brighten and their sorrows he must alleviate. In emergency, in catastrophe, in misunderstandings with employers and with the law, he must be their strong tower of help. Let him in all these things fill up their ideal of the "good man," and he has their votes at his absolute disposal.

How the corrupt Alderman of the Nineteenth Ward in Chicago built up his power on the primitive virtues of his constituents—not their vices—is shown in most enlightening detail by Miss Addams. He paid the rent of poor families in a pinch and threatened with eviction. He went bail for their sons when arrested. He buried their dead, having a standing account at the undertaker's, sometimes amounting to a thousand or two a year. The funeral of his humblest constituent was provided by this big-hearted friend with its requisite "flower-piece" and its string of carriages. The chances that the money to pay for it all was stolen, will not be too narrowly discussed by the people who ride to and from the graves of their dead at his expense. At weddings and christenings a present from the Alderman was never wanting. Six tons of turkeys and four or more tons of ducks and geese were handed out last Christmas by the Alderman in person or by deputy, each fowl accompanied by hearty greetings and good wishes. Still more of an earthly providence does the Alderman appear in his capacity of securing work for his supporters. In the Nineteenth Ward it was the Alderman's proud boast that he had 2,600 people on the pay-roll of the city or of corporations operating public franchises. Here was one-third of the vote of the entire ward inalienably his to begin with.

Now, considering the moral ideas of the people who vote such a man into

office, it cannot be said that they are making a deliberate choice of bad rulers. They are simply supporting the best man they know—the type of big-hearted friendliness. If any qualms ever seize them respecting the source of the money he spends so lavishly for their benefit, they have a ready and all-sufficient explanation, "Oh, he gets it from the rich." It is a sort of Robin Hood affair: the poor man and the priest are not robbed, only the fat and greasy citizen, who has plenty more; so it does not matter. This is undeveloped morality, to be sure, but it is precisely on the undeveloped morality of municipal voters that corruption flourishes. Theirs is largely the crime of ignorance, while the inexcusable criminals are the rich men and corporations who furnish the corruptionist the money with which he makes himself impregnable among his simple-minded constituents. Miss Addams sees clearly this ultimate fountain and source of our municipal corruption. How an effort to redeem the Nineteenth Ward came to grief she relates as follows:

"During a campaign a year and a half ago, when a reform league put up a candidate against our corrupt Alderman, and when Hull House worked hard to rally the moral sentiment of the ward in favor of the new man, we encountered another and unexpected difficulty. Finding that it was hard to secure enough local speakers of the moral tone which we desired, we imported orators from other parts of the town, from the 'better element,' so to speak. Suddenly we heard it rumored on all sides that, while the money and speakers for the reform candidate were coming from the swells, the money which was backing our corrupt Alderman also came from a swell source; it was rumored that the president of a street-car combination, for whom he performed constant offices in the City Council, was ready to back him to the extent of \$50,000; that he, too, was a good man, and sat in high places; that he had recently given a large sum of money to an educational institution, and was therefore as philanthropic, not to say good and upright, as any man in town; that our Alderman had the sanction of the highest authorities, and that the lecturers who were talking against corruption and the selling and buying of franchises, were only the cranks, and not the solid business men who had developed and built up Chicago."

To this *impasse* every trail leads. If we want to identify the men who make our municipal politics a hissing, we must not look for them in the tenements and the slums. The voters there resident live up, in general, to their highest conception of morality and civic duty. No, we must go to the clubs and the churches and the avenues where are to be found the men of eminent respectability who, for the sake of making millions illegally, pay out their tens of thousands to the spoiler.

THE ELECTIONS IN JAPAN.

TOKYO, March 24, 1898.

The election which has just been held for new members of Parliament is remarkable in many respects. For the first time since the first election there were no party cries, no party platforms, and no special party excitement. In many districts there was much acrimony between candidates which

in a few cases led to bloodshed, but these dissensions arose mainly from personal rivalry, and not from any excess of party spirit. Beyond the fact that the Constitution of Japan prescribes an election within a certain period after the dissolution of Parliament, and requires the sanction of Parliament for the enactment of certain measures, it is difficult to see why the late election took place.

No doubt there are reasons why this state of things should exist. The new Cabinet, since coming into power, has had no time to make either friends or enemies. It is a strong cabinet in some respects, and contains some new men who are anxious to show their calibre. They know that they are on trial in a rather critical period, and they are exerting every effort to make themselves useful in their respective departments. While the Cabinet is devoid of popularity, it has so far not marred its activity by any blunder. The parties, therefore, even of the so-called Opposition have been without a handle of attack. Besides, the Cabinet definitely declared before the election that it would make no party affiliations. In former elections the Government has been known to give its utmost assistance to the party or parties that promised support in passing certain measures. But the present Ito Cabinet refused to do more than to stand impartially between conflicting partisans, and determined that it would merely enforce the laws against election disorders. This programme, it is only fair to say, the Government strictly adhered to. So far there has been no charge from any party or coterie that the Government showed favor to one candidate at the expense of another. This attitude of indifference, while it insured a fair election, undoubtedly deprived the campaign of some picturesque characteristics.

But, more than all this, the old war cries directed against the *Sato* have lost much vitality for the moment through the fault of the parties themselves. All the groups—the Liberals, the Progressives, and National Unionists—have at one time or another united with the Government in power on terms far short of those demanded in their political manifestoes. The result is, that the old fight between the Government and Parliament cannot be easily renewed. There must at least be a pretence to consistency and sincerity in party warfare; otherwise the public is bound to lose its interest in a political contest. When, a year ago, it was seen that the Progressive party, the last to hold out against the Government, yielded to the blandishments of the Cabinet, there was no party left to defend the old principles and measures. The recent "campaign" is the first that has shown the consequences of this abandonment of old watchwords and party cries. It is clear that the voters have for the time lost the interest which they formerly had in electoral contests.

Nevertheless, the election was not conducted by the candidates without a certain general object in view. In political warfare, distinctions may often be made without a difference, and in the present election we may note certain points as to which the various parties and groups were divided. As soon as the returns came in, the newspapers separated the successful candidates into two classes—those who were likely to support, and those who were likely to oppose, the Government. The chief parties for the Government are supposed to be the Liberals and National Unionists, the former an ally

of Marquis Ito in his previous administration. The most powerful of the opposition parties are the Progressives, who, with their leader, Count Okuma, abandoned the Matsukata Cabinet a few weeks before it fell. This separation of the two parties into two classes gives us a clue to what is the probable issue of the election. The various organizations without a watchword or principle worthy of the name can still maintain a relation of hostility towards or alliance with the Government. Their attitude will be determined entirely by the circumstances of the case. This is the secret of the efforts made in the election, especially by the Progressives. This party was aware that if it could succeed in securing a sufficient number of candidates, it could force the Government to make terms with it. For this reason it was willing to be considered an anti-Government party, though at the proper moment, under favorable conditions, it would perhaps throw in its lot with the Government. Even Count Okuma takes this view of the situation. It is known that in January, when the present Cabinet was forming, Count Okuma was solicited to enter it. He offered no objection to a union with Marquis Ito and other chiefs of the new Cabinet who had been his opponents, but stipulated certain conditions, chief of which was that his party should be liberally recognized in the official administration. The conditions were so onerous that they had to be rejected.

The returns of the election are a surprise in many ways. What calls for special notice is the heavy slaughter at the polls of some of the most experienced party men. Out of 299 members who sat in the old House, only 89 were reelected. The greatest change took place in the Liberal ranks, in which only 26 of the old members were returned and 75 new members. The figures for the Progressives are 42 old and 62 new. The general dissatisfaction with the conduct of many of the old members in the last Parliament, especially in abandoning their party organization for the sake of official rewards, accounts to some extent for this overthrow. There can be no doubt that many candidates in this way lost influence with the voters. The general feebleness of party organization furnishes another practical explanation. In some districts there were two or even more candidates, nominally belonging to the same party, contending for a seat, and in these cases the rivalry was often quite as great as between the candidates of different parties.

Precisely what vote the Government can count upon during the next session is still a matter of uncertainty. It may be assumed that the Liberals and National Unionists will join their forces in support of the Government; but as members belonging to these two parties do not command a majority in the Lower House, the Government will need reinforcements. On the side of the Government may be reckoned 101 Liberals and 26 National Unionists, and probably the 9 votes of the Business Men's party, making a total of 136. On the other side, the Progressives control 104 votes of their own party and 23 votes of loosely affiliated parties, making a total of 127 for the possible opposition. The balance may lie in the hands of the Independents, and the Government, it is said, will secure them. If not, it will have to make concessions to the Progressives, who, as the cleverest political managers in Japan, will strain every nerve to strengthen their own ranks. Of all the parties the Progressives

have lost least by the election. Their prestige, though not what it once was, is not seriously damaged, and it would require but a little more popularity for them to secure a working majority. The general feeling among the voters, now as ever, is unquestionably with the party that stands strongest for party cabinets.

The next session of Parliament is bound to be an important one, and the pressure of various measures which the Government will lay before the Lower House may help it in securing the requisite majority. The position of Japan vis à vis the European Powers who now threaten China is awakening the gravest anxiety, both within and without Government circles. The expansion of the army and navy calls for heavy outlays and new taxes, some of which will have to be considered in the next session. The money market in Japan is in a precarious condition. In every department of business there is a cry for more capital. It is practically impossible for the Government to float any new issues of bonds within the country at reasonable rates of interest, as the market seems to be gleaned bare of surplus funds. To foreign loans at the present moment the Government has a natural aversion, though eventually it may have recourse to them. The indemnity is not yet exhausted, but, with heavy payments for war-ships now building abroad, the net proceeds left for home purposes are by no means extraordinary. The very gravity of these issues may serve to stifle party warfare and give to the Government, which lacks the elements of strong popular support, a working majority, or even a strong backing. Whatever the faults of political parties in Japan, they cannot be charged with sacrificing their country's interest to party or personal considerations.

G. D.

THE DEPUTY KEEPER OF THE RECORDS.

LONDON, March, 1898.

Hard by the Courts of Justice, and close to Lincoln's Inn, Gray's Inn, and the Temple, in a neighborhood where lawyers most do congregate, the Public Record Office rears its beautiful structure. It stands upon land of the Rolls Estate, property belonging to the Crown. Going from Charing Cross along the Strand, after passing the Griffin which now marks the site where Temple Bar stood not so very long ago, you turn by your left into Chancery Lane, on the right-hand side of which you will, after walking about two hundred yards, find an entrance to the Record Office. This approach is one of very recent date. The other route—and formerly the only one—is by Fetter Lane, on the City side.

The building, which forms a record repository for the United Kingdom, is a modern one. The construction of the main pile was commenced only in 1851. Parliament voted a quarter of a million pounds sterling for the work. Extensions are even now going on, which are estimated to cost over fifty thousand pounds more. These will include a museum, into which the old Rolls Chapel is being converted, wherein will be set out for the inspection of sightseers various unique historical documents that are preserved in the great treasure-house of materials for the history of the British Empire and for the colonial period of the United States. But few American visitors to London seem to be

aware that, even now, there is a room in the newly built annex in which are displayed for public view documents not duplicated elsewhere. Here are the two parts of Domesday Book. Here is the Pope's bull creating King Henry VIII. Defender of the Faith, and here the Treaty of the Cloth of Gold. The statutes of the Poor Knights of Windsor and the statutes of the Order of St. Michael of France are both on view. Tallies used in the Exchequer, both ancient and modern, and the famous golden seals may also be seen. Specimens of illumination and autographs of famous persons alike are open to inspection. It is not, however, as a museum, but as a mine of history that this great national institution must be regarded. The nature of the documents and their priceless value are well described by Mr. Scargill-Bird, an assistant keeper of the records, in his most useful 'Guide to the Principal Classes of Documents Preserved in the Public Record Office.' As an example of the vast bulk of the material, Mr. Scargill-Bird instances the Close Rolls of the Court of Chancery. These comprise considerably over 10,000 rolls. The Coram Rege and De Banco Rolls are also numbered by the thousands. They are frequently of huge size, a single roll of the Tudor and Stuart periods containing from 500 to 1,000 skins of parchment. The custody of these masses of records, and the direction of the department of state which is charged with preserving them and making them available for the use of the public, are, by law, vested in the Master of the Rolls, the judge who, in England, ranks after the Lord Chancellor and the Lord Chief Justice alone. The working head of the department, "the chief record keeper," is, however, the Deputy Keeper of the Records, whose appointment is vested in the Master of the Rolls, subject to the formal approval of the sovereign. The functions of both officials, in relation to the records, are defined by the public-record act (1 and 2 Vict., cap. 94).

It was in 1854 that the old State Paper Office was amalgamated with the Public Record Office, when the documents that had for centuries been accumulating were brought together at the Record repository, from the Courts of Chancery, Exchequer, Admiralty, Queen's Bench, Common Pleas, and Marshalsea. At the same time were removed thither the records theretofore deposited in the Tower of London, the Chapter House at Westminster, the Rolls Chapel, Petty Bag Office, the Queen's Remembrancer, and other Exchequer offices, the First Fruits and Tenths Office, the Office of Land Revenue Records and Enrolments, the office of the late Auditor of the Land Revenues of England and Wales, and the Records of the Pells Office of the Exchequer. To these must be added the books, papers, and documents of the several departments of state and of other offices of government. A mere outsider may well feel appalled when Mr. Scargill-Bird, a specialist in such matters, admits that it took him ten years to compile his admirable 'Guide' to the Records. Yet, enormous as are the accumulations at the Record Office, there are multitudes of state papers in existence in other places. Among these are the mansions of the noblemen and gentlemen of England, the Lambeth Library, the British Museum, and the University and college libraries of Oxford, Cambridge, and Dublin. In olden times, the high officers of state

regarded such documents as being their private property. They accordingly took them away to their homes, where many are still preserved. It was not until 1578 that the old State Paper Office was established by Queen Elizabeth, to prevent the "embezzlement" of the papers, on the frequent changes of secretaries of state, and "that a certain place should be appointed for them and a fit man chosen for registering and keeping them in order, who should be tied by oath for the secrecy and safe-keeping thereof." Even after the establishment of the State Paper Office, numbers of official records were "carried off." Hence it happens that, from time to time, the British Museum acquires, by purchase, all sorts of state papers, even including records of the Privy Council. The manuscripts known as Egerton, 2395, are a notable instance of this kind of acquisition, and include most valuable papers relating to the American and West Indian colonies in the seventeenth century, which were in the keeping of Thomas Povey, Secretary to the committee for plantations. On the other hand, the "good Earl" of Shaftesbury, in 1871, presented to the Public Record Office his family manuscripts; and the grandfather of the present Duke of Manchester "deposited" a number of his family papers at the same place. Both these interesting collections of the Ashley-Cooper and Montagu families are accessible to literary workers.

The mere preservation of these masses of records would be of but little avail to historical students and others. It is indispensable that the documents should be sorted out, arranged, listed, indexed, and calendared, and that they should be forthcoming on demand, when required by the numerous classes of inquirers who resort to the Record Office. This is the business of the Deputy Keeper of the Records. Under his direction work a staff of skilled officers, consisting of a secretary to the department, six Assistant Keepers of Records, and twenty clerks, and a number of attendants, some of whom have by long service acquired such an intimate knowledge of the details of the classification of the records as to render them most helpful to workers. The Parliamentary vote for the salaries and wages of the officers and servants of the department amounts annually to about £19,000. For the due application of this sum the Deputy Keeper is "Accounting Officer" under the rules of the Imperial Treasury. In like manner is he held responsible for the amounts expended on account of "Calendars and Historical Documents" and on account of the Historical Manuscripts Commission.

Those who have for the last quarter of a century been resorting to the Record Office justly hold in veneration the honored name of Sir Thomas Hardy, a former Deputy Keeper, who did much, under the ægis of Lord Romilly, the then Master of the Rolls, to make the treasures of the Record Office accessible to the public. Sir Thomas Hardy was succeeded by his brother, Sir William, who, in turn, was followed in 1886 by the present Deputy Keeper, Sir Henry Churchill Maxwell Lyte. It is no derogation of his predecessors to say that, under its present chief, a steady advance has been made in bringing the collections of the Record Office within easier reach of the public. On that gentleman's appointment, "the work of reducing the Records to a systematic arrangement was," says Mr. Scargill-Bird,

"begun in earnest." Mr. Scargill-Bird himself supervised the work, which lasted for two years. In the result the officials were, for the first time, in a position to state definitely whether any record or records of a particular date and class did or did not exist. Moreover, huge masses of so-called Miscellanea have been examined, and found to contain a great number of documents belonging to already existing classes, and are being incorporated with these. A series of "Lists and Indexes," of and to these documents, has been begun. "Inventories" of several of the more important classes have been published. Then the system of "Calendars of State Papers" has not only been continued with those series already in progress, but has been extended. A new series has been undertaken of the Patent Rolls and Close Rolls, beginning with those of Edward I. The twelve volumes of these calendars already published form a valuable contribution to the history of England during the Middle Ages. The various series of calendars issued by the Record Office are simply invaluable to the historical student. The volumes give the pith of the contents of the records dealt with. Of departmental papers alone, about one hundred calendars are already in the hands of the public. These consist mainly of the Domestic, Foreign, and Colonial series. The last-mentioned series has a special interest for Americans, as it gives the pith of the contents of documents relating to the early years of the English colonies in America and the West Indies. The papers for this series have been arranged down to the year 1688. The calendars as yet published do not, however, include colonial papers of later date than 1680. They embrace (besides the documents at the Record Office) papers in the India Office and the British Museum. No student of the early history of the United States can be properly equipped for his work without having these calendars within his reach. No historical collection relating to American history can pretend to completeness without the volumes treating of America and the West Indies. These calendars are published by the British Government, not for gain, but as a contribution towards historical knowledge. Such of them as are not yet out of print may be had for about twenty-five dollars the lot. The following is a list of those already published:

- Vol. I.—America and West Indies, 1574-1660.
- Vol. II.—East Indies, China, and Japan, 1513-1616. (Out of print.)
- Vol. III.—East Indies, China, and Japan, 1617-1621. (Out of print.)
- Vol. IV.—East Indies, China, and Japan, 1622-1624.
- Vol. V.—America and West Indies, 1661-1668.
- Vol. VI.—East Indies, 1625-1629.
- Vol. VII.—America and West Indies, 1669-1674.
- Vol. VIII.—East Indies and Persia, 1630-1634.
- Vol. IX.—America and West Indies, 1675-1676, and Addenda, 1574-1674.
- Vol. X.—America and West Indies, 1677-1680.

The bulk of these calendars was prepared by the late Mr. Noel Sainsbury, who for over fifty years was a member of the Record Office staff. To his collaboration many an American student, from the late George Bancroft downwards, has been indebted. Most of the American Ministers to the Court of St. James's at one time or another sought his assistance. He liked to speak of the im-

pression made upon him by these diplomats from the New World. Buchanan's manner quite charmed him. Mr. Sainsbury had some most interesting recollections of search-work in connection with his own service and that of searchers from the New World. On one occasion a lawyer came to him on behalf of a wealthy American who was anxious to establish his pedigree. There was a tradition in the family that an ancestor had gone to New York from Barbados in the seventeenth century. Proof was needed. Mr. Sainsbury referred to the Board of Trade papers of that period, and there found the name of the ancestor in question, in a list of passengers sailing from Barbados to New York. "That information," said the lawyer to Mr. Sainsbury, "is worth a thousand pounds!" He did not, however, act up to his generous impulse, as Mr. Sainsbury, with a merry laugh, assured an inquirer. A competent successor, as editor of the Colonial series of Calendars, has been found in the Hon. John Fortescue, a Devonshire man, whose interest in the history of the extension of the British Empire is hereditary. The historical labors of Mr. Fortescue are not confined to the preparation of these valuable calendars. He has made various interesting contributions to the literature of the day upon military expeditions and other matters.

Besides the calendars dealing with departmental papers, the Record Office has prepared and published hundreds of volumes that tell of the contents of documents preserved in the Record Office itself and among the archives of foreign countries. The latter include calendars of state papers preserved at Simancas and other depositories in Spain, and of state papers and manuscripts at Venice. Of the care with which these publications are edited, it is only necessary to say that the names of the editors include G. A. Bergenroth, Pascual de Gayangos, Martin Hume, and Rawdon Brown. Other calendars of British records include acts of the Privy Council of England, Treasury papers, state papers relating to Ireland, state papers relating to Scotland, and others that are very helpful in the several branches of historical research. Besides assisting students by making known the nature of documents, at home and abroad, that throw light upon the history of the United Kingdom, the authorities of the Record Office have gone afield, and caused to be printed or reprinted and edited the old Chronicles and the Memorials which are the sources of the early history. American students who may be concerned to learn the nature of the various publications emanating from the Record Office can obtain, gratis, a catalogue of them from the Queen's printers, Messrs. Eyre & Spottiswoode, East Harding Street, Fleet Street, London, E. C.

The same liberal spirit shown in the publication of the calendars and other pointers to the contents of the national records, extends to the admission of workers to the Record Office itself and to the examination of documents. The documents belonging to the great departments of state are merely "deposited" at the Record Office. They are treated as if they were still in the Government offices to which they respectively belong. The heads of those departments fix the limits within which their records may be inspected by inquirers. The Deputy Keeper merely gives effect to the general and special permissions accorded by the

departmental chiefs. At the present time the following are the dates after which such documents cannot be consulted by the public without special permission from the departments concerned:

Treasury.....	December 31, 1759
Foreign Office (with some exceptions),.....	December 31, 1802
Colonial Office (with some exceptions),.....	December 31, 1803
Home Office.....	December 31, 1772
Admiralty.....	December 31, 1796
Admiralty, Logs.....	December 31, 1840
Admiralty, Muster Books.....	1860
Board of Trade.....	January 29, 1820
Audit Office.....	1821
War Office.....	June 19, 1857

To obtain permission to search after-date papers, the student must address himself, in writing, to an Under Secretary of State, giving precise information as to the particular papers he wishes to have access to, and the nature of the use he proposes to make of the contents of the documents. Such permission is given only after strict inquiry. The present Deputy Keeper has here, again, conferred a boon upon students by getting the periods of search materially extended. Take, for instance, the limit for the Records of the Colonial Office, now brought down to 1802. Only a few years ago, such documents could not be searched when of later date than 1760, excepting by special permission from the Colonial Office. Under the same progressive administration of the Record Office, the hours of work have been extended by half an hour daily, which means an additional week in each year gained by searchers.

There are three separate search-rooms for the use of the public. These are: the literary search-room, the legal search-room, and the Government search-room. In the literary search-room, which is that most frequented, every kind of record, excepting the after-date state-papers above mentioned, is open to inspection, without restriction or payment. The daily average attendance here cannot be less than twenty-five. Not seldom there is hardly room enough for those having business there. From October to April may be regarded as the busiest time. It is said that the applications for documents in this room number considerably over 30,000 a year. The use of ink is strictly forbidden, and students must manage as best they can with pencils. In the legal search-room, records are open to the public without restriction, for researches made solely for historical or literary purposes. Where documents are consulted for matters of a business nature, fees must be paid by stamps. The Government search-room is mainly reserved for those who have special permission to search after-date papers. In this room may, at times, be seen such famous historians as Dr. Rawson Gardiner and Dr. Stubbs, the Bishop of Oxford. Here also are at work Dr. Theal, on behalf of the Government of the Cape of Good Hope; Mr. Bonwick, on behalf of the Government of New South Wales; and Major Smyth, on behalf of the Government of Canada—all with their staffs of copyists, engaged in the transcription of documents relating to the early history of their respective colonies, that will hereafter be placed among the archives at Capetown, at Sydney, and at Ottawa. Does the grandeur of the Great Republic disdain to profit by the example of these colonial governments?

Each of the search-rooms has an experienced officer as its superintendent. These gentlemen are most helpful to students, and their services have from time to time been

acknowledged by the leading writers of the day. The superintendents have their own special work, such as the compiling of calendars, in hand; but, interrupt them as you will, they are ever courteous and obliging. The Superintendents at the present time are: Mr. G. H. Overend, in the Legal Room; Mr. Edward Salisbury, in the Literary Room; and Mr. Hubert Hall, in the Government Room.

There is practically no restriction upon admission to the Record Office for genuine workers; unless it be the requirement that persons shall not appear there in "unseemly dress." The rules governing the use of the institution are short and plain. The hours of admission are from 10 A. M. to 4:30 P. M. on every working-day throughout the year, excepting on Saturday, when the hours are from 10 A. M. to 2 P. M. On coming into the entrance-hall of the building, the student must forthwith write his name and full address in the attendance book kept there. He must also give up to the hall porter any umbrella, stick, or bag, brought by him. He will then proceed to the room where his researches are to be carried on. Arrived there, he takes a seat, and, by placing his overcoat upon it, or setting down his note-book or his hat upon the table in front of the seat, the place will be regarded as his for the remainder of the day. If the student knows the particular document or class of documents for which he is in quest, he at once fills up a form, with the necessary particulars, and within a reasonable time an attendant will bring the manuscripts required. If the student be in doubt, he can often get all the help he needs from one of the attendants, without troubling the Superintendent. Silence is, as far as practicable, required in the search-room. Exclusion or refection from the search-rooms is almost unheard of, but rule 21 provides for it.

Besides his own proper duties in connection with the administration of the Record Office, the Deputy Keeper is charged with an honorary duty which closely concerns the cause of historical research. He is responsible for the general superintendence of the Historical Manuscripts Commission. In this he is assisted by the Secretary to the Record Office, who is also secretary to the commission. The chairman of this most useful commission is the Master of the Rolls for the time being. When Lord Escher lately retired from that high office, a fresh commission was issued. This comprises the following persons: Sir Nathaniel Lindley, Master of the Rolls; the Marquesses of Salisbury, Lothian, and Ripon; the Earls of Crawford and Rosebery; the Viscount Escher and Lord Edmond Fitzmaurice; Dr. Stubbs, the learned Bishop of Oxford; Lords Acton and Carlingford; Sir Edward Fry and Sir H. C. Maxwell Lyte; and those front-rank historians, Mr. Lecky and Mr. Rawson Gardiner. The commission is appointed to ascertain what unpublished manuscripts are extant in the collections of private persons, corporations, and institutions, which are calculated to throw light upon subjects connected with the civil, ecclesiastical, literary, or scientific history of the country; the main object being the discovery of unknown historical and literary materials. To give effect to their commission, application is made, from time to time, to the nobles and gentlemen of England, for permission to examine their muniment-rooms; assurance being given that nothing relating to title-deeds

shall be divulged, and that papers of a private character shall not be examined. The Commissioners' appeals have met with a most generous response, and their published reports are invaluable for historical purposes. Some of the examinations are made by inspectors, appointed by the Deputy Keeper, at the houses where documents are preserved. In practice, it has been found more satisfactory, with the consent of the owner, to remove the papers to the Record Office itself, for examination there. Some of the collections preserved in the stately homes of England are very extensive. Already have seven volumes been issued by the commission upon those at Hatfield, Lord Salisbury's historical home; and yet the work seems only to be begun. The historical materials which have been brought to light since the commission's first report, in 1870, are simply priceless. Many of the appendices to those reports contain interesting information relating to the colonial period of American history. The papers of Lords Townshend and Dartmouth simply abound with materials for that history.

During the twelve years that he has filled the office of Deputy Keeper of the Records, Sir Maxwell Lyte has not only vigorously administered the department, and rendered its precious stores of documents more available to the public, but he has also exercised his best influence for the enlargement of the Record Office buildings. When the contemplated extensions have been carried out, and the old buildings yet remaining have been moved away, the beautiful architecture of the Record Office will then be properly appreciated. It was Lord Escher who, when Master of the Rolls, selected Sir Maxwell for the office of Deputy Keeper. At the time, the appointment caused bewilderment to the older members of the Department, for the new chief was not a member of the staff, although he had done a good deal of work as an inspector of private muniments for the Historical Manuscripts Commission. He was, on the other hand, an Eton boy and an Oxford man, who had written histories of those two seats of learning. Then, the rule for the compulsory retirement of officials at sixty-five years of age had not yet been enforced, and there were some elderly gentlemen on the staff who no doubt felt that they had been "passed over." The new Deputy Keeper had no intention of being a mere figure-head, while the elderly gentlemen, on their part, regarded supervision as interference. In one case, a mild suggestion from the chief brought upon him the crushing denunciation, "Mr. Lyte, I was on the staff of the Record Office before you were born!" This statement was quite true, and even now the Deputy Keeper has hardly attained his fiftieth year. But the old order has given place to the new, and the Deputy Keeper, the Secretary, and the whole staff work together in general accord for the good of the public. The high traditions of the department are maintained, and the dignity of the Record Office has been enlarged under its present head. Americans on their travels in Europe will see, in the English cemetery at Nice, the grave of the Rev. H. F. Lyte, the author of "Abide with Me" and of other beautiful hymns. It is a grandson of his who now so ably fills the office of Deputy Keeper of the Records. N. D. D.

Correspondence.

A LITERARY PARALLEL.

TO THE EDITOR OF THE NATION:

SIR: It is remarkable what a similarity there is between Paul Leicester Ford's novel, 'The Story of an Untold Love,' and M. Edmond Rostand's play, 'Cyrano de Bergerac,' which has set all France in a furor. M. Coquelin crowds the Porte-Saint-Martin nightly with it; Sir Henry Irving is to bring it out in London, Richard Mansfield in New York. M. Jules Lemaitre declares it "le plus grand succès que j'ai vu"; and M. Émile Faguet, "le plus beau poème dramatique qui ait paru depuis un demi-siècle." The latter even claims that, like "Le Cid," like "Andromaque," like "L'École des Femmes," like "Hernani," like "La Dame aux Camélias," it will mark an epoch in French literature—"ouvre le vingtième siècle d'une manière éclatante et triomphale."

In "Cyrano de Bergerac" the stupid cadet, Christian de Neuville, gains the love of the *précieuse* Roxane through the intellectual mediation of Cyrano, who also loves her. Cyrano writes love-letters for the young cadet, even disguises his voice, and pleads, hidden, in passionate verse of love to Roxane, who believes she hears all from Christian at her side. She loves Christian, as she says, not for his beauty, but for his soul, his heart; this soul, this heart are those of Cyrano de Bergerac. Later she is undeceived.

In "The Story of an Untold Love," Whitely, the stupid millionaire editor, publishes as his own the work of the brilliant but obscure writer Rudolf Hartzman (alias Donald Maitland) in order to gain the affections of Maisie, the modern *précieuse*, whom they both love. She perceives "that no man but one of noble character and pure moral mind could write from such a standpoint," and is almost won. Later she discovers the deception, and gives her hand, of course, to Hartzman-Maitland.

Donald Maitland is cousin to Maisie, Cyrano de Bergerac to Roxane. In place of Christian, the inane peacock, Cyrano, the "perfit gentil knight," and Roxane, the sweet *précieuse* of Louis XIII. chivalry, put Mr. Whitely, the inflated Philistine, Rudolf Hartzmann (alias Maitland), the modern Sir Walter Scott, and Maisie, the rather sophisticated heroine of *fin de siècle* American literary life, and you have practically the same story. All contiguity ends here, of course, and is simply fortuitous.

EDWARD MEYER.

WESTERN RESERVE UNIVERSITY.

FOREIGN EXPRESSAGE.

TO THE EDITOR OF THE NATION:

SIR: As regards my statement that ten copies of the book in question could have been sent by mail for 90 cents, Miss Hapgood remarks that she is "not so sure about that." My assertion, however, was not a matter of conjecture, but of fact. Six copies of the book in two packages were sent by mail to the same address and reached their destination in two weeks at a cost of 52 cents for postage. It is easy to calculate that ten copies of the book sent by mail would have cost less than 90 cents. I

have lived in Germany altogether more than twenty-five years, and during my residence there have received scores of books from the United States, England, France, and Italy. These books have been usually sent by mail as printed matter, and have always been promptly delivered without any extra charge. From England I have received several times a dozen or more books sent in a single package through the post for parcels. In such cases the package must pass through the custom-house. A card is then brought to the dwelling of the person to whom the package is addressed, informing him that it is in the custom-house. For this service a fee of 10 pfennigs (about 2 cents) is charged. He then goes or sends to the custom-house, where the official, on being informed that the package contains books, very rarely opens it, but marks it free and permits it to be carried off without any charge whatever.

Miss Hapgood gives her experience with parcels sent from Russia to Germany, but these packages must have been sent by express agencies or as freight. She does not seem to be aware of the fact that there is no Government package postal service between Russia and Germany. In this respect Russia is in precisely the same condition as the United States. The additional dues of which she complains were levied by the agents of the Russian express companies in Germany, just as similar dues are levied by the German agents of American express companies. Her experience, therefore, only confirms my statements concerning foreign expressage. There is no German monopoly of the kind of which she speaks, and her assertion that the German Government "permits that packet company to seize prepaid mail matter at its own sweet will" is utterly untrue. Her censure of the stamp tax on newspapers in Austria is perfectly just, but wholly irrelevant to the subject under discussion.

Repeated efforts have been made to induce the American Government to establish a package postal service with other members of the postal union; but these efforts have been constantly defeated by the American express companies. A contribution to a campaign fund is of more importance in the eyes of our politicians than the general welfare of the people. P.

Notes.

D. Appleton & Co.'s first spring announcements embrace 'Outlines of the Earth's History,' illustrated, by Prof. N. S. Shaler; 'The Play of Animals,' by Prof. Karl Groos; 'The Art of Taxidermy,' illustrated, by John Rowley; 'Familiar Life in Field and Forest,' illustrated, by F. Schuyler Mathews; 'Studies of Good and Evil,' by Prof. Josiah Royce; 'Political Crime,' by Louis Proal; 'Psychologic Foundations of Education,' by Dr. William T. Harris; 'Italian Literature,' by Dr. Richard Garnett; and 'A French Volunteer in the War of Independence (The Chevalier de Pontignaud),' translated by Robert B. Douglas.

Macmillan Co. will make a book of Mr. Frank Stockton's serial now running in *St. Nicholas*, with a slightly altered title, 'Buccaneers and Pirates of Our Coasts,' and will shortly have ready 'The Loves of the

Lady Arabella,' a novel by Miss Molly Elliot Seawell.

By special arrangement with the Macmillan Co., the Crosscup & Sterling Co., No. 114 Fifth Avenue, will publish in June a new, complete, and limited edition of the Life and Works of Alfred, Lord Tennyson, in fourteen volumes, of which four will contain the Memoir by his son, and will be issued also separately to match the present large-paper editions of the Works. The number of copies will be 500.

Thomas Whittaker announces 'Faith and Doubt in the Poets of the Century,' by the Rev. R. A. Armstrong; 'Henry VIII. and the Reformation of the Church of England,' by the Rev. William Frederick Faber; 'The Construction of the Bible,' by Prof. Walter F. Adeney; and 'The Conquered World,' by the Rev. Robert F. Horton.

Fleming H. Revell Co. state that the second volume of the Rev. James S. Dennis's 'Christian Missions and Social Progress' (the first already reviewed in these columns) will not be ready till late in the autumn. It will be fortified with statistical tables.

'English Etymology,' a select glossary by Prof. Friedrich Kluge of Freiburg and Prof. Frederick Lutz of Albion College, Mich., is to be issued at once by D. C. Heath & Co., Boston. It aims to serve as an introduction to the history of the English language.

Ginn & Co. have nearly ready 'The Ethics of Hobbes,' by Prof. E. Hershey Sneath of Yale.

L'Echo de la Semaine, Boston, has begun the publication of a new series of select short French stories, with English notes by Prof. A. N. Van Daele of the Massachusetts Institute of Technology.

David Nutt, 270 Strand, London, expects to publish on May 15 'The English Emersons, Emersons, or Embersons,' by P. H. Emerson, M.B., B.A. (Cantab.). On March 12 discovery was made of the baptisms of the children of Thomas and Elizabeth Emerson, who emigrated to Ipswich, Mass., in 1638, and from whom the poet Emerson was descended. The edition will be limited as follows: 50 copies *de luxe* and 250 copies ordinary, at \$16.00 and \$8.00 respectively by subscription in advance.

There is a steady flow of reprints to our table, and we must report progress on some of them. From Messrs. Scribner we have volumes 3, 4, 5 of the archaic 'Spectator,' edited by G. Gregory Smith, each with its portrait frontispiece—of Steele, Pope, Budgell—and all handy to hold if not (as it seems to us) enticing typographically. The same firm (in connection with Chapman & Hall, London) have added eight imposing volumes to their Gadshill Dickens, viz.: 'David Copperfield' (2), 'Our Mutual Friend' (2), 'Dombey and Son' (2), 'Great Expectations,' and 'A Tale of Two Cities.' Mr. Lang's introductions are not devoid of signs of the weariness which such perfunctory undertakings seldom fail to engender, and they are hardly to be compared in interest with the businesslike historical prefaces of the younger Dickens. The Scribners also add a volume (fifth of the 'History of Frederick II.') to the very handsome and very inexpensive Centenary Edition of Carlyle; and 'Rhymes of Childhood' to the Complete Works of James Whitcomb Riley (Homestead Edition)—a collection not exactly described by its title; and, so far as it is, raising a question, not of the poet's cleverness, but of the desirability of filling the youth-

ful mind with (generally) dialect jingle and bad grammar. Mr. Riley's sympathy with childhood none will dispute.

A tasteful volume, in compressed but readable print, has been made by Small, Maynard & Co. of Walt Whitman's Complete Prose Works, with the early portrait for frontispiece, and with other pertinent personal illustrations, including (strange to say) the well-known physiognomy of Elias Hicks. Very much of this collection possesses an historical interest, and it is a pity that an index was not joined to it; witness the accounts of Hicks, Emerson, Father Taylor, etc., and the war experiences generally.

The admirable "Little Masterpieces" edited by Prof. Bliss Perry (Doubleday & McClure Co.) are extended with 'Benjamin Franklin'—being characteristic and famous excerpts from his Autobiography, Poor Richard, etc.; and 'Daniel Webster'—his 'Adams and Jefferson' and Reply to Hayne. Both have excellent portraits.

The special feature of the thirty-fifth annual edition of 'The Statesman's Year-book' (Macmillan), a plump volume well past the limit of 1,000 pages, is the series of maps and diagrams in the forefront. The first of these is of West Africa with reference to the Niger question. The disputed Hinterland is relatively a small territory, but as it lies for some three hundred miles along the river, fronting the Royal Niger Company's domain, it to that extent affects free navigation up to the boundary of the acknowledged French "sphere," which then envelops both banks to the sources. But Germany too is at hand to profit by a division, and the whole parcelled situation finely suggests the pains the western Powers have been at to establish points of contact and friction in barbarous regions. A series of three colored maps exhibits the world viewed as the recipient of British exports. Finally, the rise and fall of imports and exports for the leading nations of the earth in the past twenty-five years is shown diagrammatically in several folded plates. The general contents of this firmly established handbook need no praise.

'Port Royal Education,' by Félix Cadet, translated, with an index, by Adnah D. Jones (Scribners), contains two hundred pages of extracts from the writings of MM. de Port Royal, preceded by a treatise on these writers, their works and their activity in the short-lived but influential Jansenist schools. The book is well adapted for the many who have no access to or taste for the numerous and heavy publications emanating from the members of Port Royal, or who do not feel disposed even to tackle the voluminous histories of that famous institution.

The author of 'Dodo' has made a much more agreeable novel of 'The Vintage; A Romance of the Greek War of Independence' (Harpers). It is a pleasant book, in spite of the horrors of the scenes at the siege of Tripoli, and has sufficient historical foundation. The brave young peasant, Mitsos, as he works among the vines and "sings in his boat on the bay," is quite idyllic; and he becomes heroic in his personal sacrifices for his country. The military and political situation during the quarrel of the bishops with the army has something Eastern and medieval, which perhaps helps to explain some of the difficulties in the way of establishing Greece in full independence. Vanity, pride, and self-seeking are fearful enemies to patriotic effort, and Mr. Benson's 'The Vin-

tag' is but another testimony to the need of further purging for this poor nation.

The April number of the *American Historical Review* (Macmillan) offers a large proportion of interesting themes, of which two in particular are calculated for either half of the Anglo-Saxon world. Dr. Charles Gross throws a deal of light on "The Early History of the Ballot in England," concerning which much had been forgotten even by reformers from Bentham to Macaulay, and incidentally plucks from the Dutch cap another feather placed there by the late Douglas Campbell. Dr. Gross discovers secret voting in some boroughs as early as the fourteenth century. "In our age of jealous office-seekers," he remarks, "we should remember that for centuries office-holding was regarded [in England] as a burden; that the election originally determined upon whom an irksome duty was to be imposed." Prof. Jameson's paper on "The Early Political Uses of the Word *Convention*" begins on this side of the Atlantic and ends in Scotland, and is really a very learned gloss on the rubric *Convention* in the Oxford Dictionary, albeit not obviously dependent on this authority. Notable, among the book reviews, are an anonymous criticism of Bache's 'Life of General Meade' and Prof. Macvane's survey of the Report of the Venezuela Commission, which, he finds, in spite of anti-British bias, "casts a curious light on the extravagant statements once current here as to 'English expansion' of claims beyond those made by the Dutch." Of great interest is the announcement that the third report of the Historical Manuscripts Commission will present a first instalment of the correspondence of John C. Calhoun.

According to a compilation made by the *Schlesische Zeitung*, covering the period from the close of the Summer semester of 1896 to the beginning of 1898, the twenty-one German universities bestowed the doctor's degree on 2,371 candidates. The largest number is credited to Erlangen, namely 333, while Berlin follows with nearly one hundred less, namely, 237. Munich reports 220, Würzburg, 181; Leipzig, 177; Greifswald, 133; Heidelberg, 116; Freiburg, 107; Göttingen, 103; Halle, 93; Bonn, 89; Rostock, 83; Kiel, 81; Marburg, 72; Jena, 70; Breslau, 64; Strassburg, 60; Tübingen, 58; Königsberg, 48; Giessen, 38; and the Catholic Academy at Münster, with only two faculties, 9. These figures are not at all in proportion to the attendance. In this respect Berlin, Munich, and Leipzig far outdistance all other competitors and form a group by themselves. Rather singularly, the three Bavarian universities, Munich, Erlangen, and Würzburg, furnish a contingency of 733 new doctors, while the nine Prussian universities, together with Münster as the tenth, reported only 928 promotions. About one-half of these promotions were in the medical department, namely, 1,187, followed by the philosophical faculties with a total of 829, the law, with 339, and the theological, with 20. The last mentioned figures are about the average for the theological faculties, which grant a D.D. only *honoris causa* and no longer in course. A doctor of divinity is as rare in Germany as he is frequent in America. This is, on the face of matters, noteworthy, since Germany is the chief factor and force in the theological ups and downs of our day.

The relief map of New Jersey emanating from the State Geological Survey has

been provided with a very desirable and convenient overlay on transparent paper, bearing the geographical names of the leading towns, mountains, lakes, and other localities. This overlay is in three sheets, readily applied to the mount for the purpose of orientation.

—The Committee of Seven appointed by the American Historical Association at its meeting at Christmas, 1896, to consider the question of the teaching of history in the secondary schools of the country, held an important meeting at the University of Michigan on April 8 and 9. At this session the committee carefully investigated the general subject of college and university entrance requirements in history, with special reference to the kind and amount of history to be accepted as units in the so-called optional system of entrance examinations, as well as to what should be included under a rigid system of entrance requirements. The question of the lines of division between periods of history, and the content and emphasis within periods, were again discussed with a view of determining what periods and branches should be recommended for one, two, three, or four-year history courses in secondary schools. Although certain extremely important conclusions were arrived at, they have not as yet been finally formulated, but it is hoped and expected that at the next meeting of the American Historical Association, to be held in New Haven in December, the work of the committee will be so far advanced that a full report of its deliberations and recommendations may be presented to the Association, and, if approved, through it to secondary educators throughout the country. It has seemed at once unadvisable and impossible to present, as had been hoped, either a full or partial report before the opening of the next school year. The final report will not by any means be merely a study of college entrance requirements in history, but a study of history teaching in secondary schools generally, as regards courses, methods, equipment, and bibliography. It will embody the results of conferences with teachers in secondary schools, circulars, study of problems abroad by specialists and in this country by communication and personal consultation with teachers' associations everywhere. A bibliography of the entire field of history as a pedagogical subject is now being prepared by a student of the Library School at Albany, N. Y. So far as English titles go, it will be nearly exhaustive, and a full (through not a complete) bibliography of titles in modern European languages will be added. Besides this, shorter bibliographies of special value to teachers will be issued as soon as may be. Further, the committee hopes to present in its report several general methods of teaching history, numerous and flexible enough to be adapted to most contingencies and personalities in history instruction.

—Besides offering one European and one American fellowship each year, the Association of Collegiate Alumnae has undertaken the task of recommending women who wish to study at foreign universities. It occasionally happens, among women as among men, that some one who is thoroughly unfitted to profit by the difficult lectures given at the German universities, wishes, for some freakish reason or other, to listen to them. Such persons are very apt to conduct themselves in all sorts of queer ways, and to cast dis-

credit upon the students who come for the purpose of serious study and who have had the right sort of preparation. A committee has therefore been formed by the Association which has added to itself distinguished professors of different American colleges, and which has put itself in communication with the principal universities of Germany. It will give an official letter of introduction to any young woman who applies to it and who can show that she has had an adequate amount of previous training. The idea has been received with much favor by the German university professors, who are often not in a position to know the difference between (say) Walla Walla University and a university of a more recognized standing. As an illustration of the good work which women are now doing in the higher ranks of the profession of teaching, it may be mentioned that one of the applicants this year for a letter of recommendation is already a professor in full charge of the department of mathematics in one of the agricultural colleges of New England, with several assistants under her who are men. The president of the college writes concerning her: "Miss — is an excellent teacher, and has performed all her duties to the full and entire satisfaction of the president and corporation of the institution. The corporation has now given her a leave of absence for a year and a half. She has served on the committees for our courses of study, has been secretary of the faculty, and chairman of the board of examiners. In all these positions she has dispatched the work that presented itself with more than ordinary ability and cheerfulness of disposition." It is not every professor of the opposite sex who can show so good a record as this last.

—Mr. Edward Dana Durand's 'Finances of New York City' (Macmillan) is in part a compilation and in part a critical history of the subject. The statistical information given is valuable, and the author's history presents a good view of the whole subject. As a whole, the researches of the author tend to confirm the popular view that the trend of municipal forces in New York is towards a highly centralized management in the hands of a representative board. He says, indeed (p. 281), that "a large part of the people" have at last come to believe that the city legislature would become an improvable body (capable of financial control) if it only had more power; but his own review shows that the old legislature was deprived of its power because of the corrupt use made of it. He admits that the new Municipal Assembly is only the simulacrum of a legislature, and that the real control of the finances remains in the hands of the Board of Estimate and Apportionment, except so far as the Legislature usurps it and the courts limit it. The great American contribution to municipal economics is really the discovery that the judiciary may be used to curb the wastefulness of debt-contracting bodies, through a constitutional limit. Were it not for the 10 per cent. limit on expenditure introduced into our Constitution some years since, we should be now on the high road to a new Tweed Ring. Mr. Durand does not seem to be in sympathy with the theory that a city is a business corporation which those who have something at stake ought to govern. His objection is that a city is a place of residence, where thousands of citizens who cannot accumulate property are compelled to live,

and that the poor do actually pay taxes through rent or prices of commodities (p. 283). We do not perceive what bearing this has on the question, which is whether people should be allowed to raise money out of property they have not accumulated, and spend it on themselves. The only check on this that has ever been devised is to say that only the thrifty shall tax others. It is only in politics that the man who cannot manage his own affairs with foresight and prudence is allowed a voice in the management of the concerns of his fellows. It may, of course, be said on the other side that, although the present tax-laying body is fairly representative of the property-owners, it is still often very wasteful and lax; but defects will always exist. Because you cannot have a perfect check is no reason for not having any. The moral of the book is that every cent that can be spent will be spent. Is the dream of a great community permanently rich and at the same time without debt as far off as ever? We notice (p. 335) that the debt of San Francisco is merely nominal.

—The Cambridge (England) Antiquarian Society has published the first volume of the Luard Memorial Series, entitled 'Grace Book A,' and containing the proctors' accounts and other records of the University of Cambridge for the years 1454-1483 (Cambridge: Macmillan & Bowes). These ancient accounts are the dryest possible reading, but have their importance for the student of the days before the Renaissance. It is interesting to reflect that there was such a thing at Cambridge as a University Library before printed books were known except as curiosities. The University made but a precarious provision for the Librarian's salary. In 1463 (November 3) there is a memorandum providing that this functionary, called "custos librarie," should receive 40 shillings annually from the rent of the schools of Canon Law. On June 24 there is an entry of 20 shillings paid him, but this entry was subsequently erased. The Library is building when these accounts open. Expenses for the glazing of its windows and for lead are itemized in June, 1455. Also (and this is one of the heavy expenses of the University for the new Library) we have repeated sums laid out upon chains for chaining books to the library desks. The fire in the new college of Kings endangered the books, and the University paid roundly for the care of them during that emergency. In July, 1470, the University receives fourteen books, chiefly from the Earl of Worcester, pays for the covers, clasps, and chains; also for instruments by means of which they were labelled with their donors' names, as well as for the engrossing of a letter concerning the gift. Lists of the books on tablets hung in the Library were provided for. Scribes were paid for writing a list of all the books, which was sent to the Chancellor in 1477. The Chancellor figures as the giver of twelve books, for which the University provides chains in 1478. In the following year he gives twenty-seven volumes. The list of 1477 thus appears to have been sent to him as a means of enlightening his generosity. In his editorial Introduction, Mr. Stanley Leathes gives a list of the books pawned, many of them several times, for ready money. It is curious to note the connection, at Cambridge as at Oxford, of the beginnings of the University Library with this practice of raising the wind by a deposit of

one or more volumes as security for a loan. Also, the casual mention in 1486 of a printed book received "ex dono Magistri stoyle" is noteworthy.

—The need, practically felt and practically provided for, of being on good terms with generous benefactors is illustrated by an item of five marks expended by the "dominus Cancellarius" in 1464 "pro placatione domini Comitis Wigornie." This is apparently the same John Tiptoft, Earl of Worcester, who gave books to the Library. During the illness of Henry VI., the University expended sixpence upon occasion of a procession made in 1454 for his recovery, and in 1459 they pay fourpence to the cross-bearer "in processione pro bono statu regis et regni." In the same year they pay Master Oliver King, the Proctor, 27 shillings for expenses in seeking out the King with letters from the University, and a further sum of 25 shillings and 4 pence for expenses in attending upon the King's chancellor, and securing his good will in a matter of University business. In the following year, we mark an item of 4 shillings and 8 pence "pro vino pro domino Cancellario anglie," so that entertainment would seem to have been one sure means of currying favor. The whole arrangement and administration of "chests" founded by benefactors who wished to secure for their souls the prayers of frequenters of the University, gives a remarkable insight into mediæval practices. These chests, containing the sum bequeathed by the several benefactors whom they commemorated, were deposited in churches and administered by two Masters. Loans upon pledges were made, and if it came to a sale of the pledge, the sum loaned reverted to the chest, the balance to the borrower, who was bound to pray for the benefactor from whose chest he received his loan. Annual masses, too, for these benefactors were celebrated by the University, and their names were also gratefully mentioned with those of other benefactors at general masses. Several of these chests figure in these proctors' accounts from 1454 to 1487.

—The late Guido Fridolin Verbeck, who died at Tokyo on the 10th day of March, was the best alien speaker of Japanese in the world. He was "a man without a country," having left Holland before mature age, and the United States before naturalization. He represented the best traditions of both countries, while in heart and soul an American. Born in Zeist, Utrecht, January 23, 1830, this son of the Lutheran burgomaster was thoroughly educated in Dutch, German, French, and English. He thus obtained that mental discipline which enabled him to talk easily five languages, and to use eight with scholarly accuracy. His course in mechanical engineering at Utrecht further fitted him for nearly forty years of the most varied usefulness in Japan. In the early fifties he spent several years in Arkansas and Wisconsin, building marine engines; but his missionary zeal, caught in childhood from the Moravians of Zeist, led him into the ministry through the Auburn Theological Seminary. With the Rev. Drs. S. R. Brown, D.D., and Duane B. Simmons, M.D., he went to Japan, reaching Nagasaki in November, 1859. He began at once to help inquirers in all paths of science, and quickly gained the confidence of high and low. He was made teacher of the Government school of languages, and under him were educated scores

of men of the Samurai class who have since been active or eminent in making the new Japan. When that students' movement, continued during a century, brought about a revolution in 1868 and set the young Mikado in supreme authority in Yedo (now changed to Tokyo), which was made the national capital, the leaders called their old friend and helper from Nagasaki to aid and advise them. For several years Mr. Verbeck was the sole confidential adviser of the new Government. During the decade of his Tokyo service as unofficial attaché of the Cabinet, his multifarious services were those which only a cosmopolitan linguist and scholar, absolutely trusted by a naturally suspicious and sensitive people, could perform. He translated into Japanese the Code Napoléon, Bluntschli's 'Staatsrecht,' 'Two Thousand Legal Maxims,' with commentary, the constitutions of the states of Europe and America, forest laws, compendiums of forms, and hundreds of other legal and political documents. He elaborated the national scheme of popular education in 1871. He was immediately influential in stopping persecution of native Christians. It was he who in 1869 conceived the idea, and planned the details, of that embassy round the world which in 1871-'73 made Japan so well known abroad, and which so potently turned the national mind to ideas of progress. When its personnel was made known, Dr. Verbeck found that over one-half were his former pupils at Nagasaki. Returning to direct missionary work in 1878, Dr. Verbeck spent seven years in translating the Book of Psalms. In 1890, desiring to become an American citizen, and finding insuperable obstacles on account of long absence, he asked to be naturalized as a Japanese. Unable as yet, in view of the revision of treaties, to grant his request, the Japanese Government gave him a passport allowing him or any member of his family to reside or travel anywhere in the Japanese empire. Rarely seeking or allowing even ordinary publicity concerning his work, it is to be hoped he has left some reminiscences or sketches of history.

GABRIELE D'ANNUNZIO.

The Intruder. Translated by Arthur Hornblow. George H. Richmond.

The Maidens of the Rocks. Translated by Annetta Halliday-Antona and Giuseppe Antona. George H. Richmond.

The American translator of Gabriele D'Annunzio's novels has not followed the order of their composition. More than a year ago Mr. Hornblow published 'The Triumph of Death,' the third of a series called 'Romances of the Rose'; now he gives us the second of that series, known in Italian as 'L'Innocente,' in French as 'L'Intrus,' and in English as 'The Intruder.' In this arrangement Mr. Hornblow appears to have been guided by the patent-medicine formula which advises a mild dose at first, to be increased if the system can stand it. The public, having absorbed 'The Triumph of Death' without serious revolt, is assumed to be able to stomach 'The Intruder.' Of the two, 'The Intruder' is the more concentrated and vehement study of lust. The author is not so often diverted from his theme by the attractions of other forms of disease in the world about him. His imagination, with its power of producing vague, mystic impressions, its detachment from actuality, has

almost no share in the performance. His consciousness of corruption is equally evident, but his perception of any reasonably healthy and clean estate even more obscure and limited. The story is a confession by Tullio Hermil of his indiscriminate adultery, of his wife's infidelity, and of his murder of her child—a crime tacitly acquiesced in by her.

The author's ideal of virtue and high morality is expressed in Juliana Hermil, and needs no comment. In one way the whole book is less shocking than this bare statement of the drama, for neither Hermil, nor Juliana, nor the sacrificial infant has much objective reality, but serves chiefly to give definiteness and continuity to subjective discussion of instincts, impulses, and emotions which the word "depraved" describes correctly but not harshly. The incidents, like the persons, are of no great importance for their own sake; nothing is very significant except the spectacle of a man abnormally sensitive to physical impressions, dismally indecent, sometimes brutally coarse, thrusting himself before the world naked and unashamed. It is true that he has not thrust himself upon an English-speaking world, has not deliberately exposed his unhappy personality to a people alien in temperament, unsympathetic in thought, and of hostile literary tradition. Mr. Hornblow and others must bear the burden of that indiscretion and settle it with their phantom consciences. It would be wise for many reasons if English reviewers would consent to ignore these miserable translations which put the author in the worst possible light. But the shadow of a European reputation is upon us, and we cannot bear an imputation of cowardice, or stupidity, or defective culture, or a quite ridiculous, and of course hypocritical, preference for reticence about the infamies of human nature. So, far from observing a policy of silence during the last two or three months, English reviewers have been discussing the appalling Italian with a fluency which he might envy, and often with an obscurity such as he achieves only in his most mystic moments.

All of us, English and American, know perfectly well that the most licentious of our own literature is vigorous and clean in comparison with D'Annunzio's "Romances of the Rose," and that, in these later days, a similar corruption has been paraded only by a few emasculated creatures whose notoriety has been transient. The most unscrupulous and ingenious of us all would have to be hanged at daybreak if our salvation should be made dependent on a clear and exact statement of any loss to English literature or life by such limitation. To make these simple statements would seem an easy duty, yet that European reputation, and the terror of seeming to care more for morals than for art, have, in the blunt phrase of the street, knocked most of the critics silly. They all hasten to assure us that in English justice cannot be done to one who needs the benefit of both justice and mercy, but here is the beginning and end of certainty and unanimity.

The great attention given to the morality of the books shows how we can't help caring more for that than for any kind of art that chiefly defines itself by shocking every feeling for morality. It is discovered by one buoyant spirit that D'Annunzio is not immoral because, though lust is his theme, he deals with it philosophically, and his philo-

sophy condemns it. By his philosophy is probably meant his speculations on the causes of effects, his implications and conclusions about the reason of existence and its meanings. Though his philosophy is, indeed, a most voluble arraignment of lust, to a mind unconcerned for justification or apology it must also appear the essence of his corruption. It refers all of life to physical sensation, degrades mind, and annihilates spirit. The philosophy summarized in "Let us eat, drink, and be merry, for tomorrow we die," proclaims at least a hearty animalism, and is a message of light and joy beside D'Annunzio's "Let us desire and sate and loathe ourselves, only to plunge into grosser abomination, until, worn out, diseased, mad, we die." A philosophy which assumes universal uncleanness, indicating no means of purification while impotently frothing about the unpleasantness of our state, is not a philosophy to temper representations of immorality.

The critics who sagaciously wink at the question of morals and expend themselves in eulogy of the author's perception of artistic beauty and power "to recreate a beautiful world" out of any material, however unpromising, are on safer ground. As a race we are very feeble in perception of artistic beauty and unsure of judgment. A bold enough bluff will at least succeed in producing much trouble and confusion of spirit. Therefore, when we are told that D'Annunzio is compound of pagan joyousness and Latin delight in mere physical sensation, which we can never understand, but should take for granted and admire and wonder at with respectful awe, few of us have the self-assurance to turn a deaf ear to such well-meant admonition. Yet it may occur to any one that as a figure for joy, pagan or Christian, D'Annunzio would never recognize himself; and a little reflection will suggest to English readers that what he most clearly derives from the pagans (from Greek and Latin literature) is not joy, but a depressing fatalism, which has not given his work the dignity of inevitable tragedy, or the courage of stoicism, or, the beauty of tranquil, unemotional intellectuality. Beauty of phrase and image he undoubtedly commands, and yet his taste is so bad that he can begin a sentence in the language of poetry and finish it in the language of pathology. The only influence for good he has had on Italian literature has been to inspire a closer attention to style. The "Latin renaissance" foreseen by M. de Vogüé several years ago has never come off. D'Annunzio has not the stuff of a leader in him. No writer whose whole power lies in the expression of himself ever led a movement or founded a school. Any confusion of opinion about the kind of power on which his claim to rank in letters must rest, is dispelled by his last work.

Having completed the "Romances of the Rose," after a period of what his translator calls "internal decomposition," D'Annunzio began the "Romances of the Lily," and the first of that series has just been translated under the title, 'The Maidens of the Rocks.' This is almost entirely an expression of his poetical quality, defying the test of reason and having almost no relation to the facts of life. The beautiful maidens, daughters of a princely house and doomed to madness, may symbolize something, but ordinary intelligence displays only proper caution in not hazarding a guess. The emotional atmo-

there is all that is worth considering, and its texture is so delicate and mysterious that the breath of inquiry puts it in peril of destruction. D'Annunzio has been compared with the English Pre-Raphaelites, the French Naturalists, the Russian Realists. His likeness to any of these is superficial—hardly more than may be attributed to the pressure of his age. But in the 'Maidens of the Rocks' there is an essential likeness, of spirit and of indefinable poetic mysticism, to the American poet who owed least to external influences, Edgar Allan Poe. The impression of misery and madness revives the impression of 'The House of Usher,' and the picture of the walled garden set in a land rent and scarred by burning lava calls up instantly that mad vision of

"—the dark tarn of Auber
By the ghoul-haunted woodlands of Weir."

The translation of 'The Maidens of the Rocks,' done by Annetta and Giuseppe Antona, is as faulty in detail as a translation can be, with abundant elementary mistakes in grammar; but it gives the impression of the original much more forcibly than do the translations of the "Romances of the Rose." In this first "Romance of the Lily" there are but few lapses into indecency; which suggests that, after another period of "internal decomposition," the author, whose sins have been as scarlet, may appear white as snow.

BOOKS ON ART AND ARTISTS.

Letters of Dante Gabriel Rossetti to William Allingham, 1854-1870. By George Birkbeck Hill, D.C.L., LL.D., Honorary Fellow of Pembroke College, Oxford, Editor of Boswell's 'Life of Johnson,' etc. Frederick A. Stokes Co.

J. F. Millet and Rustic Art. By Henry Naegely (Henry Gælyln). London: Elliot Stock. 1898.

The Bases of Design. By Walter Crane. London: George Bell & Sons. 1898.

Windows: A Book about Stained and Painted Glass. By Lewis F. Day. London: B.T. Batsford; New York: Charles Scribner's Sons. 1897.

Peter Paul Rubens. By R. A. M. Stevenson. (The Portfolio.) The Macmillan Co.

Painting and Decorating. By Walter J. Pearce. London: Charles Griffin & Co., Ltd.; Philadelphia: J. B. Lippincott Co.

There is more about poetry than about painting in Rossetti's letters to Allingham, naturally enough, considering to whom they were written; and there is more anecdote and personal gossip in the volume than information or discussion on either painting or poetry. Much the greater part of what is amusing in the book is supplied by the editor, whose notes are often much longer than the letters to which they refer. Dr. Hill has evidently much knowledge of his own, and he has used a drag-net on all published and unpublished sources of information, and where Rossetti mentions a name the editor instantly supplies a description or a story. By these means he has made a rather entertaining collection out of letters which are for the most part very bald and trivial. There are hardly half-a-dozen letters in the set that contain anything of importance, or anything worth publishing either in itself or for any light it throws upon the pre-Raphaelite movement.

What is most welcome is the reproduction

of a couple of drawings by Miss Siddal. The Brotherhood were all crazy about Miss Siddal. Ruskin bought all her drawings, and thought them better than Rossetti's "or almost anybody's"; and Rossetti himself, who thought none but the P. R.'s worthy to be included in the illustrated Tennyson, wanted her included. Here are two of the drawings, and they are almost incredible. Some of Rossetti's own early drawings are feeble enough in all conscience, and some, even, of Millais's; but such childish inefficiency as Miss Siddal's is phenomenal. Perhaps they contain the treasures of sentiment that her admirers found in them, but her knowledge of drawing is about equal to that of any school-girl. One is tempted to wonder if, in her case as in many others, the amount of "feeling" discoverable by the willing mind is not in inverse ratio to the amount of knowledge. There is so much else to look at in a drawing that is well done that nobody thinks of looking for sentiment in it; but if a drawing is obviously bad, it ~~must~~ have sentiment, for it has nothing else. Rossetti did in the end achieve certain technical virtues, though his work always remained faulty enough to please, but it is well known that Millais became intolerable as soon as he learned to paint. We all know now that his was an essentially vulgar and bourgeois soul, but pre-Raphaelite sentiment clung to his work so long as pre-Raphaelite feebleness of technique impeded his hand. If one would be credited with a poetic soul, it is a great mistake to learn to paint.

Mr. Naegely's book on Millet is disappointing. The author knew Millet and is on friendly terms with the painter's family, and one hoped for new matter from him. A little new matter there is, but very little. One or two errors are corrected, one or two fragments of Millet's manuscript are now first printed, and we are given a series of letters from Millet's grandmother and mother. These things are valuable and welcome, but they constitute a very small part of the volume before us. They make it necessary that that part shall be consulted by the future writer on Millet, who will, nevertheless, wish that the rest of the volume had never been written. The bulk of it consists of reflections on "Rustic Art," which are more noticeable for energy of statement than for lucidity of thought. The author is on the right track in protesting against the delusion that Millet was somehow a great artist in spite of an inability to paint and to draw, and feels dimly the truth that the master could both paint and draw in a masterly way; but he is, unfortunately, unable to explain what he feels, and the impression left by the most of what is here written is that of sound and fury, signifying, indeed, something, but something very misty. We are a little inclined to protest, at any rate, against this phrase, "Rustic Art." There is art, and there is that which is not art. Millet was an artist and the lineal descendant of Michelangelo; his "rusticity" is more or less an accident. When his work shall be analyzed by a competent critic who shall be willing to ignore the nature of his subjects, and to point out the relation of his art to all the other good art that has existed, we shall be in the way to understand him better. It is much easier to talk of subjects than of technical matters, and to sentimentalize about the "Angelus" than to point out the purely artistic merits of one of the great painters of the world.

So far as his "peasantry" goes, wherein is Millet better than Jules Breton? The infinite difference between the two is a difference of art. One was a master of synthetic drawing and color, and the other—well, it is not here necessary to characterize the other. The book on Millet remains, however, to be written.

Another disappointing book is that by Walter Crane. The author explains this, to some extent, in his preface, where, after stating that the substance of his volume "originally formed a series of lectures addressed to the students of the Manchester Municipal School of Art," he adds: "The field covered is an extensive one, and I am conscious that many branches of my subject are only touched, whilst others are treated in a very elementary manner. Every chapter, indeed, might be expanded into a volume, under such far-reaching headings, to give to each section anything like adequate treatment." To the discerning reader this paragraph is doubly explanatory, for not only does it show how the author was tempted to try to cover too great a field in a small book, but its very style betrays the lack of that breadth and grasp and clearness of mind which would be necessary to anything approaching a successful condensation of his matter into a limited compass. It soon becomes evident upon perusal that the system of the book is confined to the "far-reaching headings," and that anything in one chapter might almost as well have fallen in any other. Mr. Crane is one of those who have something to say, but can by no means contrive to say it. What was needed was a clear and systematic statement of principles, condensed almost to a "primer," with few and well-chosen examples. What he has given us is a large and promiscuous selection of examples with the most confused and inadequate thread of comment. There are long passages of many pages where the statement of principles disappears entirely, to make room for what reads like a poor condensation of some general History of Art.

Mr. Day's book on 'Windows' is a very good and very sensible one. It is rather a history of the art of glass than a theoretic treatise on the principles of the art, and it concerns itself almost entirely with the glass of the past and very little with that of to-day. A page or two only is devoted to "new departures," in which the experiments of Mr. La Farge are sympathetically referred to. Mr. Day's own notions of the proper technic of window-making and of the relative value of different methods and epochs are, however, made sufficiently plain. He is almost provokingly catholic, and is ready to admit with heartiness the merit of much work that he must consider to be done on wrong principles; but his general conclusion is undoubtedly that when the art of glass forsook the way of mosaic for that of painting, it sold its proper birthright for a mess of pottage. The more one follows in detail the history of stained glass as here set forth, the more one is likely to be confirmed in the conclusion that the so-called American method is the only logical one, and that our designers have begun to do what was never done before—to apply the talent of educated painters to the bringing out of the natural and essential qualities of glass.

A book in all but form is Mr. Stevenson's monograph on Rubens which forms the January number of the *Portfolio*, and a bet-

ter book than many within bound covers. Mr. Stevenson is a somewhat extreme advocate of the doctrine of paint for paint's sake, but this, perhaps, makes him the more sympathetic interpreter of that great wielder of the brush. Rubens was, indeed, something more than a technician, or even than a Flemish naturalist, and the queer fusion of traditions in his work and his essentially classic nature still await their definitive interpreter. Mr. Stevenson gives us many acute observations and much clear insight besides the necessary facts and dates, and his contribution to this useful series is a worthy one.

'Painting and Decorating' is a book on a trade rather than on art. Its author is a practical painter and decorator, and his book is something like a series of recipes. He gives chapters on plant and materials, on paper-hanging, distempering, painting, varnishing, graining, gilding, lettering, measuring, and estimating, and coach-painting, as well as some general ideas on ornament and color. The volume is not meant for the artist or the general reader, but seems likely to fulfil its end of usefulness to those intending to become house-painters.

BONAPARTE AND MOREAU.

The Campaign of Marengo, with Comments. By Herbert H. Sargent, 1st Lieut. 2d Cavalry, U. S. A., etc. Chicago: A. C. McClurg & Co. 12mo, pp. 240; maps.

Mr. Sargent's former volume on Napoleon's first campaign insures a welcome for this on the campaign of Marengo. We find the same clearness of analysis, the same intelligent comprehension of the situation and lucidity of description. The reader renews the satisfaction with which he perused the former book and approved the plan of separate handy volumes for distinct campaigns.

The critical study of Napoleon's military career is still fruitful. We only gradually free ourselves from the domination of his intellect and his authority. We are kept back from real criticism by the feeling that it is presumptuous for an ordinary man to sit in judgment on his masterpieces. We fall easily into the habit of drawing our canons of criticism from his practice instead of applying rules to his conduct of war. No man was ever more independent than he in reasoning from principle; but we hold our principles with a timid grasp when we find ourselves doubting his infallibility. When Bonaparte swiftly concentrates his forces and strikes right and left as at Montenotte and Castiglione, we applaud to the echo; but when, in the same theatre, he scatters his divisions, makes eccentric movements, and delivers the battle of Marengo piecemeal, we cry out, "Strategy, my boy," and go far afield to hunt reasons for believing that black is white. His amazing good fortune never stood him in better stead than at Marengo, or better won the title to be "his star." Yet fortune might have lavished the same favors on a weaker man, and he would not have known how to use them. There is the difference. Mr. Sargent has modestly thought it necessary to apologize for venturing in his "comments" to bring Bonaparte's movements to the test of military principles. We must thank him for doing so, even if we do not always find our judgment going with the criticism. It is only in that way that we shall learn. He might well have gone further.

The First Consul's relation to Moreau's campaign on the upper Rhine and Danube is properly made part of the history of Marengo. The two campaigns were necessarily parts of one whole. The belittling treatment of Moreau by Napoleon at Saint Helena has been commonly accepted as a sound judgment; but Napoleon was never so unscrupulous as when dealing with rivals. Moreau's service with the Allies after his banishment from France offended French sensibilities, and he has been a striking example of a general who, in his time, had a towering reputation, but who, after his death, had no friends. The French, even Republicans, would not praise him, because he joined the enemies of France, and Germans were willing to ignore him because he was a Frenchman. He fell between two stools. Yet we may be sure that the allied sovereigns would not have made him their chief military adviser in the campaign of 1813 if that of 1800 had not left him with a great European renown. Napoleon's prestige had been greatly shaken by the campaign of Moscow, and it is significant that, over all the generals then prominent, Moreau was taken after a dozen years of retirement—years of activity of armies on a scale to blot out the remembrance of what had gone before. As he spent those years of banishment in America, Americans have a call to see that justice is done him.

General Gourgand, in the Saint Helena 'Mémoires,' records Napoleon's statement that the First Consul planned that Moreau, whose army lay along the Rhine from Mayence to Basle, should march up the river to Schaffhausen, there build four bridges, cross over and attack the Austrian army's left flank, crush it, and place himself on the line of the enemy's communications at Ulm on the Danube. Napoleon sneeringly said that Moreau was incapable of carrying out or even of understanding such a movement (*incapable d'exécuter et même de comprendre un pareil mouvement*), and proposed instead to cross the Rhine at Mayence, Strasbourg, and Basle. A compromise was finally made by which a movement on Schaffhausen up the east side of the river and an additional crossing there was added to the others. The sneer has gone into history as a conclusive judgment on Moreau's military intellect, and reappears with regularity. It well illustrates the abdication of independent judgment by military writers in the presence of Napoleon's unscrupulous and audacious egotism.

The merit of Napoleon's plan lay in its simplicity, not its profundity; and, when once stated, "wayfaring men, though fools, shall not err therein." To say that Moreau did not know the value of flank attack and of operating against his enemy's communications, and could not understand them when stated, is ridiculous. Neither Moreau, nor Hoche, nor Dumouriez, nor Masséna, nor Jourdan, nor Saint-Cyr, nor any other of the generals who had won victories for the Republic, was so ignorant of the art of military art as that, or so fat-witted that he could not comprehend so simple a plan and its advantages. The difficulty lay in the execution, not in the comprehension of it. Moreau's army had wintered in the Rhine Valley, and was in four corps—three of them along the river from Basle through Strasbourg to Mayence, and one in Switzerland. To concentrate at Schaffhausen would require an average march of a hundred miles by the flank for three-fourths of the army, and the building of the four bridges at their

crossing-place from material to be collected on the spot. At and below Basle the French had three bridges, with fortified bridge-heads on the German side. These were to be left unused while the long flank march was made to a place where there was no means of crossing but such as could be improvised, for the army was not supplied with pontoons. The Austrians under Kray were on the opposite bank, keenly watching the French, each army something more than a hundred thousand strong. The bend of the river around the highlands of the Black Forest made it a much shorter march for Kray to concentrate near Schaffhausen than for Moreau. It was not a question of stealing a day's march on an adversary, it was a flank march of several days for a great army, whose movements would almost certainly be known. The greater part of the march would be in Switzerland, where was much dislike of the French masters, and a volunteer body of Swiss *émigrés* was serving with the Austrians.

Under these circumstances, Moreau thought the movement could not be concealed, and that it was therefore better and quicker to cross by the bridges already in his possession. Gouvion Saint-Cyr, who was second in rank to Moreau, and who wrote after Gourgand's 'Mémoires' had appeared, believed a surprise would have been impossible, especially as Basle, through which the greater part of the army must march, swarmed with intelligent and enterprising spies, who were in good relations with the Swiss. Moreau's movement was, in fact, a success, and he concentrated his army against Kray's left wing, building bridges at Schaffhausen behind his army after the movement. Napoleon's plan not being tried, historians are at liberty to consider it done because it was suggested, and to tell us how much Moreau lost by not adopting it. Had Napoleon tried to carry it out himself, his unmatched fertility of resource in the face of difficulties might have found some other way if this had failed; but then he would have told us at Saint Helena of the new plans he carried out, and not of the old one that miscarried. Moreau's own plan, however, was to attack Kray at his right centre opposite Strasbourg, and Marshal Saint-Cyr tells us that the Austrians were so scattered that this promised excellent results, with the advantage of opening the campaign earlier by nearly a month, when time was of immense importance in the start of Napoleon to relieve Masséna, who was enduring starvation in Genoa.

Another gloss upon the history of this campaign which we often meet with, and which Mr. Sargent seems to accept, is that Napoleon thought of taking command of the army of the Rhine in person, and that Moreau's jealousy prevented his serving as second. There were such other reasons that it is misleading to speak of jealousy. Bonaparte was violating the Constitution by taking personal command in the field at all, when he was First Consul. He could use Berthier in that way in the Marengo campaign, as he could use him in any other *coup d'état*, but Moreau would not be so used. Berthier was nominally General-in-Chief, and Bonaparte was apparently a guest at headquarters; but most people fail to remember that Berthier was even the man-of-straw, so completely did his master nullify him.

The Army of the Rhine had not come under the witchery of Bonaparte's personal leadership, and its *esprit de corps* retained a republican tinge to the end. Its officers were slow to adopt the display which became fashionable under the Empire. Even as late as the Russian campaign of 1812, Marbot tells us how, at Polotak, Saint-Cyr, with only a long *redingote bleue* for uniform, without epaulets or other insignia, looked more like a professor than a general of the Empire, at the very time when he received the marshal's bâton. The same conclusive testimony asserts that this republican simplicity was still a mark of many men who had fought under Moreau. They were rarely promoted till they became a necessity to the Emperor, and they got used to seeing their juniors of inferior talent promoted over their heads. Gourgaud does not venture to put into Napoleon's mouth the assertion that Moreau's jealousy was the obstacle to his taking command of the Army of the Rhine. It was too notorious that it was the army itself that he feared. Napoleon only said, as Gourgaud reports, that the internal disturbance of the republic (*l'agitation intérieure*) made it unadvisable to leave the capital so early as the opening of the campaign. Yet it is probably true that Moreau declared that he would be no figure-head, and that when the First Consul came to camp, he would leave. The situation was a critical one, and the episode is well worth studying.

La Vie de Jean-Arthur Rimbaud. Par Patern Berrichon. Paris: Société du *Mercur de France*. 1897.

The life of Arthur Rimbaud has been until now obscured by a fog of uncertainties. His sudden appearance in the literary sky of France was followed by as sudden an extinction, like a sheet of heat lightning, seen for an instant only, and then disappearing in the collied night. M. Berrichon's book dissipates this mystery, and brings Rimbaud's brief and disordered life into full view.

Arthur Rimbaud, the son of a captain in the French army, was born at Charleville in the Ardennes, on October 20, 1854. He was a precocious boy, wild and shy, always in rebellion both at home and in school. At school, however, he showed extraordinary cleverness, and some of his rhetorical exercises, written between the ages of eight and twelve, are really astonishing pieces of composition. Within the next year or two he had read the usual Latin classics, and had translated into French verse Juvenal, Tibullus, and Propertius, besides extensive reading in French literature and more than the usual work in mathematics and science. At fifteen he declared flatly that he would have no more to do with schools, and when his mother, whose turn of mind seems to have held even more closely to the peasant than to the bourgeois type, attempted coercion, he ran away from home to the Ville-Lumière, all ready to commence Parisian and Parnassian. He had not money enough to pay his fare all the way to Paris, but he hid himself and went on with his train, and, at the end of the journey, since he had no ticket to show, he was, of course, arrested, committed to Mazas as a vagabond, and after three days sent home again. This was the first of several escapades of the same sort. Once he set out for Belgium without a sou,

hoping to obtain some newspaper work at Charleroi, which he did not get, and so made his way back on foot as a tramp.

When the siege of Paris was raised, he sold his watch, and at once set out for that city. It was cold weather then. He knew no one, and suffered miserably for a week, almost without food and sleep, dragging himself home at last on foot. It was of this period that he wrote in 'Un Saison en Enfer.' Once more, during the Commune, he tried the capital and failed, although some small sums of money, which he wasted at once, were raised for him by certain Communists. Once more he returned to Charleville, and there wrote his astonishing poem, the "Bateau Ivre," a most remarkable production for a boy of his years, or, indeed, for any writer. At this point he introduced himself to Verlaine by writing to him, and received in reply an urgent invitation to return to Paris and become a member of the Verlaine household. His hosts knew nothing of him, and great was the astonishment of Mme. Verlaine to find that the much-looked-for poet was a ragged boy of seventeen. Verlaine's astonishment and delight at discovering him knew no bounds, and at once was begun that singular intimacy about which so much has been written, and of which the obscurer parts have perhaps not yet been fully brought to light. Then followed the only portion of Rimbaud's life that has hitherto been, even imperfectly, known to the public. From October, 1871, to July, 1872, Rimbaud remained in Paris, lodging at Théodore de Banville's, at a hotel in the Rue Racine, and finally in furnished apartments offered him by Verlaine. The thirteen months between July, 1872, and August, 1873, were occupied by the journeys that he made with Verlaine and their very curious experiences of travel in Belgium and in England.

It was upon their return into Belgium that the bond between them was violently broken. Verlaine was eager that their life in common should continue, while Rimbaud had made up his mind to break it off. Verlaine's family also intervened, attempting to reclaim him to household duties. At the end of an excited discussion, Verlaine, finding Rimbaud obdurate, drew a revolver from his pocket and fired, wounding him in the left arm. Then followed a tearful, even a somewhat hysterical, scene of reconciliation. But Rimbaud had not changed his mind, and a new quarrel broke out in the street as the friends were returning from the hospital where the wound had been dressed, when Verlaine fired on him a second time, and pursued him along the sidewalk with a view to further persuasion. For this assault Verlaine was arrested, and received in punishment the two years of seclusion which he describes in 'Mes Prisons.' Rimbaud, though wounded and in the hospital, was expelled from Belgium. He went home for a brief period, and then followed sojourns, none of them long, in England, where he taught French, and in Stuttgart, where he learned German. Here, in 1875, Verlaine sought and found him, and the two poets were together for the last time.

A passion for the Orient had sprung up in Rimbaud's mind, and soon after Verlaine's visit he set out, in characteristic fashion, selling his trunk and travelling by railway as far as his money enabled him to pay for tickets. That was not very far, and he had to foot it over the Saint-Gothard and came down into Italy well worn by cold

and hunger. He got no further than Leghorn, where he was obliged to betake himself to a hospital, whence he was returned to France. In 1876 he set out again, this time with more success, owing to some attacks which he made on the family purse, and to a transaction in the Netherlands which was of the nature of bounty-jumping. This brought him at last to the East, to Java and Sumatra. He was quite too proud of soul, his biographer tells us, and had too high a sense of honor and dignity to accept submission, and still less military discipline, and was also endowed by nature with quite too large a moral comprehension to feel any scruple in cheating military tyrants; so, finding himself hindered by army regulations from wandering about as he liked, he took the key of the fields and deserted, working his way westward on an English ship. The captain of this vessel, a man devoid of sensibility, refused to put in at St. Helena—although Rimbaud was eager to visit the spot that was once Napoleon's tomb—and must have been much surprised to see him manifest his individuality by jumping overboard and attempting to swim ashore.

Then followed a year or more in Europe, filled with strange shifts and devices for getting money enough to return to the East. The most honorable of these was perhaps a visit that Rimbaud made to Norway and Sweden as interpreter for a travelling circus. At last he attained his end, and found himself in Egypt, where he began a mercantile life, starting at the very bottom of the ladder. The rest of his years call for little more than bare mention. His natural parts, his cleverness, the ease with which he acquired languages and the like, helped him to some degree of success in money-making. He spent ten years in Asia Minor and in Africa, chiefly at Aden and at Harrar, an African town colonized by the Egyptians and dependent on their government. Literature he completely forgot, writing nothing within the ten years except a "Rapport sur l'Ogadine," communicated by him to the Société de Géographie. In 1890 he was attacked by a lameness having its origin in synovitis, which, through carelessness of himself, became greatly aggravated. His constitution also, no doubt, had been much racked by early excesses and neglects, and his case soon became a very serious one. He was carried to the coast on a litter and regained France, where his leg was amputated. He survived the operation and made a partial recovery, but at the age of thirty-seven he was already worn out, and died in the Hospital of the Conception at Marseilles on the 10th of November, 1891.

Rimbaud will be known in the future, one may suppose, chiefly from his connection with Verlaine. In that curious friendship, which was the tempter and which the lost soul, which was the inspirer or the awakener, and which the inspired or awakened, it may be hard to say. But one cannot on the instant accept M. Berrichon's belief that it was Rimbaud, and not Verlaine, who was the protagonist. Rimbaud was a poet of individuality, who spoke out of his own temperament his own thoughts with force that was not devoid of grace. But his verse can hardly be compared, to his advantage, with the limpid beauty of the stream of Verlaine's poetry where it moves in gentle flow over the shallows, or with the strong rush of its deeper currents.

Nullification and Secession in the United States. By Edward Payson Powell. Putnam. 1897. Pp. xi, 461.

Mr. Powell has written a book with which students of American history will wish to make themselves acquainted, but which is likely to receive diverse appreciation. Neither a detailed history nor yet a commentary, it partakes somewhat of the nature of both. It will be useful to those only who are already familiar with the general course of events, yet it is often annoyingly careless about statements of fact. It is clearly the fruit of much reading and some thinking; but, even if the author did not warn us that it "is undeniably written for a purpose," one could not go far without feeling sure that Mr. Powell has an axe to grind. Avowing no sympathy for slavery, nullification, or disunion, nor for their supporters, the way in which "certain accepted heroes" are scored would have warmed many an ante-bellum Southern heart. Of respect for received opinions Mr. Powell shows little trace, and both authority and tradition, when weighed in his balance, are often found wanting. The style is vigorous and pungent, and at least makes clear enough the author's point of view, even though it be not successful in winning assent to his opinions.

The main thesis which Mr. Powell sets himself to defend is the not unfamiliar one that the idea of "an indestructible Union composed of indestructible States" not only was not the generally accepted or well understood theory of our Government when the Constitution went into operation, but was repeatedly denied by political leaders, and repudiated by concerted action in different sections of the country at different times. In support of this proposition, he examines in succession the discussions and events connected with the Alien and Sedition acts and the Kentucky and Virginia Resolutions of 1798, the plot for a Northern confederacy in 1803-'4, Burr's conspiracy, the attitude of New England during the war of 1812, the nullification movement in South Carolina in 1832, and, finally, the consummation of secession in 1861. The treatment of these various divisions is of uneven merit, the chapter on nullification in South Carolina being, so far as substance is concerned, rather slight; nor does Mr. Powell confine himself very strictly to the particular subject in hand. On each of his main points, however, he has brought together an array of extracts from letters, speeches, public resolutions, and the like, which, if this were all there was to be said on the subject, might well cause some rattling among the dry bones, and which, in any case, quite suffice to confirm the statement of the preface, that "political righteousness has not been the exclusive property of any one part of the United States."

The trouble, of course, is that there is another side to the case. Mr. Powell writes about the history of ideas of nullification and secession much as a prosecuting attorney argues against the prisoner at the bar; that is, he makes the most of everything favorable to the view for which he is contending, and pursues relentlessly the uttermost ramifications of political or personal motive. It is not without value, and is even, at times, brilliantly done; but it is nothing but special pleading, after all. We can, for example, readily admit, with Mr. Powell, that the Federalists, confronted by the immense task of organizing the new government,

made serious mistakes of judgment; that under Adams they pushed matters to the verge; and that, after 1801, their influence was sometimes pernicious, without at the same time conceding that they were so infatuated with England as to be ready to sacrifice the United States, or that their leaders were incompetent and venal because they were not saints. That Hamilton was a restless politician as well as a statesman, and that neither his public nor his private life will bear critical examination at every point, does not detract from the worth of his achievements, or make Burr any more a paragon of virtue. Marshall may well have had his full share of the infirmities common to man, and he may not have been the greatest jurist the world has yet produced, although learned and critical judges have ranked him very high; but we need more evidence and better argument than Mr. Powell has adduced to convince us that Marshall, in reaching the conclusion that it was "the people" who assented to the Constitution, made "a zigzag use of facts" (p. 68).

Mr. Powell, indeed, seems to go out of his way, at times, to minimize the importance of the Supreme Court. His disparagement of Marshall, for the latter's theory of the Constitution and conduct during the Burr trial, is one instance only. As to Mr. Powell's theory of the matter, his position does not appear to differ essentially from that of Jackson. The Supreme Court is a body of learned but fallible men set up to render decisions on certain legal questions; but its opinions have no moral weight unless endorsed by the people. It is the people who pass finally on the meaning of the Constitution; and if the opinion of the Court and the opinion of the people happen to differ, the latter nullifies the former. "The real final authority of our government has been the common sense of the people acting as States. That the people have rectified not only legislative but legal blundering is an historic fact. They correct or negative Congressional work with promptitude, but have learned to be more patient with the Court" (p. 76). Mr. Powell then goes on to show that the life tenure of judges "has served to separate the judiciary from the other branches of Government in spirit and sympathy" (p. 78); that "it was a general suspicion of the judiciary department that made the acceptance of the Constitution so very close in 1789" (p. 79); and that, in the successive periods of our history, "the Supreme Court has in every instance thrown its influence against popular rights," and "has already cast its wavering voice, in the social struggle, for the wealthy as a class" (p. 80). How far this is either correct history or reasonable interpretation, we leave the reader to judge.

We have called attention to these apparently subsidiary points in Mr. Powell's book partly because they show the spirit in which he has written, and partly because we are unable to think that, on his main point, he has achieved any marked success. Indeed, we are inclined to doubt whether, along the line he has pursued, success is to be had. That the controversy over the earliest theories as to the nature of the Constitution still goes on, is largely due to the persistent effort to discover a theory where none existed. The framers of the Constitution were not engaged in elaborating a political philosophy, but in founding a government. Whether it was to endure

but for a day, or whether it might haply be perpetual, no one knew, and some hardly dared to think. What they did know well, however, was that the Constitution must be, in some important respects, a work of compromise, and that the simpler its provisions, the more likely was it to be given a chance to live. They commended it to the country as a practical adjustment of serious interests; and they laid stress on the practical benefits likely to flow from it, and not on its harmony with this or that theory of sovereignty or allegiance. Any clear and general understanding that the Union thus created was to be indissoluble, that no State could withdraw from it under any circumstances short of general consent, or that the era of experiment was passed, cannot be shown, to entire satisfaction, by historical inquiry; there is too much evidence on each side. What has come about is that the perpetuity of the Union is seen to rest, not upon the fact that at a particular time it was declared to be perpetual, but upon the fact that, the circumstances being what they have been, it cannot possibly be conceived of as anything else. It is the nascent consciousness of a national existence grounded in the nature of things, and struggling to establish itself against political theories radically opposed to it, that gives to the movements which Mr. Powell has studied their vividness and importance; and it is because, as we think, Mr. Powell has failed to see this that he has failed to make to his subject a contribution of especial worth.

We note a few of the rather too numerous misstatements or misprints. The Jay treaty was proclaimed February 29, and not March 3, 1796 (p. 58). The Kentucky Resolutions of 1798 preceded those of Virginia by more than five weeks, instead of following them, as seems to be implied on p. 63. The Constitution does not fix the membership of the Supreme Court at nine (p. 74), or at any other number. The name of Jonathan Russell, one of the American commissioners in the negotiation of the treaty of Ghent, appears as John Russell (p. 225). It was Gov. Harrison of Indiana Territory, not of the Indian Territory (p. 161), to whom Burr had a letter. Hamilton's report on manufactures was submitted in 1791, not in 1787 (p. 256). Garrison did not denounce the Constitution as "a league with hell" (p. 336), nor did "a poor truckman" "seize a stake and drive off the mob" which was dragging Garrison through the street in Boston (p. 337). Lovejoy was killed in 1837, not in 1836.

The New England Primer. Edited by Paul Leicester Ford. Dodd, Mead & Co. 1897.

It was a pleasant conceit which led Mr. Ford to give to his elegantly sober volume a passing resemblance to the memorable booklet upon which he has lavished so much scholarly care. Charles Kingsley, in substance, said long ago that the Puritan had made his own reticence in outward garb the pattern for gentlemen of succeeding ages; and one is reminded of this good saying, in contrasting the pathetic humility of a 'New England Primer' with the decorous refinement of this monument reared to its memory.

After the pursuit of many paths of letters, Mr. Ford returns once more to bibliography, and the present tribute to his first love is worthy. There is a definite satisfac-

tion in recognizing in this book a finished task, something which calls for no doing a second time. Perchance there may turn up, though it is improbable, one or two more issues of the Primer; a few more rays of light may yet be shed on its earliest history; but such discoveries cannot affect the permanent soundness of Mr. Ford's book. To the mere precision and usual excessive detail of bibliography Mr. Ford has always brought a historian's sagacity and discrimination to such a degree that he has actually lifted a somewhat depressing if necessary science to higher possibilities. Not that he is wholly alone in this accomplishment, but what he has done, has been done in a characteristic way. Ill-content with the passive excellence of a full list of primers actually seen or conjectured, and of the helpful adjunct of old-time advertisements which throw light on the subject, Mr. Ford has hunted down the probable author (if a work so essentially a growth may be said to have an author) and undoubted first publisher of the Primer. Benjamin Harris was an over-zealous Protestant publisher who came from London to Boston about the year 1686, and there began to make and sell books. Some time between 1687 and 1690 Mr. Ford fixes as the date of the first issue of the immortal Primer; of a "second impression, enlarged" there is the satisfactory proof of an advertisement. Harris had already published in England the 'Protestant Tutor,' which is shown to have been the predecessor of the 'New England Primer.' It is a fair assumption that he changed the name and cut down the size of the 'Tutor' to meet in a business-like way the pride and purses of New England. From a unique copy in the British Museum a facsimile is given by Mr. Ford of the 'New English Tutor,' issued by Harris some time between 1702 and 1714, which in all probability contains the same text as the 'New England Primer' of that period, and was printed in England under the changed title to increase the sale. If such conjectures are correct, Mr. Ford has produced the earliest accessible text of the Primer, besides giving a facsimile of the earliest known issue of the Primer itself, that of 1727, from the Lenox copy.

It was always by its best-known title that the Primer won its way, not only here, but in England and Scotland. For one hundred and fifty years its popularity was great, both as a text-book for primary training and as an elementary spiritual guide. Mr. Ford thinks that as many as three million copies were sold. Out of this mass the salvage has been astonishingly small—less than fifty copies, representing less than forty editions of the eighteenth century. No sure vestige of an issue of the seventeenth century survives. To private collectors who seem to have opened their treasures freely, the sumptuous volume before us owes its wealth of facsimiles and reproductions. It is noticeable, however, that the Boston Public Library, which in the nature of things should be richest in such material, seems to have rendered Mr. Ford no assistance. Full justice is done to the real merits of the little book. Not sympathizing with the conditions which nourished it and gave it force, Mr. Ford is so far friendly that he seems even to lament the decline and fall of its influence, when milder doctrines began to enter and the sincere milk of the word was slyly watered with utilitarianism and an easier theology. To-day the Primer

is sought only by reason of its extreme rarity, and excites only an amused curiosity. Yet it was not ill-conceived, only crude. What work it had to do it did marvellously well, and it may safely be ranked with Webster's Spelling-Book and Colburn's 'Intellectual Arithmetic,' as one of the inspired works of American educational literature.

Some verses composed by one Robert Smith have long been ascribed to John or "Mathewe" Rogers. They seem to have been dear to the Puritan heart, but, in declaring his excellent discovery of the true authorship, Mr. Ford becomes a little heated at this "piece of sectarian garbling and falsehood." It seems harsh to blame a whole sect for an error attributable probably to stupidity rather than malevolence. However, Puritanism is more or less of a red rag to Mr. Ford, who lets himself wander from his road to proclaim the great "percentage of crime" (p. 152) due to the "lawlessness and immorality" of early New England. Mr. Ford is too keen a historian not to see the fallacy of comparing—for it always comes to mean that—the Massachusetts Bay, where, from the start, court and other records were kept with reasonable fulness, with other colonies where the archives furnish no comparable information. In estimating the defects of the Puritan character, one element of it is always to be borne in mind: all early records and historical writings reveal an almost morbid willingness to tell the worst that can be said. Crimes and social weaknesses of every sort were confessed with astonishing zeal. There may have been spiritual pride in such candor, but there certainly was an absence of worldly reticence and hypocrisy. The worse was seldom made to appear the better reason, and we have the Puritans' own word for it that they were desperately wicked.

Dreamers of the Ghetto. By I. Zangwill. Harper & Bros.

An application of the methods employed by Landor in his 'Imaginary Conversations,' and by Louisa Mühlbach in her historical novels, to some more or less famous Jewish worthies and unworthies of recent times, may redound to an author's credit for eccentricity but not sanity of genius. The result could not fail to be bizarre, particularly when, throughout, the jester's cap and bells seem to compete for mastery with the cynic's wall. The stories, too, it must be confessed, read better when they appeared "syndicated" in various magazines and weeklies than in the present collection; the tricks of phrase and style, the exaggerations in language and sentiment, the threadbare plush of rhetoric, and the flimsy ornamentation follow too rapidly and self-consciously as the chapters are successively analyzed. If the author, in addition to his undeniable gifts, had only possessed the gift of condensation, his work would have lost in bulk and exuberance, but it would have gained largely in merit.

Unlike novelists of the Ghetto such as Kompert, Bernstein, Mosenthal, Kohn, and Franzos, not to mention Berthold Auerbach, whose romance of 'Spinoza' anticipated Mr. Zangwill's 'The Master of Lenses,' the author of 'Dreamers of the Ghetto' essays a more ambitious rôle. They were, as a class, content to paint cameos or genre sketches of old-time Jewish life, and let the pictures, fantastic or realistic, speak for themselves. Mr. Zangwill aims at philosophy as

well as fiction. We fear that he is too much inoculated with the very Aryanism which he deprecates as ominous for the Jew, and is too much of a waverer himself to be a thoroughly trustworthy guide in any philosophy of Judaism based upon the careers of the heroes in fact and fustian whom he exploits. How he can term Lassalle, Heine, and Disraeli "dreamers of the Ghetto," is a mystery indeed, especially in the case of Disraeli, who was a devout son of the Established Church, and never entered an English synagogue except when he acted as witness at a wedding of one of the Rothschilds. It was only after these worthies left the Ghetto—if they ever really belonged to it—that they became famous. Had they remained Ghetto youths, history might have been silent about them, and a Zangwill might never have employed them for text or pretext.

The volume, however, has its value in familiarizing the general public with a comparatively untrodden field—the inner history and workings of the Jews of recent centuries, and the currents and counter-currents among them due to opposing tendencies of the times. Under the guise of fiction, a goodly amount of modern Jewish history is thus unconsciously taught, which possibly can just now be imbibed in no other way. The author, too, is candid in exposing the faults of his brethren, and does not unduly idealize them. His own chief defect—which is becoming too painfully evident in the younger school of English fiction—is his quality of exaggeration. This makes his book glaringly melodramatic, and gives his "dreamers" often the tones and attitudes characteristic of burlesque. From this charge we must exclude his "From a Mattress Grave," which is an exquisite vindication of Heine—a bit of Heine come to life again.

Outlines of Psychology. By W. Wundt.

Translated, with the cooperation of the author, by C. H. Judd. Leipzig: Engelmann; New York: Stechert. 1897. Pp. xviii, 342.

In this convenient little book Prof. Wundt has prepared a work "written primarily for the purpose of furnishing my students with a brief manual to supplement the lectures on psychology." It is a first-rate introduction to the more elaborate work of its distinguished author, and will have currency as fulfilling that function. The translation seems to be well done, and the glossary of terms appended by the translator (German, with the English equivalents) will be serviceable.

With so much description and commendation of the book, a word or two of criticism may be indulged in expressing the reviewer's reaction against what may be called the *Wundt'sche Anschauung und Methode*. In the first place, the abstract and semi-scholastic way of drawing distinctions which pervades the 'Outlines,' is a serious drawback to its usefulness. No one who is well read in the recent books, in which concrete fact is kept so to the front that it controls abstract exposition, can read this one through without weariness; and in the case of the junior students, for whom it is designed in its English dress, it would tend to displace that wholesome obligation to the concrete which we are just getting well established in the instruction of our laboratories and experimental courses. The other point which should be spoken of with equal

plainness is Prof. Wundt's mild attack of the "mania for naming." Along with the abstract distinctions with which the treatment of almost all the topics bristles, we find new applications constantly made of psychological, popular, and scientific terms. Every pair of phrases of this or that has its special pair of names, by which afterwards the particular phrases are known; so that the student has not only to see the distinction as he goes along, but to preserve the names for it with all exactitude in his memory. This has two vicious results: first, it creates a special Wundtian terminology—a terminology in the manufacture of which the author seems to have gone to little pains to keep himself in touch with the historical usages of the science, and which forces students who have worked over other textbooks to correlate painfully his terminology with that already learned. And, second, it fosters the habit of mind—possibly the most unfortunate of all the "idols of the den"—of taking a name and its correlate for an explanation of the distinction which they characterize. This affliction, under which psychology has so long had to labor, is still the *onus maximum* of psychological science. It is currently braced up by all sorts of theoretical pleas, which are nothing less than apologies for inability to find explaining principles. For example, as soon as one goes to biology or neurology for explanations, he is arrested by the cry, "You are deserting the 'psychological standpoint,' you are no longer doing legitimate work; psychological explanations must be purely psychological; anthropology has its own devotees, so have biology and neurology; leave them to their flesh-pots!"—and so the weary describing, and concatenating, and comparing, and naming goes on. Or, if one sights a larger truth, something which may fairly be called "philosophical," he is reined up with equal vigor, and told that no theorist shall inherit the psychological kingdom of heaven. The James-Lange theory of emotion is absurd. Why? Because it is "physiological"! The "inheritance of acquired characters" is true. Why? Because all other accounts of mental continuity in evolution are unpsychological. And so it goes.

It must be said, however, without reserve, that Professor Wundt does not sin on the side of inhospitality to legitimate theory. In his various books he shifts his point of view. Indeed, he is one of the first among living psychologists in the breadth of his interests and the variety of his contributions to current theory. In this he furnishes a salutary example.

Through South Africa. By Henry M. Stanley, M.P. Charles Scribner's Sons.

This book is made up of letters written to a newspaper called *South Africa*, with the addition of a map, an introductory chapter, and a number of photographs. Mr. Stanley attended the celebration at Bulawayo held when the railroad was completed to that city, an event which may well deserve commemoration. In March, 1896, this railway extended about 880 miles north from Cape Town, and in November, 1897, the remainder, 480 miles, was finished. The engineering difficulties seem to have been not numerous, and although an elevation of 4,500 feet is attained, there are few steep grades. Mr. Stanley's train made the distance in ninety hours, and he declares that its motion was wonderfully smooth and steady. The rails are laid

on iron tires. The people of Bulawayo, of course, expect great results from the building of this road, and extensions are already projected. Mr. Stanley writes as if this settlement might become a second Chicago, but his arguments are not very convincing. They amount to no more than saying that there is a vast amount of unoccupied land around Bulawayo, which is at present a desert, but which might be made productive if great companies could be formed to irrigate it, and if they could find the water wherewith to do so. The conditions which created Chicago were very different from this.

As Mr. Stanley saw little of the country except what was visible from a car-window, his impressions are not very extensive, nor are they interesting. His speculations as to the future development of South Africa have no such basis as to command our attention, and his recommendations as to the measures to be pursued are often puerile and presumptuous. We find none of his letters particularly agreeable reading, but the most repulsive are those from Johannesburg, which are in the main given up to coarse abuse of President Krüger. This worthy is doubtless a perverse and oppressive ruler, possibly a corrupt one; but the violent language employed by Mr. Stanley in describing him arouses the sympathy of the reader, nor are such facts presented as would give reason for this vituperation. On the whole, these letters give the impression of much ignorance on the writer's part of what he undertakes to describe; what he has to say is hardly worth saying, and he does not say it very well. It would be a waste of time for any one who can procure Mr. Bryce's 'Impressions' to pay attention to those of Mr. Stanley.

Memory and its Cultivation. By F. W. Edridge-Green, M.D., F.R.C.S. (International Scientific Series, No. 78.) D. Appleton & Co. 1897. 8vo, pp. 311.

This author recognizes thirty-seven faculties of the mind, differing in but few particulars from the thirty-seven accepted by the phrenologists, and located like theirs in the cortex of the brain. This is utterly at variance with all the results of the last thirty years' study of the functions of the brain. Still worse, although Dr. Edridge-Green acknowledges that memory is the most important of all the powers, he places it in the corpus striatum and optic thalamus—that is, in organs between the cortex and the spinal cord. Two chapters are devoted to arguing these positions, yet the only reference to the experimental researches of our time is one brief and vague mention of Ferrier's work. No reasons are put forward which are not either old or insignificant.

The opening sentence of the book is, "What is memory?" This is pertinent; but the true answer is not given. The phenomena of memory are nothing but those of the phenomena of association by contiguity, in which the suggested idea brings with it so much of its environment as to be referred to the past. Hence, whatever cerebral explanation is given for association in general must be applied to the chief constituent of memory. Dr. Edridge-Green (p. 145) appears to locate association by contiguity in the optic thalamus. Considering that association by contiguity is nothing but mental habit, and that habit-taking is one of the fundamental attributes of protoplasm in

general, the theory of this work could not well be narrower or more arbitrary.

Although the theoretical part of the book is so unimportant, it might be hoped that some wise counsels would be given about the cultivation of memory. All we find, however, is a series of twenty-two mnemonic rules. Though there are so many, they omit some well-known principles, such as that of the summation of stimuli. Among the rules given are a few which will probably be of some value. Others, though well enough, are trite. Still others are both trite and pernicious, because they recommend the burdening of the memory with utterly trivial and useless associations. Thus, we are advised to remember that the first Roman invasion of Britain took place 55 B. C. by associating it with the vocables "Julius Cæsar," and remembering that the letter *d* means 5. Is it not much easier to remember that it was seven years after the defeat of Catiline and seven years before Pharsalia? The good old way of learning a few important and familiar dates *per se*, and the rest by their intervals between those, can hardly be improved.

Modern Architecture: A Book for Architects and the Public. By H. Heathcote Statham, Fellow of the Institute of British Architects, Editor of the *Builder*, etc. Charles Scribner's Sons. 1898.

The keynote of Mr. Statham's book is common sense. It contains good instruction for those who are candidates for such instruction, whether laymen or architectural students, discussing the planning and in the rough the designing of buildings in country and town, without concerning itself much for the technical forms of architecture, with abundant illustrations from the buildings of various countries, and with a catholicity of judgment which we do not always find in the writers of a country that has an architecture of its own. If we notice at all that Anglocentric view of the universe from which Englishmen find it hard to get away, it is when Mr. Statham sees in every Parliament-house an appropriation of the idea, which he patents to Mr. Barry, of using a central hall of entrance connected with a great chamber on either hand—one of the obvious expedients which belong to the world, and have been used by it at many times and places. This is very much as if one should accuse every musician who writes a perfect cadence of plagiarizing from Haydn. It is not unnatural that Mr. Statham should prefer English planning to French, perhaps not strange that he should say that "the French architects are mostly very bad planners": we have known French architects to say the same thing of English. Possibly architects not French, who have studied French work, though they might not quite agree with either, would on the whole give the preference to French planning. It is very much a question of the comparative values one sets on details of convenience, of which the French are ready to sacrifice a good deal, and of elegance, for which the English have little natural gift. It should be remembered that all planning is a matter of compromise. He succeeds best who combines the greatest number of the possible excellences, and who knows best what to sacrifice; as to this last, opinions will differ, as habits do.

In spite of an inclination, which is common to writers on this subject, to lay down law

for design in cases where there is more question of an artist's instinct than of doctrine. Mr. Statham's criticism seems to us in general very judicious. It shows not only clear ideas of what works well in practice, but an eye to the artistic qualities of design, and especially to qualities of stateliness and dignity which we too often miss in the work of English and American architects.

BOOKS OF THE WEEK.

HENRY HOLT & CO.'S RECENT BOOKS.

The publishers' catalogue of General Literature free on application to 89 W. 33d St., New York.

Fiction.

BURROWS'S THE FIRE OF LIFE.

A love-story of English Society to day. Scene, London and a Somerset Village. \$1.25.

TARBET'S FIGHTING FOR FA-VOUR.

12mo \$1.35.
 A picturesque tale of adventures in Scotland in the sixteenth century.

ELLIOTT'S THE DURKET

SPERRET

12mo. \$1.25.

PUGH'S KING CIRCUMSTANCE

12mo. \$1.25.
 Stories mainly of humble town and country life in England, written with extraordinary vigor and truthfulness, and not devoid of humor.

8TH IMPRESSION OF VOYNICH'S THE GADFLY

12mo. \$1.25.

4TH IMPRESSION OF JEROME'S SKETCHES IN LA-VENDER, BLUE AND GREEN.

12mo. \$1.25.

Eur-Aryan Roots. BALY'S EUR-ARYAN ROOTS.

Vol. I. xxvii+781 pp., 8vo, \$15, net.
 The late Archbishop of Calcutta here gives the pedigree of the greater portion of English words now in use, tracing them to their original Eur-Aryan source.

Cuba.

3D IMPRESSION OF ROWAN & RAMSAY'S CUBA.

16mo. \$1.25.

Books in these two columns, when not kept by local booksellers, may be had of the publishers at 89 W. 33d St., New York, or 378 Wabash Ave., Chicago. The prices, where not otherwise specified, are net, and 8 per cent. should be added for postage. *Educational Catalogue free.*

French.

CANFIELD'S FRENCH LYRICS.

About 340 poems, representing over 60 authors, mostly those since the Renaissance, and especially those of XIX Century. With historical introduction and brief notes.

STE-BEUVE'S SEVEN OF THE CAUSERIES DU LUNDI.

Edited by Prof. Harper of Princeton. LI.+170 pp 75c.

ST. PIERRE'S PAULET VIRGINIE.

Edited by Prof. Kuhns of Wesleyan x+160 pp.50c.

ZOLA SELECTIONS.

Authorized Edition. Edited by Prof. Cameron of Princeton. (In Preparation.)

LOTI SELECTIONS.

Authorized Edition. Edited by Prof. Cameron of Princeton. LXII+185 pp. 70c.

OHNET'S FILLE DU DEPUTE.

Edited by Geo. A. D. Beck, *Maître de Lettres.* V+204 pp., 50c.

MUSSET'S LE MERLE BLANC.

Edited by Misses Countat and Williams of Smith College. (May.)

STERN AND MERAS' FIRST LESSONS.

(May.)

AUBERT'S LITTERATURE FRANCAISE.

Second Series XVIII. and XIX. Centuries. Representative selections, with editorial matter in French. 290 pp., \$1.

GASC'S LIBRARY DICTIONARY.

French-English and English-French. 956 pp. (3 columns), 8vo, \$4.00 net.

A New and Cheaper Edition of GASC'S STUDENTS' DICTIONARY

1166 pp. (3 columns), 12mo. \$1.50 retail.

REMAF German.

BIERWITH'S ELEMENTS OF GERMAN.

Grammar and exercises based upon the frequency of occurrence of words and constructions, actually ascertained by count in more than 160,000 words of ordinary prose and verse. (Full.)

SCHILLER'S WILHELM TELL.

Edited by Prof. Palmer of Yale. With illustrations, maps and vocabulary (May.)

SCHRAKAMP'S GRAMMATICAL DRILL.

Gives practice in the more difficult points of syntax and usage. 168 pp., 65c.

SCHRAKAMP'S CONVERSATION.

Practical and up to date conversations both in German and in English, including one on the bicycle. 107 pp., 55c.

STERN'S FIRST LESSONS.

(May.)

ROSSEGER'S

WALDSCHUHL-MEISTER.

Abridged and edited by Prof. Foster of the University of Nebraska. (June.)

A New Edition with Vocabulary of GOETHE'S HERMANN UND DOROTHEA.

Edited by Prof. C. Thomas of Columbia. 160 pp. 40c

A New and Cheaper Edition of WHITNEY'S DICTIONARY.

900 pp. \$1.50, retail.

Spanish.

RAMSAY'S ELEMENTARY

READER.

With Illustrations and Vocabulary. 248 pp. \$1.
 Prof. C. L. Brannan of Columbia: "I shall consider it my pleasant duty to recommend it to any one who may ask my advice as to the choice of an elementary Spanish reader."

YALE MIXTURE.

The choicest tobacco made, and preëminently a gentleman's smoke.

Marburg Bros., The American Tobacco Co., Successor, Baltimore, Md.

Letters of Credit. We buy and sell bills of exchange to and make Cable Transfers of money on Europe, Australia, and South Africa; also make collections and issue Commercial and Travellers' Credits, available in all parts of the world.

BROWN BROTHERS & CO.
 NO. 59 WALL STREET, NEW YORK.

The Nation.

NEW YORK, THURSDAY, APRIL 28, 1898.

The Week.

Spain has ordered her ambassadors in various parts of the world to present to the governments to which they are accredited a memorandum setting forth the long list of concessions made by Spain to the United States. This note will probably be very like the one which Minister Polo left with our Department of State on April 10. It recites the demand after demand made by our Government, to which Spain had acceded. The whole constitutes one of the most brilliant diplomatic victories ever won. President McKinley might have sent an account of it to Congress with paeans of exultation over his immense accomplishment. But, as the *Paris Temps* said, just when his diplomatic success was greatest and most evident, he felt compelled to place himself at the disposal of Congress, with the result, as Mr. Goldwin Smith says, that "the American nation is being hurried into war before the resources of diplomacy are exhausted." It is, indeed, a striking instance of a lost opportunity of diplomacy. Such mysterious failures when the chances of complete success were apparently brightest, make Coleridge's sneer seem almost justified: "Your diplomatic art is stuff!"

The idea that the Spanish, than whom there is no prouder race on earth, would yield what they consider their national honor on demand—and a demand made as insulting as possible—argued a woful lack of knowledge and imagination in those who held it. No doubt our politicians were misled not only by ignorance, but also by what they thought safe precedents. We had sent an ultimatum to Paraguay, and she had surrendered without a shot. We had bullied Chili, and she had complied with our demands. Chili and Paraguay are Spanish by descent; ergo, all you have to do to Spain is to treat her just like Chili and Paraguay. This was, no doubt, a convincing argument in the minds of those gentlemen, totally inexperienced in diplomacy and quite ignorant of Spain, who have led us into war; but it has been dashed to pieces on the hard fact. The speech from the throne at the opening of the Spanish Cortes on April 20 disposed of the final lingering hope of some of the Jingoists that Spain would, at the last moment, ignominiously back down. But that scarcely justifies their now angrily saying that this revelation of Spanish obstinacy and pride shows how futile it was to negotiate at all with such an unreasonable people. It is evident that

the wretches never meant to surrender Cuba without a fight, now say our men of oozing valor; therefore, we should have fought them long ago. But if the Spanish had not had patriotism enough to assert themselves as they have done, they would have been too contemptible for even a Jingo to fight. As it is, we are at least assured that our enemy is spirited and tenacious, a foe worthy of respect, and one to subdue whom we shall need to exert ourselves mightily.

The departure of Minister Woodford from Madrid is a fit occasion for saying that, so far as his record has come to the public knowledge, he has proved an excellent representative of our Government in a most difficult, responsible, and embarrassing position. Lacking both experience in diplomacy and knowledge of the Spanish language, he has triumphed over these drawbacks, and his bearing throughout the steadily increasing complications of the last few weeks has been most dignified and creditable. He has been, from first to last, the earnest advocate of a peaceful settlement of the controversy if such a settlement were possible. There will be great curiosity to see the full history of the diplomatic negotiations which have gone on through the American Minister during the last few months, and the final verdict upon his part in them must await such publication; but it may be said now, and it ought to be said, that, so far as appears upon the surface, Gen. Woodford has conducted himself in a manner worthy of high praise.

There is much truth in what Dr. Barth writes in the *Berlin Nation*, that a war between Spain and the United States will be between two governments, not two peoples. There is no personal hatred of the Spaniards by Americans, and we do not believe the Spaniards hate us. Those of them who have lived in this country say they should feel perfectly safe here even in time of war. They go away, not through fear, but because they consider it "good form." The Governor of Florida has declared that no Spaniards need leave that State through dread of not being protected in life and property; he would use the whole power of the State to protect them, if necessary. It is reported from St. Louis that the Spanish Consul in that city advises Spaniards to stay quietly where they are, as he considers them perfectly safe. Of course they are, and so, we believe, would any inoffensive American be in Seville or Santander.

The new Hull army reorganization bill, which passed the House on Satur-

day, alters the present organization of the army only by adding two more companies and a major, two captains, and four lieutenants to each regiment of infantry. At the end of the war there is to be a relapse to the present antiquated system of having eight manned and two skeleton companies. Beyond this the bill simply places the army upon a war footing by prescribing that each company of cavalry and infantry shall have 100 and 106 men respectively, while the heavy artillery batteries are to consist of 200 men each. In view of the arduous conditions of the warfare we shall wage in Cuba, it would have been no mistake to increase each company to the size of the German and French units of 250 men each, since deaths, disease, and privations rapidly reduce the strength of any company in the field, as all veterans well know. Even in garrison duty it has been a common thing to have fifteen or twenty men out of a troop or company of sixty unable to do duty because of sickness or accidents or necessary detached service. The best that can be said about the proposed increase is that it will prevent us from sending weak battalions, over-officered and erroneously called regiments, to the front to become ineffective in the shortest possible time. The promotions which will ensue in the infantry on the passage of the bill, will advance many captains who have long since passed the age of usefulness as company officers. Indeed, the retirements last week go far to prove, what has been patent to all army observers for many years, that a large number of the higher officers and of the old war-time captains are unfit to stand the hardships of an active campaign. It is safe to say that the *Army Register* of two years hence will be a surprisingly changed and altered book.

The War Department's call for volunteers issued on Monday is full of surprises. A careful perusal of the list tends to the belief that the assignment of quotas was made by some one utterly unfamiliar with the capabilities and value of the Guards of each individual State, or else by simply drawing lots from a hat. For example, the State of New York has had admittedly for years the best cavalry and light artillery, yet only half its well-trained cavalry and not one of its five light batteries, with their 450 men, have been called for by this order. Gen. Carroll, the Chief of Artillery for this State, points out the astonishing fact that, although California and Maryland have no artillery whatever, they are each required to furnish four batteries. Furthermore, seven States which have no artillery are called upon for sixteen batteries, while twenty-

six States which possess fifty-one batteries, more or less ready for duty, are not required to furnish a single one! Another glance at this remarkable order shows that although Pennsylvania's Guard comprises three light batteries and three troops of cavalry, she is asked only for infantry and heavy batteries—the latter an unknown branch of the service in that State. Finally, Massachusetts, which has for some time possessed the only militia heavy artillery regiment, is asked to furnish only three heavy batteries, or one-fourth of its force now ready for active service. In view of these facts we must either regard this order as the most careless and slipshod one ever drawn in the emergency of war, or infer the desire of the War Department to obtain the required State quotas without any regard whatever to the existing State troops. The only explanation given by Adjt.-Gen. Corbin is that it is "within the possibilities, even probabilities, of the near future that the [New York] artillery will be very much needed at home." But this by no means explains many other astonishing facts of this momentous order, which continues to call forth vigorous protests on all sides.

We undoubtedly have the right during this war with Spain to capture her merchant vessels on the high seas, but it is contrary to our principles to do so. When we proposed in 1856 to the European Powers that, instead of merely abolishing privateering, the principle should be adopted of exempting all private merchant ships and their cargoes from belligerent seizure on the ocean, it was confidently predicted by some publicists that, by the close of the century, this benign improvement of public law would be assented to by the whole civilized world. This exemption, said John Quincy Adams as Secretary of State, has been an object which the United States have had much at heart ever since they assumed their place among the nations. Mr. Fish in 1870, in an official communication, expressed the hope that our Government might soon be gratified by seeing this principle recognized as another restraining and humanizing influence imposed by modern civilization on the art of war. The following year we agreed by treaty with Italy that, in the event of war between the two countries, the private property of their respective citizens, with the exception of contraband of war, should be exempt from capture on the high seas or elsewhere, unless such vessels attempted to enter a blockaded port. In favor of this doctrine is the recent practice of Austria and Prussia; the former declaring in 1866 that enemy's ships and cargoes should not be captured as long as a like indulgence should be extended by the enemy, and the latter going so far in the war of 1870 as to decree this

exemption in favor of French vessels without any condition whatever.

Great Britain has, however, never consented to this new doctrine, and for its refusal it has received the censure of not a few Continental authorities on international law. But Mr. Hall, an eminent English authority on this subject, though maintaining that there is no moral reason for the abandonment of the right of capture, presents strong considerations of policy for its abolition. Owing to the dependence of English manufactures on the cheap importation of raw material, and of the English population on foreign food supplies, he insists that the adherence of the British Government to the old rule in respect to capture of private property at sea is of very doubtful wisdom. As commerce progresses, the principles of warfare established in ancient times must necessarily be modified. All peoples are concerned in having international intercourse disturbed as little as possible on such occasions. We of all peoples are most thoroughly committed to the principle that there should be no distinction in time of hostility between immunity on sea and immunity on land of private property. Now is the auspicious time to concert a plan that shall make this principle, for which we have so long and so ably contended, an accepted maxim of maritime law.

The revenue measure introduced by Chairman Dingley is calculated to yield \$90,000,000 per year. It puts additional taxes on beer, tobacco, and cigars, and on licenses to sell tobacco. It revives most of the stamp duties of the civil-war period, including legal instruments, stocks, bonds (other than those of the federal, State, or municipal governments), bank checks above \$20, telegrams, patent medicines, perfumery, cosmetics, domestic wines and mineral waters, and a tonnage tax on vessels engaged in foreign trade. The bill provides also for a loan or loans not exceeding \$500,000,000, by the sale of bonds bearing interest at the rate of 3 per cent. These are to be issued in denominations of \$50 and upwards, and are to be first offered as a popular loan. The Secretary of the Treasury is to have authority to borrow money on certificates of indebtedness, bearing interest at 3 per cent., but the amount of certificates outstanding cannot exceed \$100,000,000 at any time. The tax features of the bill are scientific. They are much better than we had expected to see. It is a commendable feature of the bill that the taxes will be paid by persons who will know that they pay them. When we have a war, it is desirable that the people should feel its burdens, since it is only in this way that the great mass of the community ever learn how bad a thing war is.

The bonds are to be payable in "coin," but not specifically in gold coin. Probably this is the only kind of bond that would pass the Senate in any case, and the situation is such that something must pass very soon. Under these circumstances the Secretary of the Treasury could hardly withhold his assent to the measure in the form which has been given to it. It has been reported that most of the Democrats, Populists, and Silver Republicans will oppose any bond issue whatever, and Senator Teller is quoted as saying that no such measure can pass the Senate. Here we reach the dead point of danger in home politics. The Senate forced the Government into war. Now if the Senate withholds the means for carrying on the war, pretending that fresh issues of greenbacks will answer every purpose, the country will be not far from ruin. That there was a lurking purpose of this sort behind the Senate's resolution—that there was thus much of method in its madness—we have all along suspected. We hope that our suspicions may not be realized. Possibly Mr. Teller's programme may not command all the votes of the opposition in the Senate, although Senator Jones of Arkansas, chairman of the Democratic national committee, is reported to be against any issue of bonds, and in favor of an income tax instead. The latter measure is possible only by an amendment of the Constitution. Such an amendment might be passed and ratified under the stress of war, but it would take time, and in the meanwhile where would the Government get money to pay the troops, to buy ammunition, guns, ships, and provisions for the soldiers and sailors?

The resignation of Secretary Sherman puts an end to an awkward, not to say an intolerable, situation. Ever since he assumed the position thirteen months ago, the State Department has been one of growing responsibility, until at last it became the most important of all; and yet its nominal head has been a broken-down old man, who was utterly incapable of discharging its duties, and whose presence was a source of constant embarrassment. It is a melancholy ending of an exceptionally long public career—this necessary crowding out of the secretaryship of a veteran who had first been crowded into it, against his will, in order that his seat in the Senate might be had for a new-comer in politics. The episode has been one of the most discreditable in our political history, and the sooner it is forgotten, the better. Mr. Sherman will be succeeded in the secretaryship by the man who as first assistant has done the work during the past year. Judge Day was an unknown Ohio lawyer when he came to Washington, but all accounts agree that, although devoid of diplomatic training or experience, he has done remarkably

well as the real head of the State Department during a most critical period.

The retirement of Mr. Gary from the Postmaster-Generalship is no loss to the public service, because he has shown no capacity for anything beyond the discharge of its duties along conventional lines. One must be a man of uncommon force of character and of especial talent for executive affairs to leave any impression upon this department, even if he remains at its head for the four years of a President's term. The second change in the cabinet, like the first, shows the humbug of the locality method of constituting that body. Mr. McKenna was made Attorney-General in order to "give recognition to the Pacific Coast," but he had filled the place only a few months when he was appointed to a seat on the Supreme Bench, and was succeeded by a New Jersey man. Mr. Gary, a respectable and successful business man of Baltimore, was selected in order to "give recognition to the South," but he resided in what is really quite as much a Northern as a Southern State, and, retiring after about a year's service, he is succeeded by a Pennsylvanian. Thus the South and the Pacific Coast are both left without representation. The cabinet appointments are now "lumped" to an unusual degree in the region between Boston and Chicago, one representative being allotted each of the States of Massachusetts, New York, New Jersey, Pennsylvania, Ohio, Michigan, and Illinois; while Iowa is the only commonwealth of the great number west of the Mississippi and south of the Ohio which has a place.

Mr. Wanamaker keeps on making exposures of the Quay despotism in Pennsylvania, and his disclosures at Bellefonte on Tuesday week were in some respects the most startling yet made. "There was a time," he said, "when we could boast of a free press, but to-day in Pennsylvania, to a great extent, it exists only in name. The same political influences that have poisoned the springs of public integrity, that have corrupted the politics, that have debauched the counsels of legislation, that have wrecked banks, trust and insurance companies, have contaminated and blocked the course of public news." Mr. Wanamaker traced the various methods by which this result is achieved. In the first place, large numbers of the great army of correspondents who first gather the news are "hypnotized by the machine," so that they manufacture stuff favorable to the machine and suppress news that is unfavorable. In the second place, the news that does pass the reporter sentinels must then run the gauntlet of the news service, where machine retainers are often secretly planted upon the manage-

ment, and the facts are more thoroughly squeezed out. Finally, when it reaches the newspaper office, it frequently encounters a machine-owned editor, or a political guard, stationed in the news room, by whom it is finally suppressed or distorted; while scores of editors throughout the State are candidates for post-offices, and do not furnish the news, and many more have relations who expect appointments, and realize that it would never do to print facts detrimental to the machine. Nor does the Quay machine stop with suppressing the publication of matter that it does not wish the people to read. Mr. Wanamaker charged that "some of the great telegraph systems are no longer safe conductors of private messages." He stated that the superintendent of one great company sits in the secret councils of the machine. He declared that "our friends" (meaning the opponents of the machine) "complain that in some places no message of importance is sent of which the machine is not advised." Do they manage things any better in Spain?

Massachusetts follows the example of New York in substituting the electric chair for the gallows. Hitherto, murderers in the Bay State have been executed by the rope, the penalty being inflicted in the jail of the county where the crime was committed. A law has just been passed by the Legislature which provides that the electric current shall hereafter be used and, in order to avoid the necessity of more than one plant for the purpose, all executions will take place in the State prison. Another reform in methods adopted from New York is a restriction of the old publicity of executions, as nobody will be permitted to be present except certain officials, including the necessary physicians, the surgeon-general of the Governor's staff, and the Sheriff of the county in which the crime was committed, and not more than three other persons. The substitution of the electric chair for the gallows in New York is a change which was long since thoroughly vindicated, and the only wonder is that other States, even the most progressive, are so slow to take the same step.

The attitude of the French press towards our war is anything but favorable, but this was to have been expected. In the first place, it is said on good authority that the French are the principal foreign holders of Spanish securities. We have heard this holding estimated as high as \$120,000,000. The relations of Frenchmen and Spaniards have for centuries been very cordial. Spaniards always form a very prominent feature in Parisian society. In the second place, they are of the same religion—and religion still counts with the bulk of Frenchmen—and rely on much the

same saints in time of difficulty and danger. In the next place, both are peoples who attach great importance to manners, and the American absence of or indifference to manners has always outraged them both in equal degree. This war has, unhappily, brought out this trait in our character with unusual prominence. There was probably never a war begun with so little attention to forms and preceded by so much belligerence. Every now and then there appears on the Parisian stage a play intended to ridicule Americans—we believe that such a one is running there now—and in these plays the American want of manners is the characteristic always most prominently displayed. We need not go into particulars to show the great probability that the present unpleasantness has furnished abundant fuel for hostility to us on this score, in Paris as well as in Madrid. There is nothing which in Europe excites so much anti-American prejudice as this indifference of ours to forms, and our somewhat ludicrous tendency to believe that forms in a foreigner mean affectation.

The friends and admirers of Crispi, the Italian statesman, waited a good while with great anxiety for the report of the commission which was to inquire into his reported connection with the bank scandals that occurred during his administration, for even those who do not admire him as a statesman, have a soft place in their hearts for him as an old soldier, one of Garibaldi's glorious Thousand. The commission has made its report. What it says is that the Bank of Naples opened a branch at Bologna in 1893; that, between the opening of the branch and 1896, Crispi had six transactions with it, namely, loans upon promissory notes, and that the sums thus furnished to him were obtained by fraudulent means by Favilla, the manager. They were repaid with interest, but they were, it would appear, repaid out of public money of which Crispi at the time happened to have control. Crispi alleges in his defence that the money thus obtained was used for public purposes, but this was not made out very clearly. Nor did it appear very clearly that he did not know where Favilla was getting the money. There was, however, something worse than this. When an inspection of the banks was ordered in 1896, he used his official influence to get Favilla's bank exempted from it, and yet, had it been made at that time, Favilla's frauds would have been discovered. The commission seems to have done its work faithfully, but the report shows that the Italians are nearly as clever as we are in mixing politics and business. The most striking resemblance of all is Crispi's declaration, when he was reflected to the Chamber, after the exposure, that the reflection operated as a "vindication."

THE WAR, AND AFTER.

The President having signed the Cuban resolutions passed by Congress, and the Spanish Government having refused to comply with the demands therein made, the two nations are now at war with each other. We have done everything in our power to prevent this lamentable result, but even a veto of the resolutions could only have caused some delay in the rush of the nation into war—could hardly have prevented it. The President has proclaimed a blockade of the principal Cuban ports, which is really the only thing to do to carry on the war at present. There is little use in bombarding Havana until we have a force to land and take possession of it after bombarding it, and if we had one we should, for humanity's sake, be unwilling to land it at this season. But it must not be forgotten that blockading and "starving out" are a tedious business. There is no certain information as to the state of the Spanish garrison for supplies. The Administration may know more than the public on that point, but the public knows little or nothing. What is called "military honor" will oblige Blanco to hold out as long as he can, and we may be sure that he will do what military commanders do in all such cases—sacrifice the inhabitants to the garrison.

Some sanguine spirits in Washington think that all will be over in thirty days. On the other hand, we have Gen. Miles's reported advice not to send troops to Cuba until the rainy season is over. Much as we, in common with every one else, wish the war settled in the shortest possible time, to send troops, even hardened regulars, to the island now will simply be to subject them to frightful losses, such as must inevitably follow their exposure to the yellow fever and the other evils of the Cuban climate. To proceed quickly is one thing; to expose rashly our best officers and men to certain death before we can reinforce them with trained soldiers is a very different matter, particularly as no one knows how long we shall have to maintain troops in the conquered territory before that desired stable government shall have been established. Furthermore, the next six months will be all too short a space of time to properly organize and drill the volunteers just called for.

If it depended solely on the capture of Cuba, the war might be short. The island is not defensible against a great Power lying so near to it as we are, by a Power lying at so great a distance as Spain is. If Cuba were within one hundred miles of Spain and three thousand miles from us, we never could wrest it from her. The disadvantage of distance would be so great that we never should attempt to do so, nor even imagine such a thing. The disadvantage of distance is even greater against Spain in the pre-

sent case from the fact that the island of Cuba derives nearly all her food supplies from us. There is no other country that could supply her fully, except possibly Canada. We are blockading her, and this raises a very solemn question for us to consider, viz., what is to become of our friends the reconcentrados? Only a short time ago we were on the point of going to war for the privilege of feeding these poor people. We had the most doleful pictures of their condition from Senator Proctor, from Miss Barton, from Dr. Klopsch, and from our consuls in the island. Dr. Klopsch said that if the island were blockaded, they would all starve to death within a week. Now the pressing question is how to carry on the war so as not to murder our own friends and adopted children. After taking so much pains to rescue them from misery, we ought not to make their last end worse than their first.

The next question is what we are to do after taking the island. Recognize the Cuban republic? That means putting the reins in the hands of Gomez and his followers. That is the contention of the Democratic party in this country. That is what is meant by the display of Cuban flags in the columns of the yellow journals. That is the reason why the Cuban bonds have been issued and placed where they will do the most good. It is a very attractive programme to the bondholders and issuers, no doubt, but it will never be adopted by the American people. The brigands and half-breeds who have kept this country as well as their own in a turmoil for three years will never be put in authority over the orderly and peace-loving wealth-producing inhabitants, at the cost of American blood and treasure, unless they are a majority of the island, and proved to be such by an election held under our auspices, at which every qualified person can vote without fear or constraint.

What will happen if Gomez and his followers refuse to disband at our instance? In that case it would be incumbent upon us to take up the task of suppressing them, and this we should do beyond a doubt. We should have stepped into Spain's shoes in this particular after fighting Spain for the privilege of doing so, and there would be no escape from it. Our declared purpose is to pacify the island, to make it free and independent, to establish a stable government and then to take hands off. Government, according to our theory and our principles, means the government of the majority, and if the insurgents do not agree to this, we must put them down, and this we shall infallibly do. According to the report of Consul McGarr, they do not number at the present time more than 10,000 men all told. There is every reason to believe that they are a small minority of the whole population of Cuba. That they are the

least intelligent part of the population, and least fitted to govern themselves or anybody else, is also pretty generally admitted. So far as Cuban politics enters into our politics, the party that follows President McKinley's plan may fairly claim the support of all believers in the rule of the majority. Cuban flags and yellow journals and Junta bonds are alike obnoxious to that principle.

POOR SPAIN!

Pobre España, wrote unlucky Minister De Lome, and "our poor Spain" is the common phrase on the lips of Spaniards, officials and others, who speak of the thickening perils confronting their country. Even in the Queen Regent's speech, with all its fine display of national pride and courage, there was audible a note of profound melancholy, as of a nation conscious that its inspiring past and its most desperate efforts would not keep it from taking one more step in a decadence probably without historical parallel. Glance only at a map of the Western Hemisphere and see the vast possessions which have been sheared away from Spain within a hundred years, and you will begin to understand her passionate clinging to Cuba, "the ever-faithful isle," as Spaniards have delighted to call it, as the last visible token of a vanished grandeur. Yet Spain's leaders cherish no illusions as to the result of the conflict upon which they are now entering to retain Cuba. They know that they will lose the island, that their lingering prestige in Spanish America will disappear in its last vestiges, and that Spain will be plunged deeper than ever in miseries. No wonder that, even in the same breath with their bravest defiance, they whisper, "Poor Spain!"

During the past twenty years, or since the close of the last Cuban insurrection and the return of the Bourbons to the throne, Spain has had a breathing-spell. Perhaps it might be said that she was then given by fate her last opportunity. She had peace at home, after fifty years of endless revolts and *pronunciamientos* and dictatorships and changes of government. She increased rapidly in population and in wealth. She even, under the lead of Sagasta and the Liberal party, accomplished many reforms in legislation: the suffrage was extended, religious freedom established, trial by jury obtained, and so on. But all the while the real disease from which the nation was suffering was insidiously strengthening, and when the Cuban trouble flamed up three years ago, Spain was discovered to the world weaker than ever. With all her splendid energy of race still existing, administrative capacity seemed to have deserted her. The more desperately she struggled, the more she seemed to flounder helplessly in a quagmire of executive and military incompetence.

[Making every allowance for the enormous difficulties in the way of campaigning in Cuba, the failure of the 250,000 soldiers sent there to subdue at the most 40,000 insurgents is simply unparalleled and colossal.] Authentic stories of wretched equipment and inadequate supplies and bad leadership show to what a depth of inefficiency the service had fallen. Moreover, a good deal of the military strength of Spain in Cuba was merely on paper. She sent there, for the most part, only conscripts, mere boys. Her very last reinforcements, some 16,000, sent to Cuba since the 1st of January, are described by the correspondent of the *London Times* as largely "boys of fifteen and sixteen years of age." Her best troops, some 70,000 or 80,000 seasoned men, Spain kept at home "in case anything should happen" (*para lo que ocurriere*). That is, the lurking fear of a Carlist uprising or a republican outbreak tied the hands of the Government.

But how about the Spanish navy? We are more concerned about that just now. In what state of efficiency has the Government kept the navy? Well, we can judge only by scattered indications, but those, we must say, confirm the opinion of Mr. Goldwin Smith that the Spanish naval service is in as bad a state as her military, and that the "Spaniards have hardly mechanical skill enough to handle the new machines" which have supplanted the ships of the old style. In the naval war which Spain waged against Chili and Peru in 1865-'66, she cut a lamentable figure in gunnery and seamanship. She was able to bombard defenceless Valparaiso, but in the one naval action she was practically defeated by an improvised and inferior fleet. During the present Cuban war she has been unable to prevent filibuster after filibuster from landing men and cargo. Her loss of the fine cruiser *Reina Regente*, four or five years ago, was one of the most frightful and disgraceful calamities that ever befell a navy. This war-ship was sent to carry the Moorish Ambassadors from Cadiz to Tetuan. Her captain warned the authorities that she was unstable unless heavily loaded with coal; but there was no coal to be had at Cadiz; the *Reina Regente* was ordered to sea, ran into a gale coming back, incontinently upset, and now lies at the bottom of the sea with all her crew.

This Spanish habit of trusting to luck and improvising everything at the last moment has, we believe, marked Spain's preparations for war with the United States. Although that war has been pointed to unerringly for two years past, it bursts upon her sadly unready. The correspondent of the *London Times*, writing from Havana on March 26, said that a blockade would reduce the army to starvation in "a very few weeks." And there is reason to credit the reports that the Spanish fleet and coaling-stations are grievously short of coal. For

a year or two now coal has been very expensive. It takes hard cash to buy coal, and Spain has been living from hand to mouth in both cash and coal. She can now command cash, but finds herself, on the verge of a naval war, without adequate supplies of coal and with none obtainable in sight. But battle-ships without coal are helpless hulks. This circumstance, together with her disadvantages on the score of distance from the probable scene of the war, makes the odds against Spain simply fearful.

Travellers in Spain report that intelligent middle-class Spaniards will admit every charge of incompetence which can be brought against the conduct of public affairs. "Yes, we have a wretched government. In any other country somebody would be shot for this." There is the hopeless, fatalistic creed of the Spanish bourgeois: the Government is detestable, and killing somebody is the only remedy. It is surely a great mystery—this creeping paralysis, this accelerated decadence of a noble race. None of the off-hand explanations offered really explain. A clever writer in *Blackwood's* is thrown back upon the conclusion that all you can say is, that "there is something Spanish in the Spaniard which causes him to behave in a Spanish manner." Whatever the cause, we are no doubt about to witness the final extinction of Spain as an American Power. The mysterious ways of Providence in abasing a once exalted nation are not made less mysterious in this instance by the choice of an instrument to execute the divine decree. It would be rash to conclude that because Spain has apparently lost the favor of Heaven, we are securely established in it.

THE BANK OF SPAIN.

Given an unrestricted command over a printing-press, and a government can be financed long after the conditions have outwardly become desperate. Spain is in this position, and it is foolish to speak of her as bankrupt and financially impotent. On the contrary, she still has the means of obtaining funds, and the instrument for rendering these means available is the Bank of Spain. The remarkable constitution of this bank deserves some study, for its position is almost unique in financial experience.

The Bank grew out of a reorganization by Government in 1857 of certain existing and well-nigh moribund banks. It was local in influence, and in a few years had become little else than a land-bank, its resources being mortgaged to the state on the security of the national property, in return for which mortgage-notes were issued as circulation. The Revolution of 1868, dethroning Queen Isabella, aided the Bank, as the new Government came to depend upon its as-

sistance, and in return conferred upon it exclusive privileges, making it one great Bank of Spain. This transformation was accomplished in 1874, and was intended to consolidate the national funds, to establish a uniform circulating medium secured by a metallic reserve, and to aid commerce by discounting commercial paper. From a Madrid bank, whose notes never circulated outside of the capital, grew a national bank, with notes circulating throughout the Peninsula.

It was essentially a corporation to aid the financial management of the kingdom. The Minister of Finance, Echegaray, under whose administration this change was effected, wished to place restrictions on the demands on the new bank by the state. The loans were to be infrequent, and always secured by collaterals running for short times and readily convertible into cash. Under the older institution the Bank was more than once placed in jeopardy by the Treasury; but the new alliance of Bank and Treasury was to be "discreet," one "highly advantageous to our public finances and very profitable for the Bank." The connection was made too close, for the Bank had in a single year become a servant of the Government, farming its revenues and gradually monopolizing all state finances.

The capital was fixed at \$19,300,000 in 1874, but was increased by one-half in 1882. The administrative council is chosen by the shareholders, subject to the approval of the King, and this council recommends to the King two assistant governors. The governor holds his appointment from the King, and even the manager of a branch can be chosen only with the royal approval. The management is thus assured to the state. Under its original charter the Bank could issue paper money to five times the amount of its capital. A reserve in specie of one-fourth the circulation outstanding was required, but one-half of this may be silver, which is worth less than the Bank's paper. In 1891 the Government fell into difficulties, and required of the Bank a permanent loan without interest of an amount equal to the full capital of the institution (\$28,950,000), a violation of the law of 1874, which expressly stipulated that the Bank should make loans to the state only upon good securities, readily turned into cash. This single transaction constituted a loan to the state of the entire capital of the Bank, not a penny of which could be repaid till the charter expired. In return for this advance or loan, the charter was extended to the year 1921, and the limit to the note issues was placed at \$300,000,000.

Whatever independence the Bank had enjoyed was destroyed by this loan, for its resources were now too heavily mortgaged to the state to make it other than an adjunct to the Treasury. The Bank manages all the funds of Spain, ac-

counting for them every three months. If the state revenues are not sufficient to meet expenses, the Government pays interest to the Bank for the difference, or if the difference is large, issues temporary notes (*pagarés*) bearing interest. But the Bank pays nothing for the use of any surplus the state may have deposited with it. The foreign and domestic debts are managed by the Bank for a consideration, and all foreign payments are passed through it. It has enjoyed the profits from the tobacco monopoly, and the direct taxes on land and industries have been turned over to it as a guarantee of the loans made during the Carlist troubles. In fact, in whatever light it is examined, the connections between Bank and Treasury, even before 1894, were so many and so close as to make the two practically identical.

Since 1894 the financial operations of the Spanish ministry have still further absorbed and even monopolized the activities of the Bank. No bonds supported by a pledge of the revenues of Cuba could find a sale in any money market of Europe, for it was readily recognized that such a pledge was of the highest uncertainty, little better than no pledge at all. It could appeal only to the gambler on foreign exchanges who was willing to take any risk. Even at home the market was reluctant to absorb the ever-mounting issues of bonds, so the Bank took the securities at a rate which yielded a handsome profit to itself, and gradually passed them on to the Spanish public. With every new loan thus financed, the Bank counted upon good profits, and it has greatly benefited by the Treasury necessities. But the time came when bonds issued on the Cuban revenues were no longer salable, and remained in the tills of the Bank. The additional pledge of the customs revenue of the Peninsula was made, and opened up a new market for Spanish loans; but every dollar was made through the Bank, and the state required of it immediate advances on the bonds deposited with it. Since the outbreak of the insurrection in Cuba the cost has been borne by the Spanish Treasury, for the Colonial Treasury was a fiction; and the Spanish Treasury has been little more than the Bank of Spain. Of the \$160,000,000 in Spanish customs bonds issued, one-half has been taken by the public and the other half is held by the Bank as security for advances to the Government.

Had it not been for these Government transactions the Bank would have fared badly in its balance sheets. As it was, the year 1897, so trying to all Spanish economy, proved a year of exceptional profit to the Bank. A dividend of \$7,200,000, equivalent to 24 per cent. on the capital, was distributed among its shareholders. In 1896 the rate of dividend was 22 per cent. and in 1895 it was 19

per cent. If any conclusion is to be drawn from these figures, it is that the state uses the credit of the Bank to market its securities, but is obliged to pay usurious rates for the advantage.

NO PRIVATEERING.

It was announced in the British Parliament on Thursday that the Government of the United States had decided to abstain from the use of privateers during the present war with Spain, and the announcement was received with cheers. This news having been telegraphed back to Washington, Senator Money of Mississippi called attention to it, and said that if such a step had been taken, the President had exceeded his authority, since the right to grant letters of marque and reprisal was one of the powers vested by the Constitution in Congress. What Mr. Money said was quite true, yet there is not the smallest chance that there will be any conflict between the President and Congress on this question. Probably the President's action in the matter will have the effect to make the United States a party to the Declaration of Paris. The latter was an agreement entered into by the great Powers of Europe in 1856, after the war in the Crimea, as follows:

- "(1.) Privateering is and remains abolished.
- "(2.) The neutral flag covers enemy's goods, with the exception of contraband of war.
- "(3.) Neutral goods, with the exception of contraband of war, are not liable to capture under an enemy's flag.
- "(4.) Blockades in order to be binding must be effective—that is to say, maintained by a force sufficient to prevent access to the coast of an enemy."

The United States was invited to become a party to this declaration, but declined to do so for the obvious reason that, to nations which maintained small navies, privateering was more useful than to those which kept large ones. When the civil war broke out, we endeavored to get in line with the other Powers in abolishing privateering, but it was then too late. France and England had recognized the belligerency of the Confederate States. They could not then treat our renunciation of privateering as including the Confederacy also. In other words, they could not recognize our right to tie the hands of the Confederates in respect of privateering after the war had begun. A privateer under the Declaration of Paris is a pirate, and may be hanged with all of his crew whenever caught by the naval or civil officers of any Power, belligerent or other, but this principle governs only between Powers which are parties to the agreement. It would not apply to the privateers of Spain at the present time.

The argument against the practice of privateering was stated by Benjamin Franklin as well as it has ever been

presented by anybody. It is quoted by Woolsey (p. 211):

"The practice of robbing merchants on the high seas, a remnant of the ancient piracy, though it may be accidentally beneficial to particular persons, is far from being profitable to all engaged in it, or to the nation that authorizes it. There are three employments which I wish the law of nations would protect, so that they should never be molested nor interrupted by enemies even in times of war; I mean farmers, fishermen, and merchants. In some observations on war he pursues this subject of the evils of privateering at great length, and ends thus: 'There is then the national loss of all the labor of so many men during the time they have been employed in robbing, who, besides, spend what they get in drunkenness and debauchery, lose their habits of industry, are rarely fit for any sober business after a peace, and serve only to increase the number of highwaymen and housebreakers.'"

The opportunity presented to us to make ourselves parties to the Declaration of Paris—or perhaps we should say the motive presented to us—is a distinct gain to civilization. So long as we had no motive we should take no such step. We should keep privateering in reserve for what it might be worth. The motive we have now is that to abolish privateering secures us the good will of the maritime Powers. It protects the commerce of neutrals against the scourge of a kind of warfare extremely annoying, largely irresponsible, and almost certain to embroil us with other Powers. Privateering is so far behind the age—so much time has elapsed since the flag of a privateer was seen on the ocean—that it is not likely that the Powers of Europe would allow their merchant ships to be stopped and examined by the private armed vessels of either the United States or Spain. There was a semi-official statement sent out the other day from Berlin to the effect that Germany would not allow it. So we are clear gainers by the giving in of our adhesion to the principle that "privateering is and remains abolished."

At the time when Secretary Marcy declined, in behalf of the United States, to give our adhesion to the Declaration of Paris, he said that we would cheerfully do so if an additional clause were agreed to, that all private property not contraband of war should be exempt from capture on sea as well as on land. This the Powers of Europe would not agree to, nor have they agreed to it since. In time of war the ocean is still an open field to "commerce-destroyers," provided they belong to some regular navy. Private property on land is not subject to plunder by an invading army. No doubt a vast deal of plundering is done on land, but it is under the ban of international law. The German army when it captured Paris in 1870 could not lawfully carry off the money of the Bank of France. It had the physical power to do so, but, under the law of nations, Germany would have been obliged to account for it afterwards. But if Germany had captured the same money afloat outside the three-mile limit of French territory, it would have been a

lawful prize. This incongruity in the practice of nations still exists, but its existence does not make it the less expedient for us to join in the abolition of privateering.

THE POLICY OF ISOLATION.

Ex-Secretary Olney has an interesting article in the last number of the *Atlantic Monthly* on the policy of isolating ourselves from the rest of the world, and treating all foreign affairs as no business of ours, so long as they do not threaten us with some sort of injury. This has been carried so far that we even shrink from protecting our own citizens, as in the case of Turkey, if it seems likely to involve us in a European squabble. If we dislike to meddle even for the purpose of avenging injuries, still less do we wish to meddle for the plain promotion of our interests. Although England is taking much trouble and incurring some risk in China, in order to secure certain commercial advantages, which we shall share on equal terms, and to ward off certain dangers which, though they will not affect us in the same degree, still will affect us in some degree, we are able, owing to this policy of isolation, to offer her nothing but our "moral support."

Mr. Olney apparently ascribes this in large part to the traditional reverence for the warnings of Washington against entangling ourselves in European alliances or quarrels, uttered at a period when any country in Europe was twice as far away from us as China is now, and when we never heard any news from the Old World until two or three months after the event. He proposes now that we should cast off these traditional shackles and fairly join the community of Christendom. He instances the policy of protection, or trying to carry on trade and commerce through our own markets solely, until our production has long outgrown our markets, as a good illustration of what this policy eventually leads to. He accordingly recommends its entire abandonment, and that we should throw in our lot with other nations, and try to get our share of whatever good things are to be had anywhere through the advance of the world in wealth, population, discovery, and invention.

But the transition will not be so easy as he seems to think. Two or three generations have grown up under the present policy, and have imbibed its ideas so thoroughly that belief in it and admiration of it have become part of their equipment as American citizens, and make them look with a certain suspicion on all arguments in support of a change. It will be difficult to persuade that portion of our population which is not in actual contact with the machinery of exchange, that free trade is not a British

device for the confusion and impoverishment of other nations, or to familiarize them with the free-trade doctrine that commerce is barter. It has taken a good while to give the protectionist doctrine a foothold in their brains, and it will take some time to put something else in its place. But we admit freely that the reported *entente cordiale* with Great Britain will do a great deal to hasten the process.

This, however, is not all. We shall need a great change in our political manners. Almost ever since the foundation of the Government, certainly ever since we became very strong, each generation has been taught that we had nothing "to do with abroad," to use Judge Matthews's phrase; that nothing foreign concerned us politically, as long as no European Power attempted a settlement on this continent or sought to extend its borders in America. We were taught not to care what Europe said or thought about anything we did or how we did it. This naturally produced, after a while, complete indifference about the way in which we kept up our relations with Europe. We gradually ceased to pay any attention to the qualifications of the men whom we appointed to make our communications to Europe, or to hear what Europe had to say to us. We ceased to appoint ministers or consuls with any reference to the duties they would have to perform, any more than if Europe did not exist. To-day London and one or two others are the only posts in which we show, by our manner of filling them, that we think the minister will have anything to do, and that it makes any difference what kind of man he is, as long as he is pleased with his place himself. Our diplomatic appointments are generally made as if the minister were to stay at home, and was entitled to some agreeable reward on account of his exertions in home politics. But few of our ministers concern themselves about the countries to which they are accredited or about what is in them.

Under these circumstances, there is, naturally, not much study of languages or of foreign policy among our young men, and little concern among the people at large as to the manner in which our Executive is conducting a negotiation, beyond readiness to go to war if he says war would be a good thing, or is necessary. To the bulk of the population, in fact, foreign politics is a sealed book, and no competent public man gives himself the trouble to explain it or comment on it. If we joined the European world, therefore, we should need at once a corps, not only of competent and instructed diplomats, but of trained committees in the House and Senate. Our committee on foreign affairs, both in the House and Senate, has lost any feeling of responsibility toward foreign nations. It insults them or disregards their susceptibilities with childlike in-

souciance. Only about three weeks ago the committee of the Senate openly insulted Great Britain with as much simplicity as if Great Britain were one of the extinct nations of antiquity. They talked about her and her designs with as much frankness as if they were having a yarn at a corner grocery. If we became one of the family of nations in Mr. Olney's sense, of course, this would never do. There would be constant disputes and recrimination. Foreigners would keep taking offence and demanding explanations. There would be new combinations and new alliances in consequence of some patriotic Senator's remarks to his constituents. In fact, the sense of responsibility for spoken words would have to be developed, especially in our Western representatives, to a degree for which it would be hard to get them to see the necessity. We do not mean to say the thing is impossible, but it would take more time than Mr. Olney seems to think; old and deeply seated habits are not to be got rid of in a day.

Still, the restoration of harmony or good feeling between England and America is a consummation so devoutly to be wished that no difficulties or obstacles should be allowed to stand in its way. England has plainly recognized, at last, that America is her best and only natural ally and friend. We believe the most enlightened Englishmen have long felt this and tried to show it. The trouble has been that there has been no practical way of proving that England was sincere. The Cuban war has happily furnished one of which even the most savage Jingo acknowledges the sufficiency. It may be said, of course, that this newly formed friendship is very likely to be more valuable to England than to us, in view of the attitude of the Continent towards her. But what of it? Wise statesmen do not inquire too closely into motives. The sole questions for us are: Is it a good thing for us? Is it a good thing for liberty and civilization? No one who sees how things are going in the great Continental states can well help answering these questions in the affirmative.

RENAN AND BERTHELOT.—I.

PARIS, March 6, 1898.

The correspondence of two men like Renan and Berthelot, extending from the year 1847 to the year 1892, cannot fail to excite much curiosity. This correspondence, at the instigation of M. Berthelot, who is still alive, was first published in the *Revue de Paris*, a review which has rapidly acquired an importance equal to that of the old *Revue des Deux Mondes*. The series of articles which appeared in the *Revue de Paris* has now been condensed in a volume.

There is no need to say anything about Renan, who has long been world-famous. M. Berthelot, his correspondent, has made his reputation as a chemist. He has been, if not the only, the principal initiator of the synthetic method in chemistry. The first

chemists were occupied chiefly in decomposing all natural bodies, so as to know their elements; the new chemistry starts from the molecules and builds new bodies with them, not only inorganic, but organic also, at least constituent elements of all organic bodies. I shall not give here even a brief résumé of the works of M. Berthelot in this second phase of chemistry; it is enough to say that he has attained great eminence in the scientific world. Science turned his mind to philosophy; he is one of those savants who do not shut themselves up in a limited sphere, but who embrace the whole field of science. He became a friend of Renan in the days when both Renan and himself led very obscure lives and were quite unknown. Their friendship was of a very peculiar sort: it was a stimulant to their minds; they exchanged ideas, and their early correspondence gives an idea of what their conversations may have been.

Berthelot saw Renan for the first time in 1845. Renan was four years older than himself; he had just left the seminary and renounced the sacerdotal vocation. Their tendencies were not quite the same.

"Renan," says Berthelot, "by reason of his Breton origin, of his ecclesiastical and contemplative education, turned towards the past, had less taste than I had for democracy, for the French Revolution, and for the national, industrial, social transformation in which modern civilization is engaged. The old method of having science, literature, and art under the protection of a superior and autocratic power attracted him rather. Of this he never made a mystery. On the other hand, my Parisian origin, on my mother's side, my mind, filled from my earliest youth with medical tradition and with the example of the incessant activity of my father, induced me to sympathize instinctively with the new conception of the collective reason—that is to say, of the scientific evolution of human society. But there was between us a profound sentiment which drew us together from the first day; we were animated—it is no exaggeration to say inflamed—by a common and disinterested ardor, which led us to love, above all and before all, goodness, art, truth. It was this liking things for themselves which constantly maintained our intimacy."

What this intimacy was is well shown by the character of the correspondence. You get a glimpse of it in certain passages in the Journals of the Goncourts, since both Renan and Berthelot were members of that little society which had Goncourt for its historiographer. Berthelot's influence on Renan was chiefly owing to his great scientific knowledge. Berthelot gave his friend views which the latter had not found in the seminary, nor in his researches in exegesis—views on the nature of the world, on the relations of mind and matter, on the evolution taking place in the organic world. That these general views very early took possession of the very receptive mind of Renan is well known from his 'Avenir de la Science,' a work which he began in his youth, and published only long afterwards.

It is not so easy to say what sort of influence Renan had on Berthelot, whose father, a doctor, a general practitioner, in the poor quarter of Saint-Jacques-la-Boucherie, gave him a good education, so that in 1846 young Berthelot took the highest prize in philosophy at the Concours Général. He and Renan lived in the same house; they saw each other constantly and familiarly, and their minds were kept together in an incessant fermentation. By-and-by they took different directions. Renan became an *agréé* in philosophy, and entered as an employee

the National Library. Berthelot pursued medical studies, and became, in 1851, an assistant to the lecturer in chemistry at the Collège de France. Renan could not help him in his studies and researches, which were necessarily concrete and limited, but he could take his mind away from the concrete to the abstract, lift him above the narrow horizon of the professor, and bear him with him to the loftier regions of metaphysics.

Besides the letters of Renan and Berthelot in the volume just published are to be found letters of Renan's sister Henrietta, that remarkable woman who had an exceptional mind, and who exercised the greatest influence over her brother. She educated him and remained a spiritual guide to him till she died. It may fairly be said that she was the only person who really ever influenced him; she guided him in the great crisis which ended by his abandoning the project of becoming a priest. The three correspondents had something in common—great simplicity of manner, allied to great elevation of sentiment and of language. The letters of Henrietta Renan are very remarkable in this respect; it might almost be said that she was the most manly of the three; she certainly was the least egoistical, the most self-sacrificing and generous.

Renan has often been accused of egotism. At any rate, he was very economical of his emotions; he husbanded his own sensibility with a singular parsimony. Berthelot often reproaches him with it in his correspondence; he finds him too cold, too much master of himself. "Till I have finished my 'Origins of Christianity,'" writes Renan, "I shall be an owl and be very chary of correspondence and conversation." Berthelot, on the contrary, has, to use his own expression, "a woman's heart in his affections"; he complains to Henrietta Renan of the Olympian calm and indifference of his friend. She knows her brother well, and in a letter from Amshit, near Jebail, during the journey which she made with her brother in Syria, she writes to Berthelot this curious letter:

"The painful feelings which you express, I have often, oh very often, felt myself. I have frequently said: 'His ambitious preoccupation him more than his affections, and his new affections more than the old ones.' Nevertheless I am sure he loves me, and in view of the pain which your regrets have caused him, it is impossible for me not to believe in the depth of the friendship which he entertains for you. It seems as if he could do everything for those he loves except to give them a few moments. I assure you, sir, that I do not exaggerate in saying that during our two stays at Beirut he gave more of his time to the General and to the Pasha than to the old friend who had left everything for those distant shores. Literally, since we have been in Syria, I hardly ever see him, and when I do, he is so absorbed in the work of his mission, so preoccupied with its results or hopes, that I really do not know whether he is much aware of my presence. Well, sir, I still believe, notwithstanding all this, that my presence is dear to him, and pray, believe yourself that we hold in his life a place which no one else will ever occupy. In answer to a reproach like that in your letter, he told me once that the persons he loved best were those to whom he felt obliged to give the least time."

Renan systematically paid as little attention as possible to anything he considered secondary. His banal indulgence for men and things was part of a plan. One day he praises to Berthelot a book which had been offered to him, and lends it to him to read.

Berthelot was surprised to find it nearly uncut.

The greater number of the letters in the new volume were written during the journeys of Renan and Berthelot. Renan's impressions are always worth reading; even in familiar letters to a friend he cannot help being *the writer*, and his style is as pure, as perfect, as if he meant his impressions to become part of a book of travel. His feelings in his first journey to Italy are those you might expect of the future author of 'The Life of Jesus,' of a man who had rebelled against Rome. "My first hours in Rome," he says, "were very painful." Still he cannot help feeling the charm after a while: "This city is an enchantress, and it puts one to sleep, it enervates. There is in these ruins an indescribable charm, in these churches which you find at every step a quietude, a supernatural fascination. Would you believe it? I am quite altered; I don't criticise any more, I am not indignant, I have no longer an opinion." His poetical, his clerical mind gets the best of his critical and scientific tendencies.

"Let us have no illusion; this Italian people is as Catholic as the Arabs of the mosque are Mussulman. . . . I arrived in this country with a great prejudice against the religion of the South; I had a stock of phrases against the sensual, petty, subtle Church; Rome was for me the perversion of the religious instinct. . . . Well, my friend, the Madonnas have conquered habit; I have found in this people, in its faith, its civilization, an incomparable height, poetry, and idealism. How can I express all this? How can I initiate you into this new life into which I have thrown myself with passion? Our idealism is abstract, severe, devoid of images; the idealism of this people is plastic, invincibly disposed to find a translation and a form. You cannot walk a quarter of an hour in Rome without being struck by this prodigious fecundity of images."

In the same letter, Renan expressed himself with the greatest severity on "the ugly troop with a fierce mien, pale and disgusted faces, the pupils of the Roman College." "I went," said he, "on All Souls' Day, to the offices of the Gest, the church of the Jesuits, the most characteristic church of modern devotion, and two very distinct feelings arose in me: on one side, sympathy for this people, which accepts simply and candidly the religion which it finds, and which satisfies with it its need of an ideal; on the other side, anger and contempt for those *choregi* who sit on their throne, scholastic doctors who deform all science and all criticism for absurd dogmas. In everything I am pursued by this antithesis."

Correspondence.

AFTERTHOUGHTS.

TO THE EDITOR OF THE NATION:

SIR: A few days since, a headline in a leading daily said, "The Georgia Delegation Solid for War." It can almost be said that the Georgia people are solid for peace. After much inquiry here, I have not found nor heard of one man in Decatur County who favors war. I enclose a leaf of one local paper which contains eleven distinct brief editorials and paragraphs in favor of peace. The Savannah News is giving some excellent editorials against the Jingo craze. The war of the Rebellion did the people of the South incomparably more harm than it did

those of the North, and they have not forgotten it.

Most of these people live isolated lives on their farms, where they have the chance to think out political questions in the old-fashioned way, uninfluenced by congressional mobs, yellow journalism, or excited crowds. Again, there is practically no foreign element here. There is not one Irishman in this county, and not fifty people of foreign birth. Our people are the lineal descendants of those farmers who thought out and fought out our independence, and are undoubtedly much nearer the same type of men than are those of the North and West.

President McKinley is here most warmly commended by the very men who most bitterly opposed his election. It is believed that he could settle our difficulties with Spain honorably through diplomacy, thereby avoiding the horrors of war.

The South now affords examples of honest State, municipal, and local legislation that the North would do well to study and imitate. May she not, at some near future time, influence national legislation for the better? I think she will.

T. B. BROOKS.

BAINBRIDGE, GA., April 18, 1898.

[We print this for its historical interest, and as illustrating the extent to which our "representative" government is a failure to represent.—ED. NATION.]

TO THE EDITOR OF THE NATION:

SIR: In the history of the English-speaking people nothing is more striking than the presence of great men, or of men great enough, at least, for the occasion. The man and the hour seem to be coincident; and whenever there has been disaster, or that political folly which breeds disaster, men and events have not been synchronous.

Here in Baltimore as elsewhere, probably, denunciation of this war is universal. The mildest word applied to it is that such a war is "criminal," a national calamity and disgrace. But where in public and political life is the man who should have given timely voice to wisdom and justice? President McKinley affords one of those deplorable spectacles of weakness at all times only too common. Had he stood firm, he might have saved his country from untold evils and have showed himself a hero for all time to come. But actions speak louder than words. By talking peace and as ex-officio head of the army and navy giving full run to the Jingoism, buying war-ships and recruiting men, the President has simply fed the silly war-craze and has poured oil upon the flames. And there is not a man in either branch of Congress who has had the moral courage, force of character, and political sagacity combined to stem the torrent of Jingoism which has swept both House and Senate off their feet. The disappearance, or non-appearance, of the leader in the face of grave political need is a dire portent, as sure a forerunner of misfortune as is the disappearance of certain forms of life before the coming of pestilence. At this moment, had the American people, in Congress or in the Presidency, a man whom they could look to, one who would focus and voice their distress and indignation, something might yet be done. But the people are without a leader. The criminal indifference of good Americans to the mental calibre and character

of their public men has at last borne bitter fruit. Now, in the hour of our need, the President represents only his own timidity; Congress its own selfish interest, greed, and venality; and the people, helpless to make themselves felt, are being dragged into a causeless, conscienceless war.

D.
BALTIMORE, MD., April 22, 1898.

[What one man could do in protest we must allow that Mr. Johnson of Indiana has done; and we have already done justice to Mr. Boutelle's independence.—ED. NATION.]

TO THE EDITOR OF THE NATION:

SIR: In your issue of the 21st you make the statement that Boutelle of Maine has been supported by only one member in his opposition to a war with Spain. Am I in error in believing that Loud of California has been from the first an uncompromising opponent of either intervention or recognition? Although he represents a California constituency, this town is his birthplace, and his old friends watch with an intense and loving interest his attitude on all important questions, and we hope we are not wrong in believing he has shown, on every ballot, the courage of his convictions, which are unqualifiedly for peace.

One bit more that may interest: At the breaking out of the rebellion he was but fourteen; at fifteen he enlisted, and served faithfully to the end. He knows what war is.

A CONSTANT READER AND SUBSCRIBER.

NORTH ABINGTON, MASS., April 22, 1898.

[We believe our correspondent is right.—ED. NATION.]

THE METLAKAHTLA GRANT.

TO THE EDITOR OF THE NATION:

SIR: Referring to an article in your issue of April 7, regarding the difficulties of the Metlakatla Indians, can you tell me what was the nature of the grant made to this tribe on Annette Island? Was the land merely assigned for their use, or was it given them outright? Also, has the United States a right, in view of the improvements made on the land in question, to dispossess these people of what is rightfully theirs without full recompense? Again, have these Indians any legal standing with the Government? Not being citizens, could they hold property or could it be held for them in trust?—Very truly yours, H. D. MANN.

[The exact wording of the act of 1891 reserving for the use of the Indians (and such other Indians as may join them) Annette Island, Alaska, can be found in the United States Revised Statutes. None of the modern reservations gives a right in fee to the occupants or any right of alienation; as far as known, all hold as tenants in common, subject to the laws of the United States governing such reserves, and revocable by Congress on payment of indemnity which will cover the vested rights they have, due to possession and improvements; the right to this indemnity being a part of the general constitutional inhibition of legal robbery,

and not growing out of any express contract.

No Indians are citizens; the Annette Island Indians are as much so as any, their settlement in Alaska having been authorized by Congress. Any fund or property intended for their use or benefit, as inalienable, would probably have to be held by trustees.—ED. NATION.]

JUDGING COLLEGE DEBATES.

TO THE EDITOR OF THE NATION:

SIR: Just at this time, when the minds of many college men are turned toward debating matters, it may not be out of place to call attention to the most serious evil in debating as it is now carried on, and to suggest a remedy for the difficulty. This evil is in the method of rendering decisions.

The method of selecting judges and of making decisions in debates, which may not be known to all of your readers, is a very simple one. Six weeks before a contest is to take place, a list of the names of twenty men presumably suitable as judges is sent by the college holding the debate to the visiting college for approval. The visiting college, after striking out any of the names that, for one reason or another, may be objectionable, returns the list, and, from the names remaining, three judges are chosen, who attend the debate and render a decision on the merits of the question as debated. At a conference held at New Haven two years ago an effort was made to have judges instructed more definitely as to their duties; but the effort failed, and the only point determined upon was that decisions should be based "on the merits of the debate, not on the merits of the question."

In spite of the fact that the judges have usually been distinguished and learned men, this system has given anything but complete satisfaction. In the majority of cases the dissent from opinions has not perhaps been great, but on the other hand in many cases it has been very widespread indeed. And in the nature of things this must always be true. No matter how judicial a mind a man may have, on questions of the kind discussed in the debates—current political and economic questions—he is bound, either because of prejudice or because of superior knowledge, to have a bias which will render him incapable of making a decision on the merits of a question simply as it is presented to him on this occasion. His experience, if not his predilection, will come in to add weight to the arguments of one side and to detect fallacies in those on the other which the debaters themselves do not see or point out. He may attach great value to evidence which has had relatively little attention in the discussion. And thus an element of uncertainty—the personality of the judges—is introduced into the decision which no amount of skill can foresee or training combat. Indeed, the sagacious debater soon realizes that little of his preparation is more valuable than that which he spends in studying the opinions and records of the men whom he is especially to address.

But there is still another objection to the present system, and that is the difficulty of getting suitable subjects to debate. There are many topics of current interest, which students could debate with profit, that are

not feasible because they do not have two perfectly equal sides; for not even very superior debaters can win if their side is much inferior. The last Harvard-Yale debate is an instance of this. In that debate the Harvard men handled what arguments they had relatively better than the Yale men did; they were certainly more skillful in refutation, and they spoke more gracefully. But they had practically an impossible task: that of proving logically the value of annexing the Hawaiian Islands. I do not mention this to detract from Yale's victory, which was especially deserved, since Harvard, with the choice of sides, had deliberately taken the affirmative, but to show that under the present system, when decisions depend on the value of the arguments presented, the qualities which ought to win a debate may not.

The remedy for these evils is, I believe, a simple one. It is to instruct judges to render their decision not on the merits of the question as debated, but on the merits of the debating. The change, though at first glance it may seem slight, is in reality very fundamental. It will insure that the personal attitude of the judges toward the question, and the advantages of side, will so far as possible be eliminated from the contest, and it will insure that the decision will rest just where all must agree it ought to—on the skill displayed by the speakers in presenting their case. How college men may happen to decide any question makes not the slightest difference to any one; but it is interesting, and for the purpose of stimulating work in debating, necessary, that there should be some opinion from competent judges as to which side has acquitted itself most satisfactorily. This, I am convinced, can best be accomplished by the change I suggest. The only objection that can be made to the change—that it will require judges to estimate the value of the material which each side had at its disposal—is scarcely a valid one. At any rate, it is a difficulty wholly insignificant when compared with the great evils of the existing method.

I am, sir, respectfully yours,
RALPH CURTIS RINGWALT.
COLUMBIA UNIVERSITY, April 20, 1898.

FOREIGN EXPRESSAGE.

TO THE EDITOR OF THE NATION:

SIR: My experience confirms what Miss Hapgood says about mail-matter from Russia being taken possession of by express companies in Germany, and is entirely at variance with the statement of "P." in your issue of April 21. Not long since a letter was delivered to me by the American Express Company in Chicago which had been stamped, posted, and postmarked in Russia, fully prepaid. It was taken by an express company at Hamburg, and so came on through the American Express Company, with charges over two dollars for expressage. Knowing what the letter probably contained, I paid the charges and took it, but have never been able to get any explanation either from express company or postal authorities. I should be glad to know the reason why.

J. D. CRAWFORD.
CHICAGO, April 22, 1898.

Notes:

It is impossible to keep biographical series from overlapping, and Franklin with a new

title forms the subject of the first of the "American Men of Energy," projected by G. P. Putnam's Sons. The classification is of those "Americans whose lives and work helped to shape the destinies of their generation." Other announcements by this firm are 'Martin Luther,' by Prof. Henry E. Jacobs; a 'Life of Saladin,' by Stanley Lane-Poole; 'Matthew Arnold and the Spirit of the Age,' papers of the English Club of Sewanee for the season of 1897; 'Glimpses of England,' by Prof. Moses Colt Tyler; 'Democracy and Social Growth in America,' four lectures by Prof. Bernard Moses of the University of California; 'The Philosophy of Government,' by George W. Walthew; and 'The Study of Man,' by Prof. A. C. Haddon, first volume of the "Science Series," edited by Prof. Cattell of Columbia.

A. S. Barnes & Co. will have ready in June an 'Anglo-Saxon Reader,' for beginners, by Prof. W. M. Baskervill of Vanderbilt University; 'Later English Plays,' by Prof. Calvin S. Brown of the same institution; 'Bird Gods in Ancient Europe,' by Charles De Kay; and 'Cape Cod Week,' by Annie Elliot Trumbull.

'The Story of a Play,' by W. D. Howells; 'Thirty Strange Stories,' by H. G. Wells; 'Ghosts I Have Met,' by John Kendrick Bangs; and 'Paradise Lost: Its Structure and Meaning,' by Prof. John A. Himes, are forthcoming from Harper & Bros.

Ginn & Co. have in press Gibbon's Memoirs, edited with introduction and notes by Prof. Oliver Farrar Emerson of Western Reserve University.

Funk & Wagnalls will soon issue 'The Spaniard in History,' by the Rev. James C. Fernald.

It is announced that M. Edmond Biré is at work on a study of Chateaubriand in which, we may apprehend, that great writer will be treated as Victor Hugo has been by the same ruthless commentator and critic. But the essay is sure to be good reading.

Cotta, Stuttgart, is printing the first volume of 'Beiträge zur Amerikanischen Literatur- und Kulturgeschichte,' by our countryman, Prof. E. P. Evans.

We learn that the well-known poet Paul Heyse is preparing for publication a series of portraits of Munich authors, in black and white.

We are glad to observe that Mr. J. Wells's dainty little illustrated 'Oxford and its Colleges' (London: Methuen & Co.), which we have already commended, has passed to a second edition.

Herbert Spencer's 'Various Fragments' (D. Appleton & Co.) contains a score of articles published in various journals from 1852 to the present time. Mr. Spencer has not, however, raked in everything he ever wrote, for he enumerates a baker's dozen of articles of "comparative unimportance," and mentions yet others of "little significance." The comparatively important pieces here given will repay examination by any critic who is inquiring into the merits of Mr. Spencer's methods of reasoning. The inconveniences of a decimal currency are explained; and the instance is given of an accountant who had to go over £20,000 of accounts in one day, and who said he was glad they were not in francs.

The first volume of the "Biographical Edition" of Thackeray, 'Vanity Fair' (Harpers), discloses Mrs. Ritchie's plan of editing, and a very agreeable plan it is. It consists of

bringing together for each volume of her father's writings all the available notes, jottings from his diary, letters, sketches, etc., which bear upon the composition and reception of the work in question, and upon the author's life during its production. Thus, we have in the introduction to this biographical 'Vanity Fair' hints as to the persons and travels used by Thackeray as raw material, some unpublished sketches and letters—among the latter one to Edward Fitzgerald—accounts of method of composition, revision, etc. The recently discovered letter of Thackeray to the Duke of Devonshire, making a post-novel disposal of Becky Sharp and others, is, of course, included. An attractive new portrait of Thackeray serves for frontispiece; and when we have added that the volume is tastefully printed and bound, it is unnecessary to enlarge further upon the merits of what should be a favorite edition of an author whose popularity is certainly not on the wane.

Lee & Shepard send us a couple of handbooks on painting, 'The Painter in Oil,' by Daniel Burleigh Parkhurst, and 'Water-Color Painting,' by Grace Barton Allen. The utility of such books may be doubted, but these are favorable enough specimens of their class. In Mr. Parkhurst's volume, especially, definite recipes are avoided, and an honest and intelligent effort is made to expound principles of work. The attempt to teach drawing and painting by purely verbal instruction is, however, foredoomed to failure. Mr. Parkhurst recognizes this to some degree by saying: "I do not say paint the nude. On the contrary, if you want to go so far as that in the study of the figure, you must not attempt to do it with the aid of a book. Go to a good life class." But it is equally true that the student of painting who would make real progress in any branch of the art should go to a good master for practical instruction.

A passage from Miss Allen's volume shows well the vagueness of verbal instruction the instant the recipe style is abandoned: "In representations of china or glass having a gold decoration," she says, "the gold must be represented by yellow, brown, reddish, or greenish tones, as the light and the situation happen to demand. The proper colors, rightly employed, will give the desired effect of metal." That is all. It is perfectly true, but it is not likely to be of much use to the student who is unable to see what are the "proper colors," or how they are affected by "the light and the situation." A writer of unusual lucidity and great analytic power might, indeed, do somewhat better than this, but his teaching could be rendered effective only by the addition of elaborate colored plates, which would make his book too expensive for the class for which such works are intended; and even then five minutes' instruction before the object by a competent teacher would outweigh a whole chapter. The training of the artist is a training in seeing, and what to see can be pointed out only by the instructor in the immediate presence of the thing seen.

'Early Long Island Wills of Suffolk County, 1691-1708,' an unabridged copy of the manuscript volume known as "The Lester Will Book," being the Record of the Prerogative Court of Suffolk County, N. Y., comes to us with genealogical and historical notes by William S. Pelletreau, A.M., and an exhaustive index of persons and localities (Francis P. Harper). It covers the term of

office of Judge William Smith (1691-1706), and is, of course, only one of many similar books in other counties. The original was lost from the proper custody from 1811 to 1871, and this fact may have enhanced its value in the eyes of the editor. Otherwise we cannot account for the expenditure of money in making an "unabridged" copy of the wills of some sixty worthy but obscure inhabitants of Suffolk County. Surely, abstracts of these documents would have sufficed for even an antiquarian public, as the curious or interesting items therein are almost invisible. We must add, however, that the editor and publisher have done everything they could with such commonplace material, and that the edition is limited to 340 copies.

The handsome reprint of the 'History of the Pequot War,' from the contemporary accounts of Mason, Underhill, Vincent, and Gardener, with additions and an introduction by Charles Orr, Librarian of Case Library (Cleveland: The Helman-Taylor Co.), is avowedly only a reprint, by permission, of the copies issued years ago by the Massachusetts Historical Society. Yet as the Collections of that most stately, sedate, and painstaking society have become to a large degree as inaccessible as the originals, it was a wise and laudable act for our Western friends to issue this book. The war itself was of such vital importance in the settlement of New England that its history will be read with interest by every generation, and the quaint contemporary accounts have a freshness and life not to be equalled by the more formal periods of professed historians. Mr. Orr is to be congratulated on the good judgment and taste displayed by him in the preparation and publication of his book.

Armand Colin & Cie. have published the seventh and, presumably, last volume of the "Discours et Opinions de Jules Ferry," edited by Dr. Paul Robiquet. This particular volume is interesting on account of its containing the speeches delivered by Ferry in the course of the vigorous campaign he conducted against the Boulangists. In these, as in the other discourses, he exhibited an amount of common sense which contrasted greatly with the madness and thoughtlessness of his opponents. The work is a fitting tribute to a statesman bitterly maligned during his lifetime.

A book on Lamartine ought to be interesting, but that is not enough nowadays; it must also tell us something new about the poet, or present a fresh aspect of what we know already. This, M. Ernest Zyromski, lecturer in the University of Bordeaux, has endeavored to do in his volume on 'Lamartine Poète Lyrique' (Paris: Colin). He develops the theory that Lamartine's lyricism sprang from his habit of giving himself up in solitude to a dream-life, the intensity of which was extraordinary, and from his bearing within himself a landscape which he projected on reality. The working out of the theory is not over well done, and the impression the book makes on one is that the author has collected a lot of material from the verse of Lamartine which a more skillful hand might avail of to better purpose.

'La Fin du Classicisme et le Retour à l'Antiquité,' by Prof. L. Bertrand (Paris: Hachette & Cie.), bears all the ear-marks of a thesis for the French doctorate. In other words, it is a very careful and thorough

study of the subject, well "documentée," and offering points of interest in views not always such as are generally entertained concerning certain great authors. Indeed, Prof. Bertrand exhibits a singular boldness in his estimate and criticism of André Chénier and Chateaubriand, for instance; in the case of the former, affirming that Sainte-Beuve has "misconceived the significance of the poet's work, and, of the latter, placing the writer squarely among the classicists, and those of the decadence at that. His estimate of the value of the classic spirit and doctrine would make M. Brunetière rage furiously, though it must be borne in mind that he treats of the decadent classicism so well analyzed by Taine and others. The book is well worth reading, and will serve a useful purpose as a work of reference for a period less studied, perhaps, than those which immediately preceded and followed it.

The recent Ibsen festival found a twofold literary expression in Scandinavia in a book by one of the master's most enthusiastic and intelligent followers, Georg Brandes, and a "Festskrift" published by the Norwegian monthly *Samtiden*. The first is divided into three parts, giving the impressions of the critic at three different periods of his life—1867, 1882, and the present time respectively. The second work contains criticisms by representatives of the three Scandinavian kingdoms, and Finland, an article by Prof. Joh. Storm on Ibsen and the Norse language, and statistics showing the popularity of Ibsen at home and abroad. Brandes's book has as a frontispiece the latest photograph of the Norwegian dramatist, taken this year.

Students of the classics who have become interested in the newly discovered poems of Bacchylides—of whom, we know, there are several in this country—will be pleased to have their attention called to the fluent translation of four of those poems by Prof. H. von Arnim of Rostock, published, together with an essay on the poet, in the *Rundschau* for April. Another article of unusual interest in the same magazine is that by Prof. Dr. Thum, "Die Maniaken: Ein Beitrag zur Volkskunde des heutigen Griechenland." The learned traveller sees in the present inhabitants of the middle peninsula in the southern Morea, marked at its extremity by the promontory of Tænaron (now Cape Matapan), the nearest relatives of the heroic race of the Spartans. This primitive and warlike people is even now not very far removed from Homeric conditions, aside from the fact that it has profited by the invention of gunpowder.

In 1896 Germany exported 62 million marks' worth of books, while her imports amounted to 20 millions. The United States bought of Germany books to the amount of 7.2 millions, holding the third place in the list of all nations, and sold to her 1.7 millions' worth; the import by Germany from England during the same period reaching only 650,000 marks. In spite of the enormous production of books in Germany, their use in the country itself is still confined to a smaller proportion of the population than one might think. To be sure, there are many libraries, but most of them are university, or city, or school libraries, or others, meeting the wants of the professional scholar rather than those of the educated layman; or they are *Volkbibliotheken*, intended for the entertainment and elementary instruction of the lower classes. Good public libraries for the use of the intelligent and

well educated, as well as the lower classes, are almost entirely wanting. The library recently established by the city of Charlottenburg, though called a *Volkbibliothek*, is of a higher order than other institutions so designated. In the first two months after its opening, 8,000 books were drawn by 1,500 persons of all classes, "from the laborer to his Excellency," and the reading-room (in which no daily papers are kept) was used by more than 5,000 persons. Such a success, one would think, ought to stimulate other German cities to follow the example of Charlottenburg.

Prof. Dr. Rudolph Brünnow, grandson of Dr. Henry P. Tappan, first Chancellor of the University of Michigan, is now engaged in his third scientific expedition in Asia Minor for the purpose of exploring especially the regions east of the Jordan. His former researches in this direction were exceedingly rich in results, which he intends to prepare for publication after his return to Europe in June. While in Damascus and Jerusalem he procured a considerable number of valuable Oriental manuscripts, which he presented to the library of the University of Heidelberg.

The University of Jena has decided that students of medicine shall henceforth be required to pass a satisfactory examination in psychiatry before receiving permission to practise their profession. A thorough knowledge of diseases of the mind is now deemed quite as necessary to the physician as practical skill in treating physical maladies.

Several correspondents have referred us for the early use of the word *campus* to Hall's 'College Words and Customs' (Cambridge, 1851), where we may read: "At the College of New Jersey, the college yard is denominated the *Campus*."

—In 1893 Mr. John Brenton Copp gave to the National Museum at Washington a collection of costumes, household fabrics, and other articles accumulated by succeeding generations of the Copp family. This collection is in process of reinstallation, much of it having been kept in storage to the present time. The whole collection has now been reexamined by experts at the request of Mr. W. H. Holmes, in charge of the biological department of the museum. The books, almanacs, and other publications have been catalogued by Dr. H. C. Boulton, and Mr. Edward Eggleston has examined in detail the almost countless articles of apparel and household use. The collection is probably the richest ever made by an American family; perhaps it is the most extensive in the matter of wearing apparel and other domestic fabrics ever possessed by an American institution. The oldest article is a ponderous bed-hanging of linen, said to have been brought from England in 1635. This is now of a yellowish brown color; it once had figures stamped upon it, no doubt, in color. In the lapse of centuries the color has disappeared from the figures, but the surface of the cloth is still depressed where the figure in relief was applied in printing. The strong pressure which left this indentation in the cloth for centuries probably indicates some process other than mere printing; it is possible that the press or clamp was applied for a considerable period of time to prevent the dye elsewhere used from spreading into the compressed part, which is yet slightly lighter than the rest. There are later bedroom hangings; there are more than thirty hand-made sheets of the eighteenth century, with rich aprons and trousers and undercloth-

ing, and articles not to be met with elsewhere, such as curious braces or suspenders of other days. One pair of these has four button-holes, one above the other. Of gowns there is a considerable number of the Revolutionary period, with some of the early eighteenth-century and of the later "Directory" and "Empire" styles. There are plain everyday frocks of gingham and calico as well as rich reception gowns. If families who have moderate collections of this nature would add the contents of their attics to the cases of the National Museum, a collection of admirable completeness might be built up on the lines of the Copp collection, which is destined to be a resource for the social historian and the artist.

—Quite the most interesting group of sketches in the fifty-fourth volume of the 'Dictionary of National Biography' (Macmillan) is that of the Stephen connection, from the pen of Mr. Leslie Stephen. A trait of shyness and aloofness runs through the gifted members of this stock, who were yet capable of great public services. Of his father, Sir James Stephen, the writer relates that, as Under-Secretary of State for the Colonies in 1833, he had suddenly to draw up (at risk of postponement for a year) the measure for West India emancipation. "He therefore on this occasion (and on one other only) broke the Sabbath, and between the noons of Saturday and Monday dictated an elaborate bill of sixty-six sections." Mr. Leslie Stephen has also charged himself with the sketch of Dugald Stewart, in the course of which he quotes Cockburn as to the beauty of Stewart's delivery in spite of his being forced to clear his throat on account of an asthmatic tendency. But there was "eloquence in his very spitting." Our American habit is spitting in our very eloquence. Other prominent personages arrayed in this volume are the first Earl of Stanhope, who, Bismarck-like before Bismarck, "was naturally frank and open, and he used to say that he always imposed on the foreign ministers by telling them the naked truth"; Chesterfield; Castlereagh; the Earls Derby, father and son (fourteenth and fifteenth); Dean Stanley, Richard Steele, Sterne, Robert Louis Stevenson, and George Stephenson. Stevenson has ten pages allotted to him to Steele's six or seven and Sterne's twenty-two, and furnishes an interesting criterion of editorial proportion for another generation than ours to pass upon. Some American connections are to be traced in the Stoughtons of Massachusetts, in Gen. John Stanwix, and in Gen. Sir Thomas Stirling, who served against us in the Revolution, but never made an "attempt upon Springfield (Massachusetts) in June, 1780," as here explained. New Jersey is intended. Here, too, is commemorated Joachim Hayward Stocquer, whose Life of Wellington led John Brown to magnify the possibilities of guerilla warfare in a mountainous country, who lived to serve as war correspondent in this country during the rebellion precipitated by John Brown, and died in 1885 at a ripe old age.

—In the current number of *Cosmopolis* Anton Bettelheim pays a glowing tribute, compounded of patriotic sympathy and literary appreciation, to the genius of the greatest of living Austrian poets, Ferdinand von Saar. Saar is the Viennese poet *par excellence*, quite the most perfect organ of lyric utterance that the Germans of the Eastern Empire have in this generation found. In his prose tales,

thoughtful and vivid presentations of Austrian types, Saar reveals himself as a disciple of Turgeneff; but the Russian pessimism is softened by the cheery spirit of the Viennese, and although, like his master, he holds that circumstances are stronger than men, he does not drive the conflict to a tragic end, but finds his solution in Goethe's lofty doctrine of renunciation. Saar is an Austrian by birth and sentiment and in the choice of his subjects; his recently published 'Novellen aus Oesterreich' is a new evidence of this. But there is no occasion to distinguish strictly between the literatures of Germany and Austria. The Poles of Galicia have their own splendid literature, the Hungarians have theirs, the Czechs theirs; but the Austrians, Grillparzer, Halm, Lenau, Anzengruber, Saar, belong to German literature, and the last-named sadly admits that it is the German only among the peoples of that composite empire who is proud of the name of Austrian.

—No more convincing proof of the threatened disintegration of the Hapsburg realms could be found than the recent lament of the patriot poet Saar, who so long has sung the beauty and grace of his narrower fatherland. "Since Grillparzer's *Zeitgedichte*," writes Bettelheim, "no chords of such power have been struck in the patriotic lyric poetry of Austria." It should be remembered, too, that the gloomy and embittered prophecies of Grillparzer in 1843 did not come true, and his native land rose again out of her trials to dignity and might. The following is a metrically exact and fairly literal rendering of this striking poem of Saar's (by Mr. Charles H. Genung):

AUSTRIA.

Bowed with grief is my head, O thou, my Austria.
Slow, relentless decay threatens thy final fall,
Of the limitless empire,
Holy, Roman, the last remains.

Still thy eagle of state proudly its pinions spreads;
And in beauty thy realms gleam with their wonted pomp.

But thy firm ancient structure
Crumbles sullenly day by day.

True, thy populous hosts never were one in kin,
Love of one common home never united their hearts;
Pride of Austrian birthright
Cherished the German alone.

But when thou goest hence, gone is a peerless grace,
And a cluster of flowers falls from Europa's breast:
Thou art one made of many,
In thy bloom thou hast decked it long.

Wrong whate'er thou hast done, good thou hast
left undone—
Ever wert thou beloved, O thou, my Austria,
And now wilt thou destroy thus,
With thyself at strife, thyself?

—During recent years the planet Mars has been assiduously studied at the Observatory of Juvisy, near Paris, by M. Antionadi and others. There, as elsewhere, the "canals" on the planet have been seen, usually as long, narrow, dark lines lying in the arcs of great circles of the surface. There is no doubt of the objective existence of such markings, as they have been mapped by many observers before and since Schiaparelli undertook their serious study in 1877. Such markings are probably long cracks or crevasses in the outer layers of the planet's surface. The experiments of M. Daubrée have shown that the expansion of an interior nucleus will produce a series of long cracks lying in the arcs of great circles. A contracting nucleus produces rugations like mountain chains. Many observers since Schiaparelli have noted the "doubling" of the Martian canals. Sometimes a single marking of the sort will be suddenly replaced by two narrow markings lying in the same region and in the same direction. If, says M. Antionadi, the Seine should suddenly disappear, and if two new rivers should be created, one running from Nantes to Marseilles, the other

from Dunkirk to Strassburg, we should have a precise terrestrial analogue to the appearances of double canals on Mars. Recent popular writers have exhausted ingenuity in devising explanations of this phenomenon which should agree with their *idée fixe* that the "canals" are, without doubt, the work of human hands. It is hardly necessary to say that no explanation of the sort has been given that satisfies astronomers.

—M. Antionadi has made a careful study of the optical illusions that attend prolonged and strained vision of delicate markings of this kind, and he has come unreservedly to the conclusion that the doubling of the canals on Mars arises from defective focusing of some kind, either of the telescope, or of the observer's eye (through fatigue). One of his experiments may be tried by any one who will take the trouble to rule a fine line on a visiting card and to look at it, from a distance, with an opera-glass. A very slight disturbance of the focal adjustment, or slight fatigue of the eye, will produce a double image of the single line. It is always possible to produce double images of a single line in one of these ways. M. Antionadi's experiments seem to show that the double canals on Mars are always the results of one of these two causes. His conclusions are noteworthy in themselves as a return to rationality in the explanation of physical appearances on Mars; and it is interesting to remember that he is an assistant to M. Flammarion, who is the high-priest (in France) of the doctrine of human life on Mars. M. Antionadi accepts, tacitly, the view of the circumstances prevailing on Mars that has been consistently held by the astronomers of Princeton, Mt. Hamilton, etc., namely, that it is a planet analogous to our moon, with little or no atmosphere, no water, no clouds, with very low temperature, no human life, and no "canals" for commerce constructed by "intelligent beings like ourselves."

—M. André Lefèvre, who is Professor of Ethnography and Linguistics at the Paris School of Anthropology, and President of the Anthropological Society, has tried to give in thirty lectures a bird's-eye view of recorded history ('L'Histoire: Entretiens sur l'Évolution Historique.' Paris: C. Reinwald: New York: Dyrssen & Pfeiffer). The volume is one of the familiar Contemporary Science series, whose prospectus promises first-hand works from specialists. This promise has been fulfilled in many of the issues, but as M. Lefèvre has already contributed the volumes on 'Religion' and 'Philosophy,' and is a professor of two other pretty well differentiated sciences, it is evident that in his case the term specialist must be taken in a somewhat old-fashioned sense. The student of history approaches such attempts as this with misgiving. He anticipates a series of facile and perhaps clever generalizations, plausible enough, but not more convincing than some other series quite irreconcilable with the first. Yet, as a critic, he is disarmed by the reflection that the book is not intended to be tested in detail, but to be judged as a whole. He is certain that M. Lefèvre, accustomed to the lack of precision which is characteristic of so much in the present field of anthropology, will regard it as trifling if a reviewer objects to assertions like the following of Godfrey of Bouillon after the capture of Jerusalem (p. 491): "Il chargea quelques légistes de rédiger une constitution. . . . De leurs

délibérations sortirent les *Assises de Jérusalem*, document précieux, écrit en français, et qui fut une des bases du droit au moyen âge." Again to read that, "en 1497, les frères vénitiens Jean et Sébastien Cabot avaient découvert, au compte du roi anglais Henri VII., le Labrador, l'Hudson et la Virginie," inevitably shakes our confidence in the chapters on early Egypt and primitive China. But possibly this carelessness in detail may be amply compensated by instructive comment or enlightened breadth of view. Undoubtedly many readers will think they find both these qualities; but one example of the want of the true historical spirit shall answer for not a few that could be cited. We are not surprised that Leo X. at first pronounced Luther's opposition to Tetzels a "monkish quarrel"; but when our author contents himself with repeating this snap judgment ("Qui pourrait croire qu'une querelle si ridicule pût enfanter tant de maux?") one concludes without injustice that with inaccuracy in details M. Lefèvre has combined a flippancy of judgment which makes his work misleading to the general reader and distasteful to the scholar.

COL. HIGGINSON'S REMINISCENCES.

Cheerful Yesterdays. By Thomas Wentworth Higginson. Boston: Houghton, Mifflin & Co. 1898.

It is seldom that a man of letters has so much of a story to tell as Mr. Higginson, an experience so varied and so active to recite. Nor has Mr. Higginson ever written more agreeably than here, with happier expression, with more wealth of humorous and effective illustration, with more of that allusive light which comes from a wide range of culture, and a memory that instinctively reproduces at the right moment the appropriate anecdote or phrase. In his brief "Epilogue" he suggests that "the public may often justly complain that too much has been told." But neither the fulness nor the intimacy of his disclosure exceeds the proper bounds either as regards Mr. Higginson himself or others. If he has a sharp word of criticism for others now and then, he does not spare himself at points where he has missed the mark. And it is not by any means as if his book had an exclusively personal importance. It admits us to the very heart of several of the greatest movements of the century, without any exaggeration of the writer's personal contribution to the current of events. It gives us history in its social setting, and has, if we mistake not, permanent worth as one of those serviceable memoirs that help new times to rightly understand the old.

Mr. Higginson's first chapter, "A Cambridge Boyhood," is a valuable appendix to Lowell's "Cambridge Thirty Years Ago," and can be read continuously with that essay, which was one of the most delightful in Lowell's lighter vein, without any "dying fall." All of Mr. Higginson's tastes and aptitudes and inclinations were prefigured in his parents and their ancestors. His father's line reached back through merchants, military and civil officers to the Rev. Francis Higginson, who came to Salem in 1639. The father was the kind of man one expects to find on the wrong side of the anti-slavery conflict and is seldom disappointed. If he had lived longer—he died in 1832, when his son Thomas was nine years old—his son might have had difficulties in the progress of

his anti-slavery principles which, in the event, did not encumber him. The fact that the elder Higginson planted most of the trees in the college yard is one that "breeds perpetual benedictions" on his memory. Delightful is the story of the first supply of Hebrew Bibles for the Divinity School, in which he was much interested. He went to President Kirkland in an indignant frame because the Bibles all had their title-pages at the back end. The strain of daring and adventure in Mr. Higginson's blood came from his mother and her sea-faring English father, Capt. Thomas Storrow of the British navy. Through her also came his middle name, an inheritance from Gov. Wentworth, the first of the three royal Governors of that name who ruled over New Hampshire. Nothing adorns Mr. Higginson's pages more tenderly than his account of his mother's character and her way of life. There was everything in her reading habit to give her children's blood a literary flow, and a home library of a thousand good books surviving the father's financial wreck confirmed the mother's influence. When Mrs. Edward Everett sent her some tamarinds, her son flatters himself that they were sent for his peculiar joy; but this is, for one so deeply versed in old New England ways, to be strangely oblivious of the virtues of tamarind water. From a single remark made by his mother he dates his apprehension of the intellectual disadvantages of women and the beginning of his attempt to better them. From the killing of a bird by a young companion he dates his aspiration to deserve the friendship of Emerson by "naming all the birds without a gun." Since the civil war his feeling for birds has extended to insects and fishes, and he found that Gen. Francis A. Walker was affected in the same way by his military experience. Another early impulse in the right direction came from the blackened walls of the Charlestown Ursuline Convent. They made him a passionate believer in religious liberty.

In his second chapter, "A Child of the College," Mr. Higginson makes good his claim to this title in a degree second only to that of John Holmes and Prof. Norton, "born in it, bred in it, interested from earliest recollection in its men." He writes pathetically of the decay of its social significance since the time when the Boston banks were closed on Commencement Day; of its morality, better now, he thinks, than sixty years ago; and of its intellectual character, now and then, with something of the spirit of the *laudator temporis acti*. He praises the great qualities of Benjamin Peirce, and somewhat proudly calls the roll of men whose style was formed by Prof. Edward Tyrrel Channing. Young Higginson's years in Cambridge coincided with a brief experiment of the elective system, which in its present application he warmly commends and would have carried still further. Writing of the members of his class, he is most impressed by the foolishness of prophesying how young men will turn out. Many of his classmates falsified the predictions; the immaculate class treasurer finally bringing up in the state prison.

In his next chapter, "The Period of the Newness," Mr. Higginson gives us an inside view, at once serious and humorous, of that period. He had democratic inclinations to a life of manual labor, and some brief approximating to it on the Old Colony Railroad, carrying a surveyor's chain. He

was much at home in the social circle of which Lowell and Maria White were the binary centre, and in which their love-letters were passed around as too precious for mere private use. We get wonderful glimpses of George William Curtis and his brother Burrill, in gay-colored chintz blouses and little visorless caps with tassels. Mr. Higginson remarks on the silence of George in the Boston meetings advocating the Brook Farm doctrine; but as he was merely a boarder at the Farm, and was but nineteen when he left, his silence was most natural. Like Lowell, Higginson was for a time attracted to the law, but Richter's writings drew him to a literary career, and the preaching of James Freeman Clarke and Theodore Parker diverted him for a time into the Unitarian ministry. A passage descriptive of Parker's preaching is one of the most notable in the book.

A chapter called "The Rearing of a Reformer" covers his Divinity School life and his first settlement, which was in Newburyport, where one of his parishioners was Caleb Cushing, then a real general in the Mexican war, and another, "perhaps the quietest," was that Francis Todd who had Garrison incarcerated for libel in the Baltimore jail. The strongest personal impression made on him in the Divinity School proceeded from William Henry Hurlbut of unblest memory, generally regarded as "a worthless fellow," and so denounced by President Walker. Mr. Higginson thinks him unequalled for natural brilliancy among all the men that he has known; "even Lowell was not his peer." He was the hero of three novels, Kingsley's "Two Years Ago," Winthrop's "Cecil Dreeme," and Mr. Higginson's own "Malbone." Various aspects of the anti-slavery and other reforms are presented with the utmost vividness. We seem not so much to read about them as to be on the spot, and we feel the chill of the aristocratic Boston shoullder as it turned towards the abolitionist. Here, too, we get the measure of young Higginson's social courage. He sided with Garrison in drawing-rooms and at dinner-tables where exquisite gentlemen calmly gave their opinion that Garrison was "a fellow who ought to be hung."

In 1841 Mr. Higginson ran for Congress to please Whittier, was defeated, and soon after left Newburyport for Worcester, where a Free Church wished him to become its minister. Apt in the selection of mottoes for his chapters, for that on the Fugitive Slave epoch he might well have taken "These Are Our Failures," so disappointing was his experience in the attempted rescues of Thomas Sims and Anthony Burns. The details of these matters are full of interest, and so are those of the John Brown affair, in which Mr. Higginson was deeply involved. He did not, however, anticipate Brown's action at Harper's Ferry, and thinks it was an incident of some temporary morbid exaltation. He would fain have tried to rescue Brown, and later his companions, but the omens were fatally opposed. He resents the descriptions of Brown that have obtained currency through Nicolay and Hay and others, insisting that coarseness of any kind was foreign to his nature. Very affecting is his account of his own visit to Brown's wife at North Elba and his journey with her to meet her husband. In Mr. Higginson's account of his own Kansas doings, he inflicts a merited punishment on Gov. Robinson, whose

defamation of John Brown has soiled the reputation it endeavored to exalt.

"The Birth of a Literature" is perhaps too literal a characterization of the early fortunes of the *Atlantic Monthly*. In these fortunes Mr. Higginson took an honorable part, writing more for the magazine than any one else except Lowell and Holmes. When the war broke out, his delay in finding his place at the front was longer than it seemed likely to be in advance, but when he went at last it was in an ideal fashion, as colonel of the first negro regiment recruited from the slave population. Here again, however, his ill-luck in practical adventures followed him. Seriously injured by the abrasion of a grape-shot or piece of shell, he was obliged to leave his command, and returned to it only to find himself disqualified by malaria from discharging his duties. He adds another laurel to Robert Shaw's memorial wreath when he tells us that Shaw did not share his own confidence in the courage of the colored soldiers. So much the rarer, then, his devotion to their training until the event dishonored every fear.

Mr. Higginson tells of a Boston Irishman who wished "to say a few things before he began." Mr. Higginson tells a few things after he ends with his eighth chapter. They concern literary London and Paris twenty years ago and "The Outskirts of Public Life." All three chapters are more than entertaining, but the last is one of the best in the book, giving an account of his lecturing, speechmaking, and political activity. The best conclusion of the book is the *apologia pro vita sua* on page 183, where he estimates his abounding versatility in comparison with a more contracted range. Whatever lack of concentration there has been, the varied product of his life has been uncommonly rich; while, when all is said, the man's best service has been his conspicuously unwavering devotion to every cause that has made for the enlightenment and improvement of his fellow-men.

A MODERN UTOPIA.

Industrial Democracy. In two volumes. By Sidney and Beatrice Webb. Longmans, Green & Co. 1897.

A distinguished professor of theology, in the days when systematic theology was the science *par excellence* in New England, once complacently remarked that he believed every difficulty was solved by his system. The book now before us gives evidence of a like cheerful belief on the part of its authors, and it cannot be denied that their optimism has an exhilarating effect on the reader. The perfectibility of human society is always an engaging theme, and those who undertake to demonstrate it are sure of an appreciative audience, provided their demonstration is reasonably attractive in form. To do them justice, these authors have certainly complied with this condition. They are well known by some vigorous polemical writings in support of collectivist theories, but in this case their work is distinguished by the calmness of its reasoning and by a genuinely scientific method. It is the product of laborious investigation, and indicates a complete familiarity with economic theories and arguments. Regarded as a scientific treatise, it is marred by prolixity and repetition; the argument could have been advantageously compressed into half the 850 pages which it occupies. But as it is prob-

ably intended for popular reading, its diffuseness may render it more easily assimilable.

In one respect the book is somewhat disappointing. The authors assure us that they have devoted six years' investigation to the task of a scientific analysis of trade-unionism in the United Kingdom, during the course of which they have examined, inside and out, the constitution of practically every trade-union organization, together with the methods and regulations which it uses to attain its ends. While the results of this investigation are apparent in the decided tone in which the authors are able to speak on a number of matters not generally understood, or generally misunderstood, the particulars which they give are more meagre and less interesting than we should expect. The importance of the conclusion rather overshadows the premises, although the authors are well aware of the great interest of the "thousands of working-class democracies, spontaneously growing up at different times and places," free from the traditions of other classes, and perpetually recasting their constitutions to meet new and varying conditions. The details of this evolution are referred to occasionally, to justify an inference, but they are dwelt upon as data for theories rather than as manifestations of human feeling. The authors aver that it is only in the third part of the work that they have ventured into the domain of theory; but they are altogether mistaken in their bearings. The whole book is pervaded by certain assumptions, and all the facts are seen through spectacles colored with prejudice. This we shall presently illustrate, but in the meantime it is desirable to examine the body of science obtained by the study of the evolution of the trade-unions.

In the first place, it seems to be clearly demonstrated by this investigation that although a strong trade-union feeling exists in favor of apprenticeship regulations, such regulations are now enforced only in a small and dwindling fraction of the industrial world.

"Over by far the largest part of the limited field in which apprenticeship once prevailed, the system has gone practically out of use, and restrictive barriers, once supported by universal approval and fondly kept up by the trade clubs of the eighteenth century, have, during the past hundred years, gradually been swept away. Finally, so far from apprenticeship regulations forming a necessary part of Trade Unionism, a positive majority of the Trade Unionists now belong to occupations in which no shadow of apprenticeship has ever existed."

There were some advantages in the old way of learning a trade, but the modern industrial pace is altogether too fast for such leisurely methods, and, while the trade-unions would restrict their membership if they could, they find that practically they cannot. The tendency, therefore, is toward free competition among laborers, so far as their choice of employment is concerned.

The condition of this degree of freedom, however, is membership in a trade-union. In a number of trades no workman outside the union can get work. No employer will have anything to do with him. He is "just as much compelled to join the union as if membership were, by a new factory act, made a legal condition of employment." It is the mission of the trade-union, according to our authors, to make this state of affairs universal, so that no one shall be able to get work at any trade unless he belongs

to its union. Many laborers, many trade-unionists, even, do not recognize this truth, but it follows necessarily from another principle which is fundamental to the whole theory. This principle is that called here the "Common Rule," established by "Collective Bargaining." These capital letters indicate that we are passing from the record of facts to the realm of theory, and it is time, therefore, to consider the generalizations which support the assumptions of 'Industrial Democracy.'

The fundamental assumption is that of the disadvantage of the laborer in bargaining with the employer. "It is a fundamental article of the trade-union faith that it is impossible, in a system of competitive industry, to prevent the degradation of the Standard of Life, unless the conditions of labor are settled, not by Individual Bargaining, but by some Common Rule." According to our authors, it is a matter of indifference to the employer whether he hires a laborer or not, while it is a matter of life or death to the laborer. Hence the laborer gets only what the employer chooses to give him. According to this view, there is no such thing as competition among employers to secure laborers; their competition is in paying the lowest possible wages, and as the one that pays the lowest wages makes the highest profits, the national standard of life goes lower and lower. On this principle the whole edifice of 'Industrial Democracy' is built. If it is true, combination among workmen is indispensable to the well-being of society. It follows that these combinations, or this general combination, must establish the rule of equal pay for equal effort, and must require that work be done everywhere under the same sanitary conditions. This does not mean absolute equality of wages, although it implies equality in the hours of labor, but it means that no employer shall pay less in wages than another for a like product. Hence the schemes of employers for making their workmen dependent on them, profit-sharing, insurance funds, etc., are condemned as a subtle "nibbling at wages," and "horizontal cleavage" between classes of citizens is regarded as essential to the well-being of the industrial community.

This scheme of society is worked out with the greatest ingenuity, and even plausibility, and the actual divergences of existing trade-unions from the ideal are most instructively pointed out. Evidently everything depends on the original assumption, and the chapter on "The Higgling of the Market" is an extremely clever representation of the effect of competition in reducing prices. It is conceded that there are some enlightened employers who would prefer to employ strong, sober, honest, and skilful workmen at high wages for short hours, but they are not masters of the situation. There are other employers who employ the refuse of the labor-market, and who will undersell the benevolent employers if they put their liberal views in practice. "The capitalist manufacturer stands at as great a relative disadvantage to the wholesale trader as the isolated workman does to the capitalist manufacturer." The manufacturer is "at the mercy of the wholesale dealer," and when the latter tells him his prices are too high, he obediently cuts down his workmen's wages, unless they are combined in a union. And "just as the manufacturer is conscious of his weakness in face of the wholesale trader, so the whole-

sale trader feels himself helpless before the retail shop-keeper to whom he sells his stock." And, in his turn, the shopkeeper is at the mercy of his customers, or consumers, in general. Here our authors stop their analysis. If they went further, they would find that as producers are also consumers, there might in low prices be compensation for low wages and profits. But the chapter is perfect as it is, and ought to put our protectionist writers to shame.

To cut the matter short, it is evident that if the production of wealth is increased by trade-unions and their methods and practices, no effective argument can be brought against their multiplication and extension. Few people will be found to deplore a diminution of profits due to an increase of wages, provided the production of goods is unaffected. Our authors argue with much force that in a society regulated according to their theories production would be actually increased, and such a result is conceivable. Rich people may learn to content themselves with one per cent. interest, and pay the difference between that and the present rate to the army of Government officers to be employed in seeing that no one does any work except at the "standard rate." But our authors go further than this, and contend that the foreign trade of England would not be reduced even if her production were reduced. "So long as we continued to desire foreign products, and therefore to import them in undiminished quantity, enough exports would continue to be sent abroad to discharge our international indebtedness." The "therefore" covers a considerable chasm in the logic of this proposition. If England were to adopt a four-hours' day for labor, could the present volume of exports be maintained, and, if not, would imports continue at the same rate? The owners of New England cotton mills and the workers therein would just now like some conclusive reasoning on this point, for it looks as if the "standard rate" could not be maintained against Southern competition.

Our authors have claimed too much for their panacea in maintaining that it would be effective if enforced in but a single community. They should insist on its world-wide application; and, pending the consummation of this, their own arguments prove that its application in a single community would be injurious. But whether we dissent from their conclusions or not, we must thank Mr. and Mrs. Webb for their services in constructing the most complete argument in support of modern socialistic theories that has ever appeared. No better case can be made out, and every economist and every statesman ought to make himself familiar with it.

THE POLYCHROME BIBLE.

The Sacred Books of the Old and New Testaments: A New English Translation, with Explanatory Notes and Pictorial Illustrations. Prepared by Eminent Biblical Scholars of Europe and America, and edited, with the assistance of Horace Howard Furness, by Paul Haupt, Professor in the Johns Hopkins University, Baltimore. Part 10. Isaiah, translated by T. K. Cheyne; Part 14. The Book of Psalms, translated by J. Wellhausen. Dodd, Mead & Co. 1898.

This is an important work for several rea-

sons. It represents the labor of many Biblical scholars of high rank. It offers a new rendering of the Old Testament, without any of the conservative trammels that restrained the Revisers of 1885. It does this on the basis of a revised Hebrew text. It endeavors to present the results of literary criticism with vivid distinctness. Each participant in the work is invited and expected to give the product of his best scholarship—intelligibly, as for the layman, but without dilution or adaptation to ignorance and prejudice. As a consequence, while the work is entirely comprehensible to intelligent men and women, it is both too erudite and too frank to appeal to the crowd of superficial Bible readers. The pictorial illustrations may, it is true, attract even some of these, and that will be their best function.

Scholars will derive profit from these volumes, but they are not intended primarily for scholars. Hence it is only after some test of use by those who are not specialists that a final opinion can be given as to the success of the undertaking. But it is not too early to say that it seems likely to both interest and instruct those who pursue the study of the Old Testament seriously, even without technical training. It will give its readers some familiarity with Old Testament problems, accustom them to the scholar's attitude, and illuminate many pages of the Hebrew masterpieces with fresh light. It is, no doubt, subject to the disadvantages which attend all endeavors to represent, in crystallized form, the results of a science which is moving rapidly. It is even more subject than some others to such disadvantages, because its parts do not represent an agreement of scholars, but each the work of but one or two. Such a representation, when it is elaborate and expensive, has some tendency to claim the position of a standard, without having an absolute right to it, and, while it is useful and furthering to-day, may hamper progress to-morrow. Photographs of the sun's corona during an eclipse are invaluable if you have enough of them. It might mislead if one photograph, by a single observer, were to be published as the authoritative view of the corona.

One other drawback in the present case is the condition of the textual criticism of the Old Testament. Only to a small extent has this as yet been conducted systematically, with a careful use of all the available means. Even the principles of such criticism are not uniformly accepted. The necessity and the difficulty of it are both great. It is inevitable that textual emendation, under such circumstances, should be made up largely of suggestions, more or less acute, in which the element of personal idiosyncrasy is not lacking. It cannot embody the results of a sound and uniform method, consistently applied. This defect is accentuated by the absence, in the Polychrome version, of the evidence on which the textual changes rest. These are given in the revised Hebrew Text, which appears as an independent work. It is a pity that at least as much help in this direction could not have been offered the reader as is contained in the margin of the Variorum Bible.

Notwithstanding these drawbacks, the Polychrome Bible marks an epoch, and will contribute to the spread of knowledge. Its name is justified in only one of the two parts before us. Wellhausen's "Psalms" shows only the common white and black of

paper and printer's ink. The design of the colors was to indicate differences of authorship and date in the various materials making up the books. Not only is this clue wanting in the case of the Psalms, but in only a few cases is there any hint, in the brief notes, of the age to which a Psalm is to be referred. This is disappointing. The questions here arising are undoubtedly very difficult, but that is no reason for ignoring them. That he has ignored them is one among several indications of capriciousness in the recent Old Testament work of this brilliant scholar. The value of the part is enhanced, however, by an interesting appendix on the "Music of the Ancient Hebrews." The translation is put into English by the competent hand of Dr. H. H. Furness.

Canon Cheyne's "Isalah" represents the plan of the work much better. He uses colors freely—laid on in blocks, according to the contrivance adopted by the editor, the ink being black throughout. Not only so, but he groups the prophecies under different heads, largely according to date and authorship, so that he can use the same colors with different signification under the different heads. Their values are explained in the notes. By the aid of these devices he distinguishes, not two "Isalahs," but five, and of individual authors the number is still greater, for, e. g., the fifth group covers more than a hundred years. Taken in connection with the hints at historical interpretation found in the notes, there is no better way of receiving a distinct impression of the most interesting of the prophetic books, as understood by a bold, learned, and acute scholar, than by reading this volume of two hundred pages with care.

It is impossible to discuss details. We commend this series to the attention of Bible students, with the hope not only that the Old Testament version may be soon completed, but that the promise of the title-page may be in due time fulfilled, and the Polychrome Version of the New Testament, of which we have no announcement as yet, be put into our hands. The literary structure of the New Testament deserves study as well as that of the Old, and just now demands it with an emphasis all the greater because it has hitherto been unduly ignored.

Forty-six Years in the Army. By Lieutenant-General John M. Schofield. The Century Co. 8vo, pp. xvi, 577.

As one by one the officers of the regular army at the head of the list have been retired from active service when they reached the age of sixty-four, the roster of those who commanded independent armies in the field has been exhausted. Now and henceforth the ranking officer of the army must be one who served in the civil war as a subordinate, till this list also shall be ended and the whole generation of those who saw active service in civilized warfare on a great scale has passed off the stage. General Schofield is the last of those who commanded armies for whom a special rank was provided after the close of the war. That of General was limited to Grant and Sherman by the original statute, which also provided that the grade of Lieutenant-General should cease with the death of Sheridan. Sympathy with the latter when he was in *eriticulo mortis* led Congress to confer on him the higher rank, but he never exercised it.

A short time before General Schofield reached the age limit when he too must retire, the rank of Lieutenant-General was given him by act of Congress. These highest grades were honorary, for Grant ended his war service as Lieutenant-General; Sherman, Sheridan, and Schofield theirs as Major-Generals.

It has been known for a long time that General Schofield was writing memoirs of his military career, which would be published after his death. His retirement from active service has removed most of the objections he may have felt, and he gives us his book, as he says, while many of the actors in the great drama are still living and can point out any errors into which he may have fallen. The book is not a connected narrative of the author's life. It is rather a collection of notes and comments on events that he had part in. The first two or three chapters are more closely biographical, dealing with his boyhood and education at West Point and his service prior to the outbreak of the great rebellion. The campaigns of 1861 and 1863 in Missouri are then briefly but lucidly treated. Next follows a series of comments upon Sherman's generalship in the campaigns of Atlanta and the Carolinas, written in 1875, upon the publication of the first edition of Sherman's memoirs. These are followed by a discussion of the campaign of Franklin and Nashville in the autumn of 1864, and of the author's relations to General George H. Thomas in that important crisis. This will no doubt be considered as the most important part of the book. Further comment on Sherman's March to the Sea, its purpose, and its strategy, with the final campaign which resulted in Johnston's surrender, close the treatment of the war period. Entertaining and instructive chapters are given to the French intervention in Mexico, to reconstruction in the South, to army administration in time of peace, and to some of the lessons of the war, military and financial.

General Schofield's experience in Missouri is a most instructive lesson on the difficulties of both military and civil administration in a border State. The Union men of Missouri were divided into factions as hostile to each other as they were to the Confederates. The Union men of Kansas were generally radicals, who had been schooled by border-ruffians into an intense and implacable enmity to all slaveholders. The radicals of the two States united in the efforts to dictate a policy to the Administration at Washington, while Mr. Lincoln's heart was set on encouraging the loyalty of the anti-secession slaveholders and giving them protection. The situation was practically an intolerable one, and Schofield, as the military commandant of the department, was between the upper and the nether millstone. Mr. Lincoln appreciated the honest and patient efforts of the General to carry out his policy; but the bitter enmity of such men as Lane of Kansas and like extremists of Missouri was enough to prevent for a year and a half the confirmation of Schofield's appointment as Major-General. It was not till he had left the West and become one of Sherman's army commanders in Georgia that his confirmation was finally allowed to pass the Senate.

The chapters commenting on the Atlanta campaign contain valuable matter based on personal knowledge and throw light on some important points. The fact that the criti-

cisms on Sherman's generalship were written in 1875 and are published as then written, must diminish their weight. The publication of the Official Records has only lately opened to us the current correspondence on both sides, without which the actual situation cannot be understood, or the shifting and growing plans and methods of the opposed commanders tested with any satisfaction. The purposes of Gen. Johnston and the pressure of the Richmond Government upon him to assume the aggressive made an element in the problem of which comparatively little was known twenty years ago. The lapse of time and the opening of new sources of knowledge have, in the general judgment of the world, tended to increase the admiration for Sherman's conduct, especially in the prudence of his movements at the opening of the campaign, when his own impulsive nature was held so carefully in check. The bold strategy of his final campaigns has by common acclaim been placed among classic examples of generalship.

The treatment of Gen. Schofield's own campaign against Hood in November of 1864 is very thorough in everything which pertains to his relations to Gen. Thomas. Here the whole subject was absolutely within the author's knowledge, and he has evidently made a most thorough compilation of every kind of evidence which may bear upon it. The special interest turns largely upon the fact that an unscrupulous effort was made to poison Thomas's mind against his principal subordinate. The chief actor in this plot seems to have been a man, always of a dubious personal reputation, who ended his career under a cloud on account of malversation in a revenue office of the government. How far Thomas was deceived into believing that Schofield was scheming against him may still be regarded an open question, but the assertions of those who were about him, and the publication of Van Horne's Life of Thomas, made it entirely proper that Schofield should give the matter the thorough treatment which he has given it in this memoir. The correspondence throughout the campaign is carefully analyzed, Schofield's own part as commander in the field is clearly defined and proved, the directions of the chief and the execution by the subordinate, with the extent and kind of responsibility of each, are all so fully and clearly marked out as to leave very little room for debate. While the author deeply regrets the apparent estrangement which was wrought in Gen. Thomas's mind, and regards the plot to bring it about as a criminal wrong to both, he gives strong evidence of his own continued admiration and regard for the character of his old chief.

From a strictly military point of view, the campaign of Franklin and Nashville is calmly criticised for the purpose of fixing its strong and weak points as matters of history. The author alludes with a touch of pathos to the fact that he is already an older man and an older officer than Thomas was when he died, and claims the indisputable right to review without constraint the portions of their career which were in common. We should all have felt that Gen. Schofield had come short of doing his duty to posterity if he had omitted to give us his frank and full judgment upon the events in which he bore so important and honorable a part.

Philadelphia: J. B. Lippincott Co. 1898. Pp. xii, 192 8vo, illustrated.

This journey was undertaken in order to explore that unknown portion of the Everglades into which the Seminole Indians were driven during the Indian war, and which was left unvisited by two previous expeditions; also, to examine the fauna and flora of the region in the interests of the University of Pennsylvania. It seems strange to learn, in these days of energetic exploration in all parts of the world, that we have, in one of our Atlantic Coast States, a tract 130 miles long and 70 miles wide which, until a year or two ago, was as much unknown to civilized man as the heart of Africa. It is bounded on the north by Lake Okeechobee, on the east by a strip of pine forest about six miles wide, facing the Atlantic, on the south by the mangrove swamps bordering the southern and southwestern shores of the peninsula, and on the west by the Big Cypress Swamp, which touches the western coast fronting the Gulf of Mexico.

The first journey of any length through any part of the Everglades was made by Major A. P. Williams in 1883, but resulted in no additions to cartography, as the record of the party on published maps is merely a general line from the Harney River to Lake Okeechobee. It is probable that no attempt was made at scientific surveying. In 1892 a party of more than twenty men under J. E. Ingraham followed an old Government trail from Myers, on the west coast, to the site of Fort Shackelford on the eastern edge of the Big Cypress Swamp. Thence, after many hardships, they succeeded in crossing to Miami in about two weeks, being piloted out of the maze by a Seminole Indian.

The author of this volume made an experimental trip across the eastern pine belt in 1896. Last year he took his outfit and supplies by vessel to the Harney River on the west coast behind the Ten Thousand Islands. This river is a small stream about five miles long, its upper part available only for canoe navigation. It forms one of the outlets for the surplus waters of the Everglades. Its bed is composed of limestone chemically precipitated from the fresh water and showing a more or less crystalline structure. From the head of the river Lieut. Willoughby started with two canoes and one companion in a northeasterly direction. Distances were measured by a light wheel lashed to the stern of the canoe, provided with paddles and a register showing the number of rotations—a method which proved fairly accurate. Astronomical observations were taken daily for position. A tongue-shaped tract of sawgrass necessitated a long détour to the southward, but the Miami was reached in safety, after a journey of some fifteen days. No specific dates are given in the text for particular days.

What, then, are the Everglades? The popular opinion has been that they are a vast tract of swamp, reeking with malaria and enclosing rich islands of higher ground reached by paths known only to the Seminoles, and where, it was surmised, the latter had rich plantations, orange groves, and herds of cattle. We learn from our author that this is all erroneous. The Everglades do not form a swamp in the ordinary acceptation of the term. They are more like a vast area of gently sloping rocky beach, over which the Okeechobee drainage, constantly in motion, moves steadily towards the sea. The water is pure and potable; as it is not

Across the Everglades; A Canoe Journey of Exploration. By Hugh L. Willoughby.

stagnant, there are few mosquitoes, at least in the winter season. The author encountered no malaria, but reports the air as stimulating, with a winter temperature of 70 to 80 degrees Fahrenheit, pleasant and healthful. The water is everywhere shallow, varying from a couple of feet to as many inches, separated from the rock, which everywhere underlies it, by a coating of calcareous mud which in some places has a depth of six feet, and in others diminishes to nothing. The rock surface is curiously irregular, nubby, and full of cavities. On the bottom grow grasses which impede the traveller. Where the mud is deep the dreaded "sawgrass" grows to a height of ten feet above the water, three-sided, with each angle armed with sharp recurved teeth which cut to the bone, making a jagged wound, long in healing. The thick sawgrass is impenetrable; it is easier to go twenty-five miles round than to get through a quarter of a mile of it. Islands are few and small, rising only a few inches above the water. Snakes are plentiful and large; panther, deer, otter, and other animals occur, but more plentifully near the edges of the tract. Birds are more numerous, especially the egret; and one bird, the Everglades kite, is peculiar to the region. Alligators are found, but not abundantly; fish and turtles are common, but difficult to catch in the maze of grasses. On the whole, it is a unique region, and the author's account of it is interesting and timely.

Lieut. Willoughby speaks of the Seminoles with respect and admiration; a hard-working, patient folk, who pride themselves on their truthfulness and desire only to be let alone, free from contact with the "lying white man." The book ends with a Seminole vocabulary of sixteen pages, rather crudely prepared, but which the philologist may find to contain some useful material. The volume bears evidence of unfamiliarity with book-making, but has numerous excellent illustrations and a good index. It succeeds fairly well in filling a notable gap in the geographic literature of our country.

Histoire de la Langue et de la Littérature Française. Tome IV. 1600-1660. Tome V. 1661-1700. Paris: Armand Colin. 1897.

In accordance with expectation, each new volume of this work exceeds its predecessor in bulk. Fortunately the greater amplitude of treatment has resulted in making Volume IV. the ablest and most exhaustive yet published, while the character of the critical opinions expressed conforms more closely than ever to the intention as originally stated. To the editor (Prof. Petit de Julleville) have fallen two chapters, devoted respectively to seventeenth-century poets from Malherbe to Benserade, and the founding of the French Academy as introductory to the succeeding period of classicism. With most modern critics the treatment of the "official poet of the Bourbon dynasty" has been often so harsh that a partial rehabilitation of his fame is welcome, even though coupled with the admission that Malherbe's "laborious timidity" helped to stifle truly lyrical poetry in France for nearly two hundred years. It is but natural that the artless outpourings and the marked individuality of style in the work of Mathurin Régnier should appeal more strongly to a critic of to-day who strives to express the general feeling of his own time and generation. A similar remark

applies to Théophile de Viau. Not the least pleasing feature of this chapter is its unsparing employment of illustrative quotation, which contributors to the earlier volumes might have done well to anticipate.

M. Bourciez furnishes a capital chapter on the Hôtel de Rambouillet, in which, taking a hint from M. Brunetière's well-known views, he dwells on the development of the social spirit in French literature as the outcome of the influence of that brilliant coterie; and though recognising the triviality of much that filled their discussions, he seems to have summed up definitely the enduring worth of the movement in his last sentence: "Si quelques-uns y recueillirent . . . des germes d'affectation, beaucoup y apprirent à penser délicatement et tous à bien dire." Fifty years ago it would have required some courage to express such an opinion, except under the protection of the academic roof; but we have at last learned to understand that Molière's immortal satire was directed less against the *précieuses* of Paris than at their awkward provincial imitators.

Our feeling for the critic (M. Rigal) whose weary task it was to judge the work of the initiators of the modern French drama (Hardy, Racan, Mairat, etc.) vanishes on discovering that his enthusiasm was strong enough to inspire him with the following bit of artless chauvinism: "À la lecture ses tragédies [those of Hardy], avec leurs changements de lieu, font l'effet de tragédies écrites par un Shakespeare . . . un peu timide et plus réservé." In this chapter the well-worn theme of the dramatic unities holds a prominent place, as indeed in other divisions of the volume, and on this point the various commentators appear refreshingly united as to the wholesomely restrictive effect of rules on individual tendencies towards vagaries in dramatic composition. From a literary point of view, it is hard to speak too highly of M. Jules Lemaitre's entertaining treatment of Corneille—much the liveliest chapter in this volume—for, under the guise of irony much more gentle than is his wont, the writer conveys a series of opinions strikingly fresh and original. In the light of them the contemporary hostility to "Le Cid," which was by no means confined to Richelieu alone, nor indeed wholly instigated by his jealousy, grew out of an imperfectly realized conviction that that famous drama, with its theme of the triumph of "l'amour-passion," violates ordinary (i. e., conventional) morality in its solution of a case which that morality had not foreseen. This distinguishes "Le Cid" both from all earlier plays of the seventeenth century and from the rest of Corneille's greater dramas, in which the will to do right invariably plays the determining part of the action. Despite the gravity of the situation, M. Lemaitre's habit of literary curvetting was too strong to be entirely overcome, though the exercise has been prudently relegated to the marginal security of a foot-note, in which we read that "Polyeucte nous rappelle à la fois Saint Paul, Jean Huss, Calvin, et le Prince Kropotkine"; and a few pages further on, the examination of "Théodore" held out an irresistible opportunity for a sly rap at Sardou.

Other chapters take up romances, memoirs, and philosophical works, the last occupying a space at least equal to their importance; but, in spite of somewhat elaborate subdivisions, we fail to find in the exposition of Cartesianism (M. Hannequin and Thania)

such lucidity as characterizes M. Gazier's commentary on Pascal and Port Royal. It is possible that the metaphysical principles underlying the former do not admit, at least in such a semi-formal treatise as this, of a thoroughgoing treatment; and yet one might well give the average reader credit for the ability to follow an examination of Descartes's dualism in all its details, with the inevitable conclusion of its ultimate philosophical failure. Dealing with Pascal, M. Gazier dwells on the truly philosophical character of his scepticism, as distinguished from religious doubt; his dogmatic Christianity rests on pyrrhonism. It should, however, in fairness be admitted that no shuffling of terms can differentiate this attitude, so far as results are concerned, from that of the sentimental mystic. We must note, by the way, that the critic in this connection writes *Oberland* for *Obermann*; it is true that popular opinion connects both of these names with Switzerland, and thus it is all one.

The final chapter, on the internal history of the language, offers less interest than the corresponding divisions in earlier volumes, but not from any falling off in M. Brunet's method or manner. The age of Vaugelas and academic wranglings on the respective "nobility" of terms offers little even of historical interest to such as live in an age of journalism and reckless neologizing.

With the appearance of the fifth volume (1661-1700) "le Grand Siècle" is completed. So little remains to be said touching the great names of this period that the relatively conventional character of the judgments here rendered was all but a foregone conclusion. Boileau, La Fontaine, and Mme. de Sévigné are exalted as typically representative of French *esprit* and common sense. The treatment of the Bossuet-Fénelon quarrel, by two different hands, shows, nevertheless, much evenness, and confirms the prior conviction that the disagreement was one of temperament quite as much as of logical, or theological, conclusions. Strangely enough, the otherwise ample discussion of Molière omits all mention of his diction and style. In the case of Saint-Simon, his commentator appears to have been equally eager to emphasize the envious disposition of the man and to determine the enduring qualities of the writer. The difficulty of comparing, and yet contrasting, La Bruyère and La Rochefoucauld is met and overcome in the neat phrase which sets off the professional against the amateur. But the newest and consequently the most interesting element in this volume consists in the introduction of a long chapter by M. Rocheblave, which examines the æsthetic affinities of French art and letters during the seventeenth century, and demonstrates more cogently than ever the influence of political absolutism on both. We would say in conclusion that the attitude displayed in these volumes towards the great ecclesiastics and preachers of the time leads us to await with eagerness the coming pronouncements on the sceptical movement of the following century.

The Rod in India; being Hints how to Obtain Sport, and Remarks on the Natural History of Fish and their Culture, and Illustrations of Fishing Tackle. By Henry Sullivan Thomas, F.L.S. 3d ed. London: W. Thacker & Co. 1897.

The first edition of this work was published

ed in 1873, and the two succeeding ones both contain much new material in print and illustration. Though Mr. Thomas devotes a good deal of space to pisciculture, his book is chiefly for the angler, and is the only one of importance on Indian fishing. The mahseer, a member of the carp family, is the best known of the Indian fishes, and yields sport, when hooked, not at all inferior to that the salmon affords. He takes the fly much as a salmon does, "rising at it and descending quietly to his old place at the bottom till he feels the hook," and then his first rush is much more violent than a salmon's. "In spinning there is added yet another danger: the mahseer does not ordinarily take its fish quietly, as if it knew it would be unresisting like a puny fly, but seizes it with an angry blow that gives a sudden jerk to the line; it comes at the fish-bait with a swoop like a hawk, and, seizing it, passes swirling by at speed." His fighting qualities and strength, pound for pound, Mr. Thomas considers fully equal to those of the salmon, and, fished for with salmon tackle, the sport the mahseer yields is of the very finest, as in some of the large Indian rivers he attains a weight of 150 pounds or more, though these very large ones are seldom taken. Still, fish of 50 to 60 pounds are not at all uncommon, and on p. 399 an interesting account is given of the capture in the Poonch River of a 52-pounder which, by reason of a break in the reel, kept the angler busy for six hours before he was landed. Records of many days' fishing are given when bags of five to eighteen mahseer were made. The carniatic carp is also a sporting fish, resembling the chub in appearance, takes fly and bait, and reaches a weight of 20 to 25 pounds.

There are other fish in the streams of India, the murrel, the fresh-water shark, and many more, but of all the mahseer is by far the most attractive to the angler. Like the salmon, he inhabits impetuous streams, is fished for in the same way and with the same tackle. Mr. Thomas says of him: "The mahseer shows more sport than the salmon; not that you can kill more of them, which you may also do, but that each individual mahseer makes a better fight than a salmon of the same size."

The illustrations of the book are capital and appropriate, and every information is given that is necessary to the man contemplating an angling trip to India.

Christian Greece and Living Greek. By Dr. Achilles Rose. New York: Peri Hellados Publication Office. 1898.

Perhaps the most tragic, and certainly the bitterest, result of the late collapse of Greece is that it has made her ridiculous. There was a time when the sorrows and wrongs of Greece eclipsed the gayety of nations. But though for Phil-Hellenes Hellas is still a bleeding martyr, crushed under the heel of the heartless "Concert of Europe," the cooler and more impartial verdict is that years of silence and reorganization from within are needed if she is to win back the emotional sympathy that she once shared with "Young Italy" and Poland. For the present, she lies under the suspicion of being absurd. She is so hopelessly shrouded in an atmosphere of ineffectiveness that even the recent murderous attempt on her King has proved a fiasco in the end. The civilized world had barely recovered from its thrill of horror when it

learned that, out of six or eight shots aimed at some ten paces distance by two desperate assassins armed with terribly effective Gras rifles, one of these Gras bullets, "that will whistle through eighteen inches of solid oak," had hit but failed to break the carriage-lamp; and another had slightly marked but failed to wound the carriage horses, while the latter did not even play their part to the extent of taking fright, and so introducing an element of real danger. For this and other reasons it seems that the claims put forth by Dr. Achilles Rose in his book vaguely entitled 'Christian Greece and Living Greek' are ill-timed.

The Greek flag on the cover betrays its proselytizing aims. It would be unprofitable to criticize here vague rhapsodies over the glorious past of Greece by one who is obviously not a classical scholar. All sensible Phil-Hellenes who read Dr. Rose's still vaguer prophecies of the "glory of Greece" in the future, will share our regret for an opportunity of silence neglected, and our congratulations to Greeks that Dr. Rose is not a Greek, but a German. His book has a definite aim beyond the glorification of Greece and the vilification of "the Powers." It is a proposal for a universal language—an idea that is some centuries old, but it has been reserved for Dr. Rose to suggest that the medium best fitted for the purpose is modern Greek. Undeterred by previous failures in this line, or rather supporting himself by them, Dr. Rose points out the difficulties of a polyglot congress, and would solve them by the apparently simple plan of making all the members acquire a reading and speaking knowledge of yet another language than those that ordinarily come within their range. Scientific men who have hitherto regarded a working knowledge of French, German, and English as something of an achievement, will hardly hail with enthusiasm the prospect of such an addition to their repertory. But Dr. Rose meets this difficulty with his theory that, if classical Greek were taught "rationally" in schools and colleges, "the most perfect, the ideal language would speak for itself, and inspire scholars to unite in agitation for its general adoption" (p. 259).

Dr. Rose means, by "the perfect language," "Greek as she is spoke." It is no new contention that ancient Greek should be taught through its modern representative, and it has already been met by classical scholars with an almost perfect unanimity. The arguments of those who urge such a method are offensive to scholars because they are based on assumptions that have small foundation in fact. When Dr. Rose asserts (p. 243) that "the Greek language alone has preserved itself almost unchanged through thousands of years in its original beauty," he puts himself out of court. A language that has played fast and loose with its moods, prepositions, cases, and general syntax, which in the mouths of the people has passed into a dialect almost unrecognizable by one who is thoroughly familiar with classical Greek, cannot be said to be "almost unchanged." Dr. Rose is not explicit, and usually drops into rhetoric where one would fain have facts, but we may assume that the language he is offering to scholars as a medium is not the barbarous hybrid revived Greek of the newspapers—a jargon which a classical scholar reads with infinite disgust. One

piece of reasoning in this work is so characteristic of Dr. Rose's grasp of the issues involved that we cannot forbear to quote it. He has been told by a malignant professor of classical Greek that it is not worth while to acquire modern Greek except for the purposes of the tourist, since "there is absolutely no modern literature worthy of the name." His answer is that there is now being constructed at Athens "a work of monumental grandeur belonging to the noblest of the literature [sic] of any country in the world" (p. 276). What is this literary masterpiece? A work on craniometry and anthropology embracing facts "collected in voluminous manuscripts which I have had the pleasure, the delight, to examine. . . . Is there any literary production in any country at the present time which is superior to this?" (p. 276). How is one to meet in argument a writer who deliberately regards material for the study of anthropology as literature?

Dr. Rose's judgments on the attitude of the Powers are simply beneath criticism. The statement that "the Greeks incurred the displeasure of the European governments by their revival of the Olympian games in 1896" (p. 286) is one that every intelligent Greek will repudiate. His suggestion for an international language may be left to its fate. The *lingua philosophica* of Leibnitz died too. The "Volapük of the Rev. Mr. Schleyer" perished likewise. To us the real weakness of Dr. Rose's book lies not so much in his rather foolish suggestion, but in the tone he assumes, and his inadequate knowledge, which on almost every page leads him into blunders. The Renaissance of the classics was inspired by Greeks. It is probable that we are now facing a revival of the Dark Ages in which science will play the rôle once sustained by religion in discrediting literature. But we shall not owe to Greeks the future renaissance of Greek unless they are encouraged to see their language and modern literature in their true proportions.

On p. 68, in "Joures"—"a second Aristophanes with a strong Shaksperian vein, who shows a considerable resemblance to Chaucer's tenderness of disposition" (!)—we imagine that we recognize Soures, the editor and writer of a witty and rather scurrilous little comic paper at Athens.

Astronomy. By Agnes M. Clerke, A. Fowler, and J. Ellard Gore. D. Appleton & Co. 1898.

So many able men have entered the contest to produce the best popular astronomy that the standard of excellence for such works is now very high. At the same time, they have, on the whole, as one after another has appeared since Herschel's 'Outlines,' been growing less and less intellectual. The present volume is not as sensational as those of Flammarion; it contains nothing calculated to terrify the reader, nor any scheme for communicating with inhabitants of Mars. Those particular varieties of silliness are not this year in fashion. We read, p. 404, "According to the Book of Enoch the constellations were already known and named in the time of that patriarch." Since everybody knows that the Book of Enoch is not even admitted into the Vulgate, a stronger impression of the antiquity of the constellations, which undoubtedly go back to the very beginnings of astronomy, could have

been conveyed by mentioning that Alexander is said on good authority to have sent home from Babylon astronomical records going back to 2300 B. C.; and the "Phænomena" of the Macedonian poet Aratus, which, according to an ancient witness, depicts a globe, really describes the heavens as they were 2300 B. C. But this way of stating the minimum age of the constellations would not answer the purpose, because it supposes the reader to have sufficient logical power to follow an argument intelligently. There are no tables nor lists pretending to completeness (except that a list of the signs of the zodiac has been admitted, probably because the traditional methods of young ladies' academies make a good deal of signs of the zodiac); nor is there any attempt at summing up, or an account in any respect thorough of the present state of any branch of research. At the same time, the book reflects to-day's current opinions among English astronomers, and, touching most of the questions of descriptive astronomy now uppermost (and not too difficult), has its value, and will be used to advantage in schools of a certain character. There is no transcendental accuracy about the work in any particular.

BOOKS OF THE WEEK.

HENRY HOLT & CO.'S NEW AND FORTHCOMING BOOKS IN SCIENCE

Torrey's Chemistry.

An Elementary Chemistry. By JOSEPH TORREY, JR., Instructor at Harvard. (Aug.) Embodies the course for beginners at Harvard. Has been worked out on the basis of quantitative experimenting by the students individually. Can be used by ordinary high school pupils.

Barnes' Plant Life.

By Prof. C. R. BARNES of Univ. of Wisconsin. 411 pp. (May.)

An elementary text book, profusely illustrated. Intended to supplement and systematize laboratory and field work. Full laboratory directions are appended.

Kingsley's Zoology.

Comparative and Elementary. By Prof. J. S. KINGSLEY of Tufts. 357 pp. 12mo, \$1.30 net. (Circular free.)

R. H. Cornish, Urie's High School, New York City: "This book seems very clear cut in its plan and to be a very good combination of laboratory manual and descriptive zoology." (Introduced.)

Atkinson's Botany.

Elementary. By Prof. G. F. ATKINSON of Cornell. Richly illustrated. (August.)

Beginning with plant physiology, with simple experiments upon familiar plants, it takes up the morphology and biology of representative forms, discusses reproduction, including its physiological processes, relationship, and evolution, and concludes with a brief account of plantaeology.

Randolph's Biology.

Laboratory Directions. By Miss HARRIET RANDOLPH of Bryn Mawr. 163 pp. 80c. net.

Laboratory work on easily accessible objects for about six hours per week for one year.

Prof. E. B. Wilson of Columbia: "A very admirable little book—simple, clear, and practical."

Congdon's Qualitative Analysis.

A brief course. By EMERSON A. CONGDON of the Drexel Institute, Phila. 64 pp., interleaved, 60c. net. (May.)

New Free Descriptive Educational Catalogue Ready in May.

29 WEST 23D ST., NEW YORK.

Crowell's Logical Process of Social Development.

By JOHN FRANKLIN CROWELL, Ph.D., L.E.D. 12mo. \$1.75.

"The social process in its logical character is here regarded as the process of the selective survival of types of personality. This process of course takes place under the natural conditions of personal association and through the historical tendencies of the social organization. The development of the social population is thus systematically realized by man's membership in typical groups capable of being coordinated in the common pursuit of a more or less conscious social policy."—From the Preface.

Adams' Science of Finance

By Prof. HENRY C. ADAMS of the University of Michigan. (August.)

A work paying particular attention to the necessities of the American people and to the subject of taxation.

A New Edition from New Plates of

Remsen's Chemistry.

Advanced Course. By Prof. IRA REMSEN of Johns Hopkins. XXI + 853 pp. 8vo, \$3.00 net. (May.) Circular free.

It is hoped that this new edition will be found to contain everything that can fairly be looked for in a book of its size. A new appendix treats of the properties of many compounds necessarily omitted or briefly touched on in the text.

Hall & Bergen's Physics

Entirely New Edition. Much enlarged. 590 pp. \$1.35 net.

Frank Bolinas of New York Boys' High School: "A decided improvement on the author's earlier excellent work. I am glad to see that so much has been done to make this book suitable for classes in schools not especially preparing for Harvard University."

Yale Mixture.

A GENTLEMAN'S SMOKE.

You won't know the luxury of Pipe-Smoking until you use Yale Mixture.

A two-oz. trial package, postpaid, for 25 cts.

MARBURG BROS.,

The American Tobacco Co., Successor, Baltimore, Md.

Builders of Greater Britain

Edited by H. F. WILSON, M.A.

NEW VOLUME.

John and Sebastian Cabot.

The Discovery of North America.

By C. RAYMOND BRADLEY, M.A. Crown 8vo. With Frontispiece, Portrait, and Maps. \$1.50.

LONGMANS, GREEN, & CO.,
91-93 Fifth Avenue, New York.

DEDHAM, MASS.

10 Miles (25 Minutes) from Boston.
FOR SALE—Quick and cheap, near two railroads, four stations, and electric car, corner of good streets, GENTLEMAN'S RESIDENCE, 4½ acres; fine trees, fruit, and shrubbery; 18 rooms, gas, and electricity, hot and cold water, furnace, stable, grange, and cottage. Land alone worth more than price. Right for residence and investment. Excellent place for sanitarium or school. Apply to S. W. HATHERWAY, Atty., 84 School St., Boston, Mass.

MT. DESERT.—Furnished Houses at \$150, \$350, \$800, \$400, and \$450, previously occupied by Cornell, Dartmouth, Hopkins, and Yale professors. Perfect water supply; no pumping; slate tube; fireplaces. W. M. GRINWOLD, Cambridge, Mass.

IN THE ADIRONDACKS.
Charming camp for sale. Newly built, completely furnished, ready for occupancy. Write for illustrated descriptive circular. DUNLAP, 100 Liberty St., New York.

WANTED BY A LADY—Something to do. Experienced in clerical work and as a housekeeper. C. E. HALL, 1100 N Street, N. W., Washington, D. C.

CLARENDON PRESS.

PRACTICAL WORK IN GENERAL PHYSICS.
By W. G. WOOLLCOMBE, M.A., B.Sc. Crown 8vo, 75 cents.

PRACTICAL WORK IN HEAT. Crown 8vo, 75c.

PRACTICAL WORK IN LIGHT AND SOUND.
Crown 8vo, 75c.

AN INTRODUCTION TO CHEMICAL CRYSTALLOGRAPHY. By ANDREAS FOCK, Ph.D. Translated and Edited by W. J. POPE. With a Preface by N. STORT-MARKELYN, M.A. Crown 8vo, \$1.40.

CHEMISTRY IN SPACE. Translated and Edited by J. E. MARSH, B.A. Crown 8vo, \$1.10.

CLASS-BOOK OF CHEMISTRY. By W. W. FISHER, M.A., F.C.S. Fourth Edition. Crown 8vo, \$1.10.

TREATISE OF HUMAN NATURE. Reprinted from the Original Edition in Three Volumes, and Edited by L. A. SELBY-BIGGS, M.A. Second Edition. Crown 8vo, \$3.25.

ENQUIRY CONCERNING THE HUMAN UNDERSTANDING, and an Enquiry Concerning the Principles of Morals. Edited by L. A. SELBY-BIGGS, M.A. Crown 8vo, \$2.00.

BRITISH MORALISTS. Selections from Writers principally of the Eighteenth Century. Edited by L. A. SELBY-BIGGS, M.A. 2 vols., crown 8vo, \$4.50.

For sale by all booksellers. Send for Catalogue.

Tours.
EUROPEAN SUMMER RESORT.
INNSBRUCK, TYROL, AUSTRIA.
1,900 feet above the sea, with dry, bracing climate.
CENTRE FOR COACHING TRIPS AND EXCURSIONS
OF ALL KINDS.
Fine University, Hospital, etc.
HOTEL TIROL.
Open all the year. CARL LARSEN, Proprietor. Large, airy, sunny rooms; modern conveniences; superior cuisine. Reduced rates in winter. Best references. Illustrated pamphlets sent on application.

FRAZAR PARTIES.
Six attractive routes are arranged for the coming summer, with reasonable prices that cover all expenses. For itineraries and references, address
Mrs. M. D. FRAZAR,
70 Globe Building, Boston, Mass.

AMERICANS IN BERLIN WILL
find comfortable home, with good opportunity for speaking German, at Fri. Beck's, Hallesche Str., 20. Liberal table. Summer terms, from \$12.50 per month; two sharing room, \$15. American and German references.

NORWAY. Annual Summer Tours. Norway and Central Europe. Small party conducted by Professor CAMILLE THURWANGER, 31 Pierce Building, Boston.

By ALPHONSE DAUDET.
The Head of the Family

Translated by Levin Carnac. With a Biographical Sketch by Adolphe Cohn, LL.B., Professor in Columbia University. With 29 Illustrations by Marchetti. 12mo, \$1.50.

"ALPHONSE DAUDET'S LAST BOOK, *Le Soutien de Famille* (PUBLISHED IN THE UNITED STATES UNDER THE TITLE OF *The Head of the Family*), WILL CERTAINLY RANK AMONG HIS VERY BEST PRODUCTIONS. DAUDET WAS NEVER BETTER INSPIRED THAN WHEN DESCRIBING THE FAMILY LIFE OF THE FRENCH METROPOLIS, AND IN HIS LATTER YEARS HE MANAGED TO COMBINE WITH THE SOFT DICKENS-LIKE HUMOR OF HIS EARLIER STYLE AN IMAGINATIVE WIT AND A CRISP SARCASM OF WHICH THE FIRST EVIDENCE WAS MADE FEASIBLE IN *L'Immortel*. THE CHARACTERS ARE DRAWN WITH ALL THE SUSTLE DELINEATION AND ARE COLORED WITH ALL THE LIGHT AND SHADOW, THE PATHOS, AND THE HUMOR OF WHICH DAUDET'S GENIUS, AT ITS VERY BEST, WAS CAPABLE. . . . CERTAINLY ONE OF HIS VERY GREATEST WORKS."—*Paris Correspondent of the New York Times*.

G. P. PUTNAM'S SONS, NEW YORK & LONDON.

A NEW STRONG BOOK.
**THE TWENTIETH . . .
CENTURY CITY**

By Rev. JOSIAH STRONG, D.D.,
Author of "OUR COUNTRY" and "THE NEW ERA."
16mo, paper, 25c.; cloth, 50c.
With the same fascinating presentation of facts and figures which made "Our Country" one of the great books of the century, Dr. Strong discusses the danger arising from the vast movement of population towards the Cities and the growth of their preponderating influence in the Nation, points out the principles which may be applied successfully to the solution of the great problems of modern society and makes a ringing appeal for action.

The Nation.

NEW YORK, THURSDAY, MAY 5, 1898.

The Week.

The first battle of the war has taken place where it was expected. Admiral Dewey has demolished the Spanish fleet, as he was expected to do, in the Philippine Islands. The completeness of the victory is acknowledged in Madrid. The only thing we need to know about it is the amount of damage Admiral Dewey has himself sustained. The importance of this, however, depends on the question whether it was his intention, or whether he had instructions, to do more than demolish the fleet. So confident were the Board of Naval Strategy at Washington of the superiority of our six ships to the Spanish nine or ten, even when the latter were under the guns of the forts, that they did not hesitate to detach the powerful battleship *Oregon* from the Pacific squadron. This looked like a reckless proceeding, but the result has vindicated the Board. All danger of raids on our Pacific Coast is now removed, and our navy has only to reckon up the remaining strength of the Spanish fighting marine in the Atlantic. While this is, of course, not to be underestimated, it is far inferior to ours even on paper, while there is good reason to believe that the demoralization of the Spanish service has not failed to reach the navy. It is asserted by experts, French and other, that squadron evolutions and gunnery practice are almost unknown to the Spanish fleet. With the exception of the *Vizcaya* and the *Oquendo*, it is maintained by those who ought to know that the Spanish war-ships are away below par in equipment, drill, and discipline. Coleridge asserted that the discipline on Spanish ships was, in his time, the loosest in the world, and that in the American navy the most severe. This may not entirely hold now, but everything points to its being still measurably true.

Before war was declared, it was suddenly turned into a war to avenge the *Maine*. Has not this object been attained? We are reported to have killed or drowned 400 Spaniards. Two hundred and sixty-six men are reported to have perished in the *Maine* explosion; this leaves us with 134 dead Spaniards to our credit, which surely ought to satisfy us, unless another fight should put the balance on the other side. We do not know whether this account is quite correct, because we have heard as yet no report of Dewey's losses. If he has had any, they will, of course, have to be deducted from our credit. We notice that Bishop Whipple has

directed a prayer in his diocese for the protection of our soldiers in the field, but the Spaniards are praying busily for the protection of their soldiers. In every war between Christian nations these conflicting prayers have been a scandal, ever since the foundation of Christianity, and we hoped they had ceased. They are founded on the theory that the Creator takes a certain pleasure in watching fights, and that he gives the victory to the pluckiest and best drilled. It would be better for religion to have this view of the Creator's tastes drop out of sight. To the question why God permits war if he does not like it and does not take sides in it, we must answer by asking why he permits robbery, murder, and lynching, and lying? As we know we shall not get any authoritative answer to these questions, had we not better leave the subject alone?

Opinions differ very widely as to the probable total cost of the existing war. In the twelve months beginning with the real outbreak of civil war, in July, 1861, the War Department's expenditure was \$389,173,562, the navy adding \$42,640,363. In the last year of that war, army and navy expenditure combined reached the extraordinary total of \$1,153,307,834. The Government spent, in fact, during that fiscal year 1865, no less a sum than \$3,000,000 daily. Its normal expenditure in recent years, even with pension and miscellaneous appropriations at their highest, has been something short of \$900,000 daily. With the \$431,813,000 outlay for army and navy, even in the first year of the civil war, may be contrasted last year's disbursement of only \$83,511,000 for the same two purposes. Of course, such an increase as that of 1862 or 1865 assumes pretty continuous fighting with a large armed force; and of course, also, in the long run, an army in active operation will cost more than a navy. There is not, therefore, any great probability that our "war budget," even with the present extensive preparations, could reach the level of the budget of those years. Until, however, the outlook as to the probable length of war is clear, the Government is right in making appropriations with a view to a costly contest. Mr. Dingley's proposed increase of \$90,000,000 in the annual revenue is small enough, when it is considered that the present revenue law has run short of expenditure, thus far in the fiscal year, by \$66,000,000. Besides, who is to guarantee Dingley's ninety-million estimate?

The amendment offered by Mr. Bland to the revenue bill in the House, for

printing \$150,000,000 new legal-tender notes to be used in payment of the public expenses, is significant of a drift of the Democratic party away from free silver towards free greenbacks. If anybody in the House might have been confidently reckoned on to stand by the silver dollar, that man was Bland. At any time during the past twenty years, when a question of finance was under debate, it would have been expected of him to propose free coinage as the rainbow of hope and a cure for all financial ills. But, lo and behold, in the face of war, when we are under the necessity of raising some hundreds of millions of dollars in one way and another, Mr. Bland comes forward with what? His proposed substitute for the tax and loan bill is so remarkable, when we consider its source, that we quote it entire:

"That the Secretary of the Treasury is hereby authorized and directed to cause to be engraved and printed United States Treasury notes to the amount of \$150,000,000. Said Treasury notes shall be a legal tender in the payment of all debts, public and private, and be issued in like denominations as is now provided by law for United States notes commonly called 'greenbacks.' That the Treasury notes herein authorized shall be covered into the Treasury and paid out from time to time in the discharge of public expenditures as the exigencies of the Treasury may require.

"Section 2. That a sufficient sum of money is hereby appropriated, out of any money in the Treasury not otherwise appropriated, to carry this act into effect."

We say that this is a remarkable measure when we consider its parentage, but it is not the only sign of the drift of the Democratic party towards Middle-of-the-Road Populism. Congressman Kitchen of North Carolina, who stands in the nomenclature of that State as "Dem.-Pop.," introduced a bill the other day for \$500,000,000 of new legal-tender notes. To this he attached a section for "coining the seigniorage" and another for the free coinage of silver, but these were quite secondary to the greenback feature of the bill.

It would be a gain to get rid of Bailey of Texas on almost any terms. He came forward last week with a proposition to "coin the seigniorage" of a lot of silver bullion in the Treasury, to the amount of \$42,000,000, and to issue notes on the "untaxed credit" of the Government to the amount of \$54,000,000. What is the untaxed credit of the Government? Is there also a taxed credit of the Government which constitutes a less favorable basis for note issues than the untaxed credit? We acknowledge that we cannot understand either of these terms. We only know that it means a fresh issue of greenbacks, and that "coining the seigniorage" means the same thing in its financial intendment and effect. Whatever form of paper is put out for public disbursements is an addition to the Gov-

ernment's demand liabilities, and the very first issue of such paper would precipitate a run on the Treasury which would be required to meet not only these new notes, but all the others as fast as they could be presented. So the Bailey programme may be defined as a scheme to get the country into a war and to get it into bankruptcy as soon as possible thereafter. Bailey says that "when the point of safety in that direction has been reached" (that is, in the direction of new greenback issues), "it will be time enough for Congress to authorize the issue of interest-bearing obligations." But the very first move in that direction would strip the Government of its gold or compel it to suspend gold payments, and that is what Bailey and his partisans want to accomplish.

We are in receipt of several inquiries as to what the "seigniorage" is which Bailey and his happy-go-lucky Opposition in Congress are proposing to coin. The answer is, that no such seigniorage exists or ever did exist. Governments sometimes, in their coinage of gold, reserve from the bullion tendered at the mint a very small percentage to defray the cost of minting. In other words, they give back in coin to the owner of the bullion a trifle less of gold than they received. Obviously, such a principle could not apply except under free coinage, which exists in the case of gold. What Bland, Bailey, and their fellow-fanatics mean when they talk about the "silver seigniorage" is the profit made by the Government, during the period of compulsory silver-dollar coinage, by purchasing silver at the market price and putting it out in dollar coins which were not intrinsically worth one hundred cents. Between 1878 and 1894 about 548,000,000 of such dollars were coined and issued. The bullion in these coins cost the Government from 50 to 90 cents for every dollar coined, but the coins were used to pay the Treasury's debts at the uniform rate of 100 cents apiece. Few people without an axe to grind would be so dense as to call this enormous difference a "seigniorage"; what it actually is can easily be discovered. The dollars thus coined were fiat money to precisely the amount of difference between their legal and intrinsic value. It is this fiat quality—this vacuum, as Mr. Hewitt aptly described it—which the profound economists of the Opposition wish to "coin." Of course, the process described above left no silver in the Treasury's hands, and, of course, the Government instantly used up its 10 to 50 per cent. book profit on the coinage, and a good deal more, by increased pension and river and harbor appropriations. Bailey, however, not only insists on "coining" this fund already spent by the Government, but on issuing new legal-tender notes with such coinage as a basis. The nearest parallel to such

a business is the practice of certain railways, not very long ago, which entered their losses on the books as assets and declared cash dividends on the basis of it. Most people know what happened to the railways.

The Madrid correspondent of the London *Times* has unquestionably got hold of the diplomatic correspondence between McKinley and Sagasta. Whether by betrayal in the Spanish Foreign Office, or by a discreet official leak, with the aim of winning European sympathy for Spain, the documents he has secured are plainly authentic. It seems to us that neither Congress nor the Administration ought to wait for the successive revelations of this newspaper correspondent, but that the whole should be published here at once. That course will best comport with our dignity and with the proprieties of the situation. We really ought to have had the full correspondence before declaring war; but Congress did not call for it. The President, we think, should now volunteer it, and not leave us to learn via London what it was that turned him from his resolve, at the end of December, to give Cuban autonomy a fair trial, and led him to consent to go to war in April before even the first Cuban Parliament had been elected.

The *Tribune* argues that autonomy in Cuba must fail owing to the character and want of political training of the people. Therefore, it concludes, the Administration was not to blame for not allowing it to be tried. But this must mean simply autonomy under Spanish auspices. Our congressional resolution declaring war expressly recognizes Cuban capacity for autonomy. What could be broader than this?

"(1.) That the people of the island of Cuba are, and of right ought to be, free and independent."

The resolution then goes on to say that we must set up an autonomous government in the island. The sole importance of the matter now is, that had we waited a little longer to let the Spaniards try their autonomous experiment, our moral position in this war would be much stronger than it is. We ourselves do not believe in the Cuban capacity for autonomy in our sense of the term, either under our auspices, or under those of the Spaniards. But in the Spanish-American sense we think they are quite capable of it. We have no doubt they will, if allowed, carry on a very respectable Spanish-American government—that is, a government saved from Anglo-Saxon monotony and dullness by an occasional civil war and assassination of rulers.

That Spain's colonial policy in Cuba was vicious, and that the island was

never really pacified after the former rebellion, an exceedingly interesting memorandum lately published in Madrid shows most clearly. It is an account of the state of affairs in the island written in 1892 by Gen. Polavieja, then Governor-General. This was three years before the present insurrection broke out, yet Polavieja declared that even then "a conspiracy" existed, and had, in fact, existed ever since the so-called peace of 1878. There was no prospect, he wrote, of the conspiracy ever ending, "because the separatist tendency is ingrained in practically every home-born Cuban, including the sons of Spanish immigrants. The latter, in fact, hate Spain as cordially as the oldest families of the country." This is a significant confession, considering its source. Gen. Polavieja described the way in which roving bands of brigands were even then preparing for the later outbreak. They never molested the native Cubans; were at pains, on the other hand, to be on good terms with them, paying for everything they took, and coming down hard only on the Spanish planters and manufacturers, whom they blackmailed and robbed and carried off for ransom, with open boasts that they were in that way raising funds for the revolution. The Governor-General's remedy was characteristically Spanish: less home rule, more shooting.

An interesting exposure of the "fake" dispatches in the sensational newspapers about the withdrawal of the Americans from Havana three weeks ago is made in the *Independent* by a trustworthy correspondent of that journal in Washington, who had gone to Cuba expecting to spend Easter Sunday in Havana, but had to leave, with the other Americans, the evening before. It will be remembered that it was given out by "the yellows" that 2,000 Americans would be in danger if the President sent his message to Congress before giving the Consul-General time to get Americans away from Havana. As a matter of fact, there were not at the time 200 Americans in Cuba, including naturalized citizens. The Captain of the *Mascotte*, upon arriving at Key West a few days before Easter, on his regular trip to Havana, found a dispatch from Washington ordering him to proceed at once and bring over all the "American refugees" and everybody else desiring to leave Cuba, "without regard to numbers, if they could find standing-room on the steamer." All that the Captain could find ready to come when he reached Havana were seven native Americans, fifteen naturalized American citizens, and about fifty Cubans and Spaniards who were going North. When the *Mascotte* arrived at Key West, the Captain received orders by telegraph not to go on to Tampa as usual, but to coal at once, go back to Havana the same night, and "bring over everybody who wanted to get away from Cuba." The

second "crowd of American refugees" by this vessel consisted of seventy-four passengers, all of whom were Cubans and Spaniards going North—not a single native or naturalized citizen of this country. And yet a dispatch was sent from Tampa, and widely printed, that the *Mascotte* brought over on her first trip "920" passengers, and on the second trip "about the same number"; although the steamers of the Plant Line are by no means ocean liners, and everybody in Tampa knew that neither the *Mascotte* nor any other steamer of the line was capable of carrying "920" passengers. As for the situation in Havana down to the very end, this writer testifies that "quiet and order prevailed in Havana and had been maintained all along, while reports to the contrary were printed far and wide in the United States," and that "while some Americans were anxious to get away, others felt no anxiety about staying another week or two, or, at any rate, until it was quite certain that war would be declared."

The attitude of the negroes in the South towards the war, as well as of the Southern whites towards the participation of negroes in it, is of interest. The colored people are by no means of the same mind in the matter throughout the South. In Virginia there seems to be comparatively little enthusiasm on the subject. A meeting at Norfolk decided to do nothing towards enlisting negroes for the war, and the *Planet*, a weekly journal published at Richmond by a colored man, pronounces it "an open question whether the colored people in Cuba will be better provided for under the American administration of affairs than they are under Spanish rule." The *Planet* expects to see the United States finally assist in setting up a government which either will be a "carpet-bag government," or will be headed by a man who will be a tool in the hands of the capitalists of New York; but "in no case will he be of African descent." In Louisiana, on the other hand, large meetings of negroes have been held at New Orleans, at which patriotic speeches have been delivered and resolutions adopted urging the colored men of the State, especially the younger ones, to organize into companies for the war. But trouble has always arisen as to how the negroes shall be led. The volunteers in New Orleans were angered by an order to go under the command of a white colonel, and insist that they ought to have a colored man at their head. In Georgia there is a discussion among the whites as to whether blacks should be accepted as part of the State's contribution to the volunteer forces. The indications seem to be that most of the whites regard the proposition with disfavor, but there are not lacking men who think and say that it would be the best thing for both races if the negroes

were allowed to take part in the war as Georgia troops.

The experience of the Twenty-fifth Infantry of the regular army on its way from the Northwest to the seat of war, to help in freeing the negroes of Cuba, was very suggestive. This is a black regiment, and its chaplain, the Rev. Dr. T. G. Steward, writes to the *Independent* that, "on arriving at Nashville, the black chaplain and his family were given plainly and forcefully to understand, as they entered the railroad dining-saloon, that they could not eat with the other officers of the regiment under a Southern sky." When the regiment reached Chattanooga, the men were required to take cars separate from the whites. Before they reached Key West, the *Herald* of that city had warned the Government not to let them come to that place, and declared that their presence would endanger the peace—as soon proved to be the case. Commenting upon the separation of the races enforced in the Southern States of the Union, Mr. Steward remarks: "A glorious dilemma that will be for the Cuban negro, to usher him into the condition of the American negro."

It may not be generally known that under the treaty of 1834 Spain acknowledged herself our debtor in the sum of \$600,000 for injuries inflicted upon our merchant marine during the war waged against her American colonies. Instead of paying the principal sum, however, she made it a part of her public debt, for which she issued stock bearing interest at 5 per cent. per annum. Our Government proceeded to ascertain, by means of a claims commission, which of our citizens were entitled to these funds and the amount to be distributed to each of them. For over sixty years this interest has been regularly paid by Spain and divided among the respective claimants by our Treasury Department.

The size of the enrolment of voters under the new primary-election law does not indicate a passionate popular desire to "go into the primaries." The total for the entire city is only 137,000 out of a population that cast 526,000 votes in the last election. This is only about the proportion that has heretofore taken part in the primaries. About one-quarter of all the voters have for years done all the machine party work, controlling primaries and nominating conventions, and really thus controlling the government of the city, State, and nation. It is said that many voters who desired to enroll were restrained from doing so because the law provides for the publication in the *City Record* of their names with their party affiliations. Small tradesmen and others whose business leads them to dread political persecution, were afraid to have it known to Tam-

many that they were working with the Republican party. There is undoubtedly something in this, but it is not sufficient to account for the abstention of the great body of voters from all opportunity to participate in the primaries. Probably the war excitement has had even greater influence. Then, too, the law has not had a favorable trial, for the enrolment under it this year is a special one, and is made in a different manner from what will be the regular method in other years. When every voter is given an opportunity on the regular days of registration to enroll himself for a vote in the primaries, he may improve it better than he has now done.

When the Comptroller read his report about the city debt at the meeting of the Board of Estimate and Apportionment on Thursday, showing that the constitutional limit had been exceeded by more than \$50,000,000, the Mayor and the President of the Board of Aldermen complained that they did not understand it fully. The Comptroller said that the reason why he could not make the matter more clear was that he had not the exact figures, and could not get them within less than six months, and he begged them to consider that he had worked very hard upon his report. Everybody knows that the Comptroller made up his mind about the matter before he had examined the figures at all. He decided that the debt limit had been exceeded immediately after election, when Mr. Croker told him it had, and his subsequent examination has been directed solely to the purpose of finding figures with which to sustain Mr. Croker's view. His report shows this plainly enough. He includes in the city's indebtedness items which no Comptroller before him has ever placed there. He sets down as actual indebtedness contracts which will not be carried out for years, and the estimated cost of street and park openings which are now, and will be for years to come, before the courts. In the regular course of procedure, bonds for these proposed improvements would not be issued for ten or a dozen years. Without these unusual items, the debt limit of the old city at the close of the Strong administration was fully \$40,000,000 away. By adding future contract liabilities entered into during the Strong administration, amounting to \$64,000,000, the Comptroller claims that that administration exceeded the debt limit by \$24,000,000. Adding to this an excess of more than \$25,000,000 by other portions of the new city, figured out in the same way, he makes up his grand total of \$50,000,000 of illegal indebtedness, and, after citing an opinion of the learned Whalen, Mr. Croker's Corporation Counsel, in defence of his method of figuring, he throws up his hands in despair, and fairly weeps over the "gravity of the situation."

THE NEW POLITICAL FORCE.

The power of making war in a democracy must always, in the last resort, no matter what the constitutional arrangements may be, reside in the mass of the people. From them must come the demand which makes either war or peace inevitable. This, in a free state, there is no getting over. It is the popular will which puts armies in motion, or says there has been fighting enough. When war breaks out, therefore, it is really brought about by the influences which have acted most powerfully on the popular mind in its favor. When one sets about a minute examination of these influences, one is apt to be astonished by the number of them that are in some way irrelevant, such as misinformation about the causes of the war, about its cost, about its duration, about the character or doings of the enemy, about his motives in fighting, about the motives of our own public men, about international rights and duties, about the Government's state of preparation to fight. This can hardly be otherwise; it is so in every free country, when the war is an offensive one or is conducted at a distance from home. It is rare in any war, except a war of independence, that the public thoroughly understands what it is fighting about.

These influences are, in the main, the speaking and the writing which precede the war or bring it about. There is no other object ever submitted to a civilized human being for his decision so important as a proposal to go to war, or, in other words, to kill on a great scale the persons living in a certain country, and destroy their property. Our public men have long ceased to try to exercise this sort of influence. However much opposed to a war they may be, they dislike extremely to say so openly. They communicate their doubts or hesitations to their friends privately, but in public they shrink so much from the charge of want of "patriotism," which is the warrior's chief weapon, that their influence through speeches is almost always on the side of war, no matter what it is about. The days of Daniel Webster, and Calhoun, and Seward seem gone for ever. What the public man generally does now is to encourage war, if he speaks about it at all.

In default of other influences, the power of moulding opinion is passing—in fact, has long since passed—into the hands of the press. As a strange fate would have it, too, the subject on which the very worst portion of the press exerts most influence is war. The fomenting of war and the publication of mendacious accounts of war have, in fact, become almost a special function of that portion of the press which is known as "yellow journals." The war increases their circulation immensely. They profit enormously by what inflicts sorrow and loss on the rest of the community. They

talk incessantly of war, not in the way of instruction, but simply to excite by false news, and stimulate savage passions by atrocious suggestions. On some days they seem to have issued from an Iroquois village in war time, rather than from a Christian city. Read this, oh fighting parsons! clipped from a recent number of one of them, which claims a circulation of over a million copies every day:

"Occasionally we hear croaks from peace men. 'How sad to kill sons and fathers of sad-eyed women,' they say, etc. No sadder than to kill cousins and aunts of sad-eyed rattlesnakes. The man who would object to this war would object to the wholesale destruction of poisonous reptiles in India. And as for the American who has any feeling about the war other than a red-hot desire to hear of victories and Spanish ships sunk, all we can say is that he reminds us of the cannibal toad now on exhibition in the Paris Jardin d'Acclimatation."

Now the characteristic of these papers, which, as we have said, so powerfully influence opinion, is that they are, for the first time in American history, an irresponsible force, and the only one in the state. Every other influence in the community, not openly criminal, acknowledges some sort of restraint. The gamblers and policy-dealers live in fear of the police; the venders of obscene literature all have Anthony Comstock before their eyes; the dishonest business men live in dread of the loss of reputation or credit. Nearly every person prominent in any walk of life works under the control of something, in the shape of a conscience. There are some things he does, or does not do, because his own heart tells him they would be wrong. Even our Congressmen stand in awe of their constituents. Statesmen recoil from violating the Constitution. Professional men dread the opinion of their professional brethren. In short, it would be difficult to name any body of men, pursuing a calling not openly criminal, who do not live and labor under some sort of discipline, seen or unseen, which constantly reminds them that they, too, have duties which they must perform, or suffer in some way.

From every such discipline or restraint, except libel suits, the yellow journalist is absolutely free. His one object is to circulate widely and make money. And he does circulate widely. He treats war as a prize-fight, and begets in hundreds of thousands of the class which enjoys prize-fights, an eager desire to hear about it or read about it. These hundreds of thousands write to their Congressmen clamoring for war, as the Romans used to clamor for *panem et circenses*; and as the timid and quiet are generally attending only too closely to their business, the Congressman concludes that if he, too, does not shout for war, he will lose his seat.

This is an absolutely new state of things. In none of our former wars did anything like the modern press play any part. In the Mexican war we even

had a powerful anti-slavery press fighting vigorously for peace and justice, and, not to forget a great name, we had Lowell on the same side. The conservative, pro-slavery papers of that day, like the *Washington Intelligencer*, were gentlemanly, sober-minded sheets, still influenced by the old traditions of constitutional logic-chopping. In the civil war, too, the great newspapers were serious publications. Our cheap press to-day speaks in tones never before heard out of Paris. It urges upon ignorant people schemes more savage, disregard of either policy, or justice, or experience more complete, than the modern world has witnessed since the French Revolution. It is true it addresses the multitude mainly or only. The wise and learned and the pious and industrious do not read it. But it is the multitude mainly, and not the wise and learned and industrious, who now set fleets and armies in motion, who impose silence and acquiescence on all as soon as the word "war" is mentioned, and insist successfully that they shall not be interfered with, by either voice or vote, until they have had their fill of fighting. They have already established a régime in which a blackguard boy with several millions of dollars at his disposal has more influence on the use a great nation may make of its credit, of its army and navy, of its name and traditions, than all the statesmen and philosophers and professors in the country. If this does not supply food for reflection about the future of the nation to thoughtful men, it must be because the practice of reflection has ceased.

It is hardly possible to drop the subject without a word about the way in which men supposed to be thoughtful and far-seeing help these very agencies which are robbing them every year more and more of their legitimate influence on the affairs of the nation. There appears to be hardly a clergyman, statesman, or lawyer in the country who does not denounce the yellow journals, and deplore their influence on the young and ignorant, and yet, whenever a yellow journal finds it desirable for advertising purposes to give itself a look of respectability, it does not find much difficulty in getting our prominent public teachers and moralists to comply with a request, fortified by a yellow check drawn on the proceeds of humbug and villany, to sanctify their columns with discourses on morality, patriotism, and religion. This is due partly to fear, and partly to vanity. The fear is that the yellow journal may, as it says, "alter its opinion about them"—that is, blackguard them vigorously and call them names for a week or two. The vanity comes from a delicious belief that anything which appears from their pens anywhere is sure to convince the yellow reader of his sin. It is very like a discourse to Marat from the Duc de la

Rochefoucault, on "liberty, equality, and fraternity."

WAYS AND MEANS.

The cash balance in the Treasury March 5, 1897, was \$212,725,207, of which \$150,693,630 was gold. On April 22, 1898, the cash balance was \$219,601,919, of which \$180,924,570 was in gold. The principal transformation had been in exchanging paper for gold, and at the end of nearly fourteen months the Treasury is in no better position, even on the basis of peace, than it was when Mr. McKintley came in. It must be remembered that this showing includes the bookkeeping operation by which the deficit was covered up. This deficit was \$49,648,335 on March 4, 1897, and \$7,636,862 on April 22, 1898. Of course, at the end of June, 1897, the old deficit (only \$18,052,254) was wiped out, and placed in the Treasury books as a closed transaction. On July 1 the new deficit began to accumulate, and is apparently nearly \$8,000,000 to-day, in spite of the crediting of \$58,448,223 obtained from the Union Pacific Railroad. The true deficit from July 1, 1897, to April 23, 1898, is \$66,085,085. Some allowance may be asked on the ground of extraordinary war expenses. To show how large such an allowance is, we compare the expenditures from July 1, 1896, to April 22, 1897, and for the same period in 1897-'98:

Expenditure for	1896-7.	1897-8.
Civil and miscellaneous...	\$77,433,311	\$82,314,799
War	41,003,513	32,881,883
Navy	27,891,267	38,866,978
Indiana	11,367,876	9,882,078
Pensions	118,146,635	122,906,627
Interest	34,046,328	82,477,306
Total	\$300,868,330	\$339,278,268

Of this expenditure only that for war and navy and a part of civil and miscellaneous, or about \$27,000,000, can be set down to war. Deducting this from the true deficit, we have \$39,085,000 as the deficit that would have existed under normal conditions. In the face of the predictions so confidently made for the revenue features of the Dingley bill, this is a sorry showing, for it means a deficit of nearly \$2,000,000 a month since the law went into operation. Comparing the revenue for the period of July 1, 1896, to April 22, 1897, with that for the corresponding period of 1897-'98, the result is very suggestive:

Source.	1896-7.	1897-8.
Customs	\$180,023,531	\$117,512,863
Internal revenue	119,636,861	134,183,899
Miscellaneous	19,800,410	77,989,647
Total	\$300,516,802	\$331,036,408

As the Pacific Railroad transaction is shown in the huge "miscellaneous" receipts, we leave it to others to figure out where the Treasury would have been but for that adventitious circumstance and the increase in internal revenue.

This has an immediate bearing upon the question now to be encountered in raising war revenue. Mr. Dingley proved himself such a mistaken prophet on ta-

riff matters that any further estimates from the same source will be seriously questioned. Nor can it be said that the atmosphere pervading the ways and means committee is one to give confidence. Loudly protesting that this tariff only needed time to become a producer of a surplus, Mr. Dingley has frowned upon critics, whistled down facts that told against him, and, finding that "anticipatory importations" have ceased to silence inquiry, now seeks cover under "war expenditure" to conceal his failure. It is Mr. Dingley as a financier who is on trial, and it is as a somewhat discredited financier that he enters upon his new rôle of revenue provider.

The Treasury is not in a strong position for war expenditure, yet its credit is high, and there will be no limit to its ability to borrow, provided a due share is obtained from taxation, on the proceeds of which credit may rest with safety, and provided also the public credit is not shaken by the menace of free silver. As regards the latter, there will soon be a test of the feelings of the investing public when the expected loan comes upon the market. This is to be offered first to popular subscription. If it is rapidly taken by the people, that fact will be pretty good evidence that the public does not consider the menace of Bryanism serious. If it is not taken in that way, but is thrown back upon a banking syndicate, the latter will take it with the risk attached to it and will charge something for that risk in the way of added interest. The view of the bankers is that, being a part of the nation, they must take pot-luck with the nation. They were opposed to a war with Spain on account of Cuba, but, being in it, they must and will sustain the Government, and will take their chances of Bryanism hereafter.

Now we come to the revenue measure as a bill of items. Beer and tobacco are good sources of income, and it is expected that the pending measure will obtain \$33,000,000 from the former and \$25,000,000 from the latter, including cigars, cigarettes, snuff, and the license tax on dealers. The stamp duties on legal instruments, stock transfers, bank checks, etc., are expected to yield \$30,000,000, and this is not an extravagant estimate when we recall that thirty-two years ago the same duties yielded \$15,000,000 from the Northern States alone. Stamp duties are to be imposed also on chewing-gum, mineral waters, domestic wines, and beverages not now taxed under the internal-revenue laws. It is not an extravagant estimate that \$5,000,000 will be obtained from this source. Here we have a probable revenue of \$93,000,000, one-half of which will be needed to cover the previous deficit (the Dingley deficit), the other half serving as a basis for loans. If the war should last more than one year, another tax bill would be imperatively demanded fol-

lowing the lines of the civil war period.

The last item in the revenue measure is the tonnage tax on foreign commerce, which has caused some unfavorable comment abroad. The existing tonnage tax is three cents per ton on each entry of vessels at our ports from countries in American waters, including Bermuda and the Hawaiian Islands, and six cents per ton for all others. It is coupled with a proviso that the President shall reduce the amount of the tax on vessels of other countries, so that it shall not exceed the amount which is levied on our ships in the ports of such other countries respectively. The proposed bill increases these taxes to eight cents per ton in the first class, and twenty cents in the second, and repeals the proviso which authorizes the scaling down of the tax to correspond with that of other countries. In other words, the proposed tonnage tax, instead of being a method of equalizing burdens on shipping between our own and foreign countries, is to be made a permanent revenue measure, and it is justified by Mr. Dingley on the ground that nine-tenths of the vessels in this trade are foreign, and that, during the war now before us, all or nearly all will be so. He says that this is the rate imposed by France, and that it is only a little greater than that imposed by Great Britain. He thinks that this is a favorable occasion for imposing an increased tonnage tax, and that it ought to be kept even after the war ends. In this we think that Mr. Dingley is entirely wrong. Instead of the present being a favorable time for imposing taxes on foreign vessels, it is the most unfavorable that could be imagined. If the tax in question were ever so desirable and defensible (and we are not condemning it on its merits), we ought to do nothing now to irritate neutral Powers. We want all the friends we can have. The amount derivable from this tonnage tax is only \$2,500,000 at the outside, a contemptible sum at best, and not worth incurring enmity for at such a time as the present.

SOME SPANISH ILLUSIONS.

The Spanish Government has undoubtedly suffered many cruel self-deceptions in the course of its negotiations with the United States. Some of these it has practically confessed. It hoped great things from the European Powers, and was bitterly disappointed at getting only platonic expressions of sympathy. On the Pope's intervention Sagasta staked the very existence of his ministry, as it seemed, but nothing came of it except fresh humiliations and hopes frustrated. Yet, in spite of these successive disappointments, Spain seems now to be leaning upon other supports which will also prove broken reeds.

One of these is the expectation of an active and effective sympathy from the

South American republics. Gen. Martinez Campos referred to this in the Spanish Senate the other day. Spain could count upon the good will, and something more, of 40,000,000 people in South America who still looked to her as the mother country. Of course, there is something in this. In language and in race traditions a bond, and a strong bond, still exists between Spain and her ancient colonies. The smallest Spanish-American republic has its "Academia" in correspondence with the parent institution at Madrid. From the Spanish capital the Spanish New World still takes orders in matters literary—though it must be said that, as regards contemporary writers, the French have a greater vogue in South America than have the Spanish. But the same might almost be said of Spain itself. There are also, no doubt, wealthy Spaniards all through South America whose loyalty is unquestionable, and who have already put large gifts at the disposal of the country to which they are proud to own allegiance. But when this has been said, all has been said. From the South American governments as such, from the South American peoples as a whole, Spain can look only for indifference or actual dislike and hostility.

This is quite apart from the obvious interest of those countries to avoid offending the United States. They have unhealed grudges of their own against Spain. Their own struggles to free themselves from her sovereignty are not forgotten; and Spain did not make war on them more tenderly than she has done in Cuba. Moreover, she recognized their independence only in a slow and sullen fashion. It was not till after 1840, if we remember, that she formally recognized the independence of Mexico and sent her first minister to that country. Chili and Peru were actually at war with Spain a little more than thirty years ago, and Spain's bombardment of unprotected Valparaiso, against the protests of the foreign embassies, is not likely to win her very warm Chilian sympathy just now.

Nor should it be forgotten that the class of Spaniards to be found in the cities of Spanish America are not exactly of the kind to engage the affections of the people among whom they dwell. We cannot do better than cite on this point a message from Minister Romero's recent book on Mexico. He writes:

"The Spaniards are a money-making, wonderfully frugal race, since they have been battling with hard conditions at home for centuries. The Spaniard in Mexico is—as Richard Ford, who spent thirty years in the peninsula, and who was a close observer, depicts him—a hardy, temperate man, well fitted, under favorable conditions, to become a dominant influence.

"In Mexico, the energy of the Spaniard is remarkable. He is forceful of word and phrase, energetic in his movements, immensely vital, tremendously persistent, and wonderfully enduring. After thirty years behind a counter selling groceries, he re-

tires, a man of fortune, not always large, but sufficient, and is still a man of force, and ready for undertakings demanding good brain-power and courage. They come over mere lads, from ten to fifteen, tall and moll, feed frugally and sleep hardly, and they become millionaires, bank directors, great mill-owners, farmers on a grand scale, hot-country planters, and monopolists, for the Spaniard is born with the 'Trust' idea; while his sons are too often dukes and spendthrifts."

Unless human nature is vastly different to the south of us from what we know it here, Spaniards of the sort described by Señor Romero are not fitted to make either themselves or their country loved by the natives. We have only to recall the fury of our Populists against bankers—especially against bankers whose names they cannot pronounce with their anti-Semitic tongues—to be sure that a kindred dislike of alien blood-suckers and cormorants would be encountered in Spanish America.

Another illusion which Spain seems to have been ardently cherishing is that she would reap a great advantage from being the most Catholic country in the world. This was to be an added tie with South America; this was to insure the French alliance; this was even to detach the Catholics of the United States. But what are we seeing? Our most outspoken friends across the sea just now are the Irish, Catholic to the core. The voluble members from Cork and Tipperary are fairly raining pro-American questions upon Mr. Balfour in the Commons, all the while with the broadest of winks over-ocean, as who should say, "D'ye mind our noble attitudewd?" And as for the Catholics in this country, their readiness to serve in the war is not a whit behind that of the most fervent and resolving Methodist.

No one need think, however, that Spain's certain disillusionment in the respects mentioned will make her any less stubborn in the fight which is now upon her. Her blood is up, and she will do her best. If the stars in their courses seem to be fighting against her, she will but the more proudly declare, in the words of her own Calderón:

— "el hombre
Predomina en las estrellas."

THE SPOILS ON A CASH BASIS.

The revelations now making as to the sale of post-offices for cash by the Quay machine in Pennsylvania must not be overlooked through the engrossment of the public mind in news about the war. These disclosures constitute a most interesting and significant phase of the development of the spoils system in our politics.

On Tuesday of last week the Philadelphia Press, whose editor had just become Postmaster-General, made this brief but striking statement:

"The sale of post-office appointments in this State, in which some Congressmen have

been concerned, has become an open scandal."

On Thursday night Mr. Wanamaker, speaking at West Chester, declared that, in some parts of the State, "post-offices are practically put up at a form of auction and knocked down to the political heeler who can pay the largest sum for the privilege of becoming postmaster, and who, at the same time, is capable of carrying the most votes for Quay"; pronounced it "a notorious fact, easily proven," that post-offices are offered for sale, and have been sold, in "at least two congressional districts"; and pointed out that "these offices are in districts whose members of Congress are Quay's warmest supporters, and they look to him to secure the offices for the men to whom they are sold." He then read the following letter:

"April 23, 1898.

"DEAR SIR: I have filed my application with the Postmaster-General for the post-office at T., but it is said that our Congressman is holding it for \$3,000. Now, I do not think it right to buy the office, and have not the money to do so, and write, asking for your aid in the matter. Can you give me any, or suggest any course that will help me in securing it? If you can I will be greatly obliged. Yours, etc."

On Saturday the Philadelphia Press recurred to the matter, described the sale of post-office appointments to the highest bidder as having been "more or less of a scandal in some congressional districts of the State for nearly a year," and said that "this has been notorious in the Twentieth Congressional District, and in others many facts are known." The article in the Press revealed the identity of the town of "T.," and of "our Congressman" who was said to be holding its post-office for \$3,000, by calling this sum "pretty high for a place that is little more than a railroad junction and had at the last census a population of but 4,705." Tyrone is the only town in Pennsylvania which had exactly 4,705 inhabitants at the last census, and it is little more than a railroad junction. It is in the Twentieth Congressional District, the representative of which is Josiah D. Hicks of Altoona, in the same county with Tyrone, a follower of Quay, who is now serving his third term.

The Press makes that the significant part of this particular case is the personal participation of the Congressman, as the letter indicates. It adds that in some of the districts a different system is pursued: "The county bosses demand of the Congressman that their recommendations shall be listened to, and then they sell the offices for what they will bring, and the Congressman agrees to their choice." The Press deems it conceivable that under this system the Congressman may not know of the corruption for some time, but it rightly holds that "it certainly is impossible that he should not ultimately learn of it." It makes the further most encouraging statement that "it is most likely the whole scandal will get a full exposure

in a very short time, and no one who is guilty can be saved, and no one not guilty will be involved."

The revelation that post-offices are sold for cash by Congressmen or the local backers of Congressmen, seems to be a great shock, even to Pennsylvanians, hardened as they have become to political corruption. Yet it is really the most natural thing in the world. It is simply the logical development of the spoils system. This system begins by treating office, not as a public trust, but as a partisan asset. In its first stage the post-office at Tyrone, Pa., is regarded as belonging to the Republican or the Democratic party, according as there is a Republican or a Democratic President at Washington, and to be run for the benefit of the party in power, whichever it may be. The second stage in the development of the system makes the Tyrone office an asset, not of the Republican or Democratic party as an organization, but of that faction in the dominant party which controls its machinery. In this stage the office is given for services in promoting the interests, not of the party, but of this faction in the party, and of the representative of this faction who controls the appointment; and it is to be run in the interest of this faction.

In each of these stages there is a virtual sale of the office. In the first case, it is given to the appointee in return for his payment to the party of work and influence in getting voters to the polls, carrying doubtful districts, etc. In the second case, it is given to him in return for his payment to the dominant faction of work and influence in enabling that faction to beat the other faction in the caucuses and thus to keep control of "the organization." In each of these two stages the bargain-and-sale principle is recognized as governing the appointment. In the third stage the bargain-and-sale principle only undergoes a change in terms. The man who seeks the Tyrone post-office now cannot get it by paying services in work and influence either to the Republican party or to the Congressman who represents the dominant faction of that party; he must make his payment in cash.

All three stages in the development of the spoils system to this extreme are immoral. People have become so habituated to the sale of appointments for either party service or factional service that it does not cause the shock produced by their sale for cash, but, when the matter is analyzed, it is obvious that the same principles govern in all three cases. The Congressmen who peddle offices for cash ought to be denounced, but the reform which is needed will not be achieved by stopping the passage of money from constituent to Representative. It must be recognized that the whole theory of treating the offices as spoils is utterly wrong, and that it is morally a matter of comparatively un-

important detail whether a man gets a public place in return for partisan services, factional work, or cash.

THE PROHIBITION PLEBISCITE IN CANADA.

The bill which has just passed its first reading in the Dominion Parliament to take a plébiscite throughout the whole of Canada upon the question of prohibitory liquor legislation, is of considerable interest, not only to the advocates of temperance legislation, but also to constitutional theorists. It is certainly somewhat of a new departure from a constitutional point of view, for the bill proposes to submit to the vote of those entitled to the Dominion franchise simply the question: "Are you in favor of the passing of an act prohibiting the importation, manufacture, or sale of spirits, wine, ale, beer, cider, and all other alcoholic liquors for use as beverages?" Canadian legislatures, it is true, are not debarred from delegating their functions, for, as the English Privy Council, which is the final Court of Appeal for the whole empire, has decided, they are not in the position of mere delegates or agents of the Imperial Parliament, but are possessed of authority as plenary and as ample within the limits prescribed by their Constitution act as that Parliament "in the plenitude of its power possessed and could bestow." Therefore, doubtless, the Dominion Parliament, or any other Canadian legislature, could introduce the Swiss referendum system at any time with respect to matters within their respective jurisdictions, by enacting that acts should not go into force until a popular vote had been taken.

But in the bill under discussion we have something very different from the referendum, under which the entire law after being passed by the Legislature is submitted to the vote of the people; thus placing the latter, as Prof. Dicey has pointed out, in a position analogous to that which is still in theory, and was in former times actually, the position of the British monarch, that, namely, of possessing a veto power. But in the present case the question whether they are in favor of prohibitory legislation is to be submitted to the people without any information as to whether it is to be prohibition with compensation to those at present engaged in the liquor business, or as to the means to be taken to make up the immediate loss of Dominion revenue, amounting, we understand, to some eight million dollars, or any other particulars of the legislation to be enacted.

However, the historical explanation of the bill, no doubt, is to be found in the local-option acts to which Canadians have been accustomed for many years, notably the Canada temperance act, popularly known as the "Scott act," which has been in force since 1878, and

which provides for the prohibition of the retail sale of intoxicating liquors in any county or city in which a majority of the electors vote in favor of bringing the act into force. But there the provisions of the act are, of course, explicit, and, in voting for it, any city or county knows exactly the particulars of the legislation for which it is voting. It has, however, though still on the statute-book, fallen into great disfavor, and under the provision in it enabling a fresh vote to be taken every three years in any district which has adopted it, it has been now rendered inoperative everywhere, excepting in a few places in Nova Scotia and New Brunswick.

Nevertheless, there seems no doubt as to the present bill passing, unless, indeed, by reason of the vagueness of the proposed question to be submitted, the Senate, a majority of whose members belong to the Conservative Opposition, sees another opportunity of asserting itself with a prospect of popular approval, as it has done in the recent case of the Yukon Railway bill. And if the bill does pass, it is certain that there will be a very strenuous campaign and contest over the plébiscite, and a great probability that a majority of voters will answer the question in the affirmative, except in the provinces of Quebec and British Columbia.

In Quebec the Roman Catholic Church is, of course, overwhelmingly predominant, and there, as everywhere, its influence is, religious matters apart, against infringements of personal liberty; while in British Columbia the large mining element of the population is little likely to vote for prohibition. In the other provinces, however, where the united strength of the Presbyterian, Methodist, and Baptist denominations is in favor of such legislation, there is a great probability of the affirmative vote prevailing. And indeed the matter has been to some extent already tested in provincial plébiscites held in Manitoba, Prince Edward Island, Ontario, and Nova Scotia, between 1892 and 1894. The question then submitted in each of these provinces was very similar to that now proposed, namely, "Are you in favor of the immediate prohibition by law of the importation, manufacture, and sale of intoxicating liquors as a beverage?" and in each case the vote cast was in favor of the affirmative by very substantial majorities, although the total vote polled was not a very large one. In these provincial plébiscites the electors were informed upon their voting papers that in voting "Yes" on the question they would be considered as expressing an opinion in favor of prohibition to the extent to which the Legislature of the province or the Parliament of Canada had jurisdiction, as might be determined by the court of final resort. Thereupon a sort of armistice between the temperance party and their opponents followed,

pending the submission of a stated case, first to the Supreme Court of the Dominion and then to the judicial committee of the Privy Council, to determine precisely what the respective jurisdictions of the Dominion Parliament and the provincial legislatures were in the matter.

It may readily be believed that neither the Dominion nor provincial governments were sorry to have a reprieve from dealing with this troublesome question, in which legislation could not fail to alienate a large body of voters and disturb the party organizations. Indeed, the indefinite character of the question now proposed to be submitted to the electorate, although this is in accordance with the expressed desire of the powerful organization known as the "Dominion Alliance for the total suppression of the liquor traffic"—a federation of Canadian religious and temperance societies—is thought by many to be another example of the way in which governments in Canada have always fenced with this matter.

RENAN AND BERTHELOT.—II.

PARIS, April 15, 1898.

We left Renan in Italy. His first impressions have a surprising freshness, and are often interesting from an artistic point of view. I remember well having felt as he did in the Pantheon. "The Pantheon of Agrippa, one of the finest religious ideas of humanity, officially transformed into a church. This incomparable portico covered with pictures and indulgences revolts me." The portrait which he traces of the population of Rome would have to be very much changed now, since Rome has become the political capital of Italy. The prophecies which Renan made in 1849 have partly been verified: he announced the end of the temporal power, he perceived the effects of the French occupation and the presence of a French army (all the officers, he says, are Voltairians and democrats) in the midst of Italy. But he was chiefly occupied with the Rome of the past, with its monuments and ruins; and he describes them with much eloquence. In the midst of them, he is seized with the idea of a permanence which is in harmony with a continual transformation, and he anticipates that spiritual Rome will be transformed like material Rome:

"You cannot imagine how much modern Rome is composed of the fragments of old Rome. All the materials of the churches anterior to the sixteenth century are taken from the temples; the columns are all old; there has been very little marble imported in modern times. Everything you see in shops, all the furniture, chimney-pieces, etc., are old marbles taken from the catacombs, the cemeteries, the temples. This heredity of materials is one of the curious facts of this country. The singular Church of the Ara Coeli is entirely composed of the fragments of the temple of Jupiter Capitolinus. Its columns are those of the old temple, and the Romans themselves had taken them from the temple of Jupiter Olympius. Is it not so with religions? Construct with old materials new combinations; mix the old elements so that they will come out under a new form."

Writing some time after from Naples, Renan has very different impressions:

"I told you," he says, "that Rome made

me understand for the first time the greatness of a religion which monopolizes the spiritual life of a people. I can tell you that Naples has made me understand for the first time the ridiculousness, the horribly bad taste of a degenerate religion, dishonored by a degraded people. You could never imagine, no, never, what religion is in Naples. God is as much unknown here as among the savages of Oceania, whose religion is a mere belief in genii. There is no God for these people, there are only saints. And what are these saints? Not models of religion or morality; a kind of supernatural magicians, who can extricate you from an embarrassment, when you are sick or in difficulty. There are saints for thieves, and I have with my own eyes seen ex-votos in which the thief is represented as delivered by the saint. I cannot express to you the profound disgust which I experienced the first time I entered a church in Naples. It is no longer art, no longer ideality; it is the grossest sensualism."

Very different are his feelings in a visit made to the famous convent of Monte Cassino. There he feels a moral emotion. "If Sorrento and Posillipo, Baja and Miseno, could not diminish the sadness which was produced in my mind by the horrible degradation of this country, I doubt if the stern beauties of the Apennines would have found me more indulgent had I encountered here only coarse or stupid adepts of superannuated institutions." But at Monte Cassino he met with representatives of the best Italian intellect. He tells Berthelot the story of Father Tosti, a sort of Italian Lamennais, of Rosmini; he finds in the librarian's cell Strauss's 'Life of Jesus.' "They talk here of Hegel, of Kant, of George Sand, of Lamennais. Between us, my friend, the Fathers are philosophers like you and me; study has brought them to the point to which the modern mind tends perforce—to rationalism, to religion in spirit and in truth.

Garibaldi is the hero of the convent. [This was written in 1850.]"

Renan was not always a good prophet. I remember hearing him explain with much eloquence, at the beginning of the Italian war, that Italian unity was an empty dream. We see him defend the same idea in his letters:

"Centralization would be the death of Italy. Rome, Naples, Florence cannot be *chefs-lieux* of departments. It is well enough for Dijon, Bordeaux, etc., which have never lived. But Florence has lived; Florence would never accept that part. Give freedom to Italy, and Florence will secede, Siena will secede, Genoa will secede, Sicily will secede, Venice will secede. . . . It is true that Italy has a common sentiment of hatred of foreigners, and even a vague sentiment of intellectual and moral unity. Is this enough to create a compact state? No, a thousand times no. Would it suffice for a confederacy of Italian republics? I do not think so. All these cities would snap at each other, and at the end of a year would call in against their rivals France or the Emperor."

These letters, written from Italy in 1850, show well the uncertainties of a flexible mind like Renan's; he likes to generalize, but he is often doubtful about his own generalizations; he confesses that "the future of Italy seems, after all, an enigma." His portrait of Pio Nono, written after an audience he had with him, together with two other Frenchmen, is very delicately touched in: "It is impossible to find a more perfect type of the Roman who never has been placed, by his studies or by his relations, outside of the circle of Roman life. In France such a man would be called weak, ordinary; this sort of provincial *bonhomie* saves it all, with the result that when you leave him, you feel

contented and are in a kindly state of mind." Renan is very much struck by the provincialism of the people he sees. "In general, the intellectual development of the people in this country (I speak now of northern Tuscany) is almost nil." He finds even the Catholic sense blunted, except among the common people, who are instinctive artists. "A people wholly antique, creating its costumes with an inimitable grace, improvising a village decoration with an admirably pure taste, better able than you or I to distinguish a picture, a statue, a church of bad style; but a people absolutely strangers to any political or patriotic idea. Speak to this poor people of the independence of Italy? Why, they don't know what independence is; nor Italy." Here again you have one of those rash judgments, written, as the French say, *au courant de la plume*—very interesting, nevertheless, as they always contain a particle of truth.

In 1860 Renan made his journey to Syria, accompanying the Anglo-French expedition which had been sent there after the massacres of Christians in the Lebanon, and he had a mission from the Minister of Public Instruction. His devoted sister Henrietta accompanied him; she fell ill in Syria and died at Amshit. Her letters to Berthelot are among the best in the volume; they speak equally well for her intellect and for her heart. I do not know what is the real value of Renan's archaeological researches in Syria. The chief interest of his letters lies in the descriptions which he gives of the Holy Land. While he was copying old inscriptions, he collected documents for his 'Life of Jesus' and the lives of the apostles. He saw in Syria the patriarch of the Maronites—"a charming type; a combination of Italian education with the fine and mild spirit of this race. What is essentially wanting in the Syrians is fixity in ideas and rectitude in judgment. Their facility in learning everything, especially languages, is much greater than ours, but they have not the persistence for great creations. And then the odd, subtle, absurd idea always comes to them first. They do not understand good sense. All this with a charm which has seduced the world." At Sour he finds himself in a centre of Mussulman fanaticism:

"A fanatical party, shut up in the mosque and the bazaar, reigns by menaces of death and fire, annihilates the Turkish power and maintains a wild hatred of anything that has not the frenzied spirit of Islam. How well one understands here what a misfortune Islamism has been, what germs of hatred and exclusivism it has spread in the world, how a frenzied monotheism is opposed to all science, all civil life, all large ideas. What Islamism has made of human life is hardly credible. The asceticism of the Middle Ages is nothing in comparison. Spain has never invented a religious terror coming near it. But nature remains delicious and splendid. Syria, from one end to the other, is a garden."

In a letter from Beirut, written after a journey to Palestine (September 12, 1861), he writes a few lines which give us the true key to his 'Life of Jesus':

"I employed my long days at Ghesir in writing my life of Jesus, such as I conceived it in Galilee and in the land of Tyre. In a week it will be finished; I have only to write the account of the last days. I have succeeded in giving to the whole an organic movement, which is so much wanting in the Gospels. I believe that this time people will have under their eyes living beings, and not those lifeless phantoms Jesus, Mary, Peter, etc., changed into abstract types. I have tried, as they do in the vibration of ~~consciousness~~

plates, to give the bow-stroke which ranges the grains of sand into natural waves. Have I succeeded? You will know. But I ask you not to say a word of this to anybody outside of our circle. This big thing in my portfolio is all my strength. It will come out in due time. Now that it is done, I care little for the Collège de France or for anything on earth."

In the year 1864 Renan visited Egypt, and we find some fine descriptions of the land in his letters. He learned in Syria of the publication of the famous Encyclical, which convulsed the Catholic world at the time; he predicted a schism which did not take place. "A national church in France," he said, "is impossible, and it is fortunate; for such a church would, in fact, be clumsier and narrower than the religious system which has existed in France for fifty years. A schism is therefore inevitable; I mean an inner schism. . . . There will be two factions of Catholics arrayed against each other; one mad with a reactionary spirit, the other entering the domain of change, Protestant in reality." We see no signs yet of such a division.

Renan had a genuine horror of Turkish rule. This is what he writes from Constantinople in 1869:

"Constantinople is certainly a marvel in its way. It is the city of the painter, of the picturesque. Its general views are unequalled in the world. But that is all; if you except Saint Sophia and one or two Byzantine remains, there is not one really fine building; nothing will bear analysis; the bad taste is extraordinary, everything being made to satisfy an ephemeral fancy. Never have human meanness, folly, complacent nullity created a more adequate image of themselves. The Turkish world, with two or three exceptions, is absolutely stupid or dishonest. . . . This city appears to me like a city of monkeys, a sort of capital founded by the worthy Constantine for ignominy, intrigue, and stupidity."

The last part of the correspondence extends from 1870 to 1872; we find in it the expression of the emotions felt during the terrible days of the war with Germany, and afterwards during the Commune, the period of the government of M. Thiers and of Marshal MacMahon. The letters become shorter and shorter as Renan more and more suffered from the gout. The last were dictated by him, and he merely signed them. It is only just to say that he bore his own sufferings with stoicism; his interest in the affairs of France was paramount to the end. He was haunted with the fear of a new war with Germany. A few days before his death, he writes: "The most important act of our life is our death. We generally accomplish it in the most detestable circumstances. Our school, of which the essence is to need no illusion, has, I believe, for this great hour, quite special advantages." The last letter is written from Perros-Guirec (Côtes-du-Nord) in Brittany (in 1892). A few days after, Renan came back to Paris, where he died.

Correspondence.

DEFINITIONS AND PHRASES.

TO THE EDITOR OF THE NATION:

SIR: On going over the letter about the expression *in our midst*, which you lately published, it has occurred to me that it may be usefully supplemented by adducing some considerations there pretermitted.

In a book to be mentioned below, it is implied

that the illegitimacy of *in our midst* is clenched by asking, "Would any one say *in our middle*?" The inconclusiveness of this interrogatory argument I purpose to make evident.

With a few exceptions, so-called synonyms are, admittedly, only pseudo-synonyms. As a consequence, when, alternatively to periphrases, they are propounded in explanation of words, they very seldom indeed go beyond defining them approximately, though, in practice, they often serve acceptably as their substitutes. In order, however, that they may do so, much depends, generally, on their context. To a notable extent, in fact, it is by verbal collocation that conformity to idiom is determined. In illustration, many a vocable is circumstanced more or less like the adverb *any*. *He is not any better* is unexceptionable, whereas *it did not hurt me any* is a rank vulgarism. *In any degree, for any*, would answer in both the sentences.

To come to analogues of *in our midst*: *I request it in his behalf*, that is to say, "in his interest," "for his benefit," is faultless, though nobody would now employ *behalf*, except phraseologically, as one with "interest," "benefit." Again, though there are connections in which *sake* is inadmissible, *for my sake* and *for mercy's sake* represent established modes of speech. With *we consult his behalf* and *this sake is to be regarded* closely accord the *midst* of the crowd was impenetrable, once English, but no longer so.

Any one must feel that by *in our midst* he does not understand *in our middle*. *Midst* is, for one thing, vaguer than *middle*, which signifies, strictly, a point equidistant from extremities, and, popularly, also something of its adjacencies, lineal or other. Superficial etymologists, it is pertinent to notice, gratuitously assert that *midst* denotes "the very centre," speculating that the word is a superlative of *mid*. The better informed know it to be a contraction of *midde*, the genitive of the early English substantive *midde*, with the suffixion of an excrescent *t*, seen likewise in *against*, *amongst*, *betwixt*, *whilst*, the old *allent* (alien), *margent* (margin), *orphant*, *yeometry*, the still dialectal *alongst* and *anest*, the illiterate *wonst* (once), the standard *ancient*, *pageant*, *perchment*, *peasant*, *pheasant*, *tyrant*, and so on. It is the *middle*, not the *midst*, that is markedly or confinedly midmost.

And now let us turn to the compound *amidst*, of old *a-midde*, *in midde*, etc., meaning, verbatim, "in middle." In this there is the same spatial indefiniteness that attaches to *midst*, together with its connotation of environment, surrounding circumstances, density, or movement; the differentiation of *middle*, with respect to *midst*, being restrictedness of circumscription, with hardly any other appreciable property. An acquaintance is espied *amidst* strangers; a voluptuary lives *amidst* luxury; a deer is brought to bay *amidst* a thicket; a cry is heard *amidst* the rushing wind. The equivalent of *in the midst of*, in these phrases, is not replaceable, precisely, by *in the middle of*. From these details it is manifest that, philologically, *in our midst*, if we look to the sense of *midst*, is defensible on grounds additional to the fact that, from the point of view of analogy, it is liable to no censure. Its rhetorical repute I am not at present concerned with.

The writer who has been quoted above,

mistaking attempt for achievement, ventures the position, touching the phrase under discussion, that "its incorrectness has been exposed again and again." To make good his reprobation of it, he goes on to say, well-nigh literally copying Mr. G. P. Marsh, but not naming him:

"The possessive pronoun can properly be used only to indicate possession or appurtenance. The *midst* of a company or society is not a thing belonging or appurtenant to the company, or to the individuals composing it. It is a mere term of relation, of an adverbial, not of a substantive, character, and is an intensified form of expression for *among*." William Mathews, LL.D., *Words: their Use and Abuse*, p. 249.

Take of *their own accord*, on my account, at her bidding, in their default, in your despite, its equal, by our leave, in his stead. None of the possessive pronouns thus used are, according to Mr. Marsh and Dr. Mathews, used properly, unless *accord*, *account*, and the rest are "things belonging or appurtenant to" so and so; figuring in which capacity, they offer themselves as exceedingly nebulous entities, to ordinary apprehension. The field of possessive pronouns approaches, in amplitude, the possessive case, with its subjective and objective divisions.

Moreover, as regards the description given of *midst* in "the *midst* of a company," how can it, so collocated, be adverbial in character, as *while* is in *the while*, "meantime"? And how can it be, simultaneously, prepositional, or even quasi-prepositional, matching *side* in *this side the sea*, since it governs nothing? A confusing tintamarre of scientific terminology is not ratiocination. In *about the midst of the feast*, *from the midst of the city*, *through the midst of the sea*, and *in the midst of heaven*, is not *midst* substantival? Whether taken rightly, or taken wrongly, its character, there or elsewhere, makes nothing either for or against the idiomaticalness of *in our midst*; and so an end.

F. H.

MABLESFORD, ENGLAND, April 19, 1898.

Notes.

Mr. Nathan Haskell Dole, not content with editing a variorum edition of the *Rubáiyát* of Omar Khayyám, purposes getting out a delectable little pocket volume containing on opposite pages FitzGerald's version and a Latin translation of it made by Herbert Wilson Greene, Fellow of Magdalen College, Oxford, and privately printed in 1893. Mr. Dole's reprint, for which permission has been cheerfully accorded both by Dr. Aldis Wright and by Mr. Greene, will also be private and limited to 960 copies (760 for this country). The Latin text will be in red. The binding will be a flexible green leather. Mr. Dole's address is Jamaica Plain, Mass.

William Ellis Jones, No. 5 South Twelfth Street, Richmond, invites subscriptions to a 'Word-Book of Virginia Folk-Speech,' compiled by Dr. B. W. Green of Warwick, chiefly from the "lower peninsula," but not exclusively. The appearance of the work depends upon the support promised.

So does that of the 'Vestry Book and Register of Bristol Parish, Va., 1720-1729,' with its register of births, baptisms, and deaths, which has been fully and scrupulously transcribed by Churchill Gibson Chamberlayne.

Mr. Chamberlayne is his own publisher, and may be addressed at Richmond (P. O. Drawer 927).

M. F. Mansfield will publish immediately four volumes in a series, "The Rise of an Empire," by Sir Walter Besant; "Canada," by Howard A. Kennedy; "India," by D. C. Boulger; and "South Africa," by W. Basil Worsfold.

John Matthews, Mechlin Mansion, Brook Green, London, W., is preparing an 'American Armoury and Blue Book,' to include American families of European descent bearing, or entitled to bear, arms, as well as families descended from eminent personages in this country.

The Clarendon Press will soon publish a digest, by Sir Courtenay Ilbert, K.C.S.I., of the statute law relating to the government of India, with historical introduction and illustrative documents; and a new edition of Sir George Cornewall Lewis's 'Remarks on the Use and Abuse of Some Political Terms,' edited by Thomas Raleigh, Fellow of All Souls.

George N. Morang, Toronto, will issue on June 1 his midsummer annual, entitled 'Our Lady of the Sunshine,' with colored and other illustrations of Canadian scenery.

After fourteen years of unrivalled supremacy in its field, Mr. Louis Heilprin's 'Historical Reference Book' now passes to a fifth edition (Appletons). It is a three-fold utility in a single duodecimo volume of about 600 pages, consisting of "a chronological table of universal history; a chronological dictionary [and gazetteer] of universal history; a biographical dictionary [generally one-line]." The handiness of all this information is equalled by the accuracy of it, in which particular few similar works can challenge comparison with Mr. Heilprin's. The 'Reference Book' is now brought down to the present year, revised and extended in the supplement as elsewhere, for the "men of the time" are still increasing in number. Roentgen, Max Nordau, Paderewski, Hauptmann, Sudermann, Guerrini, Duse, D'Annunzio, are some of the new lights reflected in these pages. There is no private library which would not be the richer for being provided with the 'Reference Book,' and it ought to be in every school.

'Who's Who' (London: Adam & Charles Black; New York: Macmillan) celebrates its jubilee in a fiftieth yearly issue, the second since the new turn given to it by its enterprising editor, Mr. Douglas Sladen. This, in its main bulk, is a condensed 'Men of the Time,' often autobiographical, and hence better reading than ordinary, as where Mr. Israel Zangwill itemizes his "Recreations" thus: "All forms of locomotion except the bicycle." Each person's address and clubs (if any) are noted. Marriages, published works, etc., are other particulars convenient to ascertain readily. To last year's list colonial, artistic, and journalistic biographies have been freely added, and we are glad to find Dr. Murray of the great Dictionary "covered in." The rest of this annual consists of a great variety of tables, useful even when not complete (as, to take the weakest, Magazines, with its imperfect attempt to distinguish the American, and its omission of the *Atlantic* and the *Century*). "Peculiarly Pronounced Proper Names," "Rulers of Civilized Countries," "Chairs and Professors in the Universities" (alphabetic), "Navy," "Infantry Volunteers," "Societies, Royal, Na-

tional, and Learned," "Our Great Public Schools and their Masters" (with cost of tuition and board), are a few of the medley. Altogether, we could not afford to miss this new aid to current knowledge.

If we must hark back to sixteenth-century examples in our Morris typographical experiments, why not choose the best of that age? Messrs. Copeland & Day's ornate edition of Shakespeare's Sonnets, just issued in Boston, gives a table of first lines, but in sequence not alphabetical, though Petrarch's verse was early indexed in the only proper fashion. Then, as the Sonnets are to be read, and closely because of the close-packed conceits, why treat the broken lines without indentation, as if prose? Mr. Goodhue's initials not seldom almost compel this; but then that only proves that the design was not adapted to the font. Again and again, in fact, there is either no space between the words in these broken lines, or but the thinnest hair-spacing. The total result may be elegant black and white, but it is not good book-making, to our mind.

The Harpers reprint in book form the late George Du Maurier's articles on 'Social Pictorial Satire' which appeared recently in their magazine. Mr. Du Maurier talks lightly and gracefully of Leech, of Keene, and of himself, placing Leech first as social satirist, Keene first as artist, and leaving his own place to be determined by others. We Americans are sufficiently alien to take the "foreign" point of view, and to prefer Keene's technical mastery to Leech's veracity to English life and feeling, which we are not so well able to appreciate. Probably most of us of this generation love Du Maurier himself better than either. His range was certainly less than Leech's, and his technical power somewhat less than Keene's, while still very considerable; but he had more charm and more sense of beauty than either of the others, and his subjects are less merely English and more universal, for "good society" is much alike everywhere. The charm of style, the well-executed and, for the most part, well-chosen illustrations, and the attractive printing and get-up, make a pleasing volume, though it contains little of information and makes no pretence to serious criticism.

Señor Matias Romero's 'Geographical and Statistical Notes on Mexico' (Putnam's) is a very gratifying addition to books of ready reference. Its full and up-to-date statistics of Mexican trade and finance, agricultural and mineral resources and production, railways, banking, schools and colleges, with much other matter of great interest, make his volume one to be consulted by all who would have the latest and most trustworthy figures. Minister Romero writes remarkably good English, though here and there the Spanish idiom breaks through—as where he refers to the "regularly correct" Mexican census. What he means by "regularly" (*regularmente*) is clear from his intimation that the census may be 2,500,000 wide of the real population.

Those who would learn how a few working-men, with no resources save good sense and determination, founded what is now the greatest coöperative store in the world, will be interested in Mr. George J. Holyoake's 'Jubilee History of the Leeds Industrial Coöperative Store.' In 1897, this store completed its fiftieth year, and Mr. Holyoake was with great propriety selected as its historian. "I knew coöperation," he says, "when it was

born. I stood by its cradle. In every journal, newspaper, and review with which I was connected, I defended it in its infancy, when no one thought it would live. For years I was its sole friend and representative in the press." Certainly Mr. Holyoake may triumph in the success of an institution which now has eighty branches, and numbers 27,000 members, and which has throughout been managed on enlightened principles. 'It stands next to Rochdale as the foremost English coöperative association, and surpasses it in its valiant conflicts, its organization, its marvellous gains, and vast army of members who gather around its standard-bearers.'

We have received from the Macmillan Company two more volumes of Prof. L. H. Bailey's 'Garden-Craft Series,' which may be recommended on a-priori grounds. The volume entitled 'The Pruning Book' is necessarily somewhat technical, but its directions are clear and its illustrations apt. The other volume, 'Garden-making,' as its name indicates, is of the widest interest, and every one who possesses a square rod of land will find here suggestions for its improvement which will commend themselves to his judgment and stimulate his enthusiasm.

Among recent French books of reference may be mentioned Henry Carnoy's 'Dictionnaire Biographique des Hommes du Nord' (Paris: Lechevalier), put together on a hand-to-mouth plan not unknown in this country, by which the notices succeed each other in complete disorder, and have to be sought, not alphabetically, but by means of an index. For one section of France this work is very comprehensive, filling 372 quarto pages in double columns. The Abbé Chevin's 'Dictionnaire Latin-Français des Noms Propres de Lieux ayant une certaine Notoriété' (Paris: Retaux), has been compiled chiefly from an ecclesiastical and monastic point of view. Its usefulness would have been much increased by a corresponding French-Latin vocabulary.

C. Benoist's articles in the *Revue des Deux Mondes*, resulting from his observations in Spain, made expressly for that periodical, have been published in book form, under the title, 'L'Espagne, Cuba, et les États-Unis' (Paris: Perrin). They possess still some interest as forecast of our present troubles, and anticipate the annexation of Cuba to the United States in spite of the fact that the insurgents are not aiming for that, and in spite of our discredited protestations that our wishes are identical with those of the insurgents. The Cuban question the author judges to be the Eastern question of the New World.

The latest instalment of Hatsfeldt's 'Dictionnaire Général de la Langue Française' (Paris: Ch. Delagrave) carries this valuable work to *proposition*. Compact as the articles are, they are very good reading, witness *prendre* and *proven*, in which the extensions of meaning are noticeable.

The eight essays by M. de Vogüé collected under the title 'Histoire et Poésie' (Paris: Colin) are all serious, full of thought, and written in elegant style—a matter of course. The blending of the real with the ideal in the first two ("Au Mont-Cassin," "À Ravenne") produces the effect of a reverie arising under the direct influence of solemn surroundings. Most of the other studies ("Catherine Sforza," "Le Cardinal d'Orsini," "Le Moyen Âge," "J.-J. Rousseau," "La Renaissance Latine"), are suggested by

books published in the course of the last fifteen years. There is no preface, and in consequence no mention of the fact that everything in the volume has heretofore appeared in the *Revue des Deux Mondes*. The article on the Middle Ages contains one of the wittiest thrusts at the philologists that have been delivered of late years. The study of Jean-Jacques Rousseau brings out as it deserves the fact that his influence has been far deeper and more lasting than that of the man who filled the eighteenth century with his personality. That on Defoe's masterpiece is none the less enjoyable for the suggestion of racial jealousy it betrays. The author is one of the numerous Frenchmen who are apt to consider the Anglo-Saxon incapable of delicate and subtle taste, but he recognizes in him the power of triumphing over obstacles and reaching the end he has set his heart on attaining.

Following the new list for 1897 of the "best fifty books for a village library," we read in the *Library Journal* for April Mr. Dewey's announcement that the New York State Library will hereafter print the list as an annotated bibliography bulletin as soon as practicable after January 1. More important still is the sensible conclusion: "We shall no longer be guided simply by the number of votes [of librarians] cast for each book, but shall give due weight to the ability of each to pass judgment, and make up the list in the way to give the best average selection."

The *American Naturalist* (Ginn & Co.) for March is notable for seven articles on Agassiz, by as many hands (including several of his first pupils), in commemoration of that naturalist's beginning his instruction at Harvard in March, 1848, which began "a new era in zoological science in America." Prof. Packard, who discusses his philosophical views, recalls a conversation at Penikese in 1873, when Agassiz declared: "I should have been a great fellow for evolution if it had not been for the breaks in the paleontological record."

The third number of volume i. of the *American Journal of Archaeology* (Macmillan) is wholly given over to papers emanating from the Cretan expedition. Prof. Halbherr continuing his illustrated account of epigraphical researches in Gortyna, and adding a notice of some interesting Cretan sculpture in the museum at Candia. A chapter on a Mycenaean vase in connection with geometric vases in the same museum, by P. Orsi, and two papers on some curious Roman busts there and a statue of an Asclepiad from Gortyna, by L. Mariani, are likewise well figured in text and plates.

Lovers of "Lewis Carroll" will find in the May number of the *Strand Magazine* an interesting series of portraits from early youth, and a sympathetic sketch of his life by Beatrice Hatch, still further illustrated with facsimiles of Mr. Dodgson's MS. and drawings, and copies of his photographs of children in costume.

The "Klondike number" is the sub-title of the *National Geographic Magazine* for April, which contains much valuable information, chiefly by experts, upon Alaska and the gold-fields of the Yukon. The most important article is that by Mr. S. F. Emmons of the Geological Survey, in which he describes the geographical features of the country, the principal routes into the interior, and the character and distribution of its mineral

resources. Gen. Greely treats of its climatic conditions; Senator Perkins of California describes the civil government; Dr. W. H. Evans shows the conditions and possibilities of agriculture, which he believes could be "extended so as to supply local demands for many products"; and Mr. E. W. Nelson contributes some notes on the wild fowl and game animals of Alaska. Mr. W. H. Dall calls attention to the difficulties of transportation on the Yukon—the only practical route for food-supplies to the mining districts—and says that, while only seven trips were made by steamers from the sea-coast to Dawson last season, thirty-four trips may be made under favorable circumstances this season. This means, however, less than "half the number [of loads of provisions] required to keep the assumed influx of people on a next-to-starvation basis through the winter of 1898-'99."

The *Scottish Geographical Magazine* for April opens with the suggestive paper on the material growth and present condition of the United States, read by Mr. Henry Gannett at the Toronto meeting of the British Association. It is illustrated by numerous diagrams showing in a graphic manner the increase of the population and its divisions by race, birthplace, and occupations, the industries, manufactures, mineral products, transportation and commerce of the country. Its wealth at the first estimate in 1850 was placed at a little over \$7,000,000,000, or about \$300 per *caput*, in 1890 at \$63,000,000,000, or over \$1,000 per *caput*. This is followed by a lively description of the difficulties of a journey along a Shan road in Upper Burmah.

The accounts of three cruises to Novaya Zemlya and Spitzbergen occupy the first place in the *Geographical Journal* for April. They are followed by Mr. H. S. H. Cavenish's lively description of his adventurous journey through Somaliland and around Lake Rudolf. A part of the region traversed had been unexplored, and in it he came upon a lake some twenty-five miles long whose water, "near to the north end, where a smouldering volcano was situated, was just as hot as one would like to wash one's hands in." To the south of Lake Stefanie he found coal in large quantities—a valuable discovery in tropical Africa. This number also contains the conclusion of Dr. Sven Hedin's account of his crossing the plateaux of Northern Tibet, and a report of the Geographical Society's Antarctic meeting.

The latest volume of Proceedings of the American Antiquarian Society contains three contributions of very solid merit. Prof. Jameson's "Political Uses of the Word Convention" we have already praised in another connection. Mr. Franklin's succinct "Historical Study of the Powers and Duties of the Presidency in Yale College," and Mr. Wilberforce Eames's careful historical and bibliographical survey of "Early New England Catechisms," are both the fruit of much labor and excellent for ready reference.

To be remarked in the current Proceedings of the State Historical Society of Wisconsin (December meeting, 1897) are a very sensible and suggestive paper, "How Germans become Americans," by Ernest Bruncken; a bibliographical history of the two Wisconsin constitutional conventions, with annotated lists of the delegates; and a sketch of the Rev. Ichabod Coddling, an early and devoted abolitionist, by his widow, which was worth writing and printing.

War, which has been called a school for

learning geography, also has some lessons in national history and character. Greater knowledge of Spain might have hindered us from our present folly, or at least saved us from some illusions about our adversary. Whether we shall now be curious—or have time to be curious—about Spain, remains to be seen. Mr. W. E. Foster, of the Providence Public Library, assuming that his patrons will (or should), has devoted to Spain his Reference List, No. 55, in his Monthly Bulletin for March.

All hitherto available maps of Cuba must now yield to the military map prepared in the War Department, Adjutant-General's Office, from the latest official sources, and beautifully executed in four sheets by Julius Bien & Co. of this city. The date, 1897, is significant. The scale is one inch to eight miles. Banks and shoals are indicated, but there are no soundings. Roads of all kinds, including projected railroads, are laid down. The topography is more or less definitely shown. The multitude of settlements is the striking feature of the map, petty as many of them must be.

Luzac & Co., No. 46 Great Russell Street, London, have acquired the Chinese library of the late Prof. James Legge, and are preparing a catalogue of it to be sent on application, their desire being to sell it *en bloc*. It comprises upwards of 2,000 volumes, many rare and some in series of eight to sixty-six.

As is well known, the students of Radcliffe College, Cambridge, have no dormitory or hall of residence, and the need of one for a portion at least of the students in attendance, or who might be attracted by it, has become so manifest that a movement is on foot to erect it by subscription. It is intended to provide for not more than twenty-five students, so that the scheme is only supplementary to existing conditions of life in scattered families. The sum of \$50,000 is sought, and any contributions to it on the part of friends of the college or of the higher education generally may be sent to the Treasurer, Miss Leslie White Hopkinson, No. 22 Craigie Street.

From circulars emanating from the University of Geneva we learn that the vacation schools in modern French, already described in these columns by Mr. William Henry Bishop, will, for the coming summer, open on July 16; and autumn, October 1. Each course will have its conference for the correction of written work, its conversation groups, its pleasant song section, its lectures on special subjects in science, history, or literature. Admission is to matriculated students in a university, and to persons possessing a university degree or teachers in a public school (women included). Information in detail concerning the programme, lodgings, etc., can be had by addressing M. le Secrétaire-Caissier de l'Université de Genève.

The University of Grenoble, too, sends us its prospectus, its *cours de vacances* opening July 1 and closing September 30, unless prolonged to October 30 on request. Text-books will be loaned gratuitously. Particulars may be had of the Secrétaire de l'Académie, Rue Leadiguières, 24. We perceive no restriction on the "jeunes gens" whose presence is desired. As at Geneva, they will be assisted to suitable lodgings.

—The *May Century* has a good illustrated article on "Railway Crossings in Europe and America," by Franklin B. Locke. This is

the country of grade-crossings and grade-crossing accidents. On the latter point the statistics given are curious. When railways were first constructed in the United States little attempt was made to protect the ordinary crossing. The familiar gate, or bar, still seen everywhere, made its appearance, while in some places flagmen and bells were resorted to; in others the notice "Look out for the Locomotive," etc., was considered sufficient. In Massachusetts it seems that there are between twenty-one and twenty-two hundred grade-crossings, of which about one-half are "protected"; yet the fatalities at these are "nearly half of all the casualties occurring at both protected and unprotected crossings." It is generally recognized now that the condition of the crossings in this country is full of unending danger, and we are gradually on the way to a separation of highways from railways at points where they intersect. In course of time, even the amusing sport of "walking on the track," once so common among American children, will be stopped. In Germany such amusements are contrary to law, and the law is rigidly enforced. It is not generally known that grade-crossings are an enormous hindrance to efficient railway service. We run trains at as high a speed as any in the world; but "if we compare the average time of the twenty-six fastest trains to and from New York, on all of its twenty-six important roads, we get only about forty miles an hour, against the average . . . of forty-six miles an hour for fifty-four trains running to and from London." Mr. A. D. White contributes an article on "A Statesman of Russia," with what looks as if it must be a good portrait. The statesman in question is Constantine Pobedonostzeff, the "Proctor-General of the Most Holy Synod," otherwise known as "the Torquemada of the nineteenth century." Mr. White, who had many interviews with him, found him an agreeable man, fond of reading Hawthorne, Emerson, and Lowell, and at the same time a tremendous reactionary. His "views" are those of Metternich, adapted to the present day, and, of course, he looks at everything as a Russian, objecting to any improvement in the wretched street conveyances in St. Petersburg because they are thoroughly national. Mr. White, on the strength of several personal interviews, acquits him of being a hypocrite, but how he knows, he does not say. Pobedonostzeff's smile is described as being "a gentle, kindly smile," with nothing "ghastly or cruel" in it; but in a Torquemada would not such a smile smack of hypocrisy?

"East Side Considerations," by E. S. Martin, and "Awakened Russia," by Julian Ralph, are two leading illustrated articles in *Harper's*. The former deals with a part of New York formerly little known to the well-to-do, but now a scene of much devoted philanthropic work, which, having begun with the cleaning out of the "Five Points," is now producing parish houses, and parks, and university settlements, and generally a higher standard of living among the poor. It is not like the East End of London, for it is not English, and it has also the genuine New York transitoriness. As in all such quarters, dirt is described as one great enemy of improvement. When cleanliness becomes not merely the luxury of the rich, but the necessity of the poor, then general self-respect will have been attained. Mr. Julian Ralph has a good deal to say about Russia, and the curious changes now going

on there, but his explanation of the attitude of the Government towards the Armenian massacres will hardly bear examination. It is that Russia has a great number of Armenians within her own borders, and therefore could not "permit the Armenian in Turkey to better his condition so as to have it envied by the Armenian in Russia." What he means is that Russia could not be expected to approve of Armenian reforms; but is the alternative of reform always massacre? It is, no doubt, so considered by many a pious Mohammedan, but is that the view of Mr. Ralph? He gives a by no means clear account of the great Russian transcontinental railway, which, according to "all authorities," is to be a "perfectly modern railway, equipped not only with sleeping and dining-cars" but even with a "church car" for emergencies, yet is said in places to be so hastily built that "the ties are being merely laid down on the grass." There is nothing in the article to show that the "awakening" of Russia means a new policy of the "open door"; a Russia of railroads and telegraphs can hardly be for ever the Russia of the past, but the railroad now under construction is chiefly a very long military road.

—In the *Atlantic Monthly* for May, ex-Secretary Olney's discussion of the "International Isolation of the United States" is the leading article. To this we have already paid attention on one side, but we may further remark that the address (originally delivered at Sanders Theatre, Harvard University) confounds two different kinds of isolation—that recommended by Washington in his farewell address, and that sort of isolation represented by high tariffs, anti-Chinese and anti-immigration laws. There is no evidence that Washington was in favor of the Dingley tariff, nor of keeping Chinamen out of the country, nor of requiring immigrants to read twenty-five words of the Constitution of the United States. What Washington warned the country against was a policy of connection with European "politics" and "permanent alliances." (These are his own terms.) On the other hand, the extension of our "commercial relations" was at the same time strongly advocated by him. Mr. Olney seems to think that we have outgrown the stage of existence for which Washington's policy was suited, and that it is high time for something finer and nobler; but he shrinks from saying precisely what it is to be. He acquits at an alliance with England, but expressly declares that "it will not follow that formal alliances . . . will soon or often be found expedient"; he writes nearly a page about the Berlin (Congo) Act, without telling us what he would have. On the whole, he is opposed to too much "isolation." Is any one afraid to echo the sentiment? Prof. Münsterberg continues his articles on Psychology, but in "Psychology and the Real Life" he gets beyond our depth. This, however, is clearly our own fault; what he says about the "real life" is not meant for everybody. Stopping short at his positive psychology, the paper is a valuable explanation of the present position of that science, and to any one having even a superficial acquaintance with the subject, most entertaining. Is there anything new under the sun? "To doubt that anything at all exists is absurd, as such a thought shows already that at least thoughts exist," is surely the latest paraphrase of "cogito, ergo sum." There is something in the article

for everybody, from the hardened sceptic and positivist to the seer who possesses the key to the absolute in the limited and the infinite in the finite. If any one can read J. T. Morse, jr.'s summary of "The Dreyfus and Zola Trials" without a longing to fit out a filibustering release expedition to the Isle du Diable, he may be sure that he is no gentleman; if, on the other hand, he is fired with this wild and wholly illegal idea, he may, by reading the paper on "The Evolution of the Gentleman," by S. M. Crothers, in the same number of the magazine, gain some insight into the genesis of feelings which do him credit.

—In *Scribner's*, "Undergraduate Life at Wellesley" is the subject of an illustrated article by Abbe Carter Goodloe. Among other things, it gives an account of a new exercise which promises much entertainment and instruction for young college women. It consists of a representation of a set debate in the House of Commons, given under the direction of the Department of Constitutional History. The subject of debate is some real question in English politics. Last year it was on the motion of Mr. Burns to abolish the House of Lords; one young lady taking the part of Mr. Balfour, another that of Sir Michael Hicks-Beach, another that of Mr. Labouchere, another that of Mr. Chamberlain, and so on. "The leader of the House was as imposing as it was possible for a very much frightened young girl in a white wig and black gown to be; and the *mise en scène* was excellent, the party in power being very properly on her right, the opposition on her left, while the Irish Nationalists and the Liberals" (apparently at Wellesley a fourth party) "sat and stood and cheered and groaned below the gangway." A widespread knowledge among women of the rules which govern the procedure of deliberative bodies would add a novel feature to their equipment for life; it is a branch of learning the general principle of which may be mastered very easily. In domestic life, feminine dialectics are usually different from masculine, but which system is the most successful has, we believe, never been settled. If women, in addition to their present resources, are to be provided with those hitherto monopolized by men, they will have great advantages. He would be a bold man who should attempt to argue with a woman having the right to choose between the system of Mrs. Caudle and that of Cushing's Manual. That the emergency may arise is apparent from numerous recent manuals by women, e. g., Mrs. Shattuck's Boston 'Manual of Parliamentary Law' and her 'Advanced Rules for Large Assemblies' (now in press), not to mention such a straw as the little pocket folder, 'Parliamentary Diagram,' by Mary Urquhart-Lee, which has just been published in Chicago.

—Although most intelligent people recognize bacteria as agents intimately affecting human life, a clear knowledge of their character is not yet popularized. And it is not too much to say that even the scientists who devote themselves to a study of them are developing the horizon more rapidly than they can differentiate all that it includes. For instance, that widespread and serious disease, typhoid fever, is recognized as bacterial, and the *bacillus typhosus* is commonly regarded as the specific cause. It is the contamination of food and drink with this organism that completes the equation of cause and consequence. But to demon-

strate that bacillus out of the body, after the earlier stages of the disease, is most difficult; and while logically it should be found abundantly in the polluted water, very expert observers often fail in the search. Consequently, a considerable school believes that another bacillus (*coli communis*), which ordinarily is innocent, is convertible into the *typhosus* under conditions not yet understood; another, that *typhosus* acquires its virulence only after cultivation in the human body; and the Swiss health officers stoutly maintain that the typhoid-fever cause is generated in water contaminated by the droppings of animals and free from human pollution, pointing to the disease as found in the higher Alps. There are conditions in this country, especially in the Rocky Mountains, to support this view. Notwithstanding that the great epidemics are those where the water has been fouled by a preceding well-marked case or cases, the possibility of a change of character, if not of morphology, by environment is theoretically good, and those who believe that virulence may be diminished in pathogenetic or be grafted upon innocuous bacteria, are increasing. We are led into this train by a most admirable 'Manual of Bacteriology,' by Drs. Muir and Ritchie (Macmillan). Not that these authors countenance the transformation of either of the two bacteria that we have cited into the other. They distinctly affirm that "there is no evidence that the one organism ever passes into the other." And this is true, for evidence of that kind is most difficult to reach. They admit that variations may occur, but explain that "variation as observed consists largely in a tendency in a bacterium to lose properties ordinarily possessed. Practically no case of a bacterium acquiring new properties has been observed." It is very proper that a text-book should be conservative and not yield to every wind of doctrine. Nevertheless, we believe that variability may be a feature of these living cells, as in higher orders. The manual is neither prolix nor cramped in matter or style, but is sufficient and clear and moves with an even pace. It may be received with confidence by any student seeking a knowledge of the principles of germ life and of the methods to observe it.

—Ramabal, born in 1858, a Hindu widow of high class and culture, early founded in Poona an association to encourage female education and discourage child marriage. Feeling need of better training herself, she made her way to England in 1883, became there a professor of Sanskrit and embraced Christianity, but found English ears too conservative or incredulous for harkening to her appeals. So, after learning English, she joined her cousin Joshee in Philadelphia, who graduated at the Women's Medical College there in 1884. She became well acquainted with kindergartens and all the American school system. Personal interviews, her book on 'The High-Caste Hindu Woman,' and her travels westward even to the Pacific Coast, resulted in the formation of a humanitarian association with Edward E. Hale and Phillips Brooks at its head. Leaders in all Christian denominations, as well as Jews, joined with these two men in responding to the appeals of Ramabal in behalf of a much-injured class, which she convinced them could be effectually relieved, elevated, and sometimes Christianized. So inspiring was the prospect that all funds call-

ed for were raised. In a work published in 1888, Ramabal computed that she should need about \$15,000 to fully establish her school, and \$5,000 annually afterward during each year of the ten through which she wished that pledges for its support should be given. Six years after leaving home, Ramabal stood again in Bombay, and within six weeks opened a school there early in 1889. Upon this establishment and its country annex Mukti, near Poona, the association has laid out \$91,500, largely in a permanent plant—school-buildings, dormitories, etc.—now worth \$50,000. Three hundred and fifty child widows have passed through its undenominational course. Fourteen have been trained as teachers, eight as nurses, seven as missionary assistants; ten have homes of their own; none of them married under twenty-one. The period of pledges has now expired. Bishop Brooks, Miss Willard, and many others who made them are dead, but there must be some to carry on their work. Ramabal, now forty, seems better fitted than ever for her merciful mission to her sex. "She hath done what she could."

JENKS'S LAW AND POLITICS IN THE MIDDLE AGES.

Law and Politics in the Middle Ages. By Edward Jenks, M.A., Reader in English Law in the University of Oxford. London: John Murray; New York: Henry Holt & Co. 1898. xiii and 352 pp.

Mr. Jenks gracefully records his obligations to Prof. Maitland, and a glance at the 'Law and Politics of the Middle Ages' shows that his book is an excellent piece of work produced by a student in the school of which Prof. Maitland is the acknowledged head. The true aim of this school is to trace out the history, and especially the early history, of laws and institutions, and of the ideas to which laws and institutions owe their origin; and Mr. Jenks's treatise is a bold and in many respects successful attempt to explain the development of legal and political conceptions during the Middle Ages—that is, speaking very broadly, from the time when Rome ceased to rule the Western world to somewhere about the period of the Reformation. The book is the work of a thoroughly trained English lawyer, who combines a practical knowledge of the laws of his own country with a keen interest in speculations as to the development of legal ideas, such, for example, as the idea of "the State," of "property," of possession, of contract, and the like. The work is so admirable a specimen of its class that its appearance gives a good occasion for considering what is the real worth and the true interest of the whole body of writings to which it belongs. This is a point on which there exists some confusion in the minds both of writers and of readers, and which, therefore, repays examination.

Mr. Jenks's book may be placed together with Pollock and Maitland's 'History of English Law' and with Maitland's recent 'Lectures on Township and Borough.' These are alike concerned with the origins of legal institutions; all of them may, therefore, be placed among the legal literature of England; they are each and all of them works which any lawyer who takes a generous and liberal interest in his science may study with interest. But Mr. Jenks's treatise (and the same remark applies to those with which we have coupled its name) is in reality not a con-

tribution to our knowledge of law, but a contribution to our knowledge of history. His speculations, for example, are in themselves most interesting, but it is a mistake to suppose—and it is an error to which students are liable—that his theories, even when they touch more or less directly upon English law, can be of material help towards attaining a knowledge of the law of England, or indeed of the law of any definite country.

Let us, for the sake of illustrating this point, confine our attention to English law. The immediate object of any Englishman who wishes to become a good lawyer is to understand and then place in their due logical order all the principles enforced by English courts. He who has achieved this, if the achievement be possible, and who has also so thoroughly mastered these principles as to see their bearing upon all the combinations of facts—that is, on all the cases which may actually arise or which may be suggested by the ingenuity of theorists—has become a perfect English lawyer. Whether, under the present condition of the world and of law, such a complete master of English law can ever in fact exist, may be open to some doubt. We may suppose, however, that in every generation one or two men, endowed with very special genius as well as with indomitable industry, make a near approach to that complete mastery of law which every serious student at the opening of his career proposes to himself as an ideal. Now it is obvious that any such master of the law of England as is here imagined could not be indifferent to certain aspects of legal history; he could not understand the existing law, for example, of agency, unless he had traced a good way back the steps by which the rules governing the relation between a principal, a third party, and an agent have grown up; it is in strictness impossible that he should understand the law of real property without a considerable knowledge of the historical development of this branch of law. But, for all this, such a perfect lawyer will require but very little of the sort of knowledge supplied him by theorists whose main concern is the origin of ideas and institutions. When once the existence of a rule of law is ascertained, this rule is for a lawyer an ultimate fact, and the question how it originated is of little importance, while the inquiry what was the state of mind of the men who originally established the rule, or what were the mental perplexities or confusions which may account for its establishment, is, or at any rate may be, to a lawyer, of no importance whatever.

That this is so is patent in regard to enacted or codified law. The merit or demerit of a code is that it puts an end to the practical importance of the historical study of law. The latent hostility between codifiers and historians of law is no mere accident; but what is true of codified law is at bottom true of the rules of judge-made law, from the moment that they have become absolutely established—that is, from the moment they have become part of the law of the land. Take, for example, the law of contract. It is of importance for a lawyer to know what is meant by a contract—that is, by a legally binding agreement. It is of primary importance for an English lawyer to know what are, under English law, the constituents of a legally binding agreement. But it is of no importance, though it may be of considerable interest, for him to understand that, as Mr. Jenks and others have

simply demonstrated, there have been periods of the world's history in which men found it impossible to master the conception of a promise, an agreement, or a contract. Thus, to illustrate our meaning by another example, it is essential for an English lawyer to understand what is meant by a "consideration," and to grasp fully and follow out to all its consequences the principle that a promise for which there is no consideration is legally void; but it is of no importance whatever, from a merely legal point of view, that he should study the historical growth of the very curious doctrine that a promise which is gratuitous is in general not legally binding. Any one who has looked into the subject at all knows that writers of learning and intelligence have given different answers to the problem, How did the necessity for a consideration for the validity of a promise become part of the law of England? But every one also knows that the answer to this problem is to an English lawyer of no practical importance. The dogma that a gratuitous promise is invalid is now part of the law of England. Debates on the method by which this legal dogma has been developed cannot shake its authority. They are of intellectual interest, but possess no legal importance.

Take, again, Mr. Jenks's original and, if somewhat bold, yet most suggestive speculations as to the relation between the clan and the state. Let us assume that the truth of his conclusions may by further research be absolutely established. Still, his doctrines, however sound, will not affect a single rule of constitutional law in England or in any other country. To this criticism our author has at his command a complete reply. "I wrote," he may answer, "not as a constitutionalist, but as an historian." The conclusiveness of this retort is undeniable, but it is in effect a mere statement that a treatise on the origin of legal institutions is a contribution to our knowledge not of law but of history. It is the knowledge of history far more than the understanding of law which is being promoted by the historical school of lawyers. They have brought to light, not to say revealed, a forgotten aspect of human development. Politics, religion, art, and law are (if each word be taken in its widest sense) names for four different sides of the progress of mankind; taken together, they roughly cover the whole field of history. But historians for the most part have strangely overlooked the obvious fact that the laws of a nation at any given moment represent the conceptions by which it is governed. In the one case, indeed, of Rome, the importance of law forces itself into notice; to rule the world, and to rule it by establishing the supremacy of legal justice, was the one great achievement of Roman genius. Yet even as regards Rome it is only in comparatively recent times that men have realized the extent to which Roman law at once explains and gives a meaning to the history of Rome. Next to Rome, England is the country whose annals are most closely connected with its laws. Yet historians who have explored with care the minutest details of English party government have failed to grasp the full significance of English law and of English conceptions of justice. Macaulay was essentially a lawyer. His most permanent and his most original, if not his most brilliant, work is embodied in the Indian Penal Code; but his intense interest in Parliamentary conflicts

seems to have diverted his attention from the mass even of Parliamentary legislation, and to have prevented his ever realizing either the singularity or the importance of the judicial legislation which has built up the greater and by far the best part of English law. His picture of the reign of Charles II. contains either no reference at all, or certainly no marked reference, to the passing of the habeas-corpus act, though Fox had already designated the Restoration as a period of bad government but good legislation; and nowhere throughout Macaulay's History or his Essays will there be found an attempt to explain—what he could have explained with greater lucidity than any other English man of letters—the process by which English courts, while deciding individual cases, in reality create new law. Freeman was from some points of view a disciple of Macaulay, yet he assuredly took a wider view of history than did his teacher. He appreciated the immense part played in the annals of England by the Church; but to the true importance of English law he was blind. He knew that lawyers had in some cases falsified history; he never perceived that the very errors of lawyers were themselves part of history, and that English law, from which, be it added, he himself drew his manly and generous ideal of justice, was the most original production of English genius.

In criticising authors of merited reputation, one should always remember that they live in virtue of their merits, which are their own, and deserve criticism, but not blame, for defects which belong to their generation or their training. But no future historian of England will, if he is at all equal to the performance of his work, be able to neglect the influence of English law. To have achieved this result is the glory of the historical school of lawyers. They have already, moreover, accomplished a good deal more than merely directing attention to the influence of legal ideas and of legal institutions. They have, in some instances at any rate, absolutely established, from their study of law, conclusions which must be taken into account by any one who wishes to understand or explain the progress of civilization. Mr. Jenks, for example, to recur to a point to which reference has been already made, has produced a great deal of evidence, which is new to English readers, of the difficulty felt by men who have reached only an early stage of civilization in understanding the nature of a contract. A transfer of possession or a transfer of ownership is in reality an idea which is more easily grasped than the conception of a promise or agreement. It is true that when once the idea of a promise or contract has been seized, it has, just perhaps because of the difficulty with which it was realized, an extraordinary hold upon the mind or imagination. The religious associations linked with the word "covenant," the political aspirations or convictions associated with the term "contract," show how great is the weight in some social conditions attributable to the conception of a compact; but it is nevertheless true that any inquirer who investigates the condition of early societies will find that men found it hard to understand the meaning of a promise. Even a "pledge," just because it was associated with some tangible thing which could be handled and felt, was more intelligible than the obligation connected with it; a marriage ring, the giving of an earnest, or

shaking hands to bind a bargain, are all, in fact, survivals of a state of opinion in which men could hardly understand the existence of rights, duties, or obligations, unless you could connect them with something which could be seen and felt.

All that Mr. Jenks writes on this topic is excellent, but he avowedly does little more than illustrate or confirm doctrines propounded by other writers. Let no one, however, suppose that his book is deficient in originality. It is full of suggestions which are his own, and many of which well deserve consideration. He forces, for instance, on his readers' attention a view of the "Empire" founded by Charles the Great which assuredly is needed to complement the impression conveyed by the writings of Freeman and his followers. That Charles in a sense revived the Empire of Rome is true, but revivals are at bottom revolutions; and though it is an error to deny the connection between the Empire of Charles and the Empire of the Cæsars, it is almost the greater error to overlook the fact that artificial continuity involved essential dissimilarity. "In the end," writes Mr. Jenks, "the Frankish King assumes the sacred title of Emperor and is crowned at Rome, but, of course, the whole thing is a mimicry and a sham." The boldness of this language may provoke attack, but it contains an element of most important truth. We fully agree with our author that the revived Empire "had been a sham Empire from beginning to end, making pretensions which it could not support, using forms which it did not understand, undertaking duties which it could not perform." Readers, again, should consider with care Mr. Jenks's great generalization as to the constant conflict throughout history between the clan, founded on real or supposed connection of blood, and the state, created originally by military power and kept in existence by men's unconscious desire for the establishment of more or less equal and rational laws. No one will undertake to say—we doubt whether our author would himself assert—that the generalization he has suggested, and the inferences which he bases upon it, can as yet be regarded as more than very ingenious theories. Long and careful investigation of many obscure parts of the history of law will be necessary in order to turn these theories into established doctrines. Still, they are in the best sense suggestive; they point towards the direction in which we ought to look for the solution of many important problems.

A reviewer may be allowed to add one conjecture to the many ingenious suggestions made by our author as to the unconscious conflict between the state and the clan. Is the movement in favor of nationality at bottom more or less than a revival of the claims of the clan? Kinship is once more pitted against citizenship. Instinct comes into conflict with reason. If this be the case, the contest is no new one. But the glory of man is that, though an animal, he is a rational animal. The progress of mankind is in the long run the triumph of reason over instinct.

STRATEGY.

Letters on Strategy. By General Prince Kraft zu Hohenlohe-Ingelfingen. [Wolsley Series, edited by Capt. Walter H. James.] Charles Scribner's Sons. 2 vols., 8vo, pp. 417, 345. Maps in pockets. The plan of the 'Letters on Strategy' is

most excellent. They are written by a veteran of the campaigns of Sadowa and Sedan to a young military friend, in familiar discussion of three great European campaigns, those of Jena, Magenta, and Sedan. In these France was victorious in two, against Prussia and Austria respectively, and an impartial analysis is made of the merits and defects of the leadership on both sides. In the great struggle of 1870 a fuller examination becomes possible, and the discussion fills nearly three-fourths of the whole work. Its thesis is that Moltke and the German staff systematized and improved upon the principles and practice of the great Napoleon.

The author avoids the assumption that strategy should rank among the sciences. He says: "Strategy is not a science, but an art which must be practiced"; and as to the master strategist, he adopts the ancient maxim regarding poets, "He must be born, not made." For those having a natural adaptation for the work the best theoretic instruction is the inductive, going through the history of campaign after campaign, "and then to marshal the facts we shall thus arrive at, and from them derive rules of conduct of the widest and most certain application." In summing up his work the author shows that the analytical comment on the several campaigns has developed the very rules which the favorite German authorities have systematically stated, and that his conclusions are therefore in harmony with those of Clausewitz, Blume, Bronsart, and Goits.

He finds, however, that there are a very few maxims so general and so fundamental that they may be laid down as the axioms which will be assumed in all strategic discussion, and must be ever present in mind with commanders. They apply to armies and navies alike, and will be so profitably suggestive to every intelligent reader of war news to-day that it is well to quote them. They are five in number:

"1. National policy must be closely allied at every point with strategy.

"2. At the onset the destruction of the enemy's army must form the objective. Everything else, the occupation of cities or territories, is only of secondary importance.

"3. It is impossible to be too strong for a decisive battle. The whole efforts of strategy must be directed to this end, not diverting more forces for secondary objects than are absolutely necessary.

"4. No rigid system must be adhered to; the object should be to choose by sound judgment the shortest path to the desired goal.

"5. Changes in the plan of operation lead to incalculable losses of strength and time. Unless, therefore, the enemy or the elements enforce such alterations, they are to be avoided. Sudden changes of intention in the leader have often produced the greatest misfortunes."

The working of systematic and complete arrangements was well shown in 1870. The plan of beginning the campaign had been fully settled for two years. The place of concentration of the German forces made Rhenish Prussia and the Palatinate the base of active operations. The local depots at home for each corps were fixed and everything needed for taking the field was there. The reserves all knew just where to go when the order to mobilize should come, and the peace establishment was at once expanded to the war footing. The railway time-tables were all made out with the maximum number of trains which the several roads could put in motion. The only order needed was the brief telegraphic one, "Mobilize according to regulation." This put all the wheels

in motion. The reserves streamed to the depots, were clothed, shod, and armed, their field transportation was there ready for them, the railway trains came as if by spontaneous intelligence, and a perfectly organized army of half a million disciplined soldiers was on the French border in less than twenty days.

Louis Napoleon supposed his own army was "archiprêt," and Moltke had been willing to concede that the French, if really ready, might cross the Rhine before the Germans could reach the Mosel Valley; but the practical drill of the Prussian staff proved its value, and the speed with which the "strategic deployment" on the frontier was made surpassed anything the world had seen. To say nothing of the unreadiness of the French in equipment, they lost a week in concentration, and that week gave the Germans the initiative with preponderant force at Woerth, where one wing of Louis Napoleon's army was shattered. It secured also the union of the whole German army before Metz, kept the French on the defensive without the ability to complete their concentration, and led by logical methods to the great disasters which culminated at Sedan. The meaning of the object-lesson is that the perfection of organization of a great standing army may be such that, with superior system and speed in mobilization, the fate of a campaign between contiguous nations of equal power may be determined in effect before a battle has been fought. The days of going rashly and gayly into war with any but a very inferior Power, in the expectation of getting ready after the war begins, are over. A nation so exceptionally situated as ours may yet be practically invincible in self-defence; but from a military point of view it would be ridiculous to undertake aggressive war with a really first-class Power. Our traditional policy of careful non-interference with other nations is in no small measure the result of sagacious recognition of the facts by our real statesmen from Washington downward.

A second practical lesson, applicable to our present situation, is the success of the German leaders in making their subordinates so intelligent and expert in the work of a campaign, and so zealous in carrying out the general purpose, that very brief and general orders were all that was required for very important movements. "A commander," says our author, "must never enter into more details than is absolutely necessary. He should never interfere without good cause with the sphere of the subordinate. By these means subordinates are trained for spontaneous and independent action.

... It is only thus that dead, mechanical obedience is avoided, and self-acting obedience combined with initiative is produced." The most striking illustration of this is the fact that the attack on the Sedan position was made by the armies of the Crown Prince of Prussia and the Crown Prince of Saxony, on September 1, 1870, without orders from the royal headquarters, and when the Saxon Prince had asked for a day of much-needed rest for his troops. The Prussian Prince learned in the night of a probable effort of the French to force their way out towards Mézières, and gave the information to his Saxon comrade with notice of his own purpose to advance decisively on the left at the break of day. The Saxon Prince at once issued his own orders for an attack by the right at the same time, and

both thus anticipated orders from Moltke which came after the movements were in full progress.

There can be no such initiative when there is the least doubt of the readiness at general headquarters to approve and applaud such assumption of responsibility, if it is done intelligently and in real comprehension of the general plan and object. It has more commonly been the reproach of modern armies that spontaneity is so snubbed by jealous superiors that "dead, mechanical obedience" has been the rule, and zealous initiative the exception. Yet the first is the prolific source of delays, cross-purposes, and failures, while the other, when used with intelligence, is the spring of energy that seizes the fleeting opportunity without hesitation, and brings triumphant success. Among the lessons taught during the last thirty years, let us hope that our officers have not forgotten to learn this.

Prince Hohenlohe-Ingelfingen avoids every appearance of mere technicality in his study of the campaigns he has selected as examples, and his lucid and familiar style makes his work entirely intelligible to the general reader. He points out examples of error as well as of correct strategy, and shows how simple are the principles on which a campaign is conducted. But he reiterates the truth that while the whole seems the most natural application of common sense, the execution often involves the most terrific difficulties. Here the highest qualities of mind and will, of courage and perseverance, of self-possession and of resource are demanded. It may be doubted whether any other book on the subject better deserves to be a *vade-mecum* with the military student than this. The English edition is in excellent form, and the maps enable us easily to follow the text.

MRS. STANTON'S MEMOIRS.

Eighty Years and More (1815-1897): Reminiscences of Elizabeth Cady Stanton. New York: European Publishing Co. 1898.

Mrs. Stanton has had a busy and eventful life, and she tells its story in a manner that is engaging, both because of the variety of her experience and because of her satisfaction and delight in the recital. But her narrative is often overweighted with trivial minutiae. She was born November 12, 1815. She represents herself as suffering much from a repressive training, and more from the theological system in which she was brought up; declaring that all the cares and anxieties, the trials and disappointments of her whole life have been light in comparison with her sufferings in childhood and youth from her religious experience. This was intensified when, upon going away to school, she became subject to the revivalism of Finney and was converted in the manner then approved. The account of her school life is the more interesting because the school, that of Mrs. Willard in Troy, was a famous one, a step in the direction of the better education of women. The first attack Miss Cady planned upon the laws unfavorable to women was an amusing one. As a mere child she was impressed by the injustice done to women as she listened to their complaints in her father's law-office. The banter of the students there as to her own prospective disabilities increased her indignation, and, thinking that, if she could cut the obnoxious laws out of her father's law-

books, they would be annulled for ever, she set out to accomplish her great design, but it was frustrated by an accomplice. Thereupon she had her initiation into the business of her life, her father explaining to her how laws were made, and saying to her, "When you are grown up and able to prepare a speech, you must go down to Albany and talk to the legislators. . . . And if you can persuade them to pass new laws, the old ones will be a dead-letter."

On p. 60 Mrs. Stanton tells us that she was married May 10, 1840, but on p. 71 the happy day proves to have been May 11, the bridegroom's detention on his journey making a postponement necessary. Seven children were born of this marriage, six of whom are still living. The wedding journey was unique. It took Mr. and Mrs. Stanton to England in company with James G. Birney and others, delegates, like themselves, to the World's Anti-Slavery Convention. It was probably her game of "tag" with her brother-in-law, just before sailing, that impressed Mr. Birney with Mrs. Stanton's superabundant vitality. We have very interesting glimpses of different members of the convention. When it rejected the women delegates, Garrison went outside the camp with them, sharing their reproach. "After coming three thousand miles to speak on the subject nearest to his heart, he nobly shared the enforced silence of the rejected delegates. It was a great act of self-sacrifice which should never be forgotten by women." Mrs. Stanton and her husband had already agreed to differ on some things; he was joined to the Liberty party, which had broken with Garrison, and her sympathies were with the followers of Garrison; his devotion to the rights of women counting much in his favor in her eyes. In their later life Mrs. Stanton and her husband found themselves differing widely in their political opinions, she cleaving to the Republicans even in 1884, and he long before that becoming a Democrat, after the manner of the New York *Sun*, for which he was a writer for some years.

To return to the World's Anti-Slavery Convention, we are told that Elizabeth Fry was studiously contemptuous of Lucretia Mott because Lucretia was a Hicksite Friend, while Mrs. Fry was stiffly orthodox: "If Mrs. Mott was on the lawn, Mrs. Fry would go into the house. If Mrs. Mott was in the house, Mrs. Fry would stay out on the lawn." One evening, when they were all crowded into the parlors, Mrs. Fry found herself impelled by the Spirit to pray for the schismatic Americans, that they might be brought to see the error of their ways. Mrs. Stanton urged Mrs. Mott to make a devout retort, but Mrs. Mott felt that one breach of hospitality was quite enough. Tennyson's apologetic reading of his own "Maud" is capped with a difference by Thomas Clarkson's getting his wife to read before a company an article which he had written against colonization, and interrupting her with "Hear! hear!"—so absorbed in the matter that he forgot himself as the writer.

In chapter vii., "Motherhood," Mrs. Stanton gives abundant proof that her interest in great public affairs has not slackened her interest in her home affairs. She has been an enthusiastic housekeeper. As to the proper treatment of new-born babies and nursing infants she has much to say on which only experts can decide. One of her ideas is, that babies are born tired and need immediate rest. One is tempted to say, if Mrs. Stanton was

born tired, the condition was one she seldom experienced in her maturity. She seems to have been always "going to and fro in the earth," and to have been always fresh and ready for each new adventure.

In 1843 Mrs. Stanton's home was established in the vicinity of Boston, and she had much pleasant contact with the anti-slavery people there, and listened with warm approval to the preaching of Theodore Parker. Writing of "the first volume of Whittier's poems, published in 1838," she takes no account of the volume of 1837, published by Isaac Knapp and issued from the office of the *Liberator*, of which Knapp was the printer at that time. Her ninth chapter brings Mrs. Stanton to one of the important stages of her life, the first Woman's Rights Convention. This was in 1847, when, on account of her husband's health, they had left Boston and settled at Seneca Falls, N. Y., where they lived for sixteen years. The convention originated in a chance meeting of Mrs. Stanton with Lucretia Mott and other liberal Friends. A month later there was another in Rochester, and Mrs. Stanton was fairly launched on a career of many labors and anxieties, in which, nevertheless, she has taken great satisfaction and delight. To her true yoke-fellow, Susan B. Anthony, she devotes two chapters of generous appreciation. To the more serious and humorous elements in her friend's career Mrs. Stanton has done equal justice. There was much need of the humorous elements to make the ridicule and abuse endurable. Emerson wrote of Phillips that a course of inobs made him the best stump-speaker in America. Miss Anthony's training was as good. It is written of her and Mrs. Stanton that they are of the most opposite characteristics, and that "each does not so much supplement the other's deficiencies as augment the other's eccentricities."

In 1854 Mrs. Stanton made that first speech to the Legislature which her father had prophetically intimated many years before. Before making it, she read it to him, an unsympathetic listener, and her success gave her courage for the ultimate event. Of that speech Miss Anthony printed 20,000 copies. In 1860 the new easy-going divorce laws of Indiana attracted Mrs. Stanton's warmest sympathy, and she entered heartily into the discussion which they aroused throughout the whole country. In a chapter upon marriage and divorce she makes a frank avowal of her sentiments. They will be shocking to the ecclesiastical and conventional moralist, and few, we hope, will range themselves beside her in her contention that the state has nothing to do with either marriage or divorce, and that if only "divorce were made respectable and recognized by society as a duty," there would be no further trouble. Another reform in which Mrs. Stanton took an active part was that of the Bloomer dress. It was not, she reminds us, originated by Mrs. Bloomer, but by Mrs. Miller, the daughter of Gerrit Smith. The trials of this reform are set forth with much feeling. Evidently the loose Turkish trousers were not happily conceived; and in general the dress was not an attractive one. After a time the hearts of the bravest failed them, but Mrs. Stanton is able to record many hygienic improvements in the dress of women, and might, if she had chosen to do so, have gloried in the bicycle as doing more to effect a certain correspondence between fashion and convenience than the dress-reformers have been able to do at any time.

It is impossible for us to follow Mrs. Stanton into the various activities of her later life. The "journeyings often" of the great apostle were few compared with hers. From 1869 to 1873 she and Miss Anthony made many raids upon the West in the interest of their dearest hope; in 1891 going to California and making their work an important factor in a political campaign. In 1861 they were foremost in the organization of the Women's Loyal League, which had for its principal object the economizing of the rebellion for the emancipation of the slaves. The Centennial of 1876 was utilized as leverage for the woman's-suffrage agitation. During the next four years Mrs. Stanton wrote her 'History of Woman's Suffrage.' A task which subsequently engaged her interest was 'The Woman's Bible,' the second volume of which has recently appeared. This was an attempt to make on every text in the Bible bearing on the position of women its appropriate comment in the interest of women's wider liberties and fuller rights. It is not a little strange that Mrs. Stanton should have cared, with her purely rationalistic conception of the Bible, to engage in such a task. The more natural course would have been for her to ask, Why should the Bible present an adequate conception of the social position of woman in the modern world, and why should we be troubled in any way if it does not? To those holding the traditional opinion of the Bible, Mrs. Stanton's comments will appear irreverent and blasphemous; to those who regard it as she does they must appear superfluous.

In her concluding chapter Mrs. Stanton details with honorable pride the circumstances of the celebration of her eightieth birthday anniversary. It is clear that she has troops of friends, outnumbering all the enemies that she has ever made. And she has other satisfactions. If the suffrage has been extended to women only to an extent discouraging to her fondest hopes after so many years of agitation, the disabilities of women have been much ameliorated in many particulars, or have entirely disappeared, and their efficiency in the social organism has been much increased. Mrs. Stanton's temperamental happiness is, consequently, reinforced in her old age with gratitude for the victories already won, and with the assurance that the future has yet better things in store.

Die Kritik in der Englischen Literatur des 17. und 18. Jahrhunderts. Von Paul Hamelius. Leipzig: Th. Grieben's Verlag (L. Fernau). 1897. Pp. 207.

The present generation of scholars and readers is showing a remarkable increase of interest in the history and theory of literary criticism. Not only is the press sending out a growing stream of books on 'The Principles of Criticism,' 'The Evolution of Criticism,' and 'The Theory of Literature' (a score or more in this class within the last years could easily be named); not only a school of French criticism in practice, theory, and history captivating the judicious; not only is Aristotle's 'Poetics' (and many of its progeny) continually seeking new editors and printers, but the colleges also (Oxford, Harvard, Chicago, California) are beginning to treat the History of Criticism, and especially of English Literary Criticism, in their regular literary curricula.

The history of English literary criticism

has never been thoroughly written. Involving, as the writing of it would, the reconstruction of many points in English literary history, and the consideration of so vast an amount of material, as yet undigested, it is doubtful if it can be adequately written as a whole until its parts have been thoroughly worked up in a series of monographs. Several of these monographs have already been attempted, but the work of Dr. Hamelius is, in our opinion, the most important contribution yet offered in the field. It is essentially an account of English literary criticism in the neo-classical period, especially in the years from about 1650 to 1725. The literary criticism of the Elizabethan period is sketched, but the author's picture is considerably out of focus, and it is evident that he lacks a thorough comprehension of the literary history of the period. Want of acquaintance with the studies of previous workers in the field, and especially with Prof. Schelling's monograph on Poetic and Verse Criticism in the Reign of Elizabeth, is unfortunately noticeable here, as elsewhere in the volume. So the account of the revival of Spenser's influence in the eighteenth century (pp. 111 ff.) might have been improved by reference to Prof. Phelps's 'Beginnings of the English Romantic Movement,' as might the account of the Return to Nature (pp. 155 ff.) by reference to Miss Reynolds's study of the Treatment of Nature in English Poetry between Pope and Wordsworth. Moreover, there are a few points in which Miss Wylie's *Studies in the Evolution of English Criticism*, as well as Prof. Vaughan's Introduction to his 'Selections in English Literary Criticism' in the Warwick Library, would doubtless have been of service. As it is, however, the author, by neglecting his *Mitstreben*, has followed Goethe's maxim, and has thereby perhaps been better enabled to cover a large amount of hitherto neglected evidence, and to present a more independent and original view of the subject. On the other hand, he has neglected a certain amount of evidence which should have been covered. Both points might be illustrated from the various novel entries, as well as from the omissions, in his interesting Bibliography (pp. 188-201). And as the work is less satisfactory for the larger Elizabethan period, so for the last half of the eighteenth century, in the still obscure and inadequately traced criticism of the nascent Romantic movement, it is incomplete and inadequate. Its strength is in the discussion of the criticism of the neo-classical period.

In spite of these and other necessary reservations, it must be said that Dr. Hamelius has accomplished a delicate and difficult task with considerable success, producing a monograph which comes near to serving the purpose of a full history of the subject in its period, and presenting evidence which should help very materially in that revision of many of the old and conventional views of English literary history which has been in recent years, especially since the eulogization by Mr. Gosse of the thesis contained in his work 'From Shakspeare to Pope,' and since later special studies in the closing of the Classical and the beginnings of the Romantic movement. The more important of his new views the author summarizes at pp. 185-187: first, that neo-classicism in criticism as in poetry is to be dated from Ben Jonson rather than later—other forms of it, of course, are to be found in the 'Areopagus,' in Webbe,

Camplon, Daniel, and others before Jonson; that in the criticism of Dryden's later period is to be found the germ of a new Romantic criticism, developed to some extent after Dryden also by Dennis, Addison, and especially Steele; that the classical criticism and views represented by Pope and his party never gained undisputed supremacy in England; that Dr. Johnson, in upholding the classical standard, supported a cause already lost; that the welcome of Ossian and of Percy's 'Reliques' was not the cause but the consequence of a change in taste which had been long preparing; and that the Romantic poetry which began soon after 1730 was a direct consequence of the earlier critical activity, as is exemplified in the case of the Wartons, father and sons. Points of novelty and interest also are involved in the author's treatment of Ben Jonson, Hobbes, Dennis, Steele, and the Wartons (although Joseph Warton's thoroughly modern and Romanticist criticism on Pope is hardly accorded the importance that belongs to it), as well as in the demonstration of the fact that the older English (Elizabethan) taste in poetry never completely disappeared even in the height of the classical reaction, but lived and held its own away from the court and the city in many a corner of England where old books were read and old customs were cherished—as with Sir William Temple, for example. Valuable, too, is the exposition of the moralistic interest in criticism and literature which became prominent as a new historical tendency in the early years of the eighteenth century, "so that it was clear enough to people of penetration that neither a Return to the Renaissance nor a conversion to French forms was impending."

The author displays a considerable power of historical generalization, especially in indicating the varying separate or opposing currents of tendency in his periods, and this lends interest to his remarks explanatory of the failure of most writers properly to distinguish these currents:

"The chief reason why the historians of literature have not more precisely exhibited them is because they have preferred to fix their attention on single writers of prominence, overlooking or neglecting the lesser critics whose works must serve as commentaries on the greater. The aversion of many English investigators to abstract considerations, together with their predilection for biographical particulars, is responsible for the errors that still prevail."

In accordance with the point of view herein implied is the main defect in the author's general method—a somewhat too schematic arrangement, and a tendency to introduce groupings somewhat too set and formal. A thread is easily secured, and the material is vastly simplified by reducing everything to the incessant antithesis of "Classical" versus "Romantic"; but is not the arrangement at some points somewhat arbitrary and artificial? Or, again, for instance, must the man who wrote the "Letters on Chivalry and Romance" be denied a position among Romantic critics, and Bishop Hurd be treated as a Classicist only, because he wrote the essay on the "Province of Dramatic Poesy"? In summarizing the historical bearing and significance of theoretical views on literature Dr. Hamelius displays much acumen; it is, however, a defect of his study that applied criticism is subordinated throughout to critical theory. After Addison, the former begins far to outweigh the latter in historical importance.

In minor points, we question whether

"Puttenham" can fairly be ranked as a critic with Bacon and Sidney (p. 18); whether Spenser is really to be classed with Webbe and Camplon as one of those who "were for confining English poetry to the model of ancient verse-forms" (p. 20); the propriety of the application of the term "Romantic" in even the loosest sense to Cowley (p. 48); and the attribution to Steele, "almost exclusively" (p. 97), of the inception of the critical Return to Nature—Wordsworth in his recent work seems to find the first of the new Romantic doctrine in Addison. Nor is the account of the "Rules" and their place in English criticism (pp. 119-123) quite adequate.

The author's style is compact and severe, but logical and clear—all points of great merit in German prose. The book badly needs an index.

How to Play Golf. By H. J. Whigham. Chicago: Herbert S. Stone & Co.

"There was a time when golf was played as a recreation," says Mr. Whigham, but the observer of manners and customs who reads newspapers and listens to general conversation in these United States, will be disposed to doubt the assertion. It is but a few years ago that we called attention to the merits of the game, and expressed surprise that it had not attracted the notice of the increasing number of people in this country who are interested in field sports. And now it has suddenly become almost as universal as bicycling, and vast numbers of men and women of all ages seem to regard it as the most serious business of life. People who never before played any kind of game are now intensely interested in the comparative merits of the masher and the lofter, and there is danger that the final disappearance of the art of conversation at dinners and other social meetings will be due in a great measure to the melancholy fact that the golfer can talk of nothing but golf.

Of course the popularity of the game has resulted in the production of considerable literature. The great Badminton volume, of which Mr. Whigham truly says that it is rather an aid to experts than a consolation to beginners, has already passed through several editions, and will probably continue to hold its own as a sort of golfer's Koran. But inasmuch as the conditions surrounding the game in this country differ from those encountered elsewhere, and Mr. Whigham devotes considerable space to the important questions of making and improving links in our climate, his work cannot be considered superfluous. On the contrary, American players will find it very useful. Being on a much smaller scale than the Badminton book, it naturally appeals to the beginners for whom it is mainly intended; and the numerous instantaneous photographs of experts making the different strokes come very near to making the reader a spectator on the links where these strokes were played, and challenge his imitation. We entirely concur in Mr. Whigham's statement that "the most frequent fault which assails all golfers consists in standing too much in front of the ball," but for this very reason it seems unwise to discourage, as he does, the method of driving from the left leg. Doubtless it does not suit the average man; but if a beginner finds that he cannot learn to drive in the open style, let him try this method,

and, even if he does not become a second Laidlay, he may surprise himself and immensely improve his game. Again, we approve the recommendation of a short swing for those who begin golf comparatively late in life, as tending to greater accuracy, but we confess to being puzzled by the direction to "stand erect with the weight of the body equally distributed between each leg." Mr. Whigham wisely prefers the mashie to the lofter, and considers a cleek an excellent instrument for putting; thus, inferentially, reducing the number of necessary clubs to three. This is a desirable method of simplifying the practice of the game, and it is a method that has been found to work admirably on many courses. The advocates of the brassey will probably scout such an idea, but a little experience of the virtues of a well-balanced cleek for the second shot may change their views.

The drive is no doubt the easiest stroke in the game, and it is certainly the stroke that most players like best. It is, therefore, interesting to know that in this respect we are not far behind the Scotch and English records. Last year Mr. H. M. Harriman, in a long-driving competition, drove a ball 340 yards, and other American players have done nearly as well. Mr. Blackwell, who is probably the longest driver in England, has driven the long hole at St. Andrews (about 500 yards) in two strokes *twice in one day*, which is certainly an extraordinary performance, though not quite up to Mr. Tate's record drive of 340 yards. In this latter case, however, it should be stated that the *carry* was about 260 yards, and the nature of the ground caused an additional roll of nearly 100 yards. On level ground, 260 yards may be regarded as the maximum.

Through the Goldfields of Alaska to Bering Straits. By Harry De Windt. Harper & Bros. 1898. 8vo, xii, 314 pp. Illustrated.

Mr. De Windt's intention was to make a journey, in the main overland, from New York via Bering Strait and Eastern Siberia to Paris. In this he failed. He succeeded in travelling with a companion from the head of Lynn Canal over the Chilkoot Pass and down the Yukon to St. Michael's, as many had done before him. Thence he was transported by sea to Cape Chaplin, the Indian Point of navigators, on the western side of Bering Strait, by the United States revenue cutter *Bear*. Here he remained about six weeks, being taken off by the whaler *Belvedere*, which carried him to Unalashka, where he was transferred to the *Bear* and taken to San Francisco.

Books of travel may be roughly classified in two categories. In the one the traveller endeavors to add to the world's stock of knowledge about the region visited. In the other he endeavors to purvey for the lovers of sensational reading such a combination of fact and fancy as may stimulate a vitiated taste for excitement, and thereby earn a living. Admitting that the line between the two is not clean cut, there is usually little difficulty in assigning its place to any particular book. In the present case there is no difficulty whatever, as Mr. De Windt's narrative is, in both text and illustrations, sensational, and contains no new information of any value. It is the sort of "copy" one might expect an hysterical reporter to furnish to a "yellow" newspaper. Its usefulness, if any, will consist in the fact that a

contemplation of the picture of two men climbing a cliff with a slope of sixty degrees, entitled "Nearing the Summit of the Chilkoot," may have a deterrent effect on some would-be Klondiker. Although many accounts of the Yukon trip have appeared in the daily press, the present one, if written in a calm and sensible manner, and illustrated by authentic photographs, might have been welcomed. The author is so intent on emphasizing the horrors of the Pass, the mud, the mosquitoes, etc., that he has wasted what a more sensible person would have recognized as a real opportunity for a good bit of work.

On the Asiatic side his ignorance of existing literature, and his extraordinary incapacity for dealing with a turbulent lot of drunken Esquimaux, resulted in what was for him a most uncomfortable six weeks. When it is remembered what excellent work for geography and anthropology was done on this very shore by the brothers Krause a few years ago, the contrast between the genuine explorer and the "reportorial" variety points an evident and much-needed moral.

So long as cheap paper and "process" engraving make the path of the bookmaker easy, we may expect a pretty large percentage of worthless publications annually. Nevertheless it is probable that the good sense of the reading public will soon grasp the distinction between real and sham exploration, and publishers will find it unprofitable to issue books which have no just title to be considered as contributions to either science or literature.

The Land of Arthur. By Marie Trevelyan. London: John Hogg; New York: Charles Scribner's Sons.

There appeared some time ago two books about Wales by Marie Trevelyan, 'Glimpses of Welsh Life and Character' and 'From Snowdon to the Sea.' Then, to complete the triad inevitable in all things Welsh, a quasi-historical work was published, entitled 'The Land of Arthur.' The first two volumes are popular and entertaining; the latest, popular and exasperating. 'The Land of Arthur' is a well-indexed but ill-digested mass of facts, fables, and fallacies, so uncritically and inextricably intermingled that the book seemed at first unworthy of serious notice; but the excellence of the index carried the day. The consecutive perusal of these 423 pages is an unremunerative and irritating task, but, by a skilful use of the copious index, the reader can obtain much misinformation mingled with many truths relating to Welsh history. Even these truths must first be verified by reference to less emotional works, for the atmosphere of this book is charged with a fervid patriotism and a turgid enthusiasm of phrase that give an unveracious coloring to the best established facts. A stately array of authorities, prefixed to the volume, lend it an air of historical solemnity, but there has been no sifting of evidence, no attempt to distinguish between trustworthy sources and legendary lore, and, worst of all, the author's own crude imaginings have added to the general confusion. The book seems to be a part of the great Celtic revival, and can be read with profit only by adherents of that cult.

The treatment of the Arthurian age is full but bewildering, and it is impossible for the humble seeker after truth to extricate the few facts from the entangling mass of fic-

tion. The tale of the heroic struggle between Llewellyn and Edward I. has a most suspicious *ex parte* coloring. The English are uniformly described as fierce and malicious minions, "hungry panthers," etc., and Edward I. is "eternally disgraced," whereas the notorious and nationally characteristic treason and discord among the Welsh themselves are apologetically slurred over. The hard conditions of peace exacted by the English King are given in detail, but it is not mentioned that the heavy fine of 50,000 marks was afterward remitted. It is, however, a matter for gratitude that the old story of the slaughter of the Welsh bards by King Edward is not revived, and this is all the more to be commended since in most matters the credulity of the author is almost unbounded. The legend of the founding of Oxford by Alfred the Great is implicitly accepted (p. 53), although the paragraph in Asser's 'Life of Alfred' has been shown to be an interpolation, and the whole myth has been effectually disposed of by Messrs. James Parker and Hastings Rashdall. The story of the discovery of America in the twelfth century by Madog, the hero of Southey's "Madoc," kindles the author's enthusiasm, although she admits that there is some controversy about it. We learn, also, of certain edifying conversations between Caractacus and St. Paul at Rome. In the chronicle of Zonaras, not quoted by this author, we have some information about the sojourn of Caractacus in Rome which may be authentic; the Briton, gazing upon the stately structures of the capital, wondered why the occupants of such palaces should covet the humble huts of his countrymen. Beyond this, all information concerning Caractacus at Rome rests upon the untrustworthy testimony of the Welsh Triads. Caractacus died probably in the year 54 A. D. St. Paul went to Rome not earlier than 62 A. D. But this does not trouble our author; we do not know the exact dates about these two men, and consequently they must have met, and "a warm friendship between the great Apostle and the Cambro-British commander was the result." Moreover, since we know little about the movements of St. Paul and Caractacus between the years 60 and 67 A. D., it is "highly probable" that they were together in South Wales engaged in introducing Christianity. The author also accepts the late legend as truth that Joseph of Arimathea went to Britain. Thus, with sufficient pride of race and an irresponsible imagination, we may, by accepting as historical truths the legends of a land, prove any statement about anything, if only no authentic information to the contrary can be obtained.

Again, a chapter is devoted to "The First Sailor King." This is Carausius, who, on the doubtful authority of Richard of Cirencester, likewise not quoted by the author, is made a native of St. David's. Now Carausius was a German, and Gibbon, who calls him "a Menapian of the meanest origin," admits that the account of his birth is untrustworthy. This man secured the title of Emperor during the reign of Maximian, who is in this work, and in the ever consistent index as well, persistently referred to as Maximilian, an error due, it would seem, to an injudicious combination of the real name with that of the later Emperor Maximin. But our author hints at no doubt concerning the origin of Carausius, and boldly claims him as one of the incomparable Welsh heroes. The authentic history of the Welsh is too slight

guished and noble to require this disingenuous treatment.

The English of this work is unpardonably slipshod. "The science of military superiority superseded native courage" is a sentence, not to be corrected, but to be destroyed. "In a letter from Roger Lestrange to King Edward I. his death took place on the 11th of December 1282." As a general thing year-dates are profusely omitted, and only the days of the month given, but now and then, in a fine fit of exactitude, the date is furnished twice in full within the limits of a single page (pp. 362-363). But the worst offence is the rhetorical padding: descriptions of imaginary sunsets and other sky effects on the eve of battles centuries ago, and reveries of great commanders not quite in the style of Thucydides. For this one need not cite the list of authorities consulted. But, as has been said, the index to this badly written and exasperating book is excellent and useful.

Montaigne et ses Amis, La Boétie—Charron—Mile. de Gournay. Par Paul Bonnefon, Bibliothécaire à l'Arsenal. Nouvelle édition. Paris: Armand Colin et Cie. 2 vols., 8vo, pp. xv, 329, 413.

Five years ago the students of Montaigne were pleased by the publication of a handsome quarto volume entitled *Montaigne, l'homme et l'œuvre*. It contained more than eighty well-chosen and interesting illustrations and a well-written compendium of the familiar facts regarding Montaigne's life and writings. The reprinting of the text in these two commonplace volumes makes rather more evident than before the absence in it of any original views or any personal investigations; but it remains an excellent summary of what has been previously noted and what has been frequently said, while the somewhat monotonous style is vivified by a very agreeable tone of feeling. M. Bonnefon is always on the large and generous side of disputed questions and uncertain points of view.

The study of Estienne de La Boétie, now inserted in the middle of the Montaigne chapters, was originally the introduction to an edition of La Boétie's works published

by M. Bonnefon in 1892. These chapters have somewhat more the stamp of research than those concerning Montaigne; the editor of La Boétie's works naturally became more familiar with the details of his life than any one but a few students had been before, and the general reader is here informed of interesting facts whose interest is increased by the intelligent sympathy with which they are narrated. The chapters about Charron added at the end of the volume (with a sketch of Mile. de Gournay) are less important. M. Bonnefon has not edited Charron's works; and in any case the vacillating old canon is a less interesting figure than the high-thinking young lawyer. Besides, when Sainte-Beuve has written thirty-five pages about a man—such a man—there is little occasion to say anything more on the subject.

M. Bonnefon, fortunately, in writing about Mile. de Gournay, attains the same position as Sainte-Beuve in this respect. His sketch of her, though comprised in such a small frame, is full length, and has almost the effect of being life size. Moreover, in portraying her, he has given proof of admirable discernment of character. She has at last received from the hands of a competent judge complete justice, respectfully and admirably rendered; and to do her justice is to do her honor. Sainte-Beuve, a half-century ago, in his early volume on sixteenth-century poetry, wrote in high terms of Mile. de Gournay's abilities in literary discussion. M. Bonnefon, while fully recognizing her defects, sets forth the dignity of her life and the nobleness of her character, her loyalty and her candor, her generosity and her kindness, and shows himself touched with sympathy by the passionate enthusiasms of her nature. These passions, these enthusiasms, these vehemences brought upon "la docte fille," while living, much caricaturing ridicule, the echoes of which have not yet died away. M. Stapfer, only a year or two ago, spoke of her as "a virago of literature." No one can again justifiably use such language—unqualified—about her.

To represent Mile. de Gournay truly is to dignify the judgment of Montaigne regarding her and to free it from detracting com-

ments. This service M. Bonnefon's volumes render to the great Moralist.

BOOKS OF THE WEEK.

Aldrich, T. B. *Baby Bell*, and *Other Verse*. Boston: Houghton, Mifflin & Co. 15c.

From \$1 75 to \$1.25.

THE STUDENT'S CHAUCER.

Being a Complete Edition of his Works. Edited from numerous manuscripts, with Introduction and Glossarial Index, by Prof. W. W. SKERT, Litt.D. Crown 8vo, cloth, \$1.25.

"In all the thousandfold attentions which have been paid to Chaucer, it is strange that the attention of an eminently available 'perfect and complete' one-volume edition should have been so long delayed. We have had the wild Protean creature in every other form save one fit for an ardent student. We have handled the 'Canterbury Tales' in many a three-volume style and longed for the Pickering 'complete' at five pounds. Even Bell's 'Chaucer' we would have strained a nerve to possess—except for the fact that the set spreads over the better half of a shelf. So when Rev. Walter W. Skeat reduces several great blocks to a single green one, there is surely something gained you may say as well as lost. The Student's Chaucer, being a complete edition of his works, edited from numerous manuscripts, by the Erlington and Bosworth Professor of Anglo-Saxon at the University of Cambridge, is our gain."—[Yale Literary Magazine, Feb., 1898.]

Bird Studies

An Account of the Land Birds of Eastern North America. By WILLIAM E. D. SNOTT. With 156 illustrations from original photographs. Quarto, leather back, gilt top, in a box.

This work, while strictly accurate in every particular, avoids the use of all technical terms. The illustrations are from live birds. A distinctive feature of the book is the views of nests, these having been photographed, often with no little difficulty, without being removed from their original positions.

The Nation.

NEW YORK, THURSDAY, MAY 12, 1898.

The Week.

Not the least important result of Commodore Dewey's brilliant stroke at Manila is the instant revelation which it forced of Spain's internal weakness and political instability. The necessity of putting Madrid and other points of the country under martial law; the unchained passions and tumult of the Cortes; the rumors of a change of ministry, possibly of a change of dynasty—these are blows to Spain no less crushing in their moral effect than that delivered at the Philippines by our quiet but daring and successful Commodore. The *Madrid Liberal* has already begun to discuss the kind of government necessary for "the Spain of the future, if," it says, "God has decreed that ancient Spain shall fall." It is well if leading minds in Spain are already turning to this problem. "Ancient Spain" has already fallen. The threatened loss of all her colonies is only an outward revelation of the inward decay which had made the fall and the loss inevitable. For some years it has been an open question if Spain has not been more weakened than strengthened by her colonial possessions. The Philippines have been a source of wealth, though not one-tenth what England would have made them produce; but insurrection has been chronic there, and the vast sums spent and stolen of late years in the islands have made the account a losing one for Spain. Cuba is obviously a millstone around her neck; Spaniards have long confessed this privately. Porto Rico has been less troublesome because less important. Spain, if stripped of all these foreign dependencies, might conceivably pull herself together and enter upon a new era of stability and prosperity in the peninsula. Her territory there is a splendid one for a great nation, rich and varied as it is, within its encompassing seas. Her population is hardy and homogeneous, and only needs a good government in order to become wealthy and strong. But the elements of a good and lasting government are precisely the things which, as the *Liberal* confesses, are nowhere visible in Spain to-day.

All the accounts received from Manila agree in representing the Spanish officers and soldiers as brave to the point of rashness and even of desperation. They must have known that they had no chances of success, and very little chance of life, yet they went into the battle without the least sign of flinching. Their ships were a slaughter-pen from the first fire, while ours were exposed to more

danger from the heat of the weather than from the shot and shell of the enemy. The only life lost on the American side was from sunstroke. This detracts nothing from the valor of Commodore Dewey and his subordinates, while it adds much to their reputation for prudence and foresight. The art of war consists in doing the greatest possible damage to the enemy with the least possible injury to one's self. Gauged by this rule, Commodore Dewey's feat is almost without parallel. His humanity after the action was equal to his bravery and skill in it. The wounded Spaniards received all the attention that his own men would have had if they had received the same hurts. Now, why should not we extend our sympathies to these brave men, and to those who mourn for them and their dead fellow-heroes across the water?

Spain's unpreparedness for war, because she believed war would not come, was confessed by Minister Moret in his speech in the Cortes last week. Surely never was a nation less ready for the appeal to the sword. With finances toppling, with a government uncertain what a day might bring forth, with an army at home in open discontent and in Cuba depleted by terrible losses, with the fleet poorly equipped and poorly drilled, Spain yet fronted war in the spirit of the sad remark made by a prominent Spanish public man to Benoist, "We do not know how to govern or to organize in peace or war, but we know how to die." The ineffective valor of the Spanish sailors at Manila deserves the plaudits it has received. Caught unprepared in a way that seems to argue almost criminal negligence on the part of the Spanish Admiral—it is asserted that his ships had not even steam up—the men fought with a bravery that nothing but death could quench.

The forecast of a speedy reconstruction of the Spanish cabinet is likely to prove correct. Sagasta's ministry was not considered a strong one, even at the time it was announced. His Minister for Foreign Affairs was not well known; his Minister of Finance did not command the confidence that Gamazo, for example, would have enjoyed. His cabinet was, in fact, distinctly made up for the one great purpose of establishing autonomy in Cuba, and so averting a war with the United States. That aim having failed, it is not strange that the ministry should be counted a failure. Any readjustment that may be made will be only temporary, looking to a strengthening on the military side and to conciliating national sentiment, and intended to last the war through if pos-

sible. After that, Spaniards themselves cannot guess what will happen, but appear to be shrugging their shoulders and comforting themselves with their favorite proverb, "To-morrow will be another day."

One of the extraordinary things about the Spanish government of the Philippine Islands has been its strongly marked ecclesiastical character. The prominence of the friars as practically civil governors as well as religious leaders has been remarkable. It has not been altogether pleasant for the friars. They have been the object of the intensest hatred by the natives, and have been the first ones to be killed in insurrections. Missionaries in other lands have often suffered from the violence of natives, but never elsewhere, we believe, has there been such marked and inveterate hostility against Christian teachers in a pagan land as in the Philippines. This has sprung, of course, from the identification of the religious with the civil government in the minds of the natives. Even at Madrid, in the office of the Minister for the Colonies, the most powerful personages in waiting are ecclesiastics. M. Charles Benoist describes the way in which one desiring to get a hearing from the Minister had to run the gauntlet of rows of bishops and cardinals and friars.

We have been imitating, as closely as possible, the old Spanish methods in filling our embassies and consulates. We are now, perhaps, at last, on the eve of having colonies, a consummation for which our politicians have been longing for many a day. We have formed no plan for their government. There is no sign that we know of that any public man has ever bestowed a thought on the subject. In the midst of war it would be difficult to get the problem even discussed. But the crisis is nearly upon us. We shall probably be fitted out with a full line of colonies before the summer is over. Well, how are they to be governed? We have not a particle of doubt that most of our politicians look forward to governing them in the old way, through the Quays, through the Forakers, through the Gallingers, through the Lodges, through the Masons, and so on. We shall enter on our colonial career with a fine stock of corrupt practices, already got up for home use. If we go any further in that direction in our new career, we cannot do better than send over a congressional commission to find out how the Spanish politicians "made their pile" when they were let loose on the South Americans, on the Cubans, and on the Philippines, or whatever they are called. If so, Quay ought

to be the first Governor of the Philippines, and Lodge ought to show the Cubans how to "run the machine." This will give us a glorious colonial, but thoroughly Spanish, future.

Coincidentally with the determination now announced at Washington, to land 60,000 men of all arms in Cuba as soon as may be, comes news from the island which shows why such a decision was necessary. The insurgents are found to be more of the nature of men in buckram than was dreamed of at Washington. Gomez is in immediate command of less than 200 men, and has not more than 3,500 within call. But if they were all brought together in one army, it would simply starve before it could ever come to close quarters with the enemy. The only chance of the insurgents is to maintain themselves in widely scattered bands of small numbers. They could not feed an army of 3,000 men for a single day. This Gomez himself admits. What he asks of the United States is more arms, and, above all, rations. Without food and a commissariat, the arms might as well not be sent. The old General says that if we will arm him and feed him and give him time—a good deal of the latter—he will yet drive the Spanish into the sea. He wishes to do this with his own right arm, being distinctly cool over the proposal to aid him with United States troops. Gomez has a natural ambition to remain in chief command, with an eye both to his fame and the good things that may come after the war. So he sends word to Washington not to expose precious American lives to the deadly Cuban climate, but to supply him with all he needs and wait a year or so to see him finish the business.

But the President's military advisers have apparently concluded that this is nonsense. It is our war, and we must depend upon ourselves to conduct it. So the first plan of landing a small expedition, to seize and hold a base, and to get into touch with the insurgents, while rushing in supplies to the reconcentrados, has been abandoned. It was humanitarian, but it was not war. It bordered on the ridiculous, moreover, to be starving with one hand, through the blockade, and feeding with the other, by sending in provisions which the Spaniards were almost certain to capture. So now, we are told, there is to be aggressive military action, on a large scale, with the aim of promptly expelling the Spaniards from Cuba. Gomez's picture of the American army destroyed by yellow fever is held to be exaggerated. Competent army surgeons say that sanitary conditions in camp will reduce this danger to a minimum, which is probably true. But, at any rate, the insurgents are to be practically ignored, and we are

to send men enough to do the work in hand. This is an awful blow to Gomez, the Cuban republic and Cuban bondholders.

There is little fault to be found with the President's selections for the volunteer generalships, announced last week, particularly in view of the tremendous pressure exerted upon him by politicians and the Governors of many States to appoint place-hunters, well brought out by Gen. Miles's remarkable telegram to Col. John S. Mosby: "I should be glad to have your services, but think it will require some influence. Suggest that you communicate with your Senator." It will be particularly pleasing to the army to realize that, with the exception of four major-generalships, all the coveted appointments have gone to regular officers, who have earned them, as everybody must admit, by years of faithful, arduous, and unappreciated service in barrack, camp, and field, and in many a hard-fought Indian battle. Even the civilian appointees have excellent war-time records to justify choice of them. There is general satisfaction with the course of the President in dividing his four appointments as major-general equally between men who served with distinction in the Union and in the Confederate armies during the civil war. It was not until the 31st of March, 1896, that the way was opened for President McKinley legally to nominate Fitzhugh Lee and Joseph Wheeler as major-generals in the army.

That war upsets all existing conditions, even about matters outside its sphere, is illustrated by the new developments regarding the annexation of Hawaii. This proposition was fully discussed in time of peace, and was practically defeated. The scheme of carrying it by treaty was abandoned because a two-thirds vote could not be secured in the Senate, and everything indicated that a joint resolution could not command a majority in the House. In short, annexation was beaten a month ago. But all authorities at Washington now say that it is likely to carry within a very short time. The only reason assigned for the change is that the war with Spain over Cuba makes it necessary for us to acquire these islands in the Pacific in order to have a coaling station and base of supplies. This is absurd, for in the first place we already have the right to establish a coaling station at Pearl Harbor, and, in the second place, there are no Spanish vessels left anywhere in the Pacific Ocean to worry about. The truth about the matter is very well put by the *Philadelphia Ledger* when it says that to annex Hawaii under the present circumstances "would be a plain notice to the Powers that we have branched off into the policy

of colonization, which has been religiously abstained from heretofore, and which is so contrary to the teachings, and heedless of the warnings, of the fathers of the country"; and that it would be "followed logically by the retention of Cuba, the Philippines, and Porto Rico, and the quartering upon the public Treasury of a huge military establishment in times of peace."

The question of an income tax came up in the Senate on Wednesday week in an unexpected way. There was pending a proposed amendment to the Constitution to provide for a vacancy in the office of President in case the person elected to that office should die before his inauguration. This is a contingency not hitherto provided for. The proposed amendment makes the Vice-President-elect the successor in that case, and provides that in case of the death of both President and Vice-President-elect before inauguration Congress may provide for filling the vacancy. When the amendment came up for consideration, Senator Mills offered a further amendment, providing that direct taxes need not be levied in proportion to the respective numbers of the inhabitants of the States, but may be assessed in the same manner as other taxes, duties, imposts, and excises. This means that an income tax may be levied by Congress in proportion to income, not in proportion to population. Mr. Hoar raised the objection that it was not germane to the subject before the Senate, and that it was calculated, if fastened as a rider on the pending amendment, to endanger the latter, and, indeed, to endanger both. He considered it a great subject, one engaging the thoughts of many of the most intelligent citizens of the country, and too important to be yoked with matter of an entirely different kind. In order that it might be taken up by itself and considered on its merits, he moved to lay Mr. Mills's amendment on the table. At the end of a half hour's debate this motion prevailed by a vote of 32 to 29. The vote was on party lines, except that Senator Caffrey voted in the affirmative.

It was evident from the course of the debate that some Republicans would have supported a resolution for an income-tax amendment to the Constitution if it had been offered by itself. Mr. Hoar did not say whether he would have done so or not, but he said he should be glad to have it brought before the Senate in a proper manner. Why Mr. Mills should have declined the request made to him by Mr. Hoar, and repeated by Mr. Chandler, to let the Senate vote upon it as a separate proposition, is not explainable on any other ground than that of politics. What the Democrats want to obtain is not so much an income tax as a public record that they favor it and

that the Republicans oppose it. If Mr. Mills had adopted the simple and rational advice tendered to him, to offer his amendment separately, it is not at all unlikely that it would have received a sufficient number of Republican votes to give it the requisite two-thirds majority, in which case it would probably pass the House also, as a war measure. But in that case it would no longer be an issue in national politics. It would go to the State Legislatures for ratification, and would cease to be available on the stump for the time being. It might give us a constitutional income tax, but that is only a secondary matter.

Some months ago it was rumored that the McKinley Administration was contemplating the removal of the Chief of the Bureau of Statistics, in order to make way for a political favorite. This report called forth immediately such a storm of protest, in letters from the highest authorities in private life on questions of statistics, that the scheme was temporarily abandoned. There was sufficient reason for the protest. Mr. Worthington C. Ford, who succeeded to the office in 1893, found the bureau in something like a state of chaos. It is this bureau which collects, compiles, and prepares for publication those exceedingly important returns of the country's commerce, industry, and finance on which the future plans of merchants and financiers are based. The vital necessity for thorough and accurate work on such statistics is obvious, and thorough and accurate work can be done only by a trained statistician. The work of Mr. Ford was remarkably successful; the Government's statistics, previously regarded with much suspicion, became a recognized authority, and its publications rose at once to the rank of the publications of the British Board of Trade. Thoroughly impartial in his investigations, as becomes an expert statistician, Mr. Ford's assistance was invoked by Democratic and Republican Congresses alike, by the committee on the Wilson bill and the committee on the Dingley bill. The reputation of his work, meantime, had extended even to European circles, to the credit of our Government. Mr. Ford is now at last summarily removed, by a crafty violation of the civil-service law under whose shelter his office was long ago, and very properly, placed. Our readers will no doubt suppose that a Republican statistician of high repute is named as his successor. The country and its records will enjoy no such fortune. An obscure Washington newspaper correspondent, who has for some years shifted about from the employ of one paper to that of another, who is not known to possess the slightest knowledge of his future work, is the happy man. To any who desire to know the reason for this grotesque appointment, it may be explained

that Mr. Austin compiled for the benefit of Mr. Hanna the protection "dodgers" sent out to voters by the Republican national committee in the campaign of 1896.

A report comes from Pittsburgh that Matt Quay and Chris Magee "have reached a definite understanding on the gubernatorial situation, which will go far toward controlling Pennsylvania politics during the next five years." The *Philadelphia Ledger*, which presents the report upon the authority of a Republican contemporary, does not vouch for its accuracy, but says that all the political conditions seem to establish its correctness. The revolt against Quay is serious enough to render it prudent for him to make alliances with party leaders, like Magee, who have been hostile to him. Moreover, so long ago as January, 1896, the boss proposed a compact with the Republican managers in Pittsburgh, the text of which became public and is now revived by Mr. Wanamaker. It was the most extraordinary proposition ever put down in black and white, among the conditions being that until 1900 "Mr. Quay is to have the absolute support of Allegheny County in State and national politics, and is to sustain through his friends all regular Republican nominees and the straight Republican organization"; that, if he shall be a candidate for Senator in 1899, he shall "have the united support of the Senators and members of the Legislature from Allegheny County"; that "in every other case his leadership is to be followed by united support in the Legislature and in national and State conventions, except where a bona-fide candidate appears in Allegheny County"; that State senatorships and other positions shall be apportioned according to a plan fully set forth; that the Republican candidate for Congress in the Pittsburgh district shall be named by the Magee element, without opposition from the other faction; and that "no legislation is to be had at Harrisburg the enactment of which will be to injure the character and business interests of the Pittsburgh parties hereto."

The only reason why the compact was not signed and sealed was that the parties could not finally agree upon the division of the plunder. The draft of a proposed agreement from which we have quoted was made in Pittsburgh, and the *Ledger* says that, "stringent as were the provisions of this proposition to make Quay the dominant power in the government and politics of Pennsylvania, it failed of realization because of his contention that it was not sufficiently stringent." Under the present conditions Quay may be willing to grant larger concessions to Magee, and Magee will doubtless be as ready now as then to make an alliance if he can get the terms he wants. The proposed agreement of

two years ago was published in March, 1896, and Mr. Wanamaker says that "of all the papers in Pennsylvania that published this story of treachery, but one to my knowledge commented upon it adversely"—this exception being the *Philadelphia Ledger*. The *Ledger* is equally ready to denounce such bargain and sale now. It remains to be seen whether the party organs will be as silent in 1898 as in 1896.

The correspondence relating to Chinese affairs was laid before Parliament on April 23, and is confessed by the strongest supporters of the Government to be "not pleasant reading." It shows the most childlike and bland innocence on the part of Lord Salisbury in accepting every successive "assurance" of the Russian Government, and discovers Count Muravieff proceeding from one degree of cynical contempt for Great Britain to another. The chief interest of the papers relates, of course, to the terms on which Russia was to hold Port Arthur and Talienwan, and a little diary marking the steps by which the Russian Foreign Minister advanced to his object is instructive. The leading dates, with the "assurances" given Salisbury on each, are as follows:

December 23—Occupation of Port Arthur only temporary.

January 12—Above promise repeated.

January 19—No designs on Chinese territory.

January 27—Any ports acquired to be open.

February 9—No written assurances had been given.

March 9—Talienwan to be open. Port Arthur not to be fortified.

March 13—Port Arthur would be fortified, and not open.

March 16—"Formal assurance" that both ports would be open.

March 28—Only Talienwan to be open.

March 30—Adhered to earlier assurances.

April 3—Port Arthur not open. No assurances had been given.

Some of Count Muravieff's explanations of his backing and filling are delightful in their impudence. Salisbury had declared in the Lords that he had "written assurances" from Russia that both ports would be open. But the Russian Minister at once reminded him that the assurances were not written, and that whatever was written was not an assurance. He plaintively observed that "the ideas which I may have expressed very confidentially . . . ought never to have been interpreted as 'assurances.' It was evidently impossible for me to make the slightest engagement on this subject before the conclusion of the arrangements." One of his finest strokes was the remark that "respect for the sovereign rights of China" forbade any alteration in the status of Port Arthur—except handing it over to Russia! There may have been no assurances, but there was plenty of assurance. No wonder Salisbury flung over the whole negotiation in disgust, and seized Weihai-Wei so as to have something to show Parliament after having been so overreached.

DEMOCRATIC WAR MEASURES.

The Democrats in Congress, with a few honorable exceptions, insist that the war expenses shall be paid by the issue of new legal-tender notes and by "coining the seigniorage." These two things, although passing by different names, mean the same thing. Both of them provide for the issue of Government paper to pass into general circulation—paper which must be redeemed in gold at the demand of the holder. What the advocates of this plan really desire is that the paper so put out shall not be redeemed at all. It is not silver redemption that they want. They know that the Government has no silver dollars to redeem such notes with. Moreover, Mr. Bland said in his speech, when he proposed the greenback amendment to the revenue bill, that the word "coin" as now interpreted meant gold coin or its equivalent, and for that reason he and his friends were utterly opposed to the issue of bonds payable in coin. The conclusion is inevitable that they want to have so much Government paper put out that it cannot be redeemed at all. This is their unavowed programme for carrying on the war.

Their avowed purpose was set forth by Mr. Bailey of Texas in his speech in opposition to the bill on the 27th of April. He said, first, in reference to the proposed new taxes, that he would vote for them if the Republicans would add an income tax. Then, if money were wanted for immediate necessities, before the new taxes could be made productive, he said:

"We have an asset in the Treasury of more than \$42,000,000, which we will place at your disposal. We will not only direct the Secretary of the Treasury to coin the seigniorage into silver dollars, but we will authorize him to anticipate that coinage by issuing silver certificates to defray the expenses as they are incurred. If that is not sufficient—and according to your estimate it will not be—we will go further, and we will authorize the Secretary of the Treasury to provide the balance of the \$100,000,000 which you say is immediately necessary by issuing \$58,000,000 of United States legal-tender notes. There is no man who doubts that this government can with perfect safety extend its circulation \$58,000,000. I am as far from believing in fiatism as anybody in this House; I have never subscribed to the doctrine that Congress can make something out of nothing; but I know that this government, in a time like this, can easily and safely increase its demand notes \$58,000,000, and there is not a gentleman on the other side who would be willing to assert the contrary."

Such assertions are liable to gain currency and credit by force of impudence, and for this reason they need to be met at the very outset. It is rather late in the history of nations, and of our own nation in particular, to propose fresh issues of Government paper as an instrumentality of war; but when party leaders solemnly advocate that policy, not as a matter of necessity, but as a matter of choice and preference, they must be met and answered. Thirty-six years ago two Congresses were in session, one in Washington and one in Richmond, con-

sidering the question how to obtain means for carrying on war. Both of them, with extreme reluctance and under the plea of necessity, decided to issue Government notes for this purpose. The Washington Government notes were legal tender; those of the Richmond Government were not legal tender, but they entered into circulation, and since public opinion required that they should be accepted in trade, they were practically legal tender. Both began to depreciate as soon as issued. All creditors were required to take them at par. Consequently all such persons were defrauded of a part of their just dues. The loss fell most heavily on the soldiers themselves, whose pay, very small at best, was given to them in a currency of less value than the two governments had agreed to pay them. Prices of commodities rose. The two governments were obliged to pay higher and higher rates for arms, ammunition, food, clothing, horses, wagons, forage, ships; indeed, everything except wages. The cost of the war on the Union side was demonstrably increased more than \$800,000,000 by this means. It would have been increased still more in the Confederacy had not the whole debt, both bonds and Treasury notes, been wiped out by the destruction of that government.

One would suppose that an experience of this kind, taking place within the memory of men still living, would suffice to condemn that method of providing means to carry on war. But Mr. Bailey says that he is not a believer in fiatism. He means that the country is capable of absorbing \$100,000,000 more of fiat money without danger of being called on to redeem it. In other words, he realizes and admits that a greenback is not money, but a promise to pay money—that the note put out to-day may be presented for redemption to-morrow, and that if not redeemed the holder is a loser, the Government's credit is impaired, prices of commodities begin to rise, and that we begin to travel the road which both the Union and the Confederacy began to travel in 1862. His expectation, however, is that none of those notes would be presented for redemption. That is what his scheme of finance rests on—the belief that the public will accept this new paper in addition to what they now hold, and not ask the Government to redeem any of it. What would happen if they should take a different view he does not say. He asks us to entertain full confidence that he is right. As no responsibility rests on him in the premises, he can safely and cheaply do so. But his opponents are carrying on a war which he is only looking at. They are charged with the task of keeping the public credit good as well as putting down the enemy. Indeed, their ability to do the latter depends upon their success in the former rôle. There can be no war without the sinews of war.

Under Bailey's cool and irresponsible way of looking at things, the holders of the Government's demand notes might begin to present them for redemption at any time; Congress might not then be in session, or, if in session, might not consider redemption advisable or necessary; the Treasury might suspend specie payments, and the road of 1862-'65 might be travelled over again. We have not the smallest doubt that the issuing of new demand notes at this time would precipitate a run on the Government for gold and would lead to an early suspension. We have no doubt that this is what Bailey and his party friends desire and intend, and that this is what they hope to bring to pass in one way or another.

THE SCARCITY OF WHEAT.

Rise in the price of grain, on the outbreak of a war, is one of the most familiar phenomena of trade; therefore, few people were surprised when the wheat market began to advance with some violence last month, immediately before and after our rupture with the Spanish Government. What did, however, surprise many people who had not kept close track of the world's current grain statistics, was the failure of the market to decline again after Commodore Dewey's victory, when sentiment rather generally rushed to the conclusion that the Spanish war would certainly be short.

Not only would such reaction have been natural, if the advance had been occasioned wholly by the war, but it had already penetrated the minds of most people that in this war the influences which sometimes make wheat dear in such a contest could not operate. Grain may advance, on the outbreak of a war, through belief in a possible blockade of grain-producing states, or misgiving that their grain-carrying ships may be plundered by the enemy. Such expectation would, of course, lead foreign importers to increase their orders for quick delivery of wheat, and thus advance the price. But the notion of a blockade of the United States coast by Spain was immediately seen to be absurd. Moreover, our grain is sent to Europe in neutral bottoms, and is, consequently, exempt from capture. It might, therefore, have been imagined that if the "war argument" alone were forcing up the price of wheat, a little reasonable afterthought would start the market moving in the opposite direction.

Nothing of the sort happened. Taking as a measure the cash price of wheat for immediate delivery at New York, we shall find that it actually fell nearly five cents a bushel between the day of the *Maine* explosion and the close of March, that it rose 13 cents before the outbreak of hostilities, advanced some 8 cents further between the departure of our Atlantic fleet and the victory at ~~San~~

nila, and then, instead of yielding after the Spanish overthrow in the Philippines, started last week on a fresh and exceedingly violent advance, which brought the price by Tuesday of this week from the \$1.26½ per bushel of April 30 to the extraordinary figure of \$1.93.

On the market for wheat contracts deliverable in May, the advance was equally violent, and the price has touched \$1.90 in Chicago, the highest record since a speculative "corner" brought it to two dollars in September, 1888, and with that exception the highest since 1877, before the resumption of specie payments. That our non-commercial readers may not suppose this recent extraordinary movement to be a matter outside their own concern, it may be worth while to add that, in consequence of the steady rise in wheat, flour is selling this week on the wholesale markets two dollars and a half a barrel above the price of a month ago, and three dollars and a half above its price a year ago this month. That they may not suppose the movement to be a matter of concern to the United States alone, attention may be further called to the fact that recent mob uprisings in the peninsula, which may play an important part in the Spanish-American controversy, partake quite as much of the nature of "bread riots" as of a popular revolt against an unsuccessful war ministry.

The undoubted truth of the matter is, that the so-called "war scare" in the wheat market has played this season an infinitely less important part than the extraordinary situation of the world's grain-producers. The deficient foreign harvests of 1896, followed by the partial or complete crop failures of last year in France, Austria, India, Argentina, and Australasia, left the consuming world necessarily with a very small margin of supplies in storehouse wherewith to tide over the interval until another harvest. The world's total wheat crop of 1897, as estimated by commercial experts, fell short more than a hundred million bushels of providing enough of new supplies to meet the average annual needs of wheat-consumers. The inevitable result was that the so-called "visible supply" in home and foreign granaries was drawn down to the smallest volume in a generation.

The price advanced to a higher steady level, and the advance drew into market a good part of those secondary supplies known to the wheat market as the "farm reserves." In particular, demand increased abnormally for export wheat from the United States, which had the extraordinary fortune, last year, of raising one of the largest wheat crops in its history, in the face of the extreme European scarcity. Usually, our export of grain slackens in the spring. But during April our wheat exports rose to a magnitude quite unexampled for the

season. The weekly estimated shipments from this country last month were double or treble the average shipments of the same weeks during the past dozen years; week before last, for instance, the estimate was 4,160,000 bushels, against only 1,155,886 in the closing week of April, 1897, and 2,773,000 even in 1894. In March the country shipped abroad, by the returns of the Bureau of Statistics, very nearly twice as many bushels, in wheat and flour, as it sent out in the same month of 1897. The question began to be asked, with some uneasiness, how long even the heavy surplus left over from last year's wheat crop in the United States could continue to supply the needs of Europe. The Indian and South American crop, which is harvested between November and April, has this year again turned out disappointing. Our own winter-sown wheat and the crop of Southern Europe do not move until June, and meantime, on top of the almost or quite unprecedented volume of wheat exports from this country thus far in the season, the American visible supply has within a fortnight been shrinking at the rate of more than three million bushels weekly. Under the circumstances, it is not surprising that the mere suggestion, however illogical, of a war blockade of American supplies, should have started an advance in wheat prices which gathered force as it continued, and which was not checked even when the "war scare" itself was dissipated.

We shall not undertake any prediction as to the probable course of wheat prices during this extremely interesting interval before the new crop of 1898 is harvested. To judge such probabilities with any accuracy the exact size of last year's American harvest must be known, and, unfortunately, all the estimates in that regard are more or less discredited. The forecasts of our growing crops, on the other hand, are a matter of unusual interest. That a very much larger acreage should have been planted by our wheat-farmers—14 per cent. increase is estimated—is certainly not surprising, in view of the high level of prices now so long maintained by the wheat markets. It is gratifying on all accounts to observe also, from current commercial estimates, that the promise of the American crop is at the moment decidedly better even than it was at this time a year ago. While it is highly improbable that any such shortage of new supplies could exist as that of 1897, it is at the same time pretty certain that the demand from European wheat-importers will continue very heavy. The *London Mark Lane Express*, a recognized authority in the grain trade, lately published a summary of the world's crop as ascertained for 1897 and estimated for 1898. There is room for wide misjudgment in such estimate; but, taking it as it stands, our authority reckons that while the

world's crop of 1897 fell short some 132,000,000 bushels of actual consumers' wants, the crop of 1898, at the present outlook, will exceed such annual needs by only 68,000,000 bushels. In other words, the normal excess supply in storehouse would not, on this reckoning, be restored, even at the close of 1898.

PRIVATE PROPERTY IN WAR.

Lord Russell, in his address before the American Bar Association in 1896, paid our statesmen and jurists a high but not undeserved compliment when he declared that it was largely due to their policy and moral influence that the horrors of war had been mitigated and the area of its consequential evils narrowed. We were so fortunate as to have in Europe as diplomatic agents, when our first treaties were negotiated, some of the most liberal-minded men that this country had then or has since produced. It is to them—notably to Benjamin Franklin and Thomas Jefferson—that we owe the incorporation into our early treaties of certain principles which, as Washington justly said, marked a new era in negotiation. Pointing out the harmonizing influences which had been in operation in the field of international law for centuries, they insisted that this law should go on improving.

The maxim mentioned in the treaty of Utrecht of 1713—that free ships make free goods—which during our Revolution was supported by force of arms on the part of Russia, Sweden, Denmark, and Holland, found in them hearty advocates, and Franklin's prediction that it would become the law of nations was practically realized in 1856, in the well-known Declaration of Paris. Not stopping with this, they urged that in time of war merchant vessels of the enemy, exchanging the necessaries and conveniences of life, should not be disturbed, and that even contraband of war, when taken, should be paid for. We have already shown that they included in the treaty of 1785 with Prussia the proposition that private property should be exempt from capture in case of war between the two Powers. This rule, though not meeting with a favorable reception in every quarter, and having now, perhaps, but a small prospect of general acceptance, was qualifiedly observed by Austria in 1866, and absolutely by Prussia in her war of 1870; and when it was agreed to in our treaty of 1871 with Italy, President Grant informed Congress with undisguised pleasure that it was one which the United States had spared no opportunity of incorporating into the obligations of nations.

Unfortunately, we have no such compact with Spain, and as the State Department cannot control the adjudications of prize courts, this noble principle, which should be considered unalterable and not dependent upon any momentary

interests, will doubtless be held as naught during the present war.

As to contraband of war, it may be said that the rule of nations should never be altered so as to allow its introduction into hostile ports. By excluding such aid the enemy is sooner reduced. By allowing it the neutral, as Mr. Manning well says, would have the power to injure a belligerent which he would not possess if he were an enemy. But is there any necessity for the confiscation of such goods? Franklin thought there was none, and he and his associates in the treaty with Prussia made an agreement on the subject which has been regarded as among the curiosities of diplomatic negotiation. By its provisions military stores and other contraband of war were not to be confiscated and condemned, but the vessels and articles might be stopped, the captor paying a reasonable compensation for the loss which the owners might thereby suffer. Or if the captor chose to do so, he could use the stores so retained, paying the owners their full valuation at the place of their destination. On the other hand, the master of the detained vessel was allowed by this treaty to proceed on his voyage if he would deliver over to the captor whatever articles were supposed to be of contraband nature. Klüber contends that this provision is really a part of the international code of Europe, but it would seem that the authorities are clearly against him.

This liberal article in our first treaty with Prussia has been adhered to in all subsequent agreements with that government, and is operative between the two countries to-day. It does not seem to be such a startling innovation when it is remembered that the ancient law of Europe, which made the ship itself liable to confiscation for carrying contraband, had already in Franklin's time been relaxed. In the treaty between England and France at Utrecht in 1713 not only was the vessel saved from confiscation, but the doctrine that the rest of the cargo was infected by the prohibited goods was abandoned. Of course, in the absence of treaty stipulations, the law undoubtedly is that the owner of the contraband loses also whatever interest he may have in the rest of the cargo or in the ship. In the treaty of 1778 with France, negotiated by Franklin, Deane, and Lee, this penalty, however, as was to have been expected, was expressly denounced, and it was further agreed that if the commander of the ship would deliver up the contraband goods, the captor should immediately discharge the ship and allow her to prosecute the voyage. In case all the contraband merchandise could not be received on board the vessel of the captor, he was allowed to carry the ship into the nearest port for adjudication. The manner of ascertaining the presence of contraband was by means of the exhibition of cer-

tificates. The breaking up of hatches and opening of chests and casks were forbidden. John Adams made a similar treaty with the Netherlands in 1782, and Franklin with Sweden in 1783. This provision was retained in our treaty of 1816 with Sweden-Norway.

So far as the countries of this hemisphere are concerned, the rule seems to be that all merchandise not included in the articles of contraband, which are always explicitly enumerated in the treaties between the United States and the other American governments, may be freely carried to belligerent ports, except those besieged or blockaded, and that in no case is a vessel of any of these nations allowed to be detained on the high seas on account of having on board articles of contraband, whenever its captain will deliver up such articles to the captor, unless, indeed, their quantity be so great or of so large a bulk that they cannot be received on board without great inconvenience, in which case the vessel may be sent to the nearest port for trial. We have treaties containing this provision with Bolivia, Brazil, Central America, Colombia, the Dominican Republic, Ecuador, Guatemala, Hayti, Mexico, Peru, San Salvador, and Venezuela. They are founded, as will be seen, on one of the clauses of the Prussian treaty, advocated by Franklin and Jefferson, and are intended to encourage the greatest possible freedom of commerce in time of war.

PERIL TO FOREST RESERVES.

It will be an unspeakable pity if, under the overshadowing influence of the war, Congress shall consent to abolish the new forest reserves created by proclamation of President Cleveland on February 22, 1897, yet this is likely to happen unless vigorous protest is made at once.

These reserves, it will be remembered, were designated in accordance with the recommendation of the Forest Commission of 1896, appointed at the request of the Secretary of the Interior by the National Academy of Sciences, and consisting of Prof. Charles S. Sargent, chairman; Prof. Wolcott Gibbs, ex officio; Alexander Agassiz, Prof. W. H. Brewer, Gen. Henry L. Abbott, U. S. A. (retired); Arnold Hague of the Geological Survey, and Gifford Pinchot, practical forester. An appropriation of \$25,000 was made by Congress for the travelling expenses of this commission in its study of forest problems, but the members served without salary, and a more competent and disinterested body it would be hard to find. The commission made an extensive and thorough inquiry, including a personal investigation of most of the territory involved, and promptly embodied its conclusions in a report which is a model public document, and of which the recommendation of the reserves was but a prominent incident, a

first suggestion in the line of a large, conservative policy towards our disappearing forests. Congress is now asked to throw away all this money, time, and effort, and again to face about towards chaos.

In proclaiming these reserves President Cleveland simply carried forward the policy adopted by President Harrison. He added thirteen new reservations to the seventeen previously existing, raising the gross area from about 20,000,000 to 40,000,000 acres. Sixteen of the thirty reservations, embracing about 13,000,000 acres, were made by President Harrison; but the largest single one—the Cascade Range reserve—was made by President Cleveland early in his last term. The tracts embraced in his final proclamation were all on mountains except those in the extreme northern part of the West and those in a belt near the Pacific. Their uses would be of the utmost importance. In the interior reservations there is almost always a forest on a mountain and an agricultural region in the near foot-hills needing irrigation. This irrigation the mountain forests will give, and experience has shown that the water supply would be diminished 40 per cent. were the forests cut away. The forests on the reservations will not, as a rule, grow again when destroyed, and the Forest Commission has long been at work devising a careful plan for their preservation.

The purpose of the reservation system, be it remembered, is not to withdraw the reserved lands absolutely from occupation or use, but rather to increase their usefulness and productiveness and make them tributary to a large surrounding country; to minimize the destruction of our forest resources by fire or wasteful and unscientific cutting; to maintain and improve the timber industry by preparing for a permanent and continuous yield of forest products, developing new growths as the old trees are gradually removed; to protect the sources of water supply for the neighboring country, and for distant parts reached by rivers having their origin thereabout; and finally, by preventing the cutting of only the best timber and subsequent abandonment of the wooded lands, to encourage the bona-fide settlement of the contiguous agricultural sections, the abundance and cheapness of the local forest products being a great inducement. Much care has been taken, moreover, to avoid anything which should interfere with legitimate prospecting for minerals and development of mines.

Now Congress, under the inspiration of the opponents of a scientific forest-reservation scheme, threatens to step in and upset nearly all that has been accomplished by abolishing half of the total reserves. This is not attempted directly, but indirectly, by means of an amendment to the sundry civil bill. This

amendment, having been approved by the Senate and rejected by the House, is now in conference, and there is not the shadow of an excuse for yielding on the part of the House. Last summer, in deference to their claim that settlers and miners would be prevented by President Cleveland's proclamation from taking up valuable agricultural and mining land, that order (except so far as concerns California, which has had its eyes opened as to the value of forest reservation) was suspended by Congress until March 1, 1898, and the mineral land laws, we believe, have also been extended to the reservations. All these concessions having been made to "local sentiment," it is difficult to understand on what grounds the opposition can be based. It is rumored that the grievance of the radicals is that the surveys of the reserves have not yet been completed, but to abolish the reserves because of the necessity of rectifying the frontiers hereafter would be like burning down a barn to catch the rats.

George P. Marsh, in his admirable volume, 'Man and Nature,' which may be said to be a grammar of geographic modification, quotes a certain authority as saying that the deterioration of Spain from its position as a first-class Power was largely due to the reckless destruction of its forests, and adds: "I believe Spain is the only European land which has not made some public provision for the protection and restoration of the woods—the only country whose people systematically war upon the garden of God." It is over thirty years since Marsh in this volume warned us that we were rapidly approaching the time when the fate of Mediterranean countries would be ours. Would it not be a strange, sad comedy if Congress should at this time vote to return to the antiquated Spanish policy from which the Forest Commission bade fair to rescue us?

FRENCH PROGRESS.

The progress France is making along the line traced by the recent anti-Zola proceedings is really very remarkable. The whole Dreyfus affair seems, in fact, to have given a great stimulus to two closely allied things—intolerance and protection. The *Indépendance Belge* reports, through its Paris correspondent, that the anti-Semitic rage has penetrated even the dressmakers' work-rooms. He says there are two leading dressmakers or milliners in Paris, one of whom employs mostly Catholics, and the other mainly Jewesses. The one employing the Jewesses called her hands together the other day, told them she could no longer have Jewesses on her premises, and discharged twelve of them. The discharged girls then went to a Jewess who employs Catholics, and she promptly discharged twelve Catholics to make way for the Jewesses. The Catholics then went and took the vacant

places at the other shop. So the good work of spreading "the Ideas of '89" goes on.

In Algeria, as we all know, there have been terrible anti-Semitic riots and some loss of life. The *Réveil Algérien*, commenting thereon, says that if war breaks out, there will be only one thing to do, "in order to produce a powerful moral effect and to reassure public opinion." That would be, when the announcement of the beginning of hostilities was made, "to put Zola, Clémenceau, Labori [Zola's counsel], Rothschild, and all the principal Jews of the French republic, up against a wall and lodge twelve balls in each of their carcasses."

Side by side with this comes a fresh and furious outbreak of protectionist feeling. A certain M. Adrien Melville writes to the *Éclair* that on the Ivory Coast the French whites cannot any longer put up with the competition of the blacks. It appears that the blacks are displaying an outrageous aptitude for trade directly with Europe, without the intervention of French merchants, which constitutes, he says, a "real danger." A number of blacks, he observes, now possess small steamers employed in trade, with their own colors flying at the mast-head, and during a recent visit to Assinie he had received a call from a black who, in nine years, had made three millions of francs dealing in mahogany. "Think of this, dear countrymen," says he. He goes on to argue in favor of differential duties on English goods, which, he intimates, are bothering the French colonists a good deal. The *Journal des Économistes* contrasts this with the English practice of throwing open the trade of their colonies to all the world. It points out also that this French practice of closing colonies to foreigners makes it the interest of all the white merchants of Europe, and of all the yellow races of Asia, to desire the extension of English dominion, to the detriment of that of France.

Along with all this came the demand in the Chambers, before their adjournment, for more duty on lead to protect still further the one French lead mine, and on all products of industry into which lead enters. There was also a demand for increased duty on silk, but only for the benefit of those manufacturers who employ French labor exclusively. A society called the "Association of French Industry and Agriculture" had a meeting recently, at which a series of what the French call "vœux," or demands, invited, first, a protest against the McKinley tariff, with additional duties on American goods coming into Madagascar; next looked for more duty on raw silk, and again for more duty on ships built abroad; protested against any reduction in the duty on linens; suggested more duty on American cotton oils and oleaginous grain, and a rise in the duty on horses; and, finally, denounced any in-

ternational conference on the beet-sugar bounties. The French "Société des Agriculteurs" has also demanded that the teaching of free trade in the colleges should be prohibited, and that the public instruction should thus be made to accord with public policy as expressed in legislation.

All this indicates a lamentable retrogression from the earlier days of popular government in France, and it is difficult not to ascribe it all to the same cause—the spirit of hostility to foreigners bred by the late war, the consequent rise of the army into overmastering importance, and the decline of civil interests and considerations. What the Dreyfus affair has revealed is, that the army really rules the state, that none of the existing statesmen dare to gainsay it, and that the phrase "chose jugée" really means the will of the generals in command. It is not now denied that Dreyfus never saw the document on which he was convicted, and that, if the War Department said he ought not to see it, this was enough to satisfy the claims of justice. Asking for such a doctrine as this the respect which ought, in a constitutional country, to be accorded to the *res adjudicata*, is a sure sign that the famous "principles of '89" have lost their old place in the popular mind. Such is the usual result of love of war and prolonged preparation for war in a free country. The story is so old and well known that it seems almost absurd to recall it. The Dreyfus trial, with its acceptance by the public as fair and just, is the most significant thing which has occurred in France since the overthrow of Napoleon—more significant by far than the acceptance of the Third Empire by popular vote. That vote was made under the terror of anarchy. The attack on Dreyfus occurred in the midst of republican peace, and yet it was characterized by the same bigotry and ferocity as the Calas case in the middle of the last century.

THE AMERICAN ORIENTAL SOCIETY.

May 6, 1898.

The tragic death of Georg Bühler had not yet been published when the Oriental Society held its annual meeting at Hartford, last month. One of the duties inseparable from each foregathering of the Society is to tell the tale of those who have died since the last reunion. On this occasion there were very few to commemorate, and when the short record was read and the names of Dr. Drisler and Dr. J. H. Trumbull, both of whom had been corporate members for forty years, had been fittingly recalled, it was not supposed that there remained still unmentioned another name, already, in fact, removed from the roll of those whom the Society is proud to have upon its list of honorary members. But only a few days before this, Georg Bühler, the genial and highly endowed professor of Sanskrit in the University of Vienna, had been drowned; a fate that recalls the death of Bergaigne, the brilliant French Sanskritist, who perished

in a glacier ten years ago. Both were men of rare ability, and both died just when the world expected most of them. Bergaigne was only fifty, but his exegesis of the Veda had placed him in the front rank of Sanskrit scholarship. Bühler was just sixty, and, despite the great amount of valuable work which he had done, that which he had at heart to do, and for which he had already laid the foundation in wide-reaching preliminary studies, promised to be the masterpiece of his life. This was nothing less than a history of India before the Mohammedan invasion, a work for which Bühler was peculiarly adapted, as is attested by the mass of material which he so easily controlled, not only on the side of literary records but elsewhere—material supplied by his studies in mediæval geography and his thorough knowledge of inscriptions. For many years he was the Commissioner of Education in the Gujarat district, and distinguished himself as official purchaser of manuscripts for the British Government. In Indian epigraphy he was easily first, and has left in his 'Grundriss' and 'Indian Studies' the invaluable results of that patient investigation, combined with acute insight, which makes the master scholar. The different provinces which his genius traversed were many. History and geography became the delight of his later years, but he has left behind him the evidence of his broad interest in all things pertaining to India in his 'Digest of Hindu Law,' and in his contributions to the body of legal literature translated in the 'Sacred Books of the East.' His death will be felt deeply, not only because of the loss to Sanskrit scholarship, but by many on account of the sincere personal friendship they entertained toward him. For he was not only a great scholar; he was a very broad-minded, whole-souled man, ever ready to render assistance in suggestive thought and material aid, and the younger scholars on both sides of the Atlantic who will mourn truly for him are many in number.

It seems proper, as it is pleasant, to acknowledge this debt of learning and of kindness before speaking of the regular meeting of the Society. But the meeting itself was not without features of unusual interest. For the first time an attempt was made to group the large number of papers presented in such a way that the general public might know in advance at which session to expect the most intelligible information. For it cannot be denied that many of the papers are too technical to interest any save specialists, and it seems a pity to admit the eager throng of outsiders, who are tempted to come to the meetings on the strength of their interest in things Oriental, and then have them yawn through the dreary lengths of statistics which some of the good members think necessary to present. So Friday afternoon, the middle session of the meeting, was set apart for the pious function of reading "papers of popular interest," and if the audience were not gratified it was not the fault of the scholars who labored to please them. Prof. Haupt's criticism of criticisms of the Polychrome Bible was intended to amuse as well as enlighten, and the able editor succeeded in both aims. The same scholar also contributed an interesting account of tattooing among the Semites, which he had recently written for the Folk-Lore Society. Prof. Bloomfield presented as his offering a plan for a proposed photographic reproduction of the unique and famous 'Paippalāda Sam-

hitā,' and Prof. Lanman added to his list of learned essays a paper on Hindu lyric poetry, which seemed especially suitable to the exercises of this afternoon. That there might be few parts of the Orient neglected, the Rev. Mr. Blodgett described the "Worship of Heaven and Earth by the Emperor of China," and Prof. Jackson expounded a new theory in regard to the death of Zoroaster. Perhaps the most "popular" paper, in tone, was that of Mr. Scott on the simple savage, though it contained as much thought as wit. But to describe all the general papers would leave little space to speak of the more special essays presented at the three other sessions.

One of these sessions, in accordance with the arrangement made at the last annual meeting, was devoted to papers on the history of religions. A new branch of the Society, called the Section for the Historical Study of Religions, has just been created, and some of the *Nation's* readers may be glad to know that any properly accredited person interested in the history of religions may join the section without becoming a member of the Society, though all members of the Society are *ipso facto* members of the section. Such members of the section pay a small annual fee, and in return receive such publications of the Society as have to do with the history of religions. One of the most important papers read at this session was contributed by Prof. Toy. It professed to be a mere notice of the newly published *Archiv für Religionswissenschaft*, but it was in reality an able critique of the "science of religion," in distinction from the history of religions, and was particularly well-timed in coming at the first session of the section.

The Society (for the whole Society attended the session of the section) was so interested in Prof. Jastrow's paper on "Adam and Eve in Babylonian Literature," that he was unanimously requested to exceed his proper time limit, that the Society might hear the whole essay. To permit this, some other papers had to be read "by title," to which decapitation their respective authors gladly consented; but this brought to the fore one of the distressing factors in a crowded annual meeting—the necessary suppression of many papers owing to the few hours actually at command. Even the sacrifice of three hours on the altar of "popular interest" really made little difference, for there were more papers presented than could possibly have been read in full. Next year the meeting, in view of this, will have one session more; but it looks at present as if, with the growing number of yearly papers, four days instead of the usual three will soon be required, if justice is to be done to the papers and to their writers. For one of the chief objects of the meeting, mutual friendly criticism, is entirely suppressed when papers are read in five-minute abstracts or shelved "by title." To the older scholars this is of little consequence, as they are generally willing enough to be heard in print alone, and rather look on the reading of a paper as a bore. But the new members who are young scholars, and are more subject to new theories, deserve and should get a hearing, if only that the elders may suggest, criticise, and encourage or discourage, as seems needful.

There were many papers read at the two general sessions devoted neither to religion nor to the public at large. Prof. Gotthell spoke on Syriac folk-medicine; Prof. Bloomfield made some remarks on the myth of Pu-

rāvas and Urvag; two young scholars and new members, Messrs. Gray and Remy, presented careful studies, on the metres of Bhartrihari and the equation "*jana* is *sana*," respectively; Prof. Haupt had a budget of papers, one on the Sumerian question and two on points of Semitic grammar; Prof. Hopkins contributed as many on Village Communities, the history of Hindu guilds, and epic diction; Prof. Jackson sketched the dramatic elements in Sanskrit plays, and made new Indo-Iranian contributions; Dr. Torrey located "Bethulia"; Prof. Oertel read a new paper on Brahmanical legends; and Prof. Lanman brought up fresh data in regard to the curious beliefs in milk-drinking swans and the efficacy of "walking the deer." Prof. Macdonald, though his time must have been well taken up with his duties as "Committee of Arrangements," had found time to write on the religious attitude of Averroes and on Poe as an Orientalist. Other papers were by Prof. Ward, on Hittite art; by Prof. Prince, on prepositional usage in Assyrian; by Mr. Scott, on Polynesian words in English; while still others were presented by title or in abstract, their writers being absent. Altogether, there were more than fifty papers, ranging from mere notes to solid treatises.

The sessions naturally took up most of the members' time, nor did the weather favor excursions; so that Hartford, except for the street from the hotel to the Seminary, remained unseen. A complimentary reception in the Theological Seminary building, on Thursday, gave the members an opportunity to see the rare collection of Arabic manuscripts in the library and enjoy at the same time the bountiful kindness of the theological faculty. On Saturday afternoon, with a vote of thanks for the hospitality received, and for the exertions of the committee of arrangements, the Society dispersed, most of the members taking the train south, others leaving for Boston, where the next meeting, in April, 1899, will be held.

PICTURES IN LONDON.

LONDON, April 30, 1898.

That any one should have time to show pictures, or think of pictures, or write about pictures at a moment when war has been declared, and such tremendous national issues are at stake, seems on the face of it absurdly, almost wickedly incongruous. And yet it is curious to remember that it is to just such crises in the history of the past that we must look back to the greatest periods of art, and to the making of many of the masterpieces now preserved among a nation's treasures. To take but a single instance, but one especially appropriate at this juncture, have we not the "Lanoco" of Velasquez as a record of Spain's cruellest and most vindictive wars in the days of her might and power? And it is as curious to consider that while the wars have passed and gone, while the evils they brought in their train have been long since righted and forgotten, while incidents that were the most stirring and important at the time have become the dry facts of history or the myths of romance, the art alone has survived. Philip and Alva are now but names, but memories, but shadows. The picture of Velasquez is, and will be until the last bit of paint has faded or dropped from the canvas, a supreme possession not only for Spain, but for the whole world. It is no

wonder that there have been many men to believe that art is the one reality in life. Art alone lives, while the artists who created it, and all things with them, perish.

I am not sure, however, even if this truth justifies our interest in exhibitions opening in London at the very moment when newspaper posters are announcing the bombardment of Havana and the premature invasion of New York—in other words, that much in either the New Gallery or the Royal Academy is destined to outlive the generation that produced it. The painters are many, but the artists are few; and work fairly pleasant and often very skillful somehow seems more trivial than usual this spring. I have looked carefully through the two exhibitions, and I have found nothing really of vital importance, nothing to which one could imagine students in the future turning with delight and interest and profit, but the portraits by Mr. Sargent and an occasional landscape. Mr. Sargent, however, has never been seen in such force. He has no less than eight portraits at the Royal Academy, four at the New Gallery. Critics of late years have been pointing out the great gulf fixed, on the mere question of physical power, between the old masters, like Rubens, and the many moderns with whom one or two small paintings represent a fruitful year's work. But Mr. Sargent is not to be counted with these. And it is not only in the quantity of his productions that he towers over most of his contemporaries, but in quality—that is, in England. At the Champ de Mars he is not quite such a giant; and one always would like to see just how he would stand the test if his portraits were hung, say, in the National Gallery, side by side with those of Rembrandt, or Frans Hals, or Velasquez. One knows that at the Luxembourg the "Carmencita," in all the golden splendor of silk and lace, pales before the picture of the old lady in simple black gown against a quiet gray wall, that hangs opposite. But at the Royal Academy Mr. Sargent must be judged by Academic standards, and, thus judged, his triumph is complete.

His most striking, his most distinguished work this year is the portrait of a man, Mr. Wertheimer. His women are less successful, or certainly less original. In the case of the finest, the "Mrs. Thrale" of the New Gallery, beautiful as is his treatment of the gown—the very latest confection from Worth's, one would say—marvellous as is the vitality of the figure, one feels in the pose, in the very alertness of the lady who sits in one corner of the wide arm-chair, her dainty purple skirts wrapped tight about her crossed legs, the influence of M. Boldini, that was also but more faintly suggested in the Mrs. Myers of last year's Academy. And as M. Boldini has done this sort of thing so much better, one can but regret that Mr. Sargent has not been satisfied to remain simply himself. But there is no such fault to find with the "Asher Wertheimer, Esq." In this amazing portrait Mr. Sargent has been influenced by no one. He has seen the character of the man and has reproduced it in paint, relentlessly, uncompromisingly. Before you stands the rich, prosperous, powerful Jew, with all the mercantile genius and cunning of his race stamped upon the strange Eastern face. He holds a cigar in one hand; to his left you just see the head of a poodle, with great pink tongue lolling out, and for background there is a dark screen, with

its folds lost in shadow. And you know not at which to marvel most: at the firm, free modelling of the face (as in the "Mrs. Thrale" the vitality of the figure), the wonderful way the dog's head is put in, the quality in the many blacks, or at the masterly portrayal of character. In his rendering of the faces of the two children in his "Mrs. Myers," Mr. Sargent showed that he too had felt the strange fascination the Hebrew type has had for so many painters. But the tentative suggestion of that picture has developed into perfect realization in the Mr. Wertheimer. There are two or three other portraits of men almost as good, but not one really to equal it, for in none other did his subject give him such a chance. I wish that Mr. Sargent would do for the commanders and generals of our navy and army what Velasquez did for those of Spain, and that some day we might have in Washington a series which, though they could not compete with the portraits of the Prado, would, like them, serve as a great record of great and stirring times.

After Mr. Sargent's, the other portraits pale, the other Academicians simply disappear; always excepting Mr. Orchardson, whose portraits invariably have a refinement and individuality that make them notable where so much is either feeble in its commonplace or vulgar in its attempt to force attention. The two most ambitious efforts are by Mr. Herkomer and Mr. Solomon, who have sought, on a large scale, to commemorate incidents of the Jubilee. But both have succeeded in missing the splendor and dignity of the pageant; each has given a dull, prosaic, photographic presentment of scenes that would have been a glorious inspiration to Veronese. It is a pity that the commission could not have been intrusted to Mr. Abbey, who certainly has genuine feeling for the beauty of color and composition; and, as I have so often said before, I think it a mistake for a painter to devote his powers to reviving a past about which he knows next to nothing, when the present, which he does know, affords him quite as fine opportunities. As it is, in Mr. Abbey's pictures—a "King Lear" at the Academy, a "Poet" at the New Gallery—we are all too conscious of the studio. His arrangement of models and costumes, excellent as it may be, savors of the stage rather than of life. He has been obliged to rely upon his own imagination for the court of King Lear; he could have seen for himself the Lord Mayor in gorgeous robes, mounted on a magnificent horse, surrounded by pompous officials, as he waited at Temple Bar to receive the Queen—the special moment in the day's spectacle chosen as motive by Mr. Solomon.

If from the portraits I turn to the landscapes that promise to be remembered when Cuba may be forgotten, I find but one among all the two thousand exhibits at the Royal Academy, the five hundred at the New Gallery. There are many excellently painted, many interesting as experiments, as impressions. But the only one that haunts you afterwards is Mr. Peppercorn's "Common." A "sublime creation" a London critic not too lavish with his praise has called it, and he scarcely exaggerates. There is a rolling stretch of green open land, with a clump of trees to the right, and a few sheep wandering under a gray, sombre sky. Nothing could be simpler, less sensational. But the painter has seen it as a whole—as a picture—not as a bewildering, restless collec-

tion of petty details. It is complete in its solemnity, its great peace. As powerful, though not with the same poetic charm, the same rhythmical harmony, is a picture called "The Harrow," by Mr. George Clausen, at the Royal Academy. There is in this a very beautifully suggested landscape, a wide expanse of brown and green fields, upon which lie broad lines of sunlight, under a brilliant blue cloud-swept sky. The landscape is simply a background; it is subordinated to the study, almost ugly in its beautiful brutality, of a big white horse. You can fancy people looking at it some day as we look now at Paul Potter's "Bull" at The Hague, wondering at its skill, marvelling still more that the painter should have wasted himself upon so uninspiring a theme. But in Mr. Clausen's picture there is a splendor of color and a beauty of light and atmosphere that saves it from the hopeless prose of the Dutchman.

These are the few pictures that stand out with anything like distinction, that can rouse a strong emotion. It seems paradoxical, therefore, to add that the general average of the Academy is higher than of old. And yet it must be so, for while Frenchmen like Bonnat and Carolus-Duran and Benjamin Constant, whose technical ability is beyond question, are among the exhibitors, their work passes all but unnoticed. But this fact only proves, as we have long since learned in the old Salon, that technical dexterity, essential as it must ever be, does not alone suffice to the artist. English painters are better trained than they used to be. That is all.

It is worth noting, too, that this higher average is attained without the aid of many of the more accomplished of the younger men. The Glasgow group, who have been so discourteously treated in the past by the Academy, have reserved their forces for the International Exhibition that opens in London early in May. Nor is so fine a landscape-painter as Mr. Peppercorn to be found at Burlington House, nor so able a portrait-painter as Mr. Furse. And so one might go on counting up notable omissions. For the rest, I shall content myself by saying that in the sculpture room there is a fine bust of Mr. Lionel Smythe, one of the new Associates by Mr. Gilbert, and also some very charming enamels by Mr. and Mrs. Nelson Dawson; that the water-colors are as feeble and inconsequent as usual, and that nothing could be less representative than the black-and-white.

Correspondence.

INDEMNITY.

TO THE EDITOR OF THE NATION:

SIR: A recent letter from Washington makes the statement that there is a strong feeling in Congress favoring the retention of the Philippine Islands by the United States after the close of the war. It is, of course, taken for granted that the close of the war will see the United States in a position to make its own terms.

It is of no use to object to Congress stultifying itself by announcing at the outbreak of the war the terms upon which it will consent to make peace, as the French so blatantly did in 1870, but it is not too soon to protest in the name of the national honor and national self-respect against any idea

or intention on the part of this country of profiting by a war undertaken avowedly in the cause of humanity, and for the purpose of delivering a weak and grievously wronged people from the hand of a cruel master.

Congress has openly and before the world disavowed all intention of exercising any form of sovereignty over Cuba after the Spanish troops shall have been withdrawn. If we expect our action in forcing the war to be approved by the nations of the world, and our motives to be vindicated in history, not only must this engagement be kept to the letter during all time, but also the honest and honorable corollary that, should we be victorious, as every American confidently expects that we shall, we must retire with absolutely clean hands, and, if need be, empty pockets, demanding no indemnity whether in gold or in territory; conscious of having acted a humane and manly part, of having won for a million and a half of our fellow-creatures the right to enjoy life, liberty, and the pursuit of happiness, and for ourselves no material advantage whatsoever.

It is true that Russia demanded a war indemnity from Turkey after the war of 1877-'78, undertaken, ostensibly at least, for reasons similar to those of the United States for bringing on the present war. Russia was the aggressor, as, rightly or wrongly, the United States is now the aggressor; but no number of precedents will convert an indefensible action into one which is high-minded and honorable.

A favorite illustration of the position of this country has been that of likening it to a man who sees his next-door neighbor beating his (the neighbor's) apprentice into a shapeless mass. If he were to interfere and rescue the apprentice from the brutal master, he would have the same right to demand recompense for a torn shirt or a broken arm gotten in the scuffle as the United States would have to claim an indemnity for its war expenses. If, instead of sending ships and troops to fight the Cuban battles, we should send the necessary millions in gold, should we have a claim upon Spain for repayment when Cuba became free?

Let us beware of placing ourselves in the position of doing a noble and generous act, and then demanding that a bankrupt and humbled enemy shall pay our expenses.

Very truly yours, J. H. K. BURGWIN.

PITTSBURGH, May 9, 1898.

OF PRAYERS.

TO THE EDITOR OF THE NATION:

SIR: Apropos of your recent criticism of the prayers offered in American churches for "the protection of our soldiers in the field," why do we never hear in our churches a prayer offered for Spain? She is our enemy, for she has refused to give up Cuba at our demand, and her citizens will send cargoes of merchandise over the sea, carrying her offensive flag, and her war-ships shoot cannon at ours when attacked. Prayer for enemies is one of the first of Christian duties. How can our clergymen reconcile it with their consciences, then, that they are not praying for Spain, that she may be forgiven for disobeying our mandate to relinquish her possessions in Cuba, and for using deadly weapons against those who are punishing her for this refusal and for the blowing up of the *Maine* by slaying her seamen and

appropriating the private property of her citizens? Why are they not praying that she may repent of her crimes under the suffering which, as the instrument of Providence, we are reluctantly inflicting?

They are under the more urgent obligation to do so from the fact that the American Board has lately withdrawn its missionaries from Spain. We have no other means of contributing to the religious and moral welfare of this benighted people than our prayers offer, except, indeed, the example of Christian self-sacrifice which we set before them in waging this war—an example which only supernatural power will make their darkened minds appreciate. H.

ANDOVER, MASS., May 6, 1898.

TO THE EDITOR OF THE NATION:

SIR: You will, I hope, let me say how thoroughly your sensible position on this war question is appreciated by some non-fighting persons, at least. The facility with which men allow themselves to be dragooned into compliance with the ravings of a corrupt press is, alas! one of the most discouraging and ominous signs of a sure moral decadence. To cheer for country, "right or wrong," is of a piece with cheering for party, "right or wrong"; and that is the partisan bane of our times.

I believe that a citizenship in the heavenly country has some precedence over even that in one's own country.

Yours, etc., JOHN H. CONVERAE.

RECTORY OF THE CHURCH OF THE MESSIAH,
GWYNEDD, PA., May 7, 1898.

THE CASE OF THE BUENAVENTURA.

TO THE EDITOR OF THE NATION:

SIR: On April 20 President McKinley telegraphed an ultimatum to Spain demanding her withdrawal from Cuba, and an answer to this demand by noon of the 23d. Before the delivery of the ultimatum by our Minister in Madrid, the Spanish Government sent him his passports; notifying him at the same time that Spain considered the signature to the joint resolution of Congress "as equivalent to a declaration of war" (I have not the exact words at hand). On April 22 the Spanish vessel *Buenaventura* was captured by the *Nashville*. Whether this capture was illegal, on the ground that war did not exist at the time of the capture, is a question that must be decided by a prize court.

It was very wrong in the United States not to await the expiration of the sixty hours given by the ultimatum before authorizing any captures, because, until then, it could not be known whether, at the last moment, Spain would not decide to comply with the ultimatum. But the prize court should nevertheless hold that war had already commenced. All Spaniards are represented in the acts and declarations of their own Government, and, by her notification of April 21 to our Minister, Spain is estopped to deny that war existed on April 22, when the capture was made; and the owners of the vessel are bound by that estoppel.

FRANCIS J. LIPPITT.

WASHINGTON, May 8, 1898.

"FAKE" MAGAZINE ENTERPRISE.

TO THE EDITOR OF THE NATION:

SIR: The May number of the *Cosmopolitan* contains an article entitled the "Autoblog-

raphy of Napoleon Bonaparte." The article is prefaced with an editorial introduction which is carefully worded to convey the impression, while avoiding the explicit statement, that the manuscript which it is the purpose to publish was secretly sent by Napoleon from St. Helena to America in 1817, that it has been unknown during all the ensuing period, and is now to be published for the first time. It says the article and those to follow "purport" to be "The Autobiography of Napoleon Bonaparte, sent out secretly from St. Helena, brought to America in 1817, and, by a series of mischances, held in obscurity for eighty-one years." The editor comes dangerously near *suggestio falsi* in the statement that the autobiography is "unlike many old papers unearthed in modern times."

In a further editorial note in another part of the magazine—the article is of such importance as to justify two—the editor gives some account of the "autobiography," including the fact that "it had appeared mysteriously in London in 1817," but that "both the English and French Governments were interested in its suppression," and stating that "the matter was permitted to drop out of sight, . . . and it has so remained for three-quarters of a century." The regular publication of the manuscript is to commence next month, but, meanwhile, to whet the appetite of the reader, a section is now published, "which will," the editor says, "we feel sure, excite the intensest interest of students."

Language could scarcely come nearer stating explicitly that the manuscript is now about to be published for the first time. In 1817 there was published in New York by Van Winkle & Wiley, No. 3 Wall Street, a book with the title, 'Manuscript Transmitted from St. Helena, by an Unknown Channel. Translated from the French.' The foreword in this book is one that might appropriately accompany the first publication of such a manuscript; it comments upon the conjecture that it was written by Napoleon, and is strongly suggestive of the statements made by the editor of the *Cosmopolitan* eighty-one years later. While this book is apparently somewhat rare, a copy of it is in my own possession, and copies can undoubtedly be found in the libraries of many collectors of Napoleonicana. The section of the autobiography given is copied from this book, and the copy of the manuscript which "by chance recently came into the hands of the editor," is a copy of the book described. Lowndes, also, under "Napoleon I.," notes the publication in London in 1817 of a book under the title 'Manuscrit venu de St.-Helène, d'une manière inconnue.' PLINY B. SMITH.

CHICAGO, May 1, 1898.

TENNYSON AND CATULLUS.

TO THE EDITOR OF THE NATION:

SIR: In the new Memoir of Alfred, Lord Tennyson (vol. II., p. 239), there is recorded a curious misquotation of one of the most familiar lines of Catullus. Mr. Gladstone had compared the poem "At Midnight," which was written as a preface to Charles (Tennyson) Turner's 'Collected Sonnets,' to Catullus's elegy on his brother, and the late Laureate replied:

"I am glad, too, that you are touched by my little prefatory poem, so far as to honour it by a comparison with those lovely lines, 'Multas per terras et multa per aequora

rectus,' of which, as you truly say, neither I nor any other 'can surpass the beauty'; nor can any modern elegy, so long as men retain the least hope in the after-life of those whom they loved, equal in pathos the desolation of that everlasting farewell, 'Atque in perpetuum frater ave atque vale.'"

This quotation from memory of the noble "Multas per gentes," etc., is the more interesting in view of Tennyson's lifelong admiration for Catullus, for which we have not only his own express statement in the *Memoir* (II., 400), but also some scattered evidence in his poems.

The closing section of "Eleánore" is a free translation either of the "Ille mi par esse deo videtur" of Catullus, or of the ode of Sappho from which that poem was itself translated. The allusion in "Edwin Morris,"

"Shall not Love to me,
As in the Latin song I learnt at school,
Sneese out a full God-bless-you right and left?"

is to the charming love-idiyl of Acme and Septimius,

"Hoc ut dixit, Amor, sinistra ut aute,
Dextra sternunt adprobationem."

The lines in "In Memoriam," lvi.,

"And 'Ave, Ave, Ave,' said
'Adieu, adieu,' for ever more,"

seem to be a reminiscence of "Atque in perpetuum, frater, ave atque vale," and Prof. Tyrrell has recently maintained ('*Latin Poetry*,' p. 115) that in the noble passage of "Tithonus," where the horses of the Sun

"shake the darkness from their loosen'd manes,
And beat the twilight into flakes of fire,"

Tennyson must have had in his mind the passage in the "Attis" where Catullus says of the rising Sun,

"And he smote on the dim dawn's path with the
hoofs of his fiery chariot-steeds"—

"populique noctis umbras vegetis sonipedibus."

The metrical experiment entitled "Hendecasyllabics" is "all composed in a metre of Catullus"; the metre of the "Boëdicea" is an echo of the metre of the "Attis"; and a great part of the "Jubilee Ode" is written in the metre of the "Collis O Heliconii."

In 1880 Tennyson visited Sirmio, the peninsula of Catullus, and there he made his "Frater Ave atque Vale." The "O venusta Sirmio" of this poem, the "Lydian laughter of the Garda Lake," and the "sweet Catullus's all-but-island" are quoted from the exquisite lines in which the ancient poet expressed the delight of his home-coming after his year's absence in Bithynia; the "'Ave atque Vale' of the Poet's hopeless woe" refers to the pathetic invocation offered by Catullus at his brother's tomb in the Troad.

And lastly, to the "sweet Catullus" and the "tenderest of Roman poets" of the "Frater Ave atque Vale" we may add the dainty reference to the dainty "Lugete, O Veneres Cupidinesque," in "Poets and their Bibliographies," where Catullus is ranked as a lyricist above the "old popular Horace"—

"And you, that wear a wreath of sweeter bay,
Catullus, whose dead songster never dies."

WILFRED P. MUSTARD.

Haverford College, May 4, 1898.

COLLEGE DEBATES.

TO THE EDITOR OF THE NATION:

SIR: It may be of interest to know that Mr. Ringwalt's suggestion in the *Nation* of

April 28 for the removal of a difficulty in the judging of college debates has already been adopted by the Ohio Intercollegiate Debating League, composed of Oberlin College and Ohio State, Ohio Wesleyan, and Western Reserve Universities. The Constitution of the League provides that

"Each judge of a contest shall be furnished with a typewritten copy of the following form for his ballot: In my opinion, without reference to my views upon the merits of the question, the most effective debating has been done by the { affirmative. } negative."

Though the questions debated have been such as competent judges are sure to have definite opinions upon, there has been no complaint that decisions have been based upon the merits of the question rather than the merits of the debate. But, on the other hand, the objection has been raised that this method does not sharply enough distinguish the debate from the oratorical contest. There is danger that brilliancy of speech rather than soundness of argument shall win. However, it is believed that the difficulties arising from this source are not serious, and that this is, on the whole, the most satisfactory method.

T. N. CARVER.

OBERLIN COLLEGE, April 29, 1898.

ZEUS AND JUPITER.

TO THE EDITOR OF THE NATION:

SIR: In the review of 'Historic Ornament' (*Nation*, No. 1910), you challenge the propriety of "treating Zeus indifferently under that name or as Jupiter"; but if there is one identification clear in Greco-Italian mythology, it is that, and we have it in Latin inscriptions demonstrated by the "Zeus Pater," especially in a vase of about 400 B. C., found at Falerii, with "Minerva" as the name of an evident Athena, "Cupido" in place of Eros, etc. The Saturnian family being Pelasgic, its gods belonged both to Greece and to Italy; Saturn typifying probably the Pelasgic migration located in Italy, where it developed its first great civilization, and Zeus the Pelasgi swarming out over the Greek lands and founding the great Mediterranean empire in Crete. But to question the absolute identity for all purposes of Zeus and Jupiter seems to me rash, no matter what may be said of the secondary gods, Neptune, Mars, etc., as to which I admit question.—Yours truly,

W. J. STILLMAN.

ROME, April 26, 1898.

Notes.

The Macmillan Co. announces 'The Hope of Immortality,' by the Rev. J. E. C. Welldon, Headmaster of Harrow School.

T. Y. Crowell & Co. have in press for early publication Duruy's 'General History of the World,' revised and continued to date by Prof. E. A. Grosvener of Amherst College, with twenty-five newly engraved colored maps; and 'The Modern Man and Maid,' by Sarah Grand.

A translation of Bull's 'Fridtjof Nansen,' by M. R. Barnard and Dr. P. Groth, is announced (with an eye to its use as supplementary reading in schools) by D. C. Heath & Co., Boston.

Close upon the appearance of a German 'Poole's Index' comes the announcement of

D. Jordel's 'Répertoire Bibliographique des principales revues françaises, pour l'année 1897,' an author and subject-index of the contributions and original memoirs published in 142 French periodicals. The list seems quite comprehensive, including all sciences and such literary magazines as the *Revue des Deux Mondes*, *Monde Moderne*, *Cosmopolis*, and others. The book will be an octavo in double columns (Paris: Librairie Nilsson; New York: Lemcke & Buechner).

Much the most important work on the French historical horizon is an extensive History of France from the earliest times to the Revolution, under the editorship of Ernest Lavisse, of the French Academy, who has been laboring on it for the past eight years. It will be composed of sixteen volumes, the first containing a general introduction, from the pen of M. Lavisse, and a geographical introduction by M. Vidal de la Blache of the Superior Normal School. The second, devoted to ancient and Roman Gaul, will be by M. Bloch, also of the Normal School; the third, the Merovingian and Carolingian periods, by M. Bayot, correspondent of the Institute; the fourth and fifth, feudal France, and the beginnings of the Capetian dynasty, by M. Luchaire, member of the Institute, and professor at the University of Paris; the sixth, France from the coming to the throne of St. Louis till the breaking out of the Hundred Years' War, by M. Langlois, professor at the Paris University; the seventh, France during the Hundred Years' War, by Prof. Coville of Lyons University; the eighth, France under Charles VII. and Louis XI., by M. Petit-Dutaillis, professor at Lille University; the ninth, France of the Renaissance, by M. Lemonnier of the Paris University; the tenth, France under the last Valois and Henry IV., and the eleventh, France under Louis XIII., by Prof. Mariéjol of Lyons University; the thirteenth, France under Louis XIV., till the year 1678, by M. Lavisse; the fourteenth, from 1678 till the death of Louis, by M. Lavisse and M. Rébelliau, Librarian of the Institute; the fifteenth, France under Louis XV., by Prof. Carré of Poitiers University; and the sixteenth, the reign of Louis XVI., by M. Lavisse and M. Carré. This *magnum opus* will be brought out by Hachette. The first volume of the series will be Lavisse's Louis XIV., and will appear next year. The others will come out in the order in which they happen to be finished, and the whole collection will be issued within the next four years.

A somewhat different series of French histories is that undertaken by M. Alfred Duquet—a complete account, in nearly a score of volumes, of the war of 1870-1871. He has divided the period into eight separate parts, portions of which have already appeared—two volumes on Metz, and seven volumes on the various episodes of the struggles in and around Paris. These volumes won from the French Academy this year the largest reward at its disposal, the Berger prize of 12,000 francs. M. Duquet is now busy on the final volume of the Paris group, which will describe the capitulation of the French and the entrance of the Germans. It will be ready at the end of this or the commencement of next year. Seven more volumes, none of which is begun, will still remain to be finished in order to complete the series. After this, M. Duquet assures his friends, if not dead he will write the history of the Commune.

Another French author, M. Edmond Le-

pelletier, is on the point of publishing an important book on this same Commune. The first volume, 'La Lutte,' will appear this spring. It is based wholly on original documents, personal recollections of events, and the authentic information of the author's friends and relatives. M. Lepelletier and his brother-in-law, M. Alphonse Humbert, the Deputy, were both active supporters of the Commune, and the latter has aided in the preparation of this volume, which will throw much light on a still obscure epoch. The second volume, 'La Répression,' which will describe the terrible events from the time of the entering of the regular troops into Paris to the end of the Draconian councils of war, will repose on the minutes of these councils, the newspapers of the period, and the statements of the former Communists who returned to France after deportation.

Of new volumes concerning the Bonapartes the most important will be the second volume of Chuquet's 'La Jeunesse de Napoléon' (Paris: Armand Colin). It will cover the Revolutionary epoch of the future Emperor's career. The second chapter, slightly modified, will come out in an early number of *Cosmopolis*.

M. Paul Marmottan, who has written several monographs on the Bonapartes and their era, is now engaged on other portions of a subject which he has already treated—the French domination in Central Italy during the First Empire, and especially the rôle of Napoleon in Tuscany between 1805 and 1814, and the lieutenantcy exercised there in a singularly virile and remarkable manner by the Emperor's eldest sister, Princess Elisa, who resided at Florence as Grand Duchess of Tuscany during the last half of her brother's reign. M. Marmottan's tastes turn towards unedited matter, so that his volumes always add something to the stock of general historical knowledge. The large amount of new information which he has found is due in great measure to the fact that the historians of the Napoleonic era have paid comparatively little attention to French Italy.

M. Hippolyte Thirria, formerly a member of the Conseil d'État, and the author of an exceedingly full two-volume study, entitled 'Napoléon III. avant l'Empire' (Paris: Plon), is now about to issue an historical biography of the Marchioness de Crenay, who was a friend of Napoleon III., of his mother, Queen Hortense, and of the Duchess de Berry. It will contain letters, now first published, from these three last-named personages. The author professes to prove that Hortense never accepted from Louis XVIII. the title of Duchess of St.-Leu, that Louis Napoleon never bent the knee to Louis Philippe, and that he was indeed the son of King Louis.

The Harpers have been prompt in bringing out a popular edition of Nansen's 'Farthest North.' In one volume, instead of two, with all the text and with sixteen of the more important illustrations of the Library Edition, and the whole offered at less than one-third the cost of the two-volume issue, this appeal to a wider audience should meet with a quick response.

One must pay for the cheap one-volume edition of Villari's standard 'Life and Times of Machiavelli' (Scribners) with pretty thin paper and corresponding presswork, but the substance is all there for reading or for reference—if we know where to look. An

index might have compelled purchase even by owners of the better edition. The binding is more elegant than the typography, matching Villari's 'Florence.'

The "new and prominent writers of the year [1897]" of whom sketches and portraits occupy the first part of Mr. James MacArthur's 'The Bookman Literary Year-Book for 1898' (Dodd, Mead & Co.), are by no means all new in a strict sense; witness Dr. Weir Mitchell, Marion Crawford, Hall Caine, Prof. C. G. D. Roberts, Edward Bellamy, Prof. Sloane, etc. Nevertheless, the list is convenient. So is the succeeding very brief series of obituaries, again with portraits. Other sections illustrated are Dramatisations of Current Fiction, and American Serials of 1897, and the volume is filled out with statistics of book-production, a list of publishing book-clubs, copyright instructions, hints for correction of proof, etc.—an odd miscellany. On the whole, one cannot praise this annual as well executed or firmly conceived; it does not compare with Mr. Affalo's volume, having the same title, published (in America) by the same firm last year.

The Scribners have brought out 'The Indian Frontier War' of 1897, by Lionel James, Reuter's special correspondent, who accompanied both the Mohmund and the Tirah expeditions last fall and winter. From a military point of view, the difficulties of such a campaign were more from the character of the country and the embarrassments with the supply train than from hard fighting. The Afridis are excellent skirmishers, and kept up a worrying and irritating combat, day and night, without standing for a pitched battle. The English columns had a casualty list of fifteen hundred at the close of the expeditions, mostly of men picked off by sharpshooters who infested the march and harried the train-guards. The policy inexorably carried out by Sir William Lockhart was that of burning the villages and homesteads of the clans which refused to submit to an assessed fine for their outbreak, leaving the valleys a desert and the people destitute and without a roof for the winter. The book is a stirring narrative or journal, well printed, and illustrated by over thirty sketches and photographs and ten sketch-maps and plans.

'The Rise and Fall of the United States,' by "A Diplomat" (F. Tennyson Neely), is a "skit" of some two hundred pages, purporting to be "a leaf from history, A. D. 2060." If it be true that no country was ever great without producing some satire of itself, publications of this sort ought to be a hopeful sign. For those who take a different view it will be rather depressing reading. The author's thesis is that we are not merely on the road to ruin, but to total extinction. Our civilization, now at its highest point, will decline so rapidly that in less than two hundred years not a trace of our national existence will be left except the Declaration of Independence; this the author excerpts from the universal oblivion which is to swallow up the United States, as being "the one imperishable monument of its early genius." The theory of our decadence developed in his prophetic vision is that (if we may venture to put it in our own way) the Democracy will swallow up the Trusts, and then fall to pieces of its own incapacity and ignorance. The West will fall away from the East, the South from the North, and the Pacific Coast will join in a federation of

"certain South American States." In the end, even these divisions will be in turn subdivided into petty separate governments. Material civilization will crumble into ruins. We shall be spared the American analogue of Macaulay's New Zealander moralising over the wreck of Greater New York from Brooklyn Bridge—for there will be no bridge for him to stand on. The book gives proof of undeniable cleverness.

The declining birth-rate, so marked of recent years in civilized countries, is considered by Mr. R. Ussher in a volume entitled 'Neo-Malthusianism' (London: Gibbings & Co.). Mr. Ussher shows that the deliberate and calculated restraints upon reproduction now so extensively employed were not in the contemplation of Malthus, and that the tendency is, therefore, misnamed. He displays great industry in collecting opinions upon the causes and results of this tendency, and certainly handles a delicate subject with the utmost propriety. It may be doubted if desirable results are obtained from discussions of this character. Those people in whom the instinct of reproduction is strong will, of course, eventually supplant those in whom it is weak, and the control of such instincts is beyond legislation. So far as earnest preaching can influence it, Mr. Ussher certainly does his best, and if he can succeed in arousing a public opinion in favor of large families, the world will continue to be peopled.

The proposal to improve our banking system by legalizing and regulating the functions that have been assumed by the clearing-houses in times of financial alarm, is the subject of an essay by Mr. Theodore Gilman, entitled 'A Graded Banking System' (Houghton, Mifflin & Co.). His contention is that there should be a clearing-house incorporated in every State, by a national law, which should issue currency to banks on pledge of their assets as collateral. Whatever the merits of this scheme may be, it is doubtful if Mr. Gilman's advocacy of it is calculated to win it support. He asserts that the nation is practically a unit in approving the issue of legal-tender notes by the Government, and that their withdrawal would produce widespread distress and confusion. "No further legislation in regard to the nation's finances or obligations is required." Mr. Gilman also maintains that banks do not lose money by panics, and care nothing for them. "The loss resulting from every money panic is incalculable, but it falls on the business community, and not on the banks." Mr. Gilman apparently supposes that bankers are indifferent to the solvency of the people whose notes they discount.

A journey in Somaliland in 1897, by Count E. Wickenburg, forms the subject of the first article in *Petermann's Mitteilungen*, number three. This traveller confirms the truth of the oft-repeated reports of the frightful barbarity of the Abyssinian raiders in this country, and deprecates strongly the abandonment of any of the helpless Somali by the English through the recent treaty with Abyssinia. Dr. E. von Drygalski discusses the conditions of the inland ice of Greenland, from his own observations in 1891-93, with a view to discover the physical causes and geographical effects of the ice-movement in the glacial epoch. This gentleman has been chosen to lead the German Antarctic expedition, to consist of five scientific men, five officers, and fifteen sailors, and to be absent two years. The supplemental number 364

contains a treatise, by Dr. A. Supan, upon the distribution of the rainfall upon the dry land of the globe, with numerous tables of observations and three charts showing the average yearly rainfall and the amount at the different seasons of the year. The basin of the Amazon seems to exceed all other large regions in its rainfall, the amount registered being over 2,000 mm. (78.7 inches). The coast of Alaska is the only part of this country with a like amount.

The campaign in the Sudan proves conclusively that under English tutelage the Egyptian is being made into a good soldier and fighter. The report for 1897 of Sir John Scott, the Judicial Adviser of the Egyptian Government, shows that the fellah is also becoming a law-abiding citizen. The number of serious crimes "has fallen from 1,866 in 1896 to 1,434 in 1897, whilst six years ago the annual total reached 2,625," and there has been a sensible diminution of petty crimes. At the same time the administration of the laws by the native tribunals is continually improving, with a corresponding increase in the public confidence in them.

The Canadian "Regulations Governing Placer Mining" in the Yukon district, approved January 18, 1898, with diagrams showing plans of the different kinds of claims, are published in the Consular Reports for April. There are also some useful hints as to the cultivation of the ginseng in America and its preparation for the Chinese market. The exports of the root from this country to China in 1896 amounted to 353,147 pounds, valued at \$656,515 gold—an amount which might be vastly increased if "American farmers of the mountain regions of Pennsylvania, Michigan, Colorado, Wyoming, Georgia, Idaho, and North Carolina, where ginseng grows wild, would cultivate it on land that had no other productive value." Attention is called by our Consul at Rotterdam to the threatened sale and destruction of the historic Pilgrim church at Delfhaven through the poverty of the congregation worshipping in it.

There has recently been dedicated at the Point of Penmarc'h, in Brittany—the scene of many shipwrecks—the "Lighthouse of Eckmühl," erected in memory of Marshal Davout, Prince of Eckmühl, by his daughter, the Marchioness of Blocqueville. In her will, providing for this memorial, she says: "My first and most cherished wish is that there may be erected a lighthouse upon some dangerous point on the coast of France. . . . The tears caused by the calamities of war, which I dread and detest more than ever, will thus be compensated for by the lives saved from the tempest." In an article on the electric light on the coasts of France, in the current number of the *Annales des Ponts et Chaussées*, M. de Joly describes in detail, with plans and illustrations, the special methods employed in this lighthouse. The light is visible sixty-two miles in fine and twenty-four miles in foggy weather, exceeding in brilliancy that of any other lighthouse lamp. The optical apparatus completes a revolution in twenty seconds, and, every five seconds, sends out white flashes lasting a tenth of a second. The building material is Kersanton granite. A bronze statue of Davout is placed inside upon a pedestal of porphyry, on which are inscribed the names of his battles.

Preparations are being made for the celebration of the eightieth birthday of the oldest member of the teaching force in the

University of Berlin, the Academician and geographer, Henry Kiepert. The event will occur on the 18th of August this year. The veteran savant is still hale and hearty, and, during the past winter term, delivered a course of lectures, gratis, on the "History of Cartography," making use of the excellent collection of geographical apparatus possessed by himself and the University. Kiepert has all along been a man of remarkable vitality. When in his seventieth year he spent several months in geographical researches in Asia Minor, riding from nine to ten hours over a rough country every day.

On the occasion of his recent birthday anniversary, the well-known littérateur, Heinrich von Pochinger, who has published several works on the career of the Iron Chancellor, issued a new volume of *Bismarckiana*, entitled 'Bismarck-Portefeuille,' aiming particularly at a reproduction of the exact speeches and addresses of Bismarck at the most important stages in his life. In this feature lies the strength of the new work. It seems, however, that the author has been giving the Chancellor greater credit than those in authority are willing to allow. Accordingly, by a formal imperial decree, it has been announced that Pochinger is no longer to have access to the royal or other state archives of Prussia for the purpose of continuing his researches. It is generally understood that this step has been taken at the instigation of the Emperor himself, who failed to find in the new work a sufficient recognition of the merits of his grandfather.

—In view of the small attention hitherto given in our colleges to the subject, Dr. W. B. Cairns's pamphlet 'On the Development of American Literature from 1815 to 1833' would be welcome, even if its merits were less than they are. It is published by the University of Wisconsin, and was prepared, we suppose, as a thesis, but it is remarkably free from sophomoric gush, from absurd misinformation, and from excessive appreciation of local authors and enterprises. A citizen of the Northwest has, in fact, the impartiality of a foreigner in writing the history of this period, for which, having in mind Mr. Albert Smyth's preposterous book on early Philadelphia magazines, we ought to be doubly thankful. It was a barren period in our literary history, being, indeed, the darkness which preceded the dawn of a time illumined by nearly all the lights of our literature, who shone through the medium of magazines vastly superior to most of the ill-starred attempts whose brief existence is chronicled by Dr. Cairns. It was through the *Knickerbocker* (1833), *Southern Literary Messenger* (1834), *Democratic Review* (1837), *Dial* (1840), *Graham's Magazine* (1841), and *Whig Review* (1845) that Hawthorne and Poe, Longfellow and Lowell, Emerson and Parkman, Holmes and Thoreau, became national as distinguished from local authors. Strangely enough, N. P. Willis, the "king of magazinists" of this later period, is not mentioned; nor is his magazine, the *American Monthly*, though it began publication in 1829, even listed in the bibliographies appended to the present work. Slips are infrequent; hence, so bad a one as Edward Coote Pinckney, for Edward Coate Pinckney, causes surprise.

—Under the title, 'Forty Years of Oratory,' the Bowen-Merrill Co. (Indianapolis) pub-

lishes in two volumes the Lectures, Addresses, and Speeches of Daniel Wolsey Voorhees. The book, which is compiled and edited by Mr. Voorhees's three sons and his daughter, Harriet Cecilia Voorhees, and has numerous illustrations, including four portraits of Mr. Voorhees, is preceded by a sketch of his life by Judge Thomas B. Long of Indiana. Those who like to trace political distinction to its beginnings in early education and circumstances will find scanty material here, as the barest skeleton of a biography is given. Mr. Voorhees was trained to the bar at a time when forensic success as naturally led to political honors as pecuniary advantages procure them now. Born in 1837, he was admitted to the bar just as the period of Webster and Choate was coming to its close. Through the war, and down to the year 1897, when he died, he preserved a certain tradition of rural Democratic oratory and debate, and his speeches, lectures, and addresses enable us to trace the path of the party through the singular vicissitudes of the past forty years. His first public appearance of importance, however, was, curiously enough, as counsel for Cook, one of John Brown's lieutenants, indicted in 1859 for treason, murder, and inciting slaves to rebel, at Harper's Ferry. Mr. Voorhees, whose line of defence was to make out his client the misguided victim of a stronger will and brain, seems to have helped Cook but little, as he was convicted of murder and hanged. A more successful case was the comparatively recent one of Kilbourne vs. Thompson, in which he secured, in an action for false imprisonment, a verdict for \$150,000, which was, however, set aside by the court, on the ground that it was due rather to Mr. Voorhees's eloquence than to the facts or law. As the amount ultimately recovered was \$20,000, the difference between this and the larger sum furnishes a sort of measure of Mr. Voorhees's effect on a jury at his best. He undoubtedly did make a considerable impression upon minds of an inferior order, and his ascendancy in party councils rose as his party tended more and more to become a disorganized rabble. Silver he swallowed, but, adhering to the liberal economical views taught him by an earlier generation, he ended his days stoutly defending freedom of trade. His oratory has a peculiarly early American flavor—in fact, could not have been produced in any other country. There is a gravity about it almost Indian, a solemn introduction of learning that suggests a half-educated audience, and an elaborate mingling of courtesy with abuse which (as when he deplores the willingness of Mr. Blaine to "abandon the pursuits of the lion, and to follow the habits of the hyena") are sometimes ludicrous. His oratory deserves preservation as of a type familiar in its day but now passing. Dickens caricatured it, after his first visit to this country, and, returning a generation later, found that it had come to seem a caricature in the land of its origin too.

—We have already called attention in these columns to the growth of interest in German literature which the French, after a period of apathy or aversion, have once more begun to manifest. The magazines and the publishers' lists bear almost monthly witness to this fact. In the *Revue de Paris* Michel Bréal is making a study of the historical original of Goethe's "Närrliche Tochter," under the title, "Une Héroïne de

Goethe." Édouard Rod's "Essai sur Goethe" has elicited much serious comment, and M. Rod himself, in the *Revue des Deux Mondes*, is full of praise for Sudermann's "Johannes." And yet the time now seems very remote when German literature was a vital influence and more than merely a subject for scholarly investigation. But that time was, and a writer in the *Revue d'Histoire Littéraire de la France* has recently made a study of "Les Origines de l'Influence Allemande dans la Littérature Française du xix. siècle." This influence was strongest during the early thirties of the present century. To many it will be a surprise to learn that the productions of the eccentric and versatile E. T. W. Hoffmann bore better fruit in France than in his native land. It was he who inspired Musset's "Contes," and Musset's type of the German maiden was taken from him. Like Heine, Hoffmann found, not only in France, but in England also, a wide circle of readers, and numerous translations attest his popularity. "The Golden Pot," which Hoffmann wrote while the bullets were whistling about him at the siege of Dresden, found a place in Carlyle's collection of German romance. Within a year or two, under the title of 'Weird Tales,' J. T. Bealby has published, with the imprint of Charles Scribner's Sons, a new translation of twelve stories of Hoffmann's. As a whole, in spite of occasional infelicitous phrases, this version, so far as it goes, ranks among the best, although the omission of the inimitable "Nutcracker," for instance, in favor of less happy ventures, is to be regretted. The biographical notice appended to the second volume deserves praise. But for English readers who desire to acquaint themselves more fully with the writings of Hoffmann, the volume in the Bohn Library, under the author's own collective title of 'The Serapion Brethren,' remains the standard work.

—Hoffmann is still worth reading. Despite his somnambulism and madness, he was, says Prof. Francke, "a master of realistic description and psychological analysis." The Bohn version is by Major Alexander Ewing, who also translated Jean Paul's 'Flower, Fruit, and Thorn Pieces.' Between Richter and Hoffmann there was a certain affinity of fancy, though not of character or moral depth. In Hawthorne, too, there is a flavor of Hoffmann; but the closest analogue is Poe. The phantasms and extravagances of a wayward imagination, combined in Hoffmann's case with uncontrolled mannerisms, often destroyed the beauty of his finest flights of fancy. He, like Poe, lacked poise. He was averse to taking things seriously. "These are odious," was a self-defensive formula of his. Of a piece with this lack of seriousness was his irresistible talent for caricature, the indulgence of which once almost wrecked his career. He subsequently turned his plastic talent to account, and, by painting portraits, eked out his scanty income. The present generation has almost forgotten the extent of Hoffmann's versatility, but he was also a musician of no mean ability. His compositions were praised by Weber, and his musical setting to Fouqué's "Undine" was produced at the Berlin Opera-house. It was his admiration for Mozart, of whose "Don Giovanni" he wrote an analysis which is still a classic bit of musical criticism, that led him to change his third name of Wilhelm to Amadeus; indeed, it is as E. T. A. Hoffmann that he

is generally known. But only his literary fame carried beyond the borders of Germany, and it was beyond those boundaries that his work was destined to exert its fullest influence. He occupies a place in literature which we should not gladly see vacant, and yet, from the point of view of this end of our century, his influence upon French letters, and his wide popularity both in England and on the Continent, seem to constitute one of the curiosities of literature. That influence, however, is an undeniable fact in the history of the early days of Romanticism in France, and it is to facts like these that French writers are now directing the attention of their countrymen.

—'De Patriottentijd' (The Era of the "Patriots") is the title of an interesting Dutch work by Dr. H. T. Colenbrander, just issued at The Hague (Martinus Nijhoff). It covers the decade 1776-1786, and throws many interesting side-lights upon British and American history. The author, in common with all students who have long awaited impatiently the still delayed publication of Sir Joseph Yorke's official papers, suffers in the first half of his story from imperfect information where exact knowledge is most desired. Yorke, an army officer promoted to the diplomatic service, was for twenty-five years British Minister at The Hague, and had manipulated Dutch politics until, from Stadholder to city councilman, he thought he had the money-loving Hollanders wholly pro-British. In his plans he was foiled by Van der Capellen, Luzac, Coelkens, the Van Berckels, De Gijsselaer, and others. The recognition of John Adams by the States-General and of the United States by the Dutch republic, accompanied by a loan which, when paid, amounted to fourteen million dollars, showed that the Dutch loved freedom as well as money. Apart from its direct historical value, this work shows in a very clear way how avarice and war go together. The Dutchmen wanted more trade and larger profits when they defied Great Britain, while the motive of the indecent haste of the latter in declaring war is manifest at a glance. Before the Government at The Hague knew anything of hostilities, the seizure of Dutch ships in British ports had begun. Within a month, nearly two hundred vessels with their cargoes, worth nearly six millions of dollars, were confiscated in British ports, and the seizure of ships, lands, islands, and harbors continued for years. The student of federal government cannot afford to ignore this book, which shows what terrible, and in this case mortal, diseases may ravage the federal body politic. It is evident that our constitutional fathers in 1787 had before them not only a living, but an awful and moribund example, from which to learn what to keep and what to reject in federalism.

SIR FRANCIS DRAKE.

Drake and the Tudor Navy. With a History of the Rise of England as a Maritime Power. By Julian S. Corbett. 2 vols. Longmans, Green & Co. 1898.

This work is naturally divided into two volumes, the first devoted to the career of Drake as adventurer and corsair; the second dealing with his later years, when he became distinguished as admiral and naval commander. Besides the usual manuscripts which cover the time of Drake, and publications like the Navy Records, or like those of

the Hakluyt and Camden Societies and the works of Capt. Duro, the author has had the advantage of consulting transcripts of various unpublished Spanish documents which Capt. Duro has recently discovered and calendared. As a result, Mr. Corbett, with his previously published short life of Drake as a nucleus, has produced an historical work of much value and interest and possessing a freshness and fulness of detail never before reached.

Froude, in his works on the Spanish Armada and the contemporaneous English seamen of the sixteenth century, identifies the beginning of the ocean supremacy of the English with the defeat of the Great Armada in 1588, and would make that supremacy the legitimate child of the Reformation. More correct, it is to be hoped, in his generalities than in his details, Froude in this instance is not far from wrong, for with the advent of Sir Francis Drake as a sea-fighter Britannia took her first steps towards ruling the wave. Admiral Colomb, the best English authority upon the subject, says that the real opening of the new phase was the fight of Sir John Hawkins against the Spaniards, in the treacherous attack at San Juan de Ulloa in 1567—a fight in which Drake made his earliest appearance in real warfare, as a youngster of twenty-two, in command of the ship *Judith* of fifty tons.

Drake was born upon a farm in Devonshire about the year 1545. Related to Sir John Hawkins, and with a father who probably began life as a seaman, and became in time lay reader to seamen and a clergyman of the Anglican Church, Drake may truly be said to have come into the world with the English Reformation and revolt against Rome. It was not unnatural, as a consequence, that he should inherit his father's tastes and feelings, and that his life should be spent upon the sea and in constant antagonism to his most Catholic Majesty the King of Spain. Apprenticed as he was by his father, in the rough school of the English coasting trade, Drake received excellent training for his future life, and showed such promise that his master bequeathed to Drake his bark. From that small beginning his fortunes arose. With the reign of Queen Elizabeth began the period of reprisals, seizures, and quasi-war against Spanish trade and dominions. The causes, besides those of retaliation, were held to be three-fold. For the English people it was religious, for the Government it was political, and for the merchants it was in addition commercial. The idea dawning upon the English was the one asserted so strenuously by Sir Walter Raleigh, that "whosoever commands the sea, commands the trade; whosoever commands the trade of the world, commands the riches of the world, and consequently the world itself."

Drake, tiring of the coasting life, made cruises to the Western Islands and to the West Indies, and eventually joined his kinsman, Sir John Hawkins, in the expedition which met attack and disaster near Vera Cruz in Mexico in 1567. His bark and the *Minion* were the only survivors of this expedition when Hawkins returned afterwards to England. Drake's other expeditions to the West Indies and Spanish Main it is not necessary to dwell upon, as they are sufficiently well known and were partly in the nature of reprisals against the Spanish and partly adventures in a commercial sense; in both aspects the spoliation of the Spaniards

was congenial work. His landing and adventures at Nombre de Dios and on the Isthmus of Panama led to his first view of the Pacific, and inspired his famous cruise of circumnavigation, which lifted him to the higher plane of accomplished navigator and matured leader of men.

Fascinating as the story of Drake's voyage around the world has always been, it is none the less so with the fuller details and additional side lights published by the author in this work. The discovery of the open sea to the southward of Tierra del Fuego; the Doughty affair; the cruise along the Pacific Coast of America, and the stay in California, lose nothing in interest when told by the light of later discoveries and recent investigations. Though Drake had been obscurely heard of through Spanish sources during this voyage, it was not until September, 1599, after an absence of nearly three years, without a word of news from home, that the *Golden Hind*, richly laden with treasure, ended her voyage in Plymouth Sound. Knighted on board this ship by the Queen, Drake became the hero of the day and the great sea officer of the kingdom. After Drake's return he was put on the commission to examine the state of the navy, and thus had an opportunity to become more familiar with the weapon which he was in the future to handle so efficiently. With the acquisition of Portugal by Philip II., Spain fell heir to a fine seagoing fleet of eleven galleons, and had for the first time the nucleus of a regular navy. This nucleus, with the additional vessels constructed on the Biscayan coast, gave the Marquis of Santa Cruz, the great Admiral of Spain, reason to think the "enterprise of England," as the Great Armada's object was called in Spain, a practical affair. The prestige gained by Santa Cruz in 1585, in the defeat of the French privateers and the capture of the Azores, strengthened Philip's determination and Santa Cruz's confidence.

In England the rising danger of the Armada became apparent to everybody except possibly at first to the Queen. However, when Spain, for the purposes of the Armada, seized the English corn-fleet, Drake was directed at once to sail with a fleet to rescue the seized vessels and make reprisal. The expedition was formed in the way that was then customary, a fleet of merchantmen being stiffened, as the author says, by some ships from the Royal Navy and financed by a joint-stock company. Leaving in the autumn of 1585, he raided Vigo, touched without landing at the Canaries, and, following the usual course to the Cape de Verdes, destroyed the two principal towns of the latter group. Proceeding to the West Indies, he captured San Domingo, the capital of the Spanish West Indies, and also Cartagena on the Spanish Main. Without instructions or certainty of a continuous policy on the part of the Queen, he was wise not to hold either place with the rapidly diminishing forces under his command. For the latter cause, also, he made no attempt upon Panama, but, after burning St. Augustine, and taking on board the English colony left on Roanoke Island, returned to England, having inflicted on Spain a loss in resources and prestige that postponed the Armada as well as avenged the seizure of the corn fleet.

But Drake's most brilliant campaign was yet to come. Under orders from the Queen to prevent the concentration of the various squadrons and detachments under Santa

Cruz at Lisbon, he was further to cause "the distressing of the ships within the havens themselves." Sailing on the 1st of April, 1587, and learning at sea that ships and stores were accumulating at Cadiz, he proceeded at once to that port. The defences of Cadiz at the time were not formidable, but the shoals of the harbor added much to the difficulties of the attack, and afforded opportunity for the swift, light-draught galleys—whose rôle was that of the torpedo-boat of our day—to develop their possibilities. Standing in at once upon sighting the port, he saw inside, under the guns of the town and the batteries, some sixty ships and a crowd of caravels and small barks, almost all of which were engaged in some way in connection with the great enterprise against England. As Drake entered, the galleys made a dash at the beam of his vessels, but they were met with heavy raking broadsides from the Queen's ships that led in, which riddled them so that they turned and fled, seeking refuge behind reefs and up the estuaries near by. By nightfall all the vessels not able to get into the inner harbor were in Drake's hands and afterwards burned. Remaining undisturbed during the night at anchor, the next morning Drake raided the inner harbor by a boat expedition. The wind falling away to a calm, Drake became exposed to a galley attack under disadvantageous circumstances; but neither this, nor the newly mounted guns on shore, nor the fire-ships sent out, dislodged him, and it was not until the following morning that he left with little loss, but with the beard of the King of Spain effectually singed.

It remained yet for Drake to prevent the concentration at Lisbon. A detachment of vessels under Recalde were at Cape St. Vincent; these were forced to take refuge in Lisbon, their leader being too wary to be caught. Their retreat gave Drake an opportunity which he seized by a sudden attack on and capture of the fortifications commanding the anchorage at Cape St. Vincent, then the most important and most frequented roadstead and watering-place on the Atlantic coast of Europe. He thus secured a sheltered position for his intervening fleet, well placed between Lisbon and the Mediterranean; a point whose strategic importance continued to later days. Upon reconnaissance, Lisbon was found too strong for attack, and Drake returned to his rendezvous off St. Vincent, and sent home for reinforcements so that he might hold his chosen position. Philip, alarmed at the situation, issued a series of contradictory orders, directing Santa Cruz to go to sea, and finally abandoning vessels and sending their crews overland to Lisbon. Reduced in force by bad weather met at sea and by the desertion of some of his fleet, Drake could not hold his position and also proceed to the Azores as directed. Tempted by the news of a returning East Indiaman, he finally proceeded to the Azores, and captured the richly laden *Sea Felipe*, with which he returned once more to Plymouth, with a prize and a reputation unsurpassed in Europe. What Drake might have accomplished if he had been at the head of a purely military expedition with no commercial obligations may well be imagined, for the author is within bounds when he says that, to this day, this cruise of Drake's presents the finest example of how a small, well-handled fleet, acting on a nicely timed offensive, may paralyze the mobilization of an overwhelming force.

After reaching England, Drake was anxious to return and renew his operations on the coast of Spain, but England was reluctant and vacillating, and, as a result, the concentration went on at Lisbon unimpeded. A defensive fleet was formed, but was retained on the English coast—a strategic mistake which Drake protested against, for the defensive line then as now was the enemy's coasts. Lord Howard of Effingham was made Commander-in-Chief of the naval forces to meet the Armada, and Drake given the command of an independent fleet, which, upon the news of Santa Cruz's death, was united with that of Howard, Drake being made Vice-Admiral, second in command, and practically the professional commander of the fleet.

The various stages of the drama of the Great Armada followed—its first sailing under Medina Sidonia, its return and second departure, the indecisive engagements off Plymouth, Portland Head, and the Isle of Wight; its gradual crowding off shore and to the eastward, the attack of the fire-ships off Calais, and the final action off Gravelines, followed by the retreat to the north of Scotland, and finally the dispersion and scattered return to Spain. In all of the actions Drake played a part, varying in importance, but still strategically and technically that of the leader of the defensive fleet. Of Effingham and his part, the author, who maintains Howard to have been a Protestant, says:

"From first to last he set an example of untiring labor, of loyal devotion, and of buoyant courage, that is hardly to be surpassed, and which entirely won the respect of his headstrong and self-confident Vice-Admiral. If the times demanded a high-born amateur at the head of our navy, let no one forget what happened to other fleets similarly commanded, or ever cease to be gratified that at this great crisis the man chosen for the post was Lord Howard. His splendid behavior made the whole fleet one. Whatever was done, was done with all the might of the force. If Drake had been supreme head, the campaign might have been more scientific in design, more dashing in execution, but its success must have been thwarted by the jealousies and friction his masterful spirit seemed incapable of avoiding."

With the command of the sea given to the English by the defeat of the Armada, naturally came the desire to destroy what was left of the Spanish fleet, and to this was added an endeavor to establish Don Antonio, the Portuguese Pretender, and to capture one of the Western Islands as an advanced base against the Spanish trade. The expedition placed under Drake had Sir John Norreys as military commander. The land force seems to have been out of proportion to its objectives; too much for a raid, it was too small for serious operations against Lisbon. Probably undue reliance was placed upon Don Antonio's hope for a general rising of the Portuguese. Hampered by the instructions of the Queen and the political purposes of Don Antonio, the expedition fell far short of the success aimed at and hoped for, and Drake was in disgrace with the Queen and her advisers for a long period.

In 1595, however, the Queen appointed him joint commander with Sir John Hawkins of an expedition to the West Indies. This proved to be the last as well as the most disastrous with which he was ever connected. To the evils of a joint command were added those of inadequate force, and again interminable delays. The Spanish were not only better prepared ashore and afloat than ever before, but the delays at

Plymouth, the unwise attempts upon the Canaries, and the capture of men and a ship while en route, made known their objectives and their course and gave ample time for preparation. The failure at Porto Rico was almost contemporaneous with the death of Sir John Hawkins, and the barren ravaging on the Spanish Main and the repulse on the Isthmus of Panama were followed by the death of Drake himself, and his subsequent burial at sea near the scene of his earliest triumphs.

The limitations of Drake, both in person and in surroundings, were too great to permit us to consider him exactly in the same light as Nelson; but the words of the author which follow, seem to us an accurate summing up of his attributes as a naval leader:

"It was in the very nature of Drake," says Mr. Corbett, "that, so long as his nominal commander would consent to be a figurehead and his council of war a mere court to record his opinions, he could command with brilliant success. But such a position he would never have been allowed and could not possibly have achieved in the Cadiz expedition of 1596. The Elizabethan age, high as it rose beyond all that had gone before, yet lacked the greatness of spirit that could recognize and trust implicitly a heaven-born admiral as a ripper age could trust Nelson. So it came about that he was denied the opportunity of proving the tremendous force of his ideas, and he passed to posterity, as the narrow view of his contemporaries could see him, with a renown, it is true, so great as to become at once almost mythical, yet not for what he was."

The style of the narrative is most interesting, and the book is provided with plans and illustrations, particularly of the vessels of the time. The accuracy of the text is well sustained in the appendices and the many notes and references. It is to be regretted that the long and somewhat pedantic descriptions of the ships and guns of the Tudor age were not also relegated to the appendices.

REDDAWAY'S MONROE DOCTRINE.

The Monroe Doctrine. By W. F. Reddaway. Macmillan. 1898.

Mr. Reddaway's examination of the Monroe Doctrine was written originally in 1896 in competition for the Members' Prize at Cambridge. Coming here from an English university, it will be read with interest by Americans as both a distinctively English and at the same time impartial contribution to the learning of the subject. It differs from most writing about the Monroe Doctrine in one important point, namely, that it is not argumentative or contentious, but altogether analytical and historical in its treatment. The author seems to have drawn upon all the leading recognized American sources of information, and also upon a mass of unpublished documents in the Public Record Office, with the result that he has produced an essay which no writer can hereafter afford to neglect. His conclusions are that the evolution of the Monroe Doctrine was gradual; that the peculiar form of the message of 1823 was due to John Quincy Adams; that he, and he alone, logically applied it in politics; that it produced its desired effect as an act of policy, but in no way modified the Law of Nations; and, further, that the Monroe Doctrine of current politics seems to have become rather an "Adams sentiment," very different, however, from anything that Adams as a statesman of two generations since can be said to have ex-

pressly advocated. His view of the part played by Adams in the production and publication of the Doctrine is not different from that taken by Mr. J. T. Morse, Jr., in his biography of Adams, published some years since.

The Monroe Doctrine, as generally cited by American publicists, consists of two propositions: that "the American continents, by the free and independent condition which they have assumed and maintain, are henceforth not to be considered as subjects for future colonization by any European Powers," and that "we should consider any attempt on their part to extend their system to any portion of this hemisphere as dangerous to our peace and safety." . . . "With the governments who have declared their independence and maintained it, and whose independence we have, on great consideration and on just principles, acknowledged, we could not view any interposition for the purpose of oppressing them, or controlling in any other manner their destiny, by any European Power, in any other light than as the manifestation of an unfriendly disposition towards the United States." Historically it was intended to bolster up the newly acquired freedom of Spanish America (a valuable appendix gives an account of the political condition of America south of the United States in 1823), and was suggested by Canning and formulated by Adams and Monroe. The attempt to make it a permanent doctrine of international law is futile, because a rule of international law derives its force from the consent and practice of a number of nations, while the Monroe Doctrine expresses the policy of one, and can be modified or even recalled by that one at its pleasure. Like the Balance of Power, which, until it was superseded by other arrangements, ending in the so-called Concert of Europe, played such an important part in European diplomacy, it belongs to a domain quite outside the confines of international law, though within those of government. In obedience to our national instincts, we like to call it a "doctrine," and in this there is no harm, provided we remember that it is not recognized by international publicists, that it embodies no rule, has never been stated as one by any law-making body, and contains a clause, "with the existing colonies or dependencies of any European Power we . . . shall not interfere," which, at the present time, we are refusing in a very emphatic manner to regard as binding upon ourselves.

It follows from all this that the endeavor to bring such matters as the dispute about the Venezuela boundary, or the Clayton-Bulwer treaty, or many other matters alien to the historical ground of the policy within the scope of the Doctrine, is never likely to advance the position (whatever it may be) taken by the United States or have much bearing on subsequent disputes. The European Power with whom the dispute arises will always say: "The fact that you can make a doctrine of your own domestic policy apply, by your own principles of hermeneutics, to a given case affecting our interests is of no moment to us. We may withdraw our opposition and let you have your way, but no precedent has been established." That the flag covers the cargo, that privateering is and remains abolished, or that a blockade to be binding must be effective, are examples of rules of actual or potential international law; but a "doctrine" of a single nation

cannot be a rule of law. If it could, the United States would stand to the world at large as Rome once stood; and while Rome lasted, international law had no existence.

These considerations do not belittle the importance of the Monroe Doctrine, but show perhaps some of the reasons why it should be studied, not doctrinally or legally, but historically. It is a part of our history, and not a part of our law; moreover, we think that no one can read Mr. Reddaway's book without coming to the conclusion that it is at least doubtful whether in the future "Monroeism" will not tend more and more to be curbed by other tendencies in our policy and by the law of nations itself. That we succeeded in the Venezuela case in getting England to arbitrate her Guiana boundary, should not blind us to the fact that we ourselves admitted in the course of the controversy that a voluntary settlement between Venezuela and England would be binding on us; i. e., that the parties to the controversy might by agreement preclude us from applying the Doctrine to them—a necessary but rather dangerous concession; while in the Clayton-Bulwer dispute we have never yet induced England to take our view that the Doctrine has any application whatever.

There is no way so sure to clear up the mists and fogs which surround the whole subject as to study it historically. As Mr. Reddaway shows, the history of its proclamation is an integral part of the history of the modern world, and it was closely connected with the development of those peculiar ideas relating to government which have done so much to further the advance of democracy. As he shows, also, it was simply the announcement of a policy of support for the newly won freedom of Spanish America against the Holy Alliance and European reaction, and so played its part and accomplished its purpose at the time. Its use towards the end of the nineteenth century to cover any "continental" design of the party in power that may happen to come up, tends to great confusion of thought, and should be discountenanced by American statesmen and publicists. Ever since Canning's splendid boast in 1826 that he had "called the New World into existence to redress the balance of the Old," an atmosphere of sentiment, rhetoric, and rhodomontade has hovered about the Doctrine which it is high time that the *sicorum lumen* of historical investigation should finally and for ever dispel.

One circumstance Mr. Reddaway points out which is very important, and which, for the sake of brevity, we will put in our own words—that the Monroe Doctrine was in a measure a product of a separation between Europe and America which has ceased to exist. Down to the introduction of steam and the telegraph we were remote, in fact; to-day we are nearer to London or Paris than we are to Lima or Rio, and, it may be added, the whole world tends more and more to homogeneity of civilization. These facts make a separate and isolated policy every year more and more difficult to pursue, and bring us with time nearer to a point at which the general rules of civilized intercourse between states may become the only rules to which any single nation can afford to appeal. This does not mean that war or intervention will come to an end, but that the attempt to erect an American as opposed to a European system will fail whenever it

comes in conflict with those wider interests of mankind which have brought the ends of the earth together. It is intercourse, not geography, which determines the rules prevailing between nations.

LIDDON'S PUSEY.

Life of Edward Bouverie Pusey, D.D. By Henry Parry Liddon, D.D. Edited and prepared for publication by the Rev. J. O. Johnston, M.A.; the Rev. Robert J. Wilson, D.D., and the Rev. W. C. E. Newbolt, M.A. In four volumes. Volume IV. (1860-1883). With portrait and illustrations. Longmans, Green & Co.

The Life of Dr. Pusey is now finished, and, although the editors of the present volume complain that they have been obliged to omit things necessary to the completeness of their story, it will seem to many that a more limited presentation of the subject, rather than a fuller one, would better have subserved the object which they had in view. Dr. Liddon, by whom the biography was conceived and upon whose chosen lines it has been carried out, contributed nothing to this volume except the long account of Dr. Pusey's last days and death. Viewing Dr. Pusey's whole life as related to the Oxford Movement, Dr. Liddon devoted a volume to "The Preparation," a second to "The Movement," a third to "The Struggle," and a fourth and last to "The Victory." The present editors believe the title of this volume to be justified by the fact that "the Archbishops of England, in addressing 'the whole body of Bishops of the Catholic Church,' are able to assume, as part of the undisputed heritage of the English Church, such doctrines as the Apostolical Succession and the Sacrificial Aspect of the Holy Eucharist, which, fifty years ago, were generally branded with the discredit that belonged to the hated word Tractarian." It is undeniable that the English Church has been tending, like the Roman, to work out the logic of its system in its doctrines and ceremonies, but this tendency has been qualified by circumstances of very real importance; for one, the critical development which affords the spectacle of High Churchmen openly teaching the revolutionary opinions of Kuenen and Wellhausen; for another, the toleration of theological doctrines which were abominable to Pusey and his school. What is claimed as a victory for that school is rather to be regarded as a *modus vivendi*, about equally favorable to it and to its most radical opponents. Moreover, in so far as the Puseyite doctrines and forms have tended to a wider acceptance and observation, it is worth while to consider to what extent they have carried along with them the nation's best intelligence. A victory alienating this is only nominally different from a ruinous defeat.

There is plenty of "Struggle" in this volume, also, however it is named. We plunge at once into the long battle for the increase of Jowett's salary, a battle in which Pusey was as conspicuously the leader on one side as Stanley on the other. The story of this battle is the more interesting from the Pusey side because we have so recently had it from the other in the *Life of Jowett*. It is evident that Jowett did not overrate the extent of Pusey's influence in the matter. It was he who stirred up the University prosecution of Jowett on the ground of his heretical opinions in his commentary on Romans and in the *Essays and Reviews*. The saint-

ly Koble contributed £100 towards the expenses of the prosecution, which signally failed of putting Jowett in the wrong, and, after six years of controversy, Stanley completely won the victory for his friend, for whom he had fought so long. It should be said, in justice to Pusey, that at any time he would have been glad to see Jowett's salary increased if it could have been done without seeming to endorse his heresies, and marvellous was the ingenuity with which he strove to realize such an adjustment of the matter. When his biographers beg us to remember that since 1860 Oxford has "laid aside its old religious character," we have another item helping us to measure the reality of that "victory" which they would fain imagine was coincident with the last years of Pusey's life.

The most pathetic incident in the course of the events depicted in this volume is the meeting of Newman, Pusey, and Koble, at Koble's rectory in Hursley in 1866, a few months before Koble's death—an event which left Pusey feeling very much alone. Yet he was intimate with Newman to a degree that will be surprising to many English churchmen, and that would have made his life very uncomfortable at the time had the secret been divulged. They agreed in heartily disliking Manning and Ward and their set, Newman calling them incubi. But a less ardent resolve than Pusey's to unite the Anglican and Roman churches would have been chilled by Newman's icy manner of meeting the overtures of his friend. The pound of flesh would not do: there must be the blood with it. It is true that the indifference and arrogance of Newman were impersonal, that of the church for which he spoke. Pusey was given to understand that he could not expect a hearing with his eireneia if he did not come bringing his sheaves with him—the English bishops and clergy in a body. And so, like the poor fellow at Whitefield's camp-meeting, he "rolled himself in the dirt for nothing." His gracious overtures were received by the Manning set as a declaration of war, and even Newman wrote him, "You discharge your olive branch as if from a catapult." Pusey lacked nothing that was taught by Rome *de fide* of being a thorough-going Romanist before the declaration of infallibility, and this volume makes it appear likely that but for that declaration he would have gone over to Rome if the debate over the Athanasian creed had gone a little more against him. Newman wrote him of the Manning set, "They came to the Church and have thereby saved their souls; but they are in no sense spokesmen of the English Catholics." Nevertheless, when the Vatican Council met, he found them accepted as such at Rome and able to impose their dogma on the Church. It was most refreshing to Pusey and Koble to find that the Romanists had their differences as well as the Anglicans.

The nomination of Dr. Temple, the present Archbishop, to the See of Exeter obliged Pusey to throw Gladstone over after a friendship of thirty years' duration. "The Westminster Scandal," as Pusey designated the invitation of a Unitarian scholar to take part in the revision of the King James translation of the Bible and attend a communion service in Westminster Abbey, was another dreadful shock to Pusey's sensibility, and the wife's-sister marriage bill was another. In fact, he was being con-

tinually rubbed the wrong way. When the Athanasian creed was under fire, he threatened to withdraw from all his functions if worst came to worst. His general indifference to ritualism, and the trouble he had with it, comment amusingly on the popular identification of ritualism with Puseyism. When Manning put Newman in the attitude of refusing the Cardinalate, Pusey was so unfortunate as to fall into the trap and write Newman, "I thought in my inward heart that your place would be higher in heaven for declining all on earth." That was one of the things one would wish not to have said, but it could not be recalled.

During the last years of his life, Pusey's constancy to his ideals, together with many amiable and endearing personal traits, insured him wide consideration even from those who most deplored his influence on the English Church. An appendix of some 40 pages detailing his printed books and papers testifies to the enormous industry of a man to whom every comfort and luxury was assured should he not lift his hand. It is perhaps too soon to pass a final judgment on his life. It is certain that he did much to detach the Anglican body from the Protestant movement, and to make it substantially identical in its doctrines and its sacraments with the Roman Catholic Church.

The Household of the Lafayettes. By Edith Sichel. London: Archibald Constable & Co. 1897.

Miss Sichel writes with some knowledge of the Lafayette and De Noailles families, but our praise of her excursions into the history of revolutionary France must be slight. Her style is one of tropical luxuriance, and her judgments, whether of men or events, are far from being uniformly sound. The Marquis de Lafayette, by virtue of his share in great events, belongs to the public even more than he does to his family. For instance, on his first visit to America he left his wife, though she was hardly more than a bride, in order that he might follow his spiritual betrothed, Liberty. Miss Sichel is much more at her ease in describing the scenes of the hearth than those which are enacted on the stage of the world. We shall not enter upon her account of Lafayette, the statesman and soldier, because she does not help us forward at these points. The domestic part of her narrative is the best, and, in briefly commenting upon it, we shall take for a central figure Lafayette's remarkable wife, Adrienne de Noailles.

Miss Sichel finds in Adrienne's mother, the Duchesse d'Ayen, a personality which moulded children and grandchildren. Almost all the members of the De Noailles connection are celebrated for their respectability and clean living amid the temptations of Louis XV's court. The Duchesse d'Ayen, a descendant of the Chancellor d'Aguesseau, even raised the tone of her husband's family, and, by patiently training her children in manners and morals, prepared them for the agonies they were forced to suffer during the Revolution. Adrienne's love of her husband was spontaneous, and rose above selfishness whenever it came to a question between private content and public duty. She entered into the American project, and was a party to his plans for eluding court and family espionage when he sought to

leave the country. What separation cost her may be judged by her happiness in Lafayette's presence after his final return. Though little given to theatrical posing, "the vehemence of her feeling was so great that, for many months, she used almost to faint whenever he left the room." The Revolution found her ready for the worst that can come in life, and she was given a chance to prove her character after Lafayette's flight. During the three years between his arrest and 1796, she only heard from him once. She was seized as a suspect in the autumn of 1793, confined in a provincial prison till the following May, and then transferred to La Petite Force. Confinement had brought her to distress. In the Great Terror she lost grandmother, mother, and sister at one blow. Robespierre's fall saved her life, but by doing so left her with new difficulties to master. She had to keep her children above penury and to secure her husband's release. By dint of equal devotion and activity, she found some money, made her way to Vienna, and secured imperial permission to live at Olmütz. She entered the town with the Song of Tobit on her lips, and made captivity a very different thing for Lafayette. She remained close at hand till his freedom was achieved by the peace of Campo Formio. We can only pause to mention one touch of character. She bore illness with fortitude and without the loss of playfulness. Shortly before her death in 1807 she said to Lafayette, "So I have been a pleasant companion to you?" "You have indeed!" "Well, then, bless me." These words were engraved on the gold medallion containing the portrait which Lafayette wore till the end of his days. Miss Sichel's account of their life together is so felicitous that we regret certain other less admirable features to which we must advert.

The inaccuracies of this volume are numerous and glaring. P. 85, Barnave is ranked with Pétion as a Girondist. A little later, p. 94, he is styled Barnavès. P. 98, "Loménie de Brienne, with his scheme for equal taxation, had replaced Necker"—a bad slip to make on the very eve of the States-General. P. 100, enumerating the royalist parliamentary leaders in the reign of Charles I., Miss Sichel gives us "Falkland, Hyde, and Clarendon." P. 106, she proceeds, after quoting Gouverneur Morris's description of the meeting of the States-General: "The Third Estate had a sprinkling of *cures* and men of letters, but consisted chiefly of lawyers." That this statement applies to the original constitution of the Third Estate appears from what is said on the following page. After the oath of the Tennis Court the National Assembly "summoned the clergy to join it—only three of them obeyed." In the sentence immediately preceding this last it is affirmed that Bailly was elected President of the National Assembly on the famous 20th of June, whereas he was chosen on the 17th. The difference of a few days cannot be overlooked in the crowded action of the early Revolution. P. 113, Talleyrand is termed Abbé at a time when he was Bishop of Autun. P. 162, Hébert and Desmoulins are placed on the Committee of Public Safety, to which neither of them ever belonged. P. 137 Plinits (*sic*) is placed in Prussia instead of in Saxony. P. 175, "The desertion of Gen. Dumouriez . . . in April, just after his brilliant victories for the Republic, had precipitated matters." Miss Sichel is laboring under a grave misapprehension if she considers Neer-

winden a brilliant victory for the Republic. P. 266, at this point Sieyès comes in for a little mention. Miss Sichel is eclectic. On p. 89 she has dubbed him "the mediocre." By the Directory period he has become "the incarnation of effective cleverness." Associated with him are Barras and Carnot, "his fellow-Directors." But Sieyès and Carnot were never "fellow-Directors." P. 269, coming to Napoleon, we find him represented as "fighting with sumptuous chivalry for the deliverance of Egypt from the Turk," a crusading enterprise for which we fear he would not have left France in 1798. Considering his failure in the East, one must also stretch language a good deal to say of him in 1799, "His career since 1797 had been a triumphal procession." P. 296, Miss Sichel concludes a synopsis of the Chouan plot by beheading not only Cadoudal, but Pichegru. Without going into the question of whether he killed himself or was strangled, one may confidently affirm that Pichegru escaped decapitation. P. 340, the Ordinances of St. Cloud are placed at four instead of at five in number.

Several of these mistakes are heinous in themselves, and furthermore they imply that the subject has been written up rather than mastered. We should not have catalogued so many were the tone of the book less cocksure. One is half amused and half annoyed at reading limitless generalizations when they exist side by side with elementary errors of fact.

Marcus Aurelius Antoninus to Himself: An English Translation with Introductory Study on Stoicism and the Last of the Stoics. By Gerald H. Rendall. New York: The Macmillan Co. 1898.

The translation of the 'Meditations' of Marcus Aurelius is an enterprise to which not a few have felt called, but the versions that have appeared have been executed rather for the translator's pleasure than as a *tour de force*, and only one or two have survived in general use. We can think of no classical author of whom a translation is not inevitably a pale parody. For the scholar, the Italian motto, *Traduttore traditore* holds good for Jowett's Plato as for Pope's 'Iliad'—the blackness of the betrayal is a mere question of shade. But there are certain post-classical writers whose Greek has no peculiar and characteristic charms of style that could be obscured in a translation—in whom there are no flowers of poetry whose perfume would vanish if one attempted to distil it. Among these are Plutarch, Epictetus, and Marcus Aurelius. One cannot help feeling, as one reads the exotic, artificial, laboriously acquired Greek of Marcus Aurelius, that the kindest thing one can do for him is to translate it. It is unreadable. We question whether any scholar who is afflicted with the prejudice for style would prefer the original Greek to an English version. Marcus Aurelius is one of the very few whose appeal, not being literary but moral, not to the intellect but to the soul, rise above the need of "fame's great antiseptic, style."

The 'Meditations' have never been regarded as a work of art. When, in the seventeenth century, Cardinal Barberini translated them, he dedicated the version to his soul, "in order to make it redder than my purple at the sight of the virtues of this Gentile." There you have the spirit of all translators of this *journal intime*. Marcus

Aurelius summed up in himself the best and noblest that had ever existed in the pagan world. His feverish struggle for moral perfection, the absolute correspondence of his inner life with his outward profession, the fact that he turned aside from the splendid distractions of the Roman Empire with the self-denial of a monk—these things account for his canonization as a "Classical Dictionary hero," who realized Plato's ideal of the philosopher on the throne. But they do not account for his hold on the sympathies of modern men, for that sort of emotion which invaded Montesquieu as he read. He wins a wide attention partly because he belongs to no faith and no creed. We need no effort of imagination to put ourselves in touch with his philosophy. "La religion de Marc-Aurèle," says Renan, "est la religion absolue. Elle n'est ni d'une race ni d'un pays. Aucune révolution, aucun progrès, aucune découverte, ne pourront la changer." But he wins the sympathy of men because, under the fine flower of stoic calm, they see the signs of a strife that they too envisage daily. *Entbehren sollst du, sollst entbehren!* (*ἀντὶςτῆς καὶ ἀντὶςτῆς*) is the watchword of the 'Meditations.' Disabused and disenchanted with life from the first, Marcus's preoccupation in the earlier books is to put a good face on it; in the latter he has attained a detachment that would be Nirvana if it were less like resignation. "How is each so lonely in the wide grave of the All?" asked Richter. Marcus Aurelius, steadily putting away the thought of pleasure or of men's praises, stubbornly refusing to sweeten the rim of the cup from which he was to drink the cure for life, never removes himself above one's pity. This is the chief secret of his charm.

The translation by Jeremy Collier (1702), though possibly not the best, was master of the field until the appearance of George Long's version in 1862. Long was justly rebuked by Matthew Arnold for his contemptuous dismissal of Collier as "a most coarse and vulgar copy of the original." Collier had, at least, succeeded in imparting a certain impetuosity and vividness of style which is lacking to the Greek. But Arnold, though he shivered at Long's academic frost, rated his scholarship high, and prophesied that "Jeremy Collier's work will now be forgotten." George Long, too, bode his destined hour. Mr. Rendall, the new Head Master of Charterhouse, taking into account "the level of modern requirement," assumes that Marcus Aurelius has not hitherto been given to English readers "with scholarly precision and in becoming dress." This is not entirely fair to Long's translation. The Greek of Marcus Aurelius is often open to more than one interpretation, and we believe that, in most cases where Long's version differs from Mr. Rendall's, the divergence is accounted for, not by Long's inferior scholarship, but by a defensible difference of taste. Mr. Rendall has frequently achieved a closer verbal literalness. But with a writer so capable of separate insulation as Marcus, literalness is not so indispensable in a translator as vividness and simplicity of style.

Mr. Rendall's phrases are seldom touched with the sombre passion, the indefinable melancholy that one feels in the rugged Greek original. In the matter of style we think that he has little advantage over George Long. In the matter of spirit and style they both suffer by comparison with the frag-

mentary renderings of Walter Pater. For readers of 'Marius the Epicurean' there can be only one English portrait of Marcus Aurelius, and the bare half-dozen pages of translation in the chapter entitled 'The Divinity that doth hedge a King' will ever be the portion of the 'Meditations' most deeply impressed on their minds.

"Penthea and Pergamus sit no longer beside the sepulchre of their lord. The watchers over Hadrian's dust have slipped from his sepulchre. It were jesting to stay longer. Did they sit there still, would the dead feel it? or feeling it, be glad; or glad, hold those watchers for ever? The time must come when they too shall be aged men and aged women, and decay, and fall from their places; and what shift were there then for imperial service? This, too, is but the breath of the tomb and a skinful of dead men's blood."

Mr. Rendall here improved on Long, but not, we think, on Walter Pater:

"Does Penthea or does Pergamus still sit beside the bier of Verus? Chabrias or Diotimos by Hadrian's? Folly! And suppose they did, would the dead be conscious of it? or if conscious, glad? or if glad, would the mourners live on for ever? Must they not in the order of things first turn into old men and women, and then die? and when they died, what could their lovers do next? All comes to stench and refuse at last."

Or compare the renderings of a still more famous passage:

"To him, indeed, whose wit hath been whetted by true doctrine, that well-worn sentence of Homer sufficeth, to guard him against regret and fear: 'Like the race of leaves the race of man is: the wind in autumn strows the earth with old leaves; then the spring the woods with new endows.' Leaves! little leaves!—thy children, thy flatterers, thine enemies! Leaves in the wind, those who would devote thee to darkness, who scorn or miscall thee here, even as they also whose great fame shall outlast them, . . . and yet wouldst thou love and hate, as if these things should continue for ever."

So Pater. Here at any rate he is quite as literal as Mr. Rendall:

"When once true principles have been blithen in, even the shortest and most trite of precepts serves as a safeguard against the spirit of brooding or fear. For instance:

'As wind-shed leaves on the sod,
Such are the children of men.'

As autumn leaves thy little ones! and as leaves, too, the crowd who shout their heartening plaudits or heap their curses, or in secret cavil and gibe; as leaves, too, even those who will succeed to fame hereafter: . . . and yet you seek or shun as though they would last for ever."

Mr. Rendall's translation is preceded by 146 pages of introduction in the shape of essays on "The Origins of Stoicism," "The Birth of Stoicism," "Stoic Dogma," "Stoicism in History," and finally on the character and personal history of Marcus. This was done by Long also, but on a much less extensive scale. To scholars these introductory pages will probably seem more important as a contribution than the rest of the book. We can hardly suppose that the general reader who is wholly unacquainted with the language of Greek philosophy will find the first four essays interesting. But as an exposition of the Stoic doctrine for the benefit of those who already possess some knowledge of the subjects handled, they are admirable.

Mr. Rendall is not consistent in his presentation of Greek words in these essays. Since they will probably appeal chiefly to those who have a knowledge of Greek, it seems superfluous to transliterate the Greek character; it is a method which always falls of its mark, for the unlearned remains unenlightened and it is a shock to the scholar. In the word "Cynism," which Mr. Rendall uses for the more familiar "Cynicism," we suppose he aims at a literal translation of

the Greek *κυνισμός*. But we see no good grounds for the innovation. If "Cynism," why not "Stoism"? The book is well got up, but the cover seems somewhat too decorative for such austere contents.

BOOKS OF THE WEEK.

A Scientist's Confession of Faith. Philadelphia: Baptist Publication Society, 10c.
Bacon, Rev. T. S. The First and Great Commandment of God. James Pott & Co. \$1.50.
Clarke, Rev. W. N. An Outline of Christian Theology. Scribners, \$2.50.

The Nation.

NEW YORK, THURSDAY, MAY 19, 1898.

The Week.

The good news comes from Washington that Gen. Merritt has put his foot down on the proposition that was originally made to send only 5,000 men, who would be chiefly untrained recruits, to the Philippine Islands, declaring that such a policy would be simply to invite another Bull Run. He points out that the Spanish have a large force in the Philippines, and he insists that the United States must also send a large force to the islands, if we expect to cope with the enemy and establish our authority. It is a great relief to know that the difficult and responsible task of organising military support for our Admiral at Manila is committed to a soldier who demonstrates, by the requirements which he makes before he starts, that he understands what he is about, and will run no risk of disaster through underestimating the seriousness of the enterprise.

We hope the *Gusie* affair will put an end to the myth about the insurgents which has played so large a part in bringing on this war. There never has been any reason for believing there was any considerable body of insurgents either in or out of arms except "rumors" and "reports" from all sorts of people, reliable and unreliable. As to the number of the insurgents, these rumors have varied from 200 to 50,000. Their government was always as much of a phantasm as Juno or Apollo, and yet the Senate could with difficulty be prevented from recognizing them as a regular government, with a full line of belligerent rights. The march of events has apparently not had much influence in destroying this degrading superstition. The *Gusie*, with its two companies of regular infantry, appears to have started to meet these insurgents and deal out supplies and arms to them, in the old simple and childlike faith that they would be on the beach waiting for the expedition when it arrived, and that the Spaniards, hearing we had business with the insurrectionary Government, would keep respectfully away until we had transacted it. The insurgents, we need hardly say, did not put in an appearance, probably because they had important Government business to attend to. The fewer combinations we make with this Power, the better it will be for us. When one remembers that our Senate wanted to recognize it as a belligerent, we do not know that there is anything for a patriot to do but sit down and cry.

The prediction was made by Dr. Klopsch before war was declared against Spain, that if Cuba should be blockaded the reconcentrados would be starved to death within a very short time. The accounts brought from the interior of the island by Mr. Somerford, the *Herald's* correspondent in the camp of Gomez, confirm this painful forecast. He says that the condition of these poor people is worse than it has been at any former time, which means that it is worse now than it was under Weyler. Those who recall the picture drawn for us by Senator Proctor of these non-combatants, chiefly women and children, and the cartoons in *Harper's Weekly*, will pray Heaven to hasten the day of their deliverance, but it is to be feared that there will be few left to be rescued when our forces secure a lodgment on the island. Mr. Somerford says that many of them were offering their services to Gomez for the sake of food, but that he had very little for his own men, and would accept the services only of the able-bodied. The rest were turned back to the towns, where there is nothing for them.

The Administration is reported to be entertaining a call for a considerable number of colored troops. Those who favor the idea urge that the best fighters among the insurgents in Cuba are negroes; that negroes are less likely to succumb to climatic influences than whites; and that, when commanded by white officers and brought under discipline, they are likely to prove more effective than white troops. But there is no little opposition among the blacks to the plan of having negro regiments commanded by white officers. Some of the newspapers conducted by negroes advise their race not to enlist upon such terms. The *Richmond (Va.) Planet*, for example, remarks that "there is a disposition to send the troops of African descent to the rear, and the policy is being outlined that this is a war in which the Afro-Americans are to win glory only as privates, and that white men are to acquire fame as officers"; pronounces this policy an "insult," which must "arouse resentment of the most dangerous kind," and insists upon "the privilege of being officered by men of our own selection," with this as an ultimatum, "no officers, no fight." But the average negro is fond of adventure and display, and there will probably be no trouble about getting a good many black troops upon any conditions which the Government may make.

Though the Spanish cabinet has broken up, and is now in process of reconstruction, it must be said that the

lull in the war for two weeks past has temporarily strengthened the Madrid Government. If other swift and terrible blows could have followed the one delivered with such deadly effect at Manila, the Government, if not the dynasty, would have gone down in ruin. But the indecisive actions on the Cuban coast and at Porto Rico, which it is easy for the official Spanish reports to interpret as glorious victories, together with the success and daring of the Spanish fleet in crossing the Atlantic and in eluding, so far, our war-ships, have given Sagasta a breathing-spell. Rioting in the provinces seems to have ceased, the Cortes has voted the desired war credits, and the Prime Minister's chief difficulty now is to strengthen his cabinet in the interest of a vigorous prosecution of the war. But this relief is only temporary. Spain's final outlook, as respects the war, remains as hopeless as it has been from the beginning, and intelligent Spaniards know it. German naval authorities utter but the general opinion when they say that the Spanish fleet is in a most dangerous position, with superior force massing against it. It may avoid battle and trust to superior speed to escape pursuit; but this would only put off the evil day, and might be as disastrous to the Spanish Government as an honorable defeat. Spain's only real hope from the first has been European intervention or a European alliance, and Great Britain's position has made and makes this impossible.

That Speaker Reed is just as much opposed to Hawaiian annexation as ever is generally assumed at Washington. It is affirmed, however, that he will acquiesce in the wish of the Republican majority of the House in favor of annexation whenever it shall be no longer open to doubt. Although the war with Spain and the capture of Manila have given a temporary *éclat* to the annexation project, it is by no means certain that the opinion of Congress will be the same six months hence. We may be and very probably shall be so surfeited with foreign complications that we shall be as ready to reject Hawaii as we were to reject San Domingo and St. Thomas at the end of the civil war. Therefore, delay is by all means to be desired in this case, and if the Speaker can give us this boon he will render the country the greatest possible service—the service of affording time for the country to make up its mind soberly whether it wants Hawaii. When the project was first brought forward and recommended by President Harrison, it would have been ratified by the Senate if a vote had been taken at once and without time for reflection. Fortunately, a vote could not

be obtained then. Time was gained for reflection, and at the end of four years even the Republican party had lost its appetite for Hawaii. Instead of demanding in its last national platform the annexation of the islands, it limited itself to the "controlling" them, which is what we have done for many years and are now doing to all intents and purposes. If President McKinley had not reversed himself suddenly and unexpectedly as regards this matter, there would not be a dozen Senators in favor of annexation to-day, and there would not be enough members of the House in favor of it to secure a call of the yeas and nays. Even after Mr. McKinley had reversed himself, the project would have failed but for the temporary flipp which it has received from the present hostilities with Spain. How important it is, then, that such a question should not be decided under the stress of war. A question which may shape the whole destiny of the United States should receive only the most sober judgment of the nation, uninfluenced by the false glamour of a war with respect to a totally different matter.

The Senate "took a day off" from war business on May 10, and adopted by more than the requisite two-thirds vote a resolution proposing to amend the Constitution of the United States by substituting the 4th of May for the 4th of March as the inauguration day of the President and Vice-President and the beginning of the terms of Senators and Representatives; the change to go into effect in 1901, and the terms of President McKinley, Vice-President Hobart, and the members of the Fifty-sixth Congress to run two months longer than would otherwise be the case. Undoubtedly a change ought to be made in regard to the time of inaugurating a President and opening the session of a new Congress, but in exactly the opposite direction. Instead of putting the date further forward two months, it ought to be brought back two months. In other words, a new President and a new Congress should assume office early in the January following their election in November, precisely as is the case with new Governors and new Legislatures in the various States. Nobody ever raises any objection to inaugurating a new executive about New Year's in the bleakest States of New England and the Northwest, and a President can just as well be installed at that time in Washington by abandoning the already overgrown and unwieldy processions and other accessories. It is every whit as essential that Congress should assemble promptly after its election as any State Legislature; but, under the amendment endorsed by the Senate, Congress would still not meet for its first regular session until thirteen months after its members are chosen. On the other hand, with the time brought

forward to January, the second session could run without any limit, like the first. Now that Congressmen give so little thought to any question outside the war, it is possible that the House may concur with the Senate in the passage of the pending resolution, but it cannot endure the thorough discussion which it must meet if it shall go to the Legislatures of the various States for their consideration.

The House took its turn at amendments the next day. The measure proposed was one which would change the method by which members of the upper branch are elected. As reported from the committee, the resolution provided that United States Senators might still be chosen by the Legislature or elected by popular vote, according as the Legislature of any State should decree; and apparently the method might be changed from one to the other system as often as any State through its Legislature should order. This element of discretion aroused great opposition, Mr. Grosvenor of Ohio expressing what was obviously a widespread feeling when he urged that, under such a rule, the choice of a Senator might be made from time to time by the Legislatures "a political football"; while Mr. Powers of Vermont held that, "if you leave the option with the Legislatures, you simply provide for the perpetuation of the evils which it is sought to escape." An amendment to the original resolution making direct election by the people the invariable rule was adopted, and then it was carried by the overwhelming vote of 184 to 11.

The convention which has been sitting at New Orleans for weeks to frame a new constitution for the State of Louisiana has completed its work. The chief motive for assembling this body was to secure the practical disfranchisement of the colored voters, and this motive was openly avowed by many members. To this end, an educational test for the ballot was established, with the possession of \$300 worth of property as an alternative qualification. These two provisions were designed to let in the bulk of the whites and keep out the bulk of the blacks, and would have that effect if honestly administered. But they would also disfranchise a good many whites, and this idea was intolerable to the great majority of the delegates. A most extraordinary section was therefore adopted, which is quite without precedent anywhere in the country. It provides that no man who was entitled to vote at the beginning of 1867 under the constitution or statutes of any State, and no son or grandson of any such person not less than twenty-one years old now, as well as no foreigner naturalized before the first of January last, shall be denied the right to vote by reason of

his failure to possess the educational or property qualifications.

As no negro in the State of Louisiana was entitled to vote on the 1st of January, 1867, no black man who was an adult then, nor any son or grandson of such a negro, can vote now unless he can meet the educational or property test for the suffrage just established; whereas any white man who was entitled to vote thirty-one years ago, and his son or grandson, can vote now, no matter how great their ignorance and poverty. There seems no reason to doubt that this provision must be held plainly unconstitutional by the Supreme Court of the United States. The fifteenth amendment provides that "the right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of race, color, or previous condition of servitude." The clause in question does effect denial or abridgment of the suffrage for such a reason, and there is no way of getting around this fact. Both of the United States Senators from Louisiana, as well as many other Democratic members of the Senate, have expressed their opinion that the discrimination attempted is unconstitutional and will be annulled by the courts, but no impression could be produced upon the headstrong members of the convention. There is consequently every reason to believe that the new constitution will soon be declared void in its most vital part, and that the unhappy State will be plunged into worse confusion than ever over the suffrage question.

The total enrolment of voters in this city under the new primary-election law is estimated as about 205,000. Taking the vote of last fall, 526,000, as a test of the new city's voting strength, this is not an entirely unsatisfactory showing of interest, all things considered. It indicates that in ordinary times about one-half the voting population would be likely to take enough interest in party affairs to go into the primary election. This is a much larger proportion than went into the old primaries, for the enrolled members under the old system rarely numbered more than a fourth of the voting population, and usually not more than a fifth. When we consider that the enrolment this year was made under unfavorable conditions which will not exist again, and made also in the midst of war excitement, the result is as favorable as could have been reasonably expected. What will happen when the primary elections are held, is another matter. We shall not know till then how many of those who have enrolled are machine men and how many are not. Undoubtedly a large proportion of the 205,000 are Tammanyites. The Wigwam

never allows anything to interfere with its political activities.

The high price of wheat has brought to light once more in England the old alarm about short supplies of food, in case of war or scarcity in other countries. Some of the old protectionists are again loudly demanding the construction of great Government granaries in which to store wheat against times of great scarcity abroad. Of course, the outcry will produce no practical result, for all the calmer portion of the nation has long ago made up its mind to the fact that if England is ever so shut up by a foreign enemy that she cannot get supplies from abroad, her day will be over, and there will be little use in granaries. The bulk of the population will promptly die, or emigrate. What adds bitterness to the present crisis is that the farmers are getting no benefit from the rise in wheat, as they have for a good while gone out of the business of wheat-growing. There is in England no remedy for scarcity except to keep the sea open. As long as she can do this, she will have the whole world for a granary; whenever the day comes that she cannot do this, home granaries will be of little use.

Somehow or other, we hardly know how, perhaps through the opening of China and Africa, an alliance between England and the United States has now, after one hundred years of dislike and distrust, been brought within the reach of what is called "practical politics"—that is, has been made to seem capable of realization. It is these openings which have apparently put Great Britain in need of help; it is apparently our Spanish war which has put us in need of it. It is no discredit to either that it should call for it, so that we shall not be accused of throwing any slight on the enterprise if we say that Mr. Chamberlain's cries for it are a very cogent sign of English eagerness for it. He is not the man to shout for it if there was not a strong tide running that way. The Salisbury ministry has suffered terribly in the Russo-Chinese matter. Defeats at bye-elections are the order of the day. The benefits the Tories were to experience from Mr. Chamberlain's coöperation have not "materialized," to use our slang. The colonies have not been turned into "neglected estates"; they have not set up a zollverein with Great Britain; the pride of old Krüger has not been humbled; the Irish have not yet been won over, and, worse than all, Mr. Chamberlain, clever as he is, has not won the Tories over, though none of them denies his cleverness. It is, therefore, no wonder Mr. Chamberlain waves the American flag, and calls the whole Anglo-Saxon race to his assistance. He has never summoned anything so potent

from the "vast deep" of his versatility. It will get him out of his scrape if anything will. It is the only card that he can now play with any hope of success. It is what will break up the combination against England in the East, if anything will, without a real trial of strength. To have this combination succeed against England would mean the rolling back of the tide of civilization for at least a century.

There are signs of a change in the Parisian press in its attitude towards this country. From what we can learn, the general public never shared in the newspaper feeling, or assumed feeling, against America. French shopkeepers and artists remain as willing to see the color of American gold as ever, and say so. The annual harvest from American tourists will be much curtailed this year, and its despondent reapers in France say it will never do to make this condition of things permanent. They read, perhaps, in the *Contemporary*, that "Americans are pouring into London now with almost the same enthusiasm and with probably as much enjoyment as they once poured into Paris, and they are received everywhere with kindness and appreciation," and they ask, Are we not going a little too far in this business of sympathy with Spain? Then there is the great Exposition of 1900, at which it is hoped the Americans will figure brilliantly; is it wise for us, Frenchmen are beginning to ask, to make it difficult for the American Congress to vote money for that purpose? All these considerations, as we say, are beginning to make themselves felt in the press. The *Figaro* has been one of the most violent, yet it closes its latest article on the subject with these words:

"Americans may continue to visit Paris with perfect freedom; they will find that they are not in the slightest degree personally unpopular here, even though the policy of Congress and President is generally disapproved among us. Race hatred and all the stupidities about the conflict between the Anglo-Saxons and the Latins go for nothing here. We think and speak from motives quite foreign to ethnology and general history. . . . Undoubtedly our sympathy with Spain exists, and it is perfectly reasonable and will persist. But it relates simply to our position vis-à-vis with a friendly and neighboring Power, and neither affects nor changes our general policy."

A writer in the *Monde Économique* was explaining to sceptical Frenchmen, just before the battle of Manila came to prove his assertions true, that the American navy was a highly trained and disciplined body. The popular opinion in Europe, particularly in Spain, that American naval officers were a lot of roaring sea-dogs, brave, perhaps, but ignorant and inexperienced, was an entire mistake, this writer declared. He pointed out the thorough course of instruction at Annapolis and Newport, showed how

promotion depended strictly on seniority, and affirmed that the service was in a high state of efficiency, the officers being skilled and of a "correction glaciée." Our navy, in other words, has not been bedevilled by politics. No one ever asks from what part of the country any captain or commodore assigned to an important command comes, who is his boss and what was his "pull." We heard complaints the other day that the President, in his staff appointments to the army, had discriminated against the South. That is, the appointments were so many "plums," to be distributed as favors, and placed where they would do the most good politically. No such question can arise respecting the navy. The admirals may all come from one section, and no one cares. If they are fit for their work—and their appointments are always earned—their State, their politics are absolutely left out of the account. Luckily we have another protection than the mere traditions of the navy to guard us against having the service stuffed with politicians. Aside from all question of fitness, they would be so truly uncomfortable at sea, thrown into contact with high-toned gentlemen, they would be so disabled from carrying primaries and controlling conventions, when stationed at Joppa or Pernambuco, that they themselves would see absolutely nothing "in it" for them.

The French are finding the work of administering colonies under a democratic government a thorny business. Jules Lemaître has been discussing some of the difficulties, theoretical and practical. One of the greatest of these is the necessary flat repudiation of the principles of self-government in colonies peopled by savages. Lemaître quotes the protest of an ardent young French republican against the methods pursued in Madagascar: "Our armies have gone to Madagascar to murder a child-like people who have as much right as we have to be free, to govern themselves, and to own the land left them by their ancestors. We have shamefully plundered them, and, in the name of civilisation, have imposed upon them servitude, Jesuitism, and prostitution." This recalls Mr. Gladstone's indignant assertion that the Sudanese were "brave men struggling to be free." It is, indeed, a difficult feat for democracy to swallow its fine words about the rights of man, and to go brutally ahead on the supposition that Malagasy and Sudanese and Philippine Islander have no rights which a conquering republic is bound to respect; but a democracy is no more obliged to be consistent, when it does not want to be, than any other form of government, and there are many signs, in these latter days, as at the time of the Mexican war, that

"A merciful Providence fashioned us hollier
O' purpose that we might our principles swallow."

GOVERNING AT A DISTANCE.

The selection of Gen. Merritt as Military Governor of the Philippine Islands for the United States initiates the first experiment which this nation has ever tried in the control of a territory at a great remove from our shores. Alaska, to be sure, is separated from our Northwestern States by a stretch of British territory, but it is not far enough away to seem out of touch with our earlier possessions on the Pacific Coast. The Philippines, on the other hand, are about half way round the earth, and as remote from any association of traditions and interests with this nation as from easy communication.

It is a curious and yet characteristic illustration of the surprises of war that the government of the Philippines was not thought of, even no longer than a month ago, as a matter which could have any concern for us. Nobody supposed that the expected collision with Spain over Cuba was going to involve us, almost at once, in the most serious complications in the Far East. But the first naval battle of the war, complete victory for our side as it was, opened the eyes of our people to a fact which they had not before suspected—that the authorities at Washington must govern, temporarily at least, Manila, and the archipelago of which it is the commercial centre.

A military governor is the only sort that should even be thought of now, although there have been signs that the politicians were already planning to secure the place for one of their school. Gen. Merritt represents exactly the right type of military governor. He has risen to distinction in the army by precisely the same qualities through which Dewey made his way to prominence in the navy, and he is admirably fitted to supplement on shore the Admiral's work on the water. The first job before them will be to gather forces enough in Manila Bay not simply to take possession of the city, but also to end the anarchy which now prevails throughout the islands. This cannot prove the picnic excursion which some of the volunteers on the Pacific Coast seem to regard it. The climate of the Philippines in the summer will be very hard for men bred in the Rocky Mountain region, and the plague is always to be dreaded in that part of the world.

A precedent for Gen. Merritt's action when he shall have been installed in his new office may be found in the instructions issued for the government of the Union armies during the civil war. These declared that martial law in a hostile country consists in the suspension by the occupying military authority of the criminal and civil law, and of domestic administration and government in the occupied territory, and in the substitution of military rule as far as military necessity requires their suspension

and substitution. But the commander of the occupying forces was allowed wide discretion, and he might proclaim the continuance, in whole or in part, of the civil and criminal law, as in time of peace, until otherwise ordered. If martial law were proclaimed, the instructions issued in 1863 inculcated upon the military the observance of the principles of "justice, honor, and humanity, virtues adorning a soldier even more than other men, for the reason that he possesses the power of his arms against the unarmed."

But military government is always regarded as only a temporary expedient. Supposing that the United States should retain permanent possession of the Philippines, how could they be ruled under our Constitution? The general impression undoubtedly is that there is no provision for the government of such a region in any other way than as a Territory, with local home rule, which should some day become a State. As nobody can conceive of the Philippines ever being fit for statehood in our Union, most people would say off-hand that of course they could not become a Territory. Goldwin Smith recently suggested that an amendment of our Constitution seemed a necessary prerequisite to a colonial system for the United States.

The truth is, however, that Congress enjoys ample power for the regulation of distant regions which nobody contemplates as possible States. The fourth article of the Constitution declares, among other things, that "the Congress shall have power to dispose of, and make all needful rules and regulations respecting, the territory or other property belonging to the United States." When the Constitution was adopted, the general Government had acquired the vast region included in what was then known as the Northwest Territory, and the ordinance for the control of this region, passed by the Continental Congress on the 13th of July, 1787, shows that "the fathers" considered the power of Congress absolute. For example, the whole authority in any territorial government to be established within this vast tract was confided in the first instance to a governor and judges, who were to be subject to the control of Congress. Provision was made for the establishment of a Legislature, with large powers, whenever such a territory should contain 5,000 inhabitants, but this privilege might have been denied indefinitely. Story, in commenting upon this clause of the Constitution, after the Louisiana purchase and the acquisition of Florida, remarked that "these territories, subject to the treaty stipulations under which they were acquired, are of course under the general regulation of Congress, so far as the power has not been or may not be parted with by erecting them into States."

There will be no trouble, so far as the

letter of the Constitution is concerned, about governing the Philippines in any way that Congress likes. The fundamental obstacle to such an experiment is in the spirit of that instrument. Its framers obviously contemplated only territories which should be early fitted to govern themselves in local affairs, like the colonies which entered into the Union, and which should soon be qualified to share on equal terms with these colonies in the government of the whole nation. The idea of an ignorant and half-savage population of millions, on the other side of the world, unfit to govern themselves, and only to be ruled by force, as part of the American republic, would have seemed intolerable to them. Is there any reason why it should not seem equally intolerable to their descendants to-day?

It is argued that we have outgrown the American continent, that the Monroe Doctrine is too small for us, that the teachings of Washington were fit only for the time when they were uttered, that we ought to branch out in the world, that we ought to be within striking distance of China, and prepared to vindicate our rights in Asia, etc. These notions are reverberating to some extent in the columns of the *Chicago Tribune* and some other Western papers, but they find scant support in the East or the South. It is sufficient to say now that such a policy involves a complete change in our destiny, political, military, and naval. It requires us to arm ourselves like the Powers of Europe. If we are to bring ourselves into close neighborhood with them, we must expect to have more friction with them than we have had heretofore. If we are to do the things that they do, we must have the same tools that they possess—that is, a standing army and a great navy. A mere navy will not serve the purpose, as we now see. We must be able to mobilize land forces instantly in the same way that they do, and be prepared to send them to any quarter of the globe at short notice. The reflex action of a large standing army on our domestic institutions is a matter that has not been considered by the advocates of Philippinism. Nor does the cost of the proposed army and navy give them any uneasiness. Yet if we dance to the tune of the colonial Powers, we must pay the piper. At present we pay in the form of pensions what they pay for great armies and navies. But we shall not get rid of pensions by adopting their scale of military establishment. On the contrary, we shall lay the foundation for new pension lists, which will of course be gauged by the standard of the present ones. These are a few of the questions that will demand thoughtful consideration and debate whenever the terms of peace with Spain become questions of practical statesmanship.

Meanwhile, assuming that a colonial

policy is good policy and likely to be carried out, what we wish to point out is that even these triumphs which have excited us so much, had to be prepared for, and that through long years. Dewey, for instance, in order to do what he has done in the Philippine Islands, had to begin his education forty years ago. His captains and lieutenants had to begin theirs ten years ago. The very ships in which he fought are the result of many years of close study and preparation. This is true of the whole army and navy with which we expect to make the prodigious figure in the world to which our Jingoese are looking forward. In order not to collapse ridiculously as the Spaniards have collapsed—in order, in short, to run the career of glory which we covet—we must prepare to organize and to govern. Therefore, it will not do to vote money and build ships, simply, and drill armies and sailors. If we are going to annex and rule over countries the population of which differs from us in race, religion, language, in history and every variety of antecedent, and who will probably hate us and treat our rule as a "yoke," we shall have to get administrators ready, as well as guns and ships. We shall have to do what the other conquering and colonizing nations do, what England does, what Russia and Germany do.

We hope this branch of the subject is going to enter into the popular thought along with victories and "bombardments." For expansion we have a navy and army all ready, or nearly ready, but we have no statesmen or machinery of government ready. We have, since the beginning of the century, undertaken to rule subject peoples twice. One was the Indians; every one knows what a fiasco we have made of that. Our Indian administration has been one of the scandals of the century, and philanthropists have to this day to keep constantly at work, in order to prevent the return or perpetuation of tyranny or abuse. The second was the conquered South after the war. We decided that it was necessary to keep control of it for ten years after we had subdued it. Every person over thirty years of age remembers how we did it. We sent down large bands of characterless adventurers called "carpet-baggers" to humiliate the vanquished and plunder them, until the abuse grew too strong to be defended or even apologized for.

Unless we now make preparations for something better, along with our schemes of conquest, we must proceed to govern the Philippine Islands and Cuba as we governed South Carolina, and as we have governed and are, to some extent, still governing the Indians, and as we fill our embassies and consulates. That is, we must govern them by "pull." We must give every post which is to represent our power and civilization abroad to a powerful Senator, no matter how ignorant, silly, or

corrupt we may know him to be, or to one of his "men" who has been useful to him in his State in securing his re-nomination and reelection. Having received it, he will proceed to put in practice his old methods in his new position. His "henchmen" will follow him in crowds over the sea. By arrangement with him Congressmen will sell places under him to the highest bidder, as they sell post-offices to-day under Quay in Pennsylvania. The figure we shall cut after even twenty-five years of this will furnish an interesting chapter to history, but it will not be nearly as glorious as our triumphs in war.

THE CHURCH IN THE WAR.

We hoped, when this war began, that, owing to the progress of civilization and saner ideas as to the nature and functions of religion, we should be spared the old spectacle of the clergy on each side praying and singing *Te Deums* against each other. But we are evidently in advance of the times. The war had hardly begun when many of our own Protestant ministers began to support the war vigorously in the pulpit, and handle its opponents without gloves. Praying against the Spaniards, or, what is the same thing, praying that our own men might not be hurt by them, was thrown in as a sort of extra. This suggested to us some curious reflections as to the consequences that would have followed a war with England, which at one time seemed likely over the Venezuela affair. Here the scandal of a bellicose clergy would have been twice as great as in a war with a Catholic country like Spain, because we belong to the same form of Christian faith and are divided among the same denominations. Episcopallians on each side would have prayed against Episcopallians on the other, Baptists against Baptists, Methodists against Methodists, and so on. But the prospect did not seem to depress the Jingoese in the least. Each American denomination, too, would have given a shocking account of the motives of their English brother Christians in carrying on the war, and the English Christians would have given them as good as they got. In fact, it would have been an eminently Christian war. The unseemliness of the spectacle, and the fun it would have afforded the sceptics, would have troubled only very few.

We hardly supposed, however, that the Catholic clergy would have shown the same want of self-restraint. They used, to be sure, to sing *Te Deums* on both sides in the old wars, but this was when God was really believed to take a hand in the fighting, and when the result, as in the "wager of battle," was held to indicate which side he took. In more recent times it has been the custom of the Church to "lie low" in war, so to speak—mainly, we fear, because the

fighting men have grown more incredulous and more indifferent about divine aid when they are doing their slaughtering. We have, therefore, been surprised to see the outbreak of a difference of opinion between the Catholic bishops of Spain and those of the United States not only concerning the war, but concerning the character and motives of the people who are carrying it on. This is what our Catholic bishops said on Tuesday week:

"A resort to arms was determined upon by the Chief Executive of the nation, with the advice of both houses of Congress, and after consultation with his cabinet officers, but not until after every effort had been exhausted to bring about an honorable and peaceful solution of our difficulties with Spain. The patient calmness, the dignified forbearance, the subdued firmness of President McKinley during the trying time that intervened between the destruction of the *Maine* and the declaration, are beyond all praise, and should command the admiration of every true American. . . . If, as we are taught by our holy church, love of country is, next to love of God, a duty imposed on us by all laws, human and divine, then it is our duty to labor and to pray for the temporal and spiritual well-being of the brave soldiers who are battling for our beloved country. Let us faithfully beg the God of battles to crown their arms on land and sea with victory and triumph, and to stay unnecessary effusion of blood, and speedily to restore peace to our beloved land and people. . . . We also direct that prayers for the brave soldiers and sailors that fall in battle be said every day after a mass. These prayers shall be said aloud with the people, and shall be one Our Father and one Hail Mary, and the *De Profundis*."

This is what the French call a "vou" that our soldiers may kill enough Spaniards to give them the victory, and the inference is that the Spaniards are bad fellows who deserve what they are going to get.

But this is by no means the view of the Spanish bishops. Here is a pastoral letter put out by the Bishop of Madrid, which he orders to be read in all his churches, and with which, undoubtedly, the other Spanish bishops agree—and they are twice as numerous as ours, and therefore more likely to be right. He says that what has caused the war is "accursed greed for gold, and our [American] insatiable love of domination." He then adds that "we [the Americans] have trampled justice under foot; have misinterpreted the Pope's word; have repulsed the intervention of the Powers with arrogance; have closed all roads to the counsels of peace, and rendered necessary the horrors of war; that God is witness that Spaniards are not the authors of this disaster, and that the proud people whose dogma seems to be that gold is the god of this world, must answer for it before the Eternal."

This does not seem very clarifying. What we quote is a translation, but we have made it ourselves to the best of our ability. When we find the clergy of the oldest of the Christian churches taking such diametrically opposite ground, we may well ask whether some of our own have not gone wrong. Our Methodist brethren, for instance, have also

emitted a "vœu" to the effect that Spain ought to be wiped out of the list of nations by armed force simply for "its sacrilegious pretext of claiming to be a Christian nation"—a doctrine to which few if any of the other Protestant denominations would agree. And yet there must be some truth at the bottom of it, or so large a body of professing Christians would not hold it. But it seems to us to involve the killing of this Bishop at Madrid, to which Cardinal Gibbons would object, as not a necessary operation of war. But suppose our Government said it was, would he not, under his own manifesto, be obliged to approve of it? In fact, we know of nothing in human affairs which produces so much moral and religious confusion as the appearance of the clergy on the battle-field to instruct the Almighty as to the merits of the quarrel.

THE ITALIAN TROUBLE.

Of course, there is a certain connection between the riots in Italy and the high price of bread, but, apparently, only in the fact that the high price of bread made a rising for other causes opportune. What we call riots have been in reality an insurrection, long planned and vigorously carried out. The first proof of this lies in the fact that the fiercest and most protracted resistance has not occurred in the poor districts, but in the rich ones. Milan, for instance, seems to have been the headquarters of the disturbances, and Milan is the most prosperous and growing city in Italy. Its population has increased 200,000 since the establishment of the kingdom. It is at the same time the seat of the most savage and truculent anarchist agitation ever seen anywhere. The two newspapers which have been suppressed surpassed, in the violence of their attacks on the existing social order and on the capitalists and the rich generally, any which have ever appeared in France. The Bishop of Milan, too, from whom these journals have received steady encouragement, is a bitter and blatant opponent of the Italian Government, the fomentor of every intrigue intended to obstruct the success of the new régime and bring it into disrepute. Moreover, his character, according to the report of the Liberals, is in all respects bad.

Another important fact is that hitherto class hatred has never shown itself in Italy. The relations of the employer and employed have from the earliest times been excellent, and so have been those of the landlord and tenant. This state of things may, of course, be ascribed, in part at least, to the fact that Italian manufactures have until now been mainly the product of "home industry." It is only recently that large bodies of "factory hands" have been congregated in the towns, and that there has arisen a "labor question" of any sort. The good relations between landlord and tenant,

too, have doubtless been due to the prevalence of the "métayer" system, in which the rent consists of a certain proportion of the produce, and thus leaves no room for the old Irish quarrel about it. But, for whatever reason, the employers and the employed have lived all through Italy's checkered history on tolerably good terms. Even ten years ago there was no sign on Italian soil of the modern French and German socialism or anarchy, or of the class hatred left behind in France by the Revolution.

But there has been one source of opposition to the new régime from which waters of bitterness and hostility have not ceased to flow for thirty years—the determination of the papacy to get back possession of Rome, by hook or by crook. Appeals to the faithful, on the ground that the Pope could not discharge his great functions properly unless he had territory of his own, which he ruled as sovereign; representations to foreign Powers touching the danger to the possessions of all sovereigns which would follow if the Italian treatment of the Supreme Pontiff received continued international sanction; careful fanning of all causes of popular discontent, such as the conscription and increased taxation; the magnification of all cases of jobbery and corruption which were revealed at Rome (and there were a good many), have all been vigorously used for years to bring the new kingdom into trouble, apparently on the theory which led the Comte de Paris to strike up an alliance with Boulanger—that any trouble of any sort would redound to the benefit of the papacy.

But it was not until about three years ago that the enemies of the kingdom seem to have formed an alliance with the socialists and anarchists. A regular anti-social agitation was suddenly set on foot all over the country. Newspapers like those of Milan became fierce denouncers of the existing social order. The priests began to inveigh against the rich and the employing class generally, in all or a great many of the little village churches. Clubs were started all through the country, holding meetings once a week, at which the upper and middle classes were fiercely denounced, and at which the village curé was often the principal orator and painted the senseless luxury of the rich in glowing colors.

The remedy for all this was plain enough. The monarchy was to be overturned, and all the old states of Italy were to be revived as little republics—not one big republic, for that would be as bad as a monarchy. The new republics were to manage their affairs in their own way. The taxes were to be light and there was to be no standing army. But, most important of all, the Pope was to have his own again. He was to get back his papal states, and all the republics were to form a federa-

tion, of which he was to be the president, or head of some sort.

A good many attempts have been made by the Government to bring some of the agitators to justice, and many have been convicted; but the ministry has been weak, and the King has been weak, and both have placed an absurd reliance on conciliation, forgetting that in every country in which anarchists have shown themselves they have always treated attempts to appease them as signs of fear or confessions of guilt. As a rule, therefore, they were pardoned in Italy, or released after a very short imprisonment. Consequently, when they were ready, they broke out into open war in the old French fashion, erecting barricades in the streets, and throwing tiles from the roofs of the houses, and naturally using dear bread as their war cry, and making their greatest effort in the place where the price of bread made the least difference. The socialist propaganda has been made even more vigorously in the army than elsewhere. Had it made any impression, as many feared it would, we should have had a revolution in Italy, nobody knows with what results. But the troops not only stood firm, but have displayed that mixture of gallantry and remorselessness which is what anarchists seem to need. What has occurred in Milan will probably prove a most useful lesson to them as well as to the Government.

THE COMMONWEALTH OF AUSTRALIA BILL.

The bill for the confederation of the Australian colonies which has been framed by the delegates elected by the latter for that purpose, and is shortly to be submitted to the votes of the electors in the different colonies before the Imperial Parliament is asked to pass it, is decidedly flattering to American institutions. The very word "commonwealth" is suggestive of what is to follow. The Canadians, when they framed a federal constitution for themselves at the conference in Quebec in 1864, desired to call their confederation the "Kingdom of Canada," but the term "Dominion" was substituted, and the late Sir John Macdonald in a letter to Lord Knutsford, printed in the recent life of that statesman by Mr. Joseph Pope, says that the change was made by Lord Derby, then Foreign Minister, "who feared the first name would wound the sensibilities of the Yankees." Whether the term Dominion was itself suggested by the term "the Old Dominion" as applied to Virginia, so far as we are aware, history does not reveal. The Australians at any rate show a liking not only for many of the features, but also for many of the terms, used in our Constitution. Their country is to be called a "commonwealth," their federal popular House a "House of Representa-

tives," and their component provinces "States."

But in far more important matters than these the framers of the Australian scheme have followed our example in preference to that of Canada, which adhered in every possible way to the forms and principles of the British Constitution. In fact, the Constitution of the Commonwealth of Australia will, if the present bill be adopted, be such a curious amalgam of the constitutions of the United States and of Great Britain and Canada that it would indeed require one to be profoundly versed in constitutional lore to foresee the course of its future development. Executive authority is to be represented by a Governor-General appointed by the Queen, as in Canada, and the system of parliamentary cabinet government is secured by the provisions that the Queen's Ministers of State for the Commonwealth may be chosen and sit either as Senators or members of the House of Representatives, and are to hold office during the pleasure of the Governor-General, who may from time to time dissolve the House of Representatives. It is indeed expressly provided that no Minister of State shall hold office for a longer period than three months unless he is or becomes a Senator or a member of the popular House. Thus the Australians evidently prefer the British system to that separation of executive from legislative power which the fathers, influenced largely by the teachings of Montesquieu, laid such stress upon in our case, but which, in truth, has many adverse critics within our own borders.

On the other hand, the Australian Senate is framed upon the model of ours, since each of the colonies coming into confederation is to have the right to elect an equal number of Senators. Senators, moreover, are not to be nominated by the crown for life, as in Canada, but are to be directly chosen by the people of the States, and their term of office is to be six years, and their qualifications the same as those of a member of the House of Representatives, and their seats are to be vacated by a system of rotation similar to our own. Thus it is clear that, representing as they will do peculiarly the federal element in the Constitution, their relation to the popular House can scarcely be the same as that of the Senate in Canada, which, in reference to the Canadian House of Commons, is bound by the same conventions as those which regulate the House of Lords in England. A very original provision, moreover, which must differentiate its position from either the Canadian Senate or our own, is that, in the event of a deadlock arising between the two houses over some proposed measure, the Senate itself may be dissolved and a new election had, after which, if necessary, a joint sitting of the two houses is to be convened, and if the

measure in dispute is affirmed by three-fifths of the members present and voting thereon, it is to be taken as duly passed by both houses of Parliament.

Again, in respect to the distribution of legislative power between the Federal Parliament and the State Parliaments, the scheme of our Constitution is adopted in preference to the Canadian. The only powers granted are, as with us, granted to the Federal Legislature, and, as with us, they are for the most part not expressed to be exclusive, but the various States are left free to legislate upon the like subjects, though where their laws are inconsistent with the law of the Commonwealth the latter is to prevail. Thus, as with us, the Federal Legislature is to be one of enumerated powers, whereas in Canada certain specific enumerated powers alone are granted to the provinces; and although certain other powers are specifically and exclusively granted to the Dominion Parliament, that body has also a general legislative power on non-provincial subjects which is not conceded to our Congress or to the Federal Legislature under the Australian scheme. We notice, however, that the Australians have followed the Canadian example by placing marriage and divorce in the hands of the federal body, but not the general criminal law as the Canadians do.

Thirdly, and this seems somewhat surprising and more than anything else outside of British analogy, there is apparently to be in Australia, as with us, no federal veto power over State acts, at least there is no express provision in the bill in that regard. But since the provision, "the Constitution of each State of the Commonwealth shall, subject to this Constitution, continue as at the establishment of the Commonwealth," seems to imply that Governors of each State will continue to be appointed by the Imperial authorities, it may be that a federal veto power will in effect be indirectly exercisable by the Governor-General by reason of the State Governors, under instructions, reserving acts for the Queen's pleasure. It seems curious, however, that there should not be express provision on the point in the Constitution.

Lastly, a very marked divergence from the Canadian scheme and approximation to our own is to be found in the provisions as to federal courts. The provisions for the creation of federal courts and as to the jurisdiction which they are to exercise are very similar to those found in our own Constitution, whereas in Canada the only federal courts are the Supreme Court and the Exchequer Court at Ottawa, the latter dealing with claims against the crown and revenue cases, and the former with appeals from it and from the various provincial courts. For the rest, the administration of law and justice lies entirely in the provincial courts.

On the whole, we should say that the Australian scheme provides for a good deal looser union of the various colonies than exists in Canada, and it is framed on such eclectic principles that its future, if it is destined to come into operation, is likely to be unusually interesting. In any result, the Imperial Parliament, with its paramount authority, is always available as a *deus ex machina* in case of need.

ECONOMIC TRANSITION IN JAPAN.

TOKYO, April 20, 1898.

It is a growing complaint of travellers who come to visit Japan that the country is fast losing its attractiveness, owing to the rapid process of Westernization. The introduction of machinery has necessitated the use of coal, coal implies chimneys, chimneys produce smoke and disfigure the landscape. The chief cities and towns of Japan have gradually acquired, in place of their old picturesque and grace, many of the disagreeable characteristics of modern Western civilization. Osaka, the chief manufacturing centre of the country, has much the appearance of Chicago when approached by rail. Railways, telegraphs, banks, street-cars, electric-lighting, telephones, factories, and all the material paraphernalia of modern methods of industrial life have been introduced with wonderful rapidity into Japan. Newspapers are ridiculously cheap and numerous. Even strikes and lockouts are becoming commonplace in the more important centres of production. The rise or fall of the rate of interest determined by the Bank of Japan excites almost as much discussion in the daily press as does a change in the bank rate in England.

While the criticism of the travellers who come to see the æsthetic side of Japanese life has a good deal of truth in it, the country has in its economic development new interests that make up for the loss of the old. The very fact that Japan is in a transition state gives it a peculiar place among countries. Here are to be seen side by side the old forms and the new—very much as they existed in England at the beginning of this century; only, for certain reasons, without the abject and harsh features that characterized English industrial changes. In Japan the transition is rapid, yet not so rapid as to disorganize any great class of laborers. The Japanese laborers have a facility, an adaptability and simplicity of living which the English laborer did not have. These qualities enable him to change his occupation without a severe wrench. The low wages that exist (without, however, implying a debased standard of life) and the general prosperity of the nation are also factors that have saved him from the evils that commonly accompany the competition of machinery with hand labor.

Even in the kinds of industry most dominated by machinery, the artisan, with only his manual dexterity and a few of the simplest tools, may still compete with factory labor. Perhaps the best example of the triumph of machinery in Japan is the cotton-spinning industry. About 900,000 spindles are at work, and several hundred thousand more will soon be put into operation when some new factories now in process of construction are finished. Yet hand spinning still holds its own in many kinds of yarns.

Japanese who need to buy cheap, strong clothes say that machine-spun yarns make very nice-looking cloth, but that it does not wear so well as the cloth made of hand-spun thread. The ordinary clothes of the vast mass of the peasantry and the working people in the cities are for the most part home-spun even at the present time. A common sound in the country towns is the hum of hand spinning, and very occasionally it is heard in Tokyo, though in the latter place the practice is certainly dying out. As for weaving, the hand-loom is in almost complete possession still. A few Jacquard power-looms are used in Kyoto for the manufacture of certain fine silks, and there are also a few power-loom factories for the production of cottons, but their total output makes scarcely an impression upon the whole production of the country. In the country districts nearly every house has a small hand-loom, which occupies the time of the female portion of the household during the winter months.

The looms used in the weaving of cottons and silks are for the most part as simple as those used in India thousands of years ago. In England it was thought a considerable advance when, in 1738, Kay invented his fly-shuttle, as, among other things, it enabled one man instead of two to weave the widest kinds of cloth. But the advantages of this shuttle would scarcely be felt in Japan, where the cloth is so narrow that the weaver finds no difficulty in throwing his shuttle. Ordinary cottons and silks are generally about a foot or a foot and a half in width, and the widest Japanese textiles are not over twenty-eight inches. What is most astonishing to the Western mind is the simplicity of the means necessary to attain the results. The looms seem scarcely more than a few pieces of wood well joined together by a carpenter. The beautiful and gorgeous silk *obi* worn generally by the *geisha* of Japan are woven in these simple looms among humble surroundings, and the workmen or workwomen get no more than the ordinary wages.

Defoe, in his "Tour through the Island of Great Britain," published in 1724, gives excellent pictures here and there of the condition of English industry in those days—a condition hard for a modern Englishman to realize except by much detailed study and a considerable exercise of the imagination. In Japan one finds at every turn reminders of the state of things as Defoe saw them. "The houses," he says in describing Halifax, "are full of lusty fellows, some of them at the dye-vat, some at the looms, others dressing the cloth; the women and children carding and spinning; being all employed, from the youngest to the oldest." With a few changes of detail, this scene could be easily paralleled in Japan at the present day. The apprentice system, while perhaps never so firmly rooted in Japan as it once was in Europe, still flourishes vigorously in this Eastern country. A boy is commonly indentured at the age of ten, eleven, or twelve years, and is bound for five years, though until lately the period was seven years—the same length of time as prescribed in England in the statute of Fifth Elizabeth. The master secures the services of the apprentice during these years, and furnishes only food, clothing, and shelter. There are no laws regulating the system in Japan, but an apprentice who fails to work out the entire five years finds it im-

possible to secure work elsewhere. There are some curious and ancient customs still surviving among this class which remind one irresistibly of the customs of apprentices in European countries in the seventeenth century.

Other class customs and feelings still persist to a great extent in Japan, and have their part in moderating the effect of the economic revolution now going on. The artisans for the most part remain artisans, the peasants continue peasants, and the small tradesmen are tradesmen still, as of old. In the cities the changes are most rapid, and the contrast between old and new greatest. Government officials, shipping and railway employees, bankers and bank clerks generally wear foreign clothes, often of the latest fashion. Some of them are members of clubs, speak English, and not infrequently are men of the world in the best sense of the term. The artisans and shopkeepers wear much the same dress that the same class wore centuries ago. The nattiest silk umbrella in the hands of the bank cashier changes to the picturesque oil-paper umbrella in the hands of the shopkeeper, while the peasant wears what is probably the earliest form of protection from rain, the *wiso*, a suit made of straw or hemp, which is to be seen in the most ancient pictures of Japanese life. The first may cost five yen, the second fifty sen, the last twenty sen, and they all last about the same length of time. In the country, old customs naturally persist the longest. Agriculture is much the same as it was centuries ago, though some changes are noticeable. The mulberry is more extensively cultivated, owing to the foreign demand for raw silk, and in many districts filature factories dot the landscape. Domestic industries which have for the most part died out in America are very numerous in Japan. The country people make their own clothes, their own beverage (*saké*), and other articles of consumption which an American farmer would buy. In the winter time the peasants occupy their spare time in making straw sandals or similar articles. Farmers generally have their own rice-mills, run by water-power, for the hulling of rice; and in making rice-flour they use the stone hand-mill, nearly in all respects similar to that used in Palestine by the ancient Jews.

To see this homely, domestic, industrious life of the peasantry of Japan gives us an increased feeling of respect for the work of our forefathers. It is a frugal, laborious, somewhat monotonous life, but it is free from the noise and worry of modern commercialism and speculative crises. Undoubtedly the large capitalistic system of production in America and Europe is of greater power, but it has its own drawbacks. It certainly has not tended to unite men's interests, socially or politically. It has established a new class division. It produces hurry, excitement, and the race for wealth. In the large manufacturing centres of Japan, precisely the same phenomena are observable as are seen in the large cities of the West.

G. D.

THE WIFE OF SOBIESKI.

PARIS, May 5, 1898.

M. Wallisewski is a prolific writer. He is taking advantage of the interest in anything Russian felt at the present moment in France. Since the conclusion of the

Franco-Russian alliance, we can repeat what Voltaire said in his time:

"C'est du Nord aujourd'hui que nous vient la lumière."

Voltaire notwithstanding, France remained very ignorant of the history of Russia, and M. Wallisewski's books, ill-written as they are, have had their utility in making us a little better acquainted with the predecessors of our present "friends." In his latest book, which has just been published, M. Wallisewski has taken for the centre of a new historical study a queen of Poland, the wife of Sobieski, Marysienska.

Who was Marysienska? asks M. Wallisewski, speaking of his own heroine. He answers thus:

"A French woman who was thus named in Poland, where she became a queen. It is all one to you; and so it is to me, I would willingly say, if there were nothing else in this adventure. It is not without interest to know that this daughter of a mere captain of the guards of Monsieur, a beggarly officer of doubtful reputation, set to work to become the successor of an Austrian arch-duchess on one of the finest thrones in Europe. But there is more to note in this fragment of history. There is more even than the curious, very complicated and obscure episode of the numerous French candidacies for the throne of Poland . . . which we find in connection with this strange fortune, either helping it or being helped by it. For the great Condé appears in it, and Mazarin, and De Lionne, and the great *Roi*. But there is still more . . . there is Sobieski."

M. Wallisewski affects to give us a psychological page of history: he shows us not Sobieski the hero, the lover; he offers us "a romance and a correspondence which not only are curious and amusing, but are, I really believe, unique. People have not twice loved, twice written, like this—at least on the heights of a grandiose destiny and in the domain of living realities." I translate this last phrase to give an idea of the somewhat bombastic and pretentious style of the author.

M. Wallisewski has abandoned the modern method of severe documentation; he does not consider history one of the exact sciences, and he thinks that modern historians have been wrong in sacrificing everything to what they consider exactitude. He criticises this method and returns to the methods of the ancients.

"Ask," he says, "ten witnesses of an accident which has thrown a street into commotion: in the third account, you will hear that the coachman who ran over a foot passenger has become a velocipedist run over by an omnibus. This is how we write history. Does history, however, contain not a particle of truth? I would not be an historian if I thought so. But this particle of truth seems to me to belong even more to intuition than to study; and therefore I am disposed to say of history what the great statesman of Germany said of diplomacy, 'It is an art rather than a science.'"

It is fortunate that M. Wallisewski, though he has introduced much "intuition" into his work, and has even invented dialogues and conversations, in imitation of Herodotus and Thucydides, has on the whole remained in the domain of facts and of historical criticism. He has taken the trouble to delve in many archives, especially in those of Chantilly, which are very rich in his chosen subject. His true heroine is, in fact, a friend of the great Condé—I speak not now of Marysienska, but of Marie de Gonzague, who became Queen of Poland. Marie de Gonzague was a very remarkable person. She belonged to that mixed race which had German, Italian, Spanish, French, and Greek blood in its veins. They owned

three dukedoms—Clèves, Nevers, and Rethel. At the age of eighteen Marie inspired a passion in Gaston d'Orléans. She had among her admirers Cinq-Mars and the Duc d'Enghien, who became the great Condé. Her father died in 1637, and she inherited from him the dukedom of Nevers and the magnificent hôtel de Nevers (near the Pont-Neuf). There she became one of the queens of the period of the Fronde, and Mazarin had to count with her. Mazarin was not sorry to marry her out of France to the King of Poland. In the numerous escort which accompanied her on the journey was a child, four years old, Marie de la Grange d'Arquien, daughter of a captain of the guards of Monsieur and his wife, Françoise de la Châtre, who had been the governess of Marie de Gonzague.

This child was marked out for a romantic destiny, but for a long time she remains in the background of M. Wallisewski's narrative. He has first to describe the journey of the new Queen of Poland, which lasted three months; the reception given to her in her adopted country; the difficulties she had to overcome in a new and strange land, divided by factions. The King of Poland, Ladislas, had an official mistress, Mlle. d'Eckenberg, who had been one of the ladies of the deceased Queen. He had no authority, and, on his dying without issue in 1647, Marie de Gonzague was forced by the Diet to marry soon afterwards the new King John Casimir, son of Sigismund of Sweden and of Constance of Austria.

John Casimir had begun life as a soldier, had afterwards turned Jesuit and was made a Cardinal, which did not prevent him from arriving in Poland dressed as a soldier, with a sword at his side. He was a man of pleasure and a born soldier; he found a good ally, in his troubled reign, in Marie de Gonzague. When her husband lost the battle of Warsaw, she rallied round herself the Polish nobility, armed the people, used the resources of the church, negotiated with France, Austria, Brandenburg. She was the soul of the resistance. She was forced for a moment to take refuge in Silesia, with her husband, and when she returned to Poland in the early part of July, 1656, we find Mlle. d'Arquien in her small suite. Marysienka, as the French girl was named by the Poles, was now fifteen years old, and it was time to marry her. She found a husband in the family of Zamoyaki, one of the greatest of the Polish aristocracy. Marysienka was extremely pretty, and the Prince of Zamosc (such was the name assumed by the eldest of the Zamoyaki) fell in love with her. He was not young, was given to drink, and worn out by a life of dissipation.

The marriage took place at Warsaw, under the eyes of the Queen, who herself placed a magnificent diamond diadem on the head of the bride. "She was accompanied to church by a splendid escort. . . . Three hundred casks of Hungarian wine were drunk at the wedding repast." Neither the luxury of an almost royal establishment, nor the satisfaction of having three children in rapid succession, consoled the young Frenchwoman for her union with a brutal drunkard, who had merely the name, without having the manners, of a Prince, and who seemed quite indifferent to her beauty. The children were delicate, and died one after the other; the castle of Zamosc soon became a prison to her, and she made frequent journeys to Warsaw. She made the acquaintance of Sobieski, already an illustrious soldier, and a

great favorite with the people and the army; a country neighbor whom she could see frequently. They saw each other also in Warsaw. He fell in love with her; she was a great coquette, and they soon revived the story of Hercules at the feet of Omphale.

The union of Marie de Gonzague with John Casimir had been sterile; she wished to assure the inheritance of the throne to her niece Anne. She had to find a husband for her. Should it be an Austrian archduke? Should it be a Frenchman? The rivalry of France and Austria was engaged in the question. The chapter on the negotiations which took place on this subject is perhaps the most curious in M. Wallisewski's book. Marie de Gonzague thought for a time of the eldest son of the great Condé, of Condé himself; and the archives of Chantilly contain all the correspondence which took place on the subject. There was a French party in Poland, supported by Mazarin and by Louis XIV.; there was an Austrian party. Finally, after many complications, Marie de Gonzague put forward the name of a new candidate, Sobieski.

Madame Zamoyaka had become the mistress of Sobieski, and was secretly married to him (April 7, 1665) as soon as her husband died. Some mystery still hangs over the details of the relations of the great warrior with Madame Zamoyaka. The author intimates that the secret marriage was the result of a sort of conspiracy, in which Marie de Gonzague played a rather ugly part; her object was to bind Sobieski to herself, to set him in opposition to her enemy, Prince Lubomirski, to have a Polish ally against a Polish faction. She succeeded, and Marie d'Arquien was her intelligent and unprincipled instrument. On July 6, 1665, the public marriage took place—"a comedy between people already married," said the Austrian Ambassador. A few days after, Sobieski had to enter on a campaign. His letters to his wife during that time are those of a youthful and intoxicated lover. Wallisewski compares Sobieski to the lovers of Marivaux, but Marivaux's lovers have more esprit.

Marie de Gonzague died May 9, 1667, and her project of a French intervention in Poland died with her. John Casimir had long wished to abdicate; in 1669, he took the road to France. He had, so to speak, sold his crown for several French abbays. He paid a visit to Chantilly, saw the King at St. Germain, and retired to the abbey of Saint-Germain-des-Prés. Meanwhile the negotiations for the succession of John Casimir were continuing. Nothing can surpass the confusion of the intrigues in which Sobieski and his wife play a growing part, except the complications of M. Wallisewski's mind. I confess to have found it impossible to thread my way among the quarrels of Sobieski and his wife, her journeys to Paris, her reconciliations with her husband, the domestic incidents and the diplomatic quarrels, the electoral campaigns interrupted by wars.

After the death of King Michael, the successor of John Casimir, Sobieski was elected King, on the 21st of May, 1674. Mlle. de Scudéry could write: "It is quite serious: the great Marshal Sobieski is King of Poland. We have a Queen d'Arquien." Sobieski justified the choice of the Diet by the services he rendered, not only to his own country, but to the whole of Europe. On the 14th of July, 1683, Vienna was besieged by a Turkish army of 180,000 men.

The hour was decisive; the Ottoman power was gaining ground, and was threatening the Occident. Sobieski took command of the Polish and Imperial troops; he saved Vienna, he forced Kara-Mustapha to retreat in disorder. Hungary, Croatia, became open to the Christian. Immediately after his victory, Sobieski wrote to his wife, and sent her a gilt ornament taken from the horse of Kara-Mustapha. The battle of Vienna was the crowning day of Sobieski's life; he was as weak and incompetent as a King as he was brave on the battlefield. Marysienka was the real sovereign; she was a shrewd diplomat and a most active correspondent. Sobieski died on the 17th of June, 1696, having reigned only two years. His widow was surrounded with enemies; was despised as an adventuress and a foreigner. She was obliged to leave Poland, and retired to Rome, "la ville de toutes les indulgences," says M. Wallisewski. She died during a visit to France at Blois, on the 30th of January, 1746.

Notes.

Cassell & Co. restore New York to their former imprint, "London, Paris, New York, and Melbourne," by replacing the Cassell Publishing Co. in this city, to which they some years ago disposed of their American business. Their new branch will establish itself at Nos. 7 and 9 West Eighteenth Street.

Henry Holt & Co. have nearly ready 'Her Ladyship's Elephant,' by David Dwight Wells, a story of English society as viewed by the author while a member of our embassy in London.

D. C. Heath & Co. have in press a carefully revised edition of Prof. Woodrow Wilson's 'The State,' from wholly new plates. Experience of the class-room has determined the omission of certain details.

In view of the approaching commemoration of the thousandth anniversary of the death of King Alfred, Miss Mary Rosemond Earle of Newnham College is preparing an edition of the original writings, known or surmised, of the great West-Saxon king.

A work of undeniable attractiveness and permanent worth is projected by the house of Tullberg in Stockholm (New York: Lemcke & Buechner). It will be published in a French and in a German edition, under the title 'The Sovereign Princely Houses of Europe'—both regnant and having ceased to reign during the present century. It will consist of about 850 process portraits of all the living members of these houses, both young and old; of some 500 admirable designs of arms, views of family seats, etc., executed by Agi Lindgren, architect of the royal château of Drottningholm; and a succinct genealogical exhibition by Count Wrangel. The resulting volume (a quarto) will fill 800 pages, and will be distributed in some twenty-five parts, costing two marks each.

Guillaumin & Cie., Paris (New York: Dyssen & Pfeiffer), have in hand a 'Dictionnaire du Commerce, de l'Industrie et de la Banque,' published under the direction of Yves Guyot and A. Raffalovich, to make two large octavo volumes at fifty francs. A great number of specially qualified collaborators insure the solidity of this work.

M. Maurice Souriau, professor in the Faculty of Letters at Caen, has discovered in

the municipal library of Havre some interesting manuscripts of Bernardin de Saint-Pierre, which he is preparing for publication. The amusing side of this discovery, or what will be its amusing side to a cynical world, is that it lays bare the fact that the most faithful pupil and friend of Bernardin de Saint-Pierre—the Aimé Martin who married the writer's widow, adopted his daughter, and devoted himself to the cultus of his memory—knew these manuscripts, and in his biography of the master used them largely without giving the slightest intimation as to the source from which was drawn the best part of his book.

We are glad to call attention to the fact that an American edition is now being published of the 'Sacred Books of the East,' the series which is issued by the Clarendon Press under the editorial supervision of F. Max Müller. The English edition of this well-known set of translations from Oriental scriptural texts has long been widely used, and has done much to spread a knowledge and study of the East in the West. The American reprint is a reproduction, verbatim, of the English work, but the paper is not so heavy, and the twenty-four volumes of the original will be reduced to the compass of twelve books; without any abridgment of material, however. The binding differs from the English issue, but most important is the marked difference in the price: the cost of the first series in the American edition will be only \$30, whereas the English costs \$65.50. The first volume of the series is now on sale. It contains the translation, by Max Müller himself, of a dozen Upanishads, or religious treatises and philosophic speculations which stand at the end of Vedic literature and sum up, in a way, the development of certain lines of early Hindu religious thought. The publication is undertaken by the Christian Literature Company, No. 13 Astor Place, New York city, and the enterprise aims especially at a wider dissemination of the series among clergymen, scholars, and libraries. The work is to be commended.

Prof. Bury's admirable edition of Gibbon's 'Decline and Fall of the Roman Empire' (London: Methuen & Co.; New York: Macmillan) approaches its close with volumes four and five, leaving but another brace to come. The appendices, which open with a discussion of the sources, are full of interesting matters; the chronology in particular of a bewildering period being specially looked after. Traces of Russian scholarship applied to this field are noticeable. Gibbon's newly published autobiography has been brought to bear on the significant change of a text reflecting on the Bourbons in the first edition.

From Macmillan we have also a new edition of Kidd's 'Social Evolution,' revised, with additions, among which is a reply to criticisms of the work rewritten from the author's article in the *Nineteenth Century*. The new "Preface to the second American edition" contains this orphic utterance suited to the time: "Those who realize, however dimly, the immense part which the English-speaking peoples—if true to their own traditions—are not improbably destined to play in the immediate future of the world, will feel how great a gain any advance may be which enables us, through the methods of modern science, to obtain a clear perception of the stern, immutable conditions of moral fitness and uprightness through which alone a people can long continue to play a great part on the stage of the world."

In his illustrations to Robert Louis Stevenson's 'A Lowden Sabbath Morn' (Scribners), Mr. A. S. Boyd has done well by the poet. His designs are truthful, not ungraceful, humorous, and have a close relation to the text. The typography and binding are also to be praised. There is nothing better in the verses than the "restin' plouman," "Perplext wi' leasure; An' his raxt limbs he'll rax again wi' painfu' plesure."

Miss Wormeley's 'Cruel Side of War, with the Army of the Potomac [in 1862]' (Boston: Roberts Bros.) is reprinted too late for prevention, but not too late for reflection. "Conceive," she writes to her mother on June 4, during the Peninsula campaign, "of the Medical Director sending down over 4,500 wounded men without—yes, almost literally without—anything for them: without surgeons; no one authorized to take charge of them; nothing but empty boats to receive them." And again, the next day: "Men in every condition of horror, shattered and shrieking, were being brought in on stretchers borne by 'contrabands,' who dumped them anywhere, banged the stretchers against pillars and posts, and walked over the men without compassion. . . . Men shattered in the thigh, and even cases of amputation, were shovelled into top berths without thought or mercy. The men had mostly been without food for three days, but there was *nothing* on board either boat for them." The little volume is part of the history of the United States Sanitary Commission, and has a portrait of the organizing genius of that merciful enterprise, Frederick Law Olmsted.

The 'History of the Lowell Institute,' undertaken as a labor of love by Harriette Knight Smith (Boston: Lamson, Wolfe & Co.), shows an unpractised hand, but gives the essential particulars of this remarkable Boston lecture foundation, now sixty years old. Well worth compiling was the list of lecturers and their subjects from the beginning. From Agassiz, whose cis-Atlantic career was determined by an invitation to lecture before the Institute, down, not a few distinguished men of science and letters have owed their visits to the United States to the liberal honorarium held out for courses from them; and, being here, they have been available for lyceums in all parts of the country. Meanwhile the endowment has steadily and almost embarrassingly increased, in spite of a great expansion of the system working through various local channels. The volume contains a number of interesting illustrations, portrait and other, but does not give in full, what one might look for, the will of the founder, John Lowell, Jr., a first cousin of the poet.

Mr. James S. Barcus has edited for the Globe Publishing Co. a very useful book entitled 'Public Service.' It is the only single volume in existence which contains the names and salaries of all persons in the city, State, and national service within the State of New York, and for that reason it will be a valuable reference book in all newspaper offices. It contains also maps of all political and other divisions throughout the State—election, legislative, congressional, and other districts—together with full returns of the last election, and much other exact and valuable information.

The "Anecdota Oxoniensia" series of the Clarendon Press, Oxford, has recently added another volume to its set of Aryan publications. This is the so-called 'Mantrapātha,'

or prayer-book of the Vedic school of Āpastamba. The contents are made up of texts to be recited in connection with special domestic rites and ceremonies. A full introduction and critical material are given; a translation and commentary are to follow. The editor, Dr. Winternitz, is an investigator known for his painstaking accuracy and for his sound scholarship.

Under the title 'Névrosés' (Paris: Hachette), in itself suggestive of the influence at work on the author, Mme. Arvède Barine has given us four studies of writers each addicted to a vice, but addicted to it through heredity and temperament. A German, Hoffmann; an Englishman, De Quincey; an American, Edgar Allan Poe, and a Frenchman, Gérard de Nerval, are presented in turn as examples of the abuse of wine, or use of opium or alcohol, with madness for a consequence. The studies are admirably done; there is a sympathy for these suffering creatures led away by a temperamental tendency to sin and death, that mitigates the analysis of their temptation and fall. The main object of the writer is to define the effect on the literary production of each. In the case of Nerval she comes to the conclusion, startling and unexpected as it may be, that his very best work was done when in the grasp of the madness which eventually led him to commit suicide. One cannot help thinking that this is better scientific study of pathological cases among men of genius than all the horrors that Zola has heaped upon a suffering and an admiring world.

Somewhat more than a year ago, we spoke of the proposed enrichment of *Cosmopolis* by the addition of new supplements in other tongues than the English, French, and German, which have from the beginning been used in the magazine. The Russian supplement has now been published for a year. It consists of a series of original articles in the Russian tongue which is sent regularly to all the subscribers to *Cosmopolis* in Russia, and to such subscribers outside Russia as desire it and are willing to pay separately for it, together with the regular monthly number. The venture has been successful enough to justify M. Ortmans in extending it to two other countries, and a Spanish and an Italian supplement will be issued with the number of *Cosmopolis* for the current month (May). A little later it is expected that the turn of the Scandinavians will come, and then that of the Dutch.

The recent progress of Manchuria is strikingly shown by a comparison of the accounts of two Englishmen, Capt. F. E. Younghusband and a correspondent of the *London Times*, who visited that country, the one in 1886, the other in 1897. Where the former "travelled for 180 miles over barren prairies," the latter found cultivated fields, in which the "league-long furrow" is never-ending, dotted over with thriving villages of Chinese immigrants. The population of Peking then was 30,000; now it is "a city of 60,000 inhabitants, whose numbers are being added to with enormous rapidity." The rivers twelve years ago were practically useless for commerce or means of communication; to-day a small, but constantly increasing, fleet of steamers and barges carry "grain, hay, cattle, and food supplies" to Siberia. Of this progress, due largely to the Chinese alone, the Russians are now taking advantage. In the great towns of that part of Manchuria lying in the Amur basin (by far the larger part), Capt. Younghusband

did not see a single European. "The Russification" of Kirin—a wealthy city of 200,000 people—writes the *Times* correspondent, "is proceeding. Samovars are seen in every inn. Russian engineers, escorted by Cossacks, drive in tarantasses through the crowded streets." The same is true of all the important towns on the route of the projected trans-Manchurian railway, and he affirms that the Chinese are content that it should be so.

The Quarterly Statement of the Palestine Exploration Fund for April contains, in addition to the reports of Dr. C. Schick, an illustrated description of a visit to Petra by C. A. Hornstein, and a discussion of the Jewish measures of capacity by Col. C. M. Watson. In an interesting communication, the Rev. W. F. Birch endeavors to identify the Pisgah from which Moses viewed the Promised Land, and to reconcile the statements in Deuteronomy of what Moses saw with the prospect from the height which he describes.

The collections of Chantilly have now been for the space of three months in the full possession of the French Institute. It was well known that, besides the priceless art treasures of the château, there were most valuable books, letters, historical manuscripts and documents which occupied a considerable place in the collections and were of singular interest. One can judge something of their extent by the inventory lately published. The library and archives of Chantilly contain 1,453 manuscript volumes, 273 works printed on vellum, 600 great-folio collections of autograph correspondence, 1,660 portfolios filled with maps and papers relating to the history and administration of the domains of Montmorency and of Condé since the eleventh century, and 24,000 printed volumes.

The director of the zoological collection of the Natural History Museum of Berlin has begun a series of *Mittheilungen* with an account of the land and fresh-water molluscs of Seychelles in the collection of Dr. A. Brauer, by Ed. von Martens and Friedrich Wiegmann, illustrated by lithographic plates.

The acute racial differences at present prevailing in Austria-Hungary give a peculiar interest to the quarterly journal *Lud*, published by the Folk-Lore Society of Lemberg, in Galicia. The current number—the first of the fourth volume—contains, among other articles, a paper on the common law of the Lithuanian people and a collection of Polish tales and poems.

The Baron de St. Joseph's elaborate account of the annelids of the coast of France is concluded in the current number of the *Annales des Sciences Naturelles* (Zoologie). Nine new species are described, and the paper is illustrated by eleven plates from drawings by the author.

—'Red and Black' (New York: George H. Richmond & Son) is a translation by E. P. Robins of Stendhal's 'Le Rouge et le Noir.' To speak at any length of the book itself is as unnecessary now as to review Beckford's 'Vathek' or Hope's 'Anastasia.' It is of a Byronic romanticism; and although it carries as its sub-title "A Chronicle of the Nineteenth Century," it is really as remote as possible from the life of any century or of any planet that we know anything about. Still, it has survived; and Julien Sorel is, we suppose, one of the heroes of fiction whom it behooves the reader of books to know. 'Le Rouge et le Noir' is

not tedious; it is, in fact, full of motion, and the reader of whom we have just spoken will have no burdensome task. If he does not read French, he can take the book in the present translation. This is readable enough, and is fairly faithful, with only some slight extenuations or exaggerations here and there of the author's meaning, though the English is rather bad at times. There is now and then, also, a quite unnecessary lapse into slang. "He was in a horrible state of funk," for instance, is hardly excusable as a rendering of "il avait peur." This is, to be sure, perhaps the worst slip of the sort, but there are others nearly as bad. Occasionally, too, a word is mistranslated: *lait coillé*, for example, is not buttermilk, but curds or bonnyclabber. Still, after all deductions are made, this translation may serve well enough the needs of any one who requires a translation. The two volumes are light in the hand, nicely printed, and bound appropriately in vermilion and black.

—The publication of Zola's 'Paris' is an incident in the literary world long since closed, since it occurred at the beginning of March, but it was the occasion of the disclosure of a piece of information which possesses a continuing interest. Sixty-three thousand copies had been ordered in France in advance of publication. Ten thousand of these were countermanded, probably on account of the famous trial, and yet sixty-eight thousand was the number dispatched the first day. Fifteen thousand copies more than usual had been ordered from foreign countries. This just about doubled the number of volumes usually sent abroad. A novel of Zola's, or of any of the half-dozen writers most in view in France, is distributed by publishers to the trade in proportions that rarely vary. One-fifth of the production remains in Paris: one-fifth is taken by the railway bookstalls; one-fifth only goes to the booksellers of the departments; and two-fifths go abroad. Russia absorbs the largest number of them; after her comes Germany, then England, and then Italy. These figures seem to indicate that provincial France is not doing much reading. It might be curious to inquire whether Frenchmen living in the country read less than the same class in other lands. There must be some good reason why the literary output of France runs so much below that of Germany or of England.

—About a year ago, M. Poletti, a professor at the lyceum of Bastia, delivered in the theatre of that city a lecture on the *vendetta* and *banditisme* in Corsica, appealing to the teachers on the island to use their influence in behalf of the suppression of those savage customs. This laudable first move attracted the attention of the French Minister of Public Instruction, and has led to the adoption of general measures to enlist the schools in the civilizing cause. From a recent number of the *Revue Pédagogique* we learn that formal instructions have been given to the teachers in Corsica to enlighten the pupils in the schools and in classes of adults on the subject; and M. Poletti is about to prepare a treatise to assist them in their efforts. The director of the normal school at Ajaccio, M. Fabre, has begun, in allocutions to the student-teachers, to explain the gravity of the question. In the popular mind the murderer frequently assumes the character of a hero; the bandits receive more sympathy and pity than their victims—re-

cently, in a student's composition, they were spoken of as "examples of generosity and loyalty." Under these circumstances, M. Fabre's first, and perhaps most difficult, task is to enlighten the minds and consciences to the point of conceiving the *vendetta* to be an evil. Happily, his experience and his knowledge of the influence actually exerted in certain villages by brave and generous teachers have established in M. Fabre's own mind a firm belief in the practicability and ultimate effect of this new effort to uplift the Corsican character.

—In the 'Monographien zur Weltgeschichte' the editor, Prof. Heyck, and the publishers, Veitlagen & Klasing of Leipzig, are trying to popularize history. To this end the publishers are putting the monographs into the unusual but not inconvenient form of thin quartos with flexible covers, are printing them handsomely on good paper with many illustrations, and are selling them at the remarkably low price of three or four marks each, according to their thickness. Of each monograph there is also a special limited edition on art paper and in leather covers, at twenty marks. The editor's part in the popularization consists in selecting themes of especial importance—"Höhepunkte der geschichtlichen Entwicklung"—and in treating them or having them treated in such a way as to make the monographs intelligible and interesting to readers who are not specialists. The choice of themes, both for the numbers that have already appeared and for those that are in preparation, is excellent. The range is a wide one: it extends from the Pharaohs to Bismarck. 'Bismarck' is by Prof. Heyck, and constitutes the fourth number. In this case it must be said that the publishers have done better than the editor. In his admiration of Bismarck, Heyck is sufficiently enthusiastic for even the German public; his account of the Prince's career is accurate; he has some new points of view and a couple of fresh anecdotes; but even a German cannot find the book easy to read nor the style attractive. The sentences are of the worst German variety, tortuous and obscure. The style is sometimes high-flown, sometimes trivial, occasionally slangy. The illustrations, however, are profuse and excellent. There are more than two hundred of them, and they really illustrate—not the text, to which they bear no local relation—but the subject. We have, for example, pictures of Bismarck at all ages; pictures of his family, of his associates, and of many of his more prominent contemporaries; pictures of houses in which he has lived and of statues that have been set up in his honor; and reproductions of historical paintings and comic cartoons in which he figures. There is also a complete family tree, that starts with Alderman Hebbord of Stendal in the thirteenth century, and comes down to the Otto born last autumn.

—Macedonia has been for some years the theatre of a strange political propaganda carried on by Greece and the Balkan States by means of schools. A correspondent of the *London Times*, writing from that country, says that, while the Greek schools still outnumber those of all other nationalities combined, they are losing ground. The Bulgarians, on the other hand, are working quietly, surely, and successfully, every year showing a notable accession to their schools. Within the past two years the Servians

have made a sudden advance altogether disproportionate to their previous progress. Even the turbulent Albanian chiefs, for the most part at feud with one another, have united in a demand for the establishment of schools in which their own language shall be taught—a request, however, persistently refused by the Porte. The Mussulman peasant alone remains uninfluenced by the presence of the schoolmaster, in a state of pristine ignorance. The results of these schools and gymnasia, upon which Bulgaria, Servia, Rumania, and Greece expend about one million dollars annually, are that "the Christian rays of the past-ignorant, helpless, submissive—is disappearing, and a young generation, confident and hopeful, is springing up, which looks for help and sympathy beyond the bounds of Turkey, and has learned the fatal secret of the decadence of the Ottoman power." The contrast between the two sections of the population, the Christian and the Mussulman, is daily growing wider, "and in a brief space of time the maintenance of Turkish rule in Macedonia will become impossible."

SMITH'S LIBERTY AND FREE-SOIL PARTIES.

The Liberty and Free-Soil Parties in the Northwest. By Theodore Clarke Smith, Ph.D., etc. [Harvard Historical Series, VI.] Longmans, Green & Co. 8vo, pp. 351.

Mr. Smith's book, the Toppan prize-essay of 1896, is a contribution to the political history of the country which must have permanent value. It is not a general history of the anti-slavery movement, but only a chapter in it, important and interesting as that chapter is. Taking it for just what it professes to be, it is a very thorough and excellent piece of work. It does not deal with national politics as debated in Congress, nor with the measures which became the rallying-points either of the aggressive slaveholders or of the friends of emancipation. It confines itself to the local phases of the contest in the States and Territories northwest of the Ohio River, and to the political organization of the anti-slavery forces there, beginning with the questioning of Whig and Democratic candidates and the support of those most favorable to freedom, and ending with the organization of the Republican party in 1854.

The limitations which the author has accepted must be kept in mind in reading the book and in judging the performance of his task. If we want to be informed as to the causes which led to the New York Barnburner movement of 1847, we must find them in the fuller study of the annexation of Texas and the war with Mexico. If we would fully understand the dwindling of local activity in anti-slavery politics in 1851, 1852, we must sound the depths of Clay's compromise of 1850, and feel the seductive influence of its claim to "finality." Mr. Smith touches upon such things only to make comprehensible the political action within the Western States themselves, assuming that his readers are familiar with the political history of the country upon the broader theatre.

It was, therefore, entirely within the author's plan that he should have little to say of the propagation of anti-slavery ideas by moral exhortation not directly connected with political action. He says, "to separate out the political from the moral movement is

therefore possible," and that it is his aim to deal with the former only. The effect of such concentration of view is apt to be misleading, for the mass of material of the one sort so fills the mind and memory that a writer may assume another sort to be lacking only because he is not looking for it. Thus, Mr. Smith says: "In the Northwest there was, after 1840, very little knowledge of Garrison and his methods." The men are not all dead who remember the crowded meetings of Garrison's tour in the West of 1847, and the keen and hot controversy over his doctrines and methods, which never ceased from the beginning of his career until the clash of arms actually came. S. S. Foster and his wife, Frederick Douglass, and others were hardly less well known as lecturers and agitators west of the Alleghenies than in the East, to say nothing of able and active local disputants and journals.

Newspapers are valuable sources of history, but they are by no means all, or, in the march of opinion, even the chief. We must not forget that the newspaper cannot exist until it has a subscription-list large enough to pay the printer; and it is, therefore, quite as essentially the voice of opinion already formed as it is the organ of its propagation. The workings of the individual conscience, the brooding over a new idea of right which a lonely apostle of an unpopular faith has given to a little circle who have listened to him in an upper chamber, are not advertised in popular journals. The historian has to hark back from the outburst of popular convictions to the unseen and unheralded lessons of epoch-making truth. It is good logic to argue that the millions of voices that shouted for free soil in 1854 had back of them the millions of hearts that had somehow been taught to beat impatiently for the time when doubt as to the practicable road would no longer silence the shout of exultation and resolve when it was found. The number of them could not be counted in the poll-lists of votes for Birney or for Hale, nor yet in the membership of the anti-slavery societies. Hosts of them were scarcely conscious of their own conversion, and smothered the acknowledgment of the change in their own belief by quarrelling with those whom they called impracticable in their efforts to carry it out. It had been going on for a quarter of a century at least, yet the most diligent reader of newspaper files will find in them little or nothing of it. The age of miracles is past. The sagacious historian of to-day assumes not that some heavenly portent appeared as to Constantine and his host, but that he must delve till he discovers the natural causes which, with so little outward sign, had worked so wonderful effects. Only so can he teach us the true history of reform.

When we come, however, to the published evidences of progress, it would be hard for anybody to do better work within his chosen field than Mr. Smith has done. He has rescued from the dimness of half-oblivion many sturdy champions who did not live to see the triumph of their cause, or who had spent their strength in the earlier campaigns, and had to transfer to younger but not better soldiers the leadership in the final struggle. He has also given with great fullness the progress of opinion in the convictions and conduct of such leaders as Chase, Birney, Giddings, Wade, and others. We learn how they felt their way toward embodying their anti-slavery convictions in political formu-

las, and toward that political organization which was finally to supplant the Whig party to fight out the issue of the spread of slavery into the Territories.

In dealing with Mr. Chase, the author, without explicit judgment against him in the matter of his election to the Senate by a coalition with the Ohio Democrats, leaves the impression that he disapproves the transaction, and this impression is strengthened as we follow the history of Mr. Chase's course in the next two or three years of diplomatic effort to commit the Democracy of the West to the anti-slavery platform of the True Democracy (as he loved to call the party of freedom). Mr. Smith's tone is quite different from that he uses when describing later the election of Mr. Wade to the Senate by a similar coalition with the Whigs. We see so clearly now that the Whig party was foredoomed to dissolution, and that its opponent was becoming the national exponent of the theories and purposes of the ultra-South, that it requires no little effort to adopt the point of view of Chase and his friends when the Barnburner movement was defeating Cass for the Presidency, and the Ohio Democracy were resolving that slavery was an evil which must not be extended, but must be mitigated and finally eradicated.

To obtain the repeal of the "Black Laws" and to elect to the Senate so sturdy an anti-slavery man as Mr. Chase was a very great political triumph and a signal advance towards the party revolutions of 1854. Chase could not foresee that the followers of Van Buren would drop away when the excitement of the Presidential canvass of 1848 should be over, and it was good statesmanship in him to make as much as possible of the apparent committal of the Barnburners to a new departure. As Senator elected by their votes, he had the right to assume that he had a leadership among them, and to emphasize the principles of True Democracy to which he exhorted them to rally. In all this he did not withhold the strong doctrines of free soil, and never left it a moment doubtful that his coöperation with the Ohio Democracy would end whenever they were recreant to the anti-slavery platform they had accepted. In the Senate and in his popular addresses, his anti-slavery principles were advocated with consummate skill and cogency; and when he had thoroughly tested his allies and found them falling from grace and yielding to the discipline of the "hunker" organization, he exposed their inconsistency, denounced their lack of principle, and carried into the new Republican party a strong contingent of converted Democrats who made their mark in the political history of the next period. If he had possessed the gift of prophecy and had known the course party politics would take, it would still have been sagacious management to affect faith in the professions of his allies until their backsliding should be without semblance of excuse and they be shown up for the "doughfaces" they were.

Giddings and Wade had quite another rôle to play. As anti-slavery Whigs of the Western Reserve, they shared with their constituency the disgust which Greeley expressed in his "spitting upon the platform" of the national party, and had little need to defend themselves personally from the charge of inconsistency in supporting Taylor or Scott. They avowedly worked for the conversion of the party to the advanced anti-slavery doctrine which they earnestly sym-

fessed, and, in their different surroundings, acted upon the same principle as Chase, in being careless of formal consistency, while thoroughly in earnest in the essential purpose of consolidating their party friends in vigorous opposition to slavery. They were both far behind Chase in making themselves independent of the old national party organizations, but their immediate environment was such that their delay was as fairly to be attributed to shrewd political wisdom in choice of the steps toward the final result as was Chase's diplomacy with the Democrats. Wade's sturdy combativeness was such, after he was in the Senate and committed to the fight, that it is curious to find Giddings writing to Sumner in 1851 of "his want of straightforward determination of purpose." They had been partners in the practice of the law and life-long friends, and the remark of Giddings speaks volumes as to the force of party ties and the hesitation practical politicians felt in believing that the time for reorganizing political parties had really come.

Chase's intellectual qualities were always of the calm and philosophic cast rather than those of the impassioned and vehement advocate. Indeed, he could not be called eloquent in the common meaning of the word. He was weighty, often even ponderous. His voice was not a clear and ringing one, but a little muffled, as if his tongue were over-large for his mouth. But his reasoning was so good, his thoughts so strong, his sentences so well-framed and so clear, that men listened with satisfaction, though they were not stirred to enthusiasm. He was easily chief among the draughtsmen of platforms, happy in his choice of issues, strong in his way of putting them, and nobly elevated in the style of appeal to high motives. Through all the critical time of anti-slavery politics he was in demand for the formulation of the creeds, whether in the form of a single legislative resolution or in the elaboration of many-sided platforms like that of Buffalo in 1847.

Giddings was a much more impulsive man and a warmer and more sympathetic advocate. As large as Chase or larger, with his florid open countenance, his great shock of gray hair, his vehement tenacity of feeling and vigorous expression, he roused a peculiar enthusiasm in his followers and an equal antagonism in his opponents. It was the common feeling that Chase should enunciate the principle and lay down the plan, and that Giddings should lead in its execution. In such a crisis as the excited meeting of May, 1859, at Cleveland, in view of the jail where the "Oberlin Rescuers" lay, many believed that, but for Chase's calm thoughtfulness and caution, Giddings and his Sons of Liberty would have stormed the prison and begun an insurrection against the Government, in defiance of the Fugitive Slave Law. Indeed, as Chase was Governor, his presence at the meeting was understood to be a check upon extreme words or actions.

Mr. Smith's book is a noteworthy digest of the printed sources of the anti-slavery history of the Northwest, viewed from the standpoint of political organization, and it is so well done that it is not probable there can be any call to repeat the task. It will be a permanent authority as to the period it treats. It were greatly to be wished, however, that he could have given it a literary

handling that should better match the value of the material. The style is careless, and in places rough-hewn and even crabbed. The labor of marshalling his facts into annals of a great moral and political movement seems to have so taxed his strength that he has been content to throw his notes together, with a feeling that he had no time to consider the form and style of his work. It is perhaps more important than he thought when writing it, and more worthy of finish in the respects we have noted.

BUTLER OF WANTAGE.

Life and Letters of William John Butler, late Dean of Lincoln, and sometime Vicar of Wantage. Macmillan & Co. 1897.

Dean Butler's career was a striking example of what an earnest clergyman can accomplish by remaining long in one parish. No doubt he was peculiarly well fitted for his duties, yet he could hardly have attained his generally conceded reputation as the model parish priest of the Church of England, had he not been Vicar of Wantage nearly half his lifetime, until the charge of an ever-increasing work threatened to prove too much for his advancing years. Born in 1818, educated at Westminster School and Trinity College, Cambridge, he was ordained deacon in 1841, and priest the following year. In January, 1847, after serving as curate in small country parishes, he became Vicar of Wantage, a market town of over 3,000 people, near the Vale of White Horse, so well known to all readers of "Tom Brown." The living was in the gift of the Dean and Chapter of Windsor, and came to Butler through the good offices of his wife's uncle, Canon Canning (brother of Lord Stratford de Redcliffe), to whom Butler himself was also related. Wantage's claim to distinction was as the birthplace of Alfred the Great (849) and Bishop Butler (1692), and the coincidence of names—for there was no relationship with the latter's family—led Mr. Keble to say, "It is a good omen, *Butler of Wantage*," thus giving to the new vicar that distinctive name by which thenceforth he was often known.

When with a reading party in the lake country in 1838, Butler had borrowed the "Christian Year" from a friend; and subsequent influences, as well as his own earnest and reverent cast of character, developed the fruits of this first acquaintance with Tractarian principles, especially after he came to know Mr. Keble himself. While Butler's strong common sense, aided by a keen sense of humor, made ritualism an impossibility for him, he was essentially a High Churchman, and, being a man of tireless energy as well, his advent to a parish long neglected by non-resident vicars meant a great change. His letters on first visiting Wantage show thorough dissatisfaction with what he found, as well as his abiding conviction that the spread of Dissent was mainly due to neglect of duty by the clergy of the Established Church.

"B— [the officiating clergyman's] sermon was as dry as hay. Not a word of sense in it. I only wonder so many people can sit through such discourses. I was as fidgety as possible, and were I likely to undergo such things continually, I must join one of the sects with which Wantage is rife. Lengthy, too."

"Then the horrid apathy and irreverence of the whole concern, the crowd of idlers, etc. [at a funeral], made me rather down-hearted. The churchyard is in an abominable state. It ought at once to be remedied,

so noisy and unclean, with long, rank grass all over it. Bury me at Wareside [the parish he was leaving]: Railroad will take me cheap."

Any one who in recent years has passed from the peaceful churchyard into Wantage Church, beautifully restored, and even (almost alone of all old churches in England) enlarged to receive the throng of worshippers, and who reads Butler's first descriptions, will begin to have some conception of the results of his thirty-four years' work.

Realizing that the religion of the peasantry, and of the farmers and shopkeepers too, was wholly confined to generalities, Butler's aim was to spiritualize these classes by definite teaching, such as would affect their daily lives. At the same time he was well aware of the intense popular feeling against High Church principles, and hence of the need of intimate acquaintance and sympathy with his people if he was to lead them as he wished. To this end he was indefatigable in visiting, and welcomed to his own study all who wished to consult him, whether gentle or simple. After he became Dean of Lincoln, some one compared the cathedral on Sundays to Clapham Junction, on account of the rapid succession of services, and it was much the same at Wantage, yet he did not let the new services interfere with those to which his people had been long accustomed, therein exhibiting a moderation which, if more general, would have prevented serious trouble in many parishes. Though in the end he completely won the hearts of his people, his path was at first far from smooth, and when, after five years, he proposed the restoration of the church and abolition of box-pews, the vestry (which included dissenters) voted down the project at a stormy meeting, although they were not asked to provide the funds. For a time the party of reaction seemed to prevail in the parish, and Butler was very unpopular, but in 1855 the restoration was begun, and finished two years later; the farmer who was the first to voice the opposition in 1852 himself giving £25 to the work.

When Butler came to Wantage, not over 50 children attended the parish schools, but in 1880 there were over 750, all in new, well-appointed buildings. He visited the schools daily, usually taking the opening prayers himself, besides sharing in the instruction of the pupil-teachers. His chief educational work was, however, strictly religious, his system being to group the communicants into classes, according to age and sex, and to teach them regularly himself. He also concerned himself with all matters affecting the public welfare, such as water supply, drainage (of which Wantage was greatly in need), street-lighting, the housing of the poor, and beneficial and savings societies; but he always refused to serve as a magistrate, holding the duties of that office to be incompatible with those of a clergyman. As regimental chaplain of the Berks Volunteers, he annually went into camp, holding daily open-air services, and taking a keen interest in drill and rifle-practice. With such a vicar, Wantage became known as a training-school for curates, among whom was Canon Liddon; and though afterwards one or two of the ex-curates seem to have shown more zeal than discretion, it is significant that none of them ever abandoned the Church of England.

In 1848 Butler founded a sisterhood, the second in England, for educational and charitable work—a venture which narrowly

escaped failure in its first years, through the secession to Rome of two of the four members. Under his care and guidance, however, the community took root again, ultimately establishing several branches in other parts of England and in India, so that to-day the Wantage sisters are widely known in their special lines of work.

In 1866 Butler seemed about to enter a wider sphere, being elected Bishop of Natal to succeed the deposed Colenso. He did not shrink from the sacrifice demanded by such a call, yet, realizing the disturbed state of the diocese, he left the decision absolutely with the Archbishop of Canterbury (Longley) and his own bishop (Wilberforce); and after a year of suspense the former advised against acceptance, on the ground that it would be better to have a man of less pronounced High Church views. Whatever may have been thought of the decision in some quarters, it was at all events heartily welcomed by the people of Wantage, who had no wish to part with their vicar for the benefit of South Africa.

Butler's one annual relaxation was a trip to the Continent, where, unlike the typical British tourist, he always interested himself in the people of the country. One year he made a special study of French charitable institutions, and, being thus brought into contact with many of the clergy, he was much amused at their efforts to convert him. When assured of the logic of the Roman position, he would parry with "L'esprit anglais est très inconséquent." In 1870 he spent some time with the Red Cross Society about Sedan and Saarbrücken, visiting the wounded French prisoners and distributing supplies. At the close of 1880 he was made a Canon of Worcester, and in 1885 Dean of Lincoln, both appointments coming from Mr. Gladstone, of whom, however, he was not a follower. He had strong convictions as to the practical usefulness of cathedral institutions at the present day, holding that although at one time they did little more than maintain the standard of beauty and dignity in worship, that day was passed. His influence on the services in both cathedrals was very marked, especially at Lincoln, where there was much room for improvement, and he certainly earned the gratitude of all who have felt the inspiring effect of the Sunday evening service instituted by him, in the nave of that noble minster. He was not a great preacher, being, for one thing, unable thoroughly to control his voice, but his addresses always carried the weight that comes from sincerity and definiteness. When a Lincoln non-conformist was asked whom he preferred to hear in the cathedral, he said, "The dean, because he means business."

Both at Worcester and at Lincoln, Butler showed the same broad public spirit as at Wantage. In the former he established a school for the cathedral choristers, and took the leading part in founding a high school for girls, while at Lincoln the School of Science and Art and the Free Library owe much to his support. In spite of constant work his active frame retained much of its strength to the last, and at seventy-five he could walk twenty miles in a day and hold service afterwards. He died on January 14, 1894, after a short illness, Mrs. Butler, who had been attacked by paralysis three months before, surviving him just one week.

THE CORRESPONDENCE OF CICERO.

The Correspondence of M. Tullius Cicero. By R. Y. Tyrrell and L. C. Purser. Vol. V. Longmans, Green & Co. 1897.

The appearance of a new volume of this important work is of itself sufficient cause for rejoicing; the announcement that the final volume of the commentary is partly in print and may be expected within the present year is extremely pleasant reading; but best of all is the modest promise of a complete translation, "with a historical running comment somewhat after the model of Carlyle's 'Letters of Cromwell.'" It should be mentioned that the Index to the Correspondence is to occupy an additional (seventh) volume; this statement conveys assurance of an approach to satisfactory fulness.

The reference to the prospective translation is perhaps not so modest after all, for it follows a severe, albeit verbally kind and telling criticism of an obtrusive characteristic of Mr. Jeans's rendering of the letters of Mr. Watson's selection. These strictures, while in the main deserved, are hardly in good taste in their connection with the announcement of the new translation, and indeed seem to us to put Mr. Jeans in a false position. The misrepresentation is no doubt unintentional, but all the more mischievous for its very unconsciousness. In the introduction to his first volume, Prof. Tyrrell noticed the possibility of the occasional happy rendering of a Greek word or phrase of the letters by an equivalent French word or phrase familiar to English readers. He now charges that his "aim has been slightly misconceived"; that "some recent translators, especially the Rev. G. E. Jeans, have shown a flattering appreciation of our little remark by always rendering Greek expressions in French." Now Prof. Tyrrell made his feeling on this subject perfectly clear by his original utterance, and Mr. Jeans did not misunderstand him, or show a particularly "flattering appreciation" of his "little remark." On the contrary, he took pains to state explicitly in his preface that he had arrived independently at the same conclusions with Prof. Tyrrell in respect to the use of Greek words in the Letters, and ventured to maintain a view of his own with regard to the translation of a large class of these words, preferring the use of French to Prof. Tyrrell's *argot*. So, too, he defended his anachronisms in the use of quotations from the later Latin poets in rendering Cicero's quotations from the Greek poets. Most of us have felt with Prof. Tyrrell that this was misleading and unscholarly, as we have set his slang above Mr. Jeans's French, and laughed with him at *sel attique* and the like.

The correspondence included in the present instalment is confined within narrow limits of time, from March, 45 B. C., to September, 44 B. C. Some of the most important of Cicero's letters, however, were written during this period, a period that saw the final loss of all domestic hope in the death of his beloved daughter, and the glimmer of a renewal of political hope in the death of Cæsar. But, if important, they are not altogether pleasant reading. The letters of condolence on the death of Tullia, which themselves contain much that, somehow or other, does not ring true to our ears, are followed by daily notes to Atticus on the subject of the monument to her memory and the purchase of a site for it, and follow another series of notes

on the final financial settlement with his divorced wife. One wonders how long a man of business of the present would patiently reply to the same question day after day, and day after day, even from a friend, receive the same instructions. Indeed, Cicero's letters show that Atticus did not always come quite up to his expectations in this regard. To the letters of the time of mourning succeed those that deal with the death of Cæsar and the uncertain future of the rescued Republic. In these, too, there is much that saddens the reader in the despair into which Cicero soon falls and the shadow of impending doom. Had Cicero only been self-reliant, confident, optimistic, what a difference it would have made in our regard for him!

The sections of the Introduction treat of "Cicero's Case against Cæsar," and the lives of Vatinius and of Cicero's son, with the inevitable critical discussion and an addendum to the commentary on *Fam.* 4, 5, 4, maintaining the sincerity of Cicero's belief in the immortality of the soul. The argument on the latter point is far from conclusive, and we greatly fear that a comparison of some of Cicero's words on the subject, even in his letters of condolence and replies to such letters, would scarcely show a greater faith or higher trust than the letter of Sulpicius.

The first section is republished from the *Quarterly Review*, and is at most points a complete reply to Froude's misrepresentations. There is, however, the enthusiastic overstatement of the case to which the introductory articles of the earlier volumes have accustomed us. The accounts of the vulgar and repulsive, but good-natured, Vatinius, and of Cicero's not altogether worthless son, are unusually lively and interesting. The critical question chosen for discussion in this volume of the work is that of the value of the *codex Medicus* in establishing the text of the *Epistula ad Atticum*. The opposite views of Schmidt and Lehmann are briefly stated, and adherence is expressed to the belief of the latter that "a large class of MSS. exists which is independent of M."

While the style of the senior editor of the 'Correspondence of Cicero,' with its colloquialisms and witticisms, and indeed almost perfection of lightness and vivacity, joined as it is with sane and inspiring scholarship, makes him the ideal interpreter of comedy and of familiar epistles, it is sometimes entirely and absurdly unsuitable to his theme and thought. The volume we are considering opens with what seems to us an inexcusable flippancy. We are told of a schoolboy who described Cæsar as "a gentleman and a Christian." This is delicious; but our essayist goes on to comment on the moderation of the description as proof that the schoolboy had not read Froude. Had he, he would probably have classed his hero with the Founder of Christianity. Exuberances and Latinisms abound. Thomas Hardy and 'Jude the Obscure' may be fittingly quoted in the *Quarterly Review*, but they seem sadly incongruous in an edition of Cicero. The derivation of the name of Brasenose College, however instructive (p. 39), also seems extraneous.

In 'Cicero in his Letters' Prof. Tyrrell made public confession of his failure as a corrector of proof, and each successive volume of his more ambitious work serves further to confirm our acquiescence in this self-judgment. The last volume has the usual

list of *Corrigenda*, but it scarcely makes an appreciable diminution in the total of mistakes. We notice only a few: "to the command [of] a squadron" (p. lxii); "for his noble nature and had [his?] hatred of tyrants" (p. lxii); *Cicero* for *Cicero* in the greeting of Letter DLV; omission of the greeting of Letter DLVI, this letter having been first printed in the *Cicero* in his letters, in which the greetings are for some mysterious reason almost altogether omitted; a transposition of notes on p. 36; mistakes in syllabification on pp. 24 and 45; "March" for "May" on p. 59; μ for ν (p. ix). Such minor typographical slips, with carelessness in the use of italics and of punctuation, are to be found on nearly every page.

Is it not going too far to say the younger Cicero's "common nature" was "transmitted to him in all probability from Terentia"? But our editor cannot acknowledge the possibility of any flaw in the husband's character as a factor in the estrangement. Did Cicero in his letters to his friends labor "to put his case at the worst, and thus make sure that their judgments should not err on the side of leniency"? It would be difficult for any mortal to do this steadily year after year, and of all men most difficult for Cicero. It is not often that elementary matters are given room in the commentary, but we are told in one place that L. Paullus "defeated Perseus at Pydna"; and in another, examples are cited for *quemquam* introducing an independent clause.

The imagination must be allowed some part in any attempt to explain many allusions in these letters to the exact meaning of which we have no key, but we rarely find in the present edition the refinement of hypothesis to which Continental scholars are prone. The Dublin editors are least sure in some of their discussions of textual matters, but in this respect there is much improvement over the earlier volumes. The most unsatisfactory of all the "new readings" given in the new volume is perhaps the retention of the MS. *critia* in *Att.* 14, 19, 1, on the ground that Cicero is repeating a careless mistake in the spelling of *avaritia* of the letter to which he is replying. Of the several emendations which show a decided departure from tradition, none commends itself to us as especially happy. On the other hand, the return to the MS. reading is usually cogently sustained. Moreover, the protest against the tendency of critical scholars to make all of Cicero's correspondents write as elegant Latin as Cicero himself is sane and salutary. When all is said, the work of Prof. Tyrrell and Mr. Purser must be acknowledged to be a most sympathetic and satisfactory interpretation of this valuable portion of Roman literature, a decided addition to the apparatus of the classical scholar, and a lasting monument to the learning that distinguishes the venerable Dublin college.

Montaigne and Shakspeare. By J. M. Robertson. London: The University Press. 1897. 8vo, pp. 169.

This work is the enlargement of a study on "Hamlet" which was printed twelve years ago, and contains much that is of interest to the student of Montaigne and the student of Shakspeare. Its purpose is to present evidence that Montaigne distinctly influenced Shakspeare; that in the plays—more especially in "Hamlet"—written after the pub-

lication of Florio's translation of the 'Essays,' in 1603, there are proofs that Montaigne's thought became Shakspeare's thought. It is much to be wished that others would carry on the investigations Mr. Robertson has begun; he is really the first reaper in this field, though its possible harvest has long been pointed out.

To what extent those thoughts which are found alike in the Essays of Montaigne and in Shakspeare's plays have passed from one to the other, is an insoluble question, since the thoughts of the wise have too close correspondence to let it be said with confidence, in any special instance, "This was derived from that"; yet, on the other hand, it is generally unquestionable that strong similarities in the expression of thoughts indicate communication of ideas—in one word, borrowings. These direct and unacknowledged "borrowings" from Montaigne are traceable here, there, and everywhere in English literature. They must have been abundant by 1605, since in that year Ben Jonson (in his "Volpone"), writing of Guarini, said:

"All our English writers.
I mean such as are happy in the Italian,
Will deign to steal out of this author mainly
Almost as much as from Montaigne."

These stealings that Jonson discerned in his contemporaries have not yet been pointed out. Mr. Robertson is inclined to believe that Jonson had in mind similarities of thought and phrase to be found in "Hamlet" and in "Measure for Measure," the one published, the other produced, in the previous year (1604).

This may be; but it also may be that he had in mind similarities of thought and phrase to be found in the writings of Bacon. In Bacon's very first Essay (and it is to be observed that this very title "Essay" is stolen from Montaigne, who first used the word in this sense)—in Bacon's first Essay he quotes openly from Montaigne: "Montaigne saith prettily . . ."; and in the next Essay there are four singularly parallel passages. Such recur again and again in his Essays, and not less frequently in his other writings, especially, perhaps, in the 'Advancement of Learning.' In 1867 the late Edward FitzGerald wrote to Mr. Aldis Wright:

"When Robert Groome was with me a month ago, I was speaking to him of having found some Bacon in Montaigne; and R. G. told me that you had observed the same, and were indeed collecting some instances; I think quotations from Seneca, so employed as to prove that Bacon had them from the Frenchman. . . . I had not noticed this Seneca coincidence; but I had observed a few passages of Montaigne's own, which seemed to me to have got into Bacon's Essays."

He then quotes a passage from Montaigne's Essay, 'De la Vanité,' and adds:

"In the same essay is a piece of 'King Lear,' perhaps [and he quotes again]. One doesn't talk of such things as plagiarisms, of course; as if Bacon and Shakspeare couldn't have said much better things themselves; only for the pleasure of tracing where they read, and what they were struck by."

These things are indeed no "plagiarisms." In the passage in "King Lear" referred to by FitzGerald, Shakspeare takes the philosophic thought of Montaigne and touches it into passion and poetry by the emotion he breathes into it. In only one instance he actually "plagiarizes" from Florio's trans-

lation in the same manner that he so frequently did from North's Plutarch and Holinshed's 'Chronicle,' simply versifying the prose. John Sterling, writing in 1835, put the case as regards parallel passages judiciously in saying: "It would doubtless be easy to trace many apparent transferences from the Frenchman into the Englishman's works, as both were keen and many-sided observers in the same age and neighboring countries." It is not perhaps so very easy (in one sense) to trace these apparent (or real) transferences, since it demands very considerable familiarity with all Shakspeare's plays and all Montaigne's Essays, and a rather unusual power of memory. At any rate, it has never till now, by Mr. Robertson, been attempted.

It began to be suggested in France about the middle of this century, but nothing has been done about it there. In Germany, twenty years ago, Dr. Elze remarked that Shakspeare's obligations to Montaigne had not been adequately recognized, and Mr. John W. Hales, in his excellent notes on Shakspeare, commenting on this remark, adds: "We think that there are many more indications of direct contact than have yet been collected; but we cannot now stay to particularize." No one has "stayed to particularize" before Mr. Robertson—if, as may be assumed, there is no occasion to mention, in any serious study of the question, the book of Mr. Jacob Fels, published some years ago, 'Shakspeare and Montaigne,' which is based on the fantastic notion that in the character of *Hamlet* Shakspeare had had the character of Montaigne in mind.

Mr. Robertson notes, besides the passage in the "Tempest," three correspondences of phrase already observed, as he says, by others, which he thinks "prove reminiscence beyond possibility of dispute." To these he adds ten "parallels" which seem to him "striking correspondences" and "inevitably to suggest a relation"; and these again are followed by some thirteen "parallelisms of thought of a less direct kind." It shows how much in this matter hinges on personal impressions that the present writer finds it impossible to perceive that in two or three consecutive pages of Montaigne's 'Apology of Raimond Sebonde' "we find, poetry apart, nearly every notion that enters into *Claudius's* speech" (in "Measure for Measure," III. 1); and would equally question (as of any importance) another parallelism suggested by FitzGerald as occurring in "Othello"; while, on the other hand, there are some half-dozen parallels, in "Hamlet" and in the speech of *Henry V.* before Agincourt (IV. 1), not as yet even referred to, which seem to the present writer to stare one in the face in this connection.

If we turn from Shakspeare to Ben Jonson again, we may suspect that he himself stole from "Montaigne." One of his most beautiful odes is based on one of Seneca's Letters; this Letter must have been also in Montaigne's mind when writing the nineteenth Essay of the first book; and it would seem as if Jonson must have had floating reminiscences of Montaigne's reminiscences, for two of his lines recall a sentence in the Essay, which is Seneca's thought phrased by Montaigne in a manner hardly likely to have been recreated spontaneously by Jonson. In Jonson's case, again, "it would," in Sterling's words, "doubtless be easy to trace many apparent transferences," all the more that Jonson was a personal friend of Florio,

and must have been interested in his translation.

Passing from Jonson to Jeremy Taylor, we find the great divine calmly "conveying" a page of Montaigne into his 'Holy Dying' without the slightest acknowledgment—the beautiful page that closes the Essay just referred to. But our space shortens, and we must skip hastily from one famous name to another. Sir Kenelm Digby made "his" one of the most beautiful sentences of the Essay on Friendship, and paraphrased a page of it. Locke's views of education, it is universally recognized, were to a very remarkable degree the same as those of Montaigne, whether derived from him or not; and in page after page of Locke's 'Treatise on Education' there is sentence after sentence which is the very echo of Montaigne's words. It would be most interesting to see the Treatise printed as notes to Montaigne. As Mr. Robertson remarks, in regard to Shakespeare: "The influence is of that high sort in which he who takes becomes cothinker with him who gives."

Passing over one or two generations, in each of which, however, is to be found more than one cothinker with Montaigne, we lay our hand on the shoulder of Sterne and ask, "Where did you get all that page in 'Tristram Shandy' about your Dr. Howenass's notes?" "From Montaigne," he answers very alertly, but a little sorry to be found out—"from Montaigne. Book first, chapter twenty-five." And on all sides, roused by his confession, we hear "From Montaigne! from Montaigne! book first! book third! book second! chapter this, chapter that, and the other!" And it is no matter for surprise if, as FitzGerald would say, we "find some Shakespeare in Montaigne."

Charles Dickens: A Critical Study. By George Gissing. Dodd, Mead & Co. 1898.

In the matter of Dickens, it becomes more obvious, every decade, that the whole reading world lies in heresy. The youth of to-day reads Kipling and Stevenson, and leaves a quoting knowledge of "Boz" to the elder generation. This seems, at first sight, to mean failure for one who measured his success by the applause of the public; one to whom the attitude of the modern "realist," whose motto is Cyrano de Bergerac's *Déplaire est mon plaisir*, would have seemed absolutely mysterious. A novelist who writes with a purpose, be it theological or political or social, limits his immortality by the inevitable changes of fashion. Less than a generation passes, and the heterodoxy that was meant to move us to pity and terror assumes the flavor of toast and water. For modern readers of Dickens, paradox has become platitude; old abuses have vanished with the Fleet and the Marshalsea; they are confronted with abuses of a new pattern. Yet, since the novels of Dickens did undeniably contribute to the social revolution which has produced a change of taste, he at least could not regard their neglect as an indication of failure. It is, after all, a neglect which he shares with those far greater artists Fielding and Swift. Who reads Swift's 'Polite Conversations' nowadays? Only the professional critic. And the day is fast approaching when only he will read that great Cockney Epic, Carlyle's "lowest trash," the 'Pickwick Papers.'

We fear that a three-hundred page study of him who was once the darling of the

English people is calculated to strike terror even into the lone, lorn Dickensite. To unskilled, scattered criticism of Dickens the world has long since turned a resolutely deaf ear. The English suburb that still mistakes the absurd and impossible comparison of Dickens and Thackeray for literary discussion must be truly remote. But even the heretics whom he would fain persuade will give Mr. Gissing a respectful hearing. The incursion of a novelist into criticism is always interesting and has usually proved disappointing. In the present case, two facts make Mr. Gissing's essay noteworthy. Though his stern realism is unrelieved by humor, he has dealt in his novels with much the same aspects of life that appealed to Dickens; and he now reveals himself in the character of one of those survivors on whom Dickens exercises the old glamour. When Mr. Gissing criticises, as he does unsparingly, it is with the air of one who "lifts up his hands against my father Parmenides." When, on the other hand, he praises, as he does with almost tearful enthusiasm, he disarms the reader by his readiness to concede that, viewed as a literary artist, Dickens failed lamentably when he did fail. Mr. Gissing does not, like Mr. Henley, attempt to defend the plots, and, for a devout Dickensite, he is severe in his criticism of the tragic personages of the novels:

"The popular voice pleads for Sidney Carton; yes, he is well presented—but so easy to forget. Think, on the other hand, of the long list of women meant to be tragic who, one and all, must be judged failures. Edith Dombey, with her silent wrath and ludicrous behavior; . . . Rosa Dartle, at first a promising suggestion, but falling away into exaggerations of lime-light frenzy; Lady Dedlock and her maid Hortense—which is the more obvious waxwork?" (p. 122).

We know that Jeffrey, that stern critic, shed floods of tears over "the dying of that sweet Paul Dombey." Mr. Gissing, too, has an inexplicable weakness for the Dickens death-bed, and could weep with Jeffrey over Little Nell and her metrical last words: "When I die | put me near something that has loved the light | and had the sky above it always." This terrible metrical prose into which Dickens, like Kingsley, would drop instinctively when he was moved by strong emotion, Mr. Gissing rightly regards as the greatest of his faults of style.

The discussion of Dickens as an early Victorian "realist" is interesting. Realistic he could be, but he almost always avoided the remorseless realism of the moderns. He himself tells us that his Cheap Jack is "the real thing, of course refined and humored." It is curious to find Gérard de Nerval, after reading a translation of Dickens, congratulating the English nation on its power to read and write "chapitres d'observation dénués de tout alliage d'invention romanesque. . . . L'intelligence réaliste de nos voisins se contente du vrai absolu." Surely there is little enough of the *crœi absoles* in Dickens. Did Nerval think that London pickpockets and monthly nurses talked the comparatively refined lingo of the Artful Dodger and Sairey Gamp? It is true that Dickens, like Gautier, was a man for whom the visible world existed, but we think that Mr. Gissing goes too far when he says that "not one page of Flaubert gives proof of sight and 'rasp equal to that evinced in a thousand of Dickens" (p. 246). By the way, for what section of the English public did Mr. Gissing write this

essay, in which he apologizes for "assuming familiarity with the principal works of Balzac, Victor Hugo, Dostofeffsky, Daudet" (p. 284), and explains that Flaubert is a French novelist (p. 246)?

Mr. Gissing is a clever and interesting advocate. But he strikes the critical note so often, and so entirely to our mind, that it is with something of a shock that we confront this *volte-face* at the conclusion: "In speaking of Dickens's triumphs as an author, I have felt that the most fervent praise could not err by excess; every time I open his books, as the years go on, it is with ever more of wonder, delight, admiration, and love." After all, we are left with the uncomfortable doubt whether, when he reads Dickens, Mr. Gissing does not confuse the intimations of his heart and head.

Bouvier's Law Dictionary. By John Bouvier.

A new edition, thoroughly revised and brought up to date by Francis Rawle. Vol. I. The Boston Book Co. 1897.

The first edition of this Law Dictionary was published in 1839; in sixty years the work has passed through sixteen editions, a striking proof of its popularity and value. Meantime, like all law-books which do not speedily die, it has grown. The first volume of the second edition, which was brought out in 1848, contained some 740 small pages; the first volume of the present revision contains 1,125 large ones. In obedience to another law of legal evolution, "it has been the editor's aim to make the work a complete dictionary of the law, and also to develop still more fully its encyclopædic side," and at the same time, by rearranging titles and by cross references, to "unify and harmonize the whole." He has treated fully the most important topics of the law, especially those in which the law has shown marked development in the last fifteen years. The new ones alone number several hundred, and "the recent investigations in the early history of the English law and its relation to the Roman law have been used by the editor in the various titles which relate thereto." "A large part of the work has been rewritten, and every title has been carefully revised and corrected."

To characterize an edition of this sort in a few words is very difficult, and we shall not make the endeavor. In actual use we have found the revision convenient for a purpose to which the original Bouvier was not so well adapted—that of putting a lawyer on the scent of recently developed doctrines and collections of authorities. In modern practice this is the function of a legal encyclopædia, and in this respect many of the titles will be found valuable—for instance, to mention only half-a-dozen obvious ones, *Causa Proxima*, *Conflict of Laws*, *Foreign Judgment*, *Fixtures*, *Ejectment*, *Executive Power*, *Eminent Domain*. On the other hand, the learning and accuracy of research demanded by a legal lexicon are not always conspicuously present in this edition. Under *Fiction* we miss all allusion to fictions in ejectment; a *consiliiis* is translated "a counsellor"; *Legal Ethics* consists of two or three long extracts from essays on the subject, and the titles of a number of works and articles; *Deduction for now* is described without any explicit statement that it is an arbitrary rule of maritime insurance; the Declaration of Paris is given as made by the "leading Powers of Europe," without

any list of the signatories, or reference to the fact that the United States declined to sign; under *Contraband of War* there is no explanation of how contraband articles are condemned or forfeited. *Contents unknown* is said to be a phrase used in a bill of lading, "denoting that the goods are shipped in apparently good condition." A case decided by the Supreme Court is referred to as authority, but what the court said was, as may be imagined, not just this. Under *Arm of the Sea* there is no reference to the "three-mile rule." Under *Hook*, the Indiana Supreme Court is referred to as having decided that the verb "to hook" may not mean "to steal"—surely an unnecessary piece of information. If the fact were otherwise, strange consequences would follow. It is news to us that "greenback" applies to "all United States Treasury notes"; the editor has been misled, however, into this statement by the Supreme Court of Indiana (*Hickey vs. State*, 23 Ind., 21, mis-cited here as p. 121), which really decided only that "greenbacks" must mean some sort of Treasury note.

These instances, taken at random, have convinced us that the highest degree of accuracy has not been attempted. We are not disposed, however, to quarrel with the result, so good in many respects. The editor has certainly given Bouvier a new lease of life. He was the father of the hand-books of American law, dictionaries, encyclopedias, and all, by which we are surrounded and sometimes overwhelmed. Amid them he holds his own, through the inherent excellence of his arrangement, system, and execution. As we go for the law to Kent, Story, Marshall, or Greenleaf, so we still go for our "Termes de la Ley" to Bouvier.

The Durket Sperret. By Sarah Barnwell Elliot. Henry Holt & Co.

The Chormer: A Seaside Comedy. By Shan F. Bullock. London: James Bowden; New York: M. F. Mansfield.

King Circumstance. By Edwin Pugh. Henry Holt & Co.

From the rather vague background of mountain scenery, "Covites," and "Versity people," in *The Durket Sperret*, two figures stand out, vigorously drawn. "Strong, simple, silent," Hannah Warren moves before us, a homespun heroine, in whose possibility one is glad to believe. She is made to pass through an improbable experience, but she herself is never improbable. The other genuine bit of life, termagant old Grandmother Warren, adds such vivacity to the page that one is grateful to the indulgent Providence which averts until the last chapter her third and fatal fit. The "Durket Sperret," rending and tearing her like a demoniacal possession, is the cause of this final catastrophe—a warning to all cherishers of undue family pride. The rich resource of Mrs. Warren's vituperation is delightfully displayed, at Dave Durket's "buryin'," in the downing of that Minervy who looked as "bigxity as a settin' hen."

The author writes of her mountaineers with discrimination born of intimate knowledge. Too often they are treated very much in the spirit of the song, "All 'coons look alike to me," without regard to the social gulfs that may yawn between dwellers in a Cumberland cove. Here and there in the book one wishes for words more fitly chosen to accord with the simplicity of the theme. The

description of the Warren homestead, with its "lobby" and "piazas," gives no clear vision of the two-pans-and-a-passage style of architecture invariable in the Southern mountains. Nor do mottoes from Browning and Omar Khayyám seem the proper prelude for the rustic melodies which follow.

Irish story-writers have perhaps this advantage in the great literary handicap, that they are able, solemnly and with an appearance of good faith, to impose a more incoherent farrago than would be accepted from any other quarter. In *The Charmer* a young English artist and his bride, evidently unmindful of the trouble which overtook Abraham for a similar deception, pass themselves off as brother and sister during their stay at an Irish coast village. This attempt, unusual enough among "honeymooners," is made in order to protect themselves from the curious attentions of the villagers. The situation, skillfully treated, might have provided some amusing scenes. But the author, innocent of dramatic rule or instinct, commits the blunder of leaving audience as well as actors in the dark. Not until the last chapter is the gentle reader himself informed of the real relationship between the twain. He has been alone with them under the shining stars and by the sounding sea when, without a villager in sight, the bridal couple might not unnaturally have exchanged a caress or dropped a compromising word, but nothing of the sort has ever happened. In consequence of all this the author, who knoweth the end from the beginning, is the only one in a position to derive amusement from the spectacle of country bumpkins prostrating themselves before Kate, the "Charmer," while the artist sketches on a distant rock. The racy bits of brogue which abound are manifestly the author's justification, though they scarcely atone for the absurdities of the book.

The many different types of short story contained in the volume of *King Circumstance* give one the impression of an author who has not yet found his *métier*. He ranges from the old-fashioned romance, skeletonized, to be sure, of highwayman and outlaw, to the most modern afternoon-tea episode. With here and there some display of cleverness, particularly in the management of dialogue, there is in all a depressing artificiality. One is never convinced that these things are so. Moreover, this literary birth seems indeed to have been but a sleep and a forgetting, and the author trails cloudy recollections which bewilder one until the resemblances are fairly established. John Oliver Hobbes is most frequently suggested, but, throughout, the reader's mood is one of tender reminiscence until in *"The Anterior Time"* he becomes wearifully conscious that Tom Sawyer is not yet an abandoned mine for juvenilia. Still, the author's realism is all his own. Not even in life would one undertake to discover the prototype of the "emancipated bar-maid," "brought up in the fetid atmosphere of a public-house," "an infusion of beer in her mother's milk," who could say to her betrayer: "I was delicately nurtured; this enforced niggardliness is killing me." Beer had not at any rate made thick the tongue that could utter so unwieldy a word. The lurid imaginings of the "Martyrdom of the Mouse" are perhaps the best indications of the author's power that the book affords.

Principles of Political Economy. By J. Shield Nicholson. Vol. II., Book III. The Macmillan Co. 1897.

The segment of Political Economy here treated is Exchange in the largest sense. It includes not only the subjects of exchange-value, price, demand and supply, cost of production, foreign trade, and the foreign exchanges, but also the general theory of money, credit, and banking, with chapters on the historical development of banks, the rate of interest and of discount, and the chartered trading companies. The scheme is perhaps too comprehensive to be worked out with scientific completeness; at least, some parts of it are much better done than others. The digression on the history of Scottish banking, for instance, we should regard as distinctly inferior to that given by Adam Smith in the *'Wealth of Nations'*, although it furnishes a few later particulars. Bimetallism is disposed of in fifteen pages, most of which are taken up with a presentation of the difficulties of bringing it about, leaving scant room for defending the author's view that it is desirable. There are other chapters which, although well written, are too superficial; the author is so sure of his own position that he does not quite appreciate the opposing arguments.

On the other hand, the discussion of value and price, with which this volume opens, is thorough, and takes account of the most recent speculations and theories. Here we find some much-needed cautions forcibly stated. The doctrine of final or marginal utility has been pressed altogether too far. It is fascinating to economists of a mathematical turn of mind; and, in place of the assumption of likeness among phenomena, which alone makes classification, and thus science, possible, we have had such profound analyses of these phenomena as to make it hopeless, for practical purposes, to attempt to classify them. As illustrating Prof. Nicholson's clearness of view, we quote a part of his comment on some modern attempts to identify value and utility:

"Utility and exchange-value are essentially different. Perhaps the best way to bring out clearly the contrast is to refer to actual records of prices, such as are given in the works of Tooke, Newmarch, and Rogers. By reference to these records we can determine the relative exchange-values of a large number of important commodities (including labor of various kinds) over several centuries. We can obtain from the records the precise rates of exchange, but as regards the feelings of buyers and sellers, or the utilities and disutilities acquired or endured through the exchanges, the records are silent. We can discover the actual rents of lands and houses, but there are no records of so-called consumers' rents. . . . We may say that within certain narrow limits every purchaser pays the same price at the same time in the same market, but we can say nothing of the corresponding utilities to the various purchasers except that—such is the variability of circumstances and human nature—they are probably very different in different cases. The great banker and the small investor pay the same price for their marginal purchases of consols, but their feelings on the matter cannot be expressed in terms of money. . . . The money measures of marginal utilities have never been set down except in hypotheses."

The most interesting part of the book, to readers of the present day, will be that which relates to monetary problems, and here Prof. Nicholson's analysis is very elaborate. In general, we may say that he brings economic discussion down to the present date, and makes clear to the reader what the present issues are. Under these

circumstances, it could hardly be possible that many of his conclusions should not fail to command immediate assent. This, however, is no reflection on Prof. Nicholson's reasoning, which is fair, careful, and well informed. His book is not above the head of any intelligent reader, but it is of course of especial interest to economists, who know already that what its author has to say is worth hearing.

The General Manager's Story. By Herbert E. Hamblen. Macmillan. 1898.

It is a long reach from the deep-water sailorman to the railroad hand. Mr. Hamblen, however, has accomplished the transition with an ease that betrays that he is equally at home on the deck of a ship and the foot-board of a locomotive. In his first book, 'On Many Seas,' he showed his competence to treat of the life of a sailor; in his second, the one under notice, there is no reason to doubt equal familiarity with his subject, as it is understood that he is now a steam-engineer, a calling he has adopted since his retirement from the sea. In his first book he delineated the hardships and dangers incidental to the vocation of the mariner; in his last, 'The General Manager's Story,' he portrays with the same power the perils that encompass the career of the railroad man. In both he dwells with special fondness on the bodily mutilations and violent deaths that appear to be ordinary incidents in either occupation. In most tales in which commonplace *argot* or speech is employed, the illusion is marred through the interjection of literary words which the speakers would not employ in colloquial intercourse. Mr. Hamblen never offends in this particular. The talk of his seafaring people as well as that of his railroad men is held strictly within the limits of their educational or intellectual capacity. Their vocabulary is that of their narrow environment. This strongly marked quality of Mr. Hamblen merits special commendation.

'The General Manager's Story' purports to give the experiences of a young man who enters the railway service thoroughly enamoured of it. He is in turn brakeman, fireman, locomotive engineer, assistant superintendent, and ultimately general manager, of a great railway system, which, when he assumes charge of it, is on the brink of ruin. With astonishing celerity, he desiccates the heavily watered stock, "wipes off" the huge floating indebtedness, reduces "fixed charges," and in the end poses as an object of adoration to a large band of jubilant investors. The verisimilitude of the story had been better sustained if the two or three concluding chapters had been omitted.

In the second chapter, which relates to the hero's first seeking employment, he encounters two worthies, one of whom, having lost a leg, is trimming switch-lamps, while the other, who is "stuffing axle-boxes," "had only one eye and a terrible scar that ran diagonally across his face from eyebrow to chin. This had crushed and distorted his nose, drawn one corner of his left eye down and the opposite corner of his mouth up." . . . "His left arm was cut off just below the elbow, and finished out with a three-pronged iron hook." These two encouraging specimens were, according to Mr. Hamblen, the victims of the ordinary vicissitudes of railway life. The hero, himself, as may be imagined, throughout the various stages of his career, does not escape physical ble-

ishes. His ribs are delicately crushed while coupling cars; he receives a few scratches in "head-end" and "tail-end" collisions; he is pursued down steep grades, when on his locomotive, by the sundered rear section of his freight-train. Open switches greet him with hospitable welcome; he is "held up" by tramps; and he unavoidably kills careless pedestrians walking upon the track. An occasional broken leg, scalds, and scalp wounds vary the monotony of his daily life. The crowning achievement, however, is a collision that requires such a nice adjustment of favorable conditions as to border on the miraculous. Two trains travelling on a single track meet immediately beneath a bridge (which the accident destroys) that carries the track of a second railway across that of the first. Into this chasm an opportune train of the second railroad tumbles upon the debris of the other two a few moments after the collision. As may be imagined, this causes serious complications, to no one more than our hero, who is pinioned beneath the wreck with fire sweeping down upon him. Of course he escapes, but with the loss of all that is consumable about his person except the actual flesh.

'The General Manager's Story' is an interesting contribution to railway literature, in all that relates to train-service from the point of view of those who, practically, operate it. To masters of transportation of the distant future it will be a revelation of recklessness.

With the Conquering Turk: Confessions of a Bashî-Basouk. By G. W. Stevens. With four maps. Dodd, Mead & Co. 8vo, pp. 315.

There are two ways of looking at this book—one as entertaining light reading in the highest style of the war correspondent's art, which is nothing if not vivid; the other as authentic information touching the qualities of the Turkish soldier, the organization of the Sultan's army, and the absurd fiasco of the Greeks who insisted upon war and then scamped out of Thessaly hardly waiting for a brisk skirmish. Viewed either way, the book has its attractions. Merely as a lively bit of travel and adventure the most careless reader will find amusement in it, and gain no little knowledge of what such a town as Salonica or Larissa is like, with its mixed population of Jews and Gentiles, Turks, Greeks, and Macedonians.

But it is as the story of an eye-witness of the degradation of Greece and the renewal of Turkish importance in Europe that the book will have a higher and more lasting value. The author admits the natural growth of predilection for those among whom he was cordially received, and who showed him the amiable side of their character; but, as we accompany him, we gain faith in his truthfulness of descriptions of men and things and in his keen observation of whatever helps to make the campaign intelligible. The Turkish soldier he finds a strong, patient man, shambling along in his sandals and his dirty makeshift of a uniform, with no sign of dash or enthusiasm, taking naturally to skirmish tactics, and fighting by preference from his little heap of stones or the trunk of a tree. Yet he keeps going, like other good skirmishers, from one bit of cover to another, and, establishing himself in good range of his enemy's position, picks off one

after another till the Greeks get tired of it and retreat, when he grows jovial over their running away, but seems never to think of a prompt or sharp pursuit.

With few exceptions, Mr. Stevens found the Turkish officers ill-instructed, careless, and unenterprising, "the finished product of one of the worst governments in the world." With the rank and file, he says, "good officers could do anything in the world." The ridiculously easy promenade from Ellassona near Olympus, through the Vale of Tempe, by Pharsala and Domoko to the passes of the Othrys Mountains, he attributes to the cowardice of the Greeks and not to any leadership among the Turks. "Cowardice"—he says—"it is useless to try and explain facts away with any other word"; and as we go along with him day by day, we find ourselves absorbing the same opinion. Officers and men must share the condemnation: "They did not realize what fighting meant. They fought well the first day, at Meluna, and never once afterward. The great battle of Mati, which broke them down, was not a battle at all."

In the matter of looting and of personal outrages, we are told that all former accusations against the Turks were belied by the events of this campaign. The one thing officers seem to have been taught was that they must be responsible for the civilized treatment of captured people and places. It is a comfort to believe, by what seems an authentic example, that a Turkish army can be made as little terrible to non-combatants as an English or a French army. If the outcry of the civilized world and the strong representations of great Powers wrought that result, we need not wholly despair of the future.

Mr. Stevens noted this amenability to discipline in the frontier camps about Ellassona, before war was declared:

"Greek women are washing clothes there in the sunshine, and not one of the untaught Asiatic Reservists dreams for a moment of offering them an incivility. Greek tradesmen make their profit out of the troops; the Greek Consul flies the Greek flag, manufactures stories of outrages, and circulates predictions of coming Greek attacks. But the rudest Anatolian or Circassian never lifts a finger against the Greek" (p. 86).

Again, in mid-campaign, when Larissa was taken, he says: "I patrolled the city for hours, and I do say that the order, the discipline, and the good humor of the Turks could have been exceeded by no nation in the world. . . . The officers had forbidden pillage and violence, and the soldiers obeyed" (p. 181). "Sentinels stood at every corner, mounted patrols paced down every street. The bank and all the other principal buildings had sentries of their own, and it was pleasant to see how hard Albanians scorned the Greek sentry-boxes and sat down contentedly on the stones. There was only one possible objection to the arrangements made—they were not necessary" (p. 182). It is a reputable Englishman who tells this, and, unexpected as the story is, there is no apparent reason for questioning it. Naturally, also, it suggests this reflection, that if outrages in other quarters of the Turkish Empire are authentically proved, they cannot be charged to the inability of the Government and the army officers to enforce discipline.

Another point on which there has been a general misapprehension is the participa-

tion of German officers in the campaign. Here again Mr. Steevens confines himself to what he saw in the field; and to the question how many German officers were really with the Turks, he answers, not one. A single one was there from the third to the eighth day after hostilities began, and then left. Mr. Steevens was back and forth at headquarters, and well acquainted with the staff. His letters and dispatches were submitted to censorship there; and he explicitly declares that no German was on duty. Indeed, he laughingly insists that nobody except a Turk could possibly have conducted such a happy-go-lucky campaign.

When we reflect that Germany was acting with the other great Powers in the attempts at friendly intervention, Mr. Steevens's statement is a very probable one. Germany has been in the habit of allowing some of her officers to serve with the Turks in time of peace, giving them leaves of absence for the purpose. Von der Goltz is the best known of these in late years. But after war began and Germany took part with other Powers in trying to limit its effect, it seems a matter of course that German officers would be ordered home. Mr. Steevens's direct testimony appears to establish the fact. The picture is all very Oriental, from the beginning at Meluna Pass, where the Marshal, Edhem Pasha, was "seated cross-legged on the ground, gazing impassively in front of him, as if this were somebody else's battle and he was an intelligent critic," but looking up and laughing now and then at a good shot from the artillery.

The author closes his book with some well-put reflections on the "devilishness" of war, in spite of the sense of power and exhilaration in it, so long as you are with the winning side. "It is an intoxicating privilege," he says, "to be able to ride straight across a field of young vines in war-time; but, after all, the vines were planted for purposes of peace. You cut green corn for your horses—you have to—but you can't help thinking of the man who ploughed and sowed and will never reap." Such thoughts must "give us pause," without going into still more gruesome scenes and actual bloody horrors.

Rousseau and Education According to Nature. By Thomas Davidson. (Great Educators Series.) Scribners. 1898.

This volume, aside from worthily filling its place in the series to which it belongs, is a useful contribution to Rousseau literature in general. Though dealing in the main with Rousseau as an educational writer and reformer, the author gives a clear and straightforward account of the entire life, activity, and influence of the man, such as is not to be found anywhere else, certainly not in so readable a form and in such small compass.

There is little danger, in Rousseau's case, of the biographer's or critic's becoming a mere eulogist; Mr. Davidson is so far from it that in reading him one is more than ever impressed with the disproportion between poor Jean-Jacques, the man, and the mighty figure he represents in the intellectual history of the race. Instead of being the originator of the ideas to which he gave currency by means of the passion and magic power of his language, he owed them largely, as is here well shown, to Hobbes, Locke, Montesquieu, Morelly, they were in the air, "fermenting in men's minds when Rousseau came upon the stage." The deplorable de-

fects of his moral and mental nature, the inglorious, discreditable, ignominious circumstances of his life, compressed by Mr. Davidson into an unvarnished, matter-of-fact narrative of fifty pages, stand out far more glaring than they appear through the lyric haze of the 'Confessions.' Rousseau's social and political theories—mistaken and "pernicious or impossible in practice"—are discussed only so far as a knowledge of them is indispensable for an understanding of his educational system as expounded in the 'Emile.' The latter itself "has no redeeming feature."

The author's judgment would have lost some of its harshness, and the chasm between Rousseau's erroneous theories and his powerful influence for good would appear less deep and abrupt, if, aside from the "system," more emphasis had been put upon certain ethical and educational ideas expressed partly in the 'Emile' itself (Book IV.), partly in the 'Nouvelle Héloïse,' and in certain letters. Mr. Davidson acknowledges, however, the excellent work done by Rousseau in laying bare existing defects and abuses, and in demanding reforms, as well as his right purpose. But his influence, which "extended to all departments of known activity—philosophy, science, religion, art, politics, ethics, economics, and pedagogy," was due, according to Mr. Davidson, "to the fact that he took the 'motions' which were 'toiling in the gloom' of the popular mind of his time and made them flash, with the lurid lighting of his own passion, before the astonished eyes of the world." This is no doubt true, but it is not all: Rousseau's ideas went beyond, and penetrated deeper than, those of his predecessors and those which "were in the air"; and it was this added depth and inherent force as well as the irresistible power of his words that gave them such marvellous sway.

That Mr. Davidson must attribute to Rousseau's own thought greater importance and power than his treatment of him would lead one to infer, appears from certain statements in his concluding chapter, where we read, *c. g.*, that "Kant, in his three Critiques, does little more than present, in philosophical garb, the leading doctrines of Rousseau"; that "in Art, and especially in Literature, Rousseau's influence has, from his own days to ours, been almost paramount throughout Christendom." From one to three dozen of the foremost writers in each of the principal countries are mentioned by name as disciples of Rousseau, the remaining ones being disposed of collectively under the terms of "many more," or "hundreds more." To say that "under the influence of Rousseau the poets of Great Britain broke away from the monotonous, aphoristic stiltedness of Pope and his school, and returned to 'Nature' and simplicity," is forgetting that Thomson and Richardson had preceded Rousseau, and that the indebtedness of the Genevise to the Englishmen is great and unquestioned. Why Goethe's 'Triumph of Sentimentality,' styled by Goethe himself a *tolle Grille*, and ridiculing his own 'Werther' and Rousseau's 'Nouvelle Héloïse,' should have been cited in connection with 'Werther' is not intelligible. Emerson's state of a "loyal disciple" the author has thought it best to establish by some proof, but lack of space, no doubt, precluded any attempt to do likewise in the numerous other cases. Had he undertaken it, he would have found that frequently the supposed (and possibly real) influences were

too subtle and the guiding threads too delicate to sustain a chain of evidence. However, the last twenty pages of the book contain themes for a series of interesting volumes.

Album d'Antiquités Orientales; Recueil de Monuments inédits ou peu connus—Art, Archéologie, Épigraphie; publié par Clermont-Ganneau, Membre de l'Institut, Professeur au Collège de France. Paris: Ernest Leroux. 1897.

The Album before us is a selection from a selection, and contains plates i.-vii. and xlii.-l. of the first series of fifty plates. The Album is to appear at short intervals, in parts, each provided with ten quarto plates. The first series of fifty plates will be accompanied by a general descriptive text, and the last number by a table of contents. We are not told how many series of fifty plates there are to be; the edition will be limited; subscribers will get the volume for thirty francs, and others for forty francs.

In these specimen plates, two are devoted to Aramean stelæ from Neirab, four to various antiquities from Cyrene, including terracotta figurines, vases, and lychnarion; one to unimportant antiquities from Crete, one to a six-faced Nabatean cippus from D'Meir in Syria, one to a Phœnician inscription from Narnaka (?) in Cyprus, one to glassware from Syria; one to the dedicatory inscription on the pedestal of the statue of King Rabel (Ptera), a funeral bust with Palmyrene inscriptions (Palmyra), and a Phœnician cippus of Narnaka, (?) Cyprus; one to the bas-relief of Bar-Rekub, with an Aramean inscription (Zenderjil); one to Latin and French inscriptions of the crusaders (Palestine), an inscribed Arabic milestone from the road between Jerusalem and Jaffa, belonging to the first century of the hegira, and a lychnarion, with a Kufic inscription; one to pottery found in the ancient cemeteries of Malta, one to assorted antiquities from Syria, and lastly one to the fragments of a leaden sarcophagus from Syria. Some of the plates are excellent, while others, notably those dealing with the antiquities of Cyrene, are very poor and unsatisfactory.

It will be seen from the above that the Album is an unmethodical pot-pourri. Selections subserved a very good purpose in the reckless days of dilettantism, but the time for selections in any field of art or archaeology is happily past. The strict science of the day is satisfied with and benefited only by complete *corpora*, chronologically arranged; nothing else will suit the requirements of the historical study of art and archaeology. It is a pity to waste the energy of scholars by mere selections, no matter who makes them, nor how well the work be done. There is no reason for the existence of this Album.

BOOKS OF THE WEEK.

VERBES FRANCAIS DEMANDANT DES PREPOSITIONS.

By MME. FRANCIS J. A. DARR.

12mo. cloth, 135 pages, 50 cents.

Verbes Français Demandant des Prépositions is designed for the use of students of French in determining the proper preposition to follow the verb, which removes the greatest obstacle to a correct knowledge of that tongue. The idea is original, and has never before been presented to the public. The list of verbs, with their prepositions, is alphabetically arranged, and an example illustrates each case. The simple and clear arrangement of matter will at once appeal to the student. For students preparing to enter college or the higher schools, this work will be found of great value and assistance.

Complete catalogue on application. For sale by all book sellers, or postpaid on receipt of price by the publisher.

The Nation.

NEW YORK, THURSDAY, MAY 26, 1898.

The Week.

The rumors circulated last week that a fresh call for volunteers would be issued soon are renewed. The reasons for it given in the Washington dispatches to the *Tribune* are two in number: first, that the capture of the Philippine Islands was not anticipated when the call for volunteers was issued, and that the necessity for sending 15,000 soldiers to that quarter has greatly crippled the proposed expedition to Cuba; second, that the help expected from the Cuban insurgents is not to be depended upon, because the insurgent army is a mythical organization. As regards the latter, there has been a great disillusionment. From thirty-five thousand men (Senator Proctor's estimate) it has dropped by degrees to not more than thirty-five hundred, probably much less. "For nearly two years," says the *Tribune's* dispatch, "positive assertions had been numerous that the Cubans, with merely the moral encouragement of the United States through a recognition of belligerency, would quickly accomplish their own independence. Within the last month the falsity of these assertions has been demonstrated to the complete satisfaction of the authorities here, and, through the reports of regular army officers who have recently made reconnaissances in the island, it is now definitely known that little or no assistance from the vaunted 'armies of liberation' need be expected." In other words, we are compelled to proceed upon the basis of the fact that there is a Spanish army of 80,000 trained and acclimated and thoroughly loyal soldiers in the island, and no opposing force worth mention.

The sudden desire of so many sons of Senators and Representatives and other political magnates to serve their country as captains and majors stationed in Washington, shows how determined the Government is, in all its branches, to prosecute the war with vigor and in a way most to do good to friends while most harming the enemy. These young men may be valorous and patriotic above all others, but there is something uncanny about the way in which their superior merits have been so promptly discerned by their own fathers and their fathers' political friends. Some one should let the President know what wry faces are made by people in general, and particularly by officers in the regular army, over these appointments by favor. The affair is but the worse for the fact that many retired army officers are

available for these appointments in the volunteer force, and are willing and even eager to serve their country in any capacity. Prevented by absurd laws from being called upon for service in the regular army, as retired naval officers may be and are called upon, they would be eligible for the appointments flung to the Congressmen and the bosses, and would certainly be able to perform the duties of their office at last as well as "Captains" Sewell and Brice and the other sons of their fathers.

The war has upset all of Bryan's plans, and he has had a hard time trying to adapt himself to the new conditions. At first he attempted to keep the Cuban business in the background by shouting "sixteen to one" more loudly than ever, but he soon found that even his voice was unequal to this task. Then he began to consider how he could get into the army in some spectacular way. The happy thought struck him of offering his services to the President, with the expectation that his successful rival would offer him a major-generalship, or something of that sort; but Mr. McKinley was able to get out of this dilemma by confining these appointments to men who had behind them the military service which Bryan lacked. Then he conceived the idea of enlisting as a private at his home in Nebraska, and having his comrades first elect him captain of his company, from which position he could presently be promoted to the colonelcy; but so much opposition developed to this scheme at the start that he had to withdraw his name from the canvass, and the Populist Governor will now have to "jump" him to the command of the regiment, after the manner denounced by all good Populists as intolerable.

The President of the Louisiana Board of Health recently wrote to the supervising Surgeon-General of the United States Marine Hospital Service, asking what measures are contemplated by the United States Government to prevent the introduction of yellow fever and smallpox by troops, seamen, and others returning from Cuba, and informing him that the State Board holds that the quarantine regulations of Louisiana should be fully complied with, so that even troops coming through after the close of the regular quarantine season should submit to thorough disinfection of their clothing and baggage, lest such clothing and baggage should be the cause of infection in the following summer. Surgeon-General Wyman replied that the United States Government proposes that all returning troops shall be subject to quarantine inspection, and that provision will be made for the detention and

disinfection of suspected persons and effects. A representative of the United States Marine Hospital Service will be detailed in every Cuban port occupied by United States troops, to take such measures as may be possible to prevent persons with infectious diseases, or articles that may be infected, from leaving the port, and to give the quarantine officers at the ports of arrival all necessary information with regard to the same. The officers of the fleet will also be instructed to pay special attention to small craft which make from Cuba and attempt irregular landing at places in the United States, and to carry such craft to the nearest quarantine station for disinfection and detention. By these and other precautions it is hoped that the danger of introducing yellow fever into the United States through military operations may be minimized, but it is conceded that here is a serious risk growing out of war which few thought of beforehand.

We have not yet observed any thorough discussion, either in the Senate or in the press, of two provisions in the Senate revenue bill which are enough to stamp the entire measure as iniquitous. There are two branches of the banking industry which have been exempted, by the common consent of civilized states, from onerous taxation. These two are the business of savings institutions and of mutual life insurance, and the reason for the exemption is plain. Both are in their nature benevolent institutions, and both do business in the main with the hard-earned savings of citizens who have little to spare, but who, by an instinct of self-sacrifice, lay by that little against the chances of the future. We cannot do better than to quote the clauses of the Senate act which refer to these two industries. "Every person, firm, company, or corporation," says the bill, "engaged in the business of banking, shall pay a special excise tax which shall be equal to one-fortieth of one per centum each month upon the average amount of the deposits of money subject to payment by check or draft." This, of course, strikes at the savings bank. Moreover, "every person, firm, company, or corporation who shall own or conduct or have the care or management of any business for life, fire, marine, or accident insurance . . . shall pay a special annual excise tax equivalent to one-fourth of one per centum of the gross amount of all the receipts from premiums and assessments collected." There appears to be no exemption or exception. Life companies have been taxed on capital and surplus, but never before, so far as we are aware, on every premium received. With such

clauses in the bill, it is scarcely necessary to advert to the bearing of the "deposit tax" on the banking business generally. This tax was, of course, conceived on the theory that banking is a source of boundless wealth to its promoters, whereas most people know that the annual tax of one-quarter per cent. on deposits would in unfavorable years exhaust the entire profits of a number of smaller institutions—unless, indeed, they were able to recoup themselves through higher rates on loans.

The discussions of the war-revenue bill in the Senate are doing at least this good, that they bring to light some elementary principles of taxation which have been long obscured in this country. Senators complain that this or that proposed tax will be "burdensome." Somebody will have to pay it, will know that he is paying it, will not like it, will grumble, will, perhaps, even begin to doubt the supernal wisdom of Senators who lay the tax. Such is the result of years of teaching that taxes for Federal purposes are something that no American has to pay. The foreigner pays them, they come secretly and automatically out of the "general business of the country," they flow into the Treasury like the gentle rain from heaven—the Treasurer peeps in, and there is the money, he knows not whence—but no citizen ever puts his hand in his pocket and forks over to the general Government. This has been our complacent theory, which the indirect operation of protective taxes has given the demagogue a show of reason for asserting, and the ignorant a plausible ground for believing. What abuses and extravagances have sheltered themselves behind this opinion we all know. If there had been a perfectly clear relation between every inflated pension bill and the margin of saving of each citizen, we should not have seen what we have seen. But the war and the Dingley deficit combined are giving us saner notions. Taxes are so much taken from the wealth of the nation, and the process by which it is taken cannot be concealed when a resort to direct levies has to be made as now. Let us hope the lesson will not be forgotten before the next war comes to teach it over again.

The scheme to rush through the annexation of Hawaii as a "war measure" caps the climax of absurdity, but that is no reason why it should not be popular with members of Congress. Its advocates claim that Speaker Reed and Representative Johnson of Indiana are the only men on the Republican side in the House who have not been carried off their feet by it, and they predict the easy passage of a joint resolution through that branch. But it will be another matter to secure the concurrence

of the Senate. Mr. White of California, who has been a persistent opponent of annexation from the start, serves notice that no snap judgment can be secured. He claims that the power to admit a Territory or dependency by resolution is doubtful, and points out that, while Texas came in by resolution, it was admitted as a State under a provision of the Constitution expressly giving Congress the right to admit new States. He promises that this and many more equally cogent arguments will be elaborated whenever the subject shall be publicly debated, and well says that "the sensible thing to do is to suspend further proceedings on the subject of annexation until the war with Spain is over, and we face the new problems resulting from our success at arms." With Senators occupying this position, there seems ground for hope that we may be spared the scandal of seeing Hawaii taken in through an abuse of the war power.

The action of a Prohibition State convention is usually dismissed as a matter of no consequence, but it is not beyond the range of possibility that the body which met at Harrisburg on Friday may have put at the head of its ticket the man who will be the next Governor of Pennsylvania. Last year the Rev. Dr. S. C. Swallow, running only as the candidate of the Prohibitionists for State Treasurer in an "off year," polled nearly 120,000 votes, and carried a number of counties. He was then unknown and the nominee of a party which had no effective organization. The campaign which he made last year attracted the notice of the whole State, and insured his hearty support (if he should be in the field again this year) by a host of voters who felt that they did not know enough about him to enlist in his cause at first. Many leading Independents some weeks ago organized "the Honest-Government party," and made Dr. Swallow their candidate, with "Thou shalt not steal" as the rallying-cry of the campaign. The Prohibitionists were, of course, only too glad to nominate him again in their convention on Friday, and most of their platform was devoted to the cause of reform in State government.

It seems to us that the duty of every friend of good government in Pennsylvania is to support Dr. Swallow. Mr. Wanamaker has done excellent work, for which he deserves the highest praise, in exposing the corruption of Quay rule; but he is, to speak plainly, an impossible candidate for independent voters to support. The reason is that, although he now charges and demonstrates that the machine despotism has been intolerable for many years, he has invariably supported the candidates of the machine, and only a few years ago raised an im-

mense sum of money for Quay to use in a Presidential campaign. The man who is to make a fight for honest government in the future must be a man who has had no relations with the dishonest government of the past. Dr. Swallow is such a man, and he has, besides, an unlimited supply of courage, enthusiasm, and proselyting power. That he believes in the policy of prohibition of the liquor traffic is, for the purposes of the pending campaign, a matter of no consequence. Prohibition could be introduced in Pennsylvania only by legislative enactment, and a majority of lawmakers in favor of that policy is out of the question. We can see no reason, therefore, why the anti-Quay Republicans whom Mr. Wanamaker has been organizing, and the anti-Quay newspapers, of which the Philadelphia *Ledger* is most conspicuous, should not support Dr. Swallow, and, with the help of Democrats, hardly less disgusted with the tone of management in their party, elect him.

The Mayor of New York has taken possession of the police force for the benefit of the Croker Bossocracy, and has done it in good Tammany style. The only sign of weakness which he exhibited in the performance was in giving a public explanation of it; but as this was mainly a defiance of the respectable portion of the public and a notification that he has a majority of the voters of the city surely behind him, this does not count for much. He says he will hold his office and administer the government in the way he has been doing till the end of his term, when he is sure the people will elect him to the bench "by the largest majority ever given to a candidate in this city." In other words, he claims that, in taking possession of the police for Tammany purposes, he is carrying out the will of the people who put him in office, and that hence nobody has any right to complain. We do not see how any one can dispute this successfully. There was no disguise whatever about the Croker-Van Wyck campaign. Van Wyck was selected by Croker, put in the field by Croker, and run for Mayor on the open platform of the restoration of Tammany rule as it existed prior to the Tammany overthrow in 1894. No political organization ever conducted a campaign with so complete an absence of humbug as Mr. Croker conducted this. He said that Van Wyck was his man, and Van Wyck was content to stand as his man. After election, Croker at once took upon himself the business of organizing the new government, and in this operation also the Mayor was content to act as his man. In due course of time Croker decided that he must have possession of the police force for purposes which need not to be mentioned, and he went to Europe leaving

orders with his man to take possession. These have now been carried into execution.

Mississippi, as we show in another column, has practically disfranchised the black majority of voters who once ruled the State, but the white minority finds that something else is necessary to secure good government. Democratic newspapers are publishing most serious charges against the men who are now in power and the methods which they employ. One such journal declares the administration of affairs during the past two years the most unsatisfactory Mississippi has had since the Democrats came into power after the reconstruction period. The Jackson correspondent of the New Orleans *Picayune* pronounces the situation "deplorable"; says that "taxes are higher than since the black vampires of radicalism—Ames and his minions—were choked from the neck of the commonwealth"; and makes these further counts in the indictment against the present administration—the absence of public improvements; the issuance of \$400,000 of "interest-bearing bonds in times of profound peace"; the appropriation of \$200,000 to feed a depleted treasury and to pay the expenses of the State government; the imminent closing of the Industrial Institute and College or the calling of another extra session to keep it open, at the cost of, perhaps, \$40,000 more; and the spending of thousands of dollars in discussing resolutions to investigate official drunkenness in high place. This is certainly a pretty bad showing for that "Caucasian rule" from which so much was promised after the carpet-baggers were expelled and the negroes were disfranchised.

The sketch of Mr. Gladstone's career by James Bryce, which we print on another page, leaves us little to say beyond giving reasons why Americans should share in the English mourning, and cry that from among us also a great figure has gone out. During sixty years of public life Gladstone lived in essentially the same religious and political atmosphere as ourselves. He shared most of our political and religious ideals. He shared all, or nearly all, our legal and political traditions. He was, in early life, as Macaulay said, "the rising hope of the stern and unbending Tories," but long before he had closed his career he had identified himself with all the great hopes and expectations with which we in this country, whether rightly or wrongly, are in the habit of surrounding human progress and destiny. He embraced with ardor the creed which makes the popular comfort and welfare the chief end of statesmanship. He cast aside all traditions and habits which made anything but the condition of the masses a legislator's chief concern. And he did

this at much sacrifice of associates, of reputation, of influence. During all his later years he was deserted by most of his earlier political friends. But, much obloquy as he endured, no record ever leaped to light that brought him to shame or dishonor. It was a character of many defects and blemishes, but it was a singularly pure one. In running through that rare body of biography of illustrious men which has issued from the English press during the last fifty years, and which to-day constitutes one of England's greatest glories, we find numerous mentions of Gladstone, for he filled a very large place in English society and history, but they are invariably mentions of love and praise. They may "hate Gladstone's politics," but, as Tennyson said, "they love Gladstone."

He belonged to a generation of men the like of whom have not been seen since Rome, except in England—that is, a race of men of culture and leisure, who devoted themselves with ardor to the management of public affairs, without other reward than the approval of their own consciences and the admiration and applause of their fellow-citizens. They were produced by peculiar social conditions and brought to perfection by long ages of practice. The nearest approach that has ever been made to them in historic times has been by the Roman patrician. The success of both in building up empires has long and widely diffused the opinion that it is only such men who have the judgment, the forethought, the indomitable persistence by which alone long-enduring political structures can be produced. But, even if such a point could be decided by discussion, the side of a great man's bier would be a poor place for the inquiry. Gladstone has played his part so well that there are but few of us of commoner clay whom his hopefulness, his diligence, and his charity may not make ashamed by comparison. No vilification was ever sufficient to make him break his magnificent silence, and no ingratitude or inconstancy was ever great enough to prevent his hoping for better things.

The German Reichstag did not expire in exactly a blaze of glory. In its earlier sessions it had shown a marked degree of independence and even a good deal of praiseworthy firmness in resisting the undue demands of the crown. Its refusal to pass the resolutions congratulating Bismarck may have been an ungracious and unwise thing to do, but it at least spoke for the fact that the Reichstag had a will of its own. In withstanding the Emperor's demand for more stringent laws repressing the right of public meeting and discussion, it played well its part of representative of the people in the face of threatened ty-

ranny. But the revived war spirit, the dramatic seizure of Kiao-Chau, and the increasing pressure for colonial expansion and a fighting navy broke down its spirit, in the last months of its existence, and left it little but a docile instrument in the hands of the Ministry. What the complexion and temper of its successor may be is a question which can be answered better after the elections. But it is becoming increasingly true of legislative assemblies all over the world, that the more they are changed the more they remain the same thing. This truth was bitingly set forth for France in one of Caran d'Ache's recent cartoons. *Mademoiselle République Française*, complaining of the slow progress of her chariot, is told by President Faure that the horses are very poor, but that after the next relay (the elections of May 8) things will march. But the next picture shows the chariot still creeping, after the 8th of May post-house was passed, and the reason was obvious, for there were the same old wheezing and knock-kneed horses hitched in again.

Brunetière's sneer at the "intellectuals" in his article denouncing those who declared Dreyfus innocent, or at least unjustly condemned and deserving a new trial, has brought him a severe though dignified answer from one of the said intellectuals. It is M. Duclaux, head of the Pasteur Institute, and he writes in the legal periodical, the *Revue du Palais*, of May 1. He had been singled out for attack by Brunetière, under the thin disguise of the author of a "Treatise on Microbiology"—a book which, the critic scornfully said, would be so much waste paper in ten years. M. Duclaux begins by lamenting that a man of Brunetière's standing should have been swept away by "the wind of madness which has blown over France." Hinting that this may have been due to Brunetière's anxiety for his political future—he had announced his intention of standing for Parliament—M. Duclaux goes on to show how it is precisely the "intellectuals," the educated men, the scientists, who should be calm in the midst of popular fury, and insist upon reason and justice in public proceedings. And he nobly rejoins to the fling at his own book by saying that he himself, in the preface, had predicted that new discovery would soon make it obsolete; that a scientific book necessarily marks only one step in advance, to be followed by many others; that it is of the essence of the scientific spirit to be conscious that everything coming from its pen is "imperfectly true, contingent, and destined to be superseded, though surely leaving an influence behind it." Brunetière's misconception of the spirit and methods of science, and his flouting of savants, may help him into the Chamber, but it will hurt him terribly out of it.

THE IMPERIAL POLICY.

It is pleasant and encouraging, in times of excitement, to find any public man who is given to talking, keeping his head clear and retaining courage enough to speak out his honest thought. As a general rule, at such times nowadays, most men never think of keeping their heads clear. Their one duty, as it presents itself to them, is to fall in with the prevailing fury, whatever it may be, and, if possible, yell harder than some other man. In time of war, deliberation seems impossible. It was a Roman who said that the laws were silent in the midst of arms. What he meant was, however, that when hostilities were raging the civil law could not be executed or obeyed as usual. He did not mean—a Roman could not mean—that deliberation over questions of public policy should cease, or had to cease; that the national destinies should no longer cause any concern; and that everybody, instead of deliberating, should take to shouting and reading "yellow journals."

For this reason we have read with pleasure the remarks Mr. Chauncey Depew has seen fit to make about the annexation of the Philippine Islands, particularly as he has not won fame as a man apt to despise the "civium ardor." He appears to be our one publicist who has bestowed any *thought* on the question of annexing the Philippines or providing ourselves with a "colonial policy." What the others seem to do, when in doubt about our course, is to give three or four hearty yells and then go to bed with the stars and stripes wrapped round their bodies.

The history of this Philippine enterprise is very curious and even a little alarming. During the prolonged discussion which raged over the Cuban deliverance, we do not believe the conquest of fifteen hundred islands, inhabited by half savages and bigoted Spaniards, entered into the head of a single human being in this republic. The man who proposed it would have been generally laughed at. We do not believe the members of the Government thought of it any more than the rest of the community. Dewey's instructions were, doubtless, to destroy the Spanish fleet if he could. The only reason for directing him to undertake operations in the far Pacific was that there was a Spanish fleet there. No one thought of Spanish territory there.

But the ease and celerity with which Dewey did his work, fairly turned people's heads, coming on us, as it did, at a time when the capture of even a tramp steamer filled some of us with frantic joy. It seemed so easy to destroy a fleet that we all rushed to the conclusion that it must be just as easy to rule a far-off province. So we fell to shouting and yelling for distant islands to govern, and began to hurl defiance at everybody who said they would

not be good for us, just as if the government of islands was what we were most used to, and what we had succeeded best in. It suddenly, within a week, came out that our long and prosperous existence without islands inhabited by savages was a horrible dream or nightmare; men began to wonder how we had got on so long without them, and why on earth we had so long regarded ourselves as different from and better off than the monarchies of the old world, and we began to look around, Hawaii fashion, for some one who wanted the Philippines for himself, or was waiting to buy them from Spain if we did not take them, so that we might have a nice war with him. As far as we know, not one public man, not one writer or speaker of note or authority, has said a word, or been asked his opinion, upon this terrible launch of ours on a sea of difficulties, centuries old.

Another curious thing about the matter is this: We started on our present war with Spain in order to liberate Cuba, and the principal reason why it fell to us in a peculiar manner to liberate Cuba was that it lay so close to us, that we had so much commerce with it, and that our ears were so constantly pained with its tales of sorrow, wrong, and ruth. Nobody said or dreamed that we had any responsibility whatever for the happiness or good government of any other country than Cuba. For the prosperity and happiness of all distant continents and islands we denied all accountability, no matter how badly off we acknowledged them to be—for Ireland, for Spain herself, for Italy, for New Guinea, for China, for Africa, for Turkey, for the Caroline Islands, or even for the Spanish-American republics on this continent, although they, too, are very near us and annoy us much by their goings on. Providence has mercifully spared us the burden of looking after the political condition of the entire earth, competent though he knows us to be for the task; but from one thing he will not let us off, and that is the reclamation of the Philippine Islands from barbarism and superstition. It is true that they are not very near us, six or seven thousand miles away, but what is that in these days of steam and electricity? Then he doubtless has remarked the great leisure we enjoy, owing to our having settled all our own difficulties so nicely that he feels it would be a shame not to make us go civilizing elsewhere. If he did not mean us to take entire charge of the Philippine Islands, why did he let us win the Dewey victory? The declaration of the local archbishop, of course, looks bad, but we will soon settle him. He accuses us of an intention to forbid the sacraments of baptism, matrimony, and burial, to cut off from the people the benefit of absolution, and to desecrate the churches and convert them into Protestant chapels. With Cardinal

Gibbons on our side we really need not pay any attention to this vile priest; but if he gives us any more trouble, we would deal with him as we deal in camp with men who are not willing to "volunteer," and fancy they are in a free country. We would drum him out of some camp, tear his clothes, throw eggs at him and mud, and small articles.

Meanwhile, we call renewed attention to the necessity, if we are to have a colonial policy and a full line of islands to govern, of the training and preparation of a totally new civil service, not for subordinate or clerical places only, but for responsible positions, where discretion is to be exercised, and where the highest order of judgment will be constantly needed. For an imperial policy something far better is required than the kind of men we thrust into consulates and embassies and governorships and judgeships. We shall need a corps of administrators such as the English have in India, in Egypt, in Burmah, in Jamaica, and all the crown colonies. By this we mean a large body of men who have been trained from their youth up to the discharge of the most delicate executive functions among a subject ignorant, heathen population, with a religion to be respected which the average American politician despises and laughs at, with prejudices to be humored, with customs which cannot be safely meddled with, with strange laws to be administered, with nice points of inheritance or traditional land tenure to be elucidated. In our politics as practised to-day, the last thing that would be thought of would be the selection for such a place of a man who had resided in any of these countries, or knew their languages, or was familiar with their customs, or had practised their laws. The salaried places would, as a rule, be given to men who had "worked" hard in the last campaign, old journalists who had "written somebody up" and were out of a job, consumptive men who needed a warm climate, sons of rich fathers who had contributed handsomely to the campaign chest, and rich fathers themselves who wanted to do a little governing of poor heathen and "cut a swell" among foreign "bigwigs." If any one thinks we are putting this too strong, or, as the "Well News" say, "we are going too far," let him go carefully over the list of our diplomatic and consular appointments during the last thirty years and then tell us if we lie, or even exaggerate.

THE NICARAGUA CANAL.

The voyage of the battle-ship *Oregon* around Cape Horn has revived the demand in certain quarters for the Nicaragua Canal. Two months' time has been occupied in the passage, whereas the voyage could have been made in two, or at the most three weeks, if there had been a canal across the isthmus of

sufficient size to admit her. The occasion seems to call for a glance at the canal project as it stands to-day.

The parties who have been crying out for a canal across Nicaragua heretofore have been mainly of two varieties, viz., those who have a pecuniary interest in the Warner Miller canal—we give it that name because it serves to identify the investment made there by private capitalists some years ago—and those who want a canal for political purposes. The former had commercial ends in view when they put their money in the project. Perhaps they were visionary, perhaps they overestimated the amount of traffic that would pass through the canal when finished. It is certain that they underestimated the difficulties of the work and its cost in money. But they had only commercial considerations in view, and, therefore, were and are entitled to respectful consideration. The other class were the Jingo element in politics. They wanted a canal, not for commercial uses chiefly, but as a source of foreign embroilment. They wanted it as means of irritation and provocation and possible war with the only country in Europe that we can count as our friend to-day. All the nations of the old world except Great Britain are at heart our enemies to-day, and would like to see us humbled in our present conflict with Spain, and yet the Nicaragua Canal Jingoes, of whom the late James G. Blaine was the leader and the type, desired the canal mainly because it would prove a convenient instrument in their hands for "twisting the lion's tail."

Proof of this is found in the fact that the first step taken towards achieving the canal was an attempt, made by Mr. Blaine himself when Secretary of State, at the beginning of the Garfield administration, to abrogate the Clayton-Bulwer treaty. The public mind was prepared for this step by various outgivings, in the customary Jingo tone, that we did not need foreign assistance to guarantee the neutrality of the canal, that we were sufficient for that purpose ourselves, that this was an American canal, and that the Clayton-Bulwer treaty was rather a hindrance than an aid to its early completion and successful operation. Coupled with these outgivings was also the suggestion, bruited about in the newspapers, that a canal built by us, whose neutrality was to be guaranteed by us exclusively, would be fortified by us in such a way as to make our guarantee effective.

Here was a complete inversion of ideas, but quite characteristic of the Jingo mind. Neutrality means no advantage to one more than to the other, but the kind of neutrality proposed was a claim on our part to every possible advantage that the nature of the thing admitted of, including the right to decide all disputed points in our own favor.

Absolute control by one party out of several is the very opposite of neutrality. It was for the purpose of excluding absolute control by one, and securing real neutrality, that the Clayton-Bulwer treaty was negotiated and ratified nearly fifty years ago. The first clause declares and agrees that neither the United States nor Great Britain shall ever obtain or maintain for itself any exclusive control over any ship canal which may be constructed between the Atlantic and Pacific Oceans, through Nicaragua, nor ever fortify or maintain any dominion over any part of Nicaragua, Costa Rica, or any part of Central America in the vicinity of such canal, or make use of any alliance they may have or influence they may possess with the countries through which the canal may pass, to gain any advantage for their own citizens in respect of commerce or navigation by said canal which shall not be offered on the same terms to the citizens of the other. It was provided also that, in case of war between the contracting parties, the ships of both should be exempted from capture or detention in the canal, or within a certain distance of the two ends. It was agreed, moreover, that both parties should invite every other country to enter into the same stipulations, to the end that the neutralization of the canal should have the guarantee of the whole commercial world.

This is the treaty which Mr. Blaine as Secretary of State sought to abrogate and annul. Great Britain, speaking through Lord Grenville, her Foreign Secretary, declined to give her consent to the abrogation. She held that it was a valid agreement, highly proper in itself, not limited as to time, and that she should expect the United States to live up to its terms. There the correspondence ceased, but the idea that Mr. Blaine put forward fastened itself upon the Nicaragua Canal project, and if it has ceased to exist, it has so ceased because events have brought England and the United States to a better understanding with each other than they have had at any other time since Messrs. Clayton and Bulwer put their names to the paper in question. We think that all Americans are now agreed that as a preliminary step to the construction of the Nicaragua Canal nothing could be more advantageous, nothing more desirable than this Clayton-Bulwer treaty, and that if there were no such treaty, the first thing to be done would be to negotiate one on the same terms. We believe that the greatest obstacle to the undertaking of the canal hitherto has been the fear on the part of capitalists and sober-minded citizens that the aims of its promoters in Congress were not so much commercial as political, and that the construction of it was intended to be a source of bickering and irritation and foreign embroilment. If this

motive for the canal no longer exists, if the project can now be considered on its merits as a commercial problem solely, if the neutralization of the canal can remain undisputed as it stands in the Clayton-Bulwer treaty, then the only obstacles in the way of it are those physical ones which nature has erected on the Isthmus.

THE CAMPAIGN IN PENNSYLVANIA.

Mr. Wanamaker is prosecuting his warfare against the Quay machine in Pennsylvania with growing courage and effectiveness, week by week. Thursday was one series of skirmishes against the foe in Huntingdon County, beginning upon the arrival of the commander by sleeping-car at Mount Union about sunrise, including sorties at a number of towns during the next twelve hours, and closing with a prolonged attack in the evening. On the whole, this was the most telling day's work since hostilities were declared.

Mr. Wanamaker had previously discussed various ways in which machine legislation is driven through the Legislature—the methods of intimidation, the use of money, the promise of office, the pressure from great corporations, and the wholesale distribution of passes. On Thursday he showed how these practices are supplemented by the boldest and most flagrant violations of the law by certain officers of the Legislature who keep the record of roll-calls. He declared that "many and very important laws are to-day upon the statute-books of Pennsylvania that are said to have never received the constitutional majority of votes in the Legislature, but which were passed by being deliberately counted in by the clerks of the House or Senate." The names of many members are recorded as having voted on scores of appropriation bills that have passed by just the constitutional majority, or at least with slender margins, although these members were absent at the time the bills were considered, and did not respond to the roll-call. Moreover, an ingenious rule has been adopted by which it is held that, if a roll-call is questioned and the names of members who were not present are found to be recorded as having voted, the roll can be corrected only by the personal statement of any member whose vote is thus questioned, no matter if it is found that this one disputed vote is necessary to make the constitutional majority. A roll may thus be padded, and though the Legislature has full knowledge of the fact, it is unable to correct it; a machine-controlled Governor can sign the bill, and it becomes a law, and can in no way be affected, though later a dozen members might testify that they had not voted. Mr. Wanamaker gave this illustration of the reckless methods pursued:

"During the last night of the last session

an effort was made to pass the notorious pool bill. After the roll had been called, Representative Moore of Chester demanded the reading of the roll. The Chief Clerk tried to evade it; the demand for a reading was renewed; and again it was refused. Finally, the Chief Clerk was forced to read the roll, when it was discovered that several members who were absent were recorded as having voted. The climax was reached when the name of Representative Sloan of Washington County, who, it was stated, was at that time in Denver, Col., was read as having voted for the bill. His name is still recorded as having voted on the pool bill in the affirmative, and on the same day, July 1, 1897, he is recorded as having voted for the Grant monument junketing trip expense bill, and also for the machine revenue bill."

Mr. Wanamaker presented further evidence of the sale of post-offices for cash by the Quay machine. One correspondent writes him that it is needless to go to a certain county previously mentioned for evidence of such sale, and says of his own county: "I understand all the offices here were promised when — was a candidate for renomination. The corruption in this county is so bad, and our party here so rotten, that it is a disgrace to civilization. Truthfulness, honesty, and sobriety are lost for the sake of office. Congressman — must be an angel to our Congressman."

Early last week announcement had been made by Quay that his man, Congressman W. A. Stone, would be nominated for Governor at the Republican State convention on June 2. Mr. Wanamaker thus described how the work of this State convention of hundreds of delegates was settled in advance by half-a-dozen men:

"The convention to nominate a Governor for the next four years for Pennsylvania met last Sunday. The session was held at Avalon, N. J., at the house of Mr. Becker, State Senator, author of the Becker bill, which intended to destroy the effectiveness of the provisions of the Bullitt bill [for the government of Philadelphia]. There were six persons present, convened by the boss: United States Senator Quay, State Senator Durham, State Chairman John P. Elkin, deposed from the Attorney-General's office; Collector of the Port Wesley Thomas, State Senator Becker, Allen B. Rorke, contractor for the new capitol and proposed candidate for Mayor. These six men, who toil not, neither do they spin, all office-holders except the contractor of the capitol, held the convention and put through the slate. It robbed W. A. Stone of the disguise he was travelling under as late as Saturday night last, by declaring him the candidate of the Republican party. On June 2, 362 men are to meet together in Pennsylvania, at great expense, to ratify this Sunday convention for Pennsylvania's Governor, made in New Jersey."

Mr. Wanamaker's speech was noteworthy for what seems to have been a distinct announcement that he will not stand by the Republican party if the Quay machine shall carry out its programme at the State convention. These were his words:

"The time has come that thousands would sooner go out of politics altogether than be dumb beasts, driven at the will of one man; but there are more parties than one, and room perhaps for new parties when the old outlive themselves. I believe it would be better for a great party to go down than to permit a few thousand office-holders, by virtue of patronage control, to become absolute rulers of six millions of people, who are practically beyond any power to intervene. When neither protest, entreaty, divisions,

nor respectful demands avail, it is not likely that six million taxpayers will idly retreat before six hundred or six thousand of their servants, paid with taxpayers' money.

"Force will never cure discontent. In American politics, where each man is entitled to an equal right, concession conciliates and coercion crushes. These great popular representative assemblages mean something, and that meaning is that States are not founded and society banded together to sustain an office-holding class who arrogate to themselves continuous rulership."

Certainly neither Mr. Wanamaker nor those who support him in his present warfare against the Quay machine can preserve their self-respect if they shall fall in behind the boss after the convention has done his will. The writer of the letter from which we have quoted regarding the sale of post-offices says: "I have been a Republican since 1860, but our party now stinks in the nostrils of any decent man"; and he adds, "If the people are willing to uphold this corruption and dishonesty, God save the country!" And truly one might almost despair of the republic if Pennsylvania could elect Quay's man for Governor after the revolting exposures of Quay rule that have been made this year.

DISFRANCHISING A RACE.

Only the fact that the public mind is engrossed with the war has permitted a recent decision of the Supreme Court of the United States, involving the constitutionality of the suffrage provisions in the new Constitution of Mississippi, to pass almost unnoticed. On the whole this judgment is the most important and wide-reaching pronounced by the highest tribunal on the race question in the South since the days of reconstruction in that section, thirty years ago.

When Mississippi was readmitted into the Union, Congress imposed the condition that its Constitution should "never be so amended or changed as to deprive any citizen or class of citizens of the United States of the right to vote who are entitled to vote by the Constitution herein recognized, except as a punishment for such crimes as are felonies at common law, whereof they shall have been duly convicted under laws equally applicable to all the inhabitants of said State." Apparently Congress had thus insured the permanent rule of Mississippi by the blacks, who largely outnumbered the whites. Yet to-day the blacks exercise no influence whatever over the government of the State, and the Supreme Court, a majority of its members Republicans, validates the policy by which the race has practically been disfranchised.

The first step in this revolution was the application of what was called "the Mississippi plan" in 1875. The white minority bulldozed as many negroes as they could frighten so as to keep them from the polls, and cheated the rest in the count. But this system was so offensive to respectable people that they insisted upon reaching the same result

by legal methods. In 1890 a convention was called to frame a new constitution. The late Senator George was its most influential member, but the small Republican minority included ex-Gov. Alcorn, ex-Chief Justice Simrall, and a wise colored man. These three worked in perfect harmony with their Democratic associates, and the result was the adoption of a system by which the suffrage was denied to every man who could not read the Constitution, or understand it when read to him, and who had not paid a poll tax. Nominally applying to all men, these provisions were devised with a view to depriving most of the blacks of the right to vote. Comparatively few adult negroes could read, or understand the more abstruse clauses of the Constitution when read to them, and most negroes are so averse to paying an unnecessary tax that they would forfeit the chance to cast a ballot rather than pay something for the opportunity. The system has worked exactly as was expected. Although there were 150,469 blacks of the voting age in 1890, only a few thousand of them now have the right to vote or to sit on a jury, for the first is essential to the second.

The negroes have always claimed that this was a violation of the fifteenth amendment to the Federal Constitution, which declares that "the right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of race, color, or previous condition of servitude." Finally a case was carried up to the Supreme Court which involved the whole question. In 1896 a negro named Williams was indicted for murder by a grand jury composed of white persons, and was tried and condemned by a white petty jury and sentenced to be hanged. The judgment of the trial court was affirmed upon appeal by the State Supreme Court, and the Supreme Court of the United States has now sustained it.

This latter court had held in previous cases that the prohibitions of the Federal Constitution are against the denial of equal rights to the races by the Constitution or laws of a State. In the pending case it was not claimed that either the Constitution of the State or its laws discriminate in terms against the negro race, either as to the elective franchise or the privilege or duty of sitting on juries, but only that these results were effected by the abuse of the powers vested in certain administrative officers, and this allegation was not established. The conclusion of the whole matter is, in the closing words of the decision, that "the Constitution of Mississippi and its statutes do not on their face discriminate between the two races, and it has not been shown that their actual administration was evil, only that evil was possible under them."

The significance of this decision was

emphasized by the fact that the Federal Supreme Court quoted and endorsed the decision of the State Supreme Court, which said that "within the field of permissible action under the limitations imposed by the Federal Constitution, the convention which framed the Mississippi Constitution swept the field of expedients to obstruct the exercise of suffrage by the negro race," and which further said of the negro race:

"By reason of its previous condition of servitude and dependence, this race had acquired or accentuated certain peculiarities of habit, of temperament, and of character which clearly distinguished it as a race from the whites—a patient, docile people, but careless, landless, migratory within narrow limits, without forethought, and its criminal members given to furtive offences rather than the robust crimes of the whites. Restrained by the Federal Constitution from discriminating against the negro race, the convention discriminates against its characteristics and the offences to which its criminal members are prone."

Under this interpretation of the Constitution, it is obvious that an inferior race can be practically disfranchised under the forms of law. It is an interesting coincidence that this important decision is rendered at a time when we are considering the idea of taking in a varied assortment of inferior races in different parts of the world, which must be governed somehow, and which, of course, could not be allowed to vote.

GLADSTONE.

No man has lived in our times of whom it is so hard to speak in a concise and summary fashion as Mr. Gladstone. For forty years he was so closely associated with the public affairs of his country that the record of his parliamentary life comes near to being an outline of English politics. His activity spread itself out over many fields. He was the author of several learned and thoughtful books, and of a multitude of articles upon all sorts of subjects. He showed himself as eagerly interested in matters of classical scholarship and Christian doctrine and ecclesiastical history as in questions of national finance and foreign policy. No account of him could be complete without reviewing his actions and estimating the results of his work in all these directions.

But the difficulty of describing and judging him goes deeper. His was a singularly complex nature, a character hard to unravel. His individuality was extremely strong; all that he said or did bore its impress. Yet it was an individuality so far from being self-consistent as sometimes to seem a bundle of opposite qualities capriciously united in a single person. He might with equal truth be called, and he has been in fact called, a conservative and a revolutionary. He was dangerously impulsive, and had frequently to suffer from his impulsiveness; yet he was also not merely wary and cautious, but so astute as to have been accused of craft and dissimulation. So great was his respect for authority and tradition that he clung to views regarding the unity of Homer and the historical claims of Christian sacerdotalism which the majority of competent specialists have now rejected. So bold was he in practical matters that

he transformed the British Constitution, changed the course of English policy in the Orient, destroyed an established church in one part of the United Kingdom, and committed himself to the destruction of two established churches in two other parts. He came near to being a Roman Catholic in his religious opinions, yet was for twenty years the darling leader of the English Protestant Nonconformists and the Scotch Presbyterians. No one who knew him intimately doubted his conscientious sincerity and earnestness, yet four-fifths of the English upper classes were, in his later years, wont to regard him as a self-interested schemer who would sacrifice his country to his lust for power. Though he loved general principles, and often soared out of the sight of his audience when discussing them, he generally ended by deciding upon points of detail the question at issue. He was at different times of his life the defender and the assailant of the same institutions, yet he scarcely seemed inconsistent in doing opposite things, because his method and his arguments preserved the same type and color throughout.

Any one who had at the beginning of his career discerned in him the capacity for such strange diversities and contradictions, would probably have predicted that they must wreck it by making his purposes weak and his course erratic. Such a prediction would have proved true of any one with less firmness of will and less intensity of temper. It was the persistent heat and vehemence of his character, the sustained passion which he threw into the pursuit of the object on which he was for the moment bent, that fused these dissimilar qualities, and made them appear to contribute to and to increase the total force which he exerted.

Theories of character based on race differences are dangerous, because they are so easy to form and so hard to test. Still, no one denies that there are qualities and tendencies generally found in the minds of men of certain stocks, just as there are peculiarities in their faces or in their speech. Mr. Gladstone was born and brought up in Liverpool, and always retained a touch of Lancashire accent. But, as he was fond of saying, every drop of blood in his veins was Scotch. His father was a Lowland Scot from the neighborhood of Biggar, in the Upper Ward of Lanarkshire, where the old yeoman's dwelling of Gledstones—the kite's rock—may still be seen. His mother was of Highland extraction, by name Robertson, from Dingwall, in Ross-shire. Thus he was not only a Scot, but a Scot with a strong infusion of the Celtic element, the element whence the Scotch derive most of what distinguishes them from the English. The Scot is more excitable, more easily brought to a glow of passion, more apt to be eagerly absorbed in one thing at a time. He is also more fond of abstract intellectual effort. It is not merely that the taste for metaphysical theology is commoner in Scotland than in England, but that the Scotch have a stronger relish for general principles. They like to set out by ascertaining and defining such principles, and then to pursue a series of logical deductions from them. They are, therefore, somewhat bolder reasoners than the English, less content to remain in the region of concrete facts, more eager to hasten on to the process of working out a body of speculative doctrines. The Englishman is apt to plume himself on being right in spite of logic; the Scotchman delights to

think that it is through logic he has reached his conclusions, and that he can by logic defend them.

These are qualities which Mr. Gladstone drew from his Scottish blood. He had a keen enjoyment of the processes of dialectic. He loved to get hold of an abstract principle and to derive all sorts of conclusions from it. He was wont to begin the discussion of a question by laying down two or three sweeping propositions covering the subject as a whole, and would then proceed to draw from these others which he could apply to the particular matter in hand. His well-stored memory and boundless ingenuity made this finding of such general propositions so easy a task that a method in itself agreeable sometimes appeared to be carried to excess. He frequently arrived at conclusions which the judgment of the sober auditor did not approve, because, although they seemed to have been legitimately deduced from the general principles just enunciated, they were somehow at variance with the plain teaching of the facts. At such moments one felt that the man who was charming but perplexing Englishmen by his subtlety and ingenuity was not himself an Englishman in mental quality, but had the love for abstractions and refinements and dialectical analysis which characterizes the Scotch intellect. He had also a large measure of that warmth and vehemence called in the sixteenth century the *perfervidum ingenium Scotorum*, which belongs to the Scottish temperament, and particularly to the Celtic Scot. He kindled quickly, and, when kindled, he shot forth a strong and brilliant flame.

With these Scottish qualities, Mr. Gladstone was brought up at school and college among Englishmen, and received at Oxford, then lately awakened from a long torpor, a bias and tendency which never thereafter ceased to affect him. The so-called "Oxford Movement," which afterwards obtained the name of Tractarianism and carried Dr. Newman, together with other less famous leaders, on to Rome, had not yet in 1831, when Mr. Gladstone won his degree with double first-class honors, taken visible shape, or become, so to speak, conscious of its own purposes. But its doctrinal views, its peculiar vein of religious sentiment, its respect for antiquity and tradition, its proneness to casuistry, its taste for symbolism, were already potent influences working on the more susceptible of the younger minds. On Mr. Gladstone they told with full force. He became, and never ceased to be, not merely a High Churchman, but what may be called an Anglo-Catholic in his theology; deferential, not only to ecclesiastical tradition, but to the living voice of the visible Church, respecting the priesthood as the recipients (if duly ordained) of a special grace and peculiar powers, attaching great importance to the sacraments, feeling himself nearer to the Church of Rome, despite what he deemed her corruptions, than to any of the non-episcopal Protestant churches. Henceforth his interests in life were as much ecclesiastical as political. For a time he desired to be ordained a clergyman. Had this wish been carried out, it can scarcely be doubted that he would eventually have become the leading figure in the Church of England and have sensibly affected her recent history. The later stages in his career drew him away from the main current of political opinion within that church. He who had been the strongest ad-

vocate of established churches came to be the leading agent in the disestablishment of the Protestant Episcopal Church in Ireland, and a supporter of the policy of disestablishment in Scotland and in Wales. But the color which these Oxford years gave to his mind and thoughts was never obliterated.

When the brilliant young Oxonian entered the House of Commons at the age of twenty-three, Sir Robert Peel was leading the Tory party with an authority and ability rarely surpassed in parliamentary annals. Within two years the young man was admitted into the short-lived Tory Ministry of 1834, and soon proved himself an active and promising lieutenant of the experienced chief. Peel was an eminently wary and cautious man, alive to the necessity of watching the signs of the times, of studying and interpreting the changeable phases of public opinion. His habit was to keep his own counsel, and even when he perceived that the policy he had hitherto followed would need to be modified, to continue to use guarded language and refuse to commit himself to change till he perceived that the fitting moment had arrived. He was, moreover, a master of detail, slow to propound a plan until he had seen how its outlines were to be filled up by appropriate devices for carrying it out in practice. These qualities and habits of the Minister profoundly affected his gifted disciple. They became part of the texture of his own political character; and in his case, as in that of Peel, they sometimes brought censure upon him, as having withheld too long from the public views or purposes which he thought it unwise to disclose till effect could promptly be given to them. Such reserve, such a guarded attitude and conservative attachment to existing institutions, were not altogether natural to Mr. Gladstone's mind, and the contrast between them and some of his other qualities, like the contrast which ultimately appeared between his sacerdotal tendencies and his political liberalism, contributed to make his character perplexing and to expose his conduct to the charge of inconsistency.

Mr. Gladstone sat for sixty-three years in Parliament, and for more than twenty-six years was the leader of his party, and therefore the central figure of English politics. As has been said, he began as a high Tory, remained about fifteen years in that camp, was then led by the split between Peel and the protectionists to take up an intermediate position, and finally was forced to cast in his lot with the Liberals—for in England, as in America, third parties seldom endure. No parliamentary career in English annals is comparable to his for its length and variety; and of those who saw its close in the House of Commons, there was only one man, Mr. Villiers (who died in January, 1898), who could remember its beginning. He had been opposed in 1833 to men who might have been his grandfathers; he was opposed in 1893 to men who might have been his grandchildren. It took fourteen years, from 1846 to 1860, to carry him from the Conservative into the Liberal camp. It took five stormy years to bring him round to Irish home rule, though his mind was constantly occupied with the subject from 1880 to 1885; and those who watched him closely saw that the process had advanced some considerable way even in 1881. And as regards ecclesiastical establishments, having written a book in 1838, as a warm advocate of state church-

es, it was not till 1867 that he adopted the policy of disestablishment for Ireland, not till 1890 that he declared himself ready to apply it in Wales and Scotland also.

No great popular leader had in him less of the true ring of the demagogue. He saw, of course, that a statesman cannot oppose the popular will beyond a certain point, and may have to humor it in order that he may direct it. Now and then, in his later days, he so far yielded to his party advisers as to express his approval of proposals for which he cared little personally. But he was too self-absorbed, too eagerly interested in the ideas that suited his own cast of thought, to be able to watch and gauge the tendencies of the multitude. On several occasions he announced a policy which startled people and gave a new turn to the course of events. But in none of these instances, and certainly not in the three most remarkable—his declarations against the Irish church establishment in 1863, against the Turks and the traditional English policy of supporting them in 1876, and in favor of Irish home rule in 1886—did any popular demand suggest his pronouncement. It was the masses who took their view from him, not he who took his mandate from the masses. In all of these instances he was at the time in Opposition, and was accused of having made this new departure for the sake of recovering power. In the two former he prevailed, and was ultimately admitted by his more candid adversaries to have counselled wisely. In all of them he may, perhaps, be censured for not having sooner perceived, or at any rate for not having sooner announced, the need for reform. But it was very characteristic of him not to give the full strength of his mind to a question till he felt that it pressed for a solution. Those who discussed politics with him were scarcely more struck by the range of his vision and his power of correlating principles and details, than by his unwillingness to commit himself on matters whose decision he could postpone. Reticence and caution were sometimes carried too far, not merely because they exposed him to misconstruction, but because they withheld from his party the guidance it needed. This was true in all the three instances just mentioned; and in the last of them his reticence probably contributed to the separation from him of some of his former colleagues. Nor did he always rightly divine the popular mind. Absorbed in his own financial views, he omitted to note the change that had been in progress between 1862 and 1874, and thus his proposal in the latter year to extinguish the income tax fell completely flat. He often failed to perceive how much the credit of his party was suffering from the belief, quite groundless so far as he personally was concerned, that his Government was indifferent to what are called Imperial interests, the interests of England outside England. But he always thought for himself, and never stooped to flatter the prejudices or inflame the passions of any class in the community.

Though the power of reading the signs of the times and moving the mind of the nation as a whole may be now more essential to an English statesman than the skill which manages a legislature or holds together a cabinet, that skill counts for much, and must continue to do so while the House of Commons remains the supreme governing authority of the country. A man can hardly reach high place, and certainly can-

not retain high place, without possessing this kind of art. Mr. Gladstone was at one time thought to want it. In 1864, when Lord Palmerston's end was evidently near, and Mr. Gladstone had shown himself the most brilliant and capable man among the Liberal ministers in the House of Commons, people speculated about the succession to the headship of the party; and the wisecracks of the day were never tired of repeating that Mr. Gladstone could not possibly lead the House of Commons. He wanted tact (they said), he was too excitable, too impulsive, too much absorbed in his own ideas, too unversed in the arts by which individuals are conciliated. But when, after twenty-five years of his unquestioned reign, the time for his own departure drew nigh, men asked how the Liberal party of the House of Commons would ever hold together after it had lost a leader of such consummate capacity. Seldom has a prediction been more utterly falsified than that of the Whig critics of 1864. They had grown so accustomed to Palmerston's way of handling the House as to forget that a man might succeed by quite different methods. And they forgot also that the man may have many defects and yet in spite of them be incomparably the fittest for a great place.

Of Mr. Gladstone's oratory, something must now be said. By it, he rose to fame and power, as, indeed, by it most English statesmen have risen, save those to whom wealth and rank and family connections have given a sort of presumptive claim to high office, like the Cavendishes and the Russells, the Oecils and the Bentincks. And for many years, during which Mr. Gladstone was distrusted as a statesman because, while he had ceased to be a Tory, he had not fully become a Liberal, his eloquence was the main, one might almost say the sole, source of his influence.

The permanent reputation of an orator depends upon two things, the witness of contemporaries to the impression produced upon them, and the written or printed—we may, perhaps, be soon able to say the phonographed—record of his speeches. Few are the famous speakers who would be famous if they were tried by this latter test alone, and Mr. Gladstone was not one of them. It is only by a rare combination of gifts that one who speaks with so much readiness, force, and brilliance as to charm his listeners, is also able to deliver such valuable thoughts in such choice words that posterity will read them as literature. Some few of the ancient orators did this; but we seldom know how far those of their speeches which have been preserved are the speeches which they actually delivered. Among moderns, some French preachers, Edmund Burke, Macaulay, and Daniel Webster are perhaps the only speakers whose discourses have passed into classics and find new generations of readers. Twenty years hence Mr. Gladstone's will not be read except, of course, by historians. They are too long, too diffuse, too minute in their handling of details, too elaborately qualified in their enunciation of general principles. They contain few epigrams, and few of those weighty thoughts put into telling phrases which the Greeks called *gnomai*. The style, in short, is not sufficiently rich or finished to give a perpetual interest to matters whose practical importance has vanished. The same oblivion has overtaken all but a very few of the best things of Grattan, Pitt, Canning, Plunket, Brougham, Peel, Bright. It may, indeed, be

said—and the examples of Burke and Macaulay shew that this is no paradox—that the speakers whom posterity most enjoys are rarely those who most affected the audiences that listened to them.

If, on the other hand, Mr. Gladstone be judged by the impression he made on his own time, his place will be high in the front rank. His speeches were neither so concisely telling as Mr. Bright's nor so finished in diction; but no other man among his contemporaries—neither Lord Derby nor Mr. Lowe nor Mr. Disraeli nor Bishop Wilberforce nor Bishop Magee—deserved comparison with him. And he rose superior to Mr. Bright himself in readiness, in variety of knowledge, in persuasive ingenuity. Mr. Bright required time for preparation, and was always more successful in alarming his adversaries and stimulating his friends than in either instructing or convincing anybody. Mr. Gladstone could do all these four things, and could do them at an hour's notice, so vast and well-ordered was the arsenal of his mind. His oratory had many conspicuous merits. There was a lively imagination, which enabled him to relieve even dull matter by pleasing figures, together with a large command of quotations and illustrations. There were remarkable powers of sarcasm—powers, however, which he rarely used, preferring the summer lightning of banter to the thunderbolt of invective. There was admirable lucidity and accuracy in exposition. There was great skill in the disposition and marshalling of his arguments, and finally—a gift now almost lost in England—there was a wonderful variety and grace of appropriate gesture. But above and beyond everything else which enthralled the listener, there were four qualities, two specially conspicuous in the substance of his eloquence—inventiveness and elevation; two not less remarkable in his manner—force in the delivery, expressive modulation in the voice.

The note of genuineness and spontaneity which marked the substance of his speeches was no less conspicuous in their delivery. Nothing could be more easy and graceful than his manner on ordinary occasions. His expository discourses, such as those with which he introduced a complicated bill or unfolded a financial statement, were models of their kind, not only for lucidity, but for the pleasant smoothness, equally free from monotony and from abruptness, with which the stream of speech flowed from his lips. The task was performed so well that people thought it an easy task till they saw how immeasurably inferior were the performances of two subsequent Chancellors of the Exchequer so able in their respective ways as Mr. Lowe and Mr. Goschen. But when an occasion arrived which quickened men's pulses, and particularly when some sudden storm burst on the House of Commons—a place where the waves rise as fast as in a mountain lake under a squall rushing down a glen—the vehemence of his feeling found expression in the fire of his eye and the resistless strength of his words. His utterance did not grow swifter, nor did the key of his voice rise, as passion raises and sharpens it in most men. But the measured force with which every sentence was launched, like a shell hurtling through the air, the concentrated intensity of his look, as he defied antagonists in front and swept his glance over the ranks of his supporters around and behind him, had a startling and

thrilling power which no other Englishman could exert, and which no Englishman had exerted since the days of Pitt and Fox. The whole proud, beld, ardent nature of the man seemed to flash out, and one almost forgot what the lips said in admiration of the towering personality.

Though Mr. Gladstone's oratory was a main source of his power, both in Parliament and over the people, the effort of his enemies to represent him as a mere rhetorician will seem absurd to the historian who reviews his whole career. If the memory of his oratorical triumphs were to pass completely away, he would deserve to be remembered in respect of the mark he left upon the British statute-book and of the changes he wrought both in the Constitution of his country and in her European policy. To describe the acts he carried would almost be to write the history of recent British legislation; to pass a judgment upon their merits would be foreign to the scope of this article.

His action in the field of foreign policy, though it was felt only at intervals, was on several occasions momentous, and has left abiding results in European history. In 1851, he being then still a Tory, his powerful pamphlet against the Bourbon government of Naples, and the sympathy he subsequently avowed with the national movement in Italy, gave that movement a new standing in Europe by powerfully recommending it to English opinion. In 1870 the prompt action of his Government, in concluding a treaty for the neutrality of Belgium on the outbreak of the war between France and Germany, saved Belgium from being drawn into the strife. In 1871, by concluding the treaty of Washington, which provided for the settlement of the *Alabama* claims, he not only asserted a principle of the utmost value, but delivered England from what would have been, in case of her being at war with any European Power, a danger fatal to her ocean commerce. And in 1876, the vigorous attack he made on the Turks after the Bulgarian massacre roused an intense feeling in England, so turned the current of opinion that Disraeli's ministry was forced to leave the Sultan to his fate, and thus became the cause of the deliverance of Bulgaria, Eastern Rumelia, Bosnia, and Thessaly from Mussulman tyranny. Few English statesmen have equally earned the gratitude of the oppressed.

Such a record is the best proof of the capacity for initiative which belonged to him, and in which men of high oratorical gifts have often been wanting. In the Neapolitan case, in the *Alabama* case, in the Bulgarian case, no less than in the adoption of the policy of a separate legislature and executive for Ireland, he acted from his own convictions, with no suggestion of encouragement from his party; and in the last instances—those of Ireland and of Bulgaria—he took a course which seemed to the English political world so novel and even startling that no ordinary statesman would have ventured on it.

His courage was indeed one of the most striking parts of his character. It was not the rashness of an impetuous nature, for, impetuous as he was when stirred by some sudden excitement, he was wary and cautious whenever he took a deliberate survey of the conditions that surrounded him. It was the proud self-confidence of a strong character, which was willing to risk fame

and fortune in pursuing a course it had once resolved upon—a character which had faith in its own conclusions, and in the success of a cause consecrated by principle—a character which obstacles did not affright or deter, but rather roused to a higher combative energy. Few English statesmen have done anything so bold as was Mr. Gladstone's declaration for Irish home rule in 1886. He took not only his political power, but the fame and credit of his whole past life, in his hand when he set out on this new journey at seventy-seven years of age; for it was quite possible that the great bulk of his party might refuse to follow him, and he be left exposed to derision as the chief of an insignificant group. It turned out that the great bulk of the party did follow him, though many of the most influential and socially important refused to do so. But neither Mr. Gladstone nor any one else could have foretold this when his intentions were first announced.

The essential dignity of his nature was never better seen than during the last few years of his life, after he had retired (in 1894) from Parliament and public life. He indulged in no vain regrets, nor was there any foundation for the rumors, so often circulated, that he thought of reëntering the arena of strife. He spoke with no bitterness of those who had opposed, and sometimes foiled, him in the past. He gave vent to no disparaging criticisms on those who from time to time filled the place that had been his in the government of the country or the leadership of his party. Although his opinion on current questions was frequently solicited, he scarcely ever allowed it to be known, and never himself addressed the nation, except on behalf of what he deemed a sacred cause, altogether above party—the discharge by Britain of her duty to the victims of the Turk. As soon as an operation for cataract had enabled him to read or write for seven hours a day, he devoted himself with his old ardor to the preparation of an edition of Bishop Butler's works, resumed his multifarious reading, and filled up the interstices of his working time with studies on Homer which he had been previously unable to complete. No trace of the moroseness of old age appeared in his manners or his conversation, nor did he, though profoundly grieved at some of the events which he witnessed, and owning himself disappointed at the slow advance made by some causes dear to him, appear less hopeful than in earlier days of the general progress of the world, or less confident in the beneficent power of freedom to promote the happiness of his country. The stately simplicity which had been the note of his private life seemed more beautiful than ever in this quiet evening of a long and sultry day. His intellectual powers were unimpaired; his thirst for knowledge undiminished. But a placid stillness had fallen upon him and his household; and in seeing the tide of his life begin slowly to ebb, one thought of the lines of his illustrious contemporary and friend—

"such a tide as moving seems asleep,
Too full for sound or foam,
When that which drew from out the boundless deep
Turns again home."

Of how few who have lived for more than sixty years in the full sight of their countrymen, and have been as party leaders exposed to angry and sometimes dishonest criticism, can it be said that there stands on

record against them no malignant word and no vindictive act! This was due in Mr. Gladstone, not perhaps entirely to natural sweetness of disposition, but rather to self-control, and to a certain largeness and dignity of soul which would not condescend to anything mean or petty. Nor should it be forgotten that the perfectly happy life which he led at home, cared for in everything by a devoted wife, kept far from him those domestic troubles which have soured the temper and embittered the judgments of not a few famous men. Reviewing his whole career, and summing up the impressions and recollections of those who knew him best, this dignity is the feature which dwells most in the mind, as the outline of some majestic Alp moves one from afar when all the lesser beauties of glen and wood, of craig and glacier, have faded in the distance. As elevation was the note of his oratory, so was magnanimity the note of his character.

The favorite Greek maxim that no man can be called happy till his life is ended must, in the case of statesmen, be extended to warn us from the attempt to fix any one's place in history till a generation has arisen to whom he is a mere name, not a familiar figure to be loved, opposed, or hated. Few reputations made in politics keep so far green and fresh that men continue to read and write and speculate about the person when those who can remember him living have departed. Out of all the men who have played a leading part in English public life in the present century there are but seven or eight—Pitt, Fox, Canning, Wellington, Peel, O'Connell, Disraeli, perhaps Melbourne and Brougham—who still excite our curiosity. The great poet or the great artist lives longer—indeed, he lives as long as his books or his pictures; the statesman, like the musician or the actor, begins to be forgotten so soon as his voice is still, unless he has so dominated the men of his own time, and made himself a part of his country's history, that his personal character becomes a leading factor in the course which events took. Tried by this test, Mr. Gladstone's fame seems destined to last. His eloquence will soon become merely a tradition, for his printed speeches do not preserve its charm. His main acts of policy, foreign and domestic, will have to be judged by their still unborn consequences. If his books continue to be read, it will be rather because they are his than in respect of any permanent contribution they have made to knowledge. But whoever follows the annals of England during the memorable years from 1843 to 1894 will meet his name on almost every page, will feel how great must have been the force of an intellect that could so interpenetrate the events of its time, and will seek to know something of the wonderful figure that rose always conspicuous above the struggling throng.

There is a passage in the 'Odyssey' where the seer Theoclymenus, in describing a vision of death, says: "The sun has perished out of heaven." To Englishmen, Mr. Gladstone has been like a sun which, sinking slowly, has grown larger as he sank, and filled the sky with radiance even while he trembled on the verge of the horizon. There were able men, and famous men, but there was no one comparable to him in power and fame and honor. Now he is gone. The piercing eye is dim, and the mellow voice is silent, and the light has died out of the sky.

JAMES BRYCE.

THE RIOTS IN ITALY.

FLORENCE, May 7, 1898.

That riot and revolt, bordering on revolution, should be rife in peaceful Tuscany, is scarcely credible to those who had not been warned, by the strikes among the straw-plaiters last year and strikes among masons, that misery and hunger had raised their gaunt heads in the midst of the gentlest, mildest, most long-suffering people that ever tempted heedless, indifferent authorities to see how far the bow could bend without breaking. For weeks, rioting and disorder have been rife in Naples and the chief towns on the lower Adriatic coast; Bari, Barletta, Foggia, Minervino; again in and around Ferrara; while the rumors from Sicily become more and more ominous. But the prevalent discontent arising from failure of crops, want of work, and now the increase in the price of bread, had prepared one to hear of riots and rumors of riots. Not so in Tuscany; yet here we are, with Prato, Pignone-dell'Arno, Sesto in full revolt. In Prato the rioters have carried their tactics to incendiary fires and barricades; at Sesto, where four are killed and twenty-two wounded, order is far from being restored; nor can the authorities this time lay the blame on the Socialists, the Communists, the Republicans, as the Government inspectors, civil and military, report that the "subversive parties" have had no voice, "no lot in the uprising."

The pity of it is that all these catastrophes might have been avoided if the powers that be had but listened to competent writers and speakers, who, beginning with last August, raised their voices in warning and entreaty. The Italian wheat crop was below the medium, even so throughout Europe. Hence, contrary to precedent, the price of bread and paste (maccheroni) rose as soon as harvest was over. In the north of Italy, alas, this "rise" was scarcely noticed by the peasantry or by the unskilled workmen, who live exclusively on polenta—yellow maize ground and boiled with more or less salt; nor did it affect the Tuscan peasants, who, by the laws (or rather customs) of the *métayer* system, are entitled to as much wheat as they need for bread and paste from harvest to harvest time. No matter what the price, they but repay in kind, and if the wheat crop fail a second time, they make things even by "leaving down" so much oil, so much wine, so many lambs or cheeses or whatever they may have in abundance when they make up their yearly accounts with the owner or the steward. But in central, southern Italy and Sicily, man literally "lives by bread alone"—more strictly speaking, by wheat, which they make into bread and a hundred forms of paste (just flour mixed with water, rolled out, dried, and boiled). Now, it was clear to all that had eyes to see that unless stringent measures were taken to provide the country with wheat, troubles would come; this before there were any signs of war between Spain and the United States.

The price of bread in Italy depends upon many causes, especially in the closed communes, i. e., the large cities and towns enclosed by zones where the octroi or city tax on all food is paid down. First, of course, there is the price of grain in the world's market; second, the custom-house tax; third, the price of gold as compared with paper; fourth, the cost of grinding, i. e., the differ-

ence in price between wheat and flour; fifth, the city tax on flour, bread, paste; sixth, the price put by the bakers on bread, paste, etc. Take the prices given last August by the *Sole* of Milan and the *Nuove Antologie*, and it appears that a quintal of flour made into bread (allowing 125 kilos for every 100 of flour) costs per kilo 40½ centesimi, and I speak of large loaves, such as the people eat, the small "bread" yielding only 118 kilos per 100 flour. Well, this 4½ cents was already too high for the light purses of the poor, and the sage advisers said to the Government, "Now that we are in summer, when grapes, fruits, and vegetables are abundant, do not abolish but suspend the custom-house duty on wheat and flour. This will insure large provisions for the winter, and we must find some way to fill the deficit. If you drift into riot and revolt, the cost of calling out fresh categories that you have decided to leave at home, the cost of transport for soldiers sent hither and thither to suppress the revolts, will far exceed the income derived from your present corn laws," which then imposed a duty of 7½ lire on wheat and from 9 to 12½ on flour. But the Government and the "majority" feared to offend the "agrari" (landed proprietors and large farmers); moreover the duty, paid in gold, was most convenient for paying abroad the coupons of the 5 per cent. rente. The entire duty was maintained till last January, when 2½ lire were struck off the custom-house duty without effecting the slightest reduction in the price of bread.

Besides the tax on foreign wheat paid at the frontier, up till the Sicilian revolution of 1891-2, two other taxes increased the price of bread in closed communes—the Government octroi and the municipal octroi paid at the city gates. The Sicilian revolts led to the abolition of the Government's tax, but the municipal authorities were left free to impose their own; and as in Sicily and the southern provinces the Signori boss the provincial and town councils, they find it convenient to lay the burden of taxation on the staple food of the very poorest—bread, paste, etc.—rather than tax land, buildings, servants, carriages, which belong to themselves. This is the chief grievance of the working classes in southern Italy. Yielding to reason and partly to sentiment, the municipal authorities of Florence abolished last year this octroi or city tax on wheat, flour, bread, paste, and rice; hence they cannot be greatly blamed if they counted on exemption from riots; and indeed until yesterday there was no sign of disturbance. But it should be noted that, since the commencement of your Spanish-American war, the price of flour has gone up by leaps and bounds. The price of bread increased in proportion, hence discontent; and as riots may be classed among endemic diseases, the news from the surrounding cities fomented the unrest. It is the general opinion, however, that the tumult of a few Florentine *gemini*, and the entry into the city of some hundreds of masons demanding higher wages, might have been met by the Mayor and Aldermen without any intervention of troops.

That the Florentine people are in a bad temper must be admitted. The enormous sums spent on the late festivals held in honor of Amerigo Vespucci and Toscanelli, with the inauguration of marble monuments to Ricasoli and Peruzzi, were enjoyed by foreigners and wealthy Florentines, but the

people could not participate in them. Hall tickets cost 20 lire; even the tickets for the football game, which cost generally 1 lire, 50 and 30 centimes, were raised to 5 lire each; the entire portion of the Cascine whence the races could be seen was enclosed; while the rain, which fell in torrents, prevented the fireworks, the illumination of the public buildings and Lung' Arno, the popular open-air concerts. All these were postponed till the 8th of May, and now, owing to the "deplorable events in neighboring cities," will not be held at all. But the riot (for here it was nothing more) has had the deplorable result of frightening away the vast concourse of foreigners who this year have come in greater numbers and lingered longer than usual. Their departure in shoals is a great loss to hotel and lodging-house keepers, trains, cabs, shop-keepers and flower-sellers. The Queen Regent and Queen of Holland were the first to depart, meaning to go to Milan, but were stopped at Bologna by news from that city far more serious than has been allowed to reach us either by telegram, newspaper, or private letter: the telegrams are confiscated, the newspapers sequestered. The editor, sub-editor, and all the staff of the *Italia del Popolo* have been arrested and imprisoned, together with the Republican Deputy De Andreis; the offices closed. Such extreme measures as these were never resorted to by Cavour during the revolt of Genoa in 1857, scarcely in such sweeping fashion by Crispi in Palermo during the Fasci agitation. "But," said a veteran of '48, who left Milan last night at 10 and arrived here this morning, "Milan has a more revolutionary aspect than I have seen it wear since those eventful days."

"What are the immediate causes?" I inquired. "Firstly, the persistent refusal of the municipality to abolish the octroi or city tax on flour, bread, paste, rice. When the news came that the Government had suspended the customs tax and the municipality the octroi, it was too late; nay, people said one to another, 'By fair means we get nothing; only violence avails.' So when the summons came for the calling out of the first category of 1873, i. e., of young men of twenty-five, who, having performed their term of service from twenty-one to twenty-three years of age, thinking themselves secure, had married and set up in life for themselves, and who feel not enthusiasm but loathing at the idea of being called on to fire on an unarmed starving populace, exasperation reached its height. News came this morning that Musio Mussi, only son of the Milan Deputy and Vice-Speaker of the House, had been shot to death by the soldiers at Pavia, where he, a student, had passed the day in trying to appease the crowd, actually warning the cavalry not to charge, as zinc wire had been laid down to trip up the horses; and this did not contribute to lessen the general indignation."

"But, in point of fact, what is the situation?" "Well, this morning the workmen of several large factories decided to quit their work and call out their comrades. 'Long live our brothers of the army!' they cried when they met infantry and cavalry, and for a time the soldiers were patient; but later the cavalry charged and numbers were wounded. At Corso Venezia, barricades were improvised, 'in old Cernuschi fashion'; the tram-cars, the wagons laden with rations and forage for the troops, were all

pressed into the service, the pavements ripped up; and the children and women, forcing their way into the houses, battered the troops with paving-stones and tiles. The soldiers and police fired; dead and wounded strewn the ground. The Bersaglieri and Alpini came to the rescue, but the same scenes were repeated at the different gates. At Porta Ticinese the struggle was fiercest; the houses in the vicinity were left literally tileless, nor could the troops dislodge the assailants from the roofs. About four P. M. Gen. del Maino with his staff and four squadrons of cavalry arrived; result unknown." Barricades were erected at Porta Tenaglia; several gunsmiths' shops were sacked; but the number of killed and wounded on both sides could not even be guessed at when my friend left Milan. I am closing my letter, commenced yesterday at four P. M., on Sunday, May 8, but no authentic news is forthcoming. Even the official Stefani telegrams are stopped; the official *Fieramosca* has received neither telegrams nor newspapers from Milan.

The one gleam of light is the news of a slight fall in the price of grain at New York, and the arrival of heavy freights at Genoa, Naples, Leghorn, eagerly caught up now that the duty is rescinded. Too late, also, the Government is consenting to give work to the starving multitudes to whom it has been vainly promised throughout the winter. The money for it existed in the Treasury, but was detained there till ministers, municipalities, and contractors could agree as to who should get the lion's share.

Correspondence.

MRS. STANTON'S VIEWS ON MARRIAGE AND DIVORCE.

TO THE EDITOR OF THE NATION:

SIR: While thanking you for the space you have given in your columns to a review of my book 'Eighty Years and More,' and for your comments, so fair in the main, I ask still more space to correct a statement misleading to your readers and unjust to me.

You accuse me of saying, "The State has nothing to do with either marriage or divorce." On careful reading you will not find such a statement in any of my writings. My speech on "Marriage and Divorce" delivered before our Legislature in 1861, with a careful digest of the laws, under my father's supervision, was published by the thousands and scattered all over the State. My strictures on Wendell Phillips's position on this question, published in the *New York Tribune* in 1861; my answer to Judge Noah Davis, on the same point, in the *North American Review*, in 1883; an article in the *Arms* in 1890; many others on the same subject published in newspapers; my speeches in debates in conventions; the chapter on Marriage and Divorce in my book recently published, all these alike show that I not only have recognized the wisdom of laws governing the marriage relation, but desired that, so far as they relate to the entering into the contract, they should be more restrictive.

To my mind, parties to the marriage contract should be over eighteen years of age, and it should be entered into only with the consent of their parents. Any person of common sense must see the necessity of laws

regulating the duties of parents to their children and to each other, the right of property, inheritance, support, alimony, etc., all important for the welfare of the State as well as the family. The only point in this relation where I have claimed individual sovereignty is the right of choice, and of "separation" when the parties are wholly incompatible and antagonistic. If they desire "divorce" in order to marry again, then the State reasserts itself.

I have always asked for more liberal laws than unhappy husbands and wives enjoy in the State of New York. This is the extent of my heresy on the question of marriage and divorce. Having been true to one relation over fifty years, by example as well as precept, I have been a law-abiding citizen and rendered due honor to the State.

ELIZABETH CADY STANTON.

NEW YORK, May 17, 1898.

"CAMPUS."

TO THE EDITOR OF THE NATION:

SIR: In the *Nation* of April 14 a writer comments on the absence from all dictionaries previous to the Century Dictionary of the word campus, gives an example of the term under date of 1868, and says "that it is natural to ask how long it has been in vogue, and when and where the usage originated" (p. 285).

May I be allowed to state that these questions were answered, probably as fully as it is possible to answer them, in a paper written in March, 1897, and shortly to be printed in the third volume of the 'Publications of the Colonial Society of Massachusetts'? Though writing from memory, I yet think the following statements are correct.

Campus originated at Princeton, its earliest appearance being in a letter by an undergraduate in 1774; it first occurred in print in a book of travels written by an Englishman named Finch in 1833; the first American book to contain it was Mr. B. H. Hall's 'College Words and Customs' (1851); from Princeton it spread South, then West, and about fifty years ago invaded New England, ousting the earlier *yard* or *green*; and now it is found in every State and Territory in the Union except one. Of our elder colleges, almost the only one still to refuse to accept the intruder is Harvard, and with reason, for surely it would be a pity to displace, after an existence since at least as early as 1639, the idiomatic though homely *yard*. But even at Harvard the life of the older term is threatened; for the graduates from other institutions who now flock there bring the newer term with them.

As to how the term originated, it is not easy to say; but the following explanation, though unsupported by direct evidence, is offered for what it is worth. After two migrations, the College of New Jersey was removed, in 1756 or 1757, to Princeton. At that time its grounds consisted of a field about three acres in extent, perfectly flat and treeless, in the centre of which stood a single building, Nassau Hall (now called North College). When, in 1768, Dr. Witherspoon came to Princeton, fresh from Scotland, is it not possible that, accustomed to collegiate buildings erected round a quadrangle, he was struck by the altogether different aspect of the American college, and applied to the grounds a classical term which fitly described their character? At all events, before the arrival of Witherspoon,

yard was the word in use at Princeton, and it was during his presidency that, so far as I have been able to ascertain, the new term arose.

It may be added that *campus* is now employed in two senses: first (and this is its usual signification), it means the grounds in which the college buildings stand; and secondly, at a few institutions, it is used to designate an athletic field only.

ALBERT MATTHEWS.

CROMER, ENG., May 12, 1898.

"OF PRAYERS"; AND THE PERSONAL EQUATION.

TO THE EDITOR OF THE NATION:

SIR: Your recent editorials on the subject of the possibility of the conflict of prayers during the course of the Spanish-Cuban war must serve as an extenuation for this communication.

It is an old and a true saying that every crow thinks her own blackbird the whitest, or words to that effect, and hence the personal aspect must be forgiven me. Such forgiveness is permissible when writing of one's only four-year-old. But my little boy is the happy possessor of three uncles—two by blood and one by marriage—who, for many more years than he is old, have worn Uncle Sam's livery as cavalry and artillery officers. The first night after we received news that their commands had been moved, or were to be moved at once, the little one had finished his prayers after the usual routine, and his mother had made no mention of the war or its possibilities. Consequently, John thought he must try one on his own responsibility to supply the omission, and he added: "And God bless Uncle Tyree and Uncle William and Uncle Horn, and don't let the bullets hit the soldiers, but kill all the 'Spanyons.'"

Having thus delivered himself, the blood-thirsty little Jingo was at once reconciled to the deep sleep of childhood.

FLOURNOY RIVERS.

PULASKI, TENN.

Notes.

'Animal Intelligence,' from the point of view of the comparative psychologist, by Wesley Mills, is announced for early publication by the Macmillan Co.

T. Fisher Unwin, London, will publish next fall a study of the lithographic art, historical and æsthetical, by Joseph Penneil.

'The Art of Taxidermy,' by John Rowley; 'Familiar Life in Field and Forest,' by F. Schuyler Mathews; 'News from the Birds,' by L. S. Keyser; 'On the Farm,' by F. W. Parker and Nellie L. Helm; and Félix Gras's 'The Terror,' a romance of the French Revolution, translated by Mrs. Janvier, are current announcements by D. Appleton & Co.

A study of the "Paradiso," entitled 'Dante's Ten Heavens,' by Edmund G. Gardner, is in the press of Charles Scribner's Sons.

The second volume to appear in the Biographical Thackeray (Harpers) is 'Pendenls,' and Mrs. Ritchie's introduction of thirty pages is taken up mainly with letters and reminiscences relating to her father's Charterhouse and Cambridge days. The suggestion is, of course, that the raw material of personal experience in those years was

afterwards worked up in the novel. Several new sketches appear in the introduction, two of which, "Telemachus Recounting his Adventures to Calypso" and "The Hogmagundy" (a suggestion to FitzGerald for a new musical instrument—a suggestion unconsciously plagiarized, by the way, in a recent *Fliegende Blätter*), are in Thackeray's best manner.

Of particular interest at the present moment is a collection of short tales by Mrs. Schuyler Crowninshield, entitled 'Where the Trade Wind Blows,' and published by the Macmillan Co., being descriptive of life on the banana plantations of a Spanish West Indian isle. Dramas of varying degrees of intensity we are given, such as there should be no lack of in a spot where the landed proprietor, native-born or exotic, takes an easy view of the seventh commandment, and the peon of all shades and as many dialects combines an ignorance of all the commandments with the possession of sundry vices and passions commonly credited in abundance to the inhabitants of the tropics. An agreeable manner of treatment, a knowledge of the people, the lands, and the fruits thereof, and a good sense of humor, make these tales interesting reading, if hardly an exposition of the pleasantest phases of human nature, or an encouragement to those ardent patriots who are so eager to add a mongrel population to our own.

The Bosworth-Toller Anglo-Saxon Dictionary (Oxford: Clarendon Press; New York: Henry Frowde) needs no introduction to our readers. Part I. was published sixteen years ago, and few special lexicons are better known or have been more criticised. The end of the alphabet has at last been reached. Part IV., section II. (pp. 961-1302), conducts the searcher from *swiðh-eoel* to *ymest*; and those patient and economical students who have kept their copies unbound, in spite of bother and dogs-ears, will receive this final instalment with something like rapture. But what will their feelings be when they read in the Preface that certain matters requiring revision "will be attempted in a supplement, which will be prepared as soon as possible"? That the earlier parts of the work need revision is undoubted—indeed, it is not too much to say that parts I., II. ought to be rewritten—but it is hard to see how anything satisfactory can be done in a Supplement. Has any department of learning been unluckier than Anglo-Saxon lexicography?

The new Syriac text of the Gospels recently published in England is now followed by 'The Coptic Version of the New Testament in the Northern Dialect, otherwise called Memphitic and Bohairic' (Oxford: Clarendon Press; New York: Henry Frowde). The two volumes now issued, under the editorial supervision of the Rev. G. Horner, contain the four Gospels. In deference to the opinion of Profs. Stern and Guidi and the late Prof. P. de Lagarde, the text of a single MS. (Huntington 17, in the Bodleian Library) has been printed, without attempt at emendation—obviously the right course. There is an introduction, with critical apparatus, and a literal English translation. Schwartz's text has been the standard throughout. The editorial work appears to be carefully done, and the thanks of New Testament students are due to Mr. Horner, on whom the preparation of these volumes has entailed a great expenditure of time and labor (among other things the collation of over fifty Coptic MSS.). It

is also a sort of international work; the editor has had the support and assistance of the English scholars, Neubauer, Ellis, Margoliouth, Headlam, Robinson, and Rieu; the Italians Guidi and Carini; the Germans Stern, Pietschmann, Erman, Steindorff, and Schmidt; the French Zotenberg and Taram; the Americans Hyvernat and Gregory (the latter a professor in the University of Leipzig), and the Patriarch Cyril of Alexandria, and other Egyptians. A detailed comparison of the text with that of the Greek MSS. and other authorities cited by Tischendorf is promised by Mr. Horner.

The second volume of Alfred Zimmermann's "Die Europäischen Kolonien" (Berlin: Mittler) is entitled 'Die Kolonialpolitik Grossbritanniens.' It is a volume of nearly 500 pages, and traces the history of English colonisation from the earliest times to the period of the American Revolution and the achievement of American independence. The work is written with admirable perspicuity and impartiality, and is rendered additionally attractive and instructive by three chromolithographic maps showing the growth of English colonies in North America till 1783, and of British possessions in India and other parts of the world at the end of the eighteenth century.

The latest number of "Litterarische Forschungen," edited by Prof. Schick of Munich and Prof. Von Waldberg of Heidelberg, and published by Feller in Weimar, is Georg Sarrazin's 'William Shakespeare's Lehrjahre.' The author points out what he deems two errors in the criticism of Shakespeare: first, the rejection of his earlier works because they are not thought good enough for him, and, secondly, the rejection of him as a poet because, from what we know of his character and career, he is not thought good enough for his works. This latter view gave rise to the Baconian theory. The present monograph attempts to trace the development of Shakespeare's genius as revealed in his youthful productions, before he attained the mastery generally associated with his name.

The change in the character of the work of the Boston Public Library is well illustrated by the May Bulletin of additions, in which, out of some four hundred titles, only thirteen are of works of English fiction. The Bulletin also contains the first two parts of a useful list of books on social reform, including those upon early and present industrial and social conditions; as well as a list of the 184 serials of which an analytical card index is being published by the American Library Association. This is in a measure supplementary to the scheme of the Royal Society of London for cataloguing scientific literature; the publications of the more important learned societies being chosen, together with those relating to sociology, political science, history, geography, philosophy, and other allied subjects.

In the combined Nos. 1-6 of Volume 30 of the Bulletin of the Essex Institute one may read the interesting proceedings at the festive celebration of the first half century of this unique foundation in Salem, Mass. Its success on the side of collections in antiquities, art, natural history, and publications has taxed all its resources for house room, and it is still an object for a wise public-spirited benevolence. At this festival an offer was received, from the son of the sculptor W. W. Story, of his late father's casts of his principal works; and announce-

ment was made by Mr. George R. Curwen that he intended to bequeath to the Institute all his domestic antique furniture, portraits, china, and glass—the portraits including the likenesses of ten generations of the donor's family, all Salem people. The Salem Lyceum has this year dissolved itself into the Institute, which will carry on its lecture courses.

In January of this year the *Archivio Storico dell' Arte* put on a new and highly ornamental cover, with a new title, *L'Arte*. The change appears to have been made in order that the review may treat on occasion of modern as well as of ancient art.

In the same month was published the first number of the *Rivista d'Italia*, a monthly magazine, whose list of contributors includes such names as Carducci, Arturo Graf, Isidor Del Longo, Domenico Grioli, Fogazzaro, Paolo Lloy, and many others of the most prominent names in Italian literature. There are a few good illustrations, wherever such can add to the value of the text. The price (20 lire for Italy and 25 for the countries included in the postal union) is moderate enough to promise success for the praiseworthy enterprise.

The Geological Survey of New South Wales has begun the publication of a new serial entitled *Mineral Resources*. The two numbers which have appeared treat of chromic iron ore, its modes of occurrence, mining, dressing, uses, and value, and of the occurrence of Tungsten ores. Both papers are by J. E. Carne, F.G.S.

"Petroleum in Burma" is the subject of an elaborate paper by Dr. F. Noetling in the latest volume of the *Memoirs* of the Geological Survey of India. The author describes the geological features of the localities where oil is found, and discusses the economic importance of the different oil-fields. There has been a great increase in the number of productive wells since 1888, and the amount of oil produced has increased several hundred per cent. Maps and illustrations accompany this memoir.

The latest issue of that excellent bi-monthly, the *Zeitschrift* of the German Palestine Society, although a double number (vol. xx., parts 2 and 3), is devoted entirely to a splendid specimen of original research, namely, the investigation of the Southern Bashan districts, east of the Jordan, by Dr. G. Schumacher of Haifa, who has for months been traversing the country by appointment of the Society. The article discusses with accuracy and full details what has hitherto been practically a *terra incognita* in Biblical and Oriental geography. It is accompanied by seventy-seven illustrations, all new and given with exact measurements. The fine map, which covers Northern Adshun and Southern Hauran, is on a scale of 1:152,000, and is based almost entirely on new researches of Schumacher's made during the years 1895-96. Its usefulness is materially enhanced by a list of names, covering all the localities mentioned; these are given in both Arabic and in transcription, together with explanatory notes.

The Ministry for Education and Public Worship of the Austro-Hungarian Empire has published a report of the attendance at the eight universities to be found in the kingdoms and countries represented in the Reichsrath. The data are for the winter semester of 1897-98. The grand total is 16,996, an increase of 274 over the preceding

half year. The number of students is thus a little more than one-half the university attendance in Germany. Of this total, 1,300 are students of theology, 8,335 are in the law department, 4,316 in the medical, and 2,544 in the philosophical. These are distributed among the universities themselves in the following order: Vienna, 6,534; Innsbruck, 1,008; Prague (German), 1,321; Prague (Bohemian), 2,839; Lemburg, 1,726; Cracow, 1,443; Czernowitz, 385. The theological faculties report an increase of 111 students, the law department of 257, and the philosophical of 343, while the medical faculties show a decrease of 412.

The University of Erlangen has been put on the defensive against insinuations on account of the disproportionately large number of its doctor promotions. It seems that in 1896-97 Erlangen turned out more doctors than any other German university, and one-half of all the *doctores juris* of that year in the whole Empire (177 out of 355). This startling fact the University attributes to the "freedom from formalities and ceremoniousness" of its regulations—an explanation which does not fully satisfy some of the critics, who, however, disclaim imputing to the Bavarian university the principle formerly recognized by another small university: "Accipimus pecuniam et mittimus asinum in patriam."

The conception of the stage as an educational agency, which has been quite general in Germany since the time of Schiller, has in recent years produced practical results in the shape of representations for the special benefit of pupils of the common schools. At Hamburg eight thousand children were three times (in January, February, and March) taken to the Stadt-Theater, where such plays as "William Tell," "The Maid of Orleans," and "Minna von Barnhelm" were given with an excellent assignment of parts. The seating capacity of the house being two thousand, each play had to be given four times. The price of admission had been put at six cents, and when it was found that some children could not afford even this small amount, they were provided with tickets at the expense of beneficent citizens. It is interesting to read in the Hamburg *Jugend-Warte* the favorable expressions of teachers concerning the influence of these entertainments upon their pupils; they may be summed up in the words of one of them: "The school representations are an educational instrument of the first rank." At Leipzig and Breslau, and probably in other cities, similar advantages are offered to the pupils of the upper classes of the *Volkschulen*, though not on as generous a scale as at Hamburg.

The Danish Medical Association, with the assistance of the Government, has, during the past few months, distributed throughout Denmark placards and pamphlets giving careful instructions for the prevention of tuberculosis. The placards are to be hung up in conspicuous places in railroad carriages and stations, schools and factories, and are distributed without charge to those asking for them. This measure, combined with the efforts that are now being made for the establishment of hospitals for the special treatment of tuberculosis, ought to have an appreciable effect upon the present rapid spread of the disease in Denmark.

The abolitionists used to be credited with long memories, and longevity was also their portion. From time to time the press writes the obituary of the "last survivor" of the

Garrisonian band, and there are always more to come. Mr. F. Gutekunst, Philadelphia, sends us from his well-known photographic studio an imperial panel portrait of the late Robert Purvis of the same city, who was actually the last survivor of the little company that founded in Philadelphia the American Anti-Slavery Society in December, 1833. He was the youngest but one of all the members of the convention, being the senior by a few months of the late James Miller McKim. Mr. Purvis, though allied by blood and marriage with the African race, was a man of singularly handsome and wholly Anglo-Saxon appearance, of polished manners, and yet logically a target for the prejudice which would have subjected him to the usual indignities visited upon his "color." Mr. Gutekunst's portrait is excellent.

The same artist sends us a corresponding portrait of President Patton of Princeton; and this too is to be praised.

—*Hand, hang, and have* are the show-pieces in Dr. Murray's first instalment of H for the Oxford Dictionary (New York: Henry Frowde), which is unusually full of matter for curious study. Take the attributives, nouns, and verbs derived from proper names. *Hamiltonian* has no fewer than four allusions: to James Hamilton (1769-1831) and his system of teaching languages; to Sir William Hamilton (1788-1856), the Scotch philosopher; to Sir William Rowan Hamilton (1805-'65), the Irish mathematician; and finally to Alexander Hamilton. The *hansom* cab perpetuates the name of the architect and designer who in 1834 patented the prototype of this vehicle. The English botanist Stephen Hales is the namesake of the genus *Halesia*, to which belongs our Southern snowdrop or silver-bell tree; and, observing that this name is pronounced in four syllables, with the stress on the antepenult, we wonder if South African Rhodesia is or is to be a rhyme for it. To *Hanserdic* means "to confront (a member of Parliament) with his former utterances as recorded in 'Hansard'"—to Chamberlainise, as it were; to employ the deadly parallel. To *Harvey* or *Harveyise* steel plates is to harden them "by a process invented by H[ayward] A. Harvey of New Jersey (patented in England 1838, No. 401)," as all who know the end-of-the-century armored vessel are aware. Lincoln's "half slave and half free" is quoted under *half*; and under *hang together* Franklin's "Yes, or we shall assuredly all hang separately." Franklin, by the way, would have missed the printer's "hanging indentation," and Keats's Letters (Jan. 6, 1818) would have supplied an extra shade of meaning for *hang out*: "Stopping at a tavern they call hanging out. Where do you sup? Is Where do you hang out?"

—Bentham's "greatest happiness of the greatest number" had a singular history. It "was first enunciated by Hutcheson, 1726, thence taken into Italian, 'la massima felicità nel maggior numero,' by Beccaria," in 1764, reappearing in English in a translation of this author's 'Del Delitti e delle Pene' in 1766; "thence in Priestley, 1768, and Bentham, 1776," while Gen. Perronet Thompson in 1829 shortened it to "greatest happiness principle," "rule of greatest happiness." Types of such transmutations are also *herlequin*, the Italian *arlecchino* being possibly the same as Old French *herlequin*, etc., of which "the ultimate origin is possibly Teutonic"; and *herquebus*, Middle High Ger-

man *hake(n)bühse*, transformed by Italian popular etymology into *arco-buso*, this in turn effecting a change of the earlier French name *haquebute* into *arquebus*, which was taken over into English. The dish *haggis*, "now considered specially Scotch," was popular in English cookery down to the beginning of the eighteenth century. A certain class of purists will be surprised to find *had* rather quietly ranged in line with *had better*, *had liefer*, *had sooner*, with a reference to Dr. F. Hall's "exhaustive treatment" of this idiom (as, by the way, for *Hansa* we are referred to Dr. Gross), and similarly to find the colloquial *have got* cited as a simple example of the present tense of *have* forming a present of completed action, or "present perfect." The noun *has-been* (the veteran who lags superfluous on the stage, one past his usefulness) ought to have retained its obsolete fellow *hadiwist* (vain regret, if I had known). The three forms, *hap hazard*, *hap-hazard*, *haphazard* suggest a principle of hyphenation (to avoid the ambiguous *ph* when the two words are written as one).

—In Mr. Arthur Waugh's 'Pamphlet Library' (Henry Holt & Co.) the volume of religious tracts is edited by the Rev. Percy Dearmer. His range is considerably wider than that of Mr. Rhys in the literary section, or than that of Mr. Pollard in the political. Whereas Mr. Rhys begins with Sidney's 'Apologie for Poetry' and Mr. Pollard with Saxby's 'Killing No Murder,' Mr. Dearmer goes back to Wyclif's 'Septem Hereses' and ends with No. 7 of the "Tracts for the Times." In further comparison with these predecessors his selections are shorter, more widely representative, and, it seems to us, more informed with the spirit of terse polemic. Out of his eighteen pieces only two deal with general religious topics. Fox's 'Concerning the Rule' and Swift's 'Abolishing of Christianity' neither of them gets far into the depths of abstract speculation, but, especially in the case of Swift, they are more than sectarian. The rest centre round points connected either with the Church of Rome, or with the Church of England, or with difficulties cropping out between the Establishment and Dissenters. It should be remembered that the cornerstone of the series is a rigid test. Only those pamphlets are admitted "which, besides possessing the saving qualities of distinction and style, have also exercised a striking influence upon the current events." In Mr. Dearmer's volume the names of Halifax, Defoe, Swift, Sydney Smith, and Newman vouch for "style and distinction," while there is no denying the effect produced by Simon Fish's 'Supplication for the Beggars,' Prynne's 'Looking-Glasse for Lordly Prelates,' and Law's 'Second Letter to the Bishop of Bangor.' Cartright, Parsons, Bastwick, Baxter, and Charles Lealie are among the other writers included. We must say that we always find Martin Marprelate a little tiresome, though we cannot deny the historical importance of the controversy. Apart from the amusement which one has in watching the deft cut and thrust of these old encounters, a valuable impression is left by the sight of sixteenth and seventeenth-century sword-play, as it was practised in religious broils. To use the editor's own words, "it cannot fail to encourage the growth of that historic sense which has proved so useful a solvent of many bitter disputations."

—The decision of the Minister of Public Instruction against the further admission of foreign (i. e., non-Prussian) students to the department of mechanical engineering in the Technische Hochschule of Charlottenburg shows the most radical way of solving the "Ausländerfrage" which has for some time been agitating the public mind in various parts of Germany. A more gentle and no doubt quite effective remedy for the crowding of excessive numbers of students from without into some German technical institutions and universities would be found, as the editor of the *Hochschul-Nachrichten* remarks, in the enforcement of uniform requirements for admission in the case of all students. That the question itself may become a serious one appears from reports of several institutions. Thus, the non-German students at the Darmstadt Polytechnicum, one of the smaller institutions of its kind, numbered three hundred during the last semester. The authorities have, however, not thought it best to adopt any restrictive measures beyond requiring foreigners to furnish proof of sufficient means of subsistence. In Saxony the Ministry has had under consideration an increase of tuition fees for students from other states, in order to relieve the pressure for room in the lecture halls and laboratories of the famous mining academy of Freiberg. The senate of the Technical High School at Brunswick has somewhat stiffened the entrance conditions for foreigners without otherwise yielding to certain demands made by the student body which betrayed a narrow and hostile spirit towards foreigners. Various motives and interests, some perfectly legitimate and honorable, others rather selfish and narrow-minded, are at the bottom of this whole question, and there is every prospect that the near future will bring about changes in the conditions under which students from other countries can enter German technical schools and universities. The granting of the degree of M.D. by the University of Berlin to foreign students whose general preparatory training was sufficient, has already been made the subject of discussion in medical associations and in the press.

—The results of the investigation of the committee appointed by the Sociedad Geográfica de Lima (Peru) to ascertain exact data concerning the effect of high altitudes upon the human body, are beginning to appear in the Bulletin of that society, the first instalment of measurements of vital or respiratory capacity being published in the number corresponding to the second trimestre of 1897. The measurements were made by Dr. La Puente with modern instruments of precision, and include external dimensions of the thorax as well as the quantity of air exhaled after a forced inhalation—that is to say, the vital capacity. The results are stated in tabular form substantially without comment, and hence require some manipulation to fit them for comparison with the results obtained by Hutchinson and others. Taking one of the most interesting tables from measurements made on indigenous Indians resident in the vicinity of Oroya, 12,248 feet above sea level, and correcting for age and stature, the average vital capacity is 3,847.5 cubic centimetres, which is only 78.72 cubic centimetres greater than the European average for men thirty-five years old, and of an average stature of 1.727 metres. The Oroya Indians show an average stature of 1.65 metres. While the re-

sult is hardly what might have been anticipated, some individuals certainly possess extraordinary respiratory capacity, in one case reaching 4,400 cubic centimetres, the age being eighteen years, and the height 1.69 metres. This is equivalent to a capacity of 4,797.4 cubic centimetres for a man of normal height thirty-five years old. It would seem that the observations of travellers concerning the increase of lung capacity with rarefaction of the air must have been based upon such extraordinary cases rather than upon average ones. The same number of the Bulletin contains an interesting article by Federico Moreno upon mortality in the city of Lima. With the exception of one brief period from 1857 to 1860, the annual increase of population has never reached one per cent. since the year 1700. Considering the natural healthfulness of the dry western coast of South America, this is a condition which, as Señor Moreno well insists, should be promptly remedied. Bad sanitation is responsible in part for Lima occupying a position as the eighth unhealthiest important city in the world, although the ravages of consumption, due to the almost universal prevalence of tuberculosis in the cattle supplying the city with milk, mount up to 27.24 per cent. of the total deaths. In charming contrast to this state of things is the record of Piura, where, against 750 deaths, there were 1,780 births in three years; and even this is exceeded by Sullana, where, during the past seven years, there have been only 700 deaths, while the number of births reached 4,485.

The Whirlpool. By George Glasling. F. A. Stokes Co.

The School for Saints. By John Oliver Hobbes. F. A. Stokes Co.

'The Disaster,' a translation of 'Le Désastre' by MM. Paul and Victor Marguerite, is a vivid and impressive account of the Franco-Prussian war. There are some fictitious persons, or, at least names, but artifices of construction are discarded, and the actual events of a consummate tragedy presented in chronological succession with an air of unaffected veracity. The opening scene is a state reception at Saint Cloud, when war was in the air, when it was felt that "war was wanted in high places"—an epitome of that splendid sham, the Second Empire. Here Pierre du Breuil, the connecting link of events, is introduced, and his observations

and feelings forecast that disastrous future whose spectre from the beginning obstructed for thoughtful men the pleasant, easy road to Berlin. Du Breuil is a soldier tried in Italy and Africa, and, at the moment, an orderly officer of the Minister of War. From the agitation and confusion of preparation for advance to the Rhine, he passes with Bazaine's corps to Metz as an officer of the general staff. So he has every chance to know all that the chiefs permitted to be known of their plans, to take part in several battles, to observe confusion, mismanagement, corruption in every department of the service, and to hear the officers' criticism of Bazaine—at first a whisper of discontent, growing to accusation of bad faith, culminating in rage, despair, and a cry of, "Treason."

The characterization of Du Breuil and a number of brother officers shows many remarkable literary qualities. They come from the nobility, the bourgeoisie, and the peasantry; some are passionate, impetuous, gay, some are cool, prudent, severe; but all are brave, patriotic soldiers, heedful of military discipline, obedient to the leader's orders even when their wisdom is doubted, consciously blind pieces in the game. When the end comes and a great army is handed over to the enemy, a few cannot endure such humiliation, the natural man asserts himself, and each takes his destiny in his own hands, finding liberty or death. But Du Breuil feels that as he would have shared the army's glory, so he must share its shame, and, bowing his head to the Prussian yoke, he goes into captivity, an obedient soldier, but a poor hero of romance.

The authors' object, however, is not to lead one man or a dozen men through a series of marvellous exploits to a picturequely heroic conclusion. They have tried to describe vividly in detail the inception, conduct, and result of a war in which an army full of spirit and patriotism was vanquished as much by the incompetence of some powerful persons and the baseness of others as by the superior skill and force of the enemy. They have achieved even more than they undertook, for their description of one war includes, besides pictures of battles and fighting-men, pictures of the effects of the struggle on the condition and morale of the French people, and is an indictment of every war as a grim satire on the assumptions of Christian civilization. These authors, it is well to remember, were soldiers before they became authors, and their father fell at Sedan, charging at the head of his Chasseurs d'Afrique. Their observations, feelings, and conclusions cannot be scoffed at as the dreams and imaginations of mere literary fellows. Their book has the authority of knowledge and the bitterness of experience.

Love and war by sea and land divide the honors of Archdeacon Brady's tale of the Revolution entitled 'For Love of Country.' The author has the power to make an old tale appear better and clearer than a new one, a power born of enthusiasm for the cause, and a belief that the Revolution was a passionate struggle for human rights—as nearly as possible, a righteous war. His patriotism being a finer sentiment than partisanship, he treats the enemy with unflinching courtesy. The English sailor, Lord Desborough, is as fine a figure as his rival and foe, the American, John Seymour. The laurel for supreme courage is given to Capt. Vincent and

the crew of the *Yarmouth*, who, after annihilating the little *Randolph*, went down with their disabled ship in perfect order, cheering the red flag of England nailed to the wrecked mast-head. This famous engagement is uncommonly well described, but perhaps not better than that between the *Ranger*, commanded by Capt. John Paul Jones, and the English frigate *Juno*. In these old-time fights the ship shares the life and spirit of the men, and the combat has vastly greater human interest than one between modern death-dealing machines. To the description the author brings knowledge acquired by service in the navy, which probably helps the uninitiated to understand and to feel as if he were in the thick of things. The chapters given to the crossing of the Delaware and the Jersey campaign are rather out of direct interest, and chiefly valuable for a natural and pleasing sketch of Washington. In the love romance, laughter and tears are fairly mingled, and a happy way found out of sore trial. The political faith of the young rebel, Kate Wilton, and of the old royalist, Mrs. Talbot, is an animating force, not a garment, and the suffering of each a personal contribution, from one to the Country and from the other to the King.

The potency of fashion is well illustrated by the prevalence of the novel of romantic and picturesque adventure. Many of the chroniclers of the commonplace so plentiful a few years ago have disappeared from public view, and most of the younger aspirants to fame dip their pens in blood. Mr. Lush, the author of 'The Federal Judge,' has rather flown in the face of fashion and written a sober novel about people engaged in commerce and the practice of peaceful professions. Still, the subject is war—war between a great corporation and the people; but the conflict is conducted by minds, and the most deadly implement is an injunction of doubtful validity, issued by the Federal Judge to restrain the employees of the Trans-American Railroad from striking. The story develops the methods Mr. Gardwell used to advance his corporation's interests without reference to honor or honesty, and to assure his own fortune at any cost. Gardwell is an unscrupulous person of infinite resource, but comes to an inglorious end through follies of which a duller villain, with a little prudence, would hardly have been capable. He is very well drawn, but not well enough to satisfy, because he succeeds too easily, and never encounters any serious opposition. His great achievement is the capture of the simple, honest circuit judge, Tracy Dunn, and the conversion of this sworn foe of corporations into a most pliable and useful tool. By his tact and keen judgment of men, he makes a friend of the Judge, and then, realizing the insufficiency of common methods of corruption, by bringing to bear subtle and well-calculated influences, without exciting a suspicion in the mind of the Judge, makes him perfectly his own. The characterization of the Judge is an excellent bit of work, and the moral of it is that every man has his price, though some may sell themselves unwittingly. Mr. Lush has a good deal to learn about novel-writing. His romance is hampered by lifeless conventions, and his style is not a style, but a way of telling things too plain and literal to charm. These are defects which may be overcome and probably will be by a writer with a desire to express things well worth that trouble, and

with the very rare power of putting a real man in a book.

When America is so old that native heroes shall have become epical and legendary, the cow-boy will doubtless be the centre of an imposing cycle. Mr. Wister's Western sketches are valuable contributions to the tradition. The name of the last, "Lin McLean," is well chosen for perpetuation. The legend of Lin McLean sounds as well as the legend of Arthur, or Roland, or Amadis. Already his figure has the imaginative charm of a vanishing type, for Mr. Wister says that he lived long ago, in the "happy days when Wyoming was a Territory with a future instead of a State with a past, and the unfenced cattle grazed upon her ranges by prosperous thousands." He possesses qualities necessary for heroes of any race or nation, such as daring in war, gallantry in love, and a reserve of emotional sensibility. To these he adds an impassive demeanor, an ironical outlook on his world, and a command of sententious comment and sparkling metaphor without which no hero could be accepted as American.

Bret Harte will always be the great authority for the myth of the "Forty-Niner," though his later works tend to enfeeble the early vigorous conception of mid-century Argonauts. He seems to have lost his intuitive skill, and to have made no perceptible advance in art by the constant practice of writing. One of his recent productions, "Three Partners," is a vulgar intrigue without motive, badly constructed, and in the end quite incoherent. Another, "Tales of Trail and Town," is less discreditable to his reputation. Some of the episodes are thrilling, and some of the characters strongly imagined, but every tale is impaired in value or rendered worthless by faults that can be attributed only to laziness, or indifference, or an absolute failure of literary instinct.

Mr. Joel Chandler Harris has written many tales of Georgia, the civil war, and the colored brother, but has had the discretion not to overwrite. We are already familiar with the kind of people who move through his latest volume, 'Tales of the Home Folk,' and meet them without expectation of novelty, but with hope of being well entertained. The author's kind, genial, and humorous personality lives in every episode, and unfailingly excites the desirable sensations of pleasure and satisfaction. In one sketch, "The Late Mr. Watkins of Georgia," Mr. Harris recounts with excellent humor the troubles brought upon him by the "Uncle Remus" tales. The learned to the earth's remotest ends appear to have taken him with embarrassing solemnity, and call upon him in many tongues to engage in the most acrimonious controversies about folk-lore and myth.

In Mr. Mitchell's clever and original tale, 'Gloria Victis,' a country clergyman, Dr. Thorne, startles his congregation by declaring that Christ incarnate frequently visits this earth to lift up those who despair and to lead sinners to repentance. By the miracle wrought in his last chapter, the author attempts to show that Dr. Thorne's conviction was not an hallucination. Though the attempt is perhaps too daring for complete success, it is not a failure, and the incident appears possible if not probable. Undoubtedly, since a miracle was needed to save Steve Wadsworth, objection to its use would be ungrateful. He is a most attrac-

tive youth, and, however surprising, never incredible, always a logical argument from his inheritance. This unpleasant and dangerous inheritance is described by Mr. Mitchell in uncompromising modern fashion, bluntly, tersely, with much insidious irony and humor. His manner is rather better suited to realistic narrative than to the discussion of Christian doctrines and ethics. For these serious subjects he is a trifle flippant, never, however, falling into irreverence or cheap cynicism.

Most of the tales in the volume entitled 'An American Mother' are impressions of New York's most fashionable society, not much more than gossip without the piquancy of scandal. The author, like most writers who present their observations of this class to the general public, firmly believes that its one aim is to repress individuality, that it abhors independent action and holds originality equivalent to irretrievable disgrace. Twenty or even ten years ago this may have been Gospel truth, but we feel that justice is not being done to the development of our aristocracy. It is hardly possible that a class intimately familiar with the ways of genuine aristocrats can have perpetuated errors natural enough in its primitive, experimental period. Some one must have been keen enough to discover that no mortal is so carelessly and confidently himself as is a duke, or an earl, or even a penniless younger son of unquestioned lineage. Such observations must surely have been whispered about New York and Newport and Lenox, and excited an earnest effort towards imitation of illustrious example. It is at all events wise to receive with caution the statements of persons who tell us that our aristocrats are still intensely preoccupied with questions of etiquette, and have no ambition except to be colorless members of a recognized "best set"—our shabby substitute for "nobility and gentry." The characters in two or three of these sketches are far removed from the paralyzing influence of a best set, and in dealing with them Miss Underwood shows some knowledge of human nature. She has an excellent notion of form and a lively style, which make one regret a waste of talent on the appearances of things.

The best of the people in Mr. Gissing's 'Whirlpool' are only upper-middle-class, yet have many points in common with the American aristocrat as celebrated in fiction. They have a similar solicitude about sets, and a similar regard for uniformity of manner and of taste in clothes and cookery. They have not nearly so much money, and indeed suffer great inconvenience through the inadequacy of bank accounts for desired expenditure. The families who are in, or are struggling to get into, the whirlpool of London life, derive their incomes from the professions or the stock exchange or the timely legacies of a maiden aunt—that special British providence of the helpless or unfortunate or spendthrift nephew. These families ought to be happy, but are not, and their discomfort is in every instance attributed to the folly of the women. Mrs. Abbott, Mrs. Rolfe, Mrs. Carnaby, Mrs. Leach are all blessed with affectionate husbands, who slave for them, believe in them, and run into debt for them. Some of these ladies give in return snubs, bad temper, constant demands for more money and for absolute freedom from domestic care. Others preserve a fair face, but cherish a deadly

determination to get what they want, which is generally what their lords don't want, and always what they have to pay for. The only reasonably happy pair live in the country, where the wife—occupied with children and chickens—has no time to strike for freedom, and finds mental refreshment in the husband's Latin quotations. Fate has surely been especially cruel to Mr. Gissing in his experience of women.

The affairs of these families are closely enough interwoven to make a novel, but Mr. Gissing cares less for the whole effect than for the representation of individuals. He cannot see that though the separate characterization may be true, the combination is false. He falls into the commonest error of pessimists, so keen for defect and failure that they ignore perfection and success. So their labor, however sincere, is futile. They teach nothing, because nobody of age to read and understand them believes what they say.

In 'The School for Saints' Mrs. Craigie has relied but little on herself, and has shown an humble and catholic spirit in imitation. Her first scene, at Miraflores, and several others, including the important one near the end in Catesby Church, are very close copies of George Meredith's method and manner. The primitive Fathers and famous liturgies contribute largely to her expression of religious sentiment, the modern and minor romantic novelists to the adventures with the Carlists in Spain, while the hand of Disraeli, so long dead in letters, is over all. The author challenges comparison with Disraeli by introducing him in her story, epigram incarnate, "wearing a light overcoat, gray trousers, a white hat, and lavender gloves." These details of costume help us to know when he is being Delphic in his own person and when in Mrs. Craigie's. The worst of his domination of the page is that it casts suspicion on those dashing cynicisms and brilliant ironies which sparkle all over Mrs. Craigie's less serious and more amusing works.

Separately, the other literary influences have not affected her badly, but she has not assimilated them to the point of producing harmony and unity. The book, therefore, is tiresome and artificial except in the expression of religious sentiment, which has an ardent illogical and hot as of one newly come into inheritance of faith. Respectable though Mrs. Craigie's ambition may be, it has soared too high. She has not been able to sustain characters through a series of situations in which different aspects must show themselves—characters that cannot be hit off by a few epigrams. The intrinsic unreality of her book is not modified by such devices as italics, footnotes, and marginal references to lost documents. These are but feeble protests to establish a suspected veracity, and suggest the author's consciousness of weakness and insufficiency.

A DICTIONARY OF CLASSICAL QUOTATIONS.

A Dictionary of Quotations (Classical). By T. B. Harbottle. The Macmillan Co. 1897.

"Quotation," said Dr. Johnson, "is a good thing; there is a community of mind in it. Classical quotation is the parole of literary men all over the world." That was in the happy *tempus actum* when a background of solid classical scholarship was to be assumed in the literary man. Even in these

days of dictionary erudition the adroit journalist recognizes that, in the embroidery of quotations which he is to palm off as an essay, an occasional gold thread of classical allusion gives an agreeable and easy effect of learning worn lightly. To offer the world an idea with the air of an inventor, and drive it home with a classical illustration in which it has already been crystallized in inevitable language, is a literary trick that has always been crowned with success. The appearance of the first really exhaustive manual of classical quotations may be, from the old-fashioned point of view, but a sign of the distemper of learning. But the old-fashioned point of view is one that the breathless hack writer cannot afford. For him Mr. Harbottle's book is a whole armory of weapons. "Quicquid bene dictum est ab ullo, meum est," is an article of his unspoken creed, and, with Mr. Harbottle by his side, he need never open Seneca.

It was no slight task that the compiler of the book set himself when he attempted to select from the whole range of Greek and Latin authors, classical and post-classical, those utterances on life and men and manners that have been echoed through literature, and are still in many cases alive in the mouths of men who could never refer you to the *locus classicus* for them. Mr. Harbottle can have derived little assistance from existing manuals of the kind, for such works as King's 'Classical and Foreign Quotations' or Riley's old-fashioned 'Dictionary of Latin Quotations' cover a very limited field and are hardly to be placed in the same category with his scholarly achievement. To make such a collection exhaustive was naturally out of the question in a volume of 643 pages. In any case, another man's selection of *loci classici* will never be entirely to the taste of the scholar. But the general reader who should turn to this manual for the originals of the stock phrases for which he dimly suspects a classical source, would seldom be disappointed. There are even learned men, we imagine, who would come off badly in an examination in the curiosities of literature, such as could be set from Mr. Harbottle's pages. How many are there, for instance, who could tell you offhand that the *opera* of Archimedes must be looked for in the pages of Vitruvius, 'De Architectura,' or that the *experimentum in corpore vili* dates from the sixteenth-century writer Telesius? Mr. Harbottle has perforce left *poeta nascitur non fit* and *quem deus vult perdere prius dementat* in the provoking anonymity that has so long obscured their origin. For the latter, at any rate, the scholar on Sophocles, 'Antigone,' 626, furnishes a fairly satisfactory Greek prototype. It would be a curious inquiry how Justinian's *in flagrante crimine* was transformed for purposes of quotation into *in flagrante delicto*, or why Pliny's *ne supra crepidam* entered regularly figures as *ne ater ultra crepidam*.

One of the compiler's chief difficulties was to secure an effect of *lucidus ordo* for such a manual. By means of three indices, of authors, subject-matter, and Greek and Latin words, he has supplemented the alphabetical arrangement which, taken alone, lands one in hopeless confusion. Even as it is, we think that much might have been done in the way of cross-reference and more judicious grouping of subject-matter. The alphabetical order is, with apparent caprice, occasionally abandoned for such grouping.

not always with happy results: e. g., *admirari* is not found in its alphabetical position on p. 161, but appended to a less well known dictum of Cicero on p. 164. This would be well enough if it had been done consistently; it would certainly have been better, for example, to place together the *mens conscia recti* of Virgil, Ovid, and Ausonius (we note in passing that the Virgilian reference is ignored in the index). We fail to see why Cicero's reference to the triumphant death-song of the swan should be given, while the original passage from the 'Phædo' is altogether omitted. We defy any one to find *nequit vos missa reverti* by the index, and the alphabetical order will fail him unless he knows the whole passage. On p. 57, Salust's translation of a famous line in the 'Septem' of Æschylus is given with no indication that the original appears on p. 480; on p. 207 we ought to be told that the passage from Claudian is a translation of a couplet in the Anthology; on p. 253 the quotation from P. Syrus should be referred back to the Greek of Plutarch. One feels that the author has defrauded his readers on finding that the famous Lucretian passage about the handing on of the torch is given without the slightest indication that it is a translation of the still more famous sentence in the 'Laws' of Plato. On p. 262, Pliny's ever appropriate saying that "something new is always coming out of Africa" is not given as a translation from Aristotle, as it should be.

Mr. Harbottle's omissions are many and striking; every intelligent reader can make a list for himself, and later editions of the book will doubtless remedy the pardonable deficiencies of the first. We should have expected to find more of the *mensuræ de l'antiquité*—those famous short sayings which historical etiquette has ascribed to great men—the "short speeches which fly abroad like darts and are thought to be shot out of their secret intentions." What though the Emperor Julian did not say "Vicisti, O Gallime"? We demand that fiction of the Christian fathers, together with its Greek original, in a work of this sort. We have no time to read Suetonius, or Appian, or Tacitus; why, then, does Mr. Harbottle omit Vespasian's dying jest "Ut puto, deus es," the "Philippis iterum me videbis" of daily quotation, and Galba's "Feri, ad ex re sit Populi Romani"? We find here the immortal epitaph of Simonides, but not Cicero's translation of it—the celebrated "dic hospes Spartæ." The following are at any rate hackneyed enough to deserve a place: the *Surgit amari aliquid* and the *videtur vis enim* of Lucretius, the epitaph of Ennius, Seneca's *Ultima Thule*, Virgil's *arma emens cepio*, and that passage which Fénelon never read without admiring tears, beginning *eude hospes contemneret opes*; that other line in the Second Æneid, *infelix simulacrum etque ipsius umbra Cressæ*, which St. Augustine would cite as typical of Pagan art from which the Christian must flee; the passage that is for ever associated with Pitt's great speech on the slave-trade when, at daybreak, he pointed to the sunrise that was gilding the windows of the House of Commons and uttered with tremendous effect the lines from the first Georgic,

"Nec ubi primus equis Oriens affavit anhelis,
Illi sera rubens accendit lumen Vesper."

Another phrase that, as Tacitus himself would say, is conspicuous by its absence, is Tacitus's remark about Priscus, *etiam sapientibus cupido gloria novissima exurit*, from which

Milton drew his "last infirmity of noble mind." It is hard to trace this saying to its source. A Greek writer quoted by Atheneus tells us that Plato said that "love of glory is the last garment we discard in death," but it is of course not in Plato, and by the time that the Emperor Julian uses the phrase *τὸ ἰσχάρον χιτῶνα ἀποδιδράσκου*, it had passed into a proverb. An interesting modern instance of its use is found in Chamfort's 'Dialogues entre Saint-Réal, Julien,' etc.:

"Julien loq. La gloire est la dernière passion du sage; c'est la chemise de l'âme, m'a dit tout à l'heure un philosophe aimable né parmi mes chers Gaulois.

"Saint Réal. Ah! je reconnais Montaigne."

This list by no means represents the omissions from the Latin Section that occur to us. In the Greek we miss Plato's *ὁμιλοῦντες τῷ θεῷ*, the *μενέχμαρες ἄνθρωποι* of Aristippus, Heraclitus's *νέμερα χυμαί*—not to mention others no less famous. On p. 51 Seneca's translation of the Stoic hymn of Cleanthes is given, but Mr. Harbottle has omitted the original Greek. On p. 388 the earliest literary use of the "god from the machine" should have been traced to the 'Cratylus' of Plato. On p. 487 the phrase *κατακτάτω ἀνδραγαθὸν χιτῶνα* is quoted from Diogenes Laertius as a saying of Theophrastus; Antiphon, however, had said it long before him, and it is first recorded in Plutarch, 'Vit. Anton.,' 28. The 'Cratylus' is quoted as the authority for the Heraclitean saying that one cannot step twice into the same river—here the words of Heraclitus (p. 41) should have been quoted. It was Heraclitus, again, and not Herodotus, who said first that "men's ears are less trustworthy than their eyes."

Mr. Harbottle occasionally mistranslates. The most astonishing case is the familiar Horatian *fallentis semita vitæ*, which he renders (p. 67), "The pathway of my declining years"! In spite of Heraclitus we distrust our eyes and passed on to p. 171, where *oderint dum probent* is mistranslated, "They will hate the doer while they approve the deed." On p. 373 Mr. Harbottle, in the passage from Epictetus, reads *εὐφροσύνη*, but translates the reading of Stobæus *εὐφροσύνη*. On p. 54 he has altogether missed in his translation the point of Seneca's "brave man pitted against fate—especially if he be the one that gave the challenge."

The book is marred by not a few misprints, which are especially to be deplored in a work of reference. It is a case of *corruptio optimi pessima*—a maxim that Mr. Harbottle should first take to heart and then include in a second edition. We note the following: p. 4, for *negligemus* read *negligimus*; p. 44, for *immortalis*, *immortales*; p. 57, for *ardallionum*, *ardellionum*; p. 274, for *seculi*, *scæculi*; p. 274, for Pliny reference read 97 for 98; p. 282, for *involvens*, *involvens*; p. 283, for *virtutis*, *virtutem*; p. 338, for *ἀνδραγῶν*, *ἀνδραγῶν*; p. 338, for *being*, *bring*; p. 355, for *ἀνδραγῶν*, *ἀνδραγῶν*; p. 368, for *ἀδελφίτη*, *ἀδελφίτη*; p. 394, for *σπυρανοῦ*, *σπυρανοῦ*; p. 402, for *ἀνδραγῶν*, *ἀνδραγῶν*; p. 417, for *κατακτάτω*, *κατακτάτω*; p. 492, for *ἀνδραγῶν*, *ἀνδραγῶν*; p. 514, for *ἀνδραγῶν*, *ἀνδραγῶν*.

When all has been said that can be said in criticism, our gratitude to Mr. Harbottle remains. Undeterred by a slight disconnection of plot, we found ourselves reading his book continuously with unflagging interest. Its faults are faults of detail, which can easily be removed in a later edition.

The Siles of North America: A Description of the Trees which grow naturally in North America, exclusive of Mexico. By Charles

Sprague Sargent, Director of the Arnold Arboretum of Harvard University. Illustrated with figures and analyses drawn from nature, by Charles Edward Faxon. Vol. XI. Coniferae. Pinus. Boston: Houghton, Mifflin & Co. 1897. Pp. 163, plates 55.

Of the seventy species of Pinus known to botanical science, about one-half (or, more exactly, thirty-four) are regarded as coming within the geographical limits of this work. The seventy species are survivors of a host, numbering a hundred or more, which flourished in the miocene tertiary. Some of these survivors have had a troubled life, and now find a temporary refuge in very restricted regions. How soon they may be forced to give up even these narrow habitations and relinquish their unequal contests with the fates, we cannot tell, but if pines, as was once thought, could speak or even whisper, they would doubtless complain of the great prosperity and wide diffusion of their more fortunate kinsfolk which flourish over vast areas. But the jealous pines which think they have fallen on evil times, and which are envious of those which grow thriftily over hundreds and hundreds of square miles, ought to be comforted by the reflection that this very prosperity of their relatives is the greatest peril of all, and that these widely diffused and numerous individuals are dangerously near their end.

For it is on these vast forests of pines and their allies that the selfishness of spend-thrifts has cast its fatal glance. The scanty groups of survivors of all sorts of climatal hardships may continue to escape a while longer, but not so the thriving forests of vast extent. These latter seemed to be doomed to speedy extinction. Take the terrible illustration of the recent course in Congress. To our Senators and Representatives came word that a wise national policy of reservation and preservation of forests had been inaugurated. A commission of large experience, and containing not one unpractical member, framed a report showing what ought to be and could be done in saving our national heritage of forest trees. But, after a short period of apparent prosperity, the report began to meet with persistent opposition—some of it open, and much of it underhand. In few cases of opposition to a sound policy has the case for the opponents been more skillfully managed. Local prejudices were aroused, and all the vested interests took a quiet hand in the matter. Many persons who ought to have known better were confused by the clamor and scoffing, and were made to look upon the report as an impracticable scheme of doctrinaires who hardly knew a forest when they saw one, and doubtless some of our readers may have thought that the report regarding reservations went too far. The fact is, it hardly went far enough.

To all who feel that the report was a mistake, we commend the present volume. We advise them to glance through these pages, which present in a cautious but telling manner some of the economics of the pines. In addition to the careful presentation of these matters on conservative lines there has been given a great amount of interesting matter of a more trivial character, such as the utilization of the less important products of the plants. One of the most curious of these is the statement (on page 93, communicated to the author in a letter from M. W. Gorman) that a variety of the scrub pine, growing in

Alaska, is employed by certain natives as a source of food. The bark of this tree is subjected to a complicated treatment, which ends in the production of a smoked cake, relished by the children, but a trifle too hard for the worn-down teeth of adults. On thinking over what the cakes must taste like, we feel like congratulating the adults on their happy escape. All the other foods derived from the pines are pretty fully given, and we may further say that the different uses are all well put. Nor has the wealth of historical allusion attaching to this genus been overlooked by the author. Therefore, with its botany and applied botany, the volume is uncommonly attractive.

It is impossible to praise too highly the excellence of Mr. Faxon's drawings. They are in every way as good as the best he has given before, and the reproduction of his plates is above the average of the preceding volumes. The whole work is highly creditable to the author and artist and to American botany.

Norwegian Grammar and Reader, with Notes and Vocabulary. By Julius E. Olson, Professor of Scandinavian Languages and Literature in the University of Wisconsin. Chicago: Scott, Foresman & Co. 1898. Pp. x + 230.

In order properly to justify the title of "Norwegian," applied to a grammar and reader, such a book should concern itself with the language and literature of the dialects of Norway, as well as with the common literary language and the literature which it embodies. The author dislikes, as he says in his preface, "the cumbersome and awkward term Dano-Norwegian," and has therefore discarded it. His book, in point of fact, is, nevertheless, a "Dano-Norwegian Grammar and Reader," in that he does not take the dialects into consideration in the grammatical part, and only incidentally exemplifies them in his "Reader."

It is, of course, quite apparent that the literary language of Norway is not by any manner of means coincident with the language of Denmark. It has, to quote the author, "numerous differences in pronunciation, vocabulary, and grammatical details," which the dialects and local environment have introduced and developed; but all these together have none the less not made Norwegian out of it. It is very much as if a grammar and reader of the English language in America were put forth with "American" instead of "English" on the title-page. There is a Norwegian literature in the same way that there is an American literature; but as truly as the latter is written in the English language, so truly, in a fundamental sense, is the former written in Danish.

The *raison d'être* of Prof. Olson's 'Norwegian' manual is, then, not essentially different from Groth's and Sargent's books, which have "Dano-Norwegian" in their titles. The grammar is inferior to Groth's, its defects particularly being a lack of precision in statement in the phonetic part and the general paucity of such material—points in which the latter work excels. Its inflections, however, are adequate, and the illustrative sentences in the main excellent. By far the best part of the book is the "Reader" and the accompanying "Notes"; the former being an excellent anthology of the literature of Norway since 1814, both in the selection of the material and in its arrangement, and

the latter an admirable commentary upon it. There are, however, one or two surprising omissions. Norwegian dramatic literature, for instance, is represented by a single short extract from Ibsen's "Pretenders." Other citations from "the Master" are four lyrics and two public speeches, but there is nothing from any one of the social dramas, which, more than any other single element, have made him and the whole modern literature famous outside of Norway.

The most disappointing feature of all in a "Norwegian" reader, nevertheless, is the absence of Norwegian. In the present case this looks, too, very much like a neglected opportunity, for the author is apparently thoroughly cognizant of the field. The modern dialect literature of Norway is not only considerable in amount, but altogether remarkable for its vitality and vigor. This is particularly true of its prose; and Garborg, possibly the most notable writer in the popular dialect, has even been hailed, for his novels, as the herald of a new era in Norwegian literature—the era, as Scandinavian critics have called it, of the "Norwegian renaissance." The only specimens of this literature are four lyrics from Aasen, Vinje, Garborg, and Per Sivle, contained on as many pages of the "Reader."

The book, as a whole, in spite of what has been said, is a welcome addition to present subsidia, and as "an introduction to the study of Norwegian literature" will well meet what the author says is, in his idea, the essential need of the work.

The Life of Francis Place, 1771-1854. By Graham Wallis, M.A., Lecturer at the London School of Economics and Political Science. Longmans, Green & Co. 1898. Pp. x, 398. Portraits.

It is not known to all students of British political history that one of the personalities most efficient in promoting the growth of enlightenment and reform during the first half of the present century was a London tailor, who never sought to enter Parliament and who never held place or office. He was the associate and intimate friend of Bentham and the Mills, of Sir Francis Burdett, of Robert Owen, of Romilly and Richard Cobden and Grote. The library behind his shop in Charing Cross was for years a place of meeting for Liberal and Radical politicians in and out of Parliament. There reforms were discussed and agitations organized. There plans were laid for the return or defeat of members of Parliament. There were composed and there were circulated manifestoes that pulled down ministries. It was at once a library of political reference, a club-room, and a tract repository. This man was one of the organizers of effective trade combinations at a period when organization too often meant transportation. He was mainly instrumental in the repeal of the Combination laws, in the early advances of popular education, in the achievement of Reform, in the repeal of the newspaper-stamp duties, in the establishment of penny postage. In politics and religion he was the outcome of the French Revolution. His last efficient service was on the committee of the Anti-Corn Law League. This man was Francis Place. Joseph Hume, when near his end, wrote of him as having been "the most disinterested reformer he ever knew, valuable in council, fertile in resource, performing great labors; but he never thought of himself. Honors and advantage he might often have com-

manded, but he preferred assiduous and private services, which he tendered of his own zeal, and defrayed out of his own wealth." His carefully indexed letters and papers, his autobiography, his collections of newspaper cuttings, histories in MS. of the political events of his time, occupy cases of their own in the Library of the British Museum.

As a writer, Place was untrained, diffuse, and wandering; little use has, therefore, hitherto been made of the invaluable mine of materials left by him. We have here, admirably written, not alone his life, but an analysis and clear exposition of the principal movements in which he was engaged. It has required no small talent, no little labor, to construct such a narrative out of such material. It is assuredly a book that will live. The history of Francis Place's early struggles against adverse circumstances is as interesting as a novel. The main portion of the work is stiffer reading. The essential value lies in the details of political events many of which have their bearing upon the present. We realize, for instance, that seventy years ago as brilliant hopes were entertained as at the present day of universal happiness through collective ownership of land.

Francis Place was born in 1771 in a sponging-house kept by his father, a man of low character. He was apprenticed to a leather-breeches maker, and at nineteen, on fourteen shillings a week, married a girl two years his junior. She rose with him, and was the beloved companion of his early middle life, but never recovered the grinding hardships of the first years of their married life. A strike in which he took a leading part reduced them to the direst poverty. During the enforced idleness of that time, in their single room, a child dying of smallpox, and most of their effects pawned, he commenced that course of self-improvement which he carried on through life, and which led to his success. From being a journeyman, he began to deal in clothes, in 1799 opened a shop in Charing Cross, for a period definitely gave up every form of public life, and within a few years was in receipt of an annual income of several thousand pounds. The humiliations a man of his feelings and temperament had to endure at that period in achieving success in such an occupation are graphically described. As fortune smiled, he devoted himself more and more to public affairs. His library and writing-room behind the shop (a knowledge of the existence of which he concealed from his ordinary customers) became, as we have said, a place of call and a centre of political activity. When, yet in middle life, he retired from business, he still kept this room open as the best means by which he could hope to move the political life of his time. We have from his own pen a striking picture of himself in advanced life at Ford Abbey, visiting Bentham and the Mills, "pacing the walks from 10 to 2—four hours' hard work at Latin. I use all the care and diligence I possess or can command at this very, very difficult study." Much of his powers of accomplishment lay in that:

"I could dismiss a train of thought at pleasure and take up another, and could leave any business of any kind and go to something else, without any reference to the subject I had left; and when I concluded the new thoughts or finished the new business, I could revert to the old thoughts or business and take them up again where I had left them."

His enthusiasms were tempered by such

judgment. He occasionally passed through periods of hopelessness as to the possibility of moving society to its own good. At times he withdrew entirely from public life, soon again to be called back by his sense of duty or the claims of others. At times we find him pouring maledictions not a few on the insensibility of Parliament to generous feeling and public opinion. Like most men who have accomplished much, he expected more than has been realized from reforms. Writing in 1838: "If general post letters were charged only one penny, . . . we should become a wiser and a better people than any which have ever existed, or even [been] contemplated as likely to exist." He never anticipated a time when, under a popular franchise, the votes of London, Manchester, and Birmingham would largely contribute to return a Conservative majority of 150 to the House of Commons. A second marriage ended unhappily. Place lost much of his property. But he retained his equanimity to the end, and spent the last years of his life in the society of children and grandchildren, pleasantly occupied with the arrangement of his papers. He died peacefully in his sleep in 1854, the excitement concerning the Crimean war causing the event to pass almost without notice. Doubtless many are by the example of such lives moved to the full training and use of their faculties. Other eager natures there are, endowed with but ordinary powers and ordinary abilities, who are led to strive and strain to little purpose—perhaps even to cloud with a sense of failure lives that otherwise might have passed happily, contented with every-day occupations.

"A really delicious chain of absurdities, which are based upon American independence and impudence. . . . Exceedingly amusing"—N. Y. COMMERCIAL ADVERTISER.

WELLS'S HER LADY-SHIP'S ELEPHANT.

With cover by WILLIAM NICHOLSON. 12mo, \$1.35.

"Mr. Wells allows his sense of humor to play daffily around the portentous bulk of an elephant. It plays also about the personalities of half a dozen men and women whose lives, for a few brief, extraordinary days, are inextricably intertwined with the life of the aforesaid monarch of the jungle. . . . Smacks of the fun which can be created by clever acts placed in excruciatingly droll situations."—N. Y. TRIBUNE.

"Absolutely uproarious in plot. . . . No line can be skipped without loss."—PHILADELPHIA TIMES.

OXFORD UNIVERSITY PRESS,

(American Branch) 91 5th Ave., New York.

HAKLUYT SOCIETY President, Sir OLIVER MARKHAM, K.C.B.—A volume on THE FIRST VOYAGE OF VASCO DA GAMA, 1497-99, translated and edited by E. G. Ravenstein, Esq., is now being distributed to members by Mr. Quaritch.

The annual subscription is one guinea (\$5 for America). List of works issued or in preparation may be obtained from

WILLIAM FOSTER, Honorary Secretary, Berden, Holly Road, Wanstead (England).

Two Timely Books

Attention is invited to the two works named below, by ALEXANDER BROWN, showing the struggles between England and Spain in the early years of American history, and how persistently Spain opposed every movement towards Freedom.

The Genesis of the United States.

A Narrative of the Movement in England, 1805-1816, which resulted in the Plantation of North America by Englishmen, disclosing the Contest between England and Spain for the possession of the Soil now occupied by the United States. With Notes, Maps, Plans, 100 Portraits, and Comprehensive Biographical Index. 2 vols. 8vo. \$15.00, net; half morocco, \$20.00 net.

It is difficult to conceive of a more valuable addition to the documents of our early history than this collection.—*Christian Union* (New York).

The First Republic in America.

An account of the Origin of this Nation, written from the Records then (1624) concealed by the Council, rather than from the Histories then licensed by the Crown. With a portrait of Sir Edwin Sandys. 8vo, \$7.50, net.

In this narrative Spanish agents, sailors, soldiers, and fleets figure conspicuously.

Sold by all Booksellers. Sent, postpaid, by

The Nation.

NEW YORK, THURSDAY, JUNE 2, 1898.

The Week.

The sixth week of the war opens with the naval situation reasonably satisfactory. Admiral Cervera's bolt is shot, according to the best intelligence, and the long period of uncertainty in which he has kept our military authorities is ended with the definite knowledge that he is safely held in Santiago by Schley. If we may believe the reports about the condition of the Spanish fleet which come from Curaçoa, Cervera had very little choice. Raiding our coasts or fighting either of our squadrons was out of the question for a commander whose first duty was to find a port in which to coal and refit. His empty bunkers and depleted larders and ships "gone lame" doubtless determined his choice of Santiago as a harbor of refuge, more than any preconceived and subtle strategy. We take it for granted that our naval authorities, having got their troublesome adversary cooped up, will see to it that he does not escape.

The call for 75,000 additional troops must be taken as a sign that the Government means to push the war to as early a conclusion as possible. Everybody must approve of this. With the *s* of the Spanish fleet now a known quantity, vigorous measures can be planned and executed with confidence. There is no way of making war gently, and the harder the blows delivered, the sooner will the end come. Spain's bitter realization that she can count upon no effective European friendship, and her internal difficulties and distractions, offer at least a reasonable hope that she will not blindly persist in an unequal combat, once her inferiority is clearly demonstrated and her honor salvaged.

It is to be hoped that the dispatches from Washington in regard to the new call for volunteers are correct when they say that it is primarily intended to fill up the regiments already mustered in before accepting new organizations. The statement is also made that the Adjutant-General's office thinks "the regiments as now constituted are too small for the highest efficiency," as the companies are only eighty-three strong. It would, in fact, be difficult to assign a good reason for giving the volunteer regiments only 1,026 men, while the regular regiments, upon which they are supposed to be modelled, are assigned 1,272 soldiers for their full strength. Even the latter number is far below the size of the regiment which European

experience has taught to be the correct one, for our brigades as now organized at Chickamauga are smaller than the German or French regiment. Every officer of experience knows that there was no greater blunder committed during the civil war than allowing veteran regiments to dwindle to a couple of hundred men and then withdrawing them from the front. In their places were sent new regiments of green men with utterly inexperienced officers, mostly appointed for political reasons. Thus the valuable knowledge of veteran officers was thrown away, and the armies constantly weakened by having to break in raw troops with commanders fresh from civilian duties. An enlargement of the existing regiments to twenty-four hundred men each would be the cheapest and best way of increasing our army and adding to its efficiency. One has only to think how many politicians and place-hunters from Florida to Oregon will cry out at the suggestion of a failure to provide hundreds of officers, in order to realize how great a pressure will be brought to bear upon the War Department and the President to prevent the carrying out of so excellent a military measure.

It has been left for an English Admiral—Admiral Colomb—to point out the important bearing of Dewey's world-resounding feat at Manila upon a leading branch of naval theory. This is the question of a "naval base." We heard no end of this in the Hawaiian debates. Well, the Spaniards had at Manila just the kind of mystic "key" that we were urged to secure at Honolulu. According to certain theorists, their possession of the key made them unassailable. But Dewey, without a particle of reverence for this solemn theory, walked up and plucked the key out of the Spaniard's hand. As Admiral Colomb puts it: "Without the shadow of a base nearer than the other side of the Pacific, the American commander has reduced a squadron to nothing under the guns of its protecting works, and he now lies in Manila Bay making for the time the enemy's base his own." He adds that this operation used to be recognized in the British signal code, one old order reading, "Take up the enemy's anchorage which they have just left." The Admiral says that this signal was stricken out of the code by his own hand, and that he "never thought to see its wisdom illustrated by our cousins in practically performing the identical evolution." These considerations do not tell the whole story, of course, but they are well worth bearing in mind in connection with the general talk about needing naval bases all over the world for our enlarged navy. Dewey has shown con-

clusively that a naval base without a superior fleet to defend it may become simply a burying-ground for war-ships.

The Senate committee on finance has decided to accept no amendments to the war-revenue bill which are not germane to the measure. This disposes of Mr. Lodge's attempt to make the annexation of Hawaii a condition of the Government's getting the money which is needed to prosecute the war. Even before the committee took this action, the Massachusetts Senator had discovered that he had made a sad blunder, and was trying to devise excuses for his performance. He gave out that his annexation "rider" was not intended for obstruction, nor was it introduced with any hope that it would be adopted, but merely that it might "give the champions of the annexation project the chance they have long sought to attract the attention of the country to the arguments in favor of annexing Hawaii, and to do some debating" on the subject. The only comment needed upon this explanation is made by the *Philadelphia Ledger* when it says:

"The excuse is worse than the offence. How can the amendment be debated without causing delay, and how can it present the cause of annexation without debate? If Senator Lodge does not wish his sanity to be questioned, as well as his patriotism, he will revise the explanations his friends make for his extraordinary conduct in this affair."

Much of the discussion that the pending bill to raise revenue for the expenses of the war has received in the Senate has been altogether beside the mark. Senator Stewart and Senator Allen have, of course, illustrated the evils of monopoly by talking incoherently and excessively about things in general and silver in particular, while other Senators have discussed the issue of bonds and greenbacks in such a manner as to make it doubtful whether they are really ignorant of the elementary principles of finance, or are only trying to please benighted constituents. On the other hand, a number of Senators have engaged in the debate in the spirit in which such debates should be carried on. They have regarded the question before the Senate as relating to the manner in which taxation should be imposed with the best fiscal results and with the least inconvenience to the people, and have not considered it wise to adopt measures of doubtful policy and constitutionality at a time when money is wanted immediately to pay the cost of war. The result of this calm and statesmanlike discussion is apparent in the decisive vote by which the proposed tax of one-quarter of 1 per cent. on the gross receipts of corporations was rejected.

Mr. Allen, the Populist Senator from Nebraska, said in the debate last week on the war-revenue bill: "We shall be guilty of cowardice, inexcusable cowardice, if we transmit to another generation an enormous debt. The people desire to pay as they go, if possible, and it is easily possible to do so now." The question arises, What is meant by transmitting a debt to another generation? The usual term of a generation is thirty-three years. The civil war left us with a bonded debt of \$2,381,000,000, of which about \$800,000,000 was extra and unnecessary cost due to the use of irredeemable paper money. It was all paid off and extinguished except \$650,000,000 within twenty-five years. The whole would have been paid within the period of that generation but for unnecessary changes in our revenue laws, and the introduction of "blatherskite," like that of Senator Allen, into our financial system. Not a dollar of the great civil-war debt would have been transmitted to the next generation if things had been allowed to take their natural course, and if free coinage of silver had not been forced like a hell-broth to boil and bubble in our national politics. Now Mr. Allen (and he is only parroting the lingo of the Democratic caucus) deprecates the transmission of the present war debt to the next generation. It is true that the end of the present war is not yet in sight. It may possibly last two years, but the scale of expenditure must be much less than that of the civil-war period. It is safe to say that five years, under any respectable system of finance, would suffice to wipe out all the debt that the war can bring, and also much of that which existed before. Pile on the taxes. There is no objection to that. The nearer you can come to the policy of "pay as you go," the better. What we insist upon is that the Treasury shall be provided with the means of paying as it goes—of meeting its demand obligations as they arise, and not be driven to a suspension of specie payments before the new taxes become productive.

The present talk about an alliance with Great Britain grows out of two things, viz., our war with Spain and the recent seizure of Chinese ports by Germany and Russia. Do either or both of these events furnish a reason for an alliance in the technical sense with Great Britain? We see no such reason. Surely we do not need the assistance of anybody in a war with Spain. We have nearly five times the population of Spain and ten times the wealth, and although it may take us longer to get ready for war than we had anticipated, we should be ashamed to admit that we needed help from any other nation. As regards the Philippine Islands, we shall be better off without them than with them as a permanent possession. Hence

we need no help from Great Britain in that quarter in any event. As regards the Chinese ports, the policy of the Powers which have secured a lodgment on the coast is not yet fully developed, and it would be the extreme of folly for us to assume that it is inimical to us before that fact is assured; and even if it were so, it is by no means evident that it would be wise for Great Britain or the United States to make their attitude a *casus belli*. Indeed, if an alliance of the kind proposed were likely to drag us into a war on the other side of the Pacific Ocean, that would be the best possible reason for abstaining from it. Moreover, the union of hearts would accomplish all that a union of hands could do in this quarter as elsewhere.

The "Anglo-American alliance" is made the subject of some adverse criticism by Mr. Goldwin Smith. According to the newspaper report, he comments on the fact that while there are some sixty millions of Anglo-Saxons in the United Kingdom and the United States, there are as many Celts, Germans, Jews, negroes, and other people of miscellaneous origin having much diversity of ideas and tendencies. It may be urged in reply to this that the unifying influence of institutions and language is more powerful than these disintegrating forces, but it is not so easy to answer Mr. Smith's question as to what would be the commercial basis of an alliance between protectionist United States and free-trade Britain. So, too, the nature of our government is unfavorable to foreign alliances. With our system of Presidential elections there can be little continuity of policy, or at least little dependence could be placed by a foreign Power on much continuity. Such a Power as Great Britain could not change her policy to suit the mutations of American politics, and in Mr. Smith's opinion the talk of an Anglo-American alliance by Mr. Chamberlain will come to no more than his talk about imperial federation—a theme which has been under discussion for thirty years without gaining much ground.

Even the Morgans and the Lodges have felt constrained to suspend abuse of England, in view of the present popularity of harmonious relations with the British nation. But it seems to be necessary that we should have some foreign country for our statesmen to "pitch into," and Japan has succeeded to the place so long occupied by England. As it is both ridiculous and impolitic to charge the British Government with a purpose to seize Hawaii if we do not, the accusation is now brought against Japan. When the Senate committee on foreign relations made its report favoring the passage of the bill for annexation, the asserted desire of the Japanese

to seize and annex Hawaii was made part of the argument, and language was used that looked as if there were an American desire to affront Japan. The House committee on foreign affairs has also made a report in which a similar tone of offence towards Japan is employed, apparently in order to provoke a desire to take for the United States something which is alleged to be desired by Japan. In both reports the declaration is explicitly made that, unless the United States annex Hawaii at once, Japan will gain control of the islands by encouraging a constant inflow of Japanese subjects trained as soldiers and assured of Government support. It is further asserted that Hawaii prevented the colonization of the islands by Japan only by refusing to permit more of her subjects to come to Hawaii as agricultural laborers.

These extraordinary accusations against a friendly nation have called forth a forcible reply from Japan. The charge that Japan contemplates the seizure of the islands, or their colonization with a view to securing overwhelming influence, is denied. All that Japan has done is to complain, as it has a perfect right to do, that treaty stipulations with Hawaii regarding the importation of agricultural laborers have been violated by the Government of the islands, and to insist that it has a claim against Hawaii for damages, which it trusts will be attended to by the United States in case of annexation. It is admitted that the question of annexation is one which concerns only the United States and Hawaii, and it is declared that the only immediate interest which the Japanese Government has in the question whether annexation shall take place now or at some future date, is connected with her claims against Hawaii. The statement of Japan's position closes with this cutting but justifiable appeal for fair play:

"Apart from this, Japan's attitude is one of friendly concern merely, and both her Government and her people await the result without apprehension that it will bring with it any disagreeable consequences for them. This being so—and impartial investigation will prove that it is so—it would seem to be no more than simple justice that Japan's name should be omitted from the discussion of annexation, or, if it must be used, that its mention should not be coupled with an imputation of bad faith and double dealing."

The speech of Gen. Woodford at the reception given to him in Brooklyn on Thursday evening was in excellent taste, furnishing a marked contrast to outgivings of his predecessor in office when he returned from Madrid. Gen. Woodford said not a harsh word about the government to which he was accredited. He said nothing which could make him *persona non grata* at the Spanish court after a cessation of hostilities. He is still our Minister to Spain, although circum-

stances have interrupted the exercise of his functions. It is to be hoped that he may have the opportunity to return to his post, in which event he will have the respect of the European as well as of the American public. This he has earned by his untiring efforts to preserve peace while peace was possible, and also by refraining from using any words which might unnecessarily prolong the war. He said that he considered it desirable that Cuba should be free. He did not say that he considered it desirable that Spain should be humiliated or harmed in other respects. In refraining from the use of harsh language he made himself the type of the best support that the President now has in prosecuting the war. His allusion to the union of the North and the South as an incident of the present war was very happy, coming as it did from one who had borne arms in the civil war.

The first reciprocity agreement under the terms of the Dingley bill was concluded in Washington on Monday between the United States and France. As an evidence of general friendliness, and as a movement, even a trifling one, in the direction of saner customs taxation, the agreement is to be welcomed; but its practical effect cannot be great. The truth is, both countries had put up their taxes on each other's products to an enormous figure. After eight months of chaffering they have agreed to knock off a certain per cent. from the provisional duties, though the rates remain outrageously high. American lard, for example, is to pay \$5 the 220 pounds, and pork \$10. Canned meats will get off with \$3 the hundred kilos. Fruits and woods will be taxed at varying rates, which seem low only in comparison with the dizzy figures of the maximum tariff from which they had been suffering. In return, France is to have her brandy admitted at \$1.75 the gallon instead of \$2.25, still wines at 35 cents instead of 40 and 50, and paintings and statuary at 15 per cent. ad valorem instead of 20. This art tax, after the experiment with free art in the Wilson bill, was a distinct return to barbarism. For the sake of reciprocity and to oblige France we now consent to cut off one-quarter of it, posing gracefully as three-quarters barbarian. We still cling to moccasins and blanket, and chew betelnuts as before, but proudly point to the fact that we have washed the vermilion off our faces. But the process of cleaning up and civilizing is a dangerous one for savages to enter upon, and if this French beginning is followed up, we may yet see the Dingleyites arrayed in full Parisian garb.

Mr. Wanamaker has concluded his canvass against the control of the Republican State convention in Pennsylv-

vania this week by Quay. He has delivered sixty-seven speeches, and they have been really sixty-seven speeches—not the same speech given sixty-seven times. They have constituted the most remarkable revelation of machine methods ever known in the history of our politics. Most indictments of bosses have been framed by Independents, who had never known anything by experience of the inside management of parties, and who consequently were open to the charge of talking about things regarding which they were not informed. But Mr. Wanamaker was no Mugwump; on the contrary, he boasted at the outset that he had never "scratched" the Republican ticket during all this long period when the Quay despotism was built up and corruption became the rule of the State. Nor was he a "doctrinaire," coming out of his closet with mere theories. On the contrary, he had long been the most liberal contributor to Republican campaign funds in Pennsylvania, and everybody understood that he "knew what he was talking about." Mr. Wanamaker's canvass will not have been fruitless if the boss shall have his way in the convention. The exposures of Quay rule which the ex-Postmaster-General has made must render impossible the election of any man who is the mere tool of the Senator, and swell to great dimensions the vote for the Rev. Dr. Swallow, the "honest-government" candidate. All that Dr. Swallow needs to establish the severest charges which he brings against Quay is to quote the proofs already submitted by Mr. Wanamaker.

It is extremely edifying to learn from Platt, Tracy and Company that the complete control of the police force by Tammany puts the election this year and also the Presidential election of 1900 in the hands of Croker. Was not this pointed out last year as one of the consequences of running Tracy for the mayoralty? Was it not pointed out before that time, when the new charter was under consideration, as one of the consequences of consolidation? Over and over again, not only in the newspapers, but even in the Platt Legislature by Platt men, it was predicted that the creation of a Greater New York meant the creation of a great Tammany city, with enormous patronage, and with supreme power over election machinery, till after the next Presidential election. But Platt and Tracy refused to pay any heed to these warnings, for reasons of their own. They would not consent last year to have the new city put into the hands of honest men till after the Presidential election. Why? Because they thought they could get more for the "organization" from Tammany than they could from Seth Low. They are reaping what they themselves sowed; and the more noise they make about it, the

more clearly will they make it appear that they are among the worst enemies the city has ever had.

The action of the Presbyterian General Assembly in the McGiffert heresy case goes far to confirm the view of those who held that the denomination was so exhausted by the Briggs trial that it would be long before another like it would be seen. With a calm renunciation of the duty of enforcing discipline, the Assembly turns over the whole matter to Prof. McGiffert, begging him, if he cannot "reconsider" his views (re-cant, they used to call it), to withdraw from the church in peace. This is very likely not the end of the affair, but it is sufficiently remarkable as it stands. The Assembly seems tacitly to have acquiesced in the bold utterances of a Western Presbyterian clergyman of prominence, who lately declared that it was impossible for the denomination to expel men for holding opinions like those of Prof. Briggs. The implication is that there are too many of them in the Presbyterian Church to make their trial for heresy expedient while other churches stand ready to welcome them with open arms. As for Prof. McGiffert, he had before announced that his opinions had been maturely formed, and that he would not go out unless put out.

It is almost a year since the war between Greece and Turkey, but the Turkish troops are only now beginning to evacuate Thessaly. The delay has been due to the difficulties attending the Greek loan to pay off the Turkish indemnity. By the treaty of peace, evacuation was to begin one month after the loan was issued. Under the circumstances, this loan had to have an international guarantee, and the obstacles in the way of getting the Powers to act in harmony on any subject were doubled when the subject was a financial one. England offered to float the whole loan in the open London market, but this did not suit Russia and France at all. Their citizens must have a share of the pickings. The bonds must be allotted between the three countries, and subscriptions made on a fixed basis. This brought up the troublesome question of exchange, and the Russians and French insisted upon a certain arbitrary rate, slightly different from the actual quotations in Paris and St. Petersburg. After some expostulation and grumbling, England conceded this, with the result that London bankers have had to pay an appreciable per cent. more for their Greek securities than did their French and Russian confrères. But the Turks are actually picking up their traps and leaving Thessaly, and this is a relief well worth purchasing at a slight discrimination against London, so Mr. Curzon and Sir Michael Hicks-Beach say.

AGGRANDIZEMENT OR HONOR.

There are many signs that the policy of retaining whatever territory we may occupy in the war with Spain will soon become a political issue. Such a policy has been, of course, advocated from the beginning by a certain element, but the mere fact that it has been supported by a number of newspapers and Congressmen is not in itself alarming. What is significant is that speakers and writers who a few weeks ago dwelt on the purity and unselfishness of our motives in attacking Spain, and repudiated all thought of grasping the possessions of a weaker people for our own use, are now silent upon these aspects of the case. They now begin to consider how we can administer the government of the Philippine Islands, and intimate that Porto Rico would serve as security for the payment of an indemnity by the Spaniards. It is reported from Washington that the authorities now feel that the Cubans have so little capacity for self-government as to make it necessary for our forces to occupy their island for a considerable period. One correspondent declares that the belief is becoming prevalent that the inhabitants of the Spanish islands that will fall into our hands will not be able to maintain governments of their own "in less than a generation." It is hardly necessary to say that the retention of conquests for a generation is not likely to be followed by their abandonment.

But while it may be easier to hold on to what we conquer than to let it go, and while the pressure in favor of this course will be tremendous, if we are to regard our honor we have no choice in the matter. The very best and soundest elements in the country were brought to the support of the war wholly through appeals to their humanity. They came to believe, many of them very reluctantly, that to expel the Spaniards from Cuba was an act of mercy, and was a sacred duty imposed upon us by Providence. They felt, as the God-fearing people of the Northern States felt concerning the negroes during the civil war, that the Almighty commanded the liberation of an oppressed people even at the cost of bloodshed, and the suggestion that a profit was to be made out of the transaction would have seemed to them little short of blasphemy. The Southerners felt in 1861, as the Spaniards do now, that the war was an attempt to take away their property, but that result was in the eyes of the people of the North purely incidental. Unless the clergy and other representatives of the most upright public opinion throughout the land have been outrageously insincere in their recent utterances, the expectation of turning the Spanish revenues into our own pockets did not so much as occur to them. Nor is it too much to say that had it not been for the attitude of this element in the community, the

sensational press would hardly have been able to hurry the Government into premature hostilities. In that sense the religious people of the country are largely responsible for the conduct of the war. Their consent made the war possible, and they are entitled to insist that it shall be carried on for the righteous ends for which it was declared.

To the attainment of these lofty and unselfish ends, and these alone, we are most overwhelmingly committed. The President declared in his message last December, in words that have the clearing of sincerity, that forcible annexation was not to be thought of; that by our code of morality it would be criminal aggression. The joint resolution of Congress was adopted with practical unanimity, and it is worth while to repeat the words of its explicit disclaimer:

"The United States hereby disclaims any disposition or intention to exercise sovereignty, jurisdiction, or control over said island, except for the pacification thereof, and asserts its determination, when that is accomplished, to leave the government and control of the island to its people."

It is true that this self-denying ordinance does not constitute a rule of international law. We are at war with Spain, and no other Power has any legal right to call us to account for the disposition which we may make of conquered territory. But it was a voluntary proclamation to the nations of the world that our motives in engaging in the war were unselfish. If we proceed to appropriate the Spanish possessions, we shall have lied to humanity. We were not required to assert the disinterested character of our motives, but, having done so, honor commands that they shall remain disinterested. It will be idle to maintain that changed circumstances have relieved us of a moral obligation. He that sweareth to his own hurt and changeth can make no claim to honor; nor in fact have the circumstances changed. The course of the war has been just such as was foretold by intelligent observers, and the character of the inhabitants of the Spanish colonies has in no respect been altered. Doubtless many foreign spectators cynically predict annexation by the United States. That is because they believed we were lying when we declared that nothing was further from our intention. Shall we confess that they were right in this belief?

But it is the people of this country who supported the war on purely humanitarian grounds that should most indignantly protest against its being made a war of conquest. They are in the position of men who have set forth on what was advertised as a life-saving enterprise, and suddenly find that a number of their companions are determined to convert it into a piratical voyage. It is high time for these people to awake to the responsibility which they have assumed. They have let the fire be kindled,

and it is theirs to see that it does not spread. If they can hold the Government to its professions, we shall in a novel and glorious way secure peace with honor. For a nation to keep its pledged faith may not seem anything to boast of, but in this case it will be, as things go in this world, a splendid achievement. Few more honorable deeds will have been recorded in history. But if we break our faith, shame and dishonor are inevitable. No professions that we may hereafter make, however solemn, will be listened to except with contemptuous incredulity. If there ever is a time to prove that righteousness exalteth a nation, it is now. If territorial aggrandizement ever involves national dishonor, it is when such professions as we have made are repudiated.

THE NEW GREENBACK DIVERSION.

A correspondent writing to us from Burlington, Iowa, draws attention to the recent speech of Senator Turple on the war-revenue bill. Our correspondent is a Democrat, but he does not approve of Mr. Turple's position on the currency question, which is that of a Greenbacker, pure and simple. "The proposed issue of legal-tender notes," said Mr. Turple, "is itself alone, of all means of borrowing, the most patriotic and the least expensive to the taxpayer. It is a loan, a voluntary loan, without interest, by the people to the Government, of \$150,000,000 during the next fiscal year, for an indefinite period, determinable by the incident of redemption or retirement."

There is perhaps more "politics" in this speech than appears upon the surface. It was made very plain by the movements of Mr. Bland in the House that the leaders of the Democratic party are planning a change of the financial issue from silver to greenbacks. There is evidence also, to a discerning eye, that if silver cuts any considerable figure in the next national platform of the party, it will not be in the rigid form of unlimited coinage at 16 to 1, but rather in the shape of bimetalism at some indeterminate ratio—that is, if the leaders of the party in Congress can control the convention. They want to make a platform upon which all Democrats in New York, and in the East generally, can unite, and they know that this can never be done on the platform of 16 to 1. It is necessary, however, to hold together the great army of opponents of Trusts and monopolies, who voted for Bryan and free silver because they considered them the most nauseous possible dose to the "money power." What is more likely to satisfy these people than a proposal to issue greenbacks to pay the expenses of the present war? Coupling this with a proposal to "coin the seigniorage" gives the color of silver to the whole scheme, and the color is all that is necessary for popular consumption. But, in fact, coin-

ing the seigniorage is only another name for issuing greenbacks. It bears no more resemblance to free coinage of silver than it does to three-card monte. To discerning minds, however, greenbacks are to be preferred because they are redeemable at 100 cents to the dollar, while silver, under the terms of free coinage, is redeemable only in itself, which may be fifty cents per dollar, more or less.

Senator Turpie's speech in favor of greenbacks as a method of financing the present war is perhaps a part of the scheme to reunite the Democrats in the next Presidential campaign by modifying the silver issue and laying Mr. Bryan on the shelf. The question whether the party will accept greenbacks in place of silver, and whether the Gold Democrats will come back to their allegiance when the platform of 16 to 1 is abandoned, is, however, more than doubtful. The questions presented are extremely subtle. The proposition to issue greenbacks for war expenses is not coupled with any suggestion that specie payments be suspended. Nor is it accompanied by any means for maintaining redemption. The tendency of fresh issues of greenbacks to cause a suspension is obvious, but the law requires that redemption in gold shall continue, and nobody has been bold enough to propose a change of policy in that regard. The present Secretary of the Treasury has the same power to replenish his coffers that Secretary Carlisle exercised. The coin-purchase act is still in full force. Nobody has proposed to repeal it, and we may be sure that Secretary Gage will exercise his powers under it if other measures shall fail. That act is not the best possible means of administering the finances of a war. It is awkward, roundabout, and expensive. It tends to produce temporary panics, and it causes the Government to pay higher rates of interest than are necessary. Congressmen who are making plans for a political campaign are indifferent whether the Government pays 3 per cent. or 5 or 10. What concerns them is not the rate of interest actually paid, but the rate apparently paid. If it can be made to appear that greenbacks are a cheap method of carrying on the war, because they draw no interest, and if the operation by which the Treasury redeems them can either be obscured, or treated as reprehensible (as was the case during the Cleveland administration), then the fact that they are the most expensive means of obtaining money either in peace or war will give the Democratic politicians no concern.

Senator Turpie's plan received a severe rebuff from Senator Lindsay of Kentucky, who made it sufficiently plain that the Gold Democrats are not to be attracted to one scheme of depreciated currency by the withdrawal of another. He showed that the greenback currency issued during the civil war was the most

expensive form of debt incurred by the Government, since it led to an inflation of prices by which the cost of the war was swollen unnecessarily by hundreds of millions of dollars. He showed that the issue of new greenbacks would be a temptation to speculators to "raid the Treasury," which they would avail themselves of as long as the fresh supplies lasted, or until the Government was compelled to suspend. Asked by Senator Tillman what would happen if the war should continue two or three years and if European Powers should become engaged in it, he replied:

"The war will not go on for two or three years, unless we break down our credit at the outset of the war, and that I am opposed to doing. We shall sell bonds and get money for them. Our credit will be as good as gold, and we shall pay our debts in gold, and at the end of the war we shall have conducted it on the very cheapest possible basis. We may become involved with continental Powers, and the time may come when we cannot go further on a coin basis, either gold or silver, and when we shall be compelled to come to the issue of greenbacks. When that time comes we shall do it. Whatever necessity demands will be done. It will be done without complaint. And those who are alive at the end of the war will be charged up with the debt. But we cannot promote that state of affairs. We cannot discredit ourselves at the very outset by resorting to a currency which is in the nature of a forced loan by issuing notes payable on demand, and putting no money in the Treasury to pay them when demanded."

Senator Lindsay here gave admirable expression to the views of the Gold Democrats and of the great body of Independents who cast their votes for McKinley in the last campaign. They are not to be seduced from the principles of sound money by a mere change from free coinage of silver to free issues of greenbacks, with undefined and haphazard means of redemption.

THE FARMER AND THE WHEAT CROP.

During the four or five weeks ending with the month of June, this country's commercial fortunes for the coming season are staked very largely on the weather in the wheat-belt. As a general rule, at least two-thirds of the annual wheat production of the United States consists in the so-called "winter crop," which is planted in the Middle and Southern grain-producing States during the autumn, and is harvested, ordinarily, about the close of June.

It is hardly essential to point out the enormous influence which will be exerted, in many directions, according as the crop of 1898 is great or small. It is only necessary to recall the profound influence which the grain market situation of 1897 and 1896 has already had on our interior trade and foreign commerce. The still more remarkable episode of 1879 and 1880 is another proof that like causes may be relied upon to produce like results. That the extraordinarily urgent export demand for wheat—which in the past ten months has drawn from our home supplies fifty million bushels

more than were taken in the same period a year ago—will be repeated for another season, is hardly to be expected. It was made possible this season only by the remarkable coincidence of drought in India and Australia, wholesale destruction by insect pests in Argentina, a wet harvest in France, and an actual inundation of the wheat-fields of Austria and Hungary, almost at the moment when the grain was ready for the sickle. But although actual famine conditions need not be again expected, there is good reason to look for a steady export market at prices highly remunerative to the farmer. This was the experience of 1880, after the famous European harvest failure of the year before. The grain-growing world produced in 1880 at least 200,000,000 bushels more of wheat than it had produced in 1879, and of this increase 49,000,000 bushels was contributed through an increased yield in the United States. Yet the average American price for wheat in 1880 was only moderately below the average of the year preceding, and the total exports from our 1880 crop actually increased several million bushels.

Recent estimates of the condition and acreage of the growing wheat crop have been extremely favorable. That the area planted should have been greatly increased, when the winter wheat was sown with the market price at a dollar a bushel, and the spring wheat during a market range of \$1.25, is certainly not surprising. The Agricultural Department's recent estimate of planted acreage is interpreted by the experts to mean a total increase in the area of no less than 10 per cent. The high prices of 1879 were followed by an increase, on the Government's estimate, of 14 per cent. in the acreage of the ensuing year, so that this preliminary estimate for 1898 is at all events not excessive. The further reckoning of the optimists that, with present conditions maintained up to the harvest, a total American crop might be expected of 700,000,000 bushels, against an estimated 580,000,000 in 1897 and the maximum of 680,000,000 (commercial estimate) in 1891, is interesting, though hardly yet a matter on which to base positive expectations. The season's weather conditions are yet to be defined. But the essential point is that the situation is such as probably to warrant confidence in a profitable market even for a heavy crop—something which our farmers failed to witness in the long and trying period from 1889 to 1897.

With such possibilities in mind, it is natural that the calling of grain-production should at present be discussed in a very different tone from that to which we have recently been accustomed. Nothing would convince the farmer and his advocates in legislation, during the time when all the world was raising wheat and was fortunate in its harvests, that

the low price of his staple was not due to other than agricultural causes. He linked the decline in wheat with the decline in silver, and shut his eyes resolutely even to market movements in which the price of the metal and the price of the cereal moved in exactly opposite directions. In particular, he declared—and in this argument there was more plausibility than in any other—that the population of the grain-consuming world was growing rapidly, and that, therefore, demand for wheat must have increased so far as to prevent a decline in price unless under other economic causes.

The experience of the past year is of the utmost value in disposing of this argument. Of course, the grain-consuming population of the world has been continuously increasing; but so also has the annual food product of the world. It is quite impossible that both should increase in equal ratio, nor indeed is it possible to determine with any close approach to accuracy the ratio in which either is increasing. But there is one test which, when applied with reasonable caution, is infallible. The wheat trade keeps itself well advised of the amount of grain in storehouse at the principal markets of the world. If these unsold supplies increase with great rapidity, at a time when every grain-producer and grain-dealer is trying to force a market, the conclusion may safely be reached that the year's output of wheat has exceeded the needs of the year's consumers. When this happens, new consumers must be sought at a lower range of prices, and this is exactly what occurred between April, 1892, and April, 1894, when the world's "visible supply" of wheat, already much above the average, increased no less than forty million bushels. The price of wheat on the American farm fell to 49 cents a bushel, and the planted area of wheat was reduced throughout the world. But on top of this reduction in the acreage came two seasons of disastrous harvest weather. The stock of wheat in granary at the world's open markets, by the same trade estimates, has fallen no less than 83,000,000 bushels between the spring of 1894 and the spring of 1898. In short, the world's grain product, which beyond any reasonable question had been increasing, up to 1895, far more rapidly than the increase in bread-eating population, has now decreased sufficiently to allow the equilibrium to be more than restored.

The periodical hardship and discontent of the average farmer, from which for a season he has now emerged, may, in our judgment, be directly traced to two peculiarities in his habit of managing and forecasting his business. He is very apt to consider his own country as the only market which fixes the price for his crop of wheat; therefore, he often does not perceive that an exceptionally

heavy foreign crop, competing with ours in the export market, works surely in the direction of lower prices, whatever be the domestic crop conditions. In the second place, he has usually no other disposition to make of the profits of a season of high prices than to buy more land and plant more grain. But with upwards of four million separate farms in the United States, it may be readily imagined what results might be expected if the entire body of men engaged in such an industry were to engage even moderately in a policy of expansion. The result is apt to be not only that the average price of the farmer's product falls abruptly in the next few years, but that he has nothing to show for his earnings of the profitable year except some increased acreage which he thinks he is farming at a loss.

These tendencies are so deeply rooted in the agricultural mind, not only here but throughout the world, and not only now but throughout the history of farming, that it would be too much to hope that a more intelligent system might prevail. The American farmer is, however, now for the most part out of debt; he and his creditors both learned the lesson of farm extension on 8 per cent. mortgages, and in that regard, at any rate, both will be wiser in the future. As for the actual results of 1897 and 1898, the wheat-farmer has probably done the most profitable business of any industry in the country. In his way, he is rich, and for the present rich in money. As the official returns have clearly proved, he is making liberal use even of the detested bank-deposit system. We can see very little opening, in such a situation, for Mr. Bryan or Senator Allen.

WAR AS A LITERARY STIMULUS.

The effect of the war upon the publishing business has been much discussed, though with no conspicuous agreement as to what the facts are, much less their explanation. If the book trade is alleged to be dull, the rejoinder is made that it is always dull at this time of year. About mere degrees of dulness it is impossible to debate entertainingly. Behind this question of printing and selling books is the question of producing and reading them. How does the war affect writers? How does it influence readers?

Here again the trumpet of the literary periodicals gives forth an uncertain sound. The *Library Journal* reports an immediate and general effect of the war upon the patronage of libraries. One librarian writes that his April circulation was the lowest ever recorded—"people are so busy reading 'extras' they have no time for books." Another reports: "The war is killing library circulation—we cannot begin to supply the demand for books on Spain and Cuba, and people simply won't have anything else."

But the London *Academy* contends that, while "war multiplies newspaper readers," it "does not subtract from book readers." Newspapers are bought, but are quickly thrown aside. Are books found strewn over the floors of trains? The fair inference is, the *Academy* gives us to understand, that books are not displaced by newspapers even in the excitement of war news.

The reader makes the publisher, but it is the writer who makes the reader. Is war a deterrent to literary activity? Sir Walter Besant contends that it is not. He asserts for war as great an "awakening influence" upon the literary character as our war-for-war's-sake party claims for it upon the civic and moral character. His argument appears to be something like this: Literary genius is at its best when aroused; war arouses, therefore war is best for literary genius. To clinch this conclusion with historical illustrations, he points to the fact that it was in the war-vexed years 1793-1814 that Wordsworth, Coleridge, Lamb, Byron, Scott, Landor, and Shelley enriched our literature. In the early thirties, on the contrary, a period of profound peace, English letters were at the lowest ebb. Q. E. D.

The demonstration lacks something of being perfect, however. There is authority as good as Sir Walter's for asserting that genius is most creative in quiet. And the specific arousing effect of war upon Shelley, Wordsworth, and the others is far from being made out. Their age was one in which men were born accustomed to war. England had not known a settled peace for half a century. War had, in fact, taken its place as an expected and natural condition, and thereby must have lost its especial stimulating power, if it ever had any. Moreover, one *ad-hominem* argument remains of which Sir Walter should be the last man to deny the deadly force. Granting that the war made Shelley and Wordsworth great poets, it left them unappreciated, unsold poets. Their works were for years a drug on the market. It might have been worse if there had been no war, but war did not at any rate save them. It cannot be described now as the sure road to literary success. Sir Walter's Authors' Society might have put money in the pockets of Lamb and Coleridge, but war certainly did not. We hope he is not prepared to divide the honors of authorship between war and his Society.

The simple truth about this whole subject appears to be that we must discriminate between one war and another. It cannot be denied that war has been in the past, and may be again, a means of stirring the national consciousness, and of stimulating men to all kinds of high and heroic activities, literary activities among them. A war of defence, a war of liberation, may well bring Tyrtæan

strains from lyres that otherwise would have been mute. But that a war may also cause the muse, whether of poetry or history, to walk backward with averted gaze, we know in our own history. Perhaps the two literary monuments of the Mexican war which will be longest read are the 'Biglow Papers' and Gen. Grant's Memoirs; in the former a poet wrote as a spectator what in the latter a soldier wrote as an actor, that the war was an unjust act of aggression. No lack of ephemeral self-sure verse and dithyrambic prose was felt at the time of the Mexican war, any more than there is in the present war; but such rockets soon fall to be kicked about the gutters.

That our literary sense may be greatly stimulated before we get through is surely possible. Our poets may mature with the war. But we should not expect the benefit to be confined to one only of the belligerents. Spain has a literary tradition that casts ours into the shade; she has a large body of respectable contemporary writers. They should certainly feel the quickening and fructifying influence of war, if Sir Walter Besant is right. But Señora Emilia Pardo Bazán, speaking for them in the last number of the *Revue des Revues*, says that the war has brought them to a kind of sterile despair. "When a nation finds itself at the edge of a precipice," she writes, "it is forced to withdraw its attention from its writers. Letters require a tranquil spirit." We are bound to believe that the Spaniard, tasting the bitterness of war, is nearer the truth than the Englishman, knowing it only as a spectacle.

WHALEN AND THE CIVIL-SERVICE LAWS.

About a fortnight ago Mr. Croker's wonderful Corporation Counsel assembled himself as a court of last resort to consider the civil-service laws of the State and their bearing upon the municipal Civil-Service Commission. The result of his deliberations was an "opinion" which declared unconstitutional the act passed by the last Legislature so amending the civil-service laws as to require each city of the State to submit its civil-service regulations to the State Civil-Service Commission for approval. The learned Whalen, without a moment's hesitation, set the law aside, and informed the municipal Commissioners that they could go ahead in their own way and fill the city service with good Tammany material without paying the slightest attention to this law's provisions. In doing this he passed upon all existing civil-service laws, the State Constitution, the new city charter, and the intent of the Legislature, with various other incidental points, settling all of them offhand, apparently for all time. "It is my opinion," he declared, "that it is your duty to proceed with the

administration of the matters confided to you as if the statute had not been passed. And, of course, the consequence follows that you have no duties as regards the State board, and need not submit to that body your rules and regulations."

Instead of acquiescing in this "opinion," the Civil-Service Reform Association, through its Secretary, Mr. George McAneny, has sent to the Comptroller an elaborate protest, in which the learned Whalen's contentions are not merely disputed, but completely upset by citations from decisions by the courts. He is, in fact, left without a leg to stand upon, and notice is served upon the Comptroller that if he pays the salaries of city employees who may be appointed in the manner in which Whalen says they may be, any taxpayer can bring an action which will result in the recovery of the money thus paid from the Comptroller personally, or from the sureties of his official bond. The points of Mr. McAneny's communication can be summed up briefly. The law which Whalen declared to be unconstitutional was passed last spring, and, as we have said, it applies to "each city of the State." In order to get rid of it, Whalen held: (1) That although the statute is drawn in general terms, it contains certain provisions that would have a special or local effect if applied to the city of New York, and that for this reason it must be considered a special act; (2) that, being in part special, and having failed to receive the approval of the Mayor of New York in the manner prescribed by the Constitution, the act, in its entirety, has no application in the city of New York; and (3) that, even though it were constitutional in all its parts, the city would be excluded from its operation for the reason that the charter provisions relating to the civil service form a special statutory system differing radically from the general State system, and are secure from any change by any other method than direct charter amendment. Mr. McAneny takes these points up separately, and with an overwhelming mass of judicial decisions shows that Whalen either did not have the most rudimentary knowledge of his subject, or deliberately ignored the unbroken record of the courts against his contentions. He even shows that a decision which Whalen quoted in his own support is obviously in direct antagonism to his position. In fact, the case is virtually closed against Whalen by Mr. McAneny when he quotes the Constitution's definition of special city (as distinguished from general) laws, "those which relate to a single city, or to less than all the cities of a class."

There has never been any doubt that the act of 1898 was a general law and was also in entire harmony with the State Constitution and with the new charter. Mr. McAneny makes this plain

with a painstaking array of evidence which should have its effect upon even Whalen. He shows that from the outset the regulation of the civil service in New York has been considered a State function; that the new Constitution has a provision which was put into it for the express purpose of securing a general and uniform system of State control; and that the act of 1898 was conceived and made law with the avowed intent of establishing this system. As for Whalen's childish contention that the new law does not apply to this city because it was not submitted to the Mayor for approval, that is, as Mr. McAneny says, "a novel one." It is Whalen's invention, and as such can scarcely outweigh the constitutional provisions on the subject.

In regard to the sections of the new charter, Mr. McAneny shows that these, instead of providing, as Whalen claims, a system "differing sharply in many respects from the State civil-service system," were drawn by the Charter Commission, as its members themselves declared, "on the lines of the present law." The law referred to was that of 1893, or the only general State law in existence at that time. The only subsequent law which was inconsistent with this statute was the Black "starchless" act of 1897, which the new act of 1898 has repealed so far as it applies to cities. The charter provisions did not supersede or antagonize the general law, but supplemented it. One of the most amusing of Whalen's contentions was that the law violated the sacred "home-rule" principle. This is well disposed of by Mr. McAneny as follows:

"At the time the Constitution was adopted, the civil-service rules in every city of the State were subject to the approval of the central State authority, and remained so subject for three years. The framers of the amendments could not possibly have designed a change in this relation. On the other hand, they sought to strengthen and guarantee it. It would be as well to talk of 'home rule' in the conduct of elections, or of primaries, or excise control. The local interests of the city are fully protected. The present act does not, as the Corporation Counsel states, 'remit to the discretion of the State Civil-Service Commission the power of prescribing to the Municipal Civil-Service Commission rules and regulations.' It is for the local authorities still to prescribe, and it is the sole power of the State commission to approve or disapprove. There is an obvious propriety in giving to a commission which has the broad power of investigation conferred by sections 15 and 16 of the act of 1893 this complementary right and duty. Their function in this regard is to secure uniformity and proper compliance with the constitutional and statutory provisions; nothing more."

There is no escape for the Tammany government. It must obey the law, and must consent to have the municipal service regulated and controlled in accordance with the provisions of the law. If the local Croker Civil-Service Commission shall make rules and regulations which the State commission refuses to approve, it will be impossible to put them in operation, for the men appointed under them cannot be paid by the

city. It is hard luck, but it must be borne as patiently as possible. The Boys must grasp the fact that, able as Whalen is in the manufacture of "opinions," he is not the court of last resort, and he is not competent, therefore, to set aside the Constitution and the laws.

AN INTERNATIONAL ART EXHIBITION IN LONDON.

LONDON, May 19, 1898.

The severest blow the Royal Academy has yet received has been given it this spring. The evils of that institution have been proclaimed so often and so loud that one is as tired of hearing about them as about all the numerous other problems found impossible to solve. Various and many have been the endeavors to face and conquer them. There have been the active crusades, agitating for Royal Commissions and Parliamentary interference. There have been the new societies and galleries giving rival exhibitions, from the old Grosvenor, that, for a while, had at least the merit of being amusing, to the New English Art Club, that might work to better purpose were it less intolerant and prejudiced in its standards. The trouble is that, hitherto, if criticism has been plentiful, no practical effort has been made to improve upon Royal Academical methods. When the evils denounced come to be examined, they are found to relate chiefly to the annual exhibition. I do not suppose anybody really cares what the Academy does with the shillings collected at its door, or what social and pecuniary advantages are enjoyed by its members; and, anyway, these are matters which, so far, have been proved to be nobody's business. For, if the Academy is attacked as a private club, it pleads its responsibilities as a public institution; if its public character is impugned, it becomes at once a private society, and so evades its critics. But it is different with the yearly exhibition supposed to be the most important and representative in London, and the way this exhibition is managed has long been a scandal among artists. The best places reserved for the pictures of members no matter what their quality, the rooted objection to anything that savors of style or distinction in the work of outsiders, the rejection or contemptuous treatment of the most distinguished contributions, the honor accorded to mediocrity, the overcrowding of the walls, the atrocious hanging that seems almost deliberate—these are mistakes, you might say, easily avoided. But they characterize regularly every year the exhibition held by the Academy, that loves to cater to the popular dealer in commonplace, to an ignorant public, to publishers of the sentimental anecdote and colored supplement. The result is that most people believe it to be simply an impossibility in a country like England, which, they say complacently, is not artistic, to get together a collection truly representative of modern art. But now, without any preliminary advertisement or "booming," a society has quietly arisen to demonstrate by its first collection submitted to the public that the thing is quite possible even in London. No attack has been made upon the Academy, but the show is the most powerful argument ever brought to bear against it.

The new association is called the "International Society of Sculptors, Painters, and Gravers," and Mr. Whistler is President.

The exhibition is given at the Prince's Skating Club, Knightsbridge, turned into a gallery for an interval, now the skating season is well over. Three large, spacious rooms have been arranged, the walls covered with canvas of a cool, neutral green, canopies screening or tempering the excellent top light, and the pictures, seldom more than two deep, hung with some feeling for symmetry and harmony, not by the perfunctory exhibition purveyor, but by artists for artists, the committee, which is very strong, having had the arrangement entirely in its own hands. Altogether, to enter the gallery seems like stepping into the Salon of the Champ de Mars, the London critics have been saying. But this is not quite true: at the new Salon you are overwhelmed by the size of the exhibition, you are oppressed by numbers. At Knightsbridge there are but three hundred and twenty-seven pictures, and the sculpture, the drawings, and the engravings are in proportion.

That the interest does not depend wholly upon the gallery and the light and the hanging, you see at a glance. In the Academy you must seek out the good work; here you have to hunt for the bad. I do not mean to say that all the three hundred and twenty-seven paintings, all the sculptures, all the drawings, all the engravings, are masterpieces. Art, "reticent of habit," is never so lavish in masterpieces. You would have to ransack the world's great national galleries to produce as many. But there are a few things of supreme importance, while the average is distinctly high, distinctly interesting. I think it was Baudelaire who used to say that a man without a temperament had no business to paint. In the paintings on the walls, if you cannot always discern a temperament, you are certainly conscious of the desire, the struggle to develop one. To the exhibitor, evidently, art is not the commercial commodity it is to Royal Academicians, but it has for aim the creation of beauty, the expression of personal emotion or feeling, even if the beauty has only been seen through other men's eyes, even if the emotion has been kindled at other men's fires. The original artist does not appear every day, and at Knightsbridge, as in Paris, or Munich, or New York, or anywhere else, there are dozens of students—intelligent and sympathetic, it may be—to the one great master. But to study the right thing in this day of cheap and vulgar ideals means much. Who would not rather have the Whistler-inspired portrait than the proverbial baby and mustard-pot?

It adds immensely to the value of the collection that three or four artists who have had the most influence for good on the present generation should be represented. For this reason, it is only as it should be that two pictures by Manet have been hung. He is no longer living, it is true, but he was one of the earliest of the artists we call modern to take up and carry on the old traditions in the right way, and his painting has been in a large measure the inspiration of modern art. The two shown are not his finest; they have not the stupendous vigor of his "Bon Bock" nor the flower-like beauty of color of his little impression of "Bull-Fighters." But the large "Vagabond Musicians" has its charm as a tribute to the power of Velasquez over a painter usually considered one of the most individual of the century; and never, to my knowledge, has the "Death of Maximilian" been told with such dramatic

force. At the Durand-Ruel gallery in Paris, where I first saw it, the canvas was probably too large for the room, for it seemed brutal, unduly literal in its realism: the fine color, the tragic movement in the figures, the dazzling sunlight on the hillside beyond, the concentration of all these elements into one memorable scene or impression, were lost. Stronger still has been the influence of Mr. Whistler, and here is a wonderful series by him, from the first pictures, the exquisite "Valparaiso—Blue and Gold," the stately "Princesse du Pays de la Porcelaine," the rich, flowing "Piano Picture," the stately "Miss Rose Corder," of the early years, when to laugh at them was to be in the artistic fashion, to the work done to-day, when the critics who laughed must admire if they would escape from ridicule themselves. And very beautiful are these three new canvases: "Gold and Brown," "Blue and Coral," "Grey and Silver." Their titles show that Mr. Whistler still finds in loveliness, in rhythm of color, the true painter's poetry. The "Gold and Brown" is a portrait of himself—an admirable likeness for those who think a likeness of paramount importance in a portrait; elegant, distinguished, a delicious, low-toned harmony, as dignified as the little glimpse we have of Velasquez in his "Lances" or "Maid of Honor." Other contemporary influences are M. Degas and M. Monet, and on the wall opposite this wonderful series are the "Ballet-Dancers" of the one, a characteristic landscape of the other: pictures seen before in London, I believe, but not on that account any the less desirable and significant in the present collection.

I have said enough to explain that the Society is international not merely in name. Nor are the Frenchmen the only foreigners in the ascendancy, though there are besides M. Puvis de Chavannes, M. Bernard, M. Aman-Jean, who will no doubt make a still better showing next year, now they have learned that to send to London exhibitions is not necessarily to have their work rejected with scorn or asked with indifference. But artists of every other nationality have their places. There are the Dutchmen, Meadag, Van Toroop, with his strange, fascinating mystical enigmas, so Oriental in drawing and sentiment, and, above all, Matthew Maris, whose little "Montmartre" holds you with a spell more potent than that worked by many a larger canvas. The mystery here is all in the evasive, lovely color scheme of the tragic brown landscape, with its sonorous notes of red where the grouped roofs take definite shape in the pervading gloom. It has the poetic elusiveness of all his work, but is not as vague and indefinite as some of his later pictures, in which it seems as if the painter's visions were too dreamy, too incoherent to be recorded in paint. There are also the Germans, Von Uhde and Liebermann, on the one hand; on the other, the secessionists, mystics, idealists, what you will, but, as they are here seen, comprehensible enough in the expression they find for their fancies: Frans Stuck, whose serpent-entwined woman is a symbol for "Sin" that a child could understand; Hans Thoma, whose "Adam and Eve" is presented with a child-like straightforwardness borrowed from the Primitives. There are the Scandinavians—Zorn, strong even to coarseness; Thaulow, with his beautiful studies of water in movement and of moonlight, already exhibited at the new Salon. There are

the Italians, Segantini and Fragiaco. There is one Belgian, Fernand Khnopff. And there are the Americans, Mr. Alexander, Mr. Truesdell, Mr. Lungren, and, most conspicuous among them, Miss Cecilia Beaux, whose first appearance in London has been a veritable triumph. Her portraits are a complete revelation to a public that had never yet as much as heard her name.

Whoever knows anything of London exhibitions must realize the stupendous novelty to the Londoner of one that represents so many different men and groups and countries. But to turn to the British artists is to be again confronted with novelty. You look in vain for the popular favorites, for the painters who monopolize the line at the Academy, who are bought by the Chantrey Bequest, who reveal their incompetency or commonplace in the good strong light of the Tate Gallery. It is Glasgow that is the dominating element—Glasgow, disdained at Burlington House, grudging a sufficient space in the other London galleries. The most striking portraits are by Mr. Guthrie, Mr. Lavery, Mr. Walton; the landscapes by Mr. Macgregor, Mr. Patterson, Mr. Stevenson; the decorative arrangements by Mr. Henry and Mr. Hornel. I am afraid I must admit that these Glasgow painters are not altogether fulfilling the promise they gave some years back. They have not progressed. They have not produced the genius who, one confidently expected, must spring from their ranks. Their pictures sometimes degenerate into a mere mosaic, or pattern, without light, without atmosphere. They seem to have seen and felt little for themselves at first hand. But in their work you cannot mistake the artistic effort, the striving after style. Their paintings hung together have invariably a decorative value. They are never discordant. They fill the room with a pleasant suggestion of rich, harmonious color. And who will say that this is no great matter whose eyes have been offended by the trivial anecdotes, the bald statement of fact, the garish hues of the typical English collection?

At the Academy no one thinks of going into the little Black-and-White Gallery. It lies beyond the stairway leading down to the refreshment room, just where it is most convenient to turn one's back upon its open door. But, indeed, there is no reason why one should cross the threshold. There is nothing to see. It is refreshing, then, to find at Knightsbridge a series of drawings and etchings and lithographs and wood-engravings as fine and complete and representative as any ever displayed at the Champ de Mars. It is out of the question to mention all the good work it contains, for there is not an exhibitor in this section who can be ignored. You can study the many remarkable experiments that have been made of late in color lithography and etching. You can enjoy some of the most distinguished illustrators of the day in their original designs.

The sculpture, though but comparatively few examples are exhibited, is as noteworthy. The names of Rodin, St. Gaudens, and MacMonnies are a guarantee of its distinction. And to describe the show in detail has been less my object than to explain what manner of show it is. For herein lies its importance. If the Society can but persevere, if it can but continue as it has begun long enough to break down the barriers of British conservatism, in a few years

the Royal Academy will either have been reformed beyond recognition, or else have ceased to exist as an influence or factor in the development of art in this country.

N. N.

THE DUCHESS OF MONTMORENCY.

PARIS, May 19, 1898.

The name of Marie-Félice des Ursins is intimately connected with Chantilly. When she came to France and became Duchess of Montmorency she resided at Chantilly, which was not yet as sumptuous as it became under the Condés. She liked, when she could leave the court, to remain in the old domain of the Montmorencys; she felt the charm of "its waters, its woods," which are mentioned with solemn emotion in the deed of gift made by the Duke d'Aumale to the French Institute.

She was born in Rome on November 16, 1600. Her recent biographer, M. Monlaur, speaks in glowing terms of the family of Orsini. The daughter of Virginio Orsini (called in France "des Ursins"), Duke of Bracciano, and of Fulvia Peretti, had for godmother Marie de Médicis, and was named Marie for her; the name of Félice was given to her for her uncle, Félice Peretti, who became famous under the name of Sixtus V. Marie de Médicis negotiated the marriage of her godchild with Henri II., Duke of Montmorency, son of the famous Constable. The house of Montmorency was one of the first in the kingdom. Montmorency called himself the "premier baron chrétien." The marriage contract was signed at the Louvre on November 25, 1613, by King Louis XIII., the Queen Regent, and all the Princes of the blood. The marriage by proxy was celebrated in the Pitti palace in December. The bride was only thirteen years old, but she was sent to France, and was met at Avignon by the old Constable. She visited Languedoc with him, and traveled slowly to Paris, where she arrived before her husband. She saw him arrive at the Louvre, from a window where she stood with Louis XIII., who was then ten years old. She could admire him, in the midst of a fine retinue of gentlemen. The marriage took place at the Louvre.

The young Duke of Montmorency was handsome, elegant, witty; contemporaries speak of the sort of adoration which he inspired in all who approached him. He had long locks of fair hair, after the fashion of the time; his features were delicate, he was very slightly cross-eyed—an hereditary trait in the Montmorency family. His father had given him a severe education and prepared him for the life of a soldier. From his infancy he had been destined to the highest offices in the state; he became Grand-Admiral of France, Guyenne, and Gascony in 1613, duke and peer in 1618, Governor of Languedoc in 1614.

The author of the *Life of the Duchess of Montmorency* has found sundry documents in the Convent of the Visitation at Montpellier and in various monasteries at Nevers, at Moulins, at Annecy. The young Duchess spent much of her time in Languedoc, and when she became a widow, she retired to the Monastery of the Visitation, at Moulins, where she remained twenty-four years. Sister Ducros describes her thus:

"God had given to the Princess des Ursins a noble heart, never attached to anything which was not great; a generous heart, so

generous that she would have considered herself happy to lose everything for the glory of the good of what she loved; a chaste and pure heart, superior to all the pleasures of the senses; a tender, faithful, and constant heart, which never allowed itself any variation. She was no sooner united to her amiable husband than she attached herself to him with all the strength and vivacity of her affections; and it may be said with truth that she loved M. de Montmorency with all the love that can be felt in this world, for she never loved any but him."

The same cannot be said of her amiable husband. He was the godson of Henri IV. and had all the habits of the Béarnais. The Constable died in 1614, and his son had to leave for Languedoc; the young Duchess (she was only fourteen) remained alone. She wished to retire to Chantilly, but the Queen kept her at court. Her husband returned occasionally to Paris, but only for a short time, for some court ceremony. Marie-Félice accompanied the Queen to Bordeaux, to attend the marriage of the King with a Spanish Princess; she found there her husband, and was present with him at the exchange of the princesses (Mme. Elisabeth was married to the Infant of Spain, and Anne of Austria was married to Louis XIII.). The return to Spain, with an escort which was a real army, in winter, took as much as five months. A civil war was raging, but the rebels did not attack the Queen's army, saying that it would not do to attack people who were coming from a wedding. "The villages had been so pillaged by the disorderly armies that it was a pitiful sight, says an eye witness."

At Poitiers Madame de Montmorency heard the news of the death of a brother, Cardinal Orsini. Louis XIII. and Anne of Austria made their solemn entry into Paris on the 16th of May, 1616. There Madame de Montmorency learned the news of the death of her father. The Duke de Montmorency remained with her till the month of June, 1617, either in Paris or at Chantilly. He was not among the friends of Concini, a favorite of Marie de Médicis, and when Concini was killed in the court of the Louvre by Vitry, at the instigation of young Louis XIII., Montmorency, on hearing the news, was so overjoyed that he threw his purse to the bearer of the news. He did not, however, win favor with the King's favorite, young Luynes, who had been the mover in the conspiracy against Concini, and he spent most of his time in his government of Languedoc. Not without reason Richelieu afterwards said, "The character of the House of Montmorency is so much impressed on the people there that they consider the name of the King imaginary." Madame de Montmorency made a solemn entry into Montpellier on the 16th of June, 1617, with a brother of hers, Don Cosmo Orsini. (See the "Entrée de Madame de Montmaurais à Montpellier. Chez Jean Gilet, imprimeur de roy, 1617.") From this date the Duke placed his wife (she was now nineteen) at the head of the administration of his household; she could choose her officers, fix their duties and receive all their accounts.

In the troubled times of the reign of Louis XIII., Montmorency found himself involved in many difficulties. The favor of Luynes, whom the King had made Duke and Constable, had much discontented him. The young Constable died in 1621, and Montmorency, having taken an honorable part in the campaigns in Languedoc, hoped to obtain the Constable's sword, which his father

had worn so long. After the peace of 1622 (one of the paces between the Catholics and the Protestants of France which were merely truces), Montmorency and his wife spent some time at Chantilly. They gave there an asylum to the poet Théophile. The pavilion of Sylvia, restored by the Duke d'Aumale, is much visited by those who know the poet and have read his ode, "La Maison de Sylvie." Théophile also composed an ode to the Duke. In all his verse he bestows on the Duchess the name of Sylvia. She was fond of poetry, and Louis XIII. himself wrote verses for her. The fashion of the time was to write portraits, and all Paris having made portraits of the ladies of the court, Louis XIII. reserved for himself the portrait of the Duchess:

"Je vois ta renommée
S'enfuir
Déjà bien loin d'icy,
D'un chacun estimée."
Sage Montmorency."

Note the words "Sage Montmorency."

Montmorency was in command of the fleet during the operations which took place before La Rochelle and the island of Ré; he obtained a victory over Soublis, brother of the Duke de Rohan; he was all the more displeased when Richelieu asked him to abandon the title of High Admiral, which the stern Minister wished to abolish as well as the title of Constable, as he considered those high offices dangerous to the royal power. He took part, as Governor of Languedoc, in the last campaign against Rohan, afterwards conducted the French troops in Italy, and obtained a victory at Avigliana; he fought there most bravely, wounding Prince Doria with his own hand. He took Saluzzo and won another victory at Carignano. After the Italian campaign Montmorency was named Marshal of France. An edict inspired by Richelieu gave new institutions to Languedoc and diminished the authority of the Governor; Montmorency was greatly irritated by this exercise of the Cardinal's power, and allowed himself to be drawn into the intrigues of the numerous enemies of the Minister, among them the King's own brother Gaston and the Queen's mother.

Monsieur made overtures to Montmorency. The Duke would probably never have assumed an attitude of open revolt if he had not been worked upon by the Bishop of Albi, his evil genius, "who dragged him," says Richelieu in his Memoirs, "over the precipice." The Bishop showed him the example of the Duke d'Épernon, who had gained so much by having taken the part of the Queen-mother; he excited him against Richelieu, "the most ungrateful of men"; he represented to him that, in attacking Richelieu, he was defending the permanent interests of the state. Montmorency assembled the States, and at his request they signed a declaration in which they joined his cause; they thus signed their own abdication and the Duke signed his own condemnation.

Did the Duchess incite her husband to an act which was one of high treason? Richelieu's emissary and Richelieu himself thought so, and most historians have adopted D'Hémery's version, including Montmorency's biographer, Du Cros. M. Montlaur has consulted other documents, the manuscript Memoirs of Sister Agnès du Cros (daughter of the biographer), who lived at Moulins with the Duchess after she became a widow; the Memoirs of the Abbé Cadestin, with many other letters and documents, and he rejects the view taken by Richelieu.

Montmorency's revolt made a great commotion in the kingdom. The campaign against him was short; the regiment which Monsieur had promised him did not appear; only a few cities pronounced in his favor. Two armies, under Schomberg and Caumont-Laforce, were sent against him; he fought like a lion at Castelnaudary, receiving eighteen wounds. At the trial which took place at Toulouse, one of the witnesses, a captain in the royal army, declared that, "in the fight at Castelnaudary, seeing a single man charge through seven ranks and still fight at the seventh, he judged that that man could be only M. de Montmorency." The Duke was made prisoner on the battle-field, and was condemned to suffer capital punishment. Gaston's accomplices were beheaded or exiled; several were sent to the galleys; five bishops of Languedoc were deposed; the States were deprived of their prerogatives; all the cities or castles which had participated in the revolt lost their fortifications.

The Duchess of Montmorency was treated as a prisoner, but allowed to choose Moulins as her prison; she was conducted to the castle, and entered into communication with the superior of the Convent of the Visitation. From that time the life of Marie-Félice was entirely devoted to prayer; on the 9th of August, 1634, she entered the Convent of the Visitation, and for twenty-three years led a monastic life, though she remained in communication at times with the outside world. She died at Moulins June 5, 1666. The portrait of her which is found in M. Montlaur's volume, copied from an old picture, represents her standing in the dress of a Sister of the Visitation. One of her hands is placed on a death's-head, beside a crucifix. The features of the face are noble, the expression grave and stern.

The author of this new Life enters into many details regarding the conventual life of Marie-Félice, which have no historical interest, but which many will find entertaining. It is to be regretted that he adopts throughout his work a sort of phraseology very common in purely religious writings of a certain class. His heroine was a woman of noble feelings, of character, capable of passion; he represents her as too subdued, too tame, and one might almost say too ordinary.

Correspondence.

A PRAYER PAUSE.

TO THE EDITOR OF THE NATION:

SIR: Apropos of prayers in the churches for the preservation of our armies from the "violence of the enemy," my family feel keenly that there is a *casus omissus* in the collect published by the Bishop of the Protestant Episcopal Church in this diocese to be read by the clergy every Sunday. After praying for the safety of our brethren the soldiers and sailors, there follows this petition, "And to such as may fall in battle or by sickness, of our brethren or of our enemies, do Thou, O Lord, graciously grant the preparation of repentance unto life eternal," etc. We can all join in this very sincerely; but here comes our trouble. In San Juan, just before the bombardment by which several houses were destroyed, and we fear while it continued, was a young Spanish lady, a lovely girl, who has spent many

weeks in our house, and of whom we are all very fond. She was in danger from the cannon of our fleet, for even if the women and children flee into the country, we learn that the townspeople are not regarded with great favor by "patriots" of those parts, who are apt to get excited on such occasions. Now, though I feel sure that our friend, who has many admirers in this country, where she has lived most of her girlhood, has less need of repentance in view of sudden death than some of our brethren who took part in the bombarding, yet all men are sinners, and we should like her to be included in our prayers if God is listening with particular attention on such occasions. Would it be disloyal to ask the clergyman to pause after the word "enemies" long enough to permit my family to add a silent petition, "and also Maria —, who is *not* our enemy, but who is in great danger from the shot and shell of our brethren aforesaid"?

W. W. MONTGOMERY.

RADNOR, PA., May 24, 1898.

ROOTERS.

TO THE EDITOR OF THE NATION:

SIR: It may be that many an enthusiastic patron of "the national game" has turned to the 'Century Dictionary' to learn why he should be designated "rooter." The great thesaurus does not, however, furnish the information in a sufficiently clear manner. One must modify notions of orthography and turn to the verb "roul," and thence deduce the truth that a "rooter" is a "shouter."

The citations of the 'Century Dictionary' might be augmented by reports of dialectal usage. Thus, *roul* (*roul*) is "to cry fiercely" (Ray, 'North-Country Words'); *roul* as a noun signifies "noise," and "hoarseness" (Peacock, 'Glossary of Words Used in the Wapentake of Manley and Corringham, Lincolnshire'); *rooters* (pl.) are "fits of excitement" (Robinson, 'Glossary of Words Used in the Neighbourhood of Whitby'); and *rooter* is an extravagantly good thing, "a bumper, out-and-outer, stunner, topper, whopper" (Baumann, 'Londinismen').

Prof. Pagley once advised the appointment of a Professor of Rooting; his candidate was skilled in elegant and engaging insincerities of language and of manner (Hall, 'College Words and Customs'), so that it is clear that he had in mind an altogether different variety of action from that implied in our popular noun of agency.

A second digression from the matter in hand is furnished in a pun perpetrated by the author of 'Ginx's Baby,' which is perhaps unique and may be thought worth recollection:

"There is a Repair party, intermediating between Tories and Reformers—Radicals or Rooters let us call these latter if you like."

JAMES W. BRIGHT.

JOHNS HOPKINS UNIVERSITY.

Notes.

Little, Brown & Co. will soon issue 'Modern Political Institutions,' by Simeon E. Baldwin, of the Supreme Court of Connecticut.

M. F. Mansfield announces 'Three Years in Savage Africa,' by Lionel Decle, with an introduction by Henry M. Stanley; and 'Voices

Academice,' by C. Grant Robertson, M.A., Fellow of All Souls, Oxford.

'Types of Literary Art, from Chaucer to Arnold,' an introduction to English Literature, by Andrew J. George, is in the press of Macmillan.

R. H. Russell will hold back till the fall, for the sake of additions, 'The Shadows of the Trees, and Other Poems,' by Robert Burns Wilson. The volume will be adorned with twelve photogravure illustrations from nature by C. Grant La Farge.

Ginn & Co. have nearly ready 'Auszüge aus Luthers Schriften,' edited by Prof. W. H. Carruth, of the University of Kansas.

Mr. George J. Bayles, Ph.D. (Columbia), has begun issuing thin volumes on the Civil Church Law of the several States, leading off with New Jersey. The series aims to provide the clergy, church officers, and trustees with the law defining their duties in a form convenient for reference. Dr. Bayles is his own publisher at No. 111 Fifth Avenue, New York.

From Messrs. Scribner we have received six more volumes of the London Gadshill Edition of Dickens's Novels, viz., 'Little Dorrit,' 'Bleak House,' and 'Barnaby Rudge,' all cared for by Mr. Andrew Lang in introductions and brief notes. In his chat about 'Bleak House' he discusses the novel with a purpose, and the ethics of Harold Skimpole as a portrait of Leigh Hunt. In that about 'Little Dorrit' one remarks a fatal facility on Mr. Lang's part for dropping into a foreign language: only the first and last (half-) pages out of eight are destitute of Latin or French larding. The same publishers add a sixth volume to Carlyle's 'Frederick' in their quite charming Centenary Edition; 'The Bride of Lammermoor' to the Temple Edition of the Waverley Novels; and a sixth volume, of verse, 'The Flying Islands of the Night,' to James Whitcomb Riley's 'Poems and Prose Sketches.'

Mr. Laurence Hutton's 'A Boy I Knew, and Four Dogs' (Harpers) has already had its applauding audience among the readers of *St. Nicholas*. It is frank and humorous autobiography, yet portrays The Boy universal quite as much as The Boy particular. What city boy at least ever escaped, any more than the measles, the "one great superstition—to wit, Cracks," or the effort to avoid stepping on the cracks in the pavement? Taken altogether, these reminiscences have an humble historical value in helping us to imagine the New York of half a century ago; and the numerous portraits of The Boy's connection, dogs included, greatly enhance the interest of the wholesome narrative.

Miss Mary E. Burt, author of 'Literary Landmarks,' has added to the numerous versions of tales of ancient Greece a reading-book for children adapted from a translation of the "third book," or reader, in use in the primary schools of Athens. It is a spirited prose version of the story of 'Odysseus, the Hero of Ithaca' (Scribners), taken from the 'Odyssey' with a certain amount of literalness. The simplicity of the language is suited to children, but we cannot help thinking that Butcher and Lang's admirable translation of the 'Odyssey' would be appreciated quite as easily as Miss Burt's by children who could understand the latter, and the advantage of the former on the score of English is, of course, beyond question. Mr. Howard Pyle's charming full-page illustrations add greatly to the interest of Miss Burt's volume.

Mr. James Ward's 'Historic Ornament'

(Scribners) has been reviewed at length in these columns. There appears now a second series, or volume—that is to say, a book bearing the same title as the former, but with two stars on the title-page and on the cover. The volume now in hand deals with pottery, enamel, ivory-carving, metal-work, textile fabrics, mosaics, glass, and the decoration of books; the whole subject being thus divided into nine chapters. The criticism fitting the former volume is quite applicable to this, namely, that it is in the main a compilation, but on the whole a good one. If a student knew all that is contained in this book, he would know all about the historical aspect of the different decorative arts named above, nor would he be led astray by many false statements. On the other hand, ten pages of writing on these subjects by a man thoroughly versed in the practice of any one of the arts would be of more benefit to the serious student. The book is disfigured by some astonishing pieces of faulty English writing.

The American Architect and Building News Company of Boston has published a small folio of thirty-three plates under the title "The Georgian Period," Being Measured Drawings of Colonial Work. The names of ten architects and architectural draughtsmen are mentioned as the authors, some of whom are well known as skilled interpreters of ancient work. A circular notice laid loosely within the cover explains that "the greater portion of the value and interest of this publication will be found to lie in Part II., now in course of preparation." It is further explained that the second part will contain forty-eight sheets of drawings and a number of gelatine prints. With regard to the number before us there are but two plates, which are devoted to photographs made directly from nature and printed by some permanent process. The other plates are devoted mainly to details drawn in elevation and section, but some freehand drawings of buildings and parts of buildings are included. Among the edifices treated are the Van Rensselaer manor-house at Albany, the Royal mansion at Medford, the Hazard house at Newport, and King's Chapel, Boston. It is evident that this work, when complete, will be a valuable encyclopedia of that curious style of architecture in which the English buildings of the time of George II. and George III. were copied in America, with such modifications as were suggested by the substitution of wood for stone and brick, and the evident demand for great economy of space. As English post-Renaissance architecture is a simpler and cheaper version of the architecture of the Continent, so was American "Old Colonial" architecture an humble and domestic rendering of the English Georgian style.

Messrs. Gay & Bird of London send us 'The Progress of Art in English Church Architecture,' by T. S. Robertson, with illustrations by the author. It deals with churches in an analytic way, beginning with an account of the cruciform plan and its supposed significance, going on with the discussion of orientation and the probable causes of the irregularities or defections of line shown in some church plans, comparing then the great French cathedrals with those of England, and saying what is just of some of the peculiarities of both nations. The second chapter deals with the crypt, and judiciously, in the few words that could be allowed it. The third chapter, unexpectedly and to the

confusion of the reader, plunges into the subject of the revival of Gothic art, but this is understood by the author in the sense of a revival of interest and study rather than the building of modern Gothic churches. At last, after four preliminary chapters have been completed, the reader finds himself launched, with page 26, into an historical account divided into the familiar old epochs of Norman, Early English, etc., until chapter ix., "Notes on the English Cathedrals," is found to consist of comparatively brief notices in which the modern condition of the building, the restoration from which it has suffered, and its interesting contents and accessories are considered as well as the structure itself. The book is written with a good knowledge of the subject treated and with much enthusiasm and living interest. Judicious words are used about the care of churches and the ruinous treatment which so many have received in the name of restoration; and remarks on the English Gothic revival of 1850 and the following years, and on a possible wiser and more successful Gothic revival, close the work. There is an index, and the whole book will be found to be a general treatise on a large subject kept within narrow limits by dint of severe condensation. The author has known how to say what he thinks most important, and then to drop the subject.

A little book on private houses in America is published by the Doubleday & McClure Co. of New York under the title of 'How to Build a Home: The House Practical,' by Francis C. Moore. It is bound in boards, with a covering in the finest possible veneer of wood, unvarnished and, therefore, likely to soil, but very pretty in its present condition. The first chapter deals with "The Land-Grading," the second with "The Building," the third with the inside of the house, and so on for a series of chapters which are followed by a useful sort of index entitled the "Recapitulation," and by a very brief bibliography of authorities consulted. Plans are given illustrating the chapter entitled "A Practical Example," and these are a partial set of drawings for a "Seaside Cottage"—rather a large one, as it has a dining-room 16x20 feet, a parlor, library, kitchen, laundry, and large hall all on the ground floor, and all of corresponding magnitude. There is a great deal of common sense in the directions given, and the author is strongly impressed, and strongly impresses his readers, with the importance of guarding more perfectly against fire than is commonly done in American houses, whether they are frame-built houses as to their outside walls or not. There are some statements which an engineer would hardly approve, as the surprising one on page 16 which seems to imply that the writer does not believe in diagonal bracing. If any small book would enable a man to build a good house without professional advice, this would probably be the book.

Mr. Charles F. Binn's little book on Ceramics, recently issued by M. F. Mansfield, New York, but evidently English in origin and manufacture, is called 'The Story of the Potter.' It undertakes to give a general account, in eighty small pages, of baked-clay wares since Egyptian antiquity—and it is not unsuccessful. There are many small but clear illustrations, prints from half-tone blocks; and these and the text work well together to tell the long story in a brief and intelligible way. There is no pretence at any unusual amount of independent know-

ledge or original research, and some very queer authorities are cited; but, in the great sea of conjecture as to dates, origins, and causes, these few slips may pass unnoticed. The book would be more useful if the running-title were made to refer to the contents of the pages, instead of being the useless repetition of the general name of the book. It is expensive to set up marginal notes, but the running-title may be in one form of words as well as another; it may, and should, change with the changing subject of the pages. An attempt has been made at arranging the chronology of ceramics from about 3000 B. C., when "earthenware vases appeared in Egyptian hieroglyphics," to 1795 A. D., when "Josiah Wedgwood died." The preface speaks of this as an attempt—as a "nucleus for others to work upon." But even this is a little too much to say of a chronology extending through only four pages and a quarter.

Another book on the arts of baked clay is entitled 'Potters: Their Arts and Crafts,' the authors being John C. L. Sparks, of the South Kensington Museum, and Walter Gandy. The book is published by Thomas Whitaker of New York, but it has been manufactured as well as composed in Great Britain. This is an essay-like composition illustrated by a few not very instructive woodcuts. It is not brought down to the very latest dates, nor can it be called very learned or very scientific in treatment; not that mistakes are numerous, for we have detected few, but because it is written like a magazine article, with more wealth of allusion and anecdote than of accurate description or discrimination of manufactures or styles of decoration.

Mr. Louis N. Wilson, librarian of Clark University, Worcester, Mass., has reprinted by itself his 'Bibliography of Child Study,' first contributed to the *Pedagogical Seminary*. There are 562 direct items, besides about 80 more entries of works of standard reference on allied topics. Mr. Wilson combines the whole in a subject-index.

Mr. Wilberforce Eames, too, librarian of the Lenox Library, has done well to reprint his paper on 'Early New England Catechisms,' which has already appeared in the *Proceedings of the American Antiquarian Society*.

The library of Harvard College puts forth an appeal to its friends, and especially to the graduates of the University, for contributions of all kinds to its collection of documents illustrative of the history of the University. Even amateur photographers are solicited to file their views, duly signed and dated. Mr. William Garrott Brown is in charge of this department.

The latest of the handy American Library Association Annotated Lists is one of French Fiction, chosen by Mme. Sophie Cornu and William Beer, seeking "soundness of sentiment" as carefully as "excellence in style." The list comprises less than 200 titles taken from seventy authors.

A self-correcting but important error crept into the last sentence of the Note in last week's *Nation* (No. 1717, p. 406) regarding the overcrowding of German technical schools. "Whose general preparatory training was sufficient" should have read "insufficient."

—A correspondent writes:

Mr. Matthews will be glad to know, in the interest of the Colonial Society of Massachusetts, that the word *campus* has been dis-

covered as far back as 1848 in the *Nassau Literary Magazine*, vol. 8, p. 129. Had this fact been known to him, he would not have written that the first American book to contain that word was 'College Words and Customs,' 1851. In his lowest deep a lower deep. In regard to Harvard, a high officer there writes: "*Campus* is unknown at Harvard, and it is always regarded as the sign of one unacquainted with Harvard usages if he employ the word to describe what we call the 'college yard.'" On the other hand, Mark Sibley Severance, in 'Hammersmith: his Harvard Days,' p. 23, writes: "On an ancient commencement when these reverend gentlemen had come on horseback, . . . you might have seen them walking sedately in small-clothes, etc., about the open plain skirted by marshes and ox-pastures . . . where is now the *Campus* [Severance was a Harvard graduate of 1869; the italicizing is his, and his book was written before 1877], with its arching elms and well-arranged quadrangle flanked with halls." The earliest appearance of *campus* at Yale and regarding Yale has been lately discovered—probably since Mr. Matthews went abroad—and may be new to him and his Colonial Society. In 1872-3 a column in each number of the *Yale Record*, vol. I., was headed "On the Campus," by James H. Van Buren, one of the editors of that work—and that without any reference to Princeton usage. He felt justified in using it by the old song, "When we first came on this campus" (what is the date of that?), and because he thought he had seen it in English fiction, as 'Tom Brown,' etc.

—The Messrs. Putnam have issued in a square octavo volume of nearly 500 pages a book by the late Rev. William Wood Seymour, entitled 'The Cross: Its Tradition, History, and Art.' The book contains a large number of illustrations drawn from many sources; not generally attractive in appearance, nor of much historical or representative value. There is an index, which is full, and seems to be very nearly complete. As for the book itself, it is one of those curious accumulations of material to which some persons devote themselves through many years, and which, when they are made accessible by arrangement in the text or by a complete index, have at least the value of being suggestive, and of pointing out what kind of information is to be looked for. In the case before us the presence of a bibliography extending over ten pages enables the reader to follow up the study of any branch of the subject. The writer seems to have tried to avoid committing himself as to his belief in this or that doctrine of the many which have been attached to the cross itself, the legends concerning it, the relics which are supposed to exist in many parts of the world, and the sacred associations connected with it. Wisely, perhaps, he has stated each popular belief and each morsel of legend without much comment, as leaving to the reader the privilege and the duty of choosing what he should accept. This readiness to insist only upon the existence of the story is, perhaps, carried too far in the earlier chapters, where a vast amount of space is devoted to the appearance in very ancient and prehistoric articles of human make of crossing lines incised, in relief, or painted. In addition to the visible, existing patterns which consist of crossing lines, there are others, known only by allusions, to which the same shape and character have been ascribed, such as the mark of the blood on the door-posts of the Hebrews on the first night of the Passover, of which it is assumed that the marks took the shape of the cross. Fylfots and swastikas are, of course, much cited, and are of much apparent importance in such a piece of vague investigation. Inasmuch as it is as natural a way as any

of setting down two marks that they shall be approximately straight, and that they shall be laid across one another, and inasmuch as nothing could be easier than the increasing of the complexity of this pattern by putting additional lines to it, it may be said that too much is made of these frequent appearances in early times of what might be called a cross. Moreover, as the punishment of nailing or tying the victim to a plank, tree, or stake was common in Asia and among Asiatic peoples, and afterwards in Roman dominions, it followed, of necessity, that one of the shapes of the cross was often employed—sometimes the Tau (T) cross, in which there was a cross-bar upon an upright; sometimes the St. Andrew's cross, in which two beams crossed one another diagonally; sometimes the *crux immixta*, in which the head of the upright piece passed the cross-bar and was seen above it. In other words, the world has always been full of crosses, of those used for simple adornment and of those used for punishment. The difficulty is not in admitting this fact, but in recognizing the sacred or mystical significance of the fact; and the compiler of this book may be thought to have gone as far as it was possible to go in the way of admitting the importance of these doubtful associations.

—Under the general editorship of Prof. Prothero, the "Cambridge Historical Series" has arrived at a seventh volume. Dr. W. Cunningham's 'Outlines of English Industrial History' was one of the earliest to appear. He now contributes an essay of some 200 pages 'On Western Civilization in its Economic Aspects (Ancient Times)' (Macmillan). The aim of the essay is to trace the working out of the economic destinies of the chief ancient civilizations. In this short history of commerce the author deals with the characteristic features of the Egyptian and Phœnician civilizations, and points out their influence on the Greeks and the Greek colonies. He then proceeds to show how the conquests of Alexander on the one hand, and, on the other, the action of the Romans, diffused Greek civilization; how the incursions of the barbarians gradually limited the area of civilized life in the West, until the elements of the old civilization were restored, when Christian Rome rose from her ashes to guide the destinies of the world. The treatment is necessarily of the briefest, but, by dint of being perfectly clear and systematic, Dr. Cunningham succeeds, in spite of the slight evidence at his disposal, in giving a useful and fairly detailed picture of the methods pursued by ancient nations in opening up trade, in securing a food supply, etc. He shows plainly enough how the vitality of a city depends mainly on its economic conditions. What makes his little book especially useful is the fact that he is careful to give his authorities in foot-notes. The maps and the chronological chart showing the duration of different polities which have made important economic contributions to Western civilization, are excellent.

—The completion of the great 'Deutsches Wörterbuch' of Jacob and Wilhelm Grimm, so long a matter of satirical speculation and undated hopes, now comes pretty clearly into view across the space of eight years. The first subscription-list was started nearly half a century ago. With the first *Lieferung*, "A to Allverlein," which has just been issued, bearing the imprint of the original publishing house of Salomon Hirzel, Leipzig (in New

York, Lemeke & Buechner), begins a new subscription which, it is confidently believed, will be filled uninterruptedly and at regular intervals until eight years hence the completed work will be in the hands of all subscribers, old and new. To scholars and students the world over this will be welcome news. It is exactly sixty years ago that two emissaries of the well-known publisher and Goethe-enthusiast, Salomon Hirzel, laid before the brothers Grimm the plan of a monumental dictionary of the German language. After some hesitation the Grimms finally consented. They had never before entered upon any literary or scholarly undertaking at the suggestion of others; their works theretofore had been the results of spontaneous impulse. In the years that followed, the infinite drudgery of this colossal task weighed heavily upon them, and in their correspondence with Hirzel there is a note of anxiety which commands the reader's sympathy. At last, in 1852, after fourteen years of preparatory labors, the dictionary began to appear. The public had grown impatient, and in 1846 Wilhelm Grimm, with characteristic good nature, made a statement in Frankfurt concerning the status, the scope, and the inevitable difficulties of the work. The 'Wörterbuch' is designed to contain the complete vocabulary of the German language from Luther to Goethe, with the history of words and with citations to illustrate the usage. Luther, who rescued German from its disordered state, stands naturally at the beginning of a lexicon from which Middle and Old High German have been purposely excluded. But at that time it was no such self-evident proposition to make Goethe the central point in the study and history of the modern German tongue; he was not then so universally recognized by his countrymen as the supreme force in German culture. By assigning to him this position the Grimms showed their courageous conviction, and, in a sense, may be said to have thus been the founders of Goethe philology as a branch of scientific investigation. The Grimms were assisted by Karl Weigand and Rudolf Hildebrand and others of lesser note. By the death of Wilhelm Grimm in 1859 the enterprise received a severe blow, and when, in 1863, Jacob followed his brother, the fourth volume had only just been begun. In 1864 the work was resumed by Weigand and Hildebrand, with whom other scholars were associated. The first-named died in 1878, and indeed during the last years of his life had been too much engaged in getting out a dictionary of his own to give his full attention to the greater work. Prof. Hildebrand of Leipzig, who, like Dr. Johnson, combined with the touch of genius which characterized all his scholarly labors, an aversion to steady lexicographical drudgery, advanced but slowly with the parts intrusted to him. Death, illness, and other delaying causes incident to so vast an enterprise rendered the regular publication of the *Lieferungen* impossible. Within a comparatively short space of time Hildebrand, Matthias Lexer, Ernst Wülcker, and Otto Erdmann passed away.

—Of the immediate successors of the Grimms only one is now left, Moritz Heyne of Göttingen, who, in 1867, at the age of thirty, joined the staff of workers. He, in the course of the last thirty years, has finished the letters H, I, L, M, and R, and carried the formidable letter S through its most prolific period of Sch. The 'Wörterbuch,' as it now stands, contains the letters A, B, C, D, E, F,

H, I, L, M, N, O, P, and R, and parts of G, S, T, and V. At this point, when the dictionary was languishing in spasmodic *Lieferungen*, the publishers had an access of energy, and the result of their efforts during the past year is that they are now able to announce that, at the rate of about eighteen *Lieferungen* a year, the 'Wörterbuch' will be completed before 1907, or about seventy years after the plan of the work was submitted to the Grimms. The remainder of S is in the hands of the veteran Heyne. G, which Hildebrand left unfinished at "Getreibe," will be continued by Prof. Herman Wunderlich of Heidelberg (not Ernst Wunderlich, as it appears upon the cover, by attraction, doubtless, to the preceding name of Ernst Wülcker). Matthias Lexer, who began the letter T in 1890, had carried it only to the ill-omened word "Todesstag," when death overtook him. This task, together with the entire letter U, has been given to Prof. Stoebch of Kiel. These two letters are expected to fill the eleventh of these stately volumes. V, which had been brought by the late Ernst Wülcker as far as "Verschrecken," now passes into the hands of Prof. Siebs of Greifswald, and W has been intrusted to Prof. Karl von Bahder in Leipzig. To whom the modest Q and the more important Z have been assigned, the prospectus does not state. At all events, it is apparent from the foregoing that the completion of the 'Wörterbuch' has been taken out of the region of speculation into that of tangible certainty. In the case of a work like this, it is well to call public attention to the extremely low rate at which it is published. Each *Lieferung*, containing from twelve to fifteen signatures, costs the subscriber two marks; thus, at an annual outlay of about thirty-six marks, one may, at the end of eight years, become possessed of one of the greatest lexicographical works of the century. Rarely has a publication of such rich interest and monumental proportions been placed so completely within the reach of the most straitened purse, and we need scarcely urge students to begin at once to harvest in these tri-weekly *Lieferungen* "um in dem Allverein selig zu sein." (It is with this citation from Goethe that this first number of 239 octavo pages ends.)

RECENT AMERICAN POETRY.

The Complete Poetical Works of Joaquin Miller (San Francisco: Whitaker) suggest the curious fact that of the two poets who have claimed to be most distinctively and aggressively American, neither has ever consented to be known by his own name, but each personally shifted it to something more piquant and sensational. From the beginning of his literary career, Whitman called himself Walt, while Cincinnatus Hiner Miller rechristened himself Joaquin. In the same way, neither of the two has been content with his own language, while Longfellow and Lowell, both professors of modern languages, were satisfied with English, herein agreeing with Don Quixote, who says that all the great poets "wrote in the language they drew in with their mother's milk, and did not search out foreign ones (*buscar las extranjeras*) to express the loftiness of their conceptions." In other respects the analogy holds out. Whitman headed his first volume of poems with a picture of himself, and has since offered others; Miller decorates his final volume with seven pictures taken at different

periods. As Whitman, according to one of his biographers, used to write eulogistic notices of himself for publication, so Miller fills the intervals of his books with flattering descriptions of his personal prowess. He says in his final notes for young readers, "Not only simplicity of motive, but majesty of utterance must be ours" (p. 325). Accordingly, we read in one of his preludes his way of exhibiting this needful combination (p. 222):

"Born to the saddle and bred by a chain of events to ride with the wind until I met the stolid riders of England, I can now see how it was that Anthony Trollope, Lord Houghton, and others of the saddle and 'meet' gave me ready place in their midst. Not that the English were less daring; but they were less fortunate; may I say less experienced? I recall the fact that I once found Lord Houghton's brother, Lord Crewe, and his son also, under the hands of the surgeon in New York—one with a broken thigh, and the other with a few broken ribs. But in all our hard riding I never had a scratch. One morning Trollope hinted that my immunity was due to my big Spanish saddle, which I had brought from Mexico City. I threw my saddle on the grass and rode without so much as a blanket. And I rode neck to neck; and then left them all behind, and nearly every one unhorsed."

It is only in the pages of Conan Doyle's delightful French officer, Brigadier Gérard, that we can find a mate for the combined "simplicity" and "majesty" of these self-revelations. "Ah! my friends, I was no ordinary looking man when I was in my thirtieth year. In the whole light cavalry it would have been hard to find a finer pair of whiskers. Murat's may have been a shade longer, but the best judges are agreed that Murat's were a shade too long. And then I had a manner."

Yet it must be owned that Miller appears in one respect to more advantage than Whitman, partly because the Californian poet does all his puffing for himself, frankly, with no clique behind him; and partly because of the honest criticisms on himself which often accompany them. Thus, he tells us how much he has worked over "The Isles of the Amazons," and how it now seems foolish "with knights and things," as no doubt it does; but he does not fail to tell us that the Emperor of Brazil liked it, and invited him to come and make the palace his home while he lived (p. 108). He tells us that Lord Houghton struck out much of the "empty verbosity" from his first volumes published in 1877-'78, but naturally mentions that they brought him an invitation to spend the season with Mr. Gladstone (p. 191). He admits how poor now seem to him the writings which first—joined with certain peculiarities of dress and manners—made him an object of curiosity in London; but he describes that epoch as "the sudden renown of a little brown-faced student, . . . famous in a day as a poet" (p. 320). He says of his "Sappho and Phao" (p. 305), "It is the only thing of mine except 'The City Beautiful' that quite pleases me," though it is perhaps the vaguest of all his poems, and relates to a dim reunion of the two Greek lovers, after three thousand years, on the shores of California. After all, his humility amounts to this: he admits that some of his poems may perhaps be less good than others, but practically assumes that each is worth reprinting, and is enough to place him on the heights of fame. He has, indeed, at times a sense of lyrical melody such as Whitman despised; but, on the other hand, there are to be found many grains of gold in Whitman's heaps of dross, and these are hardly obtainable from those of Miller.

After all, the couplet which will live longest in all this closely printed volume is probably that one touch of simple feeling which crowns the description of his tribute at the grave of Walker the filibuster:

"He had done more than this for me,
And yet I could not well do more." (P. 18.)

Even this is now vitiated by the discovery, made through this book for the first time, that the poet never stood beside Walker's grave, and that the poem was originally written about John Brown of Osawatimie.

The poet Tennyson, pointing a quarter of a century ago to a copy of Miller's early poems that stood on a shelf of his library, said briefly to an American visitor: "There's power there, but crude." Among all the new American poems which have lately passed across the critic's desk, there is no question which is entitled to just this praise so far as it goes. It is 'The Children of the Night,' by Edwin Arlington Robinson (Boston: Badger). Nay, one can go farther than this, for, while the variety of Mr. Robinson's measure is as yet small, he does his work deftly and thoroughly within that plot of ground, and packs even his sonnets with such vigor and such creative imagination that the whole story is told. He writes of men and women, not of external nature, and uses the latter only as the Greeks did, for a setting, not a theme, which is the better way. When he deals of books, there is the same power of characterization. We expect young poets to have their say about Verlaine and Whitman, but we hardly expect them to have heard of Crabbe; and yet what prose critic ever summed up Crabbe and placed him in his niche so completely as this young American? (p. 64):

GEORGE CRABBE.

Give him the darkest inch your shelf allows,
Hide him in lonely garrets, if you will.—
But his hard, human pulse is throbbing still
With the sure strength that fearless truth endows.
In spite of all fine science disavows,
Of his plain excellence and stubborn skill
There yet remains what fashion cannot kill,
Though years have thinned the laurel from his brows.

Whether or not we read him, we can feel
From time to time the vigor of his name
Against us like a finger for the shame
And emptiness of what our souls reveal
In books that are as altars where we kneel
To consecrate the flicker, not the flame.

And when the young poet, looking away from his bookshelves, turns his lens upon the village street which he knows so well, the result shows the same power of putting a whole life, or a whole generation of lives, into the same narrow compass of fourteen lines (p. 54):

THE CLERKS.

I did not think that I should find them there
When I came back again; but there they stood,
As in the days they dreamed of when young blood
Was in their cheeks and women called them fair.
Be sure, they met me with an ancient air,—
And yet, there was a shopworn brotherhood
About them; but the men were just as good,
And just as human as they ever were.

And you that ache so much to be sublime,
And you that feed yourselves with your descent,
What comes of all your visions and your fears?
Poets and kings are but the clerks of Time,
Tying the same dull webs of discontent,
Clipping the same sad alnage of the years.

Mr. Robinson is not afraid of odd words where they give just what he needs. In this last verse, "ttering" is, we take it, arranging in tiers, and "alnage" means ell-measure. To show him capable of a lyric flow and of producing something which shall haunt the reader, take this (p. 32):

LUKE HAVERGAL.

Go to the western gate, Luke Havergal,—
There where the vines cling crimson on the wall,—

And in the twilight wait for what will come.
The wind will moan, the leaves will whisper some
Whisper of her, and strike you as they fall;
But go, and if you trust her she will call.
Go to the western gate, Luke Havergal—
Luke Havergal.

No, there is not a dawn in the eastern skies
To rift the dery night that's in your eyes;
But there, where western glooms are gathering,
The dark will end the dark, if anything:
God plays Himself with every leaf that flies,
And hell is more than half of Paradise.
No, there is not a dawn in the eastern skies—
In eastern skies.

Out of a grave I come to tell you this—
Out of a grave I come to quench the kiss
That flames upon your forehead with a glow
That blinds you to the way that you must go.
Yes, there is yet one way to where she is—
Bitter, but one that faith can never miss.
Out of a grave I come to tell you this—
To tell you this.

There is the western gate, Luke Havergal.
There are the crimson leaves upon the wall.
Go—for the winds are tearing them away—
Nor think to riddle the dead words they say.
Nor any more to feel them as they fall;
But go! and if you trust her she will call.
There is the western gate, Luke Havergal—
Luke Havergal.

Those who lavished so much admiration on the sonnets called 'At the Gates of Song,' by Mr. Lloyd Mifflin, have doubtless waited with much interest to see what harvest would be reaped in his later book, 'On the Slopes of Helicon, and Other Poems' (Boston: Estes & Lauriat). They must own, however, that the author's mastery of the lyric measure is scarcely equal to that which he has attained—perhaps by concentrated practice—in the sonnet measure; so it is to this last we still recur. Here his hand is practised, yet with a slight tendency to excess of alliteration and assonance (p. 57):

SUMMER'S SOUNDS.

One listening in the clover fields can hear
The mower whet his scythe; and far away,
O'er lowlands odorous with the new-mown hay,
The rattle of the reaper sharp and clear.
Across the reedy stretches of the mere
The grazing horses send their greeting neigh;
While, 'mid the silences throughout the day,
The locust's sharp staccato stabs the ear.
Dim shimmering in the heat the violet hills
Call to us vaguely from a realm of dreams;
And from the meadow's smooth meandering
streams
Come muffled murmurs of the distant mills;
From upland wheat-fields, as his barns he fills,
We hear the farmer calling to his teams.

It is perhaps natural that from those parts of the American continent which have been least described we should have more of local coloring reflected into literature than from the more hackneyed regions. From California, for instance, we have a great deal of this, in the thin volume, 'A Vintage of Verse,' by Clarence Urmy (San Francisco: Doxey); and the following graceful lines are an example (p. 35):

AS I CAME DOWN MOUNT TAMALPAIS.

As I came down Mount Tamalpais,
To north the fair Sonoma Hills
Lay like a trembling thread of blue
Beneath a sky of daffodils;
Through tules green a silver stream
Ran south to meet the tranquil bay,
Whispering a dreamy, tender tale
Of vales and valleys far away.

As I came down Mount Tamalpais
To south the city brightly shone,
Touched by the sunset's good-night kiss
Across the golden ocean blown;
I saw its hills, its tapering masts,
I almost heard its tramp and tread,
And saw against the sky the cross
Which marks the City of the Dead.

As I came down Mount Tamalpais,
To east San Pablo's water lay,
Touched with a holy purple light,
The benediction of the day;
No ripple on its twilight tide,
No parting of its evening veil,
Save dimly in the far-off haze
One dreamy, yellow sunset sail.

As I came down Mount Tamalpais,
To west Heaven's gateway opened wide,
And through it, freighted with day-cares,

The cloud-ships floated with the tide;
Then, silently through stillly air,
Starlight flew down from Paradise,
Folded her silver wings and slept
Upon the slopes of Tamalpais.

The new impulse to poetry in the British provinces fortunately leads to this local coloring, and Blomidon and Tantramar still awaken musical associations. Dr. Theodore H. Rand, in the second edition of 'The Basin of Minas, and Other Poems' (Toronto: Briggs), celebrates well the robin, the loon, and the humming-bird; the aspen, the hepatica, the twin-flower, the ghost-flower; and pays a lyric tribute to that rarely sung wanderer, the dragon-fly.

Canada also gives us touches of human emotion through a poet who has before given signs of promise, Mr. Frederick George Scott, author of 'The Unnamed Lake, and Other Poems' (Toronto: Briggs). As this, for instance (p. 45):

THE HEAVEN OF LOVE.

I rose at midnight and beheld the sky
Sown thick with stars, like grains of golden sand
Which God had scattered loosely from His hand
Upon the floorways of His house on high:
And straight I pictured to my spirit's eye
The giant worlds, their course by wisdom planned,
The weary wastes, the gulfs no sight hath
spanned,
And endless time for ever passing by.

Then, filled with wonder and a secret dread,
I crept to where my child lay fast asleep,
With chubby arm beneath his golden head.
What cared I then for all the stars above?
One little face shut out the boundless deep,
One little heart revealed the heaven of love.

To those who are growing weary of dialect poems—that is, to everybody—we heartily recommend an example of the French Canadian strain, which has never before been so deftly handled as by Dr. William Henry Drummond in 'The Habitant, and Other French-Canadian Poems' (Putnam). In the immense and innocent vivacity of these verses, and in their snap and movement, of which every line implies a violin accompaniment, there is a perpetual relish which belongs with the cheery and rather shallow life with which they deal. For the deeper emotions we must look elsewhere, but what can be more uproariously jolly than this, from 'Le Vieux Temps' (p. 13)?

Ma fader an' ma moder, too, got nice, nice familiee,
Dat's ten garçon an' t'orteen girl, was mak' it
twenty-t'ree;
But fonyy t'ing de Gouvernement don't geev de
firs' prize den
Lak w'at dey say dey geev it now, for only wan
dousaine.

De English peep dat only got wan familiee small
size
Mus' be feel glad dat tam dere is no honder-acre
prize
For fader of twelve chill'ren—dey know dat mus'
be so,
De Canayens would boss Kebeck—mebbe Ontario.

But dat is not de story dat I was gone tole you
About de fun we use to have w'en we leev a ches
nous.
We're never lonesome on dat house, for many
cavaller
Come at our place mos' every night—especially
Sun-day.

But tam I 'member bes' is w'en I'm twenty-wan
year—me—
An' so for mak' some pleassurement—we give wan
large soirée,
De whole paroisse she be invite—de Curé he's come
too—
Wit plaintee peep from 'noder place—dat's more
I can tole you.

De night she's cole an' freeze also, chemin she's
fill wit snow,
An' on de chimley lak phantome, de win' is mak'
it blow—
But boy an' girl come all de sam an' pass on
grande parloir
For warm itself on beeg box-stove, was mak' on
Trois Rivières.

An' w'en Bonhomme Latour commence for tune up
hees fidelle
It mak' us all feel very glad—I'enfant! he play
so well.

Musique suppose to be fir'st class, I often hear, for sure,
But mos' bes' mian, beat all de res', la ole Bateese
Latour—

An' w'en Bateese play Irish jeeg, he's learn on
Mattawa
Dat tam he's head boss cook Shaintee—den leetle
Joe Leblanc
Tak' hole de beeg Marie Juneau an' dance upon
de floor
Till Marie say "Excuse to me, I cannot dance no
more."

An' den de Curé 's mak' de speech—ole Curé La-
douceur!
He say de girl was spark de boy too much on some
corner
An' so he's tole Bateese play up ole-fashion reel
a quatre
An' everybody she mus' dance, dey can't get off
on dat.

Another Canadian poet, Mr. Bernard Mc-
Evoy, gives us no particular local coloring;
Indeed, his book, 'Away from Newspaperdom'
(Toronto: Morang), takes us not very far
from the locality thus described. The Rev.
Dominic Brennan, writing under the pen-
name of D. O'Kelly Branden (Buffalo: Peter
Paul Co.), gives us plenty of patriotic poems.
some Irish, some American, and some that
are thoughtful and even profound. Mrs. Mar-
garet Gill Currie, in 'A Romance of Old New
Brunswick' (Toronto: Briggs), offers some-
thing that is labored, yet not poetic. Mr.
Daniel Webster Davis, a new colored poet, in
'Weh Down Souf, and Other Poems' (Cleve-
land: Helman-Taylor Co.), makes a good se-
cond to Paul Louis Dunbar, although he does
not equal his predecessor. He was born and
reared in Virginia, and wrote the ode for the
opening of the negro building at the Atlanta
Exposition. Miss Lucy Cleveland's 'The
Scarlet-Veined' (Randolph) means the Ame-
rican flag, and should, therefore, be seasona-
ble, though published "befo' de war." Mrs.
Belle R. Harrison's poems (Dillingham) are
apparently of Southern origin, and have a
marked flavor of Miss L. E. Landon, who
furnishes the motto. "The Spinning Wheel
at Rest," by Edward Augustus Jenks, is of
value, were it only for the picture of the old
stone bridge at Gilsun, N. H. (p. 22). Why
have we so few picturesque bridges in the
United States, when there is opportunity for
so many?

Miss Fanny H. Runnels Poole, in her
'Bank of Violets' (Putnams), thus describes
the bobolinks, already so well celebrated by
Lowell and Bryant that Thomas Hughes
crossed the ocean to hear them (p. 11):

THE BOBOLINKS.

The buoyant music of the bobolinks
Outpours upon the June;
Now is the high-tide of the year, methinks,
With love and joy atune!
Yet more, I ween,
Than heard or seen
Is that which back to fancy brings
The presence of remembered things.
The air is filled with melody,
And so, my heart, with memory!

Once more and now, O playmate of my choice,
Only to live is sweet!
Thro' the billowy open floats your voice,
Too happy at your feet;
Kingsups, daisies,
In grassy mazes,
Sway low at your undulant tread;
Hush! you are calling. "Just ahead,
Something soft to keep and hold,
Hurry! all ebony and gold.

"On the brier-rose, there! O Constantine!"—
But off with arrowy flight,
Never a moment our grasp within,
Gleameth a ray of light,
Its way along
A daring song!
Ah, well! adown these after-years,
Fair is the gold and few the tears.
Playmates, we follow yet—and then
Here are the bobolinks again!

Mr. Edward McQueen Gray, now of Flor-
ence, New Mexico, gives us, in 'Alamo and
Other Verses' (London: Denny), a companion

picture of the mocking-bird; but, perhaps
because the author is of English birth, he
does not quite make the subject his own,
and his bird notes are not sufficiently free
and lyrical (p. 50):

MOCKING-BIRD.

I awoke with the first flush of dawn,
While the mocking-bird out on the lawn
His psalm was shrilling unresting and filling
My heart with the promise of morn,
Mocking-bird,
My heart with the promise of morn.

I lay while the gathering light
Was surely defeating the night
And, tunelessly swelling, thy music was telling
Of happiness, love, and delight,
Mocking-bird,
Of happiness, love, and delight.

He is more at home in writing of the bat-
tle of the Alamo; his address "To America:
Proem" is a bit of warm international cousin-
ship; and the book is printed in behalf of a
free circulating library at the author's place
of abode. Another poet, who sings both the
mocking-bird and the whippoorwill, though
with only moderate success, is Mr. William
T. Dumas, in his 'The Golden Day, and Other
Miscellaneous Poems' (Philadelphia: The
Levitytype Company). He also gives an ex-
ceedingly vigorous, but rather florid and
wordy description of "The Cyclone" (p. 55).
The same adjectives must be applied to the
new volume of the Japanese-American poet,
Yone Noguchi, 'The Voice of the Valley'
(San Francisco: Doxey). His editor, Mr.
Charles Warren Stoddard, says of him: "With
the passionate enthusiasm of youth, this un-
spoiled poet has fluttered the eagles on their
star-crowned peaks, and I glory in the almost
frenzied daring with which he has chanted
'The Song of Songs, which is Noguchi's'"
(p. 12). This is an example of the frenzied
daring (p. 23):

SONG OF NIGHT IN YOSEMITE VALLEY.

Hark! The prophecy-inciting windquake of the un-
fathomable concave of darkest Hell!
O, the God-scourning demon's shout against the
truth-locked gate of mighty Heaven!
Heaven and Hell joining their palace and dungeon,
remould the sinful universe to an ethereal pa-
radise—
O, the sphere is shaken by the Master-Mechanic
working from the surface of the world to its
centre!
Alas, the sun has fled in saddest woe!—O mortal,
breathe thy silent prayer unto mighty Yosemite
for mirth!
Behold, the light of day leaves the white mansion
to the care of dolorous night!
The gent of the Valley fly from the roar of a
thousand lions to the sacred peace above—
Lo, an unknown jeweller decks the black, velvety
heaven with treasure-stars—
Yea, the Mother-Goddess, mantling the earth with
the night, forbids Yosemite disturb her baby-
angel's dream in heaven!
Hark! the night discord of the eternal falling
of waters sounding discontent throughout the
earth—
O, a chariot is rushing down to an unknown hollow
in wild triumph!
Behold, a dragon reveals divinity in the ghostly-
odorous sky of the night—
Nay, the mighty sword of the Judgment Day blazes
down the Heaven to the gate of Hell!

'One Way to the Woods' (Boston: Cope-
land), by Evalene Stein, has much freshness
and fragrance in its description of nature,
and this bit of Mexican life—in spite of the
monotony of its refrain—will recall charming
travel-pictures to many (p. 9):

IN MEXICO.

The cactus towers, straight and tall,
Through fallow fields of chapparal;
And here and there, in paths apart,
A dusky peon guides his cart,
And yokes of oxen journey slow,
In Mexico.

And oft some distant tinkling tells
Of muleteers, with wagon-bells
That jangle sweet across the maize,
And green agave stalks that raise
Rich spires of blossoms, row on row,
In Mexico.

Upon the whitened city walls
The golden sunshine softly falls,
On archways set with orange trees,
On paven courts and balconies
Where trailing vines toss to and fro,
In Mexico.

And patient little donkeys fare
With laden saddle-bags, and bear
Through narrow ways quaint water-jars
Wreathed round with waxen lily stars
And scarlet poppy-buds that blow,
In Mexico.

A land of lutes and witching tones,
Of silver, onyx, opal stones;
A lazy land, wherein all seems
Enchanted into endless dreams;
And never any need they know,
In Mexico,

Of life's unquiet, swift advance;
But slipped into such gracious trance,
The restless world speeds on, unfelt,
Unheeded, as by those who dwell
In olden ages, long ago,
In Mexico.

Miss Mary Augusta Mason, in her 'With
the Seasons' (Randolph), has a pretty fancy
(p. 44), marred by a faulty "would" for
"should" in the last line:

O SWEET, SWEET WORLD.

O sweet, sweet world, were I a bee,
And such delights were offered me,
From morn till eve I'd spread my wings
And hover o'er the fragrant things,
And never miss a single bloom,
But carry homeward in the gloom
My load of sweets and board it so
My golden cells would overflow!

Each cup should bear a magic name
To tell me whence the honey came!
"Arbutus," "clover," "violet,"
"Azalea," "pink," and "mignonette,"—
And other flowers we love to see
And that are sweet to man and bee;
When winter comes at home I then
Would live the summer o'er again.

Mrs. Florence Earle Coates, in her 'Poems'
(Houghton, Mifflin & Co.), gives us this
strong sonnet (p. 119):

SIBERIA.

The night-wind drives across the leaden skies,
And fans the brooding earth with icy wings;
Against the coast loud-booming billows fling,
And sighs through forest-deeps with moaning
sighs.
Above the gorge, where snow, deep fallen, lies—
A softness lending e'en to savage things—
Above the gelid source of mountain springs,
A solitary eagle, circling, flies.
O pathless woods, O isolating sea,
O steppes interminable, hopeless, cold,
O grievous distances, imagine ye,
Imprisoned here, the human soul to hold?
Free, in a dungeon—as yon falcon free—
It soars beyond your ken, its loved ones to in-
fold!

Mr. Charles F. Johnson of Trinity Col-
lege, Hartford, in his 'What Can I Do for
Brady? and Other Verse' (Whittaker), puts
neatly a single thought at a time (p. 56):

THE SHAKESPEREAN PHRASE.

He took ten words from our English speech:
Two were such as mothers teach
Their children when they croon them rhymes
Or teach them legends of old times,
One he learned from his father's men,
One he picked up from "rare old Ben,"
Two he heard Marlowe use one day
At the Mitre Tavern after the play,
One he recalled from a ballad rude
That his comrades sang in Lucy's Wood,
Two he had heard on London street—
A verb and a noun now obsolete,
But full of pith in Elizabeth's reign—
And one he found in old Montaigne.

He set the Saxon words beside
The high-born Latin words of pride,
And lo! the ten words joined together
To make a phrase which lives for ever—
An immortal phrase of beauty and wit,
A luminous thought the soul of it,
But with no baffling wordy fence
Between the reader and the sense.
Genius finds in our every-day words
The music of the woodland birds,
Discloses hidden beauty buried
In the commonplace stuff of the every-day world.
And for her highest vision looks
To the world of men, not the world of books.

Philadelphia, always a city eminent for

physicians, is becoming a city where physicians are also poets, and Dr. Edward Willard Watson, in his 'Songs of Flying Hours' (Philadelphia: Coates), is no more afraid of writing poems on the actual themes of science than was Dr. O. W. Holmes of writing 'The Anatomist's Hymn.' The Philadelphian does his work, too, like his Boston precursor, with a thoroughness and dignity that disarm criticism (p. 146):

BACILLI.

For you no kindly power, with loving art,
Adorns and shapes, with beauty rare, each form.
Beneath the eye of man, in unseen part,
Ye, in the darkness of the infinite, swarm.
Everywhere, always, in the calm or storm,
Within the living, waiting there the hour
When ye shall rise triumphant and o'erpower,
Within the dead, where carnival ye keep,
Ever invading as ye steal and cower,
Till, on some sultry wind, ye to your carnage leap.
Are ye, then, life? Like flowers and painted things
That pulse in sunshine on their gilded wings,
That hum the note that louder still doth float,
Leaping heavenward, from the palpitating throat
Of every bird that skyward soars and sings?
Or are ye death, the desolate and drear,
Ever surrounding us with legions vast;
Evading sight, lurking in guilty fear
Where never can unaided glance be cast?
Are ye the silent foe of that blest power
Who, for us, works unceasing, day and night,
That hides from us its majesty and might
Within the blushing petals of the flower?
And, in the future, will the untiring hand
That builds again each shattered house of clay,
Conqueror, before death's flying legions stand,
And claim for all that lives a deathless day?

In 'Washington: A National Epic in Six Cantos' (Putnam) Mr. Edward Johnson Runk has produced a work in which it has been his aim, he tells us, "that truth should not be invaded by imagination." In this effort he has absolutely succeeded, having produced a hundred and thirty pages of extreme doggerel, in which the only touch of imagination is in his impassioned reference, near the end, to "world-famed Chauncey M. Depew," and to "the storied page of Roe." The concluding lines are:

"A halo rests round his person,
And Freedom knows one Washington."

There is, of course, some new Omar Khayyám literature—this time of American origin. Mr. John Leslie Garner prints a second edition of his own translations, under the title of 'The Stanzas of Omar Khayyám' (Philadelphia: Coates), and intersperses them, in a rather meaningless way, with mottoes in different languages and translations from other poets, old and new, prefacing all with an introduction. At the same time Mr. Condé Benoit Pullen publishes a 'New Rubáiyát' (St. Louis: Herder), in which he seriously undertakes to refute Omar's sinful levity and to substitute better views of the universe. He, however, renders his readers a service by reprinting FitzGerald's poem at the end. Yet, since every year makes it clearer that most of what endears the whole work to us is due to FitzGerald, and not to Omar, why should we not classify the book itself frankly with English literature, and no other—as we do, for instance, in the case of Chapman's Homer—and so come to an end of supplementary disquisitions, imitations, or rebuttals? A better piece of translation than Mr. Garner's, and perhaps, under the circumstances, more worth while, is the version of Pellico's tragedy of Francesca da Rimini, by the Rev. J. F. Bingham, D.D. (Cambridge, Mass.: Sever), which is accompanied with a good deal of learning and some interesting engravings of Italian buildings and localities.

Mr. Walter Learned, the author of 'Between Times,' has edited a 'Treasury of American Verse' (Stokes), which is the best col-

lection of the kind known to us, except Mr. Horder's 'Treasury of American Sacred Song,' which is somewhat more limited in theme. Of course no two readers will agree as to the proper apportionment of space to authors, and some will find fault with the proportions allotted by Mr. Learned; but he has preserved many good things not always included in such collections, as, for instance, the text of the really deserving plantation melodies of the late Stephen C. Foster, whose pathetic cadences are in danger of being lost to sight among the trivial and meaningless "coon songs" now in vogue. Mr. Learned's transcript of his various verses is unusually letter-perfect. We note only a few variations from the recognized texts. Pinkney's ever-graceful 'A Health' (p. 290) was originally printed, if we mistake not, in stanzas containing four long lines each, which have been gradually divided since the author's death into eight short ones, for the convenience of compositors; and in quoting Mr. Higginson's sonnet 'Two Lessons' (p. 26), the editor omits the fine lines from Vergil, of which the whole sonnet is a free translation, and which the author prefixed as its motto: "Disce, puer, virtutem ex me, verumque laborem; Fortunam ex aliis."

In conclusion we would suggest that in future editions of this really excellent book the full names of authors should be printed, with a very few statistics as to birth, death, birth-place, and place of residence. There should also be, as is usual, an alphabetical index of the poems by their titles, as well as by their first lines.

SIR GEORGE NICHOLLS.

A History of the English Poor Law, in connection with the State of the Country and the Condition of the People. By Sir George Nicholls, K.C.B., Poor Law Commissioner and Secretary to the Poor Law Board. New edition, containing the revisions made by the author and a biography by H. G. Willink, Chairman of the Bradfield Poor Law Union. 2 vols. New York: G. P. Putnam's Sons. 1898.

There is a singular appropriateness about this new edition of Nicholls's well-known history. It appears at a time when the strongest Conservative Government of this generation is firmly established in power in England, pledged up to the eyes to "do something" in the direction of old-age pensions; a time, therefore, when the question of the relation of that modern poor law which Nicholls did so much to create to the industrial conditions of a country like England is being reconsidered in all its aspects. That the criticism of Mr. Chamberlain's and Mr. Charles Booth's proposals should be left entirely to the Charity Organization Society is, it must be confessed, not altogether satisfactory; and even those who feel most strongly the narrowness of its principles, will be glad to see it reinforced by the experience of the strong men of 1834.

There is another reason for welcoming the present reissue. Every one who knows anything of the actual administration of poor-law relief in England is aware that the Bradfield Union, first under the chairmanship of the late Mr. Stevens, the creator of Bradfield School, and then under that of the late Mr. Garland, has for a good many years been the model for rural unions all over

England. It has been thought to show the possibility of almost entirely putting an end to out-door relief even in a purely agricultural district, and that without driving larger numbers into the workhouse or causing serious distress. To the present chairman of that union, himself the grandson of Nicholls, we now owe the sober and well-written account of Nicholls's life which is prefixed to these volumes, and which by its reticent brevity contrasts so favorably with much of the biographical writing of the day.

We could, indeed, have tolerated further particulars, for the man is more interesting than his book. Daniel O'Connell once tried to raise a laugh by assuming the absurdity of setting "a sea-skipper to regulate poor laws." A thorough old skipper Nicholls was to the end, as one may see from the excellent portrait here given. Mr. Willink describes him, from his own boyhood's recollections, as "a well-knit, alert old man, with keen gray eyes under extremely bushy eyebrows, rather austere but with a genuine smile," and, it may be added, with the firm chin and mouth of one who would carry either a ship or a public measure through every kind of storm. A life so varied in its activities as his deserves a passing glance.

The son of a Cornish farmer, George Nicholls got into the naval service of the East India Company, and was in command of a ship by the age of seven and twenty. He had made skilful use of the opportunities for trade on his own account which the Company allowed its officers, and when he married in 1812 he seemed on the high road to wealth. The year after, he lost his ship by fire, and, though exonerated from blame, he retired from the service with impaired fortunes, "a broken man." The next few years he spent in quiet country life; then, as his spirits returned, he began to throw himself into local administration, and in 1821, being just forty years of age, he accepted the unpaid office of overseer of the poor in the little town of Southwell. This was the turning-point of his life: his vigorous and successful measures to diminish outdoor relief and apply "the workhouse test" made Southwell a useful object-lesson to all poor-law reformers. But before he was called upon to apply the same principles to the whole country, his career had taken another unexpected turn. Asked to advise a friend about the Gloucester Canal, he showed such businesslike qualities that he was made superintendent of its construction, and moved to Gloucester in 1823. When the monetary crisis of 1826 brought with it the ruin of the old Gloucester private bank, he induced the Bank of England to open a branch, and so impressed the directors with his capacity that in a few months he was intrusted with the delicate task of establishing a branch at the much more considerable town of Birmingham. He had set the Birmingham office on its legs, and was getting a little tired of it—for "mere banking," he declares, "i. e., the receipt and payment of money and the discount of bills, is, of all the associations with which it has been my lot to be connected, the least interesting and intellectual, the most narrowing and restrictive in its influence on character"—when Lord Melbourne invited him to become one of the Commissioners under the New Poor-Law Act of 1834.

Granting that the policy of the Act was a necessary one, there can be no question of the wisdom of the choice. What the Act aimed at was to put an end to the universal

and most demoralising practice of granting outdoor relief from the rates, very largely "in aid of wages." A man of firm character was needed to meet the outcry which the measure was bound to produce. That the purpose of the act was in the main effected is matter of history. When we look back on the angry denunciations of the new system, with its "Poor-Law Bastilles," and of the "three Bashaws of Somerset House" who introduced it, we may wonder whether any such measure could possibly have been carried out under the democratic government of the England of to-day. As to the subsequent disputes with Sir James Graham concerning Nicholls's measures for the introduction of the new Irish poor law, the evidence here given is too scanty and (in no bad sense) one-sided to enable us to form an opinion. Ireland has always been a peculiarly difficult field for the English administrator, and *festi-vas lente* was never Nicholls's motto. When the Commission was reorganised in 1847, Nicholls was made the scapegoat of the Government, and sank from being senior Commissioner to being permanent Secretary. But this post still furnished him with congenial employment till he retired with his K.C.B. in 1851. Still unsatiated with work, he spent the last fourteen years of his life in writing his histories of English, Irish, and Scotch Poor Law and in guiding, as chairman, the deliberations of the Birmingham Canal directorate.

No one can read Mr. Willink's sketch without feeling that Nicholls deserved well of his country. Things had got to such a pass in 1834 that rough surgery was doubtless necessary. But it may be questioned whether Nicholls and his colleagues made sufficient allowance for human nature. The recent practice of "boarding out" on one side and the establishment of the casual ward on the other—not to speak of the return of a good deal of outdoor relief—are alike departures from the simplicity of the programme of 1834. The "immense scale," as a recent writer expresses it, upon which the new workhouses were planned, which now contain in most cases not half the inmates for whom they were intended, shows that they were expected to do a work which as a matter of fact they have not done.

After what we have said of the author, the reader of Nicholls's History will hardly expect to find in it any particular breadth of view, extensive historical knowledge, or literary skill. The first half follows Sir Frederick Eden and the Statutes of the Realm in a leisurely jogtrot fashion, taking statute after statute just as they come in the statute-book, so long as they have anything to do with "the condition of the people," and commenting upon them in a sensible, though often imperfectly informed, fashion. Thus his chapters present a convenient summary of all the economic legislation of England down to the middle of last century, and they breathe an optimism that is very cheering after the lamentations of Prof. Thorold Rogers and his disciples. He even believes that the justices' assessment of wages in the sixteenth century kept pace with the rise in the price of food!

The latter part of the book, dealing with the evils that called forth the great reform of 1834, and with the first twenty years' administration of the act, is much more original, and still forms the most complete account of the poor-law history of the period. It is also much narrower in its scope than

the earlier part; the reader will not learn from it of the existence of Malthus or of his Essay upon Population, which first turned the attention of thoughtful men to the inevitable consequences of the allowance plan; and he will not suspect that the period was one of profound changes in the structure of industrial society. The History becomes a sort of glorified Blue-book, with the usual limitations of such performances; but it is a permanently useful Blue-book, for all that.

The History of South Carolina under the Proprietary Government, 1670-1719. By Edward McCrady. Macmillan. 1897. Pp. ix, 762.

To many readers a considerable part of the interest and importance of Mr. McCrady's book will be thought to lie in its exposition of the formative influences in early Carolina history, and the early adoption of a distinctive social and political point of view. From the first the position of Carolina was one of comparative isolation. On the north a broad stretch of wilderness, penetrated only by Indian trails, separated it from Virginia, while on the south it touched, if it did not overlap, Spanish territory. Itself an outpost of the English advance, communication with the other English continental colonies was difficult and infrequent. While its situation, therefore, favored an independent development, its natural affiliation was soon seen to be with the colonies of the West Indies, particularly Barbados. The part taken by the Barbadians in the early affairs of South Carolina has nowhere been so carefully examined as in Mr. McCrady's volume. Emigrants from Barbados came to the colony in large numbers, bringing with them not only their property and their religion, but also an established social order the distinctive characteristic of which was an aristocracy based upon the institution of negro slavery. It was this system that was transplanted full-grown to South Carolina, and that maintained itself, without radical modification, in the midst of the new conditions. In point of social stability and definiteness, accordingly, the colony early reached a relatively more advanced stage than some of its neighbors, where the operation of new or varied conditions tended to delay the formation of a predominant and enduring type.

So, again, with the pronounced disposition to construe constitutional provisions strictly—a theory of which South Carolina was later to become a foremost champion. Mr. McCrady finds the historical beginnings of this in the struggle between the colony and the Proprietors. Locke's "Fundamental Constitutions," which for more than thirty years the Proprietors sought, in one way or another, to force upon the colony, not only was an impossible attempt to reestablish an outgrown mediævalism, but was also in opposition to the charter under which the Proprietors were to make laws only with the advice and consent of the freemen. The struggle for this charter privilege, and against the arbitrary acts of the Proprietors, is treated by Mr. McCrady in great detail. The story is the familiar one of restricted powers, restlessness, legal quibbling, and enlarging claims, on the part of the colony, and, on the part of the Proprietors, of arbitrary interference with affairs, incompetence to deal with a confessedly difficult situation, complaints, and intrigues. Through-

out the fifty years of proprietary rule, however, the colony relied upon the guarantees of its charter, whether as against the "Fundamental Constitutions" or against proprietary schemes in other forms, and learned to seek its economic and political safety in a strict interpretation of its charter provisions. Trained thus early in a strict-construction atmosphere, and maintaining at the same time a social life remarkable for self-reliance and solidarity, South Carolina gave to its political thinking a bent which was ever afterwards retained. It would be interesting to know how far this view of the historical origin of strict construction would be borne out by a study of the history of South Carolina under royal control—a study, by the way, which Mr. McCrady intimates his purpose to make.

We have called attention to these two points as prominent features of Mr. McCrady's book. The work as a whole is an exhaustive study of the period to which it is devoted, and in the field of American colonial history is fairly to be called a contribution of the first order. We can do little more than mention the other important matters considered. The position of the dissenters, especially during the famous attempt of the church party to override them and obtain permanent control of affairs, is lucidly explained, as is that of the Huguenots and the struggle for their enfranchisement. The peculiar importance of Charleston, as not only the seat of government, but as the focus and, to a large extent, the theatre, of its social and political life, centralized the interests and activities of South Carolina to a degree unknown in the other colonies.

"Until the immigration of the Scotch-Irish and Virginians into the upper country by the way of the mountains, from 1750 to 1760, the development of the colony was not, as in New England, from many and distinct settlements or towns, but from one point, the circle enlarging as the population increased, but always with reference to the one central point—the town—Charles Town. . . . For many years Charles Town practically embodied all of Carolina. Beaufort, the next town to be settled, was not attempted for more than forty years after the planting of the colony, and Georgetown not until some years later. Until 1716, elections were generally held in the town for all the province, and representation outside of it—that by parishes—was not practically established until the overthrow of the Proprietary Government in 1719. No court of general jurisdiction was held outside of it until 1773, over a hundred years after the establishment of the colony. There was only one government for the province, the town, and the church. The same General Assembly passed laws for the province, laid out streets, regulated the police for the town, and governed the church. Even after the colony had grown, and the upper country had been peopled from another source, every magistrate in the province was appointed in Charles Town until the Revolution of 1776, and after that, upon the adoption of the Constitution of 1790 and the change of the seat of government to Columbia, at that place. There was thus from the inception of the colony in 1665 to the overthrow of the State in 1865, for two hundred years, only one government in South Carolina. There was no such thing as a county or township government of any kind." (Pp. 6, 7.)

The account of the efforts to suppress piracy is one of the most entertaining parts of the volume. Mr. McCrady is particularly anxious to show that the pirates who for years infested the South Carolina coast, and whose suppression proved a work of such great difficulty, not only were not themselves South Carolina men, but, further, had

neither sympathy nor support from the people of that colony; and he objects seriously to the phrase "South Carolina pirates," as conveying an entirely wrong impression. With equal vigor, though, we think, with less success, he defends the colony against the charge of neglecting the interests of education in its early years. Finally, the steps in the transfer of the colony from proprietary to royal control are minutely traced, with especial regard to the condition of affairs in England, the attitude of Chief Justice Trott, and the legal questions involved.

Mr. McCrady has done his work so thoroughly, and, in general, so well, as to make one regret that he did not build on a somewhat broader plan. The defect of his history, as it seems to us, is its too exclusive devotion to political and legal matters. Undoubtedly the documentary sources on which he has mainly relied, and of which he has made admirable use, furnish much more abundant material in these directions than in others; from the standpoint of a well-rounded survey of the period, however, the space devoted to economic and social questions seems small. Occasionally, also, the mass of detail becomes somewhat excessive, and tends to obscure the main course of events. These, however, are by no means fatal weaknesses, nor do they detract seriously from the commendation to which the work is justly entitled.

We have noted a number of misprints, most of them, apparently, attributable to hasty proof-reading. The "General Assembly of the States" (p. 30) should, of course, read "State," as on page 31. Of misprinted proper names we find *Saye* for Sayle (p. 188, note), and *Spottswood* for Spotswood (p. 442, note). The Dorchester colonists are probably to be thought of as "threading" their way up the Ashley River, instead of *treading*, as on page 327. The witchcraft excitement in Salem was in 1692-93, not in 1691-92 (p. 451). Mr. S. C. Hughson, the author of "The Carolina Pirates and Colonial Commerce," has a particularly unfortunate time of it; for not only does Mr. McCrady object to the title of his monograph, but substitutes *Commons Journal* for it on page 586, assigns it to series 2, instead of series 12 of the Johns Hopkins Studies, in the same place, gives the author's name as *Hughson* (p. 204, note 3), and transposes the initials in the index. The "Thomas Ash" mentioned on page 386 appears as "John Ash" in the index. The absence of a table of contents, and of any chapter headings except dates, makes the volume difficult to consult, notwithstanding the full index.

Introduction aux Etudes Historiques. Par Ch.-V. Langlois et Ch. Seignobos. Paris: Hachette et Cie. 1898.

This is a book which takes one back at once to first principles. It would form an excellent text for a long article in some quarterly review; an article conceived in the fashion of fifty years ago, when the writer's aim was not so much to criticise the work nominally under his hand as to express his own general notions on the subject. We do not mean to say that MM. Langlois and Seignobos furnish little substance of their own: their pages abound in ideas and in carefully considered statements about method; but by trying to define and fix the limits of scientific history, they disclose the whole question of what history is and is

worth. We cannot, of course, enter upon an academic dissertation here, and yet there is one obvious distinction which we should like to make. When the assailant of historical studies urges, let us say, Walpole's dictum, "Anything but history, for history must be false," or one of a dozen such flings, he fails to disconnect chronology from the analysis of motive and character, or from the delineation of a public policy. A vast body of fact about the past can be established on a basis so solid that your only sceptic will be one who is unwilling to admit the existence of matter. The Benedictines of St. Maur chose a most judicious title in calling their monumental work 'L'Art de Vérifier les Dates.' The best history of this class is impreguably founded. The Oath of the Tennis Court, the Declaration of Independence, the Revolution of 1688 are, as actual events, no more to be challenged than the truths of Euclid. In discussing them, to be sure, we are apt soon to get outside ascertained fact, we are apt to dogmatize too freely. Even so, is this vice not to be laid at the door of metaphysics? The moment a man begins to use the facts of history he passes into another province. In ceasing to be an epitomist he becomes a philosopher.

M. Langlois, who writes a necessary introduction, has small patience with the attempts of his predecessors in the exposition of historical method, e. g., Droysen, Freeman, Tardif, and Chevallier. "Vous n'en extrairez, en fait d'idées claires, que des vérités évidentes par elles-mêmes, des vérités de La Palice." And soon after, in referring to them separately, Droysen's 'Grundriss der Historik' "est lourd, pédantesque, et confus au delà de ce que l'on peut imaginer. MM. Freeman, Tardif, Chevallier ne disent rien qui ne soit élémentaire et prévu." This criticism, however brusque, is at least open, and shows that its author puts forward his own treatise with confidence. Bernheim's 'Lehrbuch der historischen Methode' seems to be the nearest anticipation of this present product of the Sorbonne. Even Bernheim, by going too far into metaphysical problems, by passing too lightly over critical and practical questions, leaves something to be desired. MM. Langlois and Seignobos set before themselves a scientific goal. "Nous nous proposons ici d'examiner les conditions et les procédés, et d'indiquer le caractère et les limites de la connaissance en histoire. Comment arrive-t-on à savoir, du passé, ce qu'il est possible et ce qu'il importe d'en savoir? Qu'est-ce qu'un document? Comment traiter les documents en vue de l'œuvre historique? Qu'est-ce que les faits historiques? Et comment les grouper pour construire l'œuvre historique?"

The audience to which this essay on historical method is addressed contains, first and foremost, novices in historical composition; and the moral they will do well to draw from it is the old advice of the 'Ars Poetica':

"Sumite materiam vestris, qui scribitis, aequam
Viribus, et versate diu, quid ferre recusent,
Quid valeant umeri."

It is a common gibe that such students as find themselves unable to score a success in any other profession go into the church, and likewise, during these recent years since history has established its place in the arts curriculum, one has heard the hint that historical courses are crowded by men who follow the line of least resistance. MM.

Langlois and Seignobos are anxious to show that something besides memory and diligence are required of the historical tyro. They accumulate enough difficulties to impress the logic-chopper, perhaps even the mathematician, with the idea that some hard processes must be undergone before scientific history of the approved modern type is produced. One must distinguish, too, between instinctive processes and rational processes. "Les débutants et la plupart des personnes qui n'ont jamais réfléchi sur les principes de la méthode des sciences historiques, emploient, pour effectuer ces opérations [compliquées de critique et de construction], des procédés instinctifs qui n'étant pas, en général, des procédés rationnels, ne conduisent pas d'ordinaire à une vérité scientifique." All of which goes to show a doubting world that there is a scientific history quite apart from fine writing and from the habitual backing of one's party views through thick and thin.

Historical science, when a few more generations have rolled over its head, may develop a long terminology. Even at present it can appear at the assembly of foxes without having to lament the absence of a brush. MM. Langlois and Seignobos discuss "critique de restitution," "critique de provenance," "critique interne négative de sincérité et d'exactitude," "construction des formules générales," with the same precision which they would use in dealing with atomic weights. An experience of nearly a century in the application of criticism to the study and presentation of historical sources has something to show for itself, and were Gibbon to write again, even though he would have little to unlearn, he could gain a more rigid correctness by following the technical processes of modern erudition. Our professors of the Sorbonne furnish in compact form pretty much what one masters by rule of thumb in the better German seminaries, with this difference that pungency and a sense of style add considerably to the value of their teaching. Their matter is digested under the three heads of preliminary knowledge, analytical methods, and the steps in synthesis required by the preparation of a narrative. The second and third books, devoted respectively to "opérations analytiques" and "opérations synthétiques," are the essential parts of the treatise. Did space permit we would gladly give an outline of the main propositions advanced, for they embody the rules of the historical game as at present played. They represent common sense added to experience and inspired by the love of exact truth. From the first chapter, on *Heuristik*, to the last, on exposition, an even standard of thoughtfulness and lucidity is maintained. MM. Langlois and Seignobos are depressing in their allusions to what purports to be the historical literature of the modern world. The writers of universal celebrity seem to be peccant almost without exception. "There is none that doeth good, no not one," is the feeling created. We gather that, after the work of erudition has been completed by thousands of self-effacing toilers, the time may come when a proper coordination will be possible. Over against this wholesome humility we would place the sound scholarship of the authors. The examples which they take to emphasize their points are numerous and selected from a wide area. They show, particularly, an intimate acquaintance with periodical literature.

ture and with the moot questions which have been threshed out by historians since magazines and monographs were multiplied.

Lord Acton, in his inaugural address at Cambridge, praises the robust impartiality which is not content with balancing party views against each other, but is willing to state an opponent's case more strongly than he would put it himself. Bearing in mind the rivalry of France and Germany, we have been curious to observe the attitude of scientific French historians like MM. Langlois and Seignobos towards their German *confrères*. "Robust impartiality" would lead them to illustrate historical vices by French, and historical virtues by German, examples. This they seem disinclined to do. Certainly no painful politeness is evident, and if the Germans, considering what they have done for historical science during the present century, receive fair treatment, that is all. Intrinsically, most of the criticism aimed at them is just. MM. Langlois and Seignobos might, however, have adopted a strain more in harmony with the principles of their work, by so couching their illustrations that the reader would never be reminded of any differences outside the domain of pure history.

Certain Tragical Discourses of Bandello.
Translated into English by Geoffrey Fen-

ton. With an Introduction by Robert Langton Douglas. 2 vols. London: Nutt. 1898. [Tudor Translations.]

These melancholy tales of Bandello, dealing with the calamities incident to the votaries of love, found, like the other Italian *novelle*, eager readers among the English of the Elizabethan age. They were put into French by Belleforest (whom every Shakespearean will remember in connection with "Hamlet" and "Romeo and Juliet"), who had a high opinion of his own literary gifts, and embroidered the simple style of Bandello with classical allusions, poetical flourishes, and other rhetorical tinsel. Belleforest's version fell into the hands of Jeffrey Fenton, who employed, as he says, some of his "voyaged hours" in putting it into English. Fenton was a Puritan, and in his hands Bandello's tales became texts for copious sermonizing; so that, what with the pedantry of Belleforest and the long-winded moralisings of Fenton, the genial Milanese is "translated" much as Bottom was.

Like all the Puritans, the great Milton among the rest, Fenton has a low opinion of the female sex. "Women," he tells us, "have their being in this world for no other respect than to depend upon the will of men." They are "derived from the imperfection of men," and "ordained from the beginning to be their vassals." Should a wife

fall in awe towards her husband, he should freely use "the rodd of correction." He is, indeed, a most outspoken and conscientious wife-beater. We cannot, he tells us, begin too young with these perverse creatures—"these ymeps," as he calls them, "who have follye tyed on their backs"; and those who have charge of "lytle girls" must often "minister to them the racks and tormentes of the rodde." As Fenton did not marry until pretty late in life, and then took to wife the widow of a bishop, one is a little curious to know how far he put his theories into practice.

BOOKS OF THE WEEK.

Barnett, Edith A. A Champion in the Seventies. Chicago: H. S. Stone & Co.

Bird Studies.

An Account of the Land Birds of Eastern North America. By WILLIAM E. D. SCOTT. With 166 illustrations from original photographs. Quarto, leather back, in box, \$5.00 net.

This work, while strictly accurate in every particular, avoids the use of all technical terms. The illustrations are from original photographs, many of them being taken directly from live birds. A distinctive feature of the book is the views of nests, these having been photographed, often with no little difficulty, without being removed from their original positions.

Putnam's Nature-Study Pictures.

Designed for Practical Instruction and for Use in Decoration.

STUDIES OF BIRDS. By Wm. E. D. Scott.

A series of reproductions in facsimile from photographs of North American Birds taken from nature and in their natural environment. The plates are printed on sheets 12x9½ inches, in style suitable for class use, for the decoration of the walls of the schoolroom, and for framing as works of art.

The plates are grouped in sections, comprising each from eight to fourteen subjects, and each section is put up in a stout manilla envelope. Price per section, 50 cents.

Copies of single plates sent to instructors, as specimens of the series, by mail paid, on receipt of Five Cents.

TWO BOOKS ON CUBA.

**Due South;
Or, Cuba Past and Present.**

By M. M. BALLOU. \$1.50.

This book is of special interest just now when the thoughts of all Americans are focused on Cuba. The New York Tribune pronounced it "a practical and careful account of Cuba in all its aspects—historical, political, industrial, agricultural, and social." Mr. E. P. Whipple wrote of it: "Nothing that we have read of this wonderful island can compare with Mr. Ballou's representation of the beauty of its scenery, the wonders of its flora and fauna, the fertility of its soil, the delight of its perpetual summer."

To Cuba and Back.

By RICHARD H. DANA, Jr. \$1.25.

This book appeared some years before Mr. Ballou's. A writer in *The Atlantic Monthly* said: "We know of no modern book of travels which gives one so vivid and fresh a picture, in many varied aspects, of the external nature, the people, the customs, the laws and domestic institutions of a strange country, as does this little volume."

Sold by all Booksellers. Sent, postpaid, by
HOUGHTON, MIFFLIN & CO., Boston,
11 East 17th St., New York.

**Le Verbe en Quatre
Tableaux Synoptiques.**

By Prof. H. MARION. Sixth Edition.

This little book, which has already had six editions, and which has been recommended by the Board of Public Instruction of Quebec for use in the public schools of Canada, is highly spoken of by all the French teachers who have used it in their classes.

The difficulties of the study of French verbs are reduced to a minimum, thus making a saving of one-half the time usually devoted to this important study. It is invaluable to teachers, and can be used with any French grammar or text-book.

Price, 25 cents.

Complete catalogue on application. For sale by all book sellers, or postpaid on receipt of price by the publisher.

The Nation.

NEW YORK, THURSDAY, JUNE 9, 1898.

The Week.

Numerous motives combine to make the admiring gratification over Lieut. Hobson's feat in blocking the channel of Santiago harbor both intense and universal. It was a daring exploit, maturely planned and bravely and brilliantly executed. Say what we will of heroes of peace and of civic courage equalling military, there is something in such a crowded hour of glorious life that sets the pulses leaping in unwonted fashion. The cool measuring of danger, joined with proud contempt of it; the importance of the end aimed at, and the complete success with which it was attained; the calm ignoring of the terrible risks run, and the entire self-effacement of the young officer and his heroic crew make Lieut. Hobson's deed one of the most notable in naval annals—and high and reckless daring is the characteristic note of naval annals. The fact that Hobson is a Southerner is also one to cause especial satisfaction both North and South. As a result of the civil war, almost all the higher officers of the navy are now from the North; and it was a peculiarly happy thing that this strong appeal to a united national sentiment should have been made by a man from the South. The lofty personal bravery of the men who ran the non-combatant *Merrimac* into the throat of the channel and sank her there, is clearly what woke the admiration of the Spanish Admiral. He did the handsome thing in at once sending out word that our heroes were uninjured, and that he would be glad to restore such brave men to their fleet by exchange.

The fine work at Santiago means that the policy of slow and sure has been adopted. Not a ship or a life will be risked unnecessarily. Cervera will be penned in Santiago until the time comes to capture or destroy his squadron with the least possible hazard to our ships and men. Extensive campaigning in any other part of Cuba is scarcely to be looked for. Indeed, it may not be needed at all, if Santiago is taken and Porto Rico swooped upon as is now said to be planned. One thing is certain: we can endure a deliberate campaign better than Spain. We can better afford to see the cost of the war mount up by delay than to make a needless sacrifice of life to hasten matters; whereas it is precisely the financial pinch of the war, with a hopeless outcome all the while inevitable, that is breaking down even the high spirit of Spain, and that must soon, one hopes, lead to proposals for peace.

The news received from Spain is conflicting. On the one hand, we are told that the financial embarrassments of the Government are so great that the war must come to an end soon from lack of money. On the other hand, Premier Sagasta is quoted as saying that the war will be prosecuted with vigor, and that Spain will never yield an inch of her territory. Señor Sagasta is better authority than the newspaper reporters. Spain's financial resources are slender, but they are not so near exhaustion as the cable reports would imply. The run on the Bank of Spain may carry off the silver of that institution without doing it much harm. It will then refuse to redeem its notes. In other words, it will be bankrupt with a large stock of gold in its vaults, and this gold the Government will in one way or another find means to lay its hands on. The country can carry on the war with paper money and fractional currency for a year or two, and in the meantime some help may be secured on hard terms from the money-lenders of Paris. The internal resources of the country may even yield another loan. A "bond issue" of \$200,000,000 is now advertised, payable probably in silver or notes of the Bank of Spain. Such a loan if taken would not yield more than \$100,000,000, gold value. It would not last more than a year at the present rate, but would still leave a margin of fighting power by the issue of irredeemable currency. The Confederate States carried on war a good while in this way. Therefore it would be quite unsafe to assume that Spain will stop fighting very soon merely for want of money.

The Senate has made numerous minor amendments of the revenue bill as it came from the House of Representatives, as well as some of a vital nature. The proposed tax on the gross receipts of corporations finally dwindled down to a "special excise tax" of one-fourth of 1 per cent. on the gross annual receipts of refiners of sugar and petroleum in excess of \$250,000. This was proposed, not as a revenue measure, but as a blow at the Standard Oil and Sugar Companies. It is doubtful if it will pass the House of Representatives, doubtful if it will be sustained by the courts, and doubtful if it will be paid by the refining companies rather than by the people who buy their products. The provisions in regard to stamp taxes were modified and extended, but the changes are in most cases immaterial, and in general in accordance with fiscal principles. Every one now who draws a check, or takes a receipt, or buys a bond or a share of stock, or gives a mortgage, or ships a parcel of goods, or

takes out a policy of insurance, or hires a house, or gives a proxy or a power of attorney, or buys a ticket for Europe, or sends a message by telegraph or telephone, or takes a seat or berth in a Pullman car, or buys anything at a drug-store, or anything except food that is sold under a patent right or trademark, will know that he is contributing to the expense of the war. Bankers and brokers have to pay special taxes; bankers being taxed on their capital and surplus, and brokers by license-fees. Savings banks, however, are exempted. The tax on legacies and distributive shares of personal property is a very severe one, in view of the extent to which many of the States have already adopted such taxation. It is a graduated tax, and in the case of estates of a million dollars may amount to 15 per cent. On the whole, the measure, even if modified, is calculated to bring the existence of taxation to the knowledge of every household, and this is not a bad idea.

The interests of the newspapers were carefully "conserved" by the Senate in adjusting taxation. No stamp tax is to be paid on packages of newspapers weighing less than one hundred pounds, when sent by express, although this tax is imposed on all other packages. This amendment was advocated by Senator Allen of Nebraska, on the ground that there should be no restraints on the diffusion of intelligence, anything printed being properly so classified, according to his view. Senator Wolcott, however, opposed the amendment in some rather striking remarks. He pointed out that the serial publications of the United States pay 3 per cent. of the revenue and occasion 65 per cent. of the expense of the mail service; that the "country press," in behalf of which Senator Allen pleaded, make no use of the express service at all, while the great city papers, aided by the fast mail trains put on for their accommodation, send 6,000,000 packages by express annually. The tax on this business would be but \$60,000 a year, and Senator Wolcott thought a tax on circulation also would be a very equitable tax. He added the following remarks, which, however, had no effect on the vote of the Senate:

"If the condition were imposed that the daily statements of circulation should be accepted as complete evidence of the number of copies sold, such a tax would produce at least \$100,000,000 a year. The newspapers had been largely instrumental in leading to the war, and they ought not to object to bearing their share of the burden. There were, he said, newspapers and newspapers. The time had been when the newspapers were educators in the household, but they had gradually become sensational and cared nothing for the truth. They resorted to all sorts of slanders and misrepresentations, and had much to do with bringing about the existing state of affairs. He thought it beneath contempt for Congress to say that all the newspapers

of the United States could not pay the \$60,000 a year which would be their share of the stamp tax on packages."

Senator Hoar's address at the Bryn Mawr commencement on Thursday contained truth that was wholesome for the occasion, and would have been wholesome if uttered in the Senate chamber. The Senator, to be sure, averred that the great questions of our future, and of the fate of the republic, were to be settled "at mothers' knees," and so perhaps justified himself in saying boldly to the fair girl graduates what he has not said in the Senate. There is, in truth, something plausible in the view that there is more hope in appealing to an unborn Senate than to the one in actual life. But it would at least have been a better way of letting the country know what is the sentiment of conservative and educated Massachusetts, if the things said at Bryn Mawr had been spoken at Washington. Mr. Hoar's courage, as a strict party man, might not have been equal to declaring in the Senate, as he did at the college, that political parties and tariffs and banks, and even presidents as opposed to monarchs, are of no account compared with sentiments of honor and justice in the individual citizen and in the counsels and action of the republic; but truth like that deserves a wider audience. The Senator asked, with evident reference to current events, if the controlling motives and passions of our national conduct were to be avarice, glory, and power, and if through them we were to go the way of the great empires of the past. Our flag, he said, was not the symbol of dominion or of empire, but of freedom, self-government, law, equality, and justice. This is Mr. Hoar's scarcely veiled protest against the grasping policy. As we say, it would have been an excellent one to deliver in the Senate, only there the Senator would have had to make a personal confession that he himself had contributed not a little to the forcing upon the country of the policy at which he now stands aghast.

Two men were indicted by the grand jury in the Federal Court for the District of Alaska in December, 1896, for selling liquors without having first complied with the law regulating their sale. The defendants moved to quash the indictment upon various grounds, and the case was carried to the Court of Appeals. Several of these points were purely technical, and of no interest except to members of the legal profession. But one of them went to the very heart of the question of Territorial government by Congress, and is of the first importance. It was contended that the law upon which the prosecution was based was unconstitutional, because the Government of the United States can exercise only those specific powers conferred

upon it by the Constitution; that the Constitution guarantees to the citizen the right to own, hold, and acquire property, and makes no distinction as to the character of the property; that intoxicating liquors are property, and are subject to exchange, barter, and traffic, like any other commodity in which a right of property exists; that inasmuch as the power to regulate commerce was committed to Congress to relieve it from all restrictions, Congress cannot itself impose restrictions upon commerce by prohibiting the sale of a particular commodity; and that, if Congress has the power to regulate the sale of intoxicating liquors within the Territories as a police regulation, it can only enact laws applicable to all the Territories alike.

Judge Morrow, declaring the decision of the court upon these claims, said:

"The answer to these and the other like objections urged in the brief of counsel for defendant is found in the now well-established doctrine that the Territories of the United States are entirely subject to the legislative authority of Congress. They are not organized under the Constitution, nor subject to its complex distribution of the powers of government as the organic law, but are the creation, exclusively, of the legislative department, and subject to its supervision and control. The United States having rightfully acquired the Territories, and being the only government which can impose laws upon them, have the entire dominion and sovereignty, national and municipal, Federal and State. Under this full and comprehensive authority, Congress has unquestionably the power to exclude intoxicating liquors from any or all of its Territories, or limit their sale under such regulations as it may prescribe. It may legislate in accordance with the special needs of each locality, and vary its regulations to meet the circumstances of the people. Whether the subject elsewhere would be a matter of local police regulations or within the State control under some other power, it is immaterial to consider; in a Territory, all the functions of government are within the legislative jurisdiction of Congress, and may be exercised through a local government or directly by such legislation as we have now under consideration."

In other words, if the United States were to acquire Porto Rico and the Philippines, for example, it could govern either absolutely according to its own will. It might establish one form of government for Porto Rico and another totally different for the Philippines; it could let some people or all people vote in Porto Rico, and none in the Philippines; it could establish a high-license system in Porto Rico, and pass a prohibitory law for the Philippines; in short, it would possess all the functions of government for both, and could exercise those functions in the case of either as it chose.

The Republicans of Oregon have been a good deal demoralized on the financial question in the past, through the influence of ex-Senator Mitchell, who thought he could secure another term by favoring the free-coinage heresy; but they have abandoned the policy of compromise this year, and in their platform came out "flatfooted" in favor of the

gold standard and in unqualified opposition to the free coinage of silver, "and to all other schemes looking to the debasement of the currency and the repudiation of debts," while they "condemn the continued agitation for free silver as calculated to jeopardize the prosperity of the country and to shake the confidence of the people in the maintenance of a wise financial policy." The election, which took place on Monday, appears to have resulted, deservedly, in a decisive Republican victory on both State and congressional tickets. It was largely the 1896 contest over again, the Republicans and Gold Democrats facing a motley array of opponents known as the "People's-Democratic-Silver-Republican ticket." This happy result comes opportunely to stiffen the House Republicans in their opposition to the "seigniorage" folly, and to the policy of throwing even that sop to the silverites. And Mr. Bryan, when he learns that the returns from the country districts show large losses from the vote polled for him two years ago, can devote himself even more assiduously to the study of tactics and the pursuit of military glory.

The contest which Quay makes in Pennsylvania this year will engage the attention of the whole country, for it involves not simply the personal fortunes of the boss or the fate of his party in the November election, but also the question whether Pennsylvania is to have a republican form of government. Quay controlled the last Legislature absolutely, but the Governor was not subservient to him, and blocked various machine schemes, either by the use of the veto power after the bills were passed, or by preventing their passage through the threat of such action. Quay has now forced the nomination for Governor of a man whom he owns. If he can secure the election of such an executive and at the same time of a Legislature which he controls, the machine will absolutely govern the State. The first skirmish for this legislative control is not calculated to encourage the opponents of the boss. Chester County elected three anti-Quay men to the last Legislature, and the forces which Mr. Wanamaker has represented sought to renominate them upon their merits in this particular. The primaries were held on Saturday, and Mr. Wanamaker visited the county on Friday to deliver a speech and rally the opposition to Quay. But the boss easily carried the day, and the county convention has since put up three men who will be his mere tools, in place of the late independent legislators.

At the International Congress of Actuaries recently held in London a paper was read which unfortunately possesses a deeper interest for American readers than it would have under ordinary circumstances. The communication relat-

ed to the mortality in the British army and navy during former and recent years, and disclosed a very remarkable improvement in the rate. During the decade preceding 1865, the average death-rate per 1,000 men in the navy was from disease 11.7, from violence 4.2, making a total of 15.9. But for the ten years preceding 1895 the corresponding rates were from disease 4.4, from violence 2.6, a total of 7.0. In 1895 the actual death-rate per 1,000 in the navy was only 1.8 in excess of the rate to be expected according to Dr. Sprague's select life tables. In the army the death-rate between 1866 and 1875 was at home 10.6 and abroad 16.9, or for the whole army 13.8. In the period 1886-1895 the corresponding rates were reduced to 5.5 for the troops in the United Kingdom and 13.3 abroad, or for the total army 9.4. In 1895 the excess in the army over the average for select lives was but 4.7. If progress should continue after this fashion, men will enter military service to prolong their lives, and the apprehensions aroused in Mark Twain's mind at the appalling numbers of people who die in their beds will become general.

The addresses delivered in Parliament the day after Mr. Gladstone's death were most of them of high merit, and together constituted a remarkable tribute to the dead statesman. His long-time rival, Lord Salisbury, in his brief but generous remarks, singled out Gladstone's invariably "high moral ideal" as the one thing, more effective even than his intellectual gifts, which explained his astonishing power of attaching men to him, and which made of him "a great example—of which history hardly furnishes a parallel, of a great Christian man." The Duke of Devonshire, speaking for the Liberal Unionists who broke away from Mr. Gladstone in 1886, testified that he and his colleagues never doubted that the leader whom they could no longer follow had been "actuated by no other consideration than that of public duty, and by his conception of that which was in the highest interests of his country." Lord Rosebery's speech excelled all the others in taste and force and elevated pathos, and his characterization of Mr. Gladstone's mental and moral power was both searching and just. Mr. Balfour, too, in the Commons, spoke with unwonted enthusiasm about Mr. Gladstone's supreme and easy mastery of that House. Not from Parliamentary records, he said, would it ever be possible to reconstruct any living likeness of what Mr. Gladstone was as Leader of the House, or of the Opposition: "Posterity must take it upon our testimony what he was to those, friends or foes, whose fortune it was to be able to hear him."

The award of Sir Nicholas John Han-

nen, Chief Justice of her Britannic Majesty's Supreme Court of China and Japan, in the Cheek case is another triumph for arbitration, for not only has it been received with good grace by Siam, the losing party, but it furnishes an authoritative settlement of an important question of international law. Dr. Marion A. Cheek, a citizen of this country, made a contract in 1890 with the Government of Siam under which they advanced him a large sum of money to aid him in carrying on the teak trade, and he was to raft the logs from the forests of northern Siam to Bangkok, where they were to be sold and the profits divided between him and the Siamese Government. Cheek was to pay interest on the loan, which was secured by a mortgage on his property, consisting for the most part of 150 elephants. After the first year he could not, owing to droughts, get sufficient teak to Bangkok to meet his engagement, and in 1892 the Siamese Government, having determined that he had violated its conditions, seized his logs and placed his affairs in the hands of a receiver appointed by themselves. Later they issued an administrative order preventing him from following his business in northern Siam, leaving him with many useless elephants on his hands.

By our treaty of 1856 with that government the interests of all American citizens in Siam are placed under the regulation and control of the Consul-General of the United States, and all the disputes arising between them and Siamese subjects must be heard and determined by him in conjunction with certain Siamese officers. Not only was Cheek's case not carried by Siam before our consular court, but all the proceedings were taken administratively and in spite of the protests of our consular representative. From 1891 to 1897 there was a constant dispute between the two governments relative to this matter, but in July of the latter year, Mr. Barrett, our efficient Minister and Consul-General at Bangkok, who had been especially instructed by Mr. Cleveland to secure its settlement, signed a protocol with Prince Devawongse, submitting the whole case to the eminent English jurist already mentioned. In less than two months the arbitrator examined all the statements, pleadings, proofs, cases, and counter cases, and pronounced a judgment finally disposing of the troublesome matter, at the same time removing much of the uncertainty as to the extent of extra-territorial jurisdiction, a question in which all European governments as well as our own are interested. The decision in effect is that the seizure of Cheek's property was a violation of the treaty between the United States and Siam; that Cheek had not made any default in the performance of the conditions of his contract when properly con-

strued; and that the order suspending his business, issued by Siam on the ground that he had not complied with such conditions, was, therefore, unjustifiable. Under this decision, Siam must pay \$200,000 and release Cheek's elephants from all liens and claims.

Attention is called by the *Journal of Commerce* to the introduction by the President of the Board of Trade of Great Britain of a parliamentary measure intended to reduce the charges now levied on shipping for the support of harbors and lighthouses. These charges amount to a considerable burden on commerce, and a modification of the tax has long been urged. It has produced, owing to the vast increase of shipping, considerably more than it now costs to maintain the lighthouses, and is in so far indefensible under a free-trade policy. In fact, the tax is really a survival from the days when highways were supported by tolls. The principle, which is perfectly reasonable, theoretically, is that those who use the highway, or are guided by the lighthouse, shall pay for maintaining these conveniences. But in practice, as soon as traffic expands, it is found to be advantageous to abandon the attempt to assess a specific sum on every vehicle, and to make the cost of facilitating travel a common charge. In this respect the policy of the United States may be regarded as more advanced than that of England.

The final results of the French elections look less favorable for the ministry. The loss of a seat by the Colonial Minister, and the defeat of several other candidates who were expected to take office under M. Méline, were severe blows to the Premier, and his majority turns out but slight and precarious. According to the latest figures, the ministerialist members of the Chamber will number 291, with ten or a dozen more doubtfully to be counted upon. The Conservatives have elected 49, the Radicals 104, the Socialist-Radicals 107, and the Anti-Semites 20. Here, then, is a cabinet majority of only 10 to 20 in an Assembly containing a great many turbulent elements. This is, in the French Chamber, distinctly not a working majority. Unless M. Méline can make some speedy adjustments with the opposing factions, the prospect is that enough of his own supporters will soon be detached to leave him in a minority. At present he is weaker than before May 1. All his subservience to the military spirit, as it showed itself willing to trample upon justice in the Drayfus and Zola cases, all M. Hanotaux's appeals to Salisbury not to press him too hard in the West Africa dispute until after the elections, have profited little. There is no need of possible foreign complications to make the political outlook appear stormy.

THE REVENUE BILL.

The revenue bill, as passed by the Senate on Saturday, differs in many particulars from the same bill as passed by the House, but chiefly in the two following: (1) "coining the seigniorage"; (2) putting an import duty of 10 cents per pound on tea. Incidentally it was proved that a majority of the Senate could not be obtained for a new issue of greenbacks. On this point the majority of the finance committee was overruled by the Senate; seven Democrats and one Populist voting with the Republicans. The same vote carried the bond clause, which the finance committee had reported adversely.

Coining the seigniorage—a subtle and mysterious operation akin to witchcraft—has been explained many times, but is probably not understood by one in ten thousand of the American people, nor ever will be. We will try once more to show what the advocates of the process mean by it. Seigniorage is the charge made by a sovereign or government for coining the precious metals for private individuals. Our Government makes no charge for coining gold. It receives gold bullion from the owners and returns them exactly the amount of coin produced from it, charging them only the cost of the copper used as alloy. The Government in this case furnishes the capital and labor, and does the work for nothing. There is no reason why it should not charge at least the cost of coining. If it made a charge, whether more or less, that charge would be seigniorage. Most governments do make a charge for coining for private individuals, and our Government did so until 1873, when the present coinage law was passed. Then, at the instance of the Senators from the Pacific Coast, the seigniorage on gold was abolished.

The word seigniorage is applied also to any gain which a government makes in the act of coining. Thus, in the manufacture and sale of subsidiary coins of silver, copper, and nickel the Government buys the metal, makes the coins, and sells them to the public at their face value, but the cost of the metal is less than one-half of their face value. The difference is seigniorage. Why, then, should not the Government make an unlimited amount of these coins (halves, quarters, dimes, etc.), and pay all its expenses with the profits arising from seigniorage? Because one of the necessary conditions is that the Government after selling them at par shall redeem them at par on demand. The people require only a limited number of halves, quarters, dimes, etc., for the transaction of business. Persons who take in more small change than they can pay out must be enabled to convert it into money of more convenient form. The Government provides these facilities by redeeming all subsidiary coins in gold or its equivalent at the sub-treasuries.

Hence the possible gain from the seigniorage is limited to the amount of small change that the people require for purposes of retail trade.

The same principles apply to the Government's coinage of silver dollars. The Bland-Allison act of 1878 required the Treasury to purchase not less than two million nor more than four million dollars' worth of silver bullion per month, to coin the same into silver dollars, and to deal with them as with other money belonging to the United States. If the Government could buy with one dollar enough silver bullion to make two silver dollars, and then use each of these dollars at par in paying the salaries of its employees and its other obligations, there was a gain or seigniorage of one dollar on the transaction, and this gain might be repeated as often and as long as the dollars would pass readily into the circulation.

The so-called Sherman act of 1890 substituted another mode of dealing with silver. The amount of bullion to be purchased was increased to 4,500,000 ounces per month. It was to be bought at its market value, and, instead of coining it, legal-tender Treasury notes were to be issued to the sellers of the bullion, which notes the Government must redeem on demand in coin, and practically in gold coin, because the law declared that it was the policy of the Government to keep gold money and silver money at par with each other. If coining had continued as under the Bland act, there would have been an apparent gain or seigniorage of fifty cents on each dollar as long as the public would keep the silver dollars (or certificates representing them), and not present them for redemption. In a case where there is no coining there is no seigniorage, since seigniorage is a result of coinage.

When the Sherman act of 1890 was passed and went into operation, the silver men said that seigniorage ought to result from the issuing of Treasury notes just as from the issue of silver dollars, and in this they were right in the sense that the seigniorage was an imaginary quantity in either case. A greenback dollar is all seigniorage, a silver dollar is half seigniorage, but the gain is only a matter of bookkeeping in either case, provided the Government redeems both kinds of dollars in gold. There is nothing gained, in coining the silver in the Treasury, in the way of seigniorage or otherwise that could not be better reached by issuing greenbacks outright. But there is a disadvantage in "coining the seigniorage" in the fact that it adds another kind of currency to the seven kinds now existing. It is objectionable for the further reason that it increases the demand liabilities of the Government by \$42,000,000 at a time when every dictate of prudence requires that they should be reduced and put in the course of extinction. It is to be hoped, therefore, that

the House will resolutely cast out this provision for coining the seigniorage, and put upon the Senate the responsibility of defeating the bill if it insists upon such folly.

The imposition of a duty on tea embodied in the bill comes as a great surprise, seeing that it was proposed by a Populist from South Carolina, and was supported by nearly the entire Democratic vote of the Senate. A tax on tea is a tax on labor—not more so in fact than a duty on wool or on blankets, but equally so in fact and more so in appearance. Whether the working classes will understand what this tax means is doubtful, but we confess our astonishment that the Democrats should run the risk of their not understanding it and resenting it. A good deal may be said in favor of this tax in an emergency like the present, but even more may be said in favor of a tax on coffee, because a larger revenue is derivable from the latter. We think it most probable that the House will concur in the tax on tea, seeing that the Democrats are estopped by their own act from making it a political issue.

RAILROAD-LABOR ARBITRATION.

The public interest in the war has been so overpowering as to cause the passage of an act of Congress intended to prevent strikes on railroads, to take place without comment. The measure, however, contains features of considerable importance; and as, after extended debate, it was adopted by the Senate with only three, and by the House with only five dissenting votes, it is presumptively satisfactory to all interests. One of the strongest points in its favor is the fact that Mr. Allen, the Populist Senator from Nebraska, denounced it. He declared that he was the true friend of the laboring people, and that this bill was a trap intended to commit them to involuntary servitude. As Senator Allen was unable to substantiate this assertion by any specific proofs, and as the chief organizations of railway men had been consulted in framing the bill and had urged its passage, the danger of involuntary servitude need not be regarded as serious.

The arbitration provided in the bill is of course voluntary, compulsory arbitration involving what philosophers call a *contradictio in adjecto*. It applies to all common carriers engaged in interstate commerce except street railroads, and provides that when any controversies concerning wages, hours of labor, or conditions of employment arise between carriers and their employees, either party may call on the chairman of the Interstate Commerce Commission and the Commissioner of Labor to mediate. If mediation fails to bring about an agreement, one arbitrator is to be named by the carrier, one by the labor organi-

zations interested (or if no such organizations exist, by a majority of the laborers involved), the two arbitrators to select a third. Should they fail to agree on the third member in five days, the commissioners named above shall appoint him. Pending the arbitration the *status quo* shall be maintained, the parties submitting their respective cases in writing and stipulating to that effect, as well as that the award made shall be filed with the record of the proceedings in the proper Circuit Court of the United States, and shall be final and conclusive on both parties unless set aside for error of law apparent on the record. A third stipulation is of so much importance that we give it verbatim:

"(3.) That the respective parties to the award will each faithfully execute the same, and that the same may be specifically enforced in equity so far as the powers of a court of equity permit. Provided, That no injunction or other legal process shall be issued which shall compel the performance by any laborer against his will of a contract for personal labor or service."

This proviso is intended to prevent the issuance of injunctions of the comprehensive character which excited so much angry feeling at the time of the great Chicago strike, and while it is perhaps unnecessary in view of all the decisions, it was regarded as essential by the labor unions. A fourth stipulation is to the effect that employees dissatisfied with the award shall not on that account quit work for three months after the award is made without giving thirty days' notice, and that like notice shall be given by employers before dismissing any employee. The award shall continue in force for one year after it goes into operation. The bill further provides for appeals, and that the award when confirmed shall have the effect of a judgment of the court.

The act also provides that during the pendency of the arbitration proceedings it shall not be lawful for the employer to discharge the employees except for inefficiency, violation of law, or neglect of duty; saving, however, the right of the employer to reduce the number of employees whenever in his judgment business necessities demand it. Nor shall it be lawful "for the organization representing such employees to order, nor for the employees to unite in, aid, or abet strikes against such employer." Any violation of this section shall subject the offending party to liability to damages. This penalty, of course, amounts to nothing against individual laborers, but as Congress has already provided for the incorporation of labor unions, it may prove sufficiently efficacious. The present act requires such incorporations to exclude members who participate in or instigate "force or violence against persons or property during strikes, lockouts, or boycotts, or by seeking to prevent others from working through violence, threats, or intimidation." These corporations are given the

right to sue and be sued in any of the Federal courts. Among minor provisions is one that receivers of railroads shall not reduce wages without letting employees be heard in court; another, that no workman shall be required to agree, as a condition of employment, not to belong to a labor union; others, that there shall be no "blacklisting" or similar discrimination, no contract releasing employers from liability for causing personal injury, nor any requirement of contributions to charitable or benevolent funds.

Not a few of the members of Congress who discussed this measure expressed doubts as to its accomplishing great results. But on the whole the law is a good one. The constitution of the Board of Arbitration is satisfactory, and the stipulations are reasonable. Of course, neither the railroad managers nor the labor leaders may choose to make use of this machinery; but the pressure of public opinion upon them will be strong, and the advantages from the preservation of order and the continuance of operations will be an inducement to both parties to relinquish their legal freedom of action. While the railroads may not find that the stipulations of their employees are enforceable, yet if the employees enter into these stipulations they will not find it prudent to disregard them. We trust that it may be long before any occasion arises for testing this measure, but if it does arise we shall be disappointed if it proves altogether a failure.

THE PENNSYLVANIA CAMPAIGN.

The Republican State convention in Pennsylvania on Thursday resulted as had been expected. Quay controlled everything from first to last. So absolute was his power that he did not need to lead his forces in person, but started back to Washington before the convention was called to order, knowing that the machinery had been wound up to turn out his ticket and platform.

Two or three months ago there were abundant signs of a revolt in the party against Quay which might dethrone him. The indications were that under normal national conditions the opposition to the machine would wax so strong before the first week of June that Quay either could not secure a majority in the convention for his favorite, or, if he could force the nomination, would not dare to do so for fear of a revolt at the polls. The war with Spain has changed all this. Quay quickly saw that nothing could so help him to a majority in the convention as the fact that his personal choice for the governorship was a man who had served creditably as a young soldier in the Union army a generation ago, and could therefore be held up as peculiarly fitted to become a "war Governor," while his

chief assailant was a merchant who had no military record whatever. It was only necessary to put the head of the Grand Army on the slate for Lieutenant-Governor, and another veteran for Secretary of Internal Affairs, to make an "old soldier" ticket which was irresistible.

The war was equally helpful to the boss in the matter of a platform for the campaign. Under normal conditions it would have been impossible to avoid the issue of bad government in State affairs, and it would have been perilous to handle it. But, under the existing conditions, the war with Spain could be pushed to the front as the great issue of the day, and the first pledge of the platform is one of "earnest support to the President of the United States in whatever measures he may deem necessary for a vigorous prosecution of the war to a successful conclusion." Of course, the boss can now maintain that the only way for Pennsylvania Republicans to redeem this pledge is to elect as war Governor the old soldier whom he has named to head the ticket. The argument which will be heard on every stump was thus laid down in one of the nominating speeches, which "fairly took the delegates off their feet with their shouting and cheering in approval of the speaker's sentiments":

"The result of the coming election will be construed, truly and properly, either as approving or condemning the national Administration on the question of our war. Dare we rebuke the President of our own choosing? Dare we give to Spain and her sympathizers encouragement by even an apparent blow at our national Administration? No, we must stand by our Republican President with an emphatic Republican victory in the Keystone State in November next. Just as our fleet did in the harbor of Manila, passing over the mines and torpedoes of the enemy, let us dare to be courageous. Let us be united and fight to win. Let us on to the battle, assailing the main body of the enemy on the one side and his masked batteries on the other. Then we shall whip the free-silver party and all its hypocritical allies, just as brave Dewey thrashed the Spaniards in far-off Manila."

Already the boss sees his "dodge" working as he expected. The Philadelphia Press, which was edited by Charles Emory Smith until he entered the cabinet a few weeks ago, has earnestly supported Mr. Wanamaker in his fight against the machine, and has warned the boss that his programme was intolerable. But all that it had to say the morning after the convention was that the nomination of Quay's man for Governor is "not a victory to be proud of," because it "unnecessarily and wantonly handicaps the Republican party in the coming election"; while it hastens to add that "the rest of the ticket is unexceptionable, and the platform is strong and wise." It will not be long before the Press will join the chorus led by the Philadelphia Inquirer, Quay's personal organ, and be talking in this vein:

"Now that the party has spoken, all loyal Republicans will endorse its action. In this year, when we are making a foreign war in behalf of humanity, when thousands of

young Pennsylvanians are doing just as Col. Stone did nearly forty years ago, there will be no desire to let personal preferences before the convention enter into party discord now that the candidate has been named. We are pleased to note that this sentiment is quite general already, and believe it will be unanimous before the campaign ends."

There is speculation as to Mr. Wanamaker's attitude during the campaign. He has always boasted that he never scratched the regular ticket, and it is not to be expected that he will begin doing so "in this crisis in the nation's history." It is hardly conceivable that he can think of running as an independent candidate, because he must know that the real Independents would never vote for a man who supported the boss until the boss refused him the nomination for Governor. The men who care enough for good government to fight for it will vote for the Rev. Dr. Swallow. The vigorous canvass which he will make ought to secure enough support to render success impossible for the Quay ticket, even with the hesitating opponents of Quay in his own party shamefacedly falling in behind the boss, and salving their consciences with the theory that they are thereby supporting the national Administration in time of war.

HOLDING THE PHILIPPINES.

Mr. Chauncey Depew, in an interview in London, has expressed the opinion that the Philippine Islands would be an undesirable possession for the United States, that they would be hard to govern as a colony, and harder still to digest as an integral part of the American Union. That they are likely to be hard to hold as a colony is evidently the opinion of the authorities at Washington. It was first proposed to send 5,000 troops there. Then the number was increased to 15,000, and now the report comes that 35,000 will be required. Probably in making these rapidly rising estimates of the force required to hold the islands, allowance is made for the effects of the torrid heat of the Philippines upon men unacclimated and unused to camp life even in their own country. Experience, however, will soon make a test of the hygienic conditions of the Philippines. We hope for the best, but we sadly fear that the climate will prove a more deadly enemy than the bullets of the Spaniards.

Mr. Depew's warning is addressed to material considerations only. He aims to show that the holding of the Philippines would cost more than it would come to, and would get us into trouble in various ways. This is our opinion also, but we do not consider those reasons the strongest ones against the policy in question. Far more weighty is the objection that we began this war with a moral purpose only—that of delivering a neighboring people from oppression. This reason we put forth in a proclamation to the world coupled

with a solemn promise that we would not annex the territory about which the dispute arose. This reason for beginning the war was scouted by Spain and disbelieved by every civilized nation in the world except England. The people of the latter country with unanimity believed that the idea of aggrandizement had no place among our motives; and, in fact, it had none. It is useless to deny that public opinion in Great Britain was divided on the question whether war was justifiable under all the circumstances of the case, but no Englishman has yet said publicly that he believed we went to war for purposes of gain in territory or money. Continental opinion, on the other hand, held in the beginning that that was our main, if not our sole, motive, and that helping the Cubans to gain liberty was a hypocritical pretence. This belief has gained ground among the Continental nations, and although English opinion has not changed as to our original purpose, it is now veering to the belief that our intentions are changing, and it apparently approves of the change.

The reason why Englishmen look favorably upon our holding the Philippines is that Great Britain needs an ally in Asiatic waters, and she thinks that we should prove to be one. The policy of Russia and Germany in making acquisitions on the Chinese coast is apparently to secure for themselves exclusive trading privileges in certain large tracts of country hitherto open to our own as well as to British trade. This project naturally meets opposition here, but only of a diplomatic nature. If we should hold the Philippine Islands as a permanent possession, we should be liable to constant friction with any Powers which have acquired lodgment there, especially if their views regarding trade were not in harmony with ours. Our mere presence there would strengthen the arm of England because our interests would run in the same direction as hers. This fact sufficiently explains why England would look favorably on our holding the Philippines. It would be much more for her interest to have us retain them than to acquire them herself. Indeed, there is no reason to suppose that she would accept them if they were offered to her. The warning uttered by Lord Salisbury the other day, when he reminded his hearers that every new acquisition brought new responsibilities, has an obvious bearing on the Philippines, and on the suggestion that has been made that we turn them over to Great Britain at the end of the war, or exchange them for some of England's possessions in the West Indies.

The question of property and territorial aggrandizement, whatever may be said pro and con, is not the main consideration. The main question is whether we shall justify all our enemies by going back on our solemn promise

not to make this war a war of gain. "But that applied only to Cuba," say some of the annexationists. The words applied only to Cuba because Cuba alone was in our minds at the time. The intendment of the words included everything in the way of pelf. Our foreign critics would and actually do sneer at the quibble which assumes that we can clear our consciences by leaving Cuba alone, but by taking everything else of Spain's that we can lay our hands on. The force of the criticism is felt, undoubtedly; for our annexationists now say that Spain's rule in the Philippines is as bad as her rule in Cuba, and that we owe it to the principles of free government to deliver the natives of that country from the tyranny under which they groan. How this is to be done, no man can conceive, since the thought of admitting the Philippine natives to the Union as a self-governing community, with representation in our Congress, forms no part of the plan, and does not enter the mind of a single human being. It would be rejected unanimously if it could be brought to a vote of the American people.

TENNYSON AND HORACE.

HAVERFORD COLLEGE, May 24, 1898.

There are two passages in the new Memoir of Alfred, Lord Tennyson, which a teacher of Latin may be allowed to quote side by side. On the sixteenth page of the first volume we are told that from the time the youthful poet left Louth School, in 1820, till the time he matriculated at Cambridge, in 1828, his education was directed solely by his father. During this period he became an accurate classical scholar, the author most "thoroughly drummed" into him being Horace, whom he disliked in proportion. To quote his own words, "It was not till many years after boyhood that I could like Horace. Byron expressed what I felt: 'Then farewell Horace whom I hated so.' Indeed, I was so overdosed with Horace that I hardly do him justice even now that I am old." The other passage, i., 370, refers to a later period in the poet's life, when he had become, in his turn, the teacher of his own son. Here Hallam Tennyson, the author of the Memoir, remarks, "The first Latin I learnt from him (sc., my father) was Horace's 'O fons Bandusiae.'"

It is tempting to suppose that the late Laureate was indebted for some portion of his marvellous technical excellence to his early familiarity with the careful art of Horace. Indeed, he was once reported to have said that Horace and Keats were his two masters. But, a short time before his death, he stated that this report must have been due to a misunderstanding, adding that he did not care for Horace at all until after he was thirty, and that after the 'Poems by Two Brothers' he did not think he had taken any one for master (Memoir, ii., 386).

In view of this statement it may be interesting to collect some of the reminiscences of Horace which are scattered here and there throughout the pages of Tennyson, and to add to them a few passages of the English poet which readily suggest He-

ratian parallels. We begin with a few specific allusions or quotations:

The closing line of the first Ode is quoted in Tennyson's "Epilogue,"

"For dare we dally with the sphere
As he did half in jest,
Old Horace? 'I will strike,' said he,
'The stars with head sublime'";

and the opening lines of the triumphant "Exegi monumentum" are employed as the motto of the poem "Parnassus." The two lines in "Becket," Act I., Sc. 1,

"The included Danaë has escaped again
Her tower and her Acrisius,"

allude to Od. iii., 16, 1-5, as the line in Act V. Sc. 2, of the same play,

"And one an *amor pauperis* libet,"

comes from Od. iii., 15, 1. The allusion in "Poets and their Bibliographies,"

"And you, old popular Horace, you the wise
Adviser of the nine-years-ponder'd lay,"

is to the familiar "nonumque prematur in annum" of Ars Poetica, 388. And surely some of the "quoted odes and jewels five-words-long" of that wonderful university lecture in "The Princess" were none other than the "carmina culta" of Horace.

The phrase "guard about with triple-mailed trust," in "Confessions of a Sensitive Mind," at once recalls the "robur et aes triplex" of Od. i., 3, 9. The figure in "Eleonore," vii.,

"His bow-string slacken'd, languid Love,"

is probably borrowed from Od. iii., 27, 67,

"perfidum ridens Venus et remisso
alios arcu,"

and the line in "The Lover's Tale,"

"And Death drew nigh and beat the doors of Life," seems to be adapted from Od. i., 4, 13.

"Pallida mors aequo pulsat pede pauperum tabernae
regumque turris."

The "wise indifference of the wise," in "A Dedication," and the "not to admire or desire," of "Maud," i. iv., 7, remind one of the "Nil admirari" of Ep. i., 6, 1. The "purple Caesar" of the ode "To Virgil" may be due to the "purpurei tyranni" of Od. i., 35, 12, and the "brute earth" of "In Memoriam," cxxvii., is, in spite of Milton's use of the same phrase, "Comus," 797, probably derived from the "bruta tellus" of Od. i., 34, 9. The lines in "In Memoriam," ix.,

"Fair ship, that from the Italian shore
Sailed the placid ocean-plains," etc.,

and xvii.,

"So may whatever tempest mars
Mid-ocean, spare thee, sacred bark,"

are obviously a reminiscence of Horace's "godspeed" to the ship which was conveying Virgil to Athens, Od. i., 3, as the Christmas scene in canto cvii. of the same poem is adapted from the ode to Thaliarchus, i., 9. In "In Memoriam," lxxxix.,

"And break the livelong summer day
With banquet in the distant woods,"

Tennyson must have had in his mind the language of Od. ii., 7, 6.

"cum quo morantem saepe diem mero
fregi,"

and another line of the same canto,

"The dust and din and steam of town,"

is curiously like the

"fumum et opes strepitumque Romanum,"

of Od. iii., 29, 12. The first stanza of the poem entitled "Will,"

"O well for him whose will is strong," etc.,

is deeply indebted for its sentiment and tone to the opening lines of Od. iii., 2,

"Iustum et tenacem propositum virum," etc.;

to mention only a single detail, the lines

"Who seems a promontory of rock," etc.,

must have been suggested by Horace's man of "rock-like purpose," "solida mente." That is, the figure is suggested by the Horatian passage, although it is apparently worked out after the model of Latinus's resistance to the popular clamor, Aeneid, vii., 588-90. The Cleopatra of "A Dream of Fair Women,"

"I died a queen. The Roman soldier found
Me lying dead, my crown about my brows,
A name for ever!—lying robed and crown'd,
Worthy a Roman spouse,"

is clearly the Cleopatra "generosius perire quaerens" of Od. i., 37,

"scilicet invidens
privata deduci superbo
non humilis mulier triumpho."

A part of the description in "Edwin Morris,"

"I call'd him Orlinton, for he seem'd
All-perfect, finish'd to the finger nail,"

seems to be borrowed from Sat. i., 5, 22, "ad unguem factus homo," and the expression in "Becket," Act IV., Sc. 2,

"madden him—madden
Against his priest beyond all helibore,"

is probably due to Ars Poetica, 300, "tribus Antiochris caput insanabile." The ancient superstition of the "Morte d'Arthur,"

"till on to dawn, when dreams
Begin to feel the truth and stir of day,"

and of "The Vision of Sin,"

"I had a vision when the night was late,"

is perhaps derived from Sat. i., 10, 23,

"post mediam noctem visus, cum somnia vera,"

although the superstition itself is much older than Horace.

To the foregoing list of more or less conscious reminiscences we may add a few other parallels which it is perhaps safer to regard as accidental or independent. In the latest and best of our shorter manuals of Latin Literature, Mr. J. W. Mackall has remarked, p. 116, that the "Jubilee Ode" is curiously like the "Carmen Saeculare," "in its metrical ingenuities, and in the way in which the unmistakable personal note of style sounds through its heavy and formal movement." The line in "A Dream of Fair Women,"

"Saw God divide the night with flying flame,"

bears a striking verbal resemblance to the

"Dispartit
igni corusco nubila dividens,"

of Od. i., 34, 5-6. The exquisite lines in "Mariana,"

"Her tears fell with the dews at even;
Her tears fell ere the dews were dried,"

have been called an obvious adaptation from a beautiful fragment of Cinna,

"Te matutinus sentem conspexit Eous,
et sentem paulo vidit post Hesperus idem";

but they have at least as close a parallel in Horace, Od. ii., 9, 10-12,

"nec tibi Vespero
surgente decedunt amores
nec rapidum fugiente solem."

a passage which itself recalls the lament of Orpheus, Virgil, Geor. iv., 486,

"te veniente die, te decedente canebat."

Both Cinna and Horace, it will be noticed, allude to the identity of Hesperus (Vesper)

and Lucifer (Eous Phosphorus); so, too, does Catullus, lxi., 24,

"Nocte latent fures, quos idem saepe revertens,
Hesperus, mutato comprehendit nomine eodem";

and so does Tennyson, "In Memoriam," cxxi. But the careless astronomy of the ancient poets, in which it seems possible for the same planet to be both morning and evening star at the same season of the year, has no place in the characteristic accuracy of Tennyson,

"Sweet Hesper-Phosphor, double name
For what is one, the first, the last,
Thou, like my present and my past,
Thy place is changed; thou art the same."

Horace has his own brook that "goes on for ever," Ep. i., 2, 43,

"labitur et labetur in omne volubilis aevum,"

the "divinely gifted man" of "In Memoriam," lxi., who

"breasts the blows of circumstance,"

has his counterpart in the Ulysses of Ep. i., 2, 22,

"adversis rerum immensabilis undis,"

and the "I shall have had my day" of "Maud," XI., 1, may be compared to the "Vixi" of Od. iii., 29, 43. Such phrases as "the Motherless mother," "faultily faultless, splendidly null," "faith unfaithful kept him falsely true," remind one of the "insanientis sapientiae" of Od. i., 34, 2, the "splendide mendax" of Od. iii., 11, 35, the "iuris pederati" of Od. ii., 8, 1. In many other phrases Tennyson seems to repeat the language of the Odes and Satires: "the many-headed beast (sc. the mob)," "some full-breasted swan fluting a wild carol ere her death," "I the divided half of such a friendship," "friends, none closer, elm and vine," "cook'd his spleen," "the many-winter'd crow," "the Parthian dart," "the Danaid of a leaky vase," etc.; but these are commonplaces of the poets, not sentiments or epithets original with Horace.

Finally, we may mention one or two poems in which Tennyson is indebted to Horace in the matter of metre, and quote from the new Memoir his judgment of the metrical quality of the Roman Laureate's odes. Among the many metres which he invented he was especially proud of that of "The Daisy," which he called "a far-off echo of the Horatian Alcaic" (i., 341). The invitation "To the Rev. F. D. Maurice" is eminently Horatian in structure and in tone; its metre is substantially the same as the metre of "The Daisy," but gains a slightly different effect by the dactyl which begins each fourth line. "The Horatian Alcaics," Tennyson once wrote, "are perhaps the stateliest metre in the world except the Virgilian hexameter at its best." His own Alcaics addressed to Milton, "O mighty-mouth'd inventor of harmonies," etc., read to the ordinary ear like the address of an English Horace to an English Pindar, but they were not intended, he said, for Horatian Alcaics; they were meant rather to imitate the lighter movement of the Alcaics of Greece (ii., 11). The Sapphics of Horace seemed to him much inferior to those of Sappho, and he would audaciously describe the Horatian stanza of that metre, alluding to the Adonic fourth line, as like a pig with its tail tightly curled. Yet he was deeply moved by the Roman dignity which Horace has imparted to the Sapphic in the "Non enim gazae," etc., of Od. ii., 16, 9 (ii., 500).

WILFRED P. MUSTARD.

THE DISCOVERY OF PIRENE.

CORINTH, May 23, 1898.

Of all the famous fountains of Greece the most famous was Pirene. Pindar (choosing, no doubt, as always, an appellation of which his patrons would be proud) calls Corinth "the city of Pirene." That this fountain was a centre of the city's life is as certain as it was natural. In the "Medea" of Euripides the elders are spoken of as playing checkers "around the august water of Pirene." It is true that the fountain still bubbling up on Acro-Corinth bears the name of Pirene on the authority of Strabo. But Pausanias mentions a Pirene in the city, distinguished from all the other numerous fountains which supplied Corinth with abundant water by being fitted up with a series of chambers, like caves, out of which the water flowed into a basin.

This fountain, with a façade in two stories, it has been the good fortune of the American School to discover—not, however, without considerable pains. In our pioneer work of two years ago, besides locating and partly uncovering the theatre which gave us the first fixed point in the topography of Corinth, we dug twenty trial trenches, in one of which, in the valley east of the old temple, we found, at a depth of about fifteen feet, besides numerous walls, a street thirty feet broad paved with white limestone, with a water channel on each side of it running up and down the valley at right angles to our trench. When it came to resuming the work this year (serious work last year being hindered by the war), the choice was between continuing excavating the theatre, which, from its ruinous condition, promised no showy results, although something of importance might appear near by, and following up this pavement, in the hope of finding the agora, from which, by following Pausanias, we could line out the whole topography of the city. The hope from the latter alternative was larger, because the old temple must have stood near to the heart of the city. But we had no certainty of results, and the earth was very deep. But, regarding depth of earth as rather encouraging than otherwise, I decided to "buck the centre," even if it did seem hard to break.

With track and cars borrowed from the French at Delphi, we went to work, proceeding upward from our old trench. But it was slow work. After about three weeks the Government official attending said: "These are the first serious excavations that I ever heard of where there were no finds of any importance"; and when I saw the money given by friends of the School going off at the rate of forty dollars a day, with little to point out by way of return except a big hole and a pile of earth, I felt that I was proceeding with a halter around my neck, and was convinced that, if we did not soon find something which would amply satisfy our patrons, the excavation of Corinth would definitely close with this campaign, which would be regarded as a defeat.

A little further up the valley was a house with a garden around it. Two years ago our foreman, a German, had gone down a well in this garden, and, after entering a side passage, had returned covered with mud, bringing back a story of rooms with architectural decoration along a water channel which fed the well. At the time the story seemed somewhat fabulous; but this year we went down and saw the wonder

with our own eyes, and found that it had not been exaggerated. The very moment that my eyes fell upon the chambers, I said, "These chambers are the Pirene of Pausanias." But we saw them only from their back sides, and when they were partly filled with earth. From that time, however, we turned all our energies to laying bare their front from the twenty-three feet of earth which covered it, measured from the surface of the soil to the flowing water. To avoid the delay which would ensue from waiting for Government expropriation, I purchased at private sale a part of the garden for about \$70—a very high price, although we took three trees in a land where trees are scarce, and a well, which we, however, promised to replace in some way.

Cross walls intervened, and a big mass of Turkish masonry had to be blown apart with dynamite; but with feverish impatience we pushed our railroad to the front of Pirene. We have opened four chambers with arched entrances, and are well satisfied with the result. Into the fifth chamber the above-mentioned well is sunk, and through this well runs the aqueduct which supplies the fountain at the square of the modern village.

In removing this well we find a difficulty. Some of the villagers object to our opening a new well for a private individual who has already made so much money by the sale of his land as to excite envy. Particular exasperation was caused by our plan to insert a pump a little way back from the present well, because that would give the man an unfair advantage over his neighbors, who have no pumps. Even without these objections our task is difficult enough. Pirene is simply the mouth of several channels probably as old as Peirander. We have explored and mapped out about 400 metres of these as they come down from the foot of Acro-Corinth, cut in the soft rock or clay which is covered by the rock stratum of sea-formation, the edge of which one sees protruding as one comes up from Lechaon to Corinth. The chambers are laid out at the very edge of this stratum, which is here cut in a straight line. Their massive side-walls support it, and the upper part of the façade hides it from view. In making a new well about ten feet back from this façade, we must cut through about seven feet of this very hard rock to reach one of the water channels. It would be a great advantage to be obliged to drill only a small hole for a pump instead of slowly blasting a hole big enough for our proprietor to operate with his leather bucket. We hope, with official help and after some delay and expense, to reach our goal; but we shall fight it out if it takes all summer. All six chambers must be shown before we stop.

The fear of being stopped just short of this goal on account of the giving out of funds having cost one week ago several sleepless nights, I wrote to one who has already made the largest gift to the excavation of Corinth, and whom I had recently met in Athens, explaining the situation and telling him that £100 would relieve me of all anxiety, while half that sum or even less might pull me through. In five days I received a telegram saying, "Hundred sent." Later came a letter more cheering almost than the money, closing with the words: "Here is your hundred. I am glad to be interested to that extent in your work."

Pirene, when completely excavated, will rank with the Temple and Acro-Corinth as a thing to visit. But this is not its whole significance. It is the long-sought key to the topography of Corinth. The agora is a little further up on the road leading through the valley. We uncovered two years ago what now appears to be the base of the bronze Herakles, the only object mentioned by Pausanias between the agora and Pirene on the road to Lechaon, the harbor on the Corinthian Gulf. The road with the broad pavement and the water courses we have now followed up until it comes to the foot of a broad marble staircase, which, after about twenty-five low steps, disappears under a field to the south of the area already expropriated. We have also in successive soundings traced this road northward a third of a mile, almost to the edge of the lower terrace where the city wall stood. There is no longer any doubt that this was the road from the agora to Lechaon. Adjacent to it on the right fall the Baths of Hadrian, just as they should according to the description of Pausanias. This is the big brick building in the bowels of which we rummaged two years ago, and to which we then with some hesitation gave the right name. Next year we may easily find the agora itself; but our present result is hardly less important than that.

An incidental result of what we have already done is the giving of a name to the venerable ruin which has so long stood as the only landmark of ancient Corinth. It is the Temple of Apollo, the first object mentioned by Pausanias on the right of the road leading out of the agora towards Sikyon. We have made incidental finds at last in nearly every department of archaeology—statues, inscriptions, bronzes, and vases. These are rewards thrown in to relieve the monotony of our work; but in some eyes they may seem important enough to be principal.

The life here is rather exacting, requiring early rising and close attention. It also brings constant annoyance from the fact that we are not masters of a broad area as are the French at Delphi, and so have to pacificate many crotchety individuals in order to carry through our work. But when one sees the first rays of the rising sun striking Kyllene near at hand, and Parnassos across the Corinthian Gulf, it is like taking a refreshing draught which strengthens one to meet the hard day. The location of Corinth is, after all that can be said in praise of Sparta and Argos, the finest in Greece. But the most cheering sight of all to me is the face of Pirene. RUFUS B. RICHARDSON.

Correspondence.

THE CLERGY AND THE WAR.

TO THE EDITOR OF THE NATION:

SIR: I am a constant reader of your exceedingly able paper. Your views on the war, silver, and protection are most acceptable to me. Your logic being usually so good, it surprises me greatly that you should be so "off" in your criticisms upon "Christians praying one against the other." This argument would strike at all prayer. Our Father in heaven of course knows all things, and knows what is best for his children, who are poor, ignorant, short-sighted creatures, in spite of the boasted enlightenment of this much vaunted nineteenth century. It is the

same in war as in everything else in which we have to seek for aid beyond our own resources. You think the Almighty is a lover of peace, and therefore must be displeased when his children proceed to the extremity of war. Let us look into this.

All things are right or wrong. If a thing is right, or a good thing to do, then we can ask the blessing of God upon it; if it is wrong, we should be fools to ask it, for we know he cannot approve of what is sinful. Now the question is, Is it lawful to go to war? We will leave this war out of the question, for I disapprove of it as heartily as you do—or *did* before it commenced. Let us take it in the abstract. Is war lawful? I suppose every one will acknowledge that it is, until we get some better way of settling national difficulties. If it is not sinful, then, each side in a quarrel can consistently ask God's blessing on its cause. Our minds are too finite to grasp things in their entirety, and human nature is very prone to selfishly look on its own side as right. So both sides ask God's help, and leave it to him to decide which is right, or which cause being successful will be most advantageous to the good of mankind at large.

As to the great numbers that are killed in battle being displeasing to Almighty God, we cannot judge of the Great Being as one would of an ordinary man. The human race would become too numerous if people were not killed off by railroad accidents, storms at sea, earthquakes, floods, and individual deaths by disease and old age. Death is the only means by which human beings can go to heaven; and, whether they die singly or "en masse," the simple fact of their death is not displeasing to God, but our wrong-doing in unnecessarily depriving them of life, the greatest of all earthly blessings. So it seems to me there is nothing inconsistent in the American bishops praying for their side to win, if they think their cause a just one, and the Spanish bishops can bring forward the same argument. You object to prayers being said after mass for those who fall in battle on our side. I can assure you that our bishops will pray just as fervently for all the poor Spaniards who fall in this sad unnecessary war, for we Catholics always pray for our enemies, and for all the souls in purgatory, regardless of what their creed may have been.

I apologize for intruding this letter upon you, but, as you have many Catholics among your subscribers, I should think you ought to be more chary of singling them out for unjust criticism.

A. DOOLEY.

RICHMOND, VA., May 30, 1898.

TO THE EDITOR OF THE NATION:

SIR: It is doubtless a matter of regret to you that the clergy are not arrayed on the side of despotism, cruelty, and rapine. All over this land the Protestant clergy are lifting up their voices in behalf of the oppressed, and preaching the text, "I came not to bring peace, but a sword." Nations, like individuals, are sometimes slow to follow in the path of equity and justice, and gleaming swords are sent among them like the fiery serpents among the Israelites. Spain is about to rediscovers America, to find that a land of Protestant churches, innumerable school-houses, and a free and untrammelled press, will not pass by on the other side while their brother (though he be a Roman Catholic) lies helpless and bleeding.

I should be pleased to see you right on this

matter; and when the war is over, and justice and humanity are again established, if you will use your influence for the extirpation of the gold standard and the consequent uplifting of the masses, you will deserve the gratitude and not the reproach of,

Yours sincerely, WM. F. DOHERTY.

SCHUYLKILL HAVEN, PA., May 31, 1898.

THE ENGLISH EXAMINATION AT BRYN MAWR.

TO THE EDITOR OF THE NATION:

SIR: The entrance examination in English recently held at Bryn Mawr College, Pennsylvania, seems to me worthy on one account of a more general notice than it would otherwise deserve. I refer to the fact that the examination in question dealt with a subject that cannot fairly be considered as included among the requirements for admission as stated in the college catalogue. That your readers may judge of this matter for themselves, I give the requirement as it appears in the Bryn Mawr Catalogue for 1897, and the subject for composition assigned in the examination paper:

"In 1898, candidates must be familiar with Chaucer's *Knight's Tale*; Shakespeare's *Macbeth* and *Midsummer Night's Dream*; Milton's *L'Allegro*, *Il Penseroso*, *Lycidas*, and *Paradise Lost*, Books I. II.; Addison's *Sir Roger de Coverley Papers*; Matthew Arnold's *Essay on Gray* and *Essay on A Guide to English Literature*; Wordsworth's *Michael* and *The Leech Gatherer*; Coleridge's *Ancient Mariner* and *Christabel*; Shelley's *Adonais* and *Sensitive Plant*; Keats's *Eve of St. Agnes*; Hawthorne's *House of the Seven Gables*; Pater's *Child in the House*; and Stevenson's *Master of Ballantrae*."

The examination question purporting to be based on this list is as follows:

"Give a short account in chronological order of the chief periods in the history of English literature and the chief authors in each period, in so far as such an account may be collected from the books prescribed for this examination."

It is clear that the requirement laid down by the college in its Catalogue is one thing, and the actual requirement, withheld until the very moment of the examination, is quite another. An attempt is indeed made to establish some show of connection by the clause "in so far as such an account may be collected from the books prescribed," but a moment's reflection will convince us of the futility of this attempt, as the books do not contain "such an account" and it consequently cannot be "collected" from them. Familiarity with the "Knight's Tale" does not in itself give the student the required knowledge of its author, his chief contemporaries, or the literary period to which he belongs; and the same argument is equally applicable, with but two unimportant exceptions, to every one of the books prescribed. In a word, the Catalogue requires a familiarity with certain specified literary masterpieces, while the question demands in effect a résumé of the literary history of England.

The only "books" on the list which could possibly aid the student to pass the examination are the two essays of Arnold. The essay on "Gray" is clearly useless for that purpose, as it deals in a general and somewhat incidental manner with a brief and comparatively inactive period of literary history—an interval between two "great periods." The second essay is not a comprehensive survey of the course of the literature,

but a review of Stopford Brooke's 'Primer'; it has but little permanent value, and certainly affords no definite and material help to a young student otherwise uninformed. I believe that no competent teacher would contend that this essay by itself gives the beginner that exact chronological knowledge of the chief periods in the history of English literature, and of the chief writers in each period, called for by the requirement.

No exception is here taken to the subject in itself; indeed, the present writer has long urged that every student who enters college should have an outline knowledge of the history of literature, and Bryn Mawr's persistent refusal to require such a knowledge has long been with him a matter for regret. But no knowledge of English literature on its historical side having been required by Bryn Mawr in any previous entrance examination, a change of policy in this matter should in common fairness have been announced in advance. Every college has an unquestioned right to set such a standard for entrance as it may deem wise or expedient, but no college has any right, legal or moral, to announce one standard for an examination in its Catalogue, and then, without previous warning, to substitute another. Such a positive breach of contract gives to every candidate a just ground of complaint.

HENRY S. PANCOAST.

GERMANTOWN, PA.

AN APPEAL TO SENATORIAL COURTESY.

TO THE EDITOR OF THE NATION:

SIR: As you seem so well acquainted with Mr. Henry Cabot Lodge, Senator from Massachusetts, will you please do me a favor or two? In his "The Story of the Revolution" in the May number of *Scribner's Magazine* he says: "Carleton descended from Canada"; "He came down, the lakes to Crown Point"; "Burgoyne took his way down Lake Champlain." (Italics mine.) Will you please tell Mr. Lodge that the water of Lake Champlain does not run up hill?

Further, will you please ask him why he labels a picture of Amherst's stone barracks in Amherst's fort, built about 1769, "Ruins of old Fort Frederick, Crown Point, at the Present Time"? And, while you have his attention, ask him to give his authority for calling, on his map (p. 552), Valcour Island "Valcours" Island, and the Big Chazy (or Champlain) River "Chateaugay" River. You need not ask him why, on the same map, he calls Missisquoi Bay "Missisquoi Lake," or why this map says "Ft. Ann" and his text "Fort Anne"; but these other curiosities do disturb my sleep o' nights.

Very respectfully,

D. S. KELLOGG, M.D.

PLATTSBURGH, N. Y., June 5, 1898.

Notes.

The Baker & Taylor Co. have in preparation a 'Life of George Müller' of Bristol, England, by the Rev. Arthur T. Pierson, D.D.

Nearly ready, from Ginn & Co., is 'Selections from the Correspondence between Schiller and Goethe,' edited by John G. Robertson, Lector in the University of Strassburg.

The Werner Co., Akron, O., will shortly issue 'The Determination of Sex,' by Prof. Leopold Schenck.

Mr. Nathan Haskell Dole, Jamaica Plain, Mass., will distribute this week his bilingual edition of Omar Khayyâm already described in these columns.

A revised and enlarged edition of Justin McCarthy's 'Life of Gladstone' will be published immediately by the Macmillan Co., who also announce 'Persephone, and Other Poems,' by Charles Camp Tarelli.

To compete with unauthorized English versions of Sienkiewicz's 'With Fire and Sword,' Mr. Jeremiah Curtin's translation has been brought out anew by Little, Brown & Co. in a cheapened popular edition, which will appeal to those who like to enjoy their author while doing justly by him.

Minister Romero, whose 'Geographical and Statistical Notes on Mexico' we noticed a week or two ago, has now brought out an edition of that useful manual, bound up with a translation of various writings of his on the culture of coffee and india-rubber in Mexico. The Putnams publish this, as they did the other volume.

Good portraits of Balzac, Paul Heyse, François Coppée, and Daudet accompany as many volumes in the series of grouped short "Stories by Foreign Authors" for some time in hand with Charles Scribner's Sons. The volumes are pleasant to the eye and convenient to hold, and it is needless to say that they offer entertaining reading.

The bound volume of the *Century Magazine* for the six months November, 1897, to April, 1898, inclusive, leads us through interesting Tennysonian and Huxleyana to Klondike adventure, Mr. Kobbe's pacific stories of heroes in civil life, and the sanguinary sea-fights between the *Huascar* and the *Cochrane* and *Bianco* off the coast of Bolivia nearly twenty years ago. Much in this fashion, meanwhile, the country has with rapid change passed from a state of mind still tolerant of things of the spirit to one preoccupied with slaughter by sea, and presently by land.

Mr. James W. Alexander's recent magazine article, 'Princeton, Old and New,' revised, amplified, and lavishly illustrated, is now issued as a small book (Scribners), bound in a pleasing cover designed by Mr. F. Berkeley Smith. While the book has its chief interest for Princeton graduates, it might well attract strangers to that lovely place, whose natural beauties have lately been enhanced by some of the best college architecture in the country. Indeed, Blair Hall and the University Library have more of the true spirit of New and Magdalen than all the Victorian Gothic at Oxford. Attractive, too, is the individuality of Princeton College life as described by Mr. Alexander, than whom no one is more intimately acquainted with it.

An interesting and useful little book is Mr. H. E. Parkhurst's 'How to Name the Birds' (Scribners), which is designed to enable a bird-lover in the Eastern States to identify any of some three hundred birds that he may see on his rambles. Mr. Parkhurst's grouping of the birds for this purpose is as practical as it is novel. Instead of following the usual scientific method of proceeding by species and sub-species, any one of which may include, as happens with the thrushes, birds as widely differing in size, color, and habits as the brown-thrasher and the kinglet, Mr. Parkhurst arranges his birds in five divisions—summer, winter, and permanent residents, migrants, and birds of prey. These classes are subdivided under the dominating

colors, so that, given the time of year and the size and most striking colors of any bird, it can be quickly run down by using the key. Indeed, Mr. Parkhurst believes that even the sparrow tribe can thus be distinguished by a close observer without killing specimens. The Appalachian birds are so well known to scientists, and our museums are so well equipped with their skins and nests, that whatever influence will direct ornithologists in the Eastern States towards a closer study of bird-life and away from bird-destruction is to be welcomed. This book should increase the taking of field notes on the migration, nesting, and feeding of birds. It can be carried in the pocket, has a map and three admirable illustrations, descriptive of anatomy and plumage, two in color.

The 'Essais de Critique Dramatique' of M. Antoine Benoist (Paris: Hachette) treat of Sand, Musset, Feuillet, Augier, and Dumas fils. The dedication to Sarcey is not needed to inform us that the author is a pupil of the famous critic, but it is a proper acknowledgment of the debt he owes him. Reading Benoist is like reading Sarcey without the *bonhomie* and the wit and without the wonderful knowledge of dramatic literature possessed by the critic of the *Temps*; but for a permanent study that is an advantage.

Without being in any way original, the 'Propos Littéraires' of the Vicomte de Broc (Paris: Plon, Nourrit & Cie.) are pleasant reading, and may be recommended to those who desire to have a fair idea of some of the best writers of France without studying a history of literature. M. de Broc vaguely recalls Roche, whose anecdotic History of French Literature used to be the delight of women teachers, but the present volume is a more serious piece of work.

In France, it is well known, the *lycées de jeunes filles* have multiplied rapidly, and it is no longer the opportunity for secondary instruction that needs advocates, but rather the more general admission of women to the teaching force in secondary schools and their adequate training for such positions. Dr. Macé, in his 'Place à la Femme, surtout dans l'enseignement secondaire' (Paris: A. Charles), takes up the gauntlet for this cause; but he is especially desirous of having young women prepared to teach children Latin at an early age, orally, "entre deux caresses, . . . sans efforts en se promenant." We learn from his little book that at several lycées for boys in Paris (viz., the Lycées Molière, Racine, Lamartine, Fénelon) women, instead of men, have been appointed as physicians, and, what is more surprising yet, that the head physician at the court of "Emperor Li-Hung-Tchang" (!) is a woman.

Paul Heyse's 'Martha's Briefe an Maria: Ein Beitrag zur Frauenbewegung,' after having been widely circulated through the columns of the *Gartenlaube*, has just passed through a second edition in pamphlet form (Stuttgart: Cotta). Their mild but earnest tone and charming style make these eleven letters the most artistic plea that could be imagined. They might be read with delight by thousands of young women in our colleges and universities, who would at the same time be helping their less fortunate sisters in benighted Bavaria—the proceeds of the sale going to the fund for a girls' gymnasium in Munich.

The July number of the *American Historical Review* will contain an article by Prof. W. G. Sumner on "The Spanish Dollar

and the Colonial Shilling," and a letter of Jefferson's in which, at so early a date as 1783, he makes to George Rogers Clark a suggestion of a transcontinental exploration like that subsequently achieved by Capt. Lewis and by Clark's brother.

The "Cuba number" of the *National Geographic Magazine* for May is mostly devoted to an account, by Prof. Robert T. Hill, of the geographical relations of the island, its topography, flora (which includes over 3,350 native plants), climate (far less insalubrious, in his opinion, than is currently believed), agriculture, mineral resources (chiefly iron and copper), commerce, and the inhabitants and their government. The native Cubans, outside of Havana, he says, are a "gentle, industrious, and normally peaceable race. . . . It is their boast that no Cuban woman has ever become a prostitute, and crime is certainly almost unknown among them." There are no manufacturing industries, except tobacco and sugar, "the persistent policy of Spain having been to promote the importation of manufactured articles from the mother country." In Prof. Hill's travels over the island he saw but a single other industrial establishment, a mill for extracting oil from coconuts and making soap. Mr. Frank M. Chapman treats of the origin of West India bird-life, and the editor gives the statistics of the trade of this country with the island for the last ten years. There are several interesting illustrations and two maps—one topographical, the other shaded so as to show the devastated regions and the Spanish fortified posts and Cuban outposts.

The *Geographical Journal* for May contains a description, by H. W. Smyth, of a visit to the Siamese states on the northeastern coast of the Malay peninsula. Among the principal industries are tin-mining and the collection of edible birds'-nests. The value of the latter may be gathered from the fact that in one state a bird's-nest farm is leased by the Government at an annual rental of \$10,000, while the yearly cost of the guard-boats alone is \$5,000. The white nests bring ten dollars a pound. Baron Nordenskiöld, in an account of his observations of the effect of drift-ice in calming a rough sea, suggests the protection of exposed harbors by small floating breakwaters. Among other articles are an encouraging report on the condition and progress of a district of the British Central Africa Protectorate; and a paper on sea-beaches and sandbanks, by V. Cornish, embodying "a research upon the processes which distribute the detritus which enters the sea at its margin, and upon the behavior of the material distributed."

The Balkans seen from a bicycle is the subject of the opening article of the *Scottish Geographical Magazine* for May. It consists of a series of entertaining sketches, by the Rev. H. Callan, of the scenery and the people of the western part of the peninsula. In his characterization of the Turk, the writer says that the rank and file of the people are "physically, morally, and socially sound," that the "common Turk, peasant or soldier, is a man whom you are bound to respect for his many good, sound qualities, *c. g.*, honesty, sobriety, modesty, bravery." He draws an impressive picture of the Governor-General, Suleiman Pasha, who told him "how hard it was to govern well or wisely in a régime that was not leaving the world, but that the world was leaving." Least hopeful of the other races are the Greeks, "who are developing too quickly, exceeding

their natural means"; most interesting are the Albanians, in whom the bond of "guest friendship" is as strong as in the days of Herodotus and Xenophon. Following this in a number of exceptional value is an account by J. A. Greig, a Scottish missionary in Manchuria, of a journey across that country to Vladivostok, and thence by rail, steamer, and tarantass to Moscow. The activity of Russia was evident at every point. Along its bank of the Amur, for instance, "at every few miles are villages, post, and military stations. On the Chinese side the great primeval forests are unbroken." Mr. Greig closes by saying that the three things which impressed him most were "the strength of Russia as a military power, the extent of useful, and in parts beautiful but undeveloped, territory she possesses in Siberia, and the great desirability to Russia of the sunny, fertile, and wealthy mineral province of Manchuria." The journey from Kirin to Leith, we may add, took seventy-six days and cost \$375.

Dr. Alexander Agassiz and Dr. Alfred Goldsborough Mayer, during a recent visit to the Great Barrier Reef of Australia, obtained some specimens of Medusæ, which they describe in the Bulletin of the Museum of Comparative Zoölogy at Harvard College (volume 32, No. 2). The first number of this volume contains a paper on Dactylometra by the same authors. Admirably executed plates accompany both articles.

A biographical sketch of the late Hubert Anson Newton, professor of mathematics in Yale University, appears in the Proceedings of the Royal Society of London for April 30. The writer selects two series of investigations to illustrate how much modern science owes to Prof. Newton, and gives a summary of their results. The first of these is his great work on November star-showers, which led to the discovery of the real orbit of the meteors. The other is the explanation of the motions of periodical and non-periodical comets. The same number contains a notice of Sir Richard Quain, the eminent physician and editor of the 'Dictionary of Medicine,' with which his name will always be associated. The Croonian Lecture on "The Nature and Significance of Functional Metabolism in the Plant," by Dr. Wilhelm Pfeffer, and the Bakerian Lecture, on "Further Experiments on the Action exerted by certain Metals and other bodies on a Photographic Plate," by Dr. W. J. Russell, are to be found in these Proceedings for April 28.

The loan exhibition of book-plates and super-libros held by the Club of Odd Volumes at the Boston Museum during the past five weeks, under the auspices of the Print Department, has been attended by the publication of a catalogue which all collectors will be glad to own. An historical introduction of twenty-two pages; the list of pieces arranged by country (the United States constituting one-half); a list of American designers and engravers not named in the catalogue, but who have executed plates for public libraries; the list of super-libros ("outward signs of the ownership of books"); the bibliography; and finally the list of designers and engravers and of owners embraced in the catalogue, make this little volume most useful for reference. It is beautified by several examples of book-plates in facsimile, of various periods, from Albert Dürer to Paul Revere and E. D. French.

The Managing Committee of the Ameri-

can School of Classical Studies at Athens will hold examinations for two fellowships in Classical Archaeology on March 16-19, 1899, both at the School and at the American School in Rome, and in America at any of the universities and colleges represented on the Managing Committee. A third (Agnes Hopkin Memorial) Fellowship has been established, with an income of \$1,000, and will be awarded to any woman worthy of it in the Committee's opinion without examination, but not without evidence. Intention to compete for the first two fellowships must be in the hands of Prof. Benjamin I. Wheeler, Ithaca, N. Y., not later than February 1, 1899.

In these days of war maps we could not expect the great German cartographers to stay their hands. The Spanish-American seat of war is well shown, accordingly, in a folding map between paper covers, edited by Hermann Habenicht—an ominous name for Spain (Gotha: Perthes; New York: Lemcke & Buechner). The scope of this chart embraces Newfoundland on the north, the Orinoco on the south, the whole of the West Indies, the United States east of the Mississippi, with part of Mexico and all of Central America. Cables are colored according to the nationality owning and controlling them. There are side maps of Cuba (to show disputed possession), Porto Rico, Havana, New York and its approaches, the Bermudas, and the North Atlantic, with currents and trade routes. Apart from the Philippines, this map will answer all ordinary purposes.

—The *Atlantic Monthly* for June has three articles on Education, the most noticeable of which is Frederic Burk's "Normal Schools and the Training of Teachers." He mentions the fact that in Massachusetts the number of pupils in these schools is decreasing, there having been a loss of 23 per cent. in the nine years 1888-97, as against a gain of 38 per cent. in the previous nine years. Mr. Hill, of the State Board of Education, suggests three reasons: the influence of the local training-schools for teachers, the influence of the higher standard of admission, and the influence of the colleges in attracting to their courses many who would otherwise attend normal schools. The second reason, however, "can hardly be considered a primary cause," because the higher standard was not enforced till 1896, while "the ebb-tide in attendance set in as early as 1888." Any one who will read carefully what Mr. Burk has to say of the method of instruction pursued in normal schools, will probably come to the conclusion that those who wish to qualify themselves for teaching can now get the substantive knowledge required elsewhere, and that the normal-school method at present in vogue is positively vicious. He declares that the normal school has "staked its fortune" upon the assumption that, for the preparation of teachers, a "substitute for knowledge" is possible and practicable. This substitute he describes as "the selected facts required by the common-school curricula, together with certain specific methods of teaching them according to the ordained principles which pupils are trained to believe are more or less fixed." Of the extraordinary importance attached to method, one gets an idea from Mr. Burk's account of what he calls "devices" for teaching. The pupil, for instance, is encouraged to devise a new method of teaching elementary branches. One draws

out some cardboard elephants, horses, and bears, and explains that the child can by tracing lines round these draw a much more accurate elephant, horse, or bear than by free-hand drawing. Another draws a circle with radii on the blackboard, and at the centre puts the word "at." At the extremities of the radii, the consonants, m, c, and r are written. Thus the child learns at a glance the correlated words mat, cat, and rat. On the other hand, so little attention is paid to substance that, in a normal school, history may mean the bare facts of American history. No wonder that "State normal schools have been supplanted" by training-schools, colleges, and especially colleges for women. The principles of Horace Mann have been perverted to base uses, and his name is invoked to bolster up a deadly formalism which, were he alive, he would be the first to denounce. The *Atlantic* has introduced the improvement, which other magazines will perhaps follow, of putting all its verse together. This gives dignity to it, and, if generally adopted, will relieve editors of the grotesque charge brought against them by some poets, of regarding poetry merely as a sort of printers' "fat," to be used to fill up the blank spaces at the end of prose articles.

—*Scribner's* for this month, except for the continued contributions, is rather empty. The leading paper is an article on "Undergraduate Life at Vassar," by Margaret Sherwood, forming one of a number on undergraduate life in general which this magazine has been publishing. The article throws some light on the supposed deficiency of a "sense of humor" among women, a charge so often brought forward by masculine critics. It is obvious from such accounts as this that women have just the same sense of the ludicrous that men have—that is, they laugh just as much, and find just the same food for amusement in absurd, grotesque, and ridiculous contrasts. But as they have not necessarily the same interests as men, they do not necessarily laugh at the same things. For instance, when we are told that a debate was held at Vassar on the question, "Does a college education unfit men for domestic life?" and was decided in the affirmative, we perceive a secondary satiric intent, which must have provoked hearty amusement among the losers as well as the winners, but it is not a man's joke.

—The *Century* has three Spanish articles, one on Toledo, by Stephen Bonsal, with illustrations by Joseph Pennell; one called "Pictures for Don Quixote," by W. D. Howells, written to accompany drawings by Vierge; and one on the Spanish Armada, by William Frederic Tilton, based in part on "manuscript Irish correspondence in the London Record Office," and accompanied by a critical introduction by Capt. Mahan. The sum and substance of the story is that what accomplished the ruin of the Armada was mainly "very commonplace human mismanagement." Medina-Sidonia was an incompetent commander—we have his own word for it that he knew "nothing of the sea or of war," and had many times said that he was "unfit for a command at sea"; the vessels were not adapted for the kind of fighting they were expected to do, being neither swift enough nor handy enough; the English were better gunners and sailors. Finally, the security of the fleet, and the time and manner of the junction to be ef-

fectured with the Duke of Parma, commanding the Spanish army in the Low Countries, were left to chance. As to the disasters in the Atlantic after the fleet had got to the west of Ireland, these were due "either to original unseaworthiness, or to damage received in action, or to bad judgment in taking unweatherly ships too close to the shores of Ireland, where strong westerly gales prevailed and the coast was inhospitable." All these conditions were "preventable by human foresight and skill," but it is a curious fact that both sides attributed the result to a direct interposition of the Almighty. The reception which the wretched Spanish fugitives met with when wrecked on the Irish coast almost beggars belief, but outrageous cruelty was so much the rule three centuries since among civilized men that no great kindness was to be looked for from savages, who, as Capt. Cuellar reported, lived among their rugged hills like wild beasts. When it was a common fate for a prisoner of war to be knocked on the head in cold blood because he was one of the "poorer sort" who would bring no ransom, we cannot but feel that the historian may over-emphasize the difference between the civilized man of the period and the wild creatures among whom Capt. Cuellar fell.

—*Harper's* has for its chief illustrated articles an account of "The Czar's People," by Julian Ralph, and a paper on "The Trolley in Rural Parts," by Sylvester Baxter, who has a vision of the world that is to be, in which the face of nature will be a network of trolleys, and every citizen of moderate means, as he now has his bicycle, will have his private trolley-car, with which he will go anywhere he likes, taking his household and friends with him. Already the new systems are pushing far into the country. Capt. Mahan contributes an article on "Current Fallacies upon Naval Subjects," which, if we are not mistaken, consists itself very largely of a fallacy—that of confounding actual with potential preparation for defence. What induces other nations to respect or to heed the wishes of the United States is not merely the number of its ships or regiments, but a reserve force, consisting partly of its wealth, and which has on every occasion enabled it to deal successfully with every foe it has encountered. Most Americans believe that this reserve force counts for far more than any other one thing in making the country respected abroad. Most people think, too, that one of the best ways of increasing this potential defence would be to pay off the national debt as fast as possible. But if they are not right, then the only alternative is to make every man a soldier, as on the Continent, by actually training him as such, and having a navy equal at least to the two greatest navies in the world (this being England's plan with reference to her European rivals). Captain Mahan shrinks from any such conclusion, but he assumes throughout that we are surrounded by neighbors who are merely waiting for an opportunity to pounce down upon us and tear us to pieces. For instance, he makes the exclusion of "direct European political control" of the Isthmus Canal as much a matter of "national defence" as "the protection of New York harbor." Is there any evidence that any European nation contemplates exclusive control? The only nation in the world that has threatened exclusive control is the United States. The fact is,

that Captain Mahan, when he wanders out of his own field of naval strategy, and undertakes to discuss questions which are part political and part economic, is feeble; he writes like a doctrinaire. In the present article his remarks on obsolescent ships are valuable; his observations on law and government show clearly that he is quite out of his depth in writing about them. In one extraordinarily confused passage he suggests that the Mexican war, though it may have been "unjust," was not necessarily "wrong"; and maintains that "law" is "set aside . . . at every election."

—The *Harvard Law Review* for June has a valuable article by Prof. J. B. Thayer on "The Present and the Future of the Law of Evidence," a subject on which he always speaks with authority. The article is a model of condensation, for in seventeen pages the writer manages to bring before the reader's mind the principal features of the common-law system of evidence, while in seven more he disposes of the question of needed reforms and how we should get them. Of the drift of this learned essay as a whole, it is impossible in the space at our command to give an adequate idea; we can only refer to one or two practical points. Prof. Thayer insists that decisions as to evidence in the trial court should be generally final. This would do away with one great abuse productive of enormous delay and expense in this country, and, curiously enough, nonexistent in England—that of trying a case "for exceptions." In the United States, questions of evidence "are generally taken up (i. e., appealed) on exceptions, a procedure never common in England, and now abolished there, which presents only a dry question of law—not leaving to the upper court that power to heed the general justice of the case which the more elastic procedure of the English courts so commonly allows, and tending thus to foster delay and chicanery." Every one knows that it is a constant incident of the administration of justice with us that a case is tried in order to get one or two exceptions to evidence which may be sufficient in the appellate court to upset the verdict—the theory being that if, with the objectionable evidence admitted or rejected, the jury *might* have rendered a different verdict, then the whole case must be tried over again. Prof. Thayer would first have a thorough revision of the whole law of evidence for the purpose of eliminating from it what are really rules of substantive law (this thorough revision is the work on which he has been engaged for many years); and if some one asks whether his suggestions are not in a measure directed against jury trial itself, he says that the reduction of the volume of jury trials would not be an unmixed evil, and in many jurisdictions, *e. g.*, in Massachusetts, this volume has been greatly reduced by the introduction of the simple rule that cases will be tried without a jury unless a party in interest asks for it. But assuming jury trial to continue in the main as at present, the great fundamental principles for its regulation are simple. The testimony must be given orally in court in the presence of the jury; the parties must have the right to cross-examine; writings must be produced for inspection; unnecessary, irrelevant, confusing and misleading evidence must be excluded; new trials must be had where injustice would otherwise be done. Jury trial is based on a few great principles like these, and if they were kept steadily

under the oversight and control of the court "by being dealt with as rules of court," our system of evidence "might be vastly improved, and be made conformable to the changing convenience of mankind."

—The Colonial Society of Pennsylvania some time ago announced its intention of reproducing the *American Weekly Mercury*, the first newspaper issued in America south of Boston, from its commencement in 1719 to its close in 1752. The publication of this paper was begun in Philadelphia in December, 1719, by Andrew Bradford, a son of the founder of the press in the Middle Colonies. The father, William Bradford, settled in Philadelphia in 1685, and was forced, in 1693, to seek in New York the freedom of thought which was denied to him by the persecuting spirit of the religious faction then dominant in Pennsylvania. Andrew Bradford, some twenty years later, revived his father's business in Philadelphia, and continued it successfully until his death, in 1744. The newspaper, which he began to publish in 1719, did not die with him, but was continued by his widow until 1752, when it was finally suspended. The reprint of the first volume is an absolute facsimile, prepared under the care of Mr. Julius F. Sachse, from the copy now in the Philadelphia Loganian Library, and the only one known to exist. A glance at the volume is all that is necessary to show the excellence of the reproduction. The committee in charge of the work have spared neither pains nor expense to make it both attractive and useful—witness their elaborate index, which opens up a field of information of the greatest utility to the historian and genealogist. The latter will find the advertisements a very fruitful, if not always an entirely pleasing, source of information; while the former, in the communication "To the Printer," will discover much valuable matter which has been hitherto overlooked. The shipping news not only is an interesting showing of the growth of Philadelphia's commerce, but supplies curious details as to the movements of the ancestors of many Americans of to-day. The volume is bound in brown cloth, and sells at seven dollars and a half.

GENERAL MEADE.

Life of General George Gordon Meade, Commander of the Army of the Potomac. By Richard Meade Bache; with portraits and maps. Philadelphia: Henry T. Coates & Co. 1898. 8vo, pp. xxii, 596.

General Meade came of a family of Philadelphia merchants, largely engaged in commerce with the West Indies and with Europe, and prominent during several generations among the business men of that city. His father, after spending several years of his early manhood in business ventures in foreign parts, made his temporary residence in Spain, establishing a business house at Cadiz, where he resided seventeen years, down to 1820. The General was born there on the last day of 1815, and was therefore in his fifth year when the family was reassembled in the United States. As his father's purpose to return had been unchanged, though the absence was protracted by business exigencies, the children were natural-born citizens of this country; yet persons unfamiliar with law often annoyed General Meade with ignorant debate of the subject.

He was appointed to the Military Academy at West Point in 1851, graduated in due course, but resigned in 1856 to devote himself to civil engineering. After several years devoted to railway construction and to work as a civilian assistant to army engineers running national boundary lines at both extremities of the country, he returned to the army in 1862, as lieutenant in the corps of topographical engineers. In the Mexican war he served on General Taylor's staff in the opening campaign, and then with General Scott at the taking of Vera Cruz, but, being a supernumerary there, was not permanently attached to Scott's staff and returned home.

When the civil war broke out he was at the head of the list of captains in his corps, John Pope being next, with W. F. Smith, J. G. Parke, and G. K. Warren among the juniors. All of these became general officers of volunteers. Meade took the field in 1862 as Brigadier in the Pennsylvania Reserves, under General McCall as division commander. From that time he was in active service with the Army of the Potomac. He was commandant of division at South Mountain, Antietam, and Fredericksburg, commandant of corps at Chancellorsville, commandant of the army at Gettysburg, and commanding it as second to Grant from The Wilderness to Appomattox. In every subordinate position he had the fullest confidence of his superiors; but, by a fate not uncommon among soldiers, his elevation to the command of an independent army in the field led to a partial eclipse of his renown, generals of the first rank being few indeed in proportion to the number of respectable and even brilliant subordinates.

The victory at Gettysburg was of immense importance to the national cause, but as it was, on Meade's part, a purely defensive battle, it left open the question of his ability to conduct offensive operations. Mr. Lincoln was disappointed at what seemed to him a failure to reap the fruits of success. Assertions were made by officers of rank near Gen. Meade that he was unwillingly led to accept battle at Gettysburg, and, if left to himself, would have retired to the line of Pipe Creek, a day's march nearer Washington. It seems to be true that orders for such retreat were drafted and a council of war called to consider the subject, but the council voted that it was necessary to fight where the army was. The Potomac Army was stronger than Lee's, but the latter was not again brought to battle until Grant took the command in the field in the following year. Lee sent Longstreet's corps six hundred miles to join Bragg, and, after the mischievous done at Chickamauga, Hooker was sent from the Potomac army with a similar force and by a still longer circuit to Rosecrans to help repair the damage; but the two armies in Virginia did each other no harm.

It was in the nature of things that a change of some sort must be made, and it came in the form of Grant's appointment as Lieutenant-General and his taking active command in the field in Virginia, Meade being then reduced to the position of second in command. This, of course, involved some chafing. The principals seemed to get on well enough together, but about each were friends who looked askance at what was going on at the other headquarters. Grant generously insisted that Meade's promotion for subordinate work should keep pace with Sherman's for independent successful cam-

paigns on a great scale. But when all was done, it was evident that grievances were laid up and jealousies cherished which must be brought to the light of day when the time for historical writing should come.

Meade's biography was an altogether appropriate task for his kinsman, Mr. Bache, who, though not himself a military man, had been a good deal in contact with military life, and had enjoyed the affectionate confidence of the General. It was also quite natural that Mr. Bache should conclude that, from Gettysburg onward, Meade's military biography must include a pretty full history of the campaigns of the Potomac Army, for his proposition turns out to be that Grant's influence there was only evil, and that continually. To put it in his own words:

"Taking it altogether, there never was in history, so far as I am aware, any case so detrimental as Grant's presence in the field with the real commander of the army, except that of a king, or a prince of the blood, who was formerly often there, as an inspiring influence or from military aspirations, and, from whatever motive, generally a hindrance instead of a help to military operations" (p. 403).

It is plain that if this proposition is to be established, thorough work must be made with the analysis of the campaign.

It would next seem a pity to deal fully with the latter half of the Potomac Army's history and give only bits of the first half by limiting the author to Meade's own part in it, and so the plan of the work seems to have widened out to a narrative of all the campaigns of that army. Mr. Bache does not find that any one of them, prior to Gettysburg, showed true military ability in the successive commanders. McDowell, Pope, McClellan, Burnside, Hooker, with Halleck as their chief, are all tried and found wanting. The criticisms upon them vary in harshness; those who were, at the time or subsequently, brought into controversy with Meade being flagellated with such exaggerated severity that it suggests a disposition to punish Meade's enemies more than to make a sound criticism of a campaign.

Yet many of the general statements of canons for judgment of military conduct are correct, and we cannot deny that the Army of the Potomac had failed to find a leader able to give it the triumphs its numbers, its discipline, and its courage deserved. If, however, we look for the application of these same rules of judgment to Meade's leadership from June, 1863, to March, 1864, we are disappointed. The story here becomes a rather lame and painful apology for lack of results, and when we come to the systematic disparagement of Grant as a "hindrance instead of a help" to what Meade would have done in 1864, we think involuntarily of Lincoln's original answer to such disparagement in 1862, "At least, he fights"; and, destructive as it is, fighting is what an army is made for. Nothing but dogged, determined, and most costly fighting, East and West, brought the war to a successful end.

The assertions of Grant's incompetence turn out to be, in the main, mere assertions, though made with a self-assurance which is phenomenal. Let us take, for example, the crossing of the James River by the Potomac Army and the movement to Petersburg in June, 1864. Mr. Bache begins with the assertion that Grant left Meade "completely in the dark as to his ulterior pur-

pose" (p. 460). He follows this up with the assertion that Grant "bungled the matter of his intended surprise of Petersburg" (p. 461); that he "did not in his memoirs scruple to ignore" his omission to inform Meade of his purpose (*ibid.*); that this not only was an "egregious error," but gave the case "the aspect of his having wished to signalize himself by a master stroke of strategy," and so "having purposely withheld from him [Meade] information which should have been imparted" (p. 467). Instead of proving all this, the author excuses himself on the ground that "space does not admit" it, but he is sure his assertions will be found correct by the reader who carefully examines the records and histories, and that "it is only too sadly confirmed by the evasion of Grant himself and his accredited historian Badeau" (p. 460).

As to the "evasion," the industrious reader will be amused to find that Grant, instead of evading, squarely states in his memoirs that, immediately on his return from the visit to Gen. Butler on June 14, at which the attempt to take Petersburg was arranged, he "communicated to Gen. Meade, in writing, the directions I had given to Gen. Butler," and instructions to hasten details of cooperation (*Memoirs* II., 294). The amusement will be increased when the diligent one turns to the Official Records, and finds Grant writing to Meade himself within a fortnight of the event, "I am very much mistaken if you were not informed of the contemplated movement against Petersburg, as soon as I returned to Wilcox's Landing from Bermuda Hundred, and that the object of getting the Second Corps [Hancock's] up without waiting for the supply train to come up to issue rations to them, was that they might be on hand if required. I arranged to have rations sent down from Bermuda Hundred to issue as the troops crossed" (*O. R.* XI., pt. 1, p. 315). This letter was written in reply to Meade's endorsement on Hancock's request for investigation; and while there is room for doubt whether it was officially transmitted, the event showed that its contents were made known and acquiesced in. It stated that Grant found no fault with Hancock or Meade for the delay in the advance of the Second Corps from Windmill Point.

If we strive to follow still further Mr. Bache's suggestion to examine the Records, we find in Meade's communication to Hancock internal evidence that Grant had given him the results of the visit to Butler precisely as he stated. Grant's original directions had been that the troops, on crossing the James, should encamp at the nearest suitable place on the south side (*Id.*, pt. 2, p. 1). At 8:30 A. M. of the 14th, Meade accordingly ordered Hancock to begin crossing to Windmill Point in transports at once, and to "encamp on suitable ground after crossing the river" (*Id.*, p. 24). The shallowness of the water at the south bank was a cause of delay, and the passage took all day and most of the night. Grant wrote to Butler after getting back to his headquarters, telling him that Hancock's corps would all be over before daylight of the 15th, and would march in the morning direct for Petersburg, halting at the point on the road nearest City Point for further orders. He authorized Butler to send back to Hancock for support if it was needed. Butler was also directed to send rations for Hancock's men by water to Windmill Point, to save delay (*Id.*, p. 36). This letter was dated at 8 P. M. In the

same evening we find Meade writing to Hancock, revoking the orders as to encamping, and saying, "You need not spend any time in taking up a line, but hold yourself ready to move, as you may receive orders to march to Petersburg, in which case rations will be sent you from City Point" (*Id.*, p. 27). No hour is marked on this dispatch, but its time is sufficiently fixed by the date of Hancock's answer, which is 9:25 P. M. At ten o'clock in the evening, Meade writes again, saying: "Gen. Butler has been ordered to send to you at Windmill Point 60,000 rations. Soon as these are received and issued you will move your corps by the most direct route to Petersburg, taking up a position where the City Point Railroad crosses Harrison's Creek, at the cross-roads indicated on the map at this point," etc. (*Id.*, p. 29). The facts here given could come to Meade from no one but Grant. They contain the essential facts and directions which are contained in Grant's letter to Butler of eight o'clock, and unanswerably confirm his statements before quoted.

We have to add to this that W. F. Smith's corps (the Eighteenth) had been sent, a day or two before, to Butler, by way of White House and steamboat transportation, and Meade had himself issued this order. He knew the force Butler thus had on hand, and its position, threatening Petersburg; and no one could so grievously attack his intelligence as a soldier as he who would argue that he did not know the meaning of the order for Hancock's hasty advance, from the circumstances, even if the explicit statement that Butler was about to attack Petersburg had been accidentally omitted. But the quotations Meade made from Grant's communication settle all that.

The records also throw a curious sidelight upon the little things which, in war, may baffle the best calculations. As a matter of fact, Hancock's corps was not out of rations, and had no need to delay for them. He had written to Meade on the 14th that he had three days' rations from that morning, which would carry him to the night of the 16th (*Id.*, p. 25). But no notice seems to have been taken of this by Meade, and the representations that Hancock's men were hungry, made Grant order Butler to send down a supply by water in the night. As Meade's dispatches still continued to tell Hancock to receive and issue the 60,000 which would come to him, the latter naturally supposed there must be some strong reason for it, and waited till the middle of the forenoon of the 15th before marching. At 7:15 A. M. he was deceived by a report that the rations had arrived, and at 7:30 Meade ordered him to march without them, but added a postscript leaving it optional in view of the report that they had come (*Id.*, p. 57). The result of it all was that the column did not get in motion till 10:30.

Yet Butler was not in fault. He had ordered the rations to be sent, and the Quartermaster started them from City Point in the schooner *Susan*, with a steamboat alongside. The vessel was probably one of the supply fleet loaded with assorted rations, and the intent was to save handling the freight. But the *Susan* drew eleven feet of water and could not come to the shallow landing at Windmill Point (*Id.*, p. 58)! The chapter of accidents and small blunders was thus completed by "the total depravity of inanimate things"; and, if we may paraphrase a passage from Mr. Bache (p. 555), Grant,

who had Scotch blood in his veins, may have recalled the couplet,

"The best laid plans o' mice and men
Aft gang agley."

The example given is a perfectly fair specimen of Mr. Bache's inability to judge reasonably of Grant and his conduct. He fails to read or to understand the record, and seems to see facts and conclusions from them alike distorted by his own prejudices. When he ends by suggesting that Grant could by any possibility be aided in "signaling himself" by hiding from Meade the purpose which the latter must assist in carrying out, the thing becomes childish. The correspondence between Grant and Butler was there to settle the "priority of invention," and no subsequent frankness with Meade could imperil it. Grant was never expansive, but finesse in making a mystery of his plans was not in his line. As he, from the first, exonerated Meade as well as Hancock from blame for his disappointment, Mr. Bache's violence is gratuitous and wanton.

It must be remembered that Butler was also an army commander independent of Meade, and as such was intrusted with the direct movement on Petersburg. He was directed not to make the attempt unless it was reasonably sure to succeed with the force which he had in hand; but in the unexpected contingency of needing assistance, he was to send back to Hancock for it. The latter by every fair reckoning would be within short supporting distance, and Butler's or Smith's official word that they were authorized to call on him for aid would, by every military rule and custom, be sufficient. That all were ordered to move rapidly was the fact, but it would have been none the less their military duty if not a word had been said about it. Finally, Butler was Meade's senior, and if Grant, as Mr. Bache's official mapplot, had been absent, Meade would have had the pleasure of reporting personally to Butler for orders. We do not need Mr. Bache to tell us how he would have enjoyed it.

MORE NOVELS.

A Spanish Maid. By L. Quiller Couch. London: Service & Paton; New York: Dodd, Mead & Co.

The Beth Book. By Sarah Grand. D. Appleton & Co.

The Celebrity: An Episode. By Winston Churchill. Macmillan.

Mrs. Knollys, and Other Stories. By F. J. Stimson. Charles Scribner's Sons.

A Night in Acadia. By Kate Chopin. Chicago: Way & Williams.

The War of the Worlds. By H. G. Wells. Harper & Brothers.

Mr. Quiller Couch, in his new story, has imported into the already eerie atmosphere of Cornwall a fresh element of mystery from Spain. The uncanny traits of Carmen and the Flying Dutchman have been blended in the episode of the visit of a bewitching Spanish maiden to the good fisher folk of Landecarrook. Arrived by means supernatural, her conduct is such as is merely natural to the siren of song and story, the "minx with a way with her" of Mrs. Humphry Ward's felicitous christening. She is the spirit of evil incarnate in beauty's own shape, and she acts accordingly—from the time that fisher-boy 'Zekiel

rescues her, to his own undoing, to the moment when incensed Landecarrook chases her down to the sea, and she is caught up again in the supernatural. The tale is painful, but there are cheery glimpses through the storm, and a bright gleam in the west as the story goes down. An antiquarian parson, his little granddaughter, who dreams dreams of princes, the sound-hearted young squire of the village, the long-suffering hostess of the Spanish walf, the victimized 'Zekiel, and the wicked spirit herself, are well drawn; and the indignant matrons and merry maidens, with the village gossip, grave-digger, and idiot, are well sketched in. There is a dreadful deal of weather in the book. The scene is set with frantic accompaniment of thunder and lightning; and though the case is one which Mendelssohn declared to be the only justification of heavy brass music—namely, "witches or some deep grief"—yet the din of it oppresses the mind's ear. We cannot think the book, imaginative though it is, quite as great a gain to literature as Mr. Quiller Couch's short stories. Those we have long delighted to honor as exquisite little creations. This is a readable book.

"Some things may be thought that cannot be said," sings Peacock's ballad, in which the monk thinks "Get up" aloud and the docile mule runs away. Mrs. Sarah Grand either has not read or does not agree with Peacock. There is nothing thinkable about Beth from the cradle to the second husband, from her complexion to her soul, that is not set down in "The Beth Book." For nearly six hundred pages we are chained to her, doomed to learn how she thought, felt, aspired, and rebelled, how she learned to eat, sew, bathe, and brush her hair, and even what vulgarities and obscenities she overheard in the streets. We learn how, in a *moment perdu*, she took to writing, and caught the mannerisms of the favorite author of the moment; how, when she was reading Macaulay, her own thought "jerked along in short, sharp sentences" (a perfect description of Macaulay's style), and how she caught the "peculiarities of De Quincey, too, of Carlyle, and also some of the simple dignity of Ruskin, which was not so easy"—all this before she discovered that coming "under the influence of academic minds" made her "artificial" and her English "turgid with Latinities." There is no fault to be found with Beth's determination "not to write plotty-plotty books nor make a pivot of the everlasting love-story"; but if those topics are eliminated, others as taking should be substituted. If there is "an absence of a true sense of proportion" in making love the centre of all stories, and we agree with Beth in thinking there is, surely there is as little balance in writing a book with no centre at all and swelling it with unwholesome ingredients to shapeless and dropsical hugeness. The implied confidence in public interest in this enormous mass of largely repulsive details almost reaches the sublime—yes, goes even a step further. "Poverty of mind accounts for the shortness of the book as a rule," says one of Mrs. Grand's characters, discoursing on authorship. If this explains the quantity of the narrative, the quality remains still unexplained and unexplainable. It would be going too far to say that there is nothing noble in it. There are fine thoughts and clever sayings, and a much insisted upon high purpose of emancipating woman from

the tyranny of dissipated husbands. There is even a trace of amiability toward the monster, man, in a declaration that he is mainly bad through habit. Teach him that he can be as good as a woman, and he will learn to believe in himself. But, first, woman must shut him up in a dark closet and starve him on dry doctrine through the keyhole, and write books about him, and preach to him that he can be good, only he does not yet know it. A great deal of firmness and a little kindness make the method.

Beth's genius hovers over many fields; the piano, rabbit-killing, the exercise of what is called her "further faculty"—a sort of second sight which never accomplishes anything but to deprive her of the first; then writing, till finally, in a blaze of revelation, her mission is discovered to be public speaking in behalf of "the work," which, roughly stated, is the elevation of man without anesthetics. For a woman who disbelieved so thoroughly in him, Beth had a susceptible head. (Love affairs never went to her heart, which was the organ of self-pity.) Her redemption from despair is accomplished by the daily sight of a horseman passing her door, with whom she never exchanged a word; she makes an engagement or two and a miserable marriage and a few friendships, and we leave her about to be redeemed again by a gentleman "in art." He is last seen stalking across the fields towards her with redemption in his eye and, let us hope, divorce papers in his pocket; for, to all seeming, she is still the wife of her very unpleasant first husband. This latest life-saver of hers is an American; and yet there are those who oppose the Monroe Doctrine!

"The Celebrity" is too good a story to spoil by outlining it and thus anticipating its surprises. It belongs, indeed, to vulgar literature, but is neither insincere nor unclean, and may safely be commended as a clever achievement in extravagance, emitting, in a way not all extravagant, sparks of satire against the egotistic passion, and adorned with a portrait or two more living than mere penwork. Most notable of these is that of the Western magnate and turfman, who is made surprisingly possible though at once unbearable and a good fellow; superstitious, profane, kind, and "horsey," a man who gives as a wedding present to the bride and groom who animate the closing pages a *reposed* silver urn bearing the design of Mercury driving four horses with tails docked (by special instruction to the artist).

"Mrs. Knollys" is and long has been a lovable little story. It tells how a glacier after forty years yielded up its dead, and it brings into an effective and affecting parallel the image of the slow march of the eternal ice, faithfully preserving, and the step of time down the course of human experience, relentlessly change-making. In short stories Mr. Stimson has never done better. Its followers in this volume we find something less successful, although they hold the attention, and are mainly on a theme dear to all the world—that of military and other conquerors blighted in every style by hopeless love for beautiful damsels.

Kate Chopin tells a story like a poet, and reproduces the spirit of a landscape like a painter. Her stories are to the bayous of Louisiana what Mary Wilkins's are to New England, with a difference, to be sure, as the Cape Jeddah is different from the cinnamon rose, but like in seizing the heart of her people and showing the traits that

come from their surroundings; like, too, in giving without a wasted word the history of main crises in their lives. That Cape Jeddah is sometimes a thought too heavy is perhaps inevitable in the heated South. But enough there is of artistic in the best sense to hold the reader from cover to cover, transported for the time to a region of fierce passions, mediæval chivalry, combined with rage and bad grammar, a soft, sliding Creole accent, and the tragedies and comedies that loom with special meaning in a sparsely settled country.

As is well known, the scientifically gruesome is Mr. Wells's forte. In his "Thirty Strange Stories" we supped on thirty kinds of horror, each course a brief one. But in the "War of the Worlds," which is a novel, we are sated with one long banquet of horrors. The usual miseries of war are not enough; a hundred new ones are invented to suit the invented inhabitants of another and a more highly civilized world. The men of "vast, cool, and unsympathetic intellects," who are all brain and hand, smiting with heat-rays, and choking out life with tubes of liquid black smoke, make mere powder and shell household pets by comparison. To read this story of the emptying of London and the wasting of Surrey by the loathsome Martians—for they are repulsive as well as fearful—is to quake by day and sink into nightmare after. Such tribute as this is certainly not to be denied it. The whole conception is highly ingenious, and the deliverance at last, although a fresh horror in itself, is unexpected cheer. That the accursed bacteria of disease and putrefaction should come to man's rescue and stay the Martians (who, having no bacteria in their otherwise happy home, have developed no resisting power against them as we have) is an untying worthy Mr. Wells's genius. Under his accustomed skill of treatment the whole is entirely convincing, but we acknowledge that we prefer terror in smaller prescriptions. We suspect, however, that Mr. Wells thinks it nothing, as Thoreau says, to go round the world to count the cats in Zanzibar, and that he is not likely to be restrained from ever bolder flights of his weird fancy, to ever stranger places, whither perforce his spell-bound readers must follow.

HOLM'S HISTORY OF GREECE.

The History of Greece from its Commencement to the Close of Independence of the Greek Nation. By Adolph Holm. Vols. II.-IV. Macmillan.

It will be interesting to observe the effect of the displacement of Curtius by Holm as the standard history of Greece for the general reader and literary worker. In a former notice of the translation of Holm's first volume, we commented on the sobriety and sanity of his judgment, and more especially on the pains he has taken in all doubtful matters to distinguish the threads of the original tradition from the fabrics of modern erudite conjecture. The impression is strengthened by a rapid perusal of the three remaining volumes of the translation which now lie before us. The book is not only the most compact and convenient repository of the facts accessible to the general reader, but it is a salutary illustration of the simplicity and directness of a true method as opposed to the conventional declamatory party spirit and caprice that mark many of the most picturesque and popular of our histories

of Greece. Prof. Holm has simply eliminated rhetoric from his treatment of Greek history, and the resultant economy of space and clarification of our vision show us how large a place it had occupied. Where the evidence does not permit us to conclude, he is content to say so, instead of juggling with it in the endeavor to make possibility look like probability, and probability pass for certainty. He admits, with a touch of Socratic irony, that he cannot vie with the genius of a Curtius, a Droysen, or a Mommsen. But he confronts Curtius's highly colored picture of the degeneracy of democratic Athens with a tabular view in parallel columns of the eloquent historian's own phrases, from which it appears that precisely the same symptoms of sudden and irremediable moral decline manifested themselves about the years 430 and 360 B. C. Had a great moral revival occurred in the interim? he pertinently inquires. He deals similarly with Droysen's declamations about the frivolity of the Athens of Epicurus and Menander; and, while admiring the ingenious historian's "combinations," dryly observes: "The narration of the facts conjectured by him naturally occupies a great deal of space." Equally refreshing and incisive are his remarks on Mommsen's Caesar worship, and on the oversubtlety of classification which the learned historian of Rome applies to the legal status of the subject cities of the Empire. The study of Holm will prove a wholesome antidote to the mystic and pontifical manner of writing history.

In his defence of democracy, and his preference of the Athenian to the Dorian or Spartan type, Holm is a disciple of Grote. He even outbids Grote in admiration for Pericles, to whom he attributes far-reaching designs of "pulling out a few more stops in the average Athenian," as Matthew Arnold would say, by the introduction of Ionian science and Ionian culture and liberalism in the treatment of women. Like Grote, Holm protests against the use of Aristophanes as an historical authority, and, without committing himself to the exaggerations of Müller-Strübing, he knows how to make allowance for the inevitable prejudices of Thucydides. He joins in the rehabilitation of Cleon, whose success at Sphacteria he thinks (for once venturing on a conjecture) was due to a scheme prearranged with Demosthenes and the party that favored a vigorous prosecution of the war. He even has a good word for Hyperbolicus, a "baser nature," perhaps, but unjustly thrust "between the pass and fell increased points of mighty opposites." But his desire to rehabilitate the democracy and the popular leaders stops short of Grote's justification or palliation of the judicial murder of the generals of Arginusæ.

Holm's treatment of the fourth century is perhaps sufficiently indicated by his admiration for Xenophon, "a genuine Socratic, who eschews all phrase-making," and Isocrates, "the first and greatest publicist of antiquity." Accepting as he does Isocrates's programme of uniting Greece under some strong headship against Persia, he is comparatively unsympathetic towards Demosthenes, whom he oddly compares with "the agitator Gladstone," and takes a more favorable view than Grote of the character and achievements of Alexander.

The most valuable portion of the entire work is the fourth and final volume, in which the history of Greek civilisation is

brought down from the death of Alexander to the battle of Actium. The unity and interest of the theme lie, not in the shifting fortunes, the political intrigues, and the petty wars of the successors of the adventurers who carved themselves kingdoms out of Alexander's empire, but in the gradual diffusion of Hellenic culture over new continents and in the continued life and development of Greek city civilization. The name Alexandrian commonly applied to the entire period is a misnomer. The national life is far more truly represented by Athens, Rhodes, and the Greek cities of Asia Minor and the leagues than by the endowed science, the artificial poetry, the absolutism, and the immorality of the court of the Ptolemies. The alleged degeneracy of the Athenian people is sufficiently refuted by the high spirit they repeatedly displayed through these centuries in defence of their lives and liberties. The conventional declamations about the overthrow of Grecian liberty by the Macedonian or the Roman rest on an utter misconception of the facts. The course of history had demonstrated that freedom for the Greek meant simply the autonomy or local self-government of the polis. It did not and could not mean playing a great part on the stage of world-politics. The last hope of that vanished with the overthrow of the Athenian empire by the separatist cantonal jealousy that was at once the strength and the weakness of the Greek. "He was born to other politics." Even under the hegemony of Athens, Sparta, or Thebes, the citizen of an ordinary Greek town would have enjoyed at the most the liberty of communal autonomy, and this he did not forfeit under the rule of the successors of Alexander and the Romans. And the history of the fourth century proved that neither Athens, Sparta, nor Thebes could maintain order and play the part of international arbiter as justly as Rome and the kings did on the whole. The conclusion is, that we ought not, in the name of an illusory political liberty, to deplore the hegemony of Alexander, which extended Greek civilization to lands undreamed of by Isocrates, or the later rule of the Romans, which secured to the Greek cities of Asia Minor, under the *Pax Romana*, two or three hundred years of a prosperity hardly matched in the annals of mankind.

The life of the Greek polis during these centuries has more than a merely historical interest for us. Our vast centralized modern states, fenced from each other by protective tariffs and groaning under the burden of colossal armaments, do not necessarily constitute a higher political type than that presented by the system of Hellenized cities grouped about the Mediterranean under the presidency of the "central monad," Rome, which, as a rule, took from them little beyond the pernicious privilege of making war on one another.

Space falls us to follow in detail Holm's application of these considerations to the history of this interesting and little known period. He deserves the greatest praise for his masterly grasp and lucid presentation of the immense and complicated material. For the first time, unless we make a partial exception in favor of Mahaffy's interesting sketches, we have an intelligible and readable account of these important centuries. It is the indispensable preparation for any true appreciation of the work and mission of Rome.

A word, too, must be said in commendation of the notes that are appended to each chapter throughout the work. To the student they are more interesting than the text. They contain full references to the extant original sources, a critical examination of these sources, with a statement of all that is known or conjectured of their dependence on authors now lost; judicious criticism of the chief modern authorities, German and English, and a full treatment of all the latest epigraphic, monumental, and numismatic evidence—an enormous collection of useful material in systematic, compact form.

The translation is readable and substantially correct, though not free from occasional awkwardness and inaccuracy. "Forms of speech" and "forms of thought" (3, p. 222) should evidently be "figures of speech," etc. Miltiades was the victor rather than the conqueror of Marathon. Free inquiry was not limited to a "particular district" (2, 422), but to "ein spezielles Gebiet," namely, the phenomena of nature. "Defeated just like Dionysius had been" is poor English. Misprints and blunders in proper names and Greek words are much rarer than they were in the first volume, but are still far too frequent. We have noted, among others, Dexileus (3, 47), ἀπεφρίσμενοι (2, 286), ἡτοίμοιεν (3, 256), Halonneseus (3, 265), τὸ λυσινελῶν (3, 242), προβέλεισθαι (ibid.), ταπεινώσειεν (3, 250), μεταληθρεῖς (3, 243), Democles for Demokedes (2, 430), Thrasydacus for Thrasydacus (2, 36), Flaminus for Flamininus (4, 63), Gytheum for Gythium (4, 239 and 357), τὸ for τί (4, 429), καταπληγτικὴ φαντασία for καταληγτικὴ (4, 158), etc., etc. The population of Seleucia (4, 450) should evidently be 600,000, not 6,000,000!

Reminiscences of the Old Navy. By Edgar Stanton MacLay. G. P. Putnam's Sons.

This small volume is the product of the material found in the journals and papers of Captain Edward Trenchard and of his son, the late Rear-Admiral Stephen D. Trenchard. These papers, though covering a period of time measured by eighty years, judged by results, present comparatively little of interest or historical value. There is, for instance, but the barest mention of the services of the elder Trenchard in the waters of Tripoli or during the war of 1812, in which he superintended the construction of one of the first of our vessels built upon the waters of Lake Ontario. At the time of the affair with Tripoli, Edward Trenchard was the intimate friend and contemporary of Stephen Decatur, while in the war of 1812 he commanded the sloop of war *Madison*. The only time in Edward Trenchard's career which is treated with any degree of fulness is his cruise in the *Cyane*, in 1820, against the slave trade on the west coast of Africa.

Admiral Trenchard, with a much longer and more recent career in the navy, has for his part worthy of mention only the attack upon the Pei-ho forts and his creditable share in the operations against Fort Fisher during our late civil war. In the affair of the Pei-ho forts, which occurred in 1859, the attack was made by Admiral James Hope, of the British navy, in command of an allied force, composed of British and French naval forces, the latter being quite small in number. Trenchard was present at the affair as flag-lieutenant of Commodore Tattnall, who then held the position of flag-officer of the forces of the United States upon the China station. With Mr. Ward, our Minister to

Pekin, Tattnall and Trenchard were on board an English merchant steamer, chartered as a tender, the flagship *Powhatan* being of too heavy a draft to cross the bar and ascend the river to Tientsin. In the first attempt made by Tattnall to ascend and convey Mr. Ward towards Peking, the tender—the *Toey-wan*—grounded opposite the forts of the Pei-ho, and was relieved from this predicament by the assistance of Admiral Hope, who had authorized Tattnall to hoist the American flag upon one of the English gunboats if he deemed it necessary—an exceptional act of courtesy. Before another attempt was made by the *Toey-wan*, the attack upon the barrier and forts was made by the force under Admiral Hope. The Chinese batteries, hitherto masked by hanging mats over their embrasures, opened a heavy fire upon the column of gunboats. Several were sunk, and a number of officers were killed or wounded, Admiral Hope being among the latter number. It was at this time that Tattnall made the exclamation, "Blood is thicker than water," and proceeded with his barge to the assistance of the English Admiral, receiving a shot in his boat which killed his coxswain and slightly wounded Trenchard, who accompanied him. The boat sank as it reached the gunboat carrying the English Admiral's flag, and, while waiting for another boat, the barge's crew manned the bow gun of this vessel most effectively. Other material assistance was rendered by the *Toey-wan* to the attacking force, which was repulsed, however, both ashore and afloat, and the English Admiral was forced to withdraw with a heavy loss of eighty-nine killed and three hundred and fifty-five wounded. This disaster was one of the most serious which have occurred to the British navy of late years.

During the greater part of our civil war the duty of Admiral Trenchard, as commanding officer of the *Rhode Island*, was principally one of supply and convoy. Towards the end of the war, however, an opportunity was given him of seeing more active service, when his ship was made one of the fleet under Admiral Porter engaged in the operations against Fort Fisher. His share in the attacks upon the fort was performed in a most creditable manner, especially in the second and successful attack. The *Rhode Island* did her work most effectually, for not only was an efficient landing party put on shore to join the naval assault upon the fort, but another party under Lieutenant (now Commander) Tanner performed great service in landing siege guns for the army through the surf, while the ship itself, with the present Chief of Naval Ordnance as second in command, kept up a heavy and uninterrupted fire upon the mound battery connected with Fort Fisher, during the entire engagement.

Admiral Trenchard had thus exceptional opportunity during his professional career of observing the difficulties attending a naval attack upon well defended land fortifications, and the necessity of combining with it a military force of sufficient size and mobility. In the two cases referred to, the command of the sea was with the attacking force; with this in doubt, the difficulties and uncertainties are necessarily greatly magnified.

Ambroise Paré and his Times. 1510-1590. By Stephen Paget. Illustrated. G. P. Putnam's Sons. 1897.

France, perhaps on account of her promi-

nence in European warfare during the past 600 years, has been fortunate in developing a long line of good army surgeons. The list begins with Jehan Pitard, who went crusading with St. Louis, and reaches its culminating point in Jean Dominique Larrey, Napoleon's faithful servant and the surgeon of widest practical experience in the field that modern times has produced. Nearly midway between Pitard and Larrey we encounter Ambroise Paré, the superior of the first in opportunity and almost the equal of the second in character. Had he not written numerous works, some of them autobiographical, he would be remembered solely for his connection with the later Valois kings and for his practice of ligaturing the artery after amputation. His own writings make him a flesh-and-blood reality instead of a name, and Mr. Paget has placed us under obligations by editing for the English reader such treatises as the 'Account of the Plague' and 'Journeys in Divers Places.' We do not refer merely to his translation from the French of the sixteenth century, but to his presentation of Paré's typical *opere* in any form. The original copies are very rare and seldom to be met with outside of great national or corporate collections.

Mr. Paget's essay on Paré's life and actions belongs to history rather than to surgery. That science has so far advanced since the beginning of the French Revolutionary wars that the technique of the best men before Larrey belongs to the archaeology of the subject. Paré, kind-hearted though he was, must be called proud. He was a staunch friend of the poor, and we do not mean that he was proud in the Filippo Argenti sense. Still, he set great store by himself, and was not a little vain of his achievements. He felt that he was the only surgeon of his age who had followed armies in the field for thirty years. Remembering this, we are the less surprised to find among his dedications this account of his place in the history of his craft:

"God is my witness, and men are not ignorant of it, that I have labored more than forty years to throw light on the art of surgery and bring it to perfection. And in this labor I have striven so hard to attain my end, that the ancients have not wherein to excel us, save the discovery of first principles, and posterity will not be able to surpass us (be it said without malice or offence) save by some additions such as are easily made to things already discovered."

To pen this sort of a challenge was evidently not considered by sixteenth-century prophets to be a slight in the face of Providence. Now that Paré has been superseded, it would be unkind to dwell upon his natural and harmless vaunting. We should only remember that he was the first to supplement theory by a vast experience; the first to set trained hand and eye above the cogitations of the easy chair; and among the foremost of those who showed that, even amid the debasement of a Valois palace, life could be well led.

From the contrast between his spirit and the circumstances of his time, one takes great pleasure in tracing out Paré's career. He was a devotee of science, and, despite Renaissance tendencies, the love of war still clashed with the pursuit of scientific aims. He believed in justice, and had to see the masses trodden under foot. An ardent patriot, he was forced to stand and wait while factions were ruining the happiness of his country. He professed Huguenot doctrines at the moment of the *noce vermeilles*, and

was saved from destruction only by a friendship which led Charles IX. to place him in the same class with his own nurse. He was a lover of righteousness, and yet beheld the daily existence of princes from the inside. A good deal of what Brantôme describes must have passed under his eyes. L'Hôpital, Colligny, and Paré stand forth prominent among the saving remnant of a generation whose moral sense was blunted by the sins "that practice burns into the blood." He did not shrink from the shock of what he regarded to be honest war. On one occasion a volley levelled by his advice killed nearly a score of canaille. This story notwithstanding, his humane qualities mark him off from the mass of his contemporaries. He ministered to the enemy's wounded after the siege of Metz, and was used to shun all forms of professional cruelty which could be avoided.

Paré's 'Apologie et Traicte contenant les Voyages faicts en divers Lieux' is admirably translated by Mr. Paget, and occupies, with its attendant notes, nearly one-half of the entire space. Written in polemical form against Gourmelen, Dean of the Faculty of Medicine at Paris, it proves how the author reached his unequalled skill. Gourmelen, "mon petit Maître," attacked the ligature in defence of the cautery. Paré then, in 1580, at the height of his fame and by no means past his vigor, picked up the glove. His answer, judged by standards of sixteenth-century controversy, is polite, without lacking force. His purpose is simple enough. "You accuse me of malpractice. I will show you how I learned surgery and what I have done." Then, under separate heads, he describes nineteen campaigns or journeys on important professional business. After three years of hospital life in Paris, he had gone with the army to Italy, simply for the sake of getting good cases and material. His success was due to sheer merit. He went to the root of his trade before he reached the head of the royal surgical staff. Paré's style is delightfully vivacious, and from his wealth of adventures he draws forth those only which are to the point. Considered as memoirs, they are all too brief. They can at a sitting be read through aloud, and, once taken up in this way, they will hardly be laid aside till the end is reached. To select a single instance: French historical literature must be ransacked before it yields a more life-like picture than Guise's defence of Metz.

We can give unqualified praise to Mr. Paget's part in this book. It is not a work of erudition, but, besides being based on Paré's writings and the best modern authorities, it is well prepared, well arranged, well written. Doctors and historical readers will alike welcome his sketch which brings them into living contact with a surgical pioneer of high character; one, also, of the dearest men France produced in the century of the Reformation. The illustrations are very suitable, and the single censure we can make involves a small point of chronology: Charles IX. was a year or so older at his death than Mr. Paget states him to have been.

Religion and Conscience in Ancient Egypt. Lectures delivered at University College, London. By W. M. Flinders Petrie, D.C.L., LL.D., Ph.D. Scribners. 1898. Pp. 179.

Syria and Egypt. From the Tell el-Amarna

Letters. By W. M. Flinders Petrie. Scribners. 1898. Pp. vii, 187.

These two volumes by Prof. Petrie are quite characteristic. The author is a man intent upon the representation of what is, rather than upon the development of fantastic theories of what may have been. To be sure, the most important part of the first book mentioned is in the exposition of what may be called the author's theory of the manifold and conglomerate nature of the Egyptian population; but if theory it be, it has a mass of fact behind it which is entirely lacking in the speculative explanations of the Egyptian religion with which we have been surfeited *ad nauseam*. In the capacity of discoverer, as it were, of this commingling of races in Egypt, Dr. Petrie may be excused for a fondness for a presentation of the subject, particularly as he dwelt upon the matter within very modest limits in his 'History.'

Any one who has studied the religion of Egypt at all has been struck by the discrepancies of conception which characterize it. This feature has been explained by the conservative character of the people; by their unwillingness to discard the old and by their willingness to adopt the new, notwithstanding the fact that there was an evident lack of harmony and consistency between the amalgamated elements. But Dr. Petrie has shown us a more excellent way. He finds four sources of immigration, each distinct and each having its peculiar religious notions and belief. From these he argues as many classes of theistic conception. These diverse ideas were supreme or mingled according to the political relations of the races which held them; one set dominating another or mingling with it, according as one race was supreme or only the ally or peer of the other. Such an hypothesis is certainly suggestive at least, and as it serves to explain many "discordances" of religious tenets, it has much in its favor.

The religious texts of Egypt are past number, but their contents are very meagre in their stores of actual information. The official religion is somewhat a matter of conjecture, but this is less true of the texts which Prof. Petrie here investigates. He has turned a keen mind to the examination of the tales which have come down to us embodying the folk-lore of Egypt. Here we come face to face with the popular religious belief, and here we find the most satisfactory results in the whole book. The whole discussion of the religion is stimulating, and it forms an important addition to our information.

When we turn to the discussion of conscience, we descend to a treatment of a distinctly lower order. Dr. Petrie's preliminary remarks on the nature of conscience are unsatisfactory, and the massing of material lacks life and spirit. The term conscience is also a misnomer; the subject treated is rather the standard of morality. There is no attempt to show whether there was any historical development or not, and the use of passages from Egyptian texts by way of illustration reminds one of the method of citing Biblical proof-texts in theology without any regard to their location in the order and progress of revelation. The Pentateuch, the Psalms, the Gospels, and the Epistles used to be regarded as equally good sources from which to draw. Similarly, Dr. Petrie makes no distinction between the documents from which he draws. It

would be interesting to know whether the tone of morality and the standard of ethics advanced or retrograded, or simply changed the points of emphasis; but the reader is left in the dark on these important subjects so far as any effective details are concerned. If the entire documents used as sources of information had been reproduced in an appendix, they would have afforded some aid in this matter; but as this was not done, the present performance must be regarded as only partially satisfactory and, on the whole, as quite inadequate. The classified treatment of the duties of the moral code of Egypt is too mechanical and wooden to arouse much interest or to add greatly to our knowledge. The lack of an index further reduces the value of the work as a book of reference.

The volume on 'Syria and Egypt' contains a brief account of the finding of the cuneiform tablets of Tell el-Amarna, with summaries of their contents and a brief running commentary. The finding of these letters is one of the romantic things in modern discovery, and the marvel of the story which they have revealed surpasses the wonders of the necromancers. Prof. Petrie's performance is an attempt to arrange the letters in their historical order, but his commentary is restricted within too narrow limits. He has made a beginning, but scarcely more. There are many questions of contemporary history to be cleared up, and the claims and theories of earlier students are to be sifted with great care. With regard to the question of the date of the exodus of Israel from Egypt, the author's weight is thrown in favor of the usual view.

The general character of the two volumes is that of *obiter dicta*. The author is a busy man who has thrown off these books in the intervals of engrossing excavation and research in the field, and they bear the character which must attach to labors of this sort. They contain much valuable material, but they are not deeply learned, and they do not smell of the lamp.

Ceylon: Tagebuchblätter und Reise-Erinnerungen. Von Wilhelm Geiger. Wiesbaden,

1896. New York: Lemcke & Buechner. Royal 8vo, illustrated.

The present illustrated and descriptive volume on Ceylon is the work of a German professor, distinguished for his scholarship. It is a spirited and bright contribution, without a particle of the dry-as-dust element that tradition sometimes associates with Teutonic erudition. In other words, the book is not the diary of an ordinary traveller who is off on a jaunt to foreign lands, but is the production of a scholar who has a trained mind, a sympathetic heart, a wholesome love for nature, and who is qualified to judge of what he saw during his voyage to the Island of Ceylon in 1895-'96.

Dr. Geiger's name first became known in the field of Persian literary research. Of late years he has turned his attention to the sacred language of the Buddhists, and especially to the Singhalese. This latter fact accounts for his particular interest in southern India; and as an outcome of this he has given a good picture of the life that he saw in Colombo and in portions of the interior of Ceylon. The professor is evidently not a golf player (see p. 80), although the game has its devotees even in Ceylon. One may be interested in reading that Christianity, among the various sects of the island, claims one-sixth as many adherents as Buddhism (pp. 44, 72).

Of importance to the anthropologist, as well as to the philologist, are the author's investigations into the characteristics of the aboriginal tribe, the Weddas. This curious people, not pigmies but small of stature, are as deft in the use of the bow and the hatchet as they are shy in avoiding intrusion from outsiders into their jungle home. The photographs of these aborigines show rather an interesting, odd type. The book, moreover, is embellished by more than twenty original illustrations, which have not been published before; it is appropriately got up, and is written in a style of German that deserves commendation for its ease, grace, and charm.

MISS ELLIOTT'S THE DURKET SPERRET

A Romance of the Cumberland Mountains. 18mo. \$1.25.

The Nation: "A homespun heroine in whose possibility one is glad to believe. The rich resource of Mrs. Warren's vituperation is delightfully displayed; . . . the author writes of her mountaineers with discrimination born of intimate knowledge."

New York Tribune: "A refreshing departure; . . . has the vigorous drawing of character and the knack of beguiling narrative that must combine to make a book worth reading a second time."

New York Commercial Advertiser: "Strengthens Miss Elliott's reputation as a novelist. . . . Each character is sustained and vigorous. . . . we find ourselves pondering over each individual mentioned, thinking how perfectly he was made to do his part."

Miss Elliott's earlier books, *Jerry, John Page, and The Femerets*, uniform with the above, \$1.25 each.

Maloja Season from The splendid
beginning Palace Hotel
of June Maloja offers
OBERENGADIN till end of its guests
(Switzerland). September. the greatest
comfort of the
Family Home,

besides highland residence with first-class highland excursions, as well as easy, even promenades. Height above sea 6,000 feet; 350 beds; magnificent drawing rooms; music and theatre hall, Maliland Scala Orchestra every day. Entertainments: Sport in open air: Golf, Cricket, Lawn-tennis. Opportunities for horseback and carriage rides. The most extensive speeding course. Lake sport: Naphtha boat on the splendid Maloja Lake, as well as oar and sailing boats; photographic studio; baths and best hygienic arrangements; English and Catholic services in own churches; post and telegraph offices; physician in hotel. Is highly recommended to families as a quiet residence in the early season. Average temperature 16 degrees Centigrade. Room and board from \$3.00 to \$4.00, service, light, and heating (when cold weather) included.

Further particulars given through the European travelling book "Maloja," at all book dealers and by the Manager, E. F. WALTHER-DENZ, Maloja Palace, Engadin, Switzerland. Grounds and Villas to rent and for sale. The most beautiful and largest glaciers in the world. Wonder of Nature.

Letters We buy and sell bills of exchange to and make Cable Transfers of money on Europe, Australia, and South Africa; also make collections and issue Commercial and Travelers' Credits, available in all parts of the world.

NEW YORK, THURSDAY, JUNE 16, 1898.

The Week.

The assurance that Oregon will send another gold-standard man to the Senate next January encourages the hope that the Republican Senators committed to that policy may constitute a majority of the upper branch in the Fifty-sixth Congress. One seat now occupied by a Democrat, that of Gorman, will be turned over to a Gold Republican next March, through the election of McComas by the Maryland Legislature last winter. Another Democrat, Mitchell of Wisconsin, is sure of a Republican successor, who will be sound on the financial issue. The chances must certainly be considered more than even that similar changes will occur in the cases of Murphy of New York, Smith of New Jersey, Turpee of Indiana, and White of California, all of whom belong to the class whose terms will expire next spring. Leaving out of the account Bill Chandler, who "wobbles" more or less, there are thirty-seven gold-standard Republicans whose terms last through the next Congress or who are sure to be succeeded by men of the same mind. Maryland and Oregon already assure two more, and Wisconsin is as certain to send another as though the election had already been held, bringing the total up to forty, which would rise to forty-four with Republican victories in the four generally close States of New York, New Jersey, Indiana, and California. If Nebraska could be added to the list and send a gold-standard man to succeed the Populist Allen, the casting vote of the Vice-President would give that side a majority, even if Chandler should be eccentric enough to go the other way. If the elections next November shall give the Republicans the House by a large majority, there is a good prospect that they may control the next Senate also.

Not having been able to get their own way about coining the seigniorage, the silver Senators are consoling themselves by denouncing Secretary Gage for having recognized the probability of the Government's needing money to carry on the war. The Secretary, it seems, had been so presumptuous as to contemplate the passage of an act providing for an issue of bonds and the application of stamps to the millions of papers used in ordinary business. This act, it need hardly be said, was certain to go into effect at once; nevertheless, the Secretary of the Treasury, according to the views of the silverites, ought to have calmly ignored all probabilities, and not lifted a finger to make preparations for

carrying it out. On the same principle the Army and Navy Departments ought to have abstained from all military preparations until the actual declaration of war by Congress. We do not know what preparations the Secretary of the Treasury may have made, but we venture to say both that he has exercised the utmost forethought and that the demand for internal-revenue stamps will be so sudden and so great that all his forethought will be shown to have been necessary. He is to be congratulated on the enemies he has made, and the press of the country can do him and the cause of intelligent government no better service than by giving the widest publicity to such criticisms as those of Senators Jones and Wolcott.

A correspondent writes to us that Senator Tillman, the Populist pitchfork Senator from South Carolina, had a protectionist motive for proposing the duty of 10 cents per pound on tea. Tillman has a constituent, the writer says, at Summerville, S. C., who cultivates tea and produces two or three thousand pounds per year at three times the cost of the imported article of equal grade. This constituent has always clamored for protection, and now he is likely to get it by means of a tax on the 90,000,000 pounds consumed in the United States. This is the only satisfactory explanation that has been offered for Tillman's motive and for the support he received from the Democrats in the Senate. The conference committee on the revenue bill has accepted the duty on tea, and it will form a part of the complete measure. Its productiveness in the way of revenue and the present needs of the Government make this clause too attractive to be thrown away when presented as a Populist-Democratic measure.

It is refreshing to observe that the demagogues are "getting left" in the war which they were so anxious to bring about. The Masons and Thurstons and Gallingers in the Republican party find nobody ready any longer to listen to their rant, while even the Forakers see how absurd the course of events has rendered their clamor of two months ago for recognition of the Cuban republic. The demagogues in the other party fare no better. Bryan himself has come to occupy a ridiculous position. The Populists have been "pitching into" the Republican President for appointing men without military training, and with only political or family claims, to high positions in the army, and now the Populist Governor of Nebraska puts Bryan in the colonelcy of a regiment, although he knows nothing whatever about the army, and is without the

slightest experience even in the militia. Even Populists must be able to see the absurdity of such a performance.

It is the first step that costs. Those supporters of Hawaiian annexation who think that they can take those islands and stop there, and who desire to stop there, are fatally mistaken. They cannot control the onward movement. They cannot even control themselves. It is Hawaii to-day, the Philippines to-morrow, and something else the day after, until we are involved in all the complications of the Old World, and in army and navy expenses to correspond. That this is the expectation of the promoters of Hawaiian annexation is proved by the fact that whenever this so-called expansion is presented to them as an almost necessary consequence of their act, they say that they see no objection to colonies, and then they talk about making markets abroad for our manufactures. The "colonial policy," as understood by ninety-nine-hundredths of those who use the term, means the taking possession of a foreign country, and restricting its trade to our own producers by tariffs more or less exclusive. This is the policy of Spain with Cuba and the Philippines, and in the case of the former island has been the prime cause of the present and past insurrections. Those who talk about "colonial policy" for us, mean that we shall step into Spain's shoes and do what she did as regards trade.

It deserves attention that the Supreme Court of the United States has recently declared the law of citizenship applicable to children born in Hawaii, or in any other place that may become a part of this country. The language employed is as follows: "The fourteenth amendment affirms the ancient and fundamental rule of citizenship by birth within the territory, in the allegiance and under the protection of the country, including all children here born of resident aliens," with the exception of the children of foreign ministers, those born on foreign ships, those of enemies in hostile occupation, and those of Indian parentage. In whatever state of subjection we may expect to hold the motley populations of the Pacific islands, we must therefore exempt from it their children. These, being citizens of the United States, must have the rights of citizenship guaranteed by the Constitution, and no State can exclude them from its limits. The idea of our extending our government to the Philippine Islands is very pleasing to some minds, but it involves the idea that the population of these islands may transfer itself to this country. We may by act of Congress exclude people now in exist-

ence, but we shall be obliged to welcome the coming generations in all regions over which our flag may float to the full rights of American citizenship. Of the extent of this future immigration no one can form the slightest idea.

The remarks of President Patton, in the baccalaureate sermon which he delivered on Sunday at Princeton, afford an excellent illustration of the prevalence, among our educated classes, of a species of fatalism concerning measures of public policy. There is, no doubt, such a thing as "the logic of events, the march of history, the inevitable," before which we feel helpless; but there is also such a thing as a spirit of devotion to human rights which has altered the march of history, and interrupted what would otherwise have been the logic of events. Nothing could have seemed more in accordance with this logic than that a few thousand Athenians and Lacedæmonians should have submitted to the vast force of the King of Persia; but Thermopylæ and Marathon showed that events are shaped by human determination. We have often heard in this country that right makes might, and the "logic of events" and the "march of history" confirm the truth of the maxim. What conscientious people need to ask now is nothing but the old question—the question which, although tiresome, is just as "inevitable" as the march of history—What ought we to do? Nothing has been done in the present war that cannot be undone if justice demands that it be undone. "The boom of Admiral Dewey's cannon," said President Patton, "made us forget the Farewell Address." On the contrary, it made a great many people remember it; and the wisdom of Washington was never more manifest than at present. The principles that he explained will endure, as permanent appeals to reason, long after the sensations aroused by the boom of cannon and the slaughter of Spaniards have subsided; and it is in such principles that the logic of events is most truly expressed.

The appointment of the clerical force in the Bureau which it is proposed to establish for taking the next and subsequent censuses, has given rise to a vigorous struggle in the Senate. The bill reported by the committee provides for the appointment of the clerical force by the director of the census, after an examination of his own. Senator Cockrell flung down the gauntlet by proposing to amend the bill as reported, by making the clerical force subject to the civil-service laws. He declared that the object of the committee in removing this force from the operation of the law was to make the offices "the spoils of Congress, pure and simple, and unadulterated." Senator Lodge was equally open in asserting that the object in leaving the

examination of clerks to the director of the census was to place the offices within the disposal of members of Congress, and he was supported by Senator Hoar. The spoilsmen, of course, repudiated this interpretation of their motives. Some said that the director of the census could have just as good examinations as the Civil-Service Commission; others that this commission was doing the cause of reform great injury. This was the position of Senator Chandler, whose attitude suggested that of the Irish orator who declared his willingness to sacrifice a part of the Constitution, and, if necessary, even the whole, in order to preserve the remainder. He professed great devotion to civil-service reform in the abstract, but fell back on the old ground that "this particular measure" was not desirable, and warned the Commissioners and their friends that by extending the system "upward and downward" they were constituting themselves the foes of genuine civil-service reform.

In spite of the fact that Senator Cockrell modified his amendment to the census bill so as to allow the chief clerk and the principal statisticians to be appointed without regard to the civil-service rules, the "spoilsmen" refused to give up their chance of plunder. Only 18 votes were cast in favor of the amendment to 31 against it. Party lines were not observed in this division, nor was there any reason why they should be, as a "non-partisan" amendment was carried. This provides that the appointments shall be divided in the ratio of one-third to one party and two-thirds to the other, so far as supervisors and enumerators are concerned. It was suggested that this should apply to clerks as well, but, as Senator Chandler justly observed, it would make the non-partisan theory ridiculous to apply it to women. Finally it was agreed that all persons employed in the Census Bureau should be selected on account of special fitness and without reference to their political affiliations. "The bearings of this observation lays in the application on it."

In consequence of the combination of abnormally heavy shipments and abnormally high wheat prices, the country's export of breadstuffs during May not only exceeded in value the highest record for the spring and summer season, but ran some eight or nine million dollars beyond even the December exports of 1891, which up to this date were the largest ever reported in any single month of our history. The comparison with recent years is most extraordinary. Against the \$38,280,000 worth of breadstuffs sent abroad last month, there were exported in the same month of 1897 only \$13,094,000, and in 1896 only \$10,400,000. As compared even with the month of April, 1898, when the

movement was already heavy, the May export of breadstuffs increased nearly eleven million dollars. When the figures of our cereal exports for the eleven months ending with May are reckoned together, it appears that the shipments for this period in the present fiscal year exceed those of the same months in 1897 by \$116,500,000, those of 1896 by \$171,600,000, and those of 1895 by \$193,000,000. The student of our commercial and industrial situation hardly needs to go further to explain the powerful situation of the United States in the market for international exchange. It is in fact noteworthy that the increase in exports of the season is not even confined to breadstuffs, but has equally affected the outward movement of such commodities as cattle, pork, lard, dressed meats, and even cotton.

The Agricultural Department last week published its estimate for the growing crops, of which the winter-sown wheat is now so near maturity that forecasts may be made with safety. The estimate shows, as was to be expected after the season's high prices, a great increase in planted acreage of wheat. For the early and late crops combined, the estimated area is 43,000,000 acres, as compared with 39,465,000 acres harvested last year, 34,618,000 in 1896, and only 39,916,800 even in the "record year" 1891. In other words, the planted acreage under wheat this year is by far the largest in our history. Returns of the condition and promise of the crop are equally encouraging. The percentage condition of the winter-wheat crop is better by 12 per cent. than it was a year ago, and is the highest by far since 1891. The spring-wheat prospect, as computed by the Government returns, is apparently unprecedented in the Agricultural Department's records; it is certainly higher than any June estimate in the last fifteen years, and exceeds by 11 per cent. the corresponding estimate of a year ago. The conclusion of the Government experts is that a total crop of 637,300,000 bushels may be expected, which compares with accredited commercial estimates of 580,000,000 bushels last year and 680,000,000 in 1891. If precedent is to guide, the Government's forecast of the yield to be expected under existing circumstances is probably much too low; for the Agricultural Bureau has invariably underestimated the crop, and last year, even in August, published an estimate which the subsequent movement of the grain proved to have been at least one hundred million bushels below the facts. Commercial experts seem to agree at present that the wheat crop of 1898, barring accidents, will exceed considerably even that of 1891. Unless Mr. Bryan promptly achieves military glory in his amateur colonelship, we cannot look altogether hopefully on his prospects or on those of his associates.

The last proceeding in the Brooklyn Navy-yard dry-dock scandal is quite in keeping with the rest of the sad story. After a trial lasting twenty-four days Civil Engineer A. G. Menocal, U. S. N., who was in charge of the construction of the dock, has been found guilty of neglect and inefficiency in the performance of his duty, and has been sentenced to suspension on furlough pay for three years. This is a ridiculous punishment in view of the great loss to the Government in prestige and money, and in the disabling of the only dock large enough for first-class battle-ships in time of war—that is, if Mr. Menocal is really guilty. About this the court evidently had the gravest doubts, for it not only failed to find him "wholly neglectful" and "culpably inefficient," as the charges specified, but eight out of its nine members signed a recommendation for clemency, "because of his absence under orders at various times, and because of his absence from sickness at times, during the building of the dock; because of the imperfect provision of the contract and the imperfect wording of the same; because of the large amount of work under way at the time of building the dock, and because of the poor assistance Mr. Menocal had for his numerous duties. His attention to his duties, and his zeal and industry in attending to them, are most strongly certified to by all of the commanding officers under whom he served." One may well ask whether the court has not cleared Mr. Menocal by this recommendation and found the Navy Department guilty of some very serious offences, such as the making of imperfect contracts and of failing to provide proper inspectors.

A very important step has been taken by the Rapid-Transit Commission in obtaining an accurate statement of the revenue derived by the city of New York from the taxes on street railroads. Information of this character is an indispensable condition to any permanently satisfactory solution of the problem of the relations of these transportation companies to the municipality. There is a violent outcry against the companies because, it is claimed, they possess franchises of great value for which they pay little or nothing to the city, and many occurrences, recent as well as remote, have been of a nature to justify the charges of corrupt dealing brought against them. The best means of forming intelligent conclusions about the matter is to know what the companies earn and how much they pay, and this we now know officially from the reports of the Comptroller, based on the records of the Finance Department and the reports made to the State Railroad Commission. For the year ending June 30, 1897, the Metropolitan Company paid for percentage and license fees about \$266,-

000, and for taxes on real and personal estate \$384,000, a total of about \$650,000. It carried during that time about 178,000,000 passengers, and its gross earnings were \$8,888,000. It paid, therefore, about 71-3 per cent. of its gross earnings in taxes, or about one-third of a cent for each passenger. In view of the great expense of changing the means of propulsion, prospective as well as past, it is doubtful if the rate of taxation is at present lower than is expedient. The Manhattan Company is taxed about \$609,000, its gross receipts being \$9,163,000, and the number of passengers carried 183,000,000. Its taxes thus amount to about 62-3 per cent. of its gross earnings, or about a third of a cent per passenger. The Third Avenue road, on a much smaller business, pays a much lower rate, about 28-10 per cent. of its gross earnings, or one-seventh of a cent per passenger. The franchises more recently obtained would thus seem to pay more to the city than the older ones, which is no doubt equitable, but we require more complete statistics than have yet been furnished before a scientific system of taxation can be devised.

Mr. John Morley, by a few words which he uttered at Leeds last week, threw a flood of light on the proposed Anglo-American alliance. So far as that alliance was a union for peace and harmonious coöperation for mutual good, he welcomed it with exceeding gladness; but if it were an alliance of the Jingoism of England with the Jingoism of America, an alliance not for peace but for menace and war, it would be a new curse to both nations. Then he added:

"I know tens of thousands of the best and wisest men in America who believe that hardly any more inexpressible calamity can befall mankind than that a community, as Lincoln nobly said, conceived in freedom and dedicated to the happiness of free and equal men, should entangle itself in the unrest and intrigue of militarism, which are the torment and scourge of the Old World."

Nothing could be more true or wise or more timely. Friendship we cannot have too much of. Friendship we can have without alliances. Indeed, the very word alliance means enmity to some nation or nations with which the ally is at enmity, but with which we are at peace. We hope never to see the United States in such an alliance. We hope never to see England in such an alliance. The best hopes of mankind are enlisted in the peaceful direction of the energies and resources of both countries. England is able to take care of herself, as Mr. Morley says. She needs no alliance to defend her rights. Nor do we need any to defend ours. All that we need is to keep out of other people's quarrels and to keep our hands off other people's property. We went to war (we solemnly declared) for the distinct and defined purpose of delivering a neighboring people from tyranny and

anarchy. That purpose will undoubtedly be achieved. When it is accomplished, let us return to the duty of improving our own country and our own people. In this task there is enough work to employ our undivided energies for a hundred years to come.

What threatened to be a most ugly international dispute disappears with the signing of the Anglo-French convention on Monday respecting the division of territory on the Niger. The settlement has been made in a way to enable each side to claim a victory, and that is surely the highest triumph of diplomacy. The French retain a part of what they had seized, but to make up for it surrender a part of what they had held for a long time. Lord Salisbury gets something and yields something, and though his political opponents will angrily cry out that here is another of his "graceful concessions" to the detriment of England, he has clearly purchased peace at a very small price. English title to the lands in dispute rested upon too dubious treaties with native chiefs, too dubiously negotiated, to go to war to defend. The French Government may well say that it has come out of the affair with credit, but its troubles at home are thickening. M. Méline retains the Premiership only by a thread, and that may be snapped any day. The incurable vice of French political life—the breaking up of the Chamber into endless factions—makes party government and enduring cabinets impossible. As the *Figaro* lately jested, putting the words into the mouth of M. Joseph Prudhomme, contemplating the decreasing birth-rate and the growing number of political parties, "We have two great faults in this country—we do not multiply enough and we divide too much."

Zola's appearance before the Versailles tribunal for his second trial was made the occasion of a fresh manifestation of judicial bias against him. His counsel argued against the competency of the court, on the general ground of what we should call a wrongful change of venue from Paris to Versailles. The court asserted jurisdiction, but M. Labori took an appeal, which gave the Procureur-Général and the presiding judge a fine chance to display their prejudice. Said the former, "Condemned by the Seine jury, and fleeing before the Seine-et-Oise jury, MM. Zola and Perreux will not be tried to-day, but their cause is judged." Then the judge dismissed the jurors, saying to them, "M. Zola will not accept the trial." He also turned to Labori and unctuously reminded him that there was "nothing above the law—nothing, nothing, nothing—not even Zola." Evidently the French courts are still eager to gratify the masses in this melancholy business.

THE WAR-REVENUE BILL.

The revenue bill in its latest form, while not the best possible measure, and distinctly inferior to that which passed the House, is better than might have been expected when we consider the unsoundness of the Senate in respect of its financial notions. The seigniorage clause, which was the chief point of disagreement with the House, has not been eliminated, but it has been attenuated to a degree where it will be the least hurtful, and will not be hurtful at all under the present administration of the Treasury. The silver bullion owned by the Government is to be coined at the rate of not less than \$1,500,000, instead of \$4,000,000, per month. Our currency, especially the silver part of it, was in a terrific tangle before, so far as popular comprehension goes. It was unintelligible to the masses, and it cannot be made more so, but it may be more or less intelligible to economists, brokers, and others whose business it is to understand such things. To the latter class, the new scheme for dealing with seigniorage and silver dollars will be rather more obscure than anything that has preceded it, but they will be able to make their way through it, and they will find that it is not nearly so bad as the measure which passed the Senate.

Although the amount of the seigniorage comes to the same thing in the end as the Senate bill provided for, it is not likely to inflate the currency. The clause looking to the issue of silver certificates against the Government's holdings of silver dollars is stricken out of the bill. The public will not take and use any more "cart-wheel dollars" than they are now using. Consequently, the seigniorage dollars will simply rest in the Treasury. They can be paid out whenever there is a public demand for them, and when such a demand exists they will do the minimum of harm. They will add to the Government's demand liabilities, but any prudent Secretary of the Treasury will be able to manage them, as a prudent banker manages his note issues. It should not be overlooked that even under the existing law the coinage of this silver bullion was going on at a slow rate, dependent upon the presentation of Treasury notes for redemption, and that seigniorage is one of the consequences of such coinage.

The bond clause of the bill is in a satisfactory condition. The Secretary of the Treasury is authorized to issue \$100,000,000 of 3 per cent. certificates of indebtedness, running not more than one year, and \$400,000,000 of 3 per cent. bonds, redeemable in ten years, and payable in twenty years. There is no difference between the certificates and the bonds except as to the time they have to run, both being interest-bearing securities, and having no relation to the cur-

rency, except that the bonds are available to the national banks as security for their circulating notes. They will undoubtedly be used in preference to the existing 4s and 5s, because they can be obtained at par, and hence there will be no premium to be charged off at the end of each year, or when the bonds become payable. The upshot of the matter is that the Secretary will have \$500,000,000 of 3 per cent. securities available for the purposes of the war, which ought to be sufficient. The proceeds of these securities can be used only for the war expenses. This would be a proper provision if any means were devised to distinguish war expenses from other expenses. Probably no harm will come from it in any case, but it might be difficult to say whether the ordinary expenses of the army and navy—those expenses which go on in times of peace—are properly chargeable as war expenses under this bill.

The new inheritance taxes call for separate treatment in conjunction with those of the several States, and we may recur to them hereafter, meanwhile merely pointing out what they are. Legacies or inheritances under \$10,000 are exempt. On sums above \$10,000 the rates vary according to the degree of relationship to the decedent, those passing from husband to wife or from wife to husband being exempt. On sums above \$25,000 the rate of tax is cumulative, *i. e.*, on sums ranging between \$25,000 and \$100,000 the rates of tax are to be multiplied by one and one-half; on those ranging from \$100,000 to \$500,000 the rates are to be multiplied by two; on those ranging from \$500,000 to \$1,000,000 the rates are to be multiplied by two and one-half, and on those above \$1,000,000 the rates are to be multiplied by three. The rate of tax for the nearest relationships, parents and children, brothers and sisters, on sums below \$25,000, is 75 cents for each \$100, on sums between \$25,000 and \$100,000 it is \$1.12½ per \$100, and so on to those above \$1,000,000, when it becomes \$2.25 per \$100.

The additional taxes imposed by the bill will probably continue for some time after the war comes to an end. It is desirable that they should so continue, not only for the purpose of liquidating the debt incurred by the war, but to choke the deficit which was left by the Dingley tariff. That wretched measure has yet to learn its fate at the hands of the people, and it is necessary that the Treasury should be made independent of it. It is indispensable, too, that the Treasury should have a surplus in order to keep its various kinds of currency at par with gold. There will be bonds of former issues falling due from time to time, which will absorb any overplus the Secretary may have any time. So there is little danger of his having too much after the war expenses come to an end.

YIELDING TO DESTINY.

Whatever advantages have accrued to natural science from the establishment of the doctrine of evolution, it is certainly doubtful if it has hitherto contributed to the political progress of mankind. In the popular mind this doctrine is associated with the name of Herbert Spencer; but nothing sadder can be imagined than the present position of this philosopher. At the end of a career which may justly be called glorious if not triumphant, he finds himself reduced to declaring that the tendency of evolution is at present contrary to all that is desirable for mankind; that the chief end of man is freedom, while his immediate prospect is slavery. Eventually, Mr. Spencer, of course, holds, this tendency will be changed. The rhythm of progress will become more and more melodious, and the divine event, however far off, will surely come. But his eyes shall not see this event, nor even, perhaps, the reversal of the existing tendency. He can lament, but why should he struggle? It is *Athanasius contra mundum*; it may be magnificent, but it is not war.

Now, while the doctrine of evolution is not to be spoken of disrespectfully, it should be observed that for practical purposes it may be as pernicious as the doctrine of predestination. That doctrine is not easy of refutation, but any one who undertook to carry on his business under its influence would quickly find himself without any business to carry on. For practical purposes men rely on the doctrine that God helps those who help themselves, and political affairs do not differ in this respect from other matters that are under the influence of human volition. 'It is very easy for people to say that the destiny of our country lies in a certain direction and that it is vain to struggle against it. The fact is that the destiny of such a people as ours depends upon the will of certain classes of its citizens. Some of these citizens are determined to enlarge our limits and to undertake the government of distant islands occupied by peoples of different race, language, and institutions. These citizens declare with great earnestness that this is our manifest destiny; and there is undeniably a disposition among others to accept this declaration as prophecy. But all that it amounts to is a statement of the desire of these citizens that a certain novel policy shall be adopted by our government; and people who talk of yielding to our manifest destiny are really yielding to a popular outcry. It is simply a question of one set of human wills against another set, and our destiny will be whatever is determined by the more powerful set.'

That is the sum and substance of the doctrine of evolution as applied to political action. 'The less people think of destiny and the more they think of

righteousness and experience, the clearer will be their political *views* and the more vigorous and consistent their political action. We have a country protected by nature from the intervention or attack of foreign Powers, a government based on the principle of equal political rights, founded on the free consent of the governed, recognizing the superiority of certain inalienable rights to the physical force of rulers. We have been trying the greatest experiment of this kind that the world has yet seen, and we cannot yet say that the work of our hands is finally established. We are now urged to occupy territory that is exposed by nature to foreign attacks, and to set up a government therein that will not be based on the principle of equal rights, that will not be founded on the free consent of the governed, or recognize their right to determine its nature. In so doing, we repudiate the principles in which we have boasted and bring our professions to open shame. We shall impose our laws by force upon other nations, and establish a system of taxation without representation. It seems strange that such a policy as this should be affirmed to be in accordance with our destiny, involving as it does the abandonment of our most cherished traditions. Revolution, rather than evolution, seems the appropriate word to describe it.

But, as we have said, the less plain people muddle their brains with talk about evolution, the better. What every conscientious citizen is called upon to do is to make up his mind and declare his opinion on certain practical measures that are already advocated, and will very soon have to be adopted or rejected. The Lord will not hold him responsible for not determining what our ultimate destiny is to be; that may be called the divine prerogative. But no one can escape responsibility if he has been all his life upholding the Declaration of Independence as Gospel truth, and now takes the position that it is nothing but a tissue of glittering generalities. If other races are rightfully to be held subject by our own, what moral basis is left for democracy? If taxation without representation is just, how long since it became so? If dark people have no rights that white people are bound to respect, what was the significance of the abolition movement? These are questions which foreigners will not hesitate to ask in the most pointed manner, and it is high time for conscientious Americans to gird up their loins like men and prepare them to answer. Let them not lay the soothing unction to their souls that they must accept the decree of destiny and submit to the irresistible force of evolution. What they will accept, if they accept an imperial policy, will be the fierce demands of a set of irresponsible newspaper writers and vociferous politicians,

claiming to be the people. What they will submit to will be their own lack of consistent and courageous and honest determination; their own weakness before the clamorous insistence of an impetuous faction, without claim to wisdom, insignificant in numbers, but bent on having its way. If this faction be victorious, it will indeed be in accordance with evolution; but if it is defeated it will just as much be in accordance with evolution, and evolution of a much more satisfactory kind.

COSTLY BOSSES.

It has been discovered by the Republican managers at Washington, who are calculating the chances for securing a majority in the Congress which is to be elected in November, that the two States which make Republican success doubtful are New York and Pennsylvania. The disturbing cause in these two States is the same—a party boss who uses the party habitually as his personal property. Quay is the government of Pennsylvania in the same way that Platt is the government of New York. The methods of both men have been described too often to need particularization now. Neither of them regards himself as the agent of the party, using his leadership of it to strengthen its numbers and increase its power; that is an obsolete idea of the function of a party leader. The modern boss looks upon a party as existing mainly for his personal benefit—not so much to win victories as to give him a basis upon which to lay claim for an authoritative voice in the distribution of offices, to make bargains with the bosses of a rival party, and to levy political blackmail.

What Platt has been doing in this State during the past ten years everybody knows. His performances of last year were simply an extreme application of his usual methods. He obtained great power in the election of 1896 because the people of the State were forced without choice to the support of the Republican party in order to escape the peril of Bryanism. Platt took the victory as his personal property, and at once went to work to make all he could out of it for himself. He had the greater city created with this object in view, and then divided it with Tammany for what he considered a satisfactory price. Tammany has defaulted on the bargain because of Gov. Black's conduct in refusing to ratify the Platt side of it by means of legislation at Albany. The result is that Platt is now trying to prevent Gov. Black's renomination, and is resorting to party practices which are injuring seriously the Republican chances of success in so many congressional districts of the State that there is much alarm at Washington about it.

Platt will care nothing for this. He cares nothing for the success of his

party in Congress or anywhere else. What he is working for is Platt and the Platt family, and if he can benefit them he will sacrifice everything, from a Presidential election to a ward caucus. No man in this State knows Platt better than Jacob Worth of Brooklyn. What Worth thinks of him has been made plain many times during the past year, but never more so than in a recent interview. "I have been told," says Worth, in the figurative language so dear to politicians, "that he is the captain of the Republican ship, and I have replied that the coal-bunker is the place for him, and not the quarter-deck." Who can say, in view of Platt's achievements at last year's election, that this is too strong language? The difference between him and a real leader is well set forth by Worth:

"Once the Republican party in this State had a real leader. His name was Thurlow Weed. He could make personal sacrifices for the benefit of the party. When he picked up a man like William H. Seward, for instance, he watched over him and prevented him from making mistakes and helped him on. Now, in place of Weed we have Platt, who tries to ruin every man who has a spark of manhood, of independence, and honesty. Platt is a coward in war and a renegade in peace."

The purposes for which Weed wanted a man for Governor were very different from those for which Platt wants one. Platt himself said about a former Governor who refused to do his "deal" work for him: "No, I shall not renominate him; he cannot be depended upon in emergencies." The same objection is now made by him to Gov. Black. An "emergency" is always some disreputable "deal" or other which is so obviously infamous that no Governor can consent to do the bidding of the boss without utter loss of character. If Gov. Black had allowed all the "deal" bills which Platt's bargain with Croker included last winter, he would have been "equal to emergencies," would have used his office as a clearing-house for Platt-Croker paper drawn at the expense of the people of the State. He refused to submit to this baseness, and now Platt is determined to get rid of him even if in so doing he costs his party a majority in Congress. What is the peril of a Bryanite majority in Congress compared with peril to the Platt dynasty in New York?

The situation in Pennsylvania is much the same, and is due to exactly the same causes. A stupendous Republican majority in 1896 was virtually obliterated in 1897, and to-day the State is in doubt. In 1896 all but three of the State's thirty representatives in Congress were Republicans. Now the seats of fifteen Republican Congressmen are in danger because of the dissatisfaction in the party which Quay's corrupt personal leadership has caused. There can be no doubt that if the war were not a powerful factor in his favor Quay would be defeated in the election, and the State would be turned over to the Democrats. In no

other part of the Union is the Republican party in such perilous condition as it is in these two States. So far as New York is concerned, nothing saves the party from annihilation here except the leadership of another boss, of equally detestable character, on the Democratic side. If we flee from Platt, we throw ourselves into the arms of Croker. So long as that situation continues, so long as the people of the State are content to have these two bosses divide the business of government between them, just so long shall we be bracketed with Pennsylvania as the seat of the most harmful political system in the country.

THE IMPORTATION OF BOOKS UNDER THE COPYRIGHT LAW.

A correspondent, on another page, presents an interesting question as to the importation of foreign books which have been copyrighted in the United States. The copyright of a book would be of no commercial value unless the monopoly of a market were assured to its proprietor; and in order to secure exclusive control of the sale of an author's work, it is necessary to bar out copies of any and all editions produced without his consent. This prohibition of importation, therefore, has always been provided for in the copyright statutes. In the earliest Federal copyright act, that of May 31, 1790, it was provided, in section 2, that if any person, after the recording of the title of any book, imported any copies without the written consent of the author or copyright proprietor, signed in the presence of two or more credible witnesses, he should, at the suit of the copyright proprietor, forfeit all the copies and be subject to a fine of fifty cents for every sheet imported; one-half of this amount to go to the proprietor and the other half to the United States. In section 5, however, the act provided that it was not to be construed to prohibit the importation of books written by any person not a citizen of the United States, as copyright was granted by the act of 1790 only for the works of citizens or residents; hence the importation of reproductions of works by authors not citizens was permitted. The same provisions of law were contained in sections 6 and 8 of the first general revision of the copyright law of February 3, 1831.

In 1866 a commission was appointed to revise the statute laws of the United States. It published in 1868, 1869, and 1870 revisions of the patent and copyright law, which led to the adoption of the act of July 3, 1891. This codification of the copyright law became, with unimportant changes, title 60, chapter 3 of the revised statutes, as adopted in 1873, and still remains, with subsequent amendments, the law in force for the protection of literary and artistic property. Section 4964 of the revised statutes provides against the unauthorized

printing and importing of books, it being enacted that if any person, without the consent of the copyright proprietor, first obtained in writing, signed in the presence of two or more witnesses, imports any copies of his book, he shall forfeit them to the proprietor, and that he shall also forfeit and pay such damages as may be recovered in a civil action brought by such proprietor within two years in any court of competent jurisdiction. But the provisions of section 5 of the act of 1790 were reenacted in section 4971 of the revised statutes, which provided that "nothing in this chapter shall be construed to prohibit the . . . importation . . . of any book . . . written . . . by any person not a citizen of the United States nor resident therein." By the act of March 3, 1891, section 4971 was repealed, thus removing the statutory provision which for more than a century had made reprinting possible. Otherwise than by this repeal and a special provision concerning the importation of newspapers and periodicals, this act did not affect the prohibition of importation of *unauthorized* editions.

The so-called "International Copyright Act" of March 3, 1891, instituted important changes in copyright matters. One of the most far-reaching of these changes was the requirement that from and after July 1, 1891, books must be manufactured in the United States in order to obtain copyright. To give force to this stipulation, a special proviso was added in section 3 of the act that "during the existence of such copyright the importation into the United States of any book so copyrighted, or any edition or editions thereof, shall be, and is hereby, prohibited." This prohibition of importation is to be distinguished from that embodied in section 4964, as not being concerned with the protection of the copyright proprietor's book market, but only with the requirement that his book shall have been printed in the United States. In order to effect this exclusion of foreign copies of all books copyrighted in the United States, provision is made for the printing and distribution to collectors of customs and postmasters of weekly lists to contain the entries of all books "wherein the copyright has been completed by the deposit of two copies of such book printed from type set within the limits of the United States."

Under date of July 3, 1891, the Treasury Department issued a circular instructing collectors of customs that copyrighted books under the provisions of section 3 of the act of March 3, 1891, should not be admitted to entry, and if imported *with* the consent of the proprietor of the copyright, the books are to be seized as forfeited to the United States; but if the attempted importation be *without* the consent of the author or copyright proprietor, the latter is to be

notified so that he can proceed to enforce his right to their forfeiture to himself. The circular makes a distinction between copyrighted articles prohibited importation by the section cited, and "copyrighted articles the importation of which is not prohibited, but which are forfeited to the proprietor of the copyright when imported without his previous consent," under section 4965 of the revised statutes. No mention is made in this document of section 4964, which provides the like remedy in case of the unauthorized importation of books, but in another circular, issued February 3, 1896, attention is directed to section 4964 as giving protection against the importation of unauthorized copies *for sale*.

On June 22, 1896, the Treasury Department was again called upon to record its interpretation of the special prohibition of importation in relation to chromolithographs; and the law was laid down that the "importation of articles of this character copyrighted in the United States, with or without the consent of the owner of the copyright, is in violation of sections 3 and 8 of the act of March 3, 1891"; and on October 31 of the same year the department ruled that chromos (copies of copyrighted paintings but not copyrighted as chromos) are not prohibited importation under section 3 of the act. In 1897 an actual case occurred as follows: The American copyright proprietors of an English book, having exhausted their edition printed in the United States, imported fifty-seven copies of the English edition, which were seized. This importation was not covered by section 4964, because made by the copyright proprietor himself and therefore with his consent. But the Treasury Department, when appealed to for a release of the books, refused to interfere, ruling that they were liable to forfeiture to the United States under section 3 of the act of March 3, 1891.

When the special prohibition of importation which we have quoted was included in section 3 of the above-named act, certain exceptions were enacted. It was agreed that newspapers and magazines which did not contain any copyrighted matter printed without the authorization of the author should be exempted from the prohibition. Importation was also permitted in the case of persons purchasing for use, and not for sale, not more than two copies of a book at any one time. This latter exception came before the Treasury Department for consideration in the case of the importation of pirated Canadian copies of 'Ben Hur.' The publishers of Gen. Wallace's book contended that the prohibition of importation enacted in section 3 of the act of March 3, 1891, was for the purpose of preventing the importation of books published with the consent of the author in foreign countries, except that books so published might be im-

ported for use, and not for sale, to the extent of not more than two copies, as stated above; and that the importation of a book published without the consent of the author in a foreign country is an infringement of the copyright, and subjects such book to forfeiture under section 7 of the act. The question was submitted to the Department of Justice, and an opinion rendered April 19, 1895, deciding that the provisions as to prohibition of importation contained in section 3 of the act of March 3, 1891, apply to books copyrighted before the act was put into force as well as to books copyrighted since the passage of the act, and that the exception to this prohibition in favor of two copies of foreign printed books imported for personal use, and not for sale, is not limited in its application to the *authorized* editions of such books. It seems quite clear, therefore, that in the case of the French book mentioned by our correspondent, the law allows any person to import for his own use, but not for sale, two copies at any one time.

In addition to the two special exceptions to the prohibition of importation noted above, several paragraphs from the tariff act of 1890, remitting the payment of duties in certain cases, were transferred in a lump to the copyright law to serve as further exceptions to the general enactment of non-importation. This furnishes a good example of a method of legislation that should be avoided. The taking over of a group of provisions relating to one subject of legislation into a statute dealing with an entirely distinct subject would naturally lead to difficulties of interpretation and contrarieties. Moreover, the statute from which these sections were taken was replaced by a new tariff act in 1894, and the first question that arises is, Did the repeal of the tariff act of 1890 render these provisions nugatory in the copyright law? Neither the courts nor the Treasury Department seem to have rendered any decision on this point in our tangled legislation, but we believe that, so far as the copyright law is concerned, paragraphs 512 to 516, inclusive, of the free list of the tariff act of 1890 have still the force of law.

Briefly stated, these paragraphs exempt from the prohibition of importation under consideration books when (a) printed more than twenty years, (b) when printed exclusively in languages other than English, (c) when printed in raised characters for the blind, (d) when imported for the use of the United States, the Library of Congress, or for public libraries, or incorporated institutions of learning, and (e) when belonging to persons from foreign countries, if actually used by such persons not less than one year.

We will not go into these various provisions in detail, but it seems clear that, by reason of the first exception, the pro-

hibition of importation ("during the existence of such copyright," instead of the full term of copyright protection, forty-two years) really endures but twenty years; while the second exception allows the importation of a book when it is printed exclusively in a language other than English, and this exception is not qualified by any limitation as to private use or number of copies.

THE LATE FRENCH ELECTIONS.

PHILADELPHIA, June 7, 1898.

In the twenty years during which the Republic has solidly established itself in France, it has sought a stable majority that would permit it to live and to advance. It has not yet found one. In the French chambers an immense majority is for the Republic; but as to the form of that Republic, and the conceptions and principles that should direct and govern it, men differ, and the Republic suffers from their divisions. For twenty years it has oscillated between the opportunist doctrine which would have the Republic take root gradually and advance with short steps, and the radical doctrine which intends a brusque, swift, and incessant progress; and it inclines towards each in turn without ever reaching a decision, and its hesitancy is the cause of numerous haltings and numerous shocks.

Ministries are forced to maintain themselves not by obliging one party, but by satisfying several, which is the best method of displeasing all. Compromises, deals, luffing among the shoals, are the ordinary manoeuvres in which ministers employ their strength, talent, and dexterity. From time to time, weary of the policy of compromise, they have tried one of vigor and explicitness, which for a moment seemed successful since it pleased as a novelty. Then, after a while, it, too, showed itself powerless to create anything fixed and stable, and return was made to the old method, which also lasted as long as it could. In the past ten years the chief representatives in France of the policy of compromise have been successively MM. de Freycinet and Ribot; of vigorous policy, MM. Charles Dupuy and Casimir-Périer. Both have had the same fate. At the end of about six months, the equilibrium preserved by means of suppleness and cool-headedness suddenly gave way, and there was one more ministry in history.

In the Chamber of Deputies there has been for twenty years a Moderate Republican majority, stronger than the Radical and Socialist group and than the Monarchist and Clerical group respectively, but weaker than the two combined, so that a coalition of these parties absolutely hostile, and owning not a single idea in common, was enough at once to put a Moderate ministry in a minority. For a considerable time, in the epoch of the establishment of the Republic, and at the date of passage of the principal laws which are properly the republican work, the necessary complement of the Moderate majorities was taken from the Radical group. This was called the policy of concentration. The Republicans, Moderate and Radical, forgetting what separated them, united against the Right. To this policy was due the enactment of the military laws reducing the term of service to three years, and making it compulsory upon all, even priests; and especially obligatory and lay public instruction. But,

apart from certain great questions, the Radicals distinctly held aloof from the Moderate Republicans. Turbulent, uneasy, with an appetite for opposition to the knife, they formed a very unstable element in the Moderate majority, and never missed an opportunity, on some secondary point, of abandoning the bulk of the party for a coalition, temporary but effective, with the Right, for the overthrow of a ministry.

Thus the day when, the principal republican laws having been enacted, and the Monarchist Right being no longer a menace because of its increasing feebleness, the constitutional question passed to its second stage, the Moderate Republicans looked elsewhere for support. After 1893 the danger was no longer in monarchy, or even in Osmarism, but in Socialism, which for the first time became an important factor, having more than forty members, and embracing some of the most eloquent orators in the Chamber. The steady growth of Socialism engendered the necessity of the policy practised for nearly two years by M. Méline, a sort of concentration to the Right, consisting in borrowing from the group of *ralliés*, and even from the conservative Monarchists, the votes hitherto taken from the Radicals. It has proved more durable than the concentration to the Left because, in the first place, M. Méline is, on account of his protectionism, particularly popular with the agricultural population represented by the Right, and because the Right has discovered that a Moderate ministry is worth more to them than a Radical, and that they have greatly injured themselves by playing so long at the game of upsetting cabinets.

The question at the recent elections on May 8 and 22 was to ascertain whether the country would grant the Moderate Republicans and the *ralliés* the needful majority with which to confront at once the impenitent Monarchists and the Radical Socialists. On all sides it was asserted that such would be the case, and that the elections would witness the crushing out of Radicalism, caught between the Moderates and the Socialists, and the triumph of the Government Republicans. In numberless speeches, M. Méline in the Vosges, M. Barthou in the Pyrenees, M. Ribot in St. Omer, enforced the necessity of having at last a majority in the Chamber. By dint of talking of it, the Moderates imagined that they were going to get it. Alas! the results show that they were badly out. Not only have they not augmented their number, they have lost a notorious quantity of seats; the Radicals and the Socialists have increased their following, and the situation, far from having bettered itself, has assumed a really grave character.

The returns published by the ministry vainly announced in the new Chamber 264 Moderate Republicans, as against 250 in the former Chamber—four more! In vain were 235 Radicals found in place of 248—that is to say, thirteen less! The first political manifestation of the Chamber showed that the strength of the Opposition is nearly or quite equal to that of the Government. In the ballot for President the Government's candidate, M. Paul Deschanel, in fact received 282 votes, while the Opposition candidate had 278—which indicates a majority of four in favor of the Premier. The truth is, we must count as Opposition, not the Radicals alone, but a certain number of Monarchists who prefer disorder to the Republic, and

a score of former Boulangists now masquerading under the names of Anti-Semites and Nationalists—a formless crowd which for ten years has been the permanent leaven of every folly and extravagance in the Chambers. All these, together, form in the Lower House a heterogeneous and desperate group of some 280 members, very competent to the overthrow of the ministry, to making interpellations and provoking tumults, but powerless to inspire or to direct a policy.

Foreigners may ask how it is that in the French Chamber no majority exists in favor of any political or social doctrine. The reason of it is very simple, namely, that no majority exists in the country. The only thing that France knows clearly, and says without ambiguity when it votes, is, that it wants the Republic. What Republic? What are the principles that should animate it? The doctrine of slow, intermittent and gradual progress heralded by opportunism; or, on the contrary, the doctrine of forward march, with haste and violence, without regard to routine or tradition, heralded by radicalism? The species of collectivist demagoguery which the Socialists have in hand, or the Cæsarian, clerical, and retrograde demagoguery of which, without a proper conception of it, a certain number of Boulangists dream? As to all this the country says nothing because it knows nothing.

The French masses, as a whole, have no very distinct political education; and, furthermore, the French elections do not turn on politics alone. Indeed, the suffrage is so organized that the Deputy represents not so much a political doctrine as a small *arrondissement*—in other words, a petty territory quite restricted, having generally on the average 20,000 voters, where he is known, judged, and appreciated, beloved or detested, not according to his ideas, but according to his attitude towards his fellow-citizens, and the services he has rendered or may yet render them. It is sometimes said: Such an *arrondissement* is Royalist, Bonapartist, Moderate. The truth is, that this *arrondissement* contains a man of wealth, influence, and popularity, who for many years has, as Deputy, rendered great services, and whom the accident of birth has made a Monarchist, a Bonapartist, or a Moderate. His compatriots elect him, not for his views, but for his personality. There are thus in France a great number of rotten boroughs which have for a long period belonged to families.

This very year, for example, we have seen seats like that of the Bonapartist de Cassagnac in Gers, return to Bonapartism, which they abandoned four years ago. Shall we say that Gers, after having been Republican for four years, has become Bonapartist again? No; it means that M. de Cassagnac, who lost his seat by reason of having neglected the electors, has regained it on becoming more solicitous to satisfy them. M. Jaurès, the mighty Socialist orator, was beaten in the *arrondissement* which he represented by a marquis, a local lord, rich and influential. Has, then, the district formerly revolutionary suddenly become Moderate or *rallié*? No; the simple fact is, that the Marquis de Solages is a gentleman who possesses a larger fortune than does M. Jaurès, and has rendered more services to the electors.

People are not aware of the slight im-

portance which politics has in many districts. A Deputy is popular if he be rich, powerful, a "good fellow," on familiar terms with humble folk, and especially if he have, in common parlance, a long arm to obtain favors for his electors from the Government. It is only in the cities that politics plays a more important part, and that it concerns a Deputy to have advanced ideas and to keep step with the Opposition parties. In general, the French populace, already much infected with radicalism, is taking great strides towards Socialism. All the chief industrial centres are to-day nearly won over to it. Paris, where, beside a bourgeoisie, lives so numerous a proletariat, has always been in the van of all political movements. To-day the great majority of its wards are revolutionary-socialistic. So likewise with Marseilles. Lyons and Bordeaux, once exclusively opportunist, are now strongly carried away by the Socialists. Wherever a working population exists, Socialism has made marked progress. The check given to its two most intelligent leaders is purely accidental. Jules Guesde and Jaurès, the theorist and the orator, of the party, were both beaten by rich patrons having a great clientèle of workmen.

Another party which is also forging ahead, but less vigorously, is the "Nationalist-Anti-Semite." Composed of low demagogues who work upon what Jaurès calls the elementary instincts of the mob—that is to say, a crude patriotism and a beastly hatred of foreigners—it has profited by the stupid legends implanted in the intelligent public in connection with the Dreyfus affair, which many imbeciles regarded as the manoeuvre of a "Jewish syndicate."

The Royalists have lost altogether only nine votes, and the *ralliés* have gained eight. Apparently there will, for a long time to come, remain in the Chamber a small minority of representatives of the former régimes, whose rôles will consist in tipping this way and that the parliamentary scale, with the resulting paradox that French policy receives its principal direction from the smallest and seemingly the feeblest of the parties.

Past experience, serviceable in forecasting the work of a Chamber which so much resembles other Chambers, teaches us that this one will be as the others have been. Turbulent, impressionable, very sensitive to the influence of Opposition orators when they appeal at once to its Chauvinism and its demagogic passion, it will slaughter as many ministries as its predecessors have done, and will be succeeded by a Chamber no better than itself. Universal suffrage has few surprises for those who have practised it a bit.

OTHON GUERLAC,

Editor of the Paris *Siècle*.

THE SITUATION IN ITALY.

ROME, May 26, 1898.

The present troubles in Italy should not be taken as an indication of the poverty of the country, or of a general distress due to class-poverty inducing real suffering more than that which is at all times found in any population where public resources are ill administered. In other years, when the price of grain was much higher, there has been perfect quiet, and the proof that the present disturbances are not due either to the want of bread or of work is that they are, like the strikes, the most grave where there is least want of either, as in Milan,

the most prosperous and industrious city of Italy, in Padua, Bari, and Leghorn, where there is no want of work, and where, with the recent concessions of the Government, the taxes on breadstuffs have brought the price of bread to the usual level. In fact, we get in Rome an excellent whole-meal bread, such as I have rarely eaten in London, at thirty centimes the kilogramme, or 1½d. the pound. In sections where the destitution is the greatest there has been no violation of the peace.

The difficulty is even graver. It lies in a progressive demoralization of the State, a growing relaxation of civic discipline, an indifference to the *res publica* in every department of the Government, from the electors, who no longer concern themselves with the election of Deputies, to the head of the State, who abandons all the constitutional checks on the caprices of a frivolous Executive. There is no longer any criterion of internal policy, as there has long been no continuity in the external; the Government has no definite purpose except to remain in power, and to this end it has attempted to conciliate every section in the multi-colored politics of the country by turns, and has allied itself in the elections as readily with the Republican as with the Conservative, until the Legislature is a complete chaos, and every measure which is demanded by the stability of the institutions is defeated by the defection of some section of the majority; and the legislative record of the two past years is read in the withdrawal of project after project of laws for indispensable ameliorations of the condition of the population at large. Since the present Ministry took office it has not passed a single important measure, but has withdrawn one after another brought in, on the defection of a section of its mosaic majority. And all this time it has flirted with the Republicans and "dealt" with Cavallotti, the chief organizer of legislative anarchy in the Chamber, steadily and knowingly increasing the strength of the dissolvent element in Italian politics, in mortal fear of being found in a minority, and so fostering in the strongest measure the confidence of the revolutionary party. The severity and promptitude with which Crispi repressed the risings of 1893 were made the ground of political attacks on him, in which the Conservatives, from personal antagonism to the man, took part, and the present Government is paying the penalty. The Conservative element in politics, either in the country at large or in the Chamber, has no conception of the necessity of organizing to meet the disciplined action of the small Republican minority, which has its strength multiplied by its organization, a condition which exists in no other party, for the Conservatives (also a minority) agree in nothing but the hatred of Crispi and any strong Ministry which they cannot control. When in the State the party of order is indifferent, the party of disorder grows strong, and this is now the condition in the entire peninsula. The genuine Republican element is insignificant, but disorder is popular, and, with a weak and discordant Government like the present, inevitable.

Italy is not yet consolidated, and the liberties gained with such sacrifices by a patriotic minority are made valueless by the antagonisms of fractions and sections which spend their strength, like the Byzantines during the Turkish siege, in quarrels, and leave the future of the country to chance

and intrigue, external and internal. It is to this condition of political anarchy that the present disorders must be attributed. The Government has no policy and no civic courage: it lives by expedients and lets tomorrow care for itself; the King declines to exercise his prerogative, and the better part of the population all over the country would hail a dictatorship with delight and relief, if the Dictator could be found. Under these circumstances the rapidly increasing unpopularity of the King is a most dangerous element in the complication. Italy is not ready for a republic, and if it came it could be only one of anarchy more or less complete. Socialism is a mere effervescence of theorists, but adds dangerously to the disorder because there is no help from the Government; and Socialism and Republicanism, through the incompetence of the Government and the indifference of the King, may capture the State. In fact, the only safeguard against a revolution to-day is in the army, which is, I believe, perfectly loyal and safe, and is the only disciplined institution in Italy, including in it the navy. But the army is only a defensive institution, and cannot long defend incompetence.

The active element in the alarming events of the late four days at Milan, Pavia, etc., is Clericalism in alliance with the Republicans and Socialists; but the passive elements, which are by far the most dangerous, are the disaffection with the inefficiency of the Government; the corruption of the Legislature and of the judiciary, with its consequence of constant and patent miscarriage of justice; the indifference of the better classes to the elections, and their contempt for parliamentary government; and, worst of all, the virtual abdication of all his prerogatives by the King, whom one may hear anywhere and everywhere spoken of as "that man of straw." Italy is drifting, and States do not drift long before getting into breakers. W. J. STILLMAN.

Correspondence.

A COPYRIGHT QUESTION.

TO THE EDITOR OF THE NATION:

SIR: A Boston publisher gives notice that he has secured the rights in America and England of a certain French book, that the French text has been set up in this country and will be copyrighted here. The firm contends that no copies of the original Paris edition in French can be imported or kept for sale by dealers in America. Is this really the law, and can the original Paris edition be thus kept from the American book-buyer? A cheap and nasty edition may be set up here, simply to secure the copyright of the translation, and the American holder of the copyright may thus wish to force the American public to buy his translation. Can the lawful original issue of any book be kept out of a country which is a party to the international copyright act? The Tauchnitz volumes are authorized reprints in Germany, but nobody is prevented from securing the original London edition of any book contained in the Tauchnitz series. Some years ago a New York firm issued a similar caveat covering the French original of "Tartarin sur les Alpes," but to my recollection their contention was not good law. Can you enlighten an

INTERESTED PARTY?

NEW YORK, May 17, 1898.

NEW METHODS AT HINGHAM.

TO THE EDITOR OF THE NATION:

SIR: A certain publicity has been given, among teachers and others, in various parts of the country, to an announcement according to which I am to be a member of the faculty of the "New School of Methods," a school for teachers, which is to meet at Hingham, Mass., July 18-29. According to the announcement in question, I am said to be one of two officers who are to represent the "Department of Psychology," as "lecturers in this department." The announcement also speaks of me as about to give "discourses at the New School of Methods this summer on such subjects as the Problem of Knowledge, Realism and Idealism, the Problems of Nature, and more particularly on the growth of the child mind and its perception of and relation to the world outside."

As a fact, I was not long since asked to give, at some time between July 18 and July 29, a single evening lecture, before the "New School of Methods" at Hingham, on a psychological topic. At that time I consented to give this one lecture, and to have my name announced for this sole task. I assumed no other responsibility than this for any enterprise connected with the school, and did not promise any series of "discourses" upon any topics whatever.

For good and sufficient reasons, I have now found it imperatively necessary to cancel this single engagement. I have now no connection whatever with the "New School of Methods," at Hingham or elsewhere.

Yours sincerely, JOSIAH ROYCE.

CAMBRIDGE, MASS., June 10, 1898.

FELLOWSHIPS FOR WOMEN.

TO THE EDITOR OF THE NATION:

SIR: The European Fellowship which is awarded annually by the Association of Collegiate Alumnae, has been given this year, as has already been announced, to a very satisfactory candidate; but, in making the choice which they have done, the committee of award have been obliged to pass by other candidates whom it is a real loss to the cause of sound learning among women not to be able to send out for a year of study at a foreign university.

As an indication of the sort of work which women college students are doing nowadays, the following extracts from letters of recommendation written for different candidates by professors in the colleges where they have studied, form interesting reading: "I have never had a student whose work I could more unreservedly commend for its originality, acuteness, and thoroughness." This is said of a student who is only just taking her first degree: "Both in ability and attainment she is far above the average graduate student, and I have rarely seen any student who, even after some years of advanced study, has shown such effective grasp of the subject and such power of independent work." This comes from Chicago: "As a careful, intelligent investigator, she is among the best in the University; I have never met a student whose work and promise I could more heartily endorse." One of the most distinguished of German professors writes: "This work is most admirable, and I have only to learn from it." Of another candidate it is said: "The professors under whom she has studied, especially at

Leipzig, Heidelberg, and Berlin, uniformly speak of her, not as being one of their best American students (which is the usual form of praise), but as the absolute equal of the best students in their department." Of a paper already published in one of the German philological journals, a college professor says: "It is on the nominative singular of weak substantives in old High German—one of the most vexing problems in historical German grammar. The new explanation is, in my opinion, correct, and I appreciate her paper both as a very gratifying addition to our present knowledge of Germanic grammar, and as a testimony of its author's advanced scholarship and high aims." This is the account of a student at an Eastern university: "She has a very unusual record, having carried off the double *summa cum laude*, which no college student took in her year."

In her last printed report, the chairman of the committee of award says that in the earlier years of the fellowship it was customary for the college professors, after commending the originality exhibited by some candidate, to add the phrase "so very rare in a woman," but that, for the year covered by the report, that addition had, for the first time, not once occurred. This year there is a return to the idea, but it occurs in the course of such a remarkable piece of commendation that the most sensitive guardian of the interests of her sex could not object to it:

"It was thus possible for me to become well acquainted with the qualities of her mind, and to compare her with the young men who were taking the same course. The comparison was to her advantage. She has, I believe, not only a quick and receptive mind, but also a capacity for independent thought and original investigation which (with my very limited experience) I suppose to be even rarer in women than in men. I regard her as one of the most promising scholars I have had the pleasure of teaching, and of much greater ability than many men—of greater ability than most men—who hold travelling fellowships and scholarships."

To be obliged to deny a fellowship to such candidates as this has been a painful task to the committee of award. Very large sums of money are spent annually upon the exclusive education of men; it seems as if it would be no more than fair if a somewhat generous provision should be made for sending to Europe those women whose studies have been carried so far that a foreign residence is essential to their continuance. It is certain that nothing better could be done with several sums of ten thousand dollars than to add a few permanent European fellowships to the one that is now awarded by the Association of Collegiate Alumnae; immediate necessities could be relieved by the contribution of several sums of five hundred dollars. Remittances for this purpose may be made to Mrs. Helmer, No. 1428 Michigan Avenue, Chicago; Mrs. I. J. Backus, No. 57 Livingston Street, Brooklyn; or to Mrs. C. Ladd Franklin, No. 1507 Park Avenue, Baltimore. X.

WAR AND LITERATURE.

TO THE EDITOR OF THE NATION:

SIR: Apropos of the *Nation's* article of June 2, "War as a Literary Stimulus," are we "bound to believe that the Spaniard [Señora Emilia Pardo Bazán], tasting the bitterness of war, is nearer the truth than

the Englishman [Sir Walter Besant], knowing it only as a spectacle"? Señora Basán asserts in the *Revue des Revues* that "when a nation finds itself at the edge of a precipice, it is forced to withdraw its attention from its writers. Letters require a tranquil spirit." Sir Walter contends that war has an awakening influence upon the literary as upon the civic character.

Let us look for a moment at several of the great literary periods of the world. When Dante, Petrarch, and Boccaccio created the first modern literature, was not Italy desolated from the Alps to Tarentum by the fierce struggles of Guelph and Ghibelline? When Voltaire and Rousseau ruled the world of literature, had not France reached the ebb-tide of humiliation in war: defeated at Rossbach, compelled to sign the peace of Aix-la-Chapelle and Versailles, forcibly deprived of her hold upon India and of her colonies? When Goethe and Schiller were in the zenith of their creative powers, had not Germany almost ceased to exist politically? Did not 1806, the year after Schiller's death, see the secession of the Rheinbund, the abdication of Francis II., the battles of Jena and of Auerstädt, Napoleon in Berlin, where the pusillanimous nobility urged the common people to cheer the Emperor, crying, "For heaven's sake give a hearty hurrah; cry, *Vive l'Empereur!* or we are lost"; and Napoleon said, "I know not whether to rejoice at my success or to feel ashamed for this people"? During this time and the even greater degradation that followed, Goethe was at work upon "Faust," the first part of which appeared in 1808. Was not Germany then on the "edge of a precipice"? Did it "withdraw its attention from its writers"? Do "letters require a tranquil spirit"?

EDWARD MEYER.

WESTERN RESERVE UNIVERSITY.

Notes.

The Harpers have in press a volume of 'Collections and Recollections,' by "One who has kept a Diary," a Radical M.P.

The Macmillan Co. will publish at once 'Questions and Answers in the Theory and Practice of Military Topography,' by Major J. H. Bowhill.

The Croscup & Sterling Co., New York, will undertake, in conjunction with J. M. Dent & Co., London, a new edition of the *Saintsbury Balzac* in twenty volumes, illustrated with full-page etchings from the original plates.

The Robert Clarke Co., Cincinnati, will issue next week an 'Introduction to the Study of North American Archaeology,' by Prof. Cyrus Thomas, with 108 illustrations.

P. Blakiston, Son & Co. announce for immediate issue 'Hay Fever: Its Successful Treatment,' by Dr. W. C. Hollopeter of Philadelphia.

T. Fisher Unwin, London, has in press 'The Real Gladstone,' by J. Ewing Ritchie, consisting of anecdotes and quotations from that statesman's speeches and writings.

Mr. James Bryce's masterly appreciation of Mr. Gladstone, unabridged, has been promptly made into a pretty book by the Century Co. The matter is displayed under seven subheads, viz., Introduction, Early Influences, Parliamentarian, Orator, Originality and Independence, Social Qualities, Authorship, Religious Character. A vigorous por-

trait of Mr. Gladstone in his late prime furnishes a frontispiece.

The new (third) edition of Miss Sedmore's 'Guide-Book to Alaska' (Appletons) brings the Bering Sea question down to date, and adds a chapter on the Klondike, with an account of the several avenues to the gold fields and a map.

The pith of Walt Whitman is to be found in the Selections from his Prose and Poetry made by Dr. Oscar Lovell Triggs of the University of Chicago, a fervent disciple. The scarce preface to the first edition of 'Leaves of Grass' is here. The typography of the book is much marred by the affectation of dispensing with paragraph-indentation, as well as by the uncentred sub-titles. A selected bibliography is appended, and a biographical sketch precedes.

We noticed last week the enterprise of the Colonial Society of Pennsylvania in reproducing in facsimile Bradford's *American Weekly Mercury*. We learn that the work will be pushed to completion at the rate of two volumes a year, and that the price has now been made uniform to members and non-members alike, namely, five dollars a volume. The office of the publication committee is at 1206 Bets Building, Philadelphia.

The second and final volume of the new illustrated History of Swedish Literature, a preliminary notice of which was given in these columns two years ago, has recently appeared in Stockholm. The first part, by Prof. Henrik Schück, treated the literature from the earliest period of the runic inscriptions to the beginning of the eighteenth century; the second volume, by Prof. Karl Warburg, carries the survey down to the year 1830. It is further stated that it is the intention of the author to publish a supplementary volume covering the last seventy years. The reputations of the two authors are sufficient guarantee of the excellence of their work, which is the first complete history of Swedish literature ever published.

It is with something of a shock that one opens the belated report for 1895 of the Smithsonian Institution, to find the general and summary review by the late G. Browne Goode, Assistant Secretary. Apart from the report proper and its appendices, the stout volume is almost wholly occupied with two elaborate and learned papers, "The Social Organization and the Secret Societies of the Kwakiutl Indians," by Dr. Frans Boas, and "The Graphic Art of the Eskimos," by Dr. Walter James Hoffman. Both of these are copiously and often beautifully illustrated, and are a mine of authentic information. Not to be overlooked, also, are the "Notes on the Geology and Natural History of the Peninsula of Lower California," by George P. Merrill, with interesting views of the curious landscape of the peninsula.

Cassell & Co., No. 7 West Eighteenth Street, send us the first three of five 'Royal Academy Pictures' for the current exhibition. As heretofore, the plates are excellent memoranda by photographic process, and they are completely unprovided with text, critical or other, if we except the legend under each. On the other hand, M. Philippe Gille resumes his pen in comment on the Salon, in 'Figaro Salon,' which has begun to be distributed on this side of the water by Jean Boussod, Manzi, Joyant & Co., Goupil's representatives in this city (No. 170 Fifth Avenue). Neither assortment is par-

ticularly exhilarating, artistically considered. As usual, the several numbers of the French publication have each a separate color print twice the page size.

The principal article in the *Annales de Géographie* for May is a statement of the Argentine side of the Chilian-Argentine boundary question. The Argentine Republic maintains that the summit of the chain of the Andes forms the boundary, while Chili contends that it follows the watershed. These two lines are independent for at least five degrees of latitude, and the territory in dispute is "the most fertile, the best fitted for the establishment of agricultural colonies," in all Patagonia. The article contains many fresh geographical details in respect to this interesting region. There are also accounts of explorations in the Tian-Shan Mountains in southwestern Siberia, and a summary of the principal geographical results of French expeditions to the bend of the Niger. In addition to the maps illustrating the articles is an excellent map of Cuba prepared in 1896 for the "Service Géographique de l'Armée."

The opening article in *Petermann's Mitteilungen*, No. 4, is a description, by Lieut. Werther, of a region in German East Africa in which a Hamburg company has obtained land and mining concessions. The accompanying map, the result of an exploring expedition sent out by it, is an unusually fine specimen of cartography. The editor, Dr. Supan, contributes a series of tables showing the foreign trade of China for 1896. In closing, he dwells upon the great significance which the acquisition of Kiao-Chau will have for German commerce.

The Russian petroleum trade in 1897 is described by our consul at Batum, Mr. J. C. Chambers, in the Consular Reports for May. The average daily production of 657 wells was about 139,000 barrels, which, though the largest output up to that time, has become 200,000 barrels during the present year. Signs are not wanting, however, of the coming exhaustion of the Baku territory, and efforts are being made to find new oil-fields, so far without success. With the larger production there has also been an immense increase in the demand for residuum for fuel. Great Britain took the most oil, 44,000,000 gallons, India and Turkey taking the next largest amounts. Consul-General Du Bois sends an instructive and encouraging comparison between the labor conditions in Europe and in the United States, the locomotive fireman being taken as an example.

"Some Geological Evidence regarding the Age of the Earth" is the subject of an address delivered before the Royal Physical Society of Edinburgh by Mr. J. G. Goodchild, retiring Vice-President. He says that all who have made the attempt have realized that it is impossible, with our present knowledge, to state the antiquity of the oldest strata containing fossils "in terms of centuries, thousands of years, or even in millions." After reviewing certain changes which are known to have taken place, he concludes that "seven hundred millions of years carry us back to the commencement of the Cambrian period, but not to the beginning of life upon the earth," which, he argues, "must be vastly more remote—perhaps as much farther back from Cambrian times as they are removed from our own."

"Occurrences and Mining of Manjak in Barbados" is the title of a paper by Walter Merivale published in the April number of the *Transactions of the North of England*

Institute of Mining and Mechanical Engineers. Manjak is "one of the many bitumens that the modern demand for insulating-material, varnishes, waterproofs, etc., has called into the market." "The Coal Seams of the Transvaal," and "The Economical Combustion of Coal for Steam-Raising Purposes," are among the other subjects treated in this number.

Some new refinements in the use of the words impression, edition, and reissue are proposed by the Publishers' Association of London for general adoption. They desire each title-page to bear the date of the year of publication—that is, putting on the market—as well as of reissue, but with a bibliographical note on the back of the title-page recording this latter fact. In the same place should be indicated the date at which the book was last revised. Impression is to mean "a number of copies printed at one time"; a new impression, "a reprint without change." Edition signifies some change, even to resetting; reissue, "a republication at a different price, or in a different form, of part of an impression which has already been placed on the market." The area to which the circulation of an impression is limited by agreement should also be conspicuously stated. The record "Fifteenth impression (third edition)" would indicate the relative frequency of revision.

—"B." writes to us:

"Your correspondent, Mr. Dooley, in your last issue, informs us that 'Death is the only means by which a human being can go to heaven.' This, though highly interesting, is not novel. It was known as early as the sixteenth century. In the interlude called 'The Four P's,' the Poticary and the Pardoner are disputing as to the merits of their respective callings. The former boasts that in the practice of his profession he has sent multitudes to heaven. On this the Pardoner queries:

'Though you had slain a thousand in the place,
How came they to Heaven, dying out of grace?'
and the Poticary retorts:

'And though a thousand pardons about their neck
were tied,
How came they to Heaven if they never died?'

—In the *Harvard Graduates' Magazine* for June one may read a succinct account of the changing character of the Board of Overseers from its foundation, as a prelude to an impartial statement of the recent contest, in the Board and in the Massachusetts Legislature, over the extension of the suffrage in the election of the Board. The measure has been hung up for a year, but its ultimate passage is certain. Of wider interest is Samuel Hoar's argument on the taxation of college property. The frontispiece of the number is a view of the Phillips Brooks House about to be built at the northwestern angle of the College yard, and it appears that the designer, Mr. A. W. Longfellow, has adapted himself not only to the elder adjacent buildings, but also to the college gateway. In keeping with these boundaries will doubtless be the gate offered by the Class of 1873, so that in time we may look for a complete harmonious enclosure. Of real moment is the abandonment, from sheer unwieldiness of the classes, of the Class-Day "exercises" about the tree, with the disorderly scramble for flowers, in favor of a truly dignified and manly order of song and speech in another part of the grounds. The war party has the floor in the chronicle of Harvard's choice in the late attempted stampede of college students to the recruiting sergeant, and already we are bidden to look for the tablets that

will commemorate militant patriots worthy in all respects of the honor accorded the dead alumni of the civil war. "The principal motive of these men [the actual volunteers of the present hour]," we are told, forestalling the judgment of posterity, "was a generous spirit of self-sacrifice, such as the University expects from her sons in time of danger." But what danger was the country in? And if any, how was it brought on us? There is material for a tablet that will lack nothing of the honor of any yet erected at Harvard, in the news item relating the deed of gift by Mr. Alexander Agassiz of his collections and library in the Museum of Comparative Zoölogy, on the modest condition of personal use of them as if still his own; and in the fact that this bounty caps gifts in money to the Museum and to other college objects exceeding \$800,000 in the course of twenty-six years from the same devotee of science, seeking neither glory nor self-advertisement.

—Vol. XX. of the *Jesuit Relations* (Cleveland: Burrows Brothers Co.) contains four documents; the concluding chapters of the Relation for 1640, composed in the Huron country by Jerome Lalemant; a letter of Charles Garnier to his brother, also from the Hurons; some passages from a dispatch sent by Brébeuf to Vitelleschi, the general of the order; and the opening part of Le Jeune's Relation for 1641. Brébeuf wrote at Quebec, and Le Jeune began there but finished at Paris. The principal topics taken up in these several reports are, firstly, the trials endured by Garnier and Jogues on their new mission to the Tobacco Nation; secondly, the pious labors of the Ursulines at Quebec and of the Hospital nuns at Sillery; and thirdly, the condition of the church at Three Rivers. The country of the Tobacco Nation is reported to lie twelve or fifteen leagues westward from the Hurons, and the unwonted peace which then prevailed between the two tribes probably encouraged the Jesuits to include a district so closely neighboring within their field. Lalemant makes no secret of their failure to score any success further than the baptism of some dying fugitives belonging to the Neutral Nation, who had been driven from their own region by famine. For the rest, "this mission has been the richest of all, since the crosses and the sufferings have been most abundant therein." At Quebec the Jesuits were now reinforced by the Ursulines, who were the more welcome in that they could not become competitors. Unflinching zeal in the work is always affirmed of both orders. For instance, of the Ursulines, "their monastery contains more joy in its little enclosure than the palaces of the Cæsars in their great extent." The hospital was an endowment of the Duchesse d'Aiguillon. In it the savages were purged, bled, and nursed. Sometimes they were given medicine to carry home with them. Altogether about 150 patients had been treated in the year besides those who received simple alms. Chapter VII. of Le Jeune's Relation for 1641 is devoted to "the Residence of la Conception at the Three Rivers." Three Rivers was the gathering-place of all the Indian races who traded with the French, and the fathers stationed there, Jacques Buteux and Jean de Quen, seem to have been discouraged by the spectacle of their meetings and of their influence upon each other. This section of the narrative is largely anecdotal, and gives one reason to think that the Jesuits missed a

chance in not directing their attention more closely to such a point of focus.

—Mr. Robert Gregg Bury's edition of the *Philebus* (Cambridge: University Press; New York: Macmillan) is a very respectable but somewhat colorless performance. The text is soberly eclectic, based mainly on Hermann-Wohlrab. The grammatical notes generally supply the needed help over rough places, and a fair measure of illustration of Platonic idiom and usage. The philosophic introduction consists chiefly of a mechanical analysis and tabulation of the leading ideas and technical terms of the dialogue—Pleasure, Science, Being, the Mixed, the Unmixed, etc. Mr. Bury faithfully reports on the recent literature of the subject, attributing, as is natural, much importance to the neo-Platonic mysticism of his Cambridge teachers. The method he has learned from them of combining and equating philosophic terms and categories like rigid counters is incompatible with any real insight into Plato's thought. It may be edifying, but it certainly is not Platonic philology, to say that the soul of the universe "is the Divine will in which Love and Reason meet together." In the endeavor to extract from the text what "is not explicitly conveyed therein," Mr. Bury sometimes resorts to strange arguments. He cites 24 A to prove that the *desuper* is a kind of multiety, and 26 D for the identification of the *super* with *to be*. But the unity of *super* in 26 D, as Mr. Bury must know, is precisely on a par with that of the *desuper*—it is simply the unity of any generic idea in relation to the multiplicity of its sub-species.

—The text of the *Republic* of Plato is, for all practical purposes, fixed, and Mr. James Adam's convenient little critical edition (Cambridge: University Press; New York: Macmillan) can in the nature of things offer little that is new and nothing of serious significance. Mr. Adam's canons for the constitution of the text are: (1) to follow A wherever possible; (2) when A is deserted, to state the reading of A and the source of the reading adopted; (3) in default of A to rely chiefly on Π, Ξ and Q, and V, and where Π or Ξ and Q alone or with others give the right reading, to ignore the minor manuscripts. The emendations admitted, with the exception of the four or five classical and universally adopted instances, affect at the most grammatical concinnity or the turn of phrase. Of such emendations the editor himself contributes some thirty-five turning on the insertion or the omission of an article or preposition, or the pruning away of what he chooses to regard as a redundancy, or the correction of what the manuals of rhetoric might treat as an inaccuracy of expression. A typical example is found in 538 C, where Plato, after enumerating the painter, the cobbler, and the carpenter, goes on to speak of the man who is unacquainted with *these arts* (*ταύτων*). Mr. Adam corrects *arts* to *artisans*—*τεχνιτων*. The instructor in daily themes would undoubtedly approve.

—The educational head of Prussia, the Cultus Minister, Dr. Boese, in an address to the Parliament, recently made what is probably the first official utterance of the Prussian Government on the question of girls' gymnasia and the higher education of women in general. A petition from Breslau, asking for permission to establish, in connection with a famous school of that place, a

complete girls' college that would lead up to an examination admitting to the universities exactly on a plane with the present *Abiturienten-Examen*, was refused the sanction and approval of the Cultus Ministry, the vote being unanimous in all three sections of that department. This led to an appeal in Parliament, in response to which Dr. Boese replied, in substance, that the Ministry was disposed to meet the actual needs of the sex for enlarged fields of employment, and that girls were now given an opportunity to attend university lectures with the consent of the professor and the Rector. All the portals of science are open to women. An exceedingly small minority of them desire to pass the examination admitting to the universities, and this has been permitted them, but not in regular course (*als Hebräer*). In the department of mathematics one lady has taken the degree of doctor; and if there are women who have the physical and intellectual and moral strength to accomplish all that is necessary to secure a medical degree, the Ministry will put no obstacle in their way. In Breslau, however, it is the purpose to coax (*hercinlocken*) twelve-year-old children into taking a college course, and this project must be opposed. At such an age neither the girls themselves nor their parents are in a position to decide whether the former are capable of entering one of the professions. Such an innovation would undermine our whole present system of educating girls. During the year 1895-'96 there were only eight girls in all Prussia who tried to pass the gymnasium examinations; in 1896-'97 only six, of whom two failed; and in the spring of the present year only five. And not even all of these twenty-three were from Prussia, and all had been prepared privately. The great majority of young girls expect to marry, and the Government must deal with the rule and not with the exception. This shows that Prussia in exceptional cases will admit women to university lectures, but will do nothing to prepare them for entrance. The graduates of the three Mädchengymnasien in Germany, at Karlsruhe, Berlin, and Leipzig, must take their chances with the rest.

CHILD'S BALLADS.

The English and Scottish Popular Ballads.

Edited by Francis James Child. Part X.
Boston: Houghton, Mifflin & Co. 1898.

In these days of advertisement and syndicates, of visits to the author's study, of photographs, of private chat for public use, when even the harmless necessary scholar is forced to an interview and must talk discreetly of the stir in Sanskrit, friends of a man like the late Prof. Child might well choose *Cordelia's* part of loving silence. Certainly one would rather say nothing about him and about his work than run the risk of falling into that brazen clash of superlatives with which persons eminent in any degree must now be hailed by an appreciative public. Shall one write of the great teacher? What is a great teacher? "Provided a decent sum of money," asked a trustee who took counsel with the flesh and blood of a certain citizen, "how is this decrepit college to be built up?" "Cut out your dead wood," answered the citizen, who loved his metaphor, "and call live men to the chairs—men who are talked about, big men in big colleges—so that they will leave

a luminous trail as they go from the old place to the new." It is an easy formula; and the reporter, along with that mob of honest folk who shape their judgment by what newspapers say, has made it valid almost to the exclusion of other standards. Your great man, even your great teacher, is the man with a luminous trail; convergent luminous trails make a great institution. Now, however his old students may feel in regard to the teaching of Mr. Child—his relentless accuracy combined with literary tact; the might of learning masked behind the grace of letters, along with a kindness and a humor without bounds; his precept and example to the learner that, whatever Paracelsus says about the dilemma, in literature at least one may both know and love—they are nevertheless sadly put to it when this test of a luminous trail comes canting in, and they boggle outright at the thought of what a reporter would have said. The reporter and his public like their great men as revealed in a sonorous commonplace; and if there was anything from which Mr. Child was utterly removed, it was the sonorous commonplace. "Burke," said the popular lecturer, when note-books were well adjusted, "Burke was a master-mind. . . ." "The reason why one comes to like Chaucer better than Spenser," said Mr. Child, in his cheery, conversational way, to a certain class many years ago, "is that Chaucer always has his feet on the ground, while Spenser—ah, well, you know, Spenser is one of our greatest poets. . . ." "What did he say?" gasped the man who made a point of accurate notes.

Will it do, then, to tell the reporter that Prof. Child was a great scholar? Although the public has reluctantly abandoned that fond old test of speaking fluently nineteen languages, reading forty-three with ease, and possessing an intimate acquaintance with many savage dialects, men still feel that some divinity of the sort, something cryptic, ought to hedge the scholar. There was nothing of this about Mr. Child. His great collection of ballads, for example, is shamelessly plain; the greater part of it can be read and enjoyed by the layman. How is one to bring home, not to the scholar, who knows its worth, but to an ordinary reader, the great significance of this book for our American scholarship? Indeed, could one compass it, there were no better task, regarded simply as service to the state, than such a straightforward account of what Mr. Child really was, and what he did, both for academic ideals and for human knowledge, as should put the reporter and his public upon a revision of their standards of greatness. Accounts of Mr. Child have been written by competent hands, but have hardly reached the reporter. Meanwhile, and for the present purpose, it is enough to consider these 'Ballads'—the most important contribution that he has given to learning—and to find some basis for the assertion, made on both sides of the sea, that the work belongs to that extremely rare class known as permanent.

As a comparatively young man, Prof. Child had already done some of this permanent work in his 'Observations on the Language of Chaucer,' and he did it with quite inadequate materials. He had a rare and accurate judgment of proportion, so that he neither set himself impossible tasks, nor yet was deceived by the false appearance of impossibility. It is worthy of

note that, in his early work, the edition of Spenser, the studies in Chaucer and Gower, he showed remarkable skill of insight and combination, so as to win wide results from very narrow material; while later, in the collection and comparison of ballads, when confronted with almost boundless material, he developed quite as valuable an art in his powers of selection and control.

The publication of the 'Ballads' was begun in 1882—for the collection of 1857-58 must count as an altogether separate work, not as an earlier edition—and now comes to an end with the tenth part, completing the fifth volume. New title-pages are provided for the earlier volumes, and there is an excellent portrait of Mr. Child from Kruell's graver. This final part contains, besides a few pages of additions and corrections for particular ballads, a glossary to the whole collection, a list of sources of the various texts, an index of published airs (with an appendix of unpublished tunes), an index of ballad-titles, an index of books of ballads, an "index of matters and literature," typographical corrections, and a bibliography. With the exception of this bibliography, mainly the work of Miss Ireland, all save the general introduction, of which "a few pages of manuscript—the last thing written by his pen—almost illegible, were found among his papers," and the bibliography, begun under his own direction and carried out upon his own plan, was prepared for the press by Prof. Child himself; and the entire part has been printed under the care of his scholar, friend, and successor, Prof. G. L. Kittredge, who gives a brief but wholly satisfactory biographical sketch, but adds nothing beyond such corrections and notes as had been welcomed and published at every stage of the collection. Mr. Child—happier in all this than his friend the illustrious Grundtvig, whose great collection of Danish ballads furnished the plan for the present work—has done all that he promised in his announcement sixteen years ago, and has done it, moreover, in spite of conditions of health which would have put many a man out of the struggle. Including additions and corrections, but excluding indexes, the work as a whole comprises 2,376 pages, in double columns, of text and comment. In 1894, as Prof. Kittredge points out, the editor could "report that the 305 numbers of his collection comprised the whole extant mass of this traditional material, with the possible exception of a single ballad." Had he done nothing more than this, simply gathering from far and near every scrap of genuine traditional poetry of English or Scottish origin, Mr. Child would have taken high rank among those rare scholars whose powers of research, added to critical tact and discernment, have enabled them to save precious literature from destruction. The bagmen of letters run busily about, now with cheap, new, showy goods, now with sound old stuffs; but there is an Indianman come bravely to port, with wares far-fetched by daring and skill, wares that are made no more and must be bought for a great price.

Yet this is the smaller part of the work. It is well known that Mr. Child's comparative and historical researches go beyond those of any other scholar in the field. In the compass of a few pages will often be found erudition to furnish forth an armada of ordinary monographs. See, for example, the discussion of Bugge's theory of 'Lady Isabel and

the Elf-Knight," and the elaborate, final settlement of Robin Hood's claims upon history and myth. Nothing eludes Mr. Child; no source of information is too remote or too difficult, no chaff too forbidding for him to find the grains of wheat; yet there is no walling, as of Carlyle, over the "dust-heaps," no ostentation of effort. Moreover, even the most careless reader must be attracted by the delightful way in which the editor imparts the results of his labor. A touch here and there of literary allusion; modern instances, whenever the subject can be redeemed from mere antiquarian interest; the personal note, as in that outburst against sentimental and mawkish pity for tramps, "those terrors of our rural districts"; and everywhere the saving gift of humor. What Dryden is reported to have said, in an often quoted phrase, about the poems of Chaucer, may well serve as grace for the student who sits down to these introductions to the various ballads: "Here is God's plenty." Moreover, when Mr. Child, writing of a well-known ceremonial test in which maids and lighted candles play the chief part, just drops that line about an "exsufficate and blown surmise," and goes swiftly on his scientific way; when, gravely summarizing an extravagant theory, he gives as comment the opinion of his favorite poet that "glosing is a full glorious thing"; when he speaks of the "great moral effort" made under trying circumstances by a certain knight; when he casts about for a phrase to express his notion of a broadside version (F) of "The Broomfield Hill," and, with a felicity beyond praise, decides that it has a "pungent buckishness," that while "A smells of the broom, F suggests the groom"—whenever, in brief, these touches of humor fall upon his graver work, it is well to know that the allusion, the quip are spontaneous. And how clear, how strong is his style! If only the young lions of research could learn the lesson that one's tale of good philology need not be noted for one's bad and barren English in the telling of it! If Mr. Child perfected his method of work in Germany, and brought away that tradition of thoroughness which has made German philology so rich in permanent results, he was enough the man of letters to love and cultivate those graces which one is wont to associate with the best scholarship of England, and he was enough himself neither to affect a school nor to give his students the impression that any parochial restrictions fettered his range in the world of learning. In his study of traditional poetry he lost not a jot of the life and movement of these ballads; he kept always in view whatever they had of charm and humor and pathos; but he never swerved a hair's breadth from the dignity and severity of research.

It is as useless to point out the excellence of details as it is to move heaven and earth in the search for a possible error or omission. But it may be noted that this book should now serve as a basis for studies in custom, superstition, turn of thought or of phrase; and that the reckoning can be regarded as final, so far as English and Scottish ballads are concerned. The collecting of them is a closed account. Moreover, conjectural emendations are in order—for Mr. Child was properly chary of such suggestion—and the preparation of a single, normal text out of the varying versions of a given ballad.

It was the third part of his task that Mr. Child, as we have seen, did not live to accomplish. The collection of individual bal-

lads, the history and comparison are there; but there is no general introduction* in which this master of method sums up the texts, the origins, the conditions, the limitations, the migrations, the stylistic and metrical characteristics of the ballad in general. In regard to this task he felt a certain dread, and expressed it with his usual frankness.† Wont with unerring skill to trace the single ballad and to follow every hint of its relationship to other ballads, to other groups, he went so far as to doubt his own power to draw general conclusions and to discuss the more or less vague questions which arise when one faces the ballad as a fact in general literature. Yet this introduction, had he been spared to write it, would have made an epoch in ballad criticism. He knew, as no one else could know, the snares that lie in wait for the student of traditional literature; if ever the vanity of dogmatizing comes to test, it is here; and he had no mind, in Brunetière's phrase, to "éterniser les problèmes," to hunt rather for the sake of the exercise than for the sake of the game. Had he merely trodden the perilous ways and cleared the overgrown path, what light would have pierced at least a part of that darkness! What, for example, if he had but written an account of the migration of ballads, if he had essayed a permanent classification, if he had given in detail his notion of the tests and conditions which set off the narrative ballad of tradition, not only from the folksong, not only from the imitated ballad, but from the whole mass of popular poetry! What, too, if he could have given some general hints about the particular skill with which he sunders false pathos from true, the flush of health in a traditional ballad from the rouge of imitation! With his unerring tact, what could he not have done for the drawing of that perilous line which should mark off the vulgar broadside from a broadside which is true ballad at the heart! How straight he goes to the mark in his judgment of that "infectious" ballad, "Bewick and Graham"; and how the dignity and pathos of it rise from the shabby lendings of the broadside version:

"Father, could ye not drunk your wine at home,
And letten me and my brother be?"‡

This unrivalled knowledge of the ballad itself, this intimacy with it—"Do I like 'Stephen'?" he echoed once the question of the reviewer; "I go singing it all over the house!"—one can now find only in *obiter dicta*. Had the introduction been written as an outgrowth of the labors involved in collecting and comparing, it would have put the science of ballad criticism upon a foundation solid and sure.

The death of Prof. Child came home to his old scholars with a force in every way unusual. He had in him that generosity of manliness, that pathetic resolve not only to see the best in every one, but still to see this best round unspeakable corners of mistake and failure. He would still praise wherever honest praise was in any degree possible. He would neither give nor take conventional wares. "Your classmate —," he was once

*The prospectus of 1889 says that "a general introduction will be prefixed to the first volume."

†The summary of facts about the ballad which he drew up for 'Johnson's Cyclopaedia' must not be regarded as indicating the character of the projected introduction.

‡For Mr. Child's criticism of rejection and of appreciation the reader might consult respectively the discussion of Version D in "Captain Car" and the praise of stanzas 9, 10, in the shorter version of "Sir Patrick Spens." A study of Mr. Child's critical treatment of style and matter in the ballad would be a welcome piece of work.

told, "asked to be remembered to you." "Did — say that? Give him my love," came the composed reply. Were all the acts of kindness, done at the cost of his own precious time, which Mr. Child bestowed upon comparative strangers, upon scholars, or indeed upon any bairn of knowledge whom he could help to put on the right way—were these all to be set up for a record, what a monument of disinterested affection would be there, both for the cause of learning and for the welfare of his fellows! Applied to him, the famous saying sounds as little extravagant as it did when it came from the lips of Lessing, a man in some respects of kindred breed with Mr. Child, a kindly man, full of good loves and hates, a keen, wise, tolerant, sympathetic man, who cried out when he heard of the death of Winckelmann: "There goes the second man within a year or two of whom I can say that to prolong his life I would willingly have given something of my own." That has an unreal ring in these days; but it was not unreal as the utterance of Lessing, and it could be said in honesty by some of the old students of Prof. Child.

ENGLISH CATHEDRALS.

Bell's Cathedral Series. Edited by Gleeson White and Edward F. Strange. Volumes I.-VI. Canterbury, Chester, Salisbury, Rochester, Oxford, and Exeter. London: George Bell & Sons; New York: Macmillan.

This series of handbooks, which is intended to include twenty-four separate volumes at least, is marked by the peculiarity of being filled with photographic illustrations, some from drawings, but the greater number from the buildings themselves, many of which are of the full size of the page. These illustrations are especially numerous for the details of the buildings, as is, perhaps, best. The visitor to Canterbury or Exeter would hardly fail to buy two or three photographs of the exterior of the cathedral, whereas the details of the interior and even the projecting angles and the less important recesses of the outside would be not so easy for him to find among the photographs in the shops. The half-tone pictures are of varying merit; many of them as good as could reasonably be asked. The illustrations in line are not as numerous as they might have been, but what are given are appropriate and are of assistance to the text. The volume on Salisbury is less richly illustrated than some, containing a greater number of reproductions of prints and the like and fewer photographs of detail. Of Oxford, on the other hand, a cathedral much less known than is fitting, both half-tones and line cuts are freely given, and this volume is one of the most interesting in the matter of illustration. The plans are confined to general ground-plans, one to each volume, except as a restored or conjectural ancient plan is added, and there are no large-scale plans of parts of a church so arranged as to explain more fully the photographic pictures. On the other hand, plans of recent excavations and consequent discoveries have been introduced, as noticeably in the volume on Oxford.

It is not, however, only for the student on the spot that these books are prepared; they appeal with at least equal force to the reader in a distant land. In fact, it is rather the mark of the series that buildings are

described and their history given at length than that they are commented on as by a wise guide accompanying the student through the building. There is no reason to doubt that in this the interest of the greater number of buyers and readers has been consulted. Few are they who spend time enough in and about a cathedral to use aright a volume of 120 pages bearing upon it, and those few are apt to require the historical facts, the dates and the approximate dates rather than guidance in the examination of the buildings. Care has been taken to make the different books nearly uniform in treatment, and this even to the extent of keeping the division into four parts, often marked by a similar division into four chapters, viz.: the history of the building, the exterior of the building itself, its interior, and the history of the see. This, however, does not prevent considerable diversity in the character and quality of the writing.

The volume devoted to Canterbury, by Mr. Hartley Withers, has but little to say about the architecture. Even the chapter descriptive of the exterior and the precincts and that concerning the interior of the cathedral contain much more history than they do analysis or description of the building or of any of its parts. The architectural information in this volume is furnished mainly by the very good series of plans. These are three in number; the plan of the present church, cloisters, chapter-house, library, etc., with numerous references, being accompanied by a very well-imagined restoration of the plan as it was in 1174, and one of the Saxon cathedral, as conjectured by Prof. Willis. By an odd mistake the second plan is lettered 1774, and no erratum notice appears. This volume is well adapted to give the patient and studious visitor to the cathedral precincts a living interest in the foundation and its immense influence in the development of the English people.

The handbook on Salisbury is anonymous. Somewhat more attention is paid in it to the details of the architecture. The difficulty already referred to, of deciding between the claims of visitors and of students at a distance, is here got over by yielding everything to the latter class. Details are described as for one who has not seen them, and are hardly pointed out or alluded to as if in explanation to one who is looking at them. The plan of this cathedral is given on as large a scale as one page allows, and is, perhaps, sufficient, but there is no plan of the close, nor is even the whole cloister given.

The book devoted to Oxford and prepared by the Rev. Percy Dearmer is far more minute in its examination of the building. The unusual character of this smallest of English cathedrals in its double capacity of college chapel and cathedral church, and its unusual plan and situation, short and square and crowded in between the cloisters of the academic buildings, have, in a sense, called for this fuller treatment. It is, however, in the highest degree fortunate that the writer was prepared for the unusual task set him. The absent student may obtain from this little book a really excellent idea of the cathedral and its architectural peculiarities, the changes it has undergone, and its relative importance as a piece of English mediæval architecture; and the visitor to Oxford may follow it, page after page, in his examination of the most interesting little church. The quotations from other writers are pe-

culiar; for while the handbooks on Canterbury and Salisbury contain most useless records of what writers of the last century, wholly ignorant of Gothic art, or mere gossiping travellers have had to say, the principal quotations in Mr. Dearmer's book on Oxford are taken from Mr. Park Harrison, a very competent and most earnest and indefatigable archaeologist.

The volume on Rochester, by Mr. G. H. Palmer, is noticeably intelligent in its treatment of that curious edifice, so unattractive and even mean in its first impression on the beholder, and containing so much really curious architecture. The interior of the Norman nave rightly excites the interest of the author, and we can trace in the pages of his chapter on the history of the cathedral his guarded approval of the restorations which have in late years made the west front less insignificant; restorations which were perfectly justified in view of the very late date and very corrupt style in which its character had been fixed.

The book on Exeter, by Percy Addleshaw, adds to the regular list of chapters as given above an additional chapter on the tombs in the choir. There is not as much said about their artistic character as the reader might hope for, but this is to be taken as evidence that, in the present volume, at least, the needs of the visitor have been thought the most pressing. The architectural account of the cathedral is more close and more in the way of description than the same part in some of the other handbooks. There is added a separate chapter on the curious guildhall of Exeter town and on the ruins of Rougemont Castle.

Chester, by Charles Hiatt, is the work of a man of judgment, accustomed to weigh carefully the relative value of architectural styles, details of decoration, and the various elements of architectural beauty. The relations of the small and unpretending cathedral to the singularly picturesque town rich in mediæval and Elizabethan architecture, which, though restored almost out of recognition, is picturesque and interesting still, are all perfectly well maintained and insisted on in the text. An additional chapter is devoted to the conventual buildings, and there is a brief account of the former Cathedral of St. John.

The history of the cathedral which in each volume is contained in the first chapter is invariably a narrative of the progress and social development of one little piece of old England. The narrow boundaries of such a realm make possible the treatment which these diocesan records have received. The fact that each chronicler had a great and even an exaggerated notion of the importance to the world of his little piece of history makes that piece of history, as told by him, more entertaining and more useful, nor can we sympathize with that student of history who dislikes these annals of the little affairs of one ecclesiastical establishment and its small town. The history of the diocese, especially so called, which forms the final chapter of each volume, is rather a record of the bishops and their special character and achievements than a general chronicle.

Unforeseen Tendencies of Democracy. By Edwin L. Godkin. Houghton, Mifflin & Co. 1898.

As its title indicates, this volume is principally devoted to the examination of such

tendencies in modern democracies as are not recognized in what Mr. Bagehot would have called the "literary" theory of popular government. This examination, however, is so thorough as to constitute a sketch or outline of the science of politics. It does not comprehend politics as an art, or body of precepts, and the attitude of the author throughout is that of a political philosopher who aims chiefly to record the results of experience. Nothing would have been easier than to point morals and prescribe regimens, but the scientific attitude is consistently maintained, with the result, as we have said, of bringing out the fundamental principles of modern politics.

One of the most important of these principles is that democracies of large size do not demand rulers of ability, at least of statesmanlike ability. The "bosses" to whom these democracies commit their destinies have doubtless much ability of a certain kind. They are undeniably skilful organizers of party forces; they know how to secure the fidelity of a host of petty managers, who can control delegates and manipulate conventions. But they do not even pretend to have any conception of the larger ends of government, or any acquaintance with the lessons of history. They are content if they are able to control appointments to office, and to dictate such legislative measures as are desired by the interests with which they are identified; and the masses are apparently content with such leadership. To use Mr. Godkin's words:

"It must be admitted, even by its warmest admirers, that democracy is not very teachable by philosophers and jurists. . . . Every democracy, too, is weighted by the fact that its new agents are rarely men familiar with public affairs, or with human trials in matters of government. Those of its advisers who are familiar with such things are apt to be hostile or distrustful, and are therefore not listened to with confidence or attention."

While the management of the incapable rulers of democracy is bad and corrupt, the author concedes that the rapid increase of wealth and the sudden development of urban civilization have given democracy problems to solve which the most famous oligarchies never encountered. It would be pessimistic to maintain that democracy cannot solve these problems in time, but the mistake of optimists consists in not allowing time enough; in "thinking that there are short cuts to political happiness." Men must learn by experience, and it is at least conceivable that, after a sufficiently prolonged experience, the common people may recognize the advantages of committing public affairs to statesmen, in which event democracy may succeed as well as any other form of government. At present these advantages are not understood, and the chapter on "The Decline of Legislatures" illustrates very instructively the results of this ignorance. On the other hand, the progress of civil-service reform indicates that the people are not indisposed to correct abuses when the manner of doing so is made plain to them.

The first paper is devoted to a review of the democracies of the past in contrast with our own polity, which traces its ancestry back to Greece and Rome. It would seem from this chapter that the rise of democracy is an inevitable result of the diffusion of intelligence. So soon as the masses of the people are able to take an interest in the conduct of government, they will insist on

having a part in it, and the existence of a cheap press is incompatible with the prestige required by aristocracy. As Mr. Bagot said, the English people were a "deferential" people, and thus the ruling class kept its power; but this country is not now a deferential country. The consequences of this different attitude of our people are worked out in the chapter on "The Growth and Expression of Public Opinion." Attention is called to the necessity of defining how public opinion is to be ascertained, which is only through the ballot or through the newspaper. The ballot, taken only at long intervals and under conditions which obscure the political issues—too numerous to be generally comprehended—is an extremely clumsy and imperfect test of public opinion. A hundred voters may cast the same ballot, but they may have a hundred different reasons for doing so. On the other hand, the day is past when editors anxiously sought to express the political views of their readers, and when many readers took their political creed from one editor. The editors now seek to please advertisers, and readers take many papers, getting but a flabby faith out of them. In fact, most readers are so incapable of or so averse to sustained attention as to be incompetent to form a really intelligent opinion on a question of public policy. But of course neither readers nor editors are apt to acknowledge their imbecility, and the follies of government are the natural result of uneducated public opinion.

The chapters on "The Nominating System" and "American Municipal Government" contain much that is lacking in our systematic treatises of politics. The primary meeting, or caucus, has come to assume "the air of a scheme or device on which the republic rests." Yet it is a novelty, and not necessarily a part of the democratic scheme of government. No one seems to have foreseen or predicted this development of the nominating system, to which we are now so accustomed that we cannot imagine how it could be dispensed with. The abuses which have arisen from it are set forth with much particularity by Mr. Godkin. There is at present no sign of their decrease; but no improvement in government is to be looked for until they are abated. In fact, if they continue, they will change the structure of our government. These abuses have become most flagrant in the large cities, the rulers of which have been selected with reference to their standing in the Federal parties, not to their qualifications as municipal administrators. Here, however, there are signs of growing political intelligence. The number of citizens who ignored party ties and voted for Mr. Low at the last election in New York city was, in view of all the circumstances, encouragingly large. When a generation of voters has been trained to the conception that the administration of cities has nothing to do with the policy of the Federal Government, such movements as that in favor of Mr. Low may end the power of the politicians. But as it is necessary to overthrow them also in the State Legislatures, the struggle will be a fierce one. The plunder of a rich city will not be relinquished merely because the inhabitants of the city demand it. The struggle, however, is sure to come, and those who wish to prepare for it will find in these essays such information as to its conditions as will

enable them to fight not as men beating the air.

The Poems of Shakespeare. Edited, with an Introduction and Notes, by George Wyndham. T. Y. Crowell & Co.

In his edition of Shakspeare's poems, Mr. Wyndham has, for aught we can see, produced a book which all students of Shakspeare must possess, and in which readers for pleasure will take great satisfaction. Not that the editor's work is faultless. On the contrary, being in several respects very ill-equipped for his task, he often disappoints or exasperates, according as, with visible labor, he either fails to illuminate an obscure place or darkens a line which was clear before he touched it. Yet, despite much unevenness and superficiality, he offers so much that is good, and comports himself in so mannerly a fashion, that one finds it impossible not to approve in the main, however one may condemn in detail. Probably, Mr. Wyndham himself would be the last to claim for his editorial work finality, if such a thing is conceivable, or even an approach to finality. It is enough for him, and will be enough for his readers, that he has made an edition of Shakspeare's poems superior in some ways to any that has yet appeared. The total amount of his original contributions may not be large, when all that is wrong, or even all that appears perverse, has been eliminated from the total mass of the notes. Yet something remains—enough, we think, to insure the book an indulgent reception from candid scholars.

Mr. Wyndham's introduction is elaborate, extending to almost a hundred and fifty pages, and it is certainly good reading. Its main purpose, we take it, is to make good the distinction between a poem itself and the actual experience or observation of the poet out of which the poem grew or upon which it was founded. He insists strongly on the axiom that the study of a poem and the study of a poet's autobiography are distinct things; that the poem is valuable not because of the personal experience which it contains, but rather by virtue of the imaginative quality "superadded by the poet." There is nothing new in all this, nor is Mr. Wyndham very clear in his treatment of the subject or entirely consistent in applying his own principles. Yet the discussion is surely worth while. It is exemplary to hear an appreciative and eloquent critic, well acquainted with the details of the investigation, proclaim vigorously that, whatever one may find in Shakspeare's sonnets, the least valuable product that can be extracted from them is the autobiographical element. We could even wish that Mr. Wyndham had gone a step farther—that, in fact, he had proceeded from his disinclination to look at the sonnets merely as historical documents, to a more complete scepticism as to their trustworthiness in precisely that regard. That the step would not have been a long one we must admit, unless we forget that the author of these poems was the greatest of dramatists. And the biographical constructors have had their own way for so long that it is highly important for some protestant to make his voice heard (even if it be a *vox clamantis*). How slight, after all, is the evidential foundation in comparison with the structure which it is made to bear! Mr. Wyndham, we fancy, was very near taking the position which we have just described, if he had not been overborne by the au-

thority of his predecessors. This will account for a certain indecision and incompleteness in his views. Yet he has done good service in prompting us to remember that the subjects of Shakspeare's sonnets are, in essence, love, beauty, death, immortality, and the like, rather than dark ladies and debauched lords.

Apart from these more serious considerations, the introduction is undeniably entertaining. The sketch of Shakspeare's life, of his social and literary environment, and of the manners of his time, is lively and interesting. The author has read widely and attentively, and he has a distinct cleverness in setting forth such things. To be sure, we cannot always vouch for his accuracy. His account of the "war of the theatres," for example, would hardly satisfy a critical historian of Elizabethan Literature. Still, if one can overlook details and read the introduction simply for general impressions, there is much to commend. It would be hard to find a piece of modern essay writing in which certain aspects of the Elizabethan age are so felicitously set forth. To find faults in it would be easy—too easy to be worth doing—and the faults when found would not essentially interfere with one's appreciation of its peculiar merits. Rambling, incomplete, "precious," naïve, inaccurate, out of proportion, are all epithets that a harsh critic might use and justify; but none of them would, after all, touch the point. The introduction embodies certain ideas which need just now to be emphasized in the criticism of Shakspeare's poetry as opposed to that of his dramas. And it embodies these ideas in a form which will, as we think, inevitably give them a considerable currency.

Of Mr. Wyndham's notes it is impossible to speak adequately in our brief compass. He has taken great pains with them and has done his best. The scholar will find in them not only, as we have indicated, a few observations of importance, but also a vast amount of useless and mistaken comment, and a deal of amusing pedantry. Much of this pedantry is of that diverting kind which one always expects when a literary critic, untrained in the niceties of a technical scholarship, undertakes to play the dryasdust. The many quotations from Minshew's well-known dictionary and the long extracts from Guillim's 'Heraldry,' as well as the pitiless discussions on the significance of capital letters, may serve to illustrate our meaning. The technical scholar, however much of a pedant, could never have shown so much pedantry on these points as is exhibited by Mr. Wyndham, whose general tendencies are not pedantic at all. We have made many notes of his errors and absurdities, but these we cheerfully withhold. Some of them, to be sure, are grotesque enough, and some are hardly excusable even in a dilettante. But it is fairer both to the author and to our readers not to insist upon such matters in the case of a book which, despite some glaring faults, everybody who cares for Shakspeare will welcome to his shelves.

The Story of the British Army. By Lieut.-Colonel C. Cooper King, F.G.S., with plans and illustrations. London: Methuen & Co. 8vo, pp. 433.

Col. King's book will be a convenient manual for the same purposes for which regimental histories are useful, but on a broader

scale. It enables one to trace each regiment in the whole British army, in all its service. This is done by noting the designation of all regiments engaged in the campaigns and battles of which an outline is given. Supplementary tables give alphabetical lists of campaigns and battles since 1658, lists of regiments with former numbers and present titles, with order of precedence, their badges, mottoes, and nicknames. The text gives also the history of the changes in armor and weapons from the Norman Conquest downward, with the progress in battle tactics which necessarily accompanied the use of long-range weapons like the bow and cloth-yard shaft, and still more the musket and the rifle.

All this material is connected with an outline history of campaigns and battles in the four quarters of the globe, with appreciative estimates of the great soldiers who have become illustrious as leaders of the British hosts. Although the story must be brief to come within the compass of a single volume, it is judiciously expanded in the more important parts, especially when rapid change in arms or in tactics is going on, or when the strategy of a Marlborough or a Wellington is to be analyzed. The author has had a clear idea of his plan, which has been to fill a place in military literature really open to him; and while limiting himself to a brief treatment of history proper, he has had a keen eye to the favorite anecdotes or exploits of the regiments, so as not to lose the flavor of individuality in the larger treatment.

Colonel King has also shown independence of judgment in his estimates of men, which one is not apt to look for in connection with soldiers' *esprit de corps* when telling the deeds of the leaders of former generations. His handling of Wellington is a good example of this:

"That the 'Iron Duke' had been uniformly, and on the whole extraordinarily, successful, is evident. That he never saw the greatest leaders until he met Napoleon at Waterloo, is equally so. It was for long, and is to some extent still, rank hereby to even criticize his actions. But whatever confidence he may have gained by his imperturbable coolness, he gained no man's regard. The rank and file trusted and believed in him to some extent; but there was not one soldier who would have died with his name on his lips, as many did for his far greater antagonist, Napoleon" (p. 244).

The Duke is credited with patience, perseverance, and sagacity, but not with great strategic insight. That he misconceived the campaign of Waterloo and was out-maneuvred by Napoleon is frankly admitted. In social life he neglected his old comrades, and "the circle in which he chiefly moved was that of fashionable ladies and gentlemen." If recognition of a brilliant feat of arms by a subordinate was likely to suggest criticism of his own management, he would ignore it in his reports, though it were as splendid as that of Norman Ramsay's battery at Fuentes de Oñoro, which Napier gives such a picture of. It reads strangely, too, when we are told that Wellington "was barely on speaking terms" with Picton at Quatre Bras—Picton, who was the hero of that fight, and who concealed the wound he got there only to fall dead when cheering on Kempt's brigade at Waterloo.

The author's literary work is curiously careless. He says of pre-historic men, that "families segregated together and became tribes" (p. 3). "They had at that time, like cavalry always have" (p. 21) is a locution

to be avoided in this country, though we find it in Darwin, and General Gordon used it in his letters from Khartum. A funny ellipsis is that on p. 99: "He was no doubt a 'go-between' the Pretender in France and the few left faithful to him in the north." Other slips are the following: "There was little doubt in his mind but that no serious attack would be made" (p. 215); "Hardly had Wellington returned to England than the corps were disembodied" (p. 233); "No really free nation ever has or ever will accept the fetters" (p. 315); "Semi-civilized man with arms in his hand . . . are not content with looking at them" (p. 320). One rather enjoys the free-and-easy contempt for parts of speech and idioms.

The Bargain Theory of Wages. By John Davidson. G. P. Putnam's Sons. 1898.

The general aim of this treatise is to trace the modifications undergone by the theory of wages under the influence of a broader philanthropy. While it is not altogether true that wages are increased because people think that they ought to be, there is no doubt that the theory of wages may be affected by a livelier interest in the welfare of laborers. As Prof. Davidson shows, the earlier theory of wages was as applicable to the remuneration of slaves as to that of freemen; it was the result of a calculation of what was required, one year with another, to maintain in efficiency a certain number of laboring animals. Hence, Prof. Davidson describes it as a "subsistence theory." With the increased command of nature which marks this century, the remuneration of laborers came to be much more than mere subsistence. The subsistence theory became merely a theory of particular wages, while general wages were explained by the "wages-fund" doctrine. This doctrine Prof. Davidson describes as a theory of the demand for labor—the supply being regarded as fixed, and the laborer merely as the recipient of wages. In his view the theory "stands or falls according to the answer to the question whether the wages-fund is predeterminate and fixed." Into the merits of this vexed question we need not go; but Prof. Davidson states the arguments fairly enough.

What is termed the "Productivity of Labor Theory" was developed as a criticism of the doctrine of the wages-fund. One school has maintained that high wages are the result of efficient labor; the other, that high wages are the cause of efficient labor. According to the latter school it is only necessary to increase the reward of labor in order to increase the general wealth; the former believes in improving the laborer, in the expectation that he will become a greater wealth-producer. Here, too, Prof. Davidson brings out the implications of these theories with satisfactory clearness, and indeed sets them forth with a good deal of originality of statement. He apparently, however, attributes the prosperity following the adoption of free trade in England to the Factory acts; a not uncommon assumption, which lacks proof. The present condition of cotton manufacture in New England indicates that factory regulation does not insure prosperity. In stating what he calls the "Bargain Theory," Prof. Davidson admits that competition is one of the most important factors in determining wages, but lays stress on others, particularly the increase of knowledge among laborers which

enables them to make better bargains. He is of the opinion that the practice of paying laborers employed by Government higher rates than they can obtain from private employers is likely to create a sentiment which will assist the laborer; but why the creation of a favored class supported at the expense of the people should have this result is not made clear. While some of Prof. Davidson's arguments are not convincing, his book is suggestive and deserves the attention of economists.

Speculum Perfectionis seu S. Francisci Assisiensis Legenda antiquissima, auctore Fratre Leone, nunc primum edidit Paul Sabatier. Paris: Fischbacher. 1898.

When the Bollandists were collecting materials for the life of St. Francis of Assisi in the *Acta Sanctorum*, they invited communications from all members of the great Franciscan order. They were rewarded with innumerable dissertations which proved to be of the least possible value, for those furnished by the Observantine branch of the order consisted almost exclusively of arguments concerning the Portiuncula indulgence, while the discussions of the Conventuals bore with similar unanimity on the tradition which represents St. Francis as still standing upright in his tomb under the great church of Assisi. The children of the humble *poorvello* apparently had zeal only for that which made for their profit or glorification. It is not a little singular that it was reserved in our day for a Protestant pastor, M. Paul Sabatier, to revive public interest in the spiritual beauty and loveliness which distinguish St. Francis above all his comrades in the *Menology*, rendering his career the most perfect concrete expression of the teachings of Christ. It is some years since M. Sabatier's *Vie de François d'Assise* deservedly attracted widespread attention by the earnestness and eloquence with which the author set forth the results of a profound study of all the accessible original sources of his theme. Since then he has devoted himself to further researches on the subject, and he now presents us, for the first time in print, with the *'Speculum Perfectionis'*, an account of the saint by his devoted companion, confessor, and secretary, Brother Leo. An introduction of over two hundred pages, an appendix of special studies, and voluminous foot-notes show that all possible sources of information have been laboriously exhausted in the endeavor to throw light on the numerous intricate questions involved.

These questions have been in debate from the thirteenth to the nineteenth century. Although the Order was founded on poverty, charity, and love, it speedily became torn with dissensions of the most virulent character between those who represented the aspirations of the founder as expressed in the Rule, and those who saw in the organization a means of attaining ease and wealth and power. After internal struggles lasting for nearly two centuries, the Order divided into two branches—the Observantines and the Conventuals—hating each other with a bitterness almost incredible, and maintaining their rivalry to the present day. Until the schism was established and recognized, the worldly faction, for the most part, had control of the organization, and it desired to suppress the writings of the immediate disciples of the founder, whose accounts of his unworldliness accentuated the wide depar-

ture that had already occurred from his precepts and example. The general-chapter, held in 1366, accordingly ordered these early writings to be suppressed, and commissioned St. Bonaventura to compile a Life of St. Francis which should be accepted as official. Much valuable material thus was irretrievably destroyed, and what remains was preserved in secret and with difficulty. Portions of it have been seen the light at various times, especially of late years, including a considerable part of the 'Speculum Perfectionis,' in a disjointed and fragmentary condition. M. Sabatier has therefore made a real contribution to the history of one of the most remarkable spiritual movements of the Middle Ages by identifying and printing the 'Speculum' for the first time in a complete shape, and accompanying it with ample elucidations. To all students of the period the volume is indispensable.

Norman's Universal Gambist. By John Henry Norman. London: Biffingham Wilson. 1897.

This is a strange book by a strange writer. It has been said that the only really happy man is he who owns a hobby and spends all his time in riding it, and if this be so, Mr. Norman should be one of the happiest of human beings. Some years ago he professed to have discovered what he called the "unit-of-weight system" of calculating international exchanges, and, ever since, he has been publishing books containing masses of confused and undigested facts and figures which are supposed to be connected with this system. The reader may fail to see the connection, but he cannot fail to be impressed by Mr. Norman's statement that in writing such books he is "simply unweaving that which has been hidden from the mass of mankind." As additional excuses for his literary fecundity, he claims a "lengthened interest" in seamen, sailors, and travellers, and a desire that children should learn the system as easily as they learn geography. We have never come across seamen, sailors, or travellers who could, by any stretch of imagination, be considered likely to profit by such literature; and as for children, they might as well attempt the integral calculus or the poems of Bacchylides.

A few years since we had occasion to criticise a previous book of Mr. Norman's, in which he endeavored, in his incoherent manner, to display the manifold virtues of this "unit-of-weight system" and the method of quoting exchanges based thereon. We informed him that the method had been actually tried in the New York market in 1883, and had been given up, after a week's experience, "because it did not commend itself to those most largely interested in the matter." Mr. Norman reprints our remarks in italics, evidently believing that there must have been a wicked conspiracy on the part of the dealers in exchange to upset his dearly beloved theory. But in this he is entirely mistaken. On the contrary, there was at that time an influential movement in favor of quoting sterling exchange by a discount or premium on the bullion par, and a strong desire on the part of bankers that the change should succeed, and it was abandoned only because it was found inconvenient in practice. In the present book Mr. Norman admits that there are difficulties in his method, and in one passage (which must have been written during a period of temporary and unusual depression) he even goes so far as

to say that "it is doubtful if there will be any immediate alteration in the world's present mode of working and quoting the exchanges." The present mode has been in existence for many generations, is perfectly intelligible to those whose business it is to understand it, and is made practically convenient by elaborate exchange tables. Mr. Norman's theory is, in a certain sense, more scientific, but its practical value depends upon changes in the customs of commercial nations which are not likely to be made.

Dynamic Idealism: An Elementary Course in the Metaphysics of Psychology. By Alfred H. Lloyd. Chicago: A. C. McClurg & Co. 1898. 16mo, pp. 248.

Practical Idealism. By William De Witt Hyde. Macmillan Co. 1897. 8vo, pp. 335.

It is pretty confident to preach such brand-new theory as Mr. Lloyd's, unpassed upon by any jury, as an "elementary course." Far be it from us to pronounce this or that general attitude in philosophy unsound, for nothing is established in that science as yet. The author of this little book at least makes his own position perfectly clear, and develops it with no feeble thought and with an unusual power of compact expression. Whoever succeeds in doing that, in the present unsettled state of opinion, renders a service to philosophy. Though the book shows many marks of digested study of other philosophers, the author does not attain to mastery of his idea. It masters him; it is his element; he fails to comprehend that other minds do not share in it. This fundamental idea is nothing new or rare. Outside the garden where philosophers converse, it is the common opinion. Namely, it is, that Doing is higher than either Being or Knowing, and necessarily includes them both. So axiomatic does this seem to Mr. Lloyd that he is capable of such assertions as this: "Science is never only for science's sake. Men have often appeared to think that science as a body of knowledge was its own end, but obviously to think so long is quite impossible." Now, as a matter of historical fact, real scientific men, in every age when science has been animated by a vital spark, have one and all pursued science for its own sake. Of a piece with that, is Mr. Lloyd's claiming the support of Aristotle, whose *ἐνέργεια ψυχῆς* is a development of Being, and not a mere Doing, and who might probably have said: "Doing is never for doing's sake. Obviously to think that it is so for long is quite impossible. Doing for doing's sake is what we call pastime; it cannot form the staple of life." Do not let us be understood as arguing the question; we only point out how immersed the author is in his own mental element.

This leading idea, taken in itself, is nothing but the usual Philistine apotheosis of brute force. It naturally allies itself with dualism, since an action is essentially an accident of two individual things. And accordingly we find that all philosophers who have adopted it have been given to abrupt distinctions between pairs of opposites—such as right and wrong—to the neglect of any gradation from one extreme to another. Yet the elaboration of the idea has by no means always been so homogeneous as to include a belief in the duality of body and soul. On the contrary, no philosophy ever appeared more satisfactory to the class of minds who are attracted to this idea, or was more

thoroughly believed in by matter-of-fact respectability, than Stoicism, which moulded this principle into a system of the most wooden materialism. Stoicism, we can hardly doubt, has been secretly entertained by millions throughout the Christian era—at any rate, down to the introduction of ether and chloroform. Their conduct is not otherwise explicable.

But to-day we live in an age whose prevalent spirit is intensely idealistic, even verging upon the mystical; and in a forest it is impossible to look far over the general level of the tree-tops. And so, in this book, we find the deification of force clothing itself in a "Dynamic Idealism." It is a strange phrase, a wondrous seething snow. It accurately names an emulsion of philosophical opinions that one would not have believed could ever be worked up into so homogeneous, substantial, and inviting a mayonnaise as Mr. Lloyd has managed to compound. The philosophy in its entelechy is as far as possible from deserving the disparaging epithets we apply to its first principle. Not only will it not be affectioned by the philosophically unregenerate, but it may be doubted whether even the élite will be able to accommodate themselves to it.

New systems of idealism nowadays get patented in such swift succession that novelty's self has long ago worn out its novelty. But this little book, it must be confessed, has something of the interest of a novel; for the reader's curiosity becomes whetted to learn by what surprise Mr. Lloyd will bring about a marriage between Dynamism and Idealism. In the first place, in order to detach Action from its inherent bruteness and impart to it an intellectual character, he defines it as relation—not relation such as our minds confer at will, but relation in the very real fact itself. Undoubtedly an action is a pairing *in re* of two things. It must also be admitted that nothing has an intellectual character except relations. Some readers may suggest that those relations which are intellectual are not mere pairings, but rather mediations—that is to say, gatherings of threes, or, in Aristotle's language, syllogisms. Mr. Lloyd, however, does not notice this objection, and our purpose is only to sketch the contents of the book, not to criticise it. But, having thus described action as relation *in re*, or real pairedness, and having identified this pairedness with the mind, Mr. Lloyd seems to be as far from monism as ever; for are not the things paired one thing, and is not the pairing of them an accident over and above their matter? To avoid this result, Mr. Lloyd, as a second step, denies the separate existence of the correlates paired. According to him, nothing really exists but pure pairedness (his word is *relationship*) without any pairs of objects to be paired. That this doctrine must be classed as Idealism is beyond dispute. Its upshot resembles Hegelianism. Here, then, is dynamic idealism. For all details we must recommend the reading of the volume, only copying the brief summary which the author prints over against his title-page: "Relationship among things is the criterion neither of a life nor of a mind that exists apart from the substance of the universe. It is, however, the criterion of substance itself, and as the central truth about things it bears this witness: *The universe itself lives; the universe itself thinks.*"

Calculated for the meridian of Chautauque,

Mr. Hyde's 'Practical Idealism' is a manual of wholesome sentiments forcibly put. "Its practical aim precludes the discussion of ultimate metaphysical problems." That is to say, it is not scientific. At the same time, it was requisite to strengthen the heart of the semi-student by making him feel that he is studying philosophy. The author says that "philosophy is . . . tempted to forsake her mission as . . . guide to noble living, for the . . . technical craft," etc. In short, readers are taught to believe that Aristotle's great conquest for speculative science, in separating it sharply from questions of conscience and the like, was a great mistake and ought forthwith to be surrendered. Precisely that defines the efforts of the philosophical reactionists of to-day. As far as science is concerned, every shot they fire will fall harmless to the ground. But what their effect may prove to be upon the life and morals of their adherents, will depend upon the wholesomeness of calling that scientific which is not scientific. Were "practical idealism" plainly to confess itself to be no more than good wholesome feeling, sanctioned by the experiences of millennia, its practical aspects might be far more satisfactory than any scientific, and therefore merely provisional, hypothesis could be.

To mingle the two—philosophy and practical wisdom—is to invite vagueness and confusion, such as we here see, where the conflicting logical principles of Mill, Jevons, Sigwart, Bradley, are jumbled together, where calling pure sensation a "continuum" is said to mean precisely the same thing as calling it a "confusion," and where the reasoning of Socrates in the 'Gorgias' is held up to admiration. Some of his criticisms of psychologists and logicians will give more aid and comfort to those who wish to separate speculation and conduct than the author seems to be aware. We believe that, in the long run, it will be found dangerous to teach Chautauquans that they are to "guide their conduct" by what may recommend itself to them as philosophy.

From Tenkin to India, by the Sources of the Irawadi, January, '95-January, '96. By Prince Henri d'Orléans. Translated by H. Remt. Illustrated. Dodd, Mead & Co. 1896. Map. Pp. xii, 467. Large 8vo.

Recent events have given a timely interest to this attractive book. The region of which it treats is one of the three provinces which France, in her latest demands upon the Chinese Government, claims should be regarded as exclusively under her influence. But not only are English interests in Yunnan more important than those of the French, England has done vastly more to develop commercial intercourse between Burma, India, and Yunnan than France has between Tenkin and this province. The Burma railway, for instance, has nearly reached the frontier, while France still only contemplates building one. As the possession of Yunnan is therefore not unlikely to prove a bone of contention between the two nations in the not distant future, Prince Henry's account of a part of the disputed region, its resources, and the character of its inhabitants has a distinct value apart from its geographical and scientific interest, which indeed is not slight, for out of the two thousand miles which he travelled, fifteen hundred were through entirely new country.

His main object was to complete the ex-

ploration of the Mekong by tracing its course from the northern boundary of Laos to the Tibetan frontier. In this he was only partially successful, for though he ascended the right bank for nearly six hundred miles, it was at such a distance from the river that its precise course is still uncertain. He found it to be a mountain torrent on a grand scale, and impracticable for navigation. The country was divided by numerous high ridges, each with its stream, making progress excessively difficult. "We changed valleys every day, and were continually ascending and descending" by mere mountain paths, and crossing the streams by fords or perilous bamboo bridges or cables. The inhabitants were few in number, consisting of small mutually hostile tribes and speaking a strange variety of tongues. On one occasion, as his little party were seated around the camp-fire, he found that they "were trying mutually to converse in nine different languages," Chinese, Tibetan, Mosso, Lissu, Lutse, Thai, Singpho, Mishmi, and Hindu. He had little opportunity for exploration, so that beyond the general features of the country traversed and a few facts in regard to the people, he adds little to our knowledge of it. In its present condition, however, it is evidently worthless as a market for French or English goods, while of mineral wealth there are few indications.

On reaching the Tibetan boundary, Prince Henry turned westward, and made his way with great difficulty into Assam, the first European to do so by the most direct route, since the Indian Government prohibits English exploration in this region, for fear of political complications. The country was far wilder even than that of the Mekong valley. Seventeen distinct ranges of mountains were crossed in a distance of about 100 miles as the crow flies, one of the passes being 11,500 feet high. Roads, in the true sense, there were none. The party scrambled along delicately on hands and feet, climbing rocks by notched trunks of trees, crossing torrents by means of cane bridges "on which one hangs in a kind of hoop and propels one's self along with feet and hands." To these difficulties were added such scarcity of food that, for the last few weeks, it was a literal "flying from death" by starvation. Under these circumstances our author's remark is abundantly justified, that for the present this highroad from China to India "has small chance of becoming an artery of commerce."

The features of the country throughout nearly the whole journey were so similar—"always the same wooded mountains, with their deep valleys, at the bottom of which flow large torrents of deep blue water"—that there is naturally little variety in Prince Henry's narrative. The people seemed to differ only in their tribal names and languages. They exhibited the same generally repulsive characteristics, with the exception of such as had been under the influence of the French missionaries. The success of the expedition was due wholly to the aid given by native Christians, and especially by the interpreter Joseph, who knew no French, but conversed fluently in Latin. Little reference is made to the geographical results of the expedition, which were of some importance, mainly in the final settlement of the once vexed question of the sources of the Irawadi. The interest of the Prince was shown chiefly in collecting facts in regard to the language and literature of the people. He brought back a number of manuscripts as well as

specimens of their folklore. In one of the stories, Deer Rabbit victimizes the fox and the bear by his cunning. In appendices are given vocabularies of thirty languages or dialects, copies of several manuscripts, together with lists of the natural-history collections and the geographical and route observations of the Prince's companion, Lieut. Roux.

The translation is fairly well done, though there are occasional marks of carelessness—for instance, in this sentence on page 267: "I believe a cataclysm would not shake him out of a casualty greater even than an American's." The illustrations, especially those of the natives and their houses, are generally well chosen and interesting. Of Prince Henry himself we may say that in this journey he encountered successfully dangers and obstacles of no ordinary kind, and that he showed much pluck and cheerful endurance of great hardships. He was also a good leader, patient with and careful of his followers. In a word, he has some of the essential qualities which go to make an explorer of the highest rank.

The Nation.

NEW YORK, THURSDAY, JUNE 23, 1898.

The Week.

Under ordinary circumstances the fact that the committee on banking had reported a bill reforming the currency would excite universal interest; but more dramatic events now absorb popular attention. Nevertheless since 140 members of the House of Representatives have recorded themselves in advance in favor of the action of the committee, we can feel that a positive step towards reform has been taken. The bill reported is not an ideal measure, but it has the cardinal virtue of providing for the elimination of the notes of the Government from circulation. The place of this paper money will be taken by gold and silver coin, which will be legal tender, and banknotes, which will not. The bill has been carefully framed so as to prevent any contraction of the currency. The expansion of the bank issues balances the withdrawal of Government paper, and as this paper disappears the stock of gold held by the banks must increase. This throws a considerable burden on the banks; but if they assume it, which they will be strongly moved to do, the burden is removed from the Government. Under normal conditions we might have anticipated that a measure of this kind would in a few years put an end to our currency troubles, but the cost of the war may be so great as to disarrange all calculations. As it is, the need of such a measure is the more urgent, for it will be a great safeguard against the inflation measures which are sure to be proposed. The power to issue short-time notes just conferred on the Treasury is a gain worth almost as much as the cost of the war hitherto, and if McCleary's bill becomes law the credit of the Government will be put on a firm foundation.

The bankruptcy bill has been so long before Congress that, like the French spoliation claims or the Bering Sea awards, the public has forgotten the points at issue. Not to mince matters, we may say that the quarrel has really been between the representatives of the "debtor class" and those of the "money-power." The States have no power to absolve any man from the payment of debts due to non-residents. They may, unless prevented by the action of Congress, arrange for the distribution of a debtor's assets among his creditors; but after that is done the debtor remains liable for any deficiency, and property acquired by him thereafter belongs to his creditors until they are

paid. By the Constitution, Congress is empowered to enact bankruptcy laws which actually cancel all debts. On surrendering his property the debtor is discharged from all his liabilities, and whatever property comes into his possession thereafter is free from the claims of his creditors. It is evident that a law of this kind may be grossly abused, and there were many scandalous cases under the old law. Having obtained their discharge as bankrupts, men frequently started in business afresh with capital which they had fraudulently withheld from their creditors, while the creditors were impoverished and ruined. Conservative business men in Congress therefore insisted that debtors should not be granted their discharge in bankruptcy on their own application if they had been guilty of any fraud or had preferred any creditors; while the friends of the debtor class struggled to prevent creditors from having their debtors thrown into bankruptcy. The conferees of the two houses of Congress finally agreed on a definition of insolvency which enabled them to adjust their other differences. At common law a man is insolvent when he cannot pay his debts at the time when he promised to pay them, but by this statute insolvency results only when the debtor's property is ascertained to be less than his liabilities.

From the summaries given by the press of the provisions in the new revenue bill for the taxation of legacies and successions, and, indeed, from the wording of these provisions, it might be supposed that property passing from husband to wife or from wife to husband was exempt. The discussion in the Senate, however, made it clear that the transfer must be direct in order to claim exemption. A bequest in trust for a wife or a husband would be taxable, and apparently at the highest rates, from 5 to 15 per cent., according to the size of the estate. It should be understood, also, that the amount of the legacy is immaterial. A legacy of \$100 is taxed, provided the personal estate from which it comes exceeds \$10,000. Nor should it be forgotten that, under the decisions of the courts of New York, the personal property of a non-resident found within this State after his death is taxable here, even if it is taxed by the State in which he was domiciled, so that in such cases three inheritance taxes would be collected from the same estate. According to the reasoning of the courts, it would seem that Government bonds are not exempt from this tax when imposed by the States, and the act does not appear to exempt them from taxation by the general Government. This results from the doctrine that a tax of this kind is not a

tax upon property, but on the right to acquire property from a deceased person—a right which is declared to be not a natural right, but one conferred by Government, and subject, therefore, to its regulation. On this ground Senator Spooner expressed very grave doubts as to the power of the general Government to impose the tax, since the right of inheritance is conferred not by it, but by the State governments. The character of the discussion in the Senate was not such as to throw much light on this point, the only argument advanced in support of the tax being that as rich men did not pay taxes on their personal property while they lived, some one else ought to when they died. Legacies to religious or charitable corporations are, as a correspondent well shows on another page, subject to taxation at the highest rate.

A very surprising feature of the new revenue bill is the doubling of the tax on beer. Scarcely anybody expected that Congress would ever adopt so simple, practicable, and just a way of raising over \$30,000,000 additional a year as was afforded by making the tax on malt liquors \$2 a barrel instead of \$1. The reason for this general incredulity was the fact that the brewers have always had such a tremendous "pull" at the national capital that neither party seemed to dare to oppose their demands. Apparently, the brewers were as much surprised as anybody else at this display of courage on the part of Senators and Representatives. The thirteenth annual convention of the United States Brewers' Association opened at Atlantic City last week, and the report of the publication committee contained the significant recommendation that "it is about time to reestablish systematically and maintain the personal relations which have in former years existed between the brewers and their representatives in Congress, and to see to it that an industry now paying \$34,000,000, and soon to pay \$68,000,000 into the Federal Treasury, be not left to the mercy, the caprice, the whim or notion of irresponsible servants of the people."

It appears, from the statistics presented at this convention, that the brewing industry has not been so prosperous as usual of late. The President reported that "depression of trade was very marked for the year ending June 30, 1897, showing itself in a decrease of the consumption of malt liquors." The total output for all the breweries of the country during that year was 34,423,094 barrels, which the Prohibitionists will hardly regard as a small total, but it was 1,402,999 barrels short of the production

for the previous twelve months, and that, too, in spite of an average reduction in price of \$1 per barrel during the latter period. The extra tax of \$1 per barrel is to be added to the existing selling price, and this policy was commended by the President as a wise measure of resistance to the tendency towards making cheap and consequently inferior beer, which tendency, if continued, "would be the strongest argument that prohibition agitators could use against the use of beers." The brewers have outgrown the old "home market" theory, and pride themselves upon the fact that "American beers have won favor in many foreign lands, and perhaps the best proof of the preference given to our product lies in the fact that in countries where brewing is just being introduced, as in Japan, for instance, the American system is invariably adopted." In order to improve their opportunities abroad, they will seek a refund of the \$2 tax on every barrel exported, as well as of the duties paid on all imported materials, including bottles, corks, and tinfoil; but, "owing to the many important matters which claim the attention of the Federal Congress, an appeal to the lawmaking power does not appear advisable at the present time."

Is it desirable to initiate a policy of annexing distant islands by "flagrant executive usurpation"? It would be well to have some pretty distinct expressions of opinion on that question, even if it consumes much time. We are supposed to be committed to the "Monroe Doctrine," according to which European Powers are not to meddle with American affairs, nor we with those of another hemisphere. Is it not true, as Senator Morrill said on Monday, that

"the formal annexation of Hawaii, under a one-man power, under a republic in name, or whatever form of governmental experiment we may choose or be compelled to prescribe, will advertise the final wreckage of the 'Monroe Doctrine,' so long held dear by the American people. We cannot afford to denounce and forbid all acquisitions of territory in the western hemisphere by European governments, even at the peril of war, and forthwith embark in this enterprise ourselves. If we would have our yet unstained doctrine respected by others, we must scrupulously practise what we preach."

It is no reply to these grave words to say that "we scorn to consider the consequences of annexation."

There is evidence that somebody is taking great pains to see that no Republican platform this year shall lack one plank. The Illinois convention of the party had no views to express upon the question of annexing Hawaii, and the Kansas convention was silent regarding the wisdom of retaining any Spanish territory which may come into our possession, as the Pennsylvania convention had been a little earlier. But

all three conventions had something to say on the subject of the Nicaragua Canal, and there is a significant resemblance between the different resolutions. Quay's convention declared that "the present war has demonstrated beyond question the imperative necessity of this canal for purposes of national defence, and for the development of our foreign and domestic commerce, and we call on Congress to push this work as speedily as possible." The Illinois Republicans resolved that "we are in favor of the early construction of the Nicaragua Canal, and its control by the United States Government, as the present war has demonstrated its great necessity." The Kansas convention put it in this way: "We believe that the necessities of war have supplemented the arguments of peace, and that the Nicaragua Canal should be built as speedily as possible." How did it happen that platform-makers in three States, who do not seem to have been especially alert regarding other issues which engage the public thought, should have been so much impressed with the importance of the Nicaragua Canal? Could the Hon. Warner Miller throw any light upon this interesting phenomenon?

A second Governor in the South is going to appoint negro officers to command negro troops. The first was the executive of North Carolina, and his action was not surprising, because he owed his election largely to the negro vote, having been chosen as the result of a fusion between the Republicans and Populists. But Gov. Tyler of Virginia is a Southern Democrat of the strictest sect, and it is a notable event when such a man gives commissions to black men. Two battalions of colored troops in Virginia, having been recruited up to the required numbers, will be turned over to the United States Government as at present organized. Gov. Tyler holds that the colored companies, being organized under the same laws as the white companies, and their officers having passed all examinations creditably, are entitled to the same privilege accorded to the white companies—that of having officers of their own selection. The *Richmond Dispatch* says that, after earnest thought over the question, Gov. Tyler "is thoroughly convinced that to pursue any other course than the one he has marked out for himself would be a violation of his oath of office, wherein he is pledged to make no discrimination on account of race or color." The *Dispatch* dissents from the view that this course is required by either sound public policy or the laws of the land, but it readily accords to the Governor sincerity of motive and conscientious desire to do his duty as he understands it, and adds that "this is a case where no one can suspect him of bending his opinion to gain popularity." Now that this ques-

tion is settled, the Richmond editor expresses the hope that the President "will see to it, as he has said that he would, that the negro troops are kept separate and apart from the white troops as much as possible."

The violent fluctuations in the price of wheat caused by Mr. Leiter's speculations did not occasion similar variations in the retail price of flour, and probably affected the price of bread even less. Bakers and dealers in flour expected the excessive price of wheat to be temporary, and in most cases found it unnecessary to raise their prices to anything like a corresponding extent. Probably the mass of the people in this country who obtain their bread from bakers were unaware that they were paying more for it. This is principally owing to the fact that bread is here sold at a certain price per loaf, the weight of the loaf not being precisely determined. In England the weight of the loaf remains unchanged, while the price varies. It would perhaps be repugnant to our prejudices to buy bread by weight, since lightness is itself a desideratum; but the English custom has its advantages for statistical purposes. From a recent report of the dealings of 74 of the most important coöperative societies, it seems that between April 5 and May 10 of this year the average price of the quarter loaf rose from 5.81 to 6.70 pence. In 1893 the price was 4.79, and it fell in 1896 about a half-penny. In September, 1897, it had risen nearly 1½ pence, and since then has gone up a penny more. The returns are surprisingly uniform in the different parts of the country, and follow the variations in what may be called the normal price of wheat rather than its fluctuations in speculative markets. Probably the weight of our bakers' loaves, which have not varied in price, would show corresponding fluctuations if we could register them.

Judge Garretson's decision in the case of the Brooklyn Bridge Commissioners who were removed from office by Mayor Van Wyck, while not final, is likely to be a great shock to the learned Whalen, who told the Mayor that he had the power to remove the Commissioners and put good Tammany men in their places, whereupon the Mayor, whose faith in Whalen is beautiful to look upon, tipped them out without ceremony, and appointed as their successors some Tammanyites who took possession of the places, also without ceremony. Now Judge Garretson decides that the Mayor had not the power to do this, that consequently the Commissioners have not been removed, and that consequently the Tammanyites have no claim upon the places, and cannot either exercise the duties of Commissioners or draw salaries as such. This will prevent the Comp-

troller from paying them salaries, for he must do so at his personal risk. The question will be carried to the Appellate Division, and thence to the Court of Appeals for final decision, and in the meantime the work of the Commission will be at a standstill. There is an expenditure of \$7,000,000 involved, and, pending final decision, Tammany fingers must be kept out of this. In case the Court of Appeals sustains Judge Garretson, the Aqueduct Commissioners and the Shore-Road Commissioners, whom the Mayor removed also on Whalen's "opinion," will be reinstated. It is a distinct flaw in the powers of Whalen that he is not actually what he claims to be and what the Mayor thinks he is—a court of last resort. So long as he can be overruled by the courts, his "place" affords a very contracted field for his talents.

Spain's plight in the Philippines is a sufficient commentary on the nature of her rule there. At the very moment when she is pressed by a foreign foe, her subjects rise against her, her native troops revolt and shoot their Spanish officers, and the whole Spanish power in the islands crumbles before a single American soldier arrives. What frightful misrule and mismanagement all this argues. England has no braver or more loyal soldiers than her Sikhs and Ghurkas and Sudanese. She has known how to consolidate her colonial power through conciliating and educating the natives, while Spain is but reaping in rebellion and massacre what she has sown in neglect and oppression. Our own Philippine problem is in some respects greatly simplified, in others made much more awkward, by the successes of the insurgents. Military occupation of Manila will apparently be easy enough, if, indeed, the city do not surrender before our troops appear. But what are we going to do about the natives? What are we going to say to the independent republic which Aguinaldo may have all set up by the time Gen. Merritt gets there? Shall we not be bound to recognize it as the free choice of the people, and order our soldiers to salute it with one rousing volley and then sail for home? Our unselfish zeal for republican institutions is evidently taken in sublime good faith by Aguinaldo. He has sent special invitations to the Americans to be present when his declaration of independence is read. After the insurgents have driven out the Spaniards, will they have to turn their guns against American tyrants?

The Paris *Temps*, which certainly has title to speak as a friend of Spain, inflicts upon her faithful wounds in its issue of June 11. After reviewing the course of events since war was declared, showing how Cervera's admired tactics have ended by putting his squadron out of the account as truly as if it had been sunk, and how the military situation of

Spain grows worse from day to day, it tells the Spanish Government that it must abandon its preposterous illusions about "the fatal issue of this unequal combat." It is time, says the *Temps*, for Spain to face realities, grievous though they be. "It is time for some one to have the courage to utter the necessary word and to say that peace must be made, and that the longer it is deferred the more cruel will be the sacrifices required." Such a counsel of despair, echoed as it is in so many parts of Europe, even in those most friendly to Spain, must have a tendency to hasten the awakening of the Spanish Government and people to the inevitable.

According to the London *Statist* the returns of the Bank of Spain, beginning with April 2, have been as follows (in millions):

	Gold.	Silver.	Total reserve.	Circulation.	Excess over 1/2 of notes.
April 2...	240,778	267,865	508,643	1,276,862	83,022
May 7...	245,838	146,513	392,351	1,807,308	*43,418
May 21...	245,838	115,122	360,960	1,809,881	*75,667
May 28...	245,838	108,344	354,182	1,805,187	*80,874

*Deficit.

It will be observed that since May 7 the amount of gold has remained a fixed sum, 245,838,000 pesetas (about \$49,000,000). The silver reserve has fallen since April 2 from 267,865,000 to 108,344,000—a decline of over 159,000,000 pesetas. This means that the holders of the notes have been presenting them and drawing silver, lest the Bank should suspend cash payments altogether. Notwithstanding this fact, the Bank's circulation has increased by 28,000,000 pesetas, and its legal reserve now shows a deficit of 80,874,000 pesetas. The 28,000,000 of increased circulation, plus the amount presented by the public for redemption in silver, making a total of 187,000,000 pesetas (\$37,400,000), has probably been advanced to the Government on the security of the new national bonds. The fact that the gold in the Bank was a fixed quantity during the whole month of May suggests that it may not have been in the Bank's vaults at all, but may have been in the vaults of some foreign bank or banks for the purpose of meeting the coupons of the Spanish fours held abroad, one of which falls due on the 1st of July. If so, that fact will appear in the first statement of the Bank after the end of the present month.

From the results of the German elections thus far, the Emperor will derive little satisfaction. The Socialist vote has increased, so that it is now reported as above 2,000,000, and the chances are that the Socialist strength of 44 seats in the last Reichstag will be considerably increased in the new one. The Centrists, or Clerical party, have also gained in votes and in representation, but that will give neither pleasure nor strength to the Government. The Cleri-

cal position was defiantly stated by the Clerical leader Dr. Lieber, in an election speech. He said:

"We are often called the Government party. We are not the Government party, but we have become the governing party. This was due to our own abilities, to the unskillfulness of our opponents, and to a decisive change in the views of the Imperial Government, which determined to carry on the affairs of the country with the aid of any political party which from time to time might suit its purpose."

With a haughty party like that controlling more than one-third of the Reichstag, and with the Social-Democrats gaining strength at every election, it is no wonder that Emperor William is disgusted with universal suffrage, and is reported to be reviving a plan to restrict it.

It is pleasant to hear of reform in China, and if the term has not precisely the same meaning as with us, we should not be surprised, for China is unlike the rest of the world. The nucleus of the new movement is said to be "a formidable organization of progressive Chinese"; the movement itself is partly progressive and partly retrogressive. The progressive part looks to the introduction into China of patriotism, which is admitted, "in view of the fact that our territory is daily sliced away," to be much needed. For this purpose patriotic clubs are forming everywhere, at which the literati make addresses on texts "relating to the preservation of the state, the religion, the people, and the race." The organization is said to be "copied bodily from the method of the missionaries in spreading Christianity," but this statement refers to the machinery of its propaganda, not to the doctrine preached, which is in substance a demand for "freedom for the persecution of foreigners"; it being felt by the more thoughtful Chinese that, without this liberty, patriotism to the Mongolian masses is not likely to be altogether intelligible. The dual character of the movement, however, creates a difficulty with the official class, who are in favor of patriotism, but cannot encourage the persecution of foreigners by the reformers without getting into very serious trouble with the "slicing" Powers. Accordingly, the Governor of Hunan, in reply to a patriotic demonstration from the literati, has been obliged to announce that he cannot countenance riots "bringing on the seizure of Chinese territory," and that if the candidates for examinations persist in rioting, he will bring them back to a sense of "scholarly decorum and civilized conduct" by petitioning the throne for leave to "close the examination halls." This in China is a terrible threat, and consequently there is some doubt as to the result; if the advanced Chinese have their way and succeed in establishing patriotism in China, they will, as the hustler said of culture in Chicago, "make the old thing hum."

WAR PROSPECTS.

Secretary Long is reported to have said on Sunday that the present week would probably be the most important of the war. This does not necessarily mean that the Administration expects to hear of the fall of Santiago this week, or that Admiral Cervera's ships will be captured or destroyed before next Sunday. But our troops will have been landed, their plan of operation made plain, the situation at Santiago clearly developed, and the steady closing in of our superior force upon the doomed city will have begun by land and sea. It seems reasonable to hope, therefore, that, though Santiago may not be taken and Cervera beaten in six days' time, both those results will be demonstrably within our reach.

Both those results are, in fact, already regarded by European military authorities as foregone. Even the Spanish Minister of Marine, if we may credit a guarded remark of his, considers Cervera's position hopeless. But there seems to be a certain perversity or obtuseness in the view of the *London Times*, cabled on Monday, that "no direct military object will be gained by the capture of Santiago." What it means is, no doubt, that Santiago is an isolated position, and that it might fall without seriously affecting the Spanish military strength in Cuba. But, on the other hand, it is precisely this fact which constitutes the importance of the Santiago expedition. Granting that our army is not yet ready to move in force against Blanco, what greater piece of luck could there have been for us than to have a body of 10,000 or 15,000 Spanish troops cut off from communications or reinforcements in Santiago, and a trapped squadron in the harbor? It was one of the happy accidents of war, of which skilled commanders know how to take advantage, and our war board saw and seized the opportunity with commendable promptness. Spain may still assert that it is naught, but if 15,000 of her soldiers are put out of the reckoning, if her flag is swept from West Indian waters, and is left unable ever to return thither, how can it fail to be anything but a great disaster to her, or to prove to us a "direct military object" of the highest importance?

As we are fighting not for the sake of slaughter, but to secure peace as speedily as possible, every hint or sign of Spain's being willing to make terms must be regarded as having a direct bearing on the war. Quite the most significant of such signs is the manifesto of the Barcelona merchants, reproduced in the Madrid press. This set forth the certain ruin which the war was bringing upon Spain, and appealed to the Government to agree to "amputation" (that is, surrender of Cuba) in order to save the patient's life. Now Barcelona and Catalonia in general have been the stout-

est defenders of the policy of retaining Cuba at all hazards. They have, perhaps, a greater direct interest than any other section of Spain. Catalonia is a hive of industry, and her manufacturers have made fortunes out of the Cuban trade. Even the three years' war to retain the island has not seriously impaired their prosperity, as supplies and equipment for the army have kept the factories going. But now the Barcelona merchants see the inevitable end of all, and cry out for the Government to save what may yet be saved out of the wreck.

Another influence apart from direct fighting which makes for peace is the final disappearance of the illusion that Spain has anything to hope from foreign intervention. This illusion she has hugged from the beginning, and latterly has seen all sorts of bubble hopes floating before her eyes in the shape of German interference with our projects in the Philippines. But the last of these has now burst, and again the Spanish press is bitterly remarking that it is evident Spain must depend upon her own resources. That the Spanish Government should ever have hoped for any other issue of her diplomatic negotiations is only another proof of the fatal inability of Spain's public men to get into touch with the practical forces that control the world. Fine sentiment and flowers of rhetoric do not make international alliances. From the first it has been clear that no nation on earth would willingly meddle in our quarrel with Spain, and her rhetorical and visionary diplomats have found out, through painful disappointments, what they should have known from the beginning.

Any other nation, in Spain's place, would sue for peace. But Spain is unlike any other nation. Any other nation would not have gone to war as she did. Her Government as well as her people seem to be actuated by motives quite unaccountable to ordinary rulers and mortals. Napier, in his history of the Peninsular War, recounts the vexations of Wellington in contact with the peculiarities of his Spanish allies. Of one Spanish general he says that his action, on one occasion, would have been treason in a man of another race, but in a Spaniard it was only a vagary of the kind to be expected. Here is the difficulty in all reasoning about Spain's being bound to ask for peace before long. Those who know Spaniards best are the slowest to predict what they will do, in any given circumstances, except that it will be something whimsical and absurd. Thus, while justified in hoping that the financial and military and political embarrassments of Spain, all thickening upon her, may lead her to surrender without fighting to the bitter end, our Government will not be justified in omitting any preparation or effort that would be necessary if it were

certain that Spain would fight to the bitter end.

A "DARK SUPERSTITION."

Hawaiian annexation, for which the House voted so strongly on Wednesday week, is now admitted by both its friends and foes to be but a letting out of the waters. If we take Hawaii, we take the Philippines. Once hoisted over those, our flag is then to fly over the Caroline Islands, and, of course, the very name of the Ladrões (robber islands) will impel us to take them next. That may content us for a time as far as the Pacific is concerned, but in the Atlantic, as Mr. Dolliver frankly avowed in the debate, we are to seize and keep Porto Rico and Cuba, and it will be strange indeed if that badly governed and inviting island lying between the two, San Domingo and Hayti, does not follow them under our flag, as a writer in the *Contemporary* asserts that it will. Such, then, are the present modest limits of what is variously called the "imperial policy," "commercial expansion," and "colonial aggrandizement."

This momentous change of policy we are urged to enter upon largely by arguments drawn from the experience of England. Great Britain has colonies, is an empire, is rich and powerful; ergo, if we would be rich and powerful, we, too, must have colonial possessions. There are many ways of replying to this reasoning. Perhaps as good a way as any is to cite what Englishmen themselves have said of the colonies as the source of England's power. A private letter of Disraeli's has lately come to light in which he spoke of the colonies as a millstone about England's neck. Lord Salisbury only a few weeks ago warned the Lords that the strength of England was already dangerously taxed by her foreign dependencies. Mr. Chenery, long editor of the *London Times*, declared of the colonies: "They are not feeders, but suckers." So much for Conservatives—the Imperialists of Imperialists. What John Bright thought of the colonies, and particularly of "imperial federation," may be put in a phrase of his own. He said in 1884 that the ideas then afloat on the subject were "equally visionary and valueless." But the great Liberal statesman remains to be quoted. Mr. Gladstone said in 1894, as reported by the Hon. Lionel Toller-mache:

"I have always maintained that we are bound by ties of honor and conscience to our colonies. But the idea that the colonies add to the strength of the mother country, appears to me to be as dark a superstition as any that existed in the Middle Ages."

A superstition may be defined as a belief based on no evidence, or in the face of evidence to the contrary. Such, we submit, is the belief of which profession is made by our annexing Congressmen. All their arguments, so far as they are

not mere delirious shouting, come down to this: We must take Hawaii and all the other islands on which we can lay our hands in peace or in war, for the sake of increasing our trade and increasing our power. That annexation will do both, the gentlemen advocating it assert. Like one of Mr. Cable's impetuous Creoles, they swear it, they are sure of it—in fact, they think so. But even if 209 members of the House believe a thing, it is not necessarily so; and if they believe it without reason, in the teeth of reason, they are the victims of as dark a superstition as any they mean to annex along with Mauna Loa.

It is rather a weariful business to go over the facts about England's colonial trade. But take a single instance which may win attention: British merchants control the trade of the Philippines. They have won this with the islands under Spanish sovereignty. It would thus appear that England can increase her trade with other countries' colonies. She does not need to own or govern an island in order to trade with it. And is she in the slightest degree anxious about the possibility of the United States taking away the Philippines from Spain? Emperor William is reported to be concerned about the peril to German interests in Manila, but nobody hears of Great Britain lifting a finger. She knows that her merchants will keep the Philippine trade as they got it, no matter who owns the islands, by attending strictly to business and having goods to sell which the natives want. Any merchant of any nationality can do this in any of her colonies, and that is all she asks—a fair field and no favor. As for our sudden discovery that we need colonies in order to get foreign trade, it is a little late. We have already got the trade. Without a single island to our name, our exports, even of manufactured goods, have been increasing enormously from year to year. At the very moment that the Secretary of State congratulates Congress on our having the markets of the world at our mercy, Congress is arguing away for dear life that we must have colonies or we shall never sell a dollar's worth abroad. That is superstition, but it is not dark; it is so transparent that even a Voodoo could see through it.

The argument from resulting military strength is equally baseless. Capt. Mahan has written that it would be a "deplorable mistake" to suppose that the annexation of Hawaii would add to our power unless we increased the navy. We believe, however, that he has since said he does not wish these words of his to be cited against annexation, and that he regrets having left them lying around unguarded. Still, he makes no concealment of his belief that the navy must be enormously enlarged if we are to get the strategic benefit of off-lying islands. But it needs no book or theorist or authority to show how the thing works.

Spain is giving the world a complete illustration of the rôle of colonies in war. What have her keys of the Pacific and her naval bases in the Atlantic done for her? They have been the exclusive theatre of war. The Peninsula is safe, Spanish cities and coasts have so far been as unmolested as our own; it is in her colonies that Spain has suffered blow after blow until she is reeling on the verge of ruin.

There is a cant of patriotism, a cant of military and naval theory of the pompous order, in a great deal of the talk of annexation, from which we must free our minds. Common sense about colonies, said John Bright, is "worth far more than feeble sentiment." But as Lord Russell once said of a public man who had changed his opinions rather suddenly, there is something worse than the cant of patriotism, and that is the recant of patriotism. That is the great peril to which we are exposed in going forward in the path of conquest—the peril that we shall have to eat all our fine words in favor of freedom and self-government. "The American people," cried Mr. Dolliver, "will take care of the Philippine Islands, of Porto Rico, and of Cuba, and these people will find in us sympathy and anxiety for their welfare." There is the great recantation of American patriotism. In lieu of self-governing communities of free people, we are to extend government over 10,000,000 of those whom we must "take care of," and their views and wishes we do not for a moment propose to consult. And we are to do it with a silly trust in our own luck, with a cool waving away of consequences, and with a reckless disregard of experience which together make up, as Mr. Gladstone said, as dark a superstition as any that existed in the Middle Ages.

THE NEXT CENSUS.

The bill passed by the Senate providing for the next census, as we have pointed out, practically forbids the appointment of clerks and other subordinate officers through the civil-service rules. It is a "non-partisan" bill, which, of course, means that partisan considerations, and not proved competency, shall govern the selection of enumerators. The plan of "pass" examinations within the bureau has been already tested, and has proved, as it was meant to prove, utterly useless in obtaining competent service, and entirely "practical" in enabling politicians to get places for their nominees. If the coming census is to be managed on this system as the last one was, its results will be equally worthless, and the waste of the public money will be even more shameful. At a time when the resources of the country are already strained, and when no one ventures to set a limit to the cost of the war, it would seem that there should be enough members of the House of Representatives

animated by genuine patriotism to effect the amendment of this bill.

Mr. Carroll Wright, who is as familiar as any one in the country with statistical work, and who succeeded Mr. Porter as superintendent of the last census, has estimated that \$2,000,000 and more than a year's time would have been saved if the census force had been brought into the classified service. He added: "I do not hesitate to say that one-third of the amount expended under my own administration was absolutely wasted, and wasted principally on account of the fact that the office was not under civil-service rules."

Even Mr. Porter, who advised President Harrison to have appointments made without competitive examinations, was sickened at the results of the policy which he had recommended. He now states that the work of examining and appointing nearly 3,000 clerks literally took up all his time. "Why," he gullelessly asks, "transform the Census Office at its busiest season into an examination department for clerks, and the director of a vast scientific investigation into a dispenser of political patronage? It is simply unjust to such an official. Having passed through the ordeal once, I am satisfied that the other way is more practical and in the end will be better for all concerned."

The severity of this ordeal has been disclosed by the researches of the National Civil-Service Reform League, whose chairman has examined some of Superintendent Porter's books of account. That functionary kept what has been called a "live-stock register," in which accounts were kept with individual Congressmen, debiting them with their respective appointees; the expense of keeping these books being, of course, a public charge. One of these books is a ledger of 400 pages. At the head of every page is the name of the Congressman obtaining the appointments, the names, grades, and salaries of the appointees following. When Congressmen lost their places, their accounts were closed, and their appointees held their places by a precarious tenure. Of course there were honest Congressmen who did not participate in this degrading business; but the effect of their abstention could only be to increase the patronage of the unscrupulous. Yet the most severe defeat ever sustained by the party in power occurred at the close of the year when this distribution of the spoils took place.

The character of these political appointees was not high. Washington contains thousands of people who have been turned out of office frequently for scandalous immorality. It would not be going too far to say that many such people got places in the Census Bureau because of moral delinquencies. Under the competitive system it is, at all events, impossible for applicants to get office by

reason of such qualifications. The results of this system are well known to every one who has made a critical examination of the census report. As Mr. Wells remarked, the falsifications of fact which it contained not only destroyed its value as a record of existing conditions, but, by introducing an untrustworthy term in the series, rendered it impossible to make scientific comparisons between preceding censuses and those which are to follow. Even the mere enumeration of inhabitants was vitiated by this corrupting influence. Supervisors were chosen because recommended by politicians, and they, in turn, chose enumerators on the same principle. Their information, in violation of law, was communicated to party managers. In New York city that eminent statistician Mr. Charles H. Murray was made supervisor, and at once issued a circular calling on the district Republican organizations to submit the names of those whom they desired to be appointed as enumerators. As Gen. Walker said, if appointments were made on such a basis as that, "the census could not have been otherwise than bad." It was bad. A recount by the police of New York showed a population 200,000 greater than that reported by the federal officers, but no recount was allowed by the Government. The chairman of the Civil-Service Reform League inspected both reports and made a personal investigation, which proved that large numbers of names were omitted by the census officers, and similar errors were exposed in other parts of the country.

Since it is proved by experience that the distribution of this patronage does not help to keep Congressmen in office, that it interferes with the proper administration of the Census Bureau, and renders its returns untrustworthy and inaccurate, a strong appeal can be made by the friends of civil-service reform in the House of Representatives. The last census cost about \$11,000,000, and by the time they were published many of its returns were obsolete. It would be better to have no census at all than to have a repetition of that of 1890; but at all events the cost ought to be reduced to the lowest possible figure.

A SCIENCE OF GOVERNMENT.

The proceedings which were in progress in this city for some days before Judge MacLean in the Supreme Court should be incorporated in a textbook for use in schools of political science. What is nominally going on is a suit for libel by Senator John Raines against the *Press*, but what is actually taking place is a more or less complete revelation of the system of government which Thomas C. Platt and his agents have been administering in this State for the last few years. In order to get a full comprehension of the value of the

disclosures it is necessary to recall their original provocation.

In April, 1895, Lemuel Ely Quigg, a favorite and much-trusted agent of Mr. Platt, was the editor of the *Press*. The Legislature was then in session, with a Republican majority in both houses. Without warning, Quigg published in his newspaper a leading article in which he assailed with great violence the characters of the three most eminent Platt Senators, Raines, Robertson, and Coggeshall, and the most eminent Platt lobbyist, Louis F. Payn. He charged that the Senators were corrupt and mercenary, that a boodle fund of \$45,000 had been raised for their benefit, they being men who had to be "taken care of," and that Payn was the agent who was in charge of the fund. Quigg spoke of the four men as "high and mighty boodlers, who ought to have stripes put on them and a good heavy ball of cast iron attached to their legs." It was only natural that such language as this by one Platt agent of his fellow-agents should attract much attention. If anybody could be called an expert on these men, Quigg was that man. He had carried on the Platt Government side by side with them for a considerable period, and was, if we may use the slang of the ball-field, "on to all their curves." They realized the seriousness of the situation by demanding a legislative inquiry, which was held under their own direction, and resulted in a verdict of not proven. Then Senator Raines sued the *Press* for \$50,000 damages to his reputation, and the jury were unable to agree whether it was damaged at all.

The origin of the trouble among these operators of the Platt Government was a bill increasing the salaries of firemen. Quigg had had aspirations for the nomination for Mayor of New York city in 1894, and had besought the support of the firemen through an association which they have, telling them that if they would give him their votes he would see to it that their salaries were raised by the next Legislature. This gives us a valuable glimpse of what modern government is. It exists primarily as a basis for rewards in return for personal service. Quigg was trying to use his hold as a Platt agent upon the State Government to make the people of the State pay the cost of electing him to the mayoralty of New York city. He failed of a nomination, but he seems to have got himself under obligations to the firemen, for during the next ensuing session of the Legislature he advocated the passage of a bill increasing their salaries. To this bill Payn had an amendment added, which increased the salaries of the officers of the Fire Department as well as those of the men, and Quigg's charge was that Payn and the three Senators were "holding up" the bill until a boodle fund of \$45,000 could be raised as the price of its pas-

sage. There has been little testimony adduced to show the existence of this fund, but it has been established and admitted by Payn that a year later he did receive two checks of \$5,000 each in return for his services in the passage of another beneficiary firemen's bill—\$5,000 while it was pending and \$5,000 after its passage. The firemen spoke of this money as "dough," and of Payn's services as "handling things at Albany." This gives us another glimpse of modern government in operation for the personal benefit of its agents.

While the bill of 1895 was hanging in the Senate committee, awaiting the results of Payn's "handling," Mr. Platt, the head of the Government, was requested by Quigg to go to Payn and "call him off." Quigg testifies that he made this request because he knew that Mr. Platt possessed the necessary power. Payn testifies that Mr. Platt did "call him off," and that he came off at once by withdrawing the amendment. In order to call him off, Mr. Platt summoned him to No. 49 Broadway, the usual seat of our Government when he is in this city, and made his request. Payn also testifies that Quigg thanked him for coming off, but that he said to him: "You need not thank me, Mr. Quigg. I did not do it for you. I done it because Mr. Platt asked it as a personal favor to him." He testified also that Quigg at the same time requested him to come off on another bill, because he (Quigg) "had a great personal interest in the matter, as the people interested have contributed a large amount of money toward my election." It will be seen that here again Quigg was acting upon one of the basic principles of Platt Government—seeking to make the State pay his election expenses. (He had, through the aid of Mr. Platt, been sent to Congress.) But Payn refused this request, illustrating, in turn, another basic principle of the Platt Government, that nobody except the boss can "call off" an agent against the agent's will.

These are the main points which were brought out in the testimony in the case. They show that the agents in the Government have a thorough knowledge of one another, and make no concealment among themselves of the methods by which they carry on their work. They show also that the system is an absolute despotism, an agent being not only required but willing to "come off" and give up "dough" to any amount, whether it be \$10,000 or \$45,000, at the request of the boss. They show further that one agent need not yield to another unless the boss says that he must. Payn gave in his testimony one valuable instance in support of this principle which we have quoted, and another remains to be cited. He testified that in the convention in which Mr. Black was nominated for Governor, Quigg approached him (Payn) as the nomi-

nation was made, and, with pale face, said:

"Marshal Payn, may I speak to you a moment? I ask you now, in this hour of your great pride, to pardon me for the great wrong I did you when I was on the *New York Press* by that article. It has cost me many sleepless nights, and I have worried over it more than anything I ever did. I now, in this hour of your great triumph, ask your pardon."

When we say that Payn declined to respond at all to this pathetic appeal, and that Quigg swears he never made it, we need add nothing to show how thoroughly independent of each other, under this despotic system of government, the subordinate agents are. One agent may say of another that he is a thief and a scoundrel who should be in a penitentiary, and may, when he discovers that this was a serious error in judgment because of the great power which the accused agent has subsequently attained in the Government, apologize and try to restore harmonious relations; but it will all be in vain unless the boss shall say that harmony must be restored. Why did not the boss say this in regard to the libel suit? Why did he let the most intimate and sacred things about his agents and his Government be thus laid before a harsh and unsympathetic public? There must be "dough" in it somewhere for somebody.

MANILA.

LONDON, June 7, 1898.

A city belonging to a by-gone age: such is the traveller's first impression of Manila on approaching the port across the wide, land-locked harbor bay. Mellowed by time to a rich, velvety russet and green are the tints of its bastioned and battlemented walls, surmounted by ancient bronze cannon and girt by a wide moat over which draw-bridges, guarded by portcullised gateways, are thrown on its eastern, western, and southern sides. The northern walls are washed by the river Pasig, at the mouth of which, and on its left bank, the walled city is built. Mediæval, too, is the aspect within. The dwelling-houses present, on the ground floor, but porte-cochères and grated windows to the narrow, stony, and often grass-grown streets, and the verandahed upper floors are rigidly closed until sunset against the tropical heat and glare. Commercial and official activity are confined to a few of the main thoroughfares. The rest stretch, straight, silent, and gloomy, shadowed by great churches, austere nunneries, and the vast monasteries of the numerous friars established here for over three centuries. Occasionally, these silent streets are enlivened by a pompous procession with glittering images, waving banners, flaming tapers, brazen crosses, swinging censers, black-robed penitents, and a military band. And every evening, as the sunset hour approaches, a large portal here and there opens, and through it files forth a stream of friars, black, white, and brown—the Franciscans, not bareheaded as in the West—but wearing wide-brimmed, brown straw hats, which assort oddly with their hempen girdles and sandalled feet—who, passing through the western gate, take their silent daily

stroll on the promenade between the walls and the shore of the bay.

In striking contrast to the silence and solemnity of the old walled city is the animation on the river at its feet, and in the streets of the great business suburb of Binondo opposite. The large ocean steamers and battle-ships are anchored out in the bay, but smaller vessels lie anchored three and four rows deep alongside the busy wharves, while the gondolas of this Venice of the far East, long, elegant *bancas*, with arched awnings of matting, dart about conveying European and native employees and Chinese touts to and from the shipping. Great rafts of coconuts from the fruitful shores of the Lake of Bai, in which the Pasig has its source, float down in mid-stream; heavy *cascos*, or native barges, laden with commodities for the interior, are being poled up stream by a couple of agile natives, who run backwards and forwards on a narrow platform constructed along the sides. Crossing the Puente de España, we find ourselves in the Escolta, a street lined with shops of French millinery, jewelry, and fancy goods; English emporiums; shops of German chemists—houses of call and gossip clubs for Europeans, where the sale of aerated waters far exceeds that of drugs—and of Chinese linen-draperies, where one may, in Pidgin-Spanish, bargain for every yard of goods with a bland, smiling, corkscrew-nailed Celestial. Vehicles of all kinds pass to and fro in a perpetual stream; and here, as in the other streets of this busy mercantile quarter, the sidewalks are thronged with pedestrians—market-women bearing wide, flat baskets of fruit and vegetables on their heads; Chinese coolies, and native grass-cutters, in scanty costume, running swiftly along, with their burdens slung at each end of a bamboo lath; dandified native *porteros* in white shirts and trousers, patent-leather boots, and white straw "sailor" hats, going leisurely on messages for their European employers; and smart *Guardias Civiles*, the native policemen, in white helmets, and blue-cotton uniforms faced with red and decorated with red cordings much betagged and beelooped.

But even more interesting than the main thoroughfares of Binondo, with its various Eastern types and scenes, are the native and semi-native quarters, called respectively Tondo, Santa Cruz, San Miguel, San Sebastian, and, on the left bank of the river, Pace and St. Anna. Tondo, it may be here remarked, was the name borne by the city at the time of its settlement by a colony of Mohammedan Malays, dispossessed by the Spaniards. Here the roadways are lined with picturesque brown huts constructed of bamboo and the leaves of the nipa palm, raised on piles some five or six feet from the ground, with here and there a house of wood painted in gay stripes of green or blue and white, and raised on a stone foundation, their high-pitched roofs covered, like those of the *balays*, or huts, with a thick thatch of nipa, impervious to the sun's rays. Each dwelling is detached, and almost invariably framed in clumps of feathery bamboo, giant-leaved plantain, or tall cocoa- or areca-nut palms. Here and there by the roadside are *tiendas* constructed of matting and bamboo, in which are exposed for sale (together with vegetables and fruit) cigars, coconuts, lengths of sugarcane, green corn, rice-balls, *buys* (leaf-enveloped betel-nuts prepared with lime for chewing), and other native delicacies, the

stall-keeper squatting on her heels in a shady corner, complacently chewing this, to a Tagal who has once acquired the habit, necessity of existence. The women passing to and fro are clad in brightly striped or checked red and yellow cotton skirts, with a piece of dark blue stuff drawn, apron-wise, tightly round them and tucked in at the waist; a short white jacket of thin calico with bell-shaped sleeves, cut low at the neck; and a white kerchief folded corner-wise on the shoulders, and, out of doors, on the head; their long black hair hanging negligently down to their knees or even to their heels, and their small feet either bare or thrust into *chinelas*—colored slippers consisting merely of a sole and accommodation for three or four toes. Some are carrying home the family linen, washed in the nearest creek, in a flat basket poised on their heads; others carry on their hips brown babies to whose ready lips they frequently put the cheroot indulged in equally by Tagal women and men. For, in these green islands of the Eastern Seas, that "equality of the sexes" so ardently desired by a small section of the womanhood of the West would appear to be indigenous; and industries are also pretty equally divided between men and women. In some respects, indeed, native legislation, especially on the subjects of married women's property, is greatly to the disadvantage of the husband.

The suburbs on this side of the river are intersected with a perfect network of the tidal creeks to which Manila owes its perhaps too complimentary appellation above quoted; and to afford passage to the high Chinese-looking *cascos*, the bridges over these creeks are so highly arched that our ponies have to be whipped up for the run necessary to bring them to the top of the ascent. Descending on the other side, a charming scene meets the eye, for to-day is the festival of San Miguel, the patron saint of the parish of which the creek just crossed forms the boundary, and the inhabitants have made the usual preparations for doing honor to this important anniversary. Triumphant arches span the roadway at intervals, festoons of Chinese lanterns swing between the trees, and rows of tiny glass lamps, filled with coconut oil (*vasos de las*) stand on all the window-ledge. The whole parish is astir with excitement, and every one is in gala dress. Brightly hued silk *sayas* and *comisas* of lace-trimmed cambric or *piña* gauze, with kerchiefs to match, set off the dusky charms of the native belles, into whose smoothly coiled black tresses, secured with gold-mounted pins and combs, the stiff little red *dahila*, so beloved of Tagal women, is often coquettishly tucked. The men wear over their white cotton trousers a shirt-like blouse of brightly striped native gauze (*justi*), of hempen cloth (*abaca*), or of white cambric, much embroidered, pleated, and frilled. On their heads are either the mushroom-shaped native *eslicots* embellished round the edge with a pattern in silver, or common white straw hats; and under the left arm of the majority may be seen the almost inseparable companion of the Tagal, his favorite game-cock.

But here comes a group of strange figures robed in black, with great garlands of feathery leaves on their heads and tapers in their hands, wending their way churchwards to join the procession which will, after nightfall, emerge, with all the group of jewelled images, stoled priests, uniformed

officialdom, and military bands, to make the tour of the parish, welcomed by the admiring multitude with a lavish expenditure of illumination and the discharge of innumerable rockets. For the Tagal is pious to a degree, as he understands piety; but, his ideas being essentially concrete, religion, for him, consists in the worship of its tangible symbols with which the churches of his country are so plentifully supplied, and in pilgrimages to its miracle-working shrines such as those of the "Virgin of Antipolo" (Nuestra Señora del Buen Viage y de la Paz) and the "Holy Child of Cebu."

As to the character of the Tagal natives generally, opinions differ widely. According to one of their priests, "they are big children, who must be treated as little ones," and a British consul has recorded his opinion that they "are eminently an estimable, pre-eminently an amiable race" (Palgrave, 'Ulysses.') Indolent they doubtless are, and could hardly but be under a tropical sun and on a soil so fertile that a small amount of labor suffices to procure the necessities of life. Themselves possessing a considerable degree of physical courage, they admire bravery in others and willingly follow into danger an intrepid leader. Those, however, who have known and studied them longest find it most difficult to sketch their moral portrait, such contradictory characteristics do they present both individually and collectively. Under the eye of a firm and just master, the Tagal is the most tractable of beings and the most useful, being able to turn his hand to anything. He is essentially a fatalist, bears misfortune without emotion and disaster without complaint; is sober to a degree, holding drunkenness in horror and regarding anger as akin to madness. In his person and dwelling he is a pattern of cleanliness to Orientals generally; and among his own people he is social, genial, and hospitable, respectful to the elders of his family, generous to poor relatives, and kind to his children. Of his wife he is exceedingly jealous, though indifferent to her prenuptial indiscretions, and, as a consequence, careless of the honor of his daughters. His one unmistakable vice is gambling, which takes various forms, the one most ruinous to him being cock-fighting, a licensed sport throughout the Philippines.

The Spanish Government has always encouraged marriages between Europeans and native women, and three centuries of such intermarriages, together with those of Chinamen and native women, have produced a large proportion of half-breeds representing every degree of admixture, the Chinese mestizos alone being estimated at one-sixth of the domesticated native population. The Spanish mestizos, together with the *Hijos del País* ("Sons of the Country"), as the Creoles term themselves, constitute an influential body, the majority of whom are established as traders in Manila and the provinces. Owing to their European descent, more or less remote, these half-breeds and Creoles possess considerable business capacity, and many of them have been fairly well educated in the seminaries attached to the more important conventual establishments. Though classes are not very distinctly divided in this Eastern capital, the position of these half-breeds is naturally somewhat equivocal, and as a class they are continually struggling to place themselves on a level with the Peninsular Spaniards, who refuse to them their daughters in marriage.

This equivocal position of the Creoles and Spanish mestizos has had its natural result on their character. They are, generally speaking, morose, captious, evasive, and vacillating, fond of intrigue, and ever ready to foster grievances against the Government. The natives, pure and simple, are incapable of organization on any considerable scale, and no revolt confined entirely to them would have any chance of success. But the combined discontent of natives, mestizos, and Creoles has, for some time past, proved itself able to give considerable embarrassment to an unpopular Government.

No stricter line exists between quarters than between races and classes; and in near neighborhood with native *balays*, we find the almost palatial abodes of wealthy mestizos, Spaniards, and foreigners, surrounded by gardens filled with luxuriant tropical vegetation, many having a frontage to the river as well as to the wide tree-bordered highway. The exterior of these mansions presents a somewhat peculiar appearance, the whole of the upper story, which contains the dwelling-rooms, being enclosed with continuous windows, glazed—if the expression is permissible—with small panes made of oyster shells, ground down to the requisite thinness, which admit the light without the glare of the tropical sun. These *conchas*, as they are called, running in grooves on a thick beam some two feet from the floor, are, as the sunset hour approaches, drawn back and pushed into very small space, leaving the wide veranda they screen open to the soft evening breezes blowing off the river. From below, the ylang-ylang, *dama de noche*, and so-called *jasmin*, send up their mingled fragrance, the banana palms blunt their giant leaves against the *conchas*; while masses of the gorgeous double *hibiscus*, the yellow *alamanda*, and the delicately tendrilled *passion-flower*, with climbing plants innumerable, conceal the railings and dividing walls. Each dwelling has its bath-house and boat pier; and, looking up stream as far as the eye can reach, are, dotted here and there along the banks, low wooden cabins or *nipa* huts built on piles, their high-pitched roofs picturesquely grouped with *areca* and coconut palms and feathery bamboos. Some of these are *tiendas*, which serve as houses of call and restaurants for the numerous passengers on this great natural highway into the interior. Here boatmen and fishermen, squatting on their heels, or reclining under the shady pent-houses, rest during the noontide heats, in turn eating, drinking, smoking, gaming, and chattering. Small bamboo enclosures at the water's edge serve as duck-ponds, and here and there, on the pebbly river-reaches, women and children may, at low tide, be seen picking up shell-fish with their toes, which, from long practice, and also, probably, from heredity, they are able to use as deftly as fingers. Indeed, I never saw a Tagal, male or female, stoop down to pick up with the fingers any object that the toes could possibly grasp. Girls wade bare-legged into the stream to fill their globular earthen pots, or long narrow pitchers, made from a section of bamboo, with a handle of the same, balancing the former on the head, and bearing the latter on the shoulder as they walk with erect if not graceful gait along the raised field-paths to their homes. Great water-buffaloes, with wide-spreading horns, released from the plough or cart, come singly or in groups for their evening bath in the river, attended, if

at all, by a small urchin, who, standing upright on the broad back of this familiar companion, guides him merely by a string attached to a split rattan passed through his nostrils. As the huge animal disappears under the water, according to his habits, his rider also plunges into the stream, being almost as amphibious. For Tagal children swim, as they smoke, before they are able to walk; and on Sunday mornings after mass whole families may be seen disporting themselves along the banks, swimming, diving, and splashing each other, with chatter and laughter indescribable.

Ascending the river, one lovely vista after another unfolds itself until we emerge into the wide fresh-water lake of Bal, girdled by a hundred miles or more of varied, ever fertile shore-line, with the lofty cloud-capped peaks of the giant *Majajal* beyond. With a little enterprise we may penetrate to the cane fields of the *Laguna* district, where, hid among the hills and coffee groves of *Batargas*, lies the deep blue, cliff-encircled lake of *Taal*, with its fairy-like volcano-islet from whose summit a pennon of smoke and fire ever rises and spreads. Across rushing rivers, by sounding waterfalls, till through the dark woods of *Tayabas*, and over the mid-chain of *Luzon*, with its giant tree ferns and flowering forest trees innumerable, we emerge on the shores of the boundless Pacific.

But to return again to Manila. After a siesta, tea, and a welcome bath, the sound of carriage wheels and ponies' hoofs on the stone-paved *segway* below announces that the hour has come for the afternoon drive, and we are presently again crossing the *Puente de España*, on our way to the *Calzada*—the wide grass-bordered boulevard which encircles the old walled city on three sides, now crowded with vehicles all proceeding in the same direction. The day's work is just over in the great cigar factory outside the southern walls, and thousands of *cigarreras*, women and girls, meet us as they wend their way homewards to the various suburbs. Some are smoking cheroots, others chewing betel, while with bare arms they recoll their luxuriant tresses. Quiet, clean, and orderly, this evening procession of the Manila variety of the genus "factory hand" forms, with its brightly hued and vividly contrasting coloring, one of the prettiest sights of the city. Presently our dusky but faithful *Prudencio* reins in his ponies on the grassy expanse at the mouth of the river, bounded by the mole, the sea, and the walls, where all the rank and fashion, native and foreign, of the city is gathered or gathering. The wheeled traffic of Manila is enormous, it being computed that as many as 6,000 vehicles pass through the *Escolta* on a feast day. Here are stylish *landaus* and *victorias*, filled with mantilled Spanish beauties and bejewelled mestizas; the *jeunesse dorée* of the city in elegant *coaches* and *corromattas*, or hooded gigs, driven handsomely from behind, containing two or three native belles in costumes more costly in their elaborate *piña* embroidery and jewelled accessories than those of the most stylish European ladies present.

Monuments are not numerous at Manila, and here stands one that must not be overlooked. It is a much-dilapidated brick erection, bearing a tablet which extols, for the benefit of the natives, the heroic and patriotic deeds of Don Simon de Anda y Salazar, who, according to the Spanish version of this historical event, expelled in 1763 the invading British, and thus covered himself with

inextinguishable glory! This version of the evacuation of the Philippines and Cuba by the British at the conclusion of the Seven Years' War in exchange for Canada, Florida, Louisiana, several West Indian islands, and the Mediterranean island of Minorca is repeated in all seriousness by a French author (Montano, 'Voyage aux Philippines,' p. 36).

But the sun is already sinking behind the great mountain-mass of Mariveles on the western side of the great bay, throwing its deep blue, serrated summit into clear relief against the gold and crimson clouds. Presently the sunset gun booms from the fortress, the Angelus chimes from the many church towers within, and every hat is reverently raised. The carriage lamps are now twinkling in hundreds; the Governor-General's chariot, with its four ponies and postillions, sets off at a trot; and the long procession is again in motion. Darker grow the skies, and the four brilliant stars which compose the wonderful "Southern Cross" hang above the horizon like glowing lamps. And, as we recross the bridge, from every craft on the broad river gleam lights from stem, stern, and masthead, mirrored and multiplied in the eddying current below.

CHUQUET'S YOUTH OF NAPOLEON.

PARIS, June 2, 1898.

M. Arthur Chuquet gives us a sequel to his first volume on the youth of Napoleon, which had for its subtitle "Brienne." The second has for subtitle "The Revolution" (Paris: Armand Colin & Cie.). It deals with Napoleon's life during the first part of the French Revolution, and has been composed not only from documents in the National Archives and the Archives of the Ministry of War, but also from many printed documents. M. Chuquet has used chiefly the 'Napoléon Inconnu' of Frédéric Masson, which he speaks of as "that essential, capital work, which contains extracts from Napoleon's reading, his letters to Joseph in 1790, the entire text of the 'Lyons Discourse,' the authentic text of the 'Letters on Corsica.'" The Abbé Letteron, President of the Society of Historical and Natural Sciences of Corsica, who has printed many documents concerning Napoleon, and many other students, in France and in Italy, have furnished M. Chuquet with interesting details. Few historians have the faculty of creating order out of the chaos of documents, and, valuable as are the works of M. Chuquet, it cannot be denied that they cannot be read without fatigue.

The development of the mind of the young officer when, having left the military school, he entered a regiment, has an evident interest. M. Chuquet shows him giving himself with ardor, during the tedious hours of garrison life, to study and reading. "At Valence he devoured the books of the librarian Aurel and borrowed books from M. de Josselin. At Auxonne, while his comrades complained of that ugly place of residence, where were no distractions and they did not know what to do with themselves, he shut himself up in his room and gave all his free hours to reading." Napoleon had a sort of thirst for every kind of reading. Rollin, Mably, the Memoirs of Tott (which he cited afterwards at St. Helena), the history of England by John Barrow were read among the first. He delighted in the collection of 'L'Espion Anglais,' a work

now forgotten, in which he found many particulars on the state of France, the disorder of her finances, the defects of her administration, the pretensions of the Parlements, the chaos of the provincial assemblies. 'The English Spy' was half serious and half anecdotic; it made Napoleon acquainted with the gossip of Paris and with the doctrines of the economists; it spoke of Turgot, of Malherbes, of Necker and Madame Necker, of Voltaire's last triumph in Paris, of Rousseau's death at Ermenonville, of the admirals and generals who had taken part in the American war, of Franklin's mission. Napoleon made extracts from all the most interesting parts of his readings; and M. Masson has well shown the importance of some of these extracts. He chose in every book the most important and essential portion; he discussed the campaigns of Hannibal, the movements of Alexander in Asia; he criticised Rollin, Herodotus, Xenophon, Pausanias, Strabo; he took a lively interest in the government and finances of all countries, ancient and modern.

His literary tastes were formed also in that period from 1785 to 1791. He disliked comedy, and took no pleasure even in Molière; he wanted something serious on the stage, in accordance with his grave Corsican character. Tragedy was to him the school of great characters and of heroes. Even at St. Helena he reread with pleasure the 'General Principles' of Domalron, a writer now unknown, who, as professor, had taught him that tragedy, by representing an action at once heroic and terrible, spoke to the highest and noblest instincts of man. Napoleon knew by heart a number of verses from Corneille, Racine, Voltaire, and liked to declaim them. Corneille was his favorite, and "Cinna" the piece which he preferred. In 1791 he was still sentimental, and admired the fine scene of the clemency of Augustus; he wept over it, and said that "the tears of sentiment are the voluptuousness of the soul." Later, under the Consulate, he said that clemency was a petty virtue when not inspired by policy, and that Augustus's action was but the ruse of a tyrant.

The sentimentalism of Napoleon's early youth was well shown in his intense admiration for the famous 'Paul and Virginia' of Bernardin de St. Pierre. He remained faithful to the end to poor Virginia, and at St. Helena he read passages from it aloud to his officers, "in recollection of his former years." Under the Consulate, he gave to Bernardin de St. Pierre a pension of 2,400 francs; but much as he admired 'Paul and Virginia,' he would take no notice of the 'Studies of Nature,' by the same author, full of scientific errors. When Bernardin complained to him of the scientists, who would not even discuss with him, "Do you know," said Napoleon to him, "the differential calculus? Go and learn it first."

It was not enough for Napoleon to read, he would write also, and he tried his hand in many ways. He wrote a short novel, entitled 'The Count of Essex,' and 'The Prophetic Mask,' an episode in the history of the Arabs. His head was turned at one time, during his sentimental period, by Rousseau's 'Confessions' and 'Nouvelle Héloïse.' At a later period he was disgusted with Rousseau, and called him a tiresome idealizer; he once said to Stanislas de Girardin, "Time will show if it would not have been better for the tranquillity of the world

that neither Rousseau nor I had ever existed." But during the revolutionary years which followed 1785 Rousseau was his idol; he adopted the ideas and even the phraseology of the 'Discourse on Inequality.'

Raynal, author of the 'Philosophical History of the Two Indies,' furnished him with many ideas, and taught him to love liberty, to detest the great conquerors, to sympathize with the American colonies struggling for their independence. Napoleon's Catholic faith had been shaken even at the school of Brienne; Rousseau and Raynal turned him completely to the philosophical school. Curiously enough, he was chiefly struck by the possible opposition of Christianity and the State; he wrote some remarks on the subject after reading the 'Contrat Social':

"Is not," he asked, "the spirit of Christianity contrary to the spirit of all government? Can a religion which knows no country, since its kingdom is not of this world, attach hearts to the fatherland? . . . Is its clergy not an independent body? Do not its ministers try to become rich and powerful, so as to dominate the other classes? . . . Has not Christianity been the cause of many wars? It was, it is true, persecuted by the Cæsars; but could paganism wait till the Christians had manifested? Was it not divined that they would never content themselves with a metaphysical empire, that they aimed to destroy the established government as well as the established religion, that they meant some day to have the real power?"

These lines date from the month of May, 1786, and form one of the most interesting essays of the young lieutenant. We can see already in them the feelings of the future Cæsar, of the powerful Emperor who kept a Pope captive at Fontainebleau, and who treated the French bishops as mere functionaries. On this fundamental point of the relations of Church and State, the ideas or rather the instincts of Napoleon never changed; he was a pure Italian, and considered religion as one of the means of government. He vindicated the rights of the State, and considered that the ministers of religion were subjects like all others, that they could not be legislators nor masters in their country, but were bound to obey the orders of the sovereign. In this respect he was a real Cæsar of paganism.

In 1786, in one of his visits to Corsica, Napoleon, who had ceased very early to be a believer, wrote a parallel between Jesus Christ and Apollonius of Tyana. His dissertation, which was deemed very remarkable by Lucien, has disappeared. He gave the manuscript to Fréron, who did not give it back to him. One day, under the Consulate, Lucien reminded Napoleon of it. "Don't mention it," said he. "I should become embroiled with Rome. My concordat would be looked upon as the work of Beelzebub."

The Lieutenant Bonaparte long remained a true Corsican, and espoused all the passions of his native island and of his clan. He seemed for a while a stranger to any other feeling, and was far more Corsican than French. France before 1789 appeared to him the foreign enemy. The divisions of the island and of their factions have lost all their interest for the present generation; Corsica has become a French department like the others, and the memory of Napoleon has not a little contributed to sink the Corsican nationality in the great French unity. M. Chuquet analyzes with fatiguing minuteness events and feelings now so completely forgotten; he might have remembered

ed the words of Paoli, which he cites: "Lasciamo questa disputa ai otiosi." The "Letters on Corsica," written by Napoleon, partly at Auxonne and partly in Corsica, were a mere sketch of the history of Corsica. "I was quite right," said Napoleon afterwards, "in not having them printed."

There is not much new matter in the long chapter which M. Chuquet writes on Bastia, on the Bonaparte family, and the part which its members took in the beginning of the Revolution. M. Masson has fairly exhausted this subject. When Napoleon entered the artillery, he had to leave Auxonne and his friends of the regiment de La Fère. M. Chuquet takes the trouble to give us the history of all these friends, though it seems to us quite unnecessary. He is as careful to find out all that concerns the new comrades of the regiment of artillery at Valence, where Napoleon was in garrison. His volume, in some parts, reads too much like the 'Annual of the Army,' to be found in all the French cafés frequented by officers. A few days after the arrival of Napoleon at Valence Louis XVI. fled to Varennes and was brought back to Paris as a prisoner. The new Constitution obliged all officers to take an oath of fidelity to the King and to the Constitution; the oath was to be written and signed. Napoleon took it, like those of his comrades who did not emigrate; but he was already in favor of a republican government, and at that time he saw no further necessity for a sovereign.

There were two clubs at Valence; Napoleon joined the club of the "Friends of the Constitution." He made speeches in it, and showed much "civism," to use a word of the time. In the midst of the general excitement, however, he continued his studies in all directions, and the Academy of Lyons having offered a prize to the best author of a memoir on the subject, "What truths and sentiments is it best to inculcate in men for their happiness?" Napoleon took his pen and wrote a memoir on the subject. It is hardly necessary to analyze, as M. Chuquet has done, this emphatic "Discours de Lyons"; it did not get the prize, and did not deserve it. The memoir is made up entirely of reminiscences of Rousseau, of Raynal, and others.

In the last chapter of this new volume we return to Ajaccio, and we are treated to the history of the troubles of the island during Napoleon's furlough. At the rate at which M. Chuquet is going on, it is impossible to say how many volumes he will have to write before he kills Napoleon at St. Helena. Much as we may commend the exactitude and the zeal of this writer, we could wish him more imbued with the spirit of the true historian who knows how to get rid of the scaffolding of his edifice.

Correspondence.

THE FEDERAL INHERITANCE TAX.

TO THE EDITOR OF THE NATION:

SIR: When you prepare for the readers of the *Nation* your promised remarks on the new United States tax on inheritance, you will scarcely fail to note the curious fact that of all the forms, rates, and percentages which that tax has been prepared to assume in the numerous cases provided for, the heaviest and most punitive are made to fall on bequests to charitable and educational corporations. As I understand it, the tax is 5 per

cent. on all legacies to corporations, increasing to 10 per cent. when the amount is large. When to that is added the usual State tax on collateral inheritance, they will together confiscate 15 per cent., or about one-sixth, of all bequests to charitable uses, which universally take the corporate form.

Was this robbery of the poor, the blind, the halt, and unfortunate intentional, or merely ignorant, indifferent, and reckless?

There may be in Congress some cross-roads "statesmen" who really detest industry, saving, and all other honest methods of accumulating competence. But do any of them wish to punish those who are willing, at the expense of their own families, to bequeath of their savings to the purely altruistic purposes of charity and education? And yet thousands of schools, colleges, museums, asylums, and homes for the afflicted have been established and are supported on just such bequests.

We in Pennsylvania have not recently been led to expect much from our own Senators that is charitable, wise, or good. But where were the representatives of New England and the great States of the middle West, when this punishment was decreed against charity and education without one voice raised in their behalf? The public of our country contributes hundreds of millions in taxation with its own consent, every year, to support those noble objects. Do our national legislators deem it impolitic, or criminal, and punishable with confiscation, for individual testators to aid by contributing from their own means? But since not a voice was raised, or an amendment introduced, in favor of charity or learning, it is hard to see how the world can arrive at any other conclusion.

At all events, until this act be modified, we stand marked and branded by our own national Legislature as the only civilized people among mankind bent on stifling all testamentary generosity to charitable institutions by punishment and confiscation. We are made falsely to appear as preferring to maintain our government by tearing away private alms from the mouths of the poor, rather than by the willing and mutual contributions of the free and strong. How long will the better disposed of our legislators suffer this shameful stigma to endure? I. J. W. PHILADELPHIA, June 17, 1898.

OUR ARCHIPELAGIC FELLOW-CITIZENS.

TO THE EDITOR OF THE NATION:

SIR: Referring to the suggestion in your issue of June 16—that in whatever subjection the United States may hold motley populations of Pacific islands, we must expect that their children will be citizens of this country, that no State can exclude them from its limits, and that Congress itself will be obliged to welcome them to citizenship—it is interesting to notice the act of Congress of May 11, 1880, 21 Stat. L. 131, prohibiting Indians from going to Texas.

It is, of course, true that the position of the Indians is peculiar, but the position of the Philippine Islands is also out of the common, and the position of Texas, being specially designated as a reservation for others than Indians, is clearly exceptional. In case we cannot exclude Asiatic citizens of new territory, would it not be still possible to extend this reservation system; or, if we cannot save the whole country, cannot we save Texas?—Yours truly,

E. PARMALIE PRENTICE.

CHICAGO, June 18, 1898.

INSTINCT AND REASON.

TO THE EDITOR OF THE NATION:

SIR: I wish to draw the attention of such of your readers as are interested in the discussion of the nature of instinct, to a curious example of it, as distinct from reason, which I have lately witnessed.

Entering the parlor of a friend the other day, my attention was instantly attracted to a Florida mocking-bird. He was flying about in an eager manner, with something like a long black straw in his bill. My friend entering, I asked: "What is your bird doing?" "Building a nest," she answered. "Has he a mate?" "No, he has never had one," she replied, "nor has he ever seen a nest. That black straw is a shaving of whalebone which lasts him better than anything else." At this moment the bird flew into a corner of the cage, and, stooping, dropped the whalebone, waited a moment as if for some response, and then flew away to repeat the manoeuvre.

"Does he not want something soft?" I asked. "I sometimes give him yarn or wool; he tears it all up, works it all over, and then carries it to that corner. He evidently thinks it his duty to provide material, but he does not undertake to use it." "And what will he do next?" I asked. "He will, after a day or two, brood over that corner, sitting close and spreading his wings out as broadly as possible. He does this two or three times a day." "And after that?" "Later the paternal instinct seems to be aroused in a different way. He goes to his food cup, takes some food in his mouth, and drops it into his corner. He repeats this several times, as if he were feeding his young. I do not know how many young birds he ought to expect, but I should like to know, to see if he counts right!"

I have sometimes known a male canary to build a nest in the spring, carrying the process nearer to completion, but I have never heard of an instance like this, and think it may interest others than myself.

CAROLINE H. DALL.

14 HARRIS ST., NEWBURYPORT, MASS.
June 18, 1898.

CARLYLE BIBLIOGRAPHY.

TO THE EDITOR OF THE NATION:

SIR: Can any of your readers inform me if they have ever seen a copy of Carlyle's 'Heroes and Hero-Worship' published by an American firm in 1841, or an English edition published between 1841 and 1846? If I could only learn of the existence of such editions, or be assured that they do not exist, the knowledge would be most useful in settling a point in the bibliography of Carlyle.

Does any one know of any library, public or private, rich in Carlyleana?

ARCHIBALD MACMECHAN.

DALHOUSIE COLLEGE, HALIFAX, N. S.
June 13, 1898.

Notes.

The second volume in Oman's 'History of the Art of War,' dealing with the Middle Ages from the fourth to the fourteenth century; 'The Sphere of Science: A Study of the Nature and Method of Scientific Investigations,' by Prof. Frank Sargent Hoffman of Union College; and 'Christianity and Anti-Christianity in their Final Conflict,' by

Samuel J. Andrews, D.D., are in the press of G. P. Putnam's Sons.

M. F. Mansfield, New York, will publish immediately 'Gladstone the Man,' by David Williamson, with numerous illustrations.

The next publication of the Marlon Press, Jamaica, New York, will consist of two poems of sea-fights with Spain, "Drake's Drum," by Henry Newbolt, and Tennyson's "The Revenge, a Ballad of the Fleet." The edition is limited to 120 copies on hand-made paper.

On July 1 Henry Holt & Co. will issue 'Rupert of Hentzau,' by Anthony Hope, a sequel to his 'Prisoner of Zenda,' together with a new uniform edition of the latter; both having full-page illustrations by Charles Dana Gibson.

A new copyright edition of 'The Story of John G. Paton,' with the original illustrations, will shortly be brought out by A. C. Armstrong & Son and the American Tract Society conjointly.

Ellwood Roberts, Norristown, Pa., has ready for delivery 'Old Richland Families,' a genealogical record relating to Bucks County in that State.

Now that the completion of the Dictionary of the Brothers Grimm is, comparatively speaking, near at hand, the son of one of the brothers urges the necessity of a new German dictionary which should have its birthplace not at Berlin but at Weimar, in the halls of the Goethe-Schiller-Archiv, and whose makers should proceed, not like Jacob and Wilhelm Grimm, from Gothic, Old and Middle High German forms, but from the language of the present time. The first task of this new dictionary would be to give permanence to the language of Goethe, since a large proportion of it was inaccessible to the Grimm brothers, "the insufficiency of whose German Dictionary, begun fifty years ago, is universally felt." In the article from which we quote ("Die Zukunft des Weimarschen Goethe-Schiller-Archivs," in the June *Rundschau*), Herman Grimm indulges in prognostications and hopes with regard to that institution which deserve notice as coming from one who commenced his Goethe studies about the same time that his uncle and father published the first instalments of their Dictionary.

M. Casimir Strylenski is preparing for publication the continuation of the 'Mémoires' of the Comtesse Potocka. This volume will contain an account of travel in Italy during 1826 and 1827, in the course of which the Comtesse Potocka fell in with various members of the Bonaparte family, then in exile. M. Strylenski has also sent to the *Nouvelle Revue* an article on Balzac and Stendhal, which contains two unpublished fragments of the 'Chartreuse de Parme.'

It is not exactly his *Mémoires* which M. François Coppée is now engaged in writing, but rather (as M. Émile Berr explains in the *Revue Bleue* of May 28) some souvenirs of childhood and youth, which he will make as impersonal as is possible. His aim is to tell the story of Paris as he remembers it during the last fifty years—not its history, but its life as it impressed him in his boyhood and in his later years. It will be a study of the *petite bourgeoisie*—the household life which he shared, and in which his mind and soul accomplished their development. The work is scarcely begun, and the first volume of it will not be finished before the 1st of August. The *Revue Hebdomadaire* will publish it, and to how many volumes

it will run M. F. Coppée himself has no clear notion. He will let his pen go, following the thread of his memories, with no settled intention beyond that of coming to an end at the fatal date of 1870.

M. Eugène Montfort has printed in pamphlet form the somewhat interesting exposition of "Naturisme" which he delivered as a lecture at the congress of Brussels three or four months ago. Naturism, it may be explained to those who do not follow with eager watchfulness the rise and progress of the "young" French schools in literature, is a new literary gospel adapted for the use of youth, which was first put forward—possibly invented—about three years ago by M. Saint-Georges de Bouhélier. Its chief mission seems to be to react against the well-worn dogma of "art for art." The Naturists wish to use Art for certain humane and social ends. They also have much to say about the mystic depths in the soul of man, and it is this hidden *vis secrète* which it is the mission of the poet to comprehend and adorn. Certain great poets, they think, have known this secret, and they lament the attitude of many of the "young" towards such writers as Lamartine. It will be seen that these young gentlemen are looking back rather than forward, but reaction is perhaps, at least for the moment, the most clearly defined movement in French literary evolution.

The Bulletin of the Boston Public Library for June contains the last part of the useful list of works on Social Reform. This instalment includes the various schemes, as anarchism, communism, coöperation, etc., and the functions of the State in ownership, education, and charity. There is an author-index of about 1,200 names, and a subject-index.

There has just issued from the Government Printing-Office at Washington a descriptive list entitled, 'Alaska and the Northwest Part of North America, 1588-1898: Maps in the Library of Congress,' by the superintendent of maps and charts, P. Lee Phillips. The list consists of 101 pages, of which the first 15 antedate the present century. There is one entry for the 16th, and one (1648-1869) for the 17th century.

The origin of the Great Barrier Reef of Australia has long been a subject of discussion among naturalists, who have generally held, with Darwin, that a barrier reef can be formed only on a region of subsidence. Dr. Alexander Agassiz, in a paper published in the Bulletin of the Museum of Comparative Zoölogy at Harvard College (Vol. 28, No. 4), gives his reasons for dissenting from this view. He holds that the present condition of the reef can be explained by the mere action of erosion and denudation. The required depression unquestionably exists, but it dates back to the Cretaceous period, and there is nothing to warrant the claim that the coral growth began at that time. Dr. Agassiz's paper, illustrated by forty-two plates and charts, contains a general sketch of the physical geography of this region, and a careful description of the different localities which were explored. It concludes with an examination of the theories of other writers, especially Jukes and Saville-Kent.

A notice, with portrait, of the late James Joseph Sylvester, Savilian Professor of Geometry in the University of Oxford, and formerly Professor of Mathematics in Johns Hopkins University, appears in the Proceedings of the Royal Society of London for

May 9. In the writer's opinion, Sylvester was one of the greatest mathematicians of all time, though it may be doubted whether he will take a place among those who "occupy absolutely the front rank." His greatest achievement was probably his paper, entitled "Algebraical Researches," printed in the Philosophical Transactions for 1864; but his published works do not properly represent his genius and greatness. He was so oppressed with floods of ideas that he was unable suitably to organize his researches. His personal character was one of singular beauty, and its salient points were simplicity and honesty.

"Evidence of the antiquity of man furnished by ossiferous caverns in glaciated districts" is the subject of the anniversary address of Dr. Henry Hicks, retiring President of the Geological Society of London, published in the May number of its *Quarterly Journal*. The author shows conclusively that the palæolithic implements found in association with the remains of extinct mammals of the pre-glacial or glacial period are those of man living at the same period. The same number contains an illustrated paper by Mr. E. J. Garwood and Dr. J. W. Gregory on the "Glacial Geology of Spitzbergen," in which are demonstrated the upward flow of glacial ice and the transportation of materials from lower to higher levels.

A movement, strongly akin to a revival of historic Gallicanism, has in recent months been developed in certain sections of the Roman Catholic Church in France, and has begun the publication of a Paris organ, *Le Chrétien Français*. The agitation is for independence of thought and the establishment of evangelical principles in the Church of France. A score or more of priests have severed their connection with the dominant church, and have declared allegiance to the new movement. Father Abbé Bourrier, formerly a high ecclesiastic, is editor of the journal. Its motto is declared to be: "Nothing but the Gospel; but also, the Gospel entire."

A great stir is reported among the *bouquinistes* of the Rive Gauche in Paris and their faithful customers. The extension of the Orléans railway line to the Quai d'Orsay has displaced for a time the bookstalls established along the parapets. The booksellers of the Quai d'Orsay are the first to go; they betake themselves to the Quai de la Terrasse, and will not come back again, it is said, for two years. Those of the Quais Conti, Voltaire, and Malaquais are exiled only for some months. They are going across the river, and will set themselves up temporarily on the right bank of the Seine. About a hundred and fifty booksellers in all are scattered, but their annoyance, it may be supposed, will be far less than that of the much greater number of the quiet frequenters of the bookstalls, whose daily visits to their favorite haunts will be sadly disarranged.

In accordance with a recent decision of the Minister of Education, the degree of M.D. will hereafter be conferred by Prussian universities only upon candidates who have passed the medical state examination prescribed by the laws of the Empire. The academical honor will, therefore, be tantamount to a practitioner's license. This is as it ought to be, but it has not been so heretofore. In fact, under present conditions, a doctor of medicine of one of the foremost universities might render himself

able to prosecution by putting his title on the street-door of the wall of his house (thereby misleading the public), while there would be no objection to his attaching the *Dr. Med.* to his name on the door-plate of his private room or the entrance to his flat. Exceptions under the new regulations will be made in favor of foreigners and of students from the German States who do not intend to become practitioners, but who, in addition to their *Fachstudium* in the philosophical faculty (e. g., zoölogy, or experimental psychology), pursue medical studies sufficient to meet the requirements for the degree of doctor of medicine.

To fill the vacancy caused at Harvard by the approaching "sabbatical year" of Prof. Ashley, Dr. William Cunningham of Trinity College, Cambridge, England, has been engaged for his countryman's second half-year. Dr. Cunningham is not unknown to our readers as a writer on English economic history, being the author of the substantial two-volume treatise on 'The Growth of English Industry and Commerce' and of many other works. In 1891, he was chairman of the Economic Section of the British Association, and he has recently held for a time the Tooke professorship of Economic Science at King's College, London.

On Monday, June 13, commemorative exercises were held in honor of the late Prof. Herbert Tuttle, at Cornell University. Prof. Tuttle's reputation rests mainly upon his unfinished but excellent History of Prussia, which has been universally recognized as the best work in the English language upon its subject. He held the chair of modern European history at Cornell, and died upon the morning of commencement day in 1894. The proceedings on Monday consisted in the presentation to the European history seminary-room in the University Library of an excellent portrait of the late professor, painted by his widow, Mrs. Mary McArthur Tuttle, who is an artist of great skill and acknowledged repute. Most of Prof. Tuttle's former colleagues were present on the occasion, and speeches were delivered by President Schurman, Prof. George Lincoln Burr, Prof. Moses Colt Tyler, and Prof. H. Morse Stephens. Mrs. Tuttle has, in addition, given to Cornell University the original manuscripts of her husband's historical works.

From the Cape to Cairo is the aim of an African expedition which has just left England under the leadership of Major Gibbons. The party, which consists of nine Englishmen, carries with it two aluminium boats, and a barge in which a large part of the journey of 12,000 miles is to be made. The proposed route is to ascend the Zambezi from its mouth to the limit of navigation, and from thence across the watershed into the basin of the Congo, to the Lakes Tanganyika and Victoria, and then down the Nile. The most difficult, if not the most dangerous, part of the undertaking will be the transportation of the boats over the mountainous region between the two lakes. Major Gibbons expects to be gone eighteen months, hoping to reach Khartum by August of next year.

The eleventh International Congress of Orientalists in Paris decided to hold their next convention in the Eternal City. The committee of arrangements, of which Prof. Angelo de Gubernatis is chairman, has issued, in French, a preliminary announcement of the coming Congress, which will sit, not in September, as has hitherto been the

custom, but early in October, and the document issued gives excellent reasons for this change, one of the chief being sanitary. The King of Italy has consented to be patron of the Congress, and the Ministry of Public Instruction has promised its coöperation. The sessions will take place in the University buildings.

—The senior class of Smith College chose this year for the customary Shakspeare dramatics "Much Ado About Nothing," an undertaking less ambitious than last year's "Merchant of Venice." One who witnessed both performances writes: "The scenic opportunities were, of course, unequal, and the needful cutting of 'Much Ado About Nothing' robbed it of much of its rather slender proportion of high poetic diction. The trained delivery called for was of a different order, therefore, from that exacted by the 'Merchant,' but was still the point on which the stress of criticism must fall. Distinctness and calculated measure were essential to give full weight to quip and repartee and innuendo in which 'Much Ado' abounds, and it must be said in general that the deficiency was more noticeable than last year. Whereas, too, the men's parts in the 'Merchant' were decidedly more successful than the women's, the reverse was true in 'Much Ado.' Both *Beatrice* and *Hero* were very attractively and on the whole competently played; the male characters fared indifferently or badly. *Dogberry* and the watch were somewhat overdone. The marriage scene was, perhaps, most effective. Altogether, the play gave genuine pleasure, and the audience was justly entitled to manifest its approval, but this was constantly ill-timed, and it is to be hoped that the next class will have the courage to prescribe on its programme entire abstinence from applause till after the close of a scene or an act. To interrupt the action with it is unpardonable."

—The Rev. R. G. MacBeth's 'Making of the Canadian West' (Toronto: William Briggs) may be regarded as a sequel to his 'Selkirk Settlers in Real Life.' In the former work he described the attempt of Lord Selkirk to relieve the Scotch Highlands of their poorer inhabitants by establishing a colony on the Red River. In 1814 his first band was dispatched, only to endure the united attacks of climate and the Northwest Fur Company. In the end, however, the remnant of its numbers gained a foothold, and their descendants have proved to be a stronger stock in Manitoba than the squatters of French origin. Mr. MacBeth's present subject is the history of Manitoba and the Territories between Confederation and the School Act of 1890. His second title reminds us that he has been an eye-witness of what he relates, and it may be also stated that his father before him was an opponent of Riel at Fort Garry in the days of Scott's murder. Riel, with the movement for which he stands, is the central figure of this sketch, for the most interesting part of the action turns about troubles arising from the purchase of Hudson's Bay land by the Dominion of Canada. In the spring of 1869 Sir George Cartier and William Macdougall, representing the new federation, arranged with the Hudson's Bay Company to purchase £300,000 worth of its grant, on which at the time about ten thousand Scotchmen and *bois-brûlés* were settled. At this juncture differences of race temperament began to

show themselves. The Scotch felt sure that they would receive eventual justice from Canada, while the French half-breeds—"more fiery and easily excited, more turbulent of spirit and warlike in disposition, accustomed to passages at arms with any who would cross their path, and withal, as a class, less well informed on current events than their white brethren—were not satisfied with the course that seemed to them to place their rights in jeopardy." Mr. MacBeth's account of the two risings which were due to misunderstanding between the French and the Government is conceived in a spirit of justice, and he is at less pains to champion the cause which he upheld than most of his compatriots in Manitoba would be.

—Prof. F. A. Aulard, whose knowledge of the history of the French Revolution is unsurpassed, both in depth and in minuteness, publishes in the *Revue Bleue* of May 14 a brief and luminous article entitled, "Le Tutoiement pendant la Révolution." It is known by most people that the use of "thee" and "thou" obtained largely at this epoch, and it is also known by many that this use was ephemeral. M. Aulard gives us the whole history from its rise to its disappearance. It did not spring, as might be natural to think, from any instinct of low envy or insolence, but was the deliberate attempt of a little body of doctrinaires to establish democratic equality. Just as the first movement toward a republic in France was made by a few men of letters who had hard work to persuade the workmen that it could be possible to get along without a king, so the democratic reform of manners was imagined and popularized by a few cultivated people of the upper class. The first person to advocate the *tutoiement* appears to have been a woman of noble birth, daughter of the Chevalier Guynement de Kéralio, and wife of François Robert, who was an advocate of Liège, an ardent Revolutionist, and who, later, represented the Department of Paris in the National Convention. Mme. Robert was somewhat more advanced in her views than Mme. Roland, and no love was wasted between these ladies, who differed not only in politics but also socially. Besides her salon, Mme. Robert founded a newspaper, the *Mercur National*, of which she was editor-in-chief, assisted by her father and her husband. It was she who, under a pseudonym, published in the *Mercur* of December 14, 1790, an article entitled "Sur l'influence des mots et le pouvoir de l'usage," in which the *tutoiement* was first proposed. Already the words *citoyen* and *citoyenne* had begun to replace *monsieur* and *madame*, and the *tutoiement* was really not much more than a logical carrying out of this.

—Whether the new mode came into use at once, M. Aulard is unable to say, but by the 10th of August, 1792, it was usually employed by the popular societies in their debates. In 1793 it had become in Paris a badge of advanced democratic opinions, and later in the year, on October 31 (10th Brumaire, An II.), a numerous deputation was sent from the societies to the Convention to demand a decree establishing its use. The decree was refused, but the petition was inserted in the *Bulletin* with an invitation to all citizens to use only such language as should convey the steadfast principles of equality. On the 21st Brumaire a second attempt, also fruitless, was made to obtain

a decree. This was really needless, for the Committee of Public Safety had already adopted the usage. "Thee" and "thou" triumphed, but its reign was short. After the democratic check of Thermidor, "vous" came back again, and by Prairial of the year III. (May, 1795) the *tutoiement* had almost entirely passed out of use, at least among private persons. The Committee of Public Safety kept it up in its correspondence, and the Conventionals used it among themselves for awhile, but after the Convention it had generally disappeared. M. Aulard writes of it with respect and with regret. It was, he thinks, one of the forms of the noble idea of brotherhood on which the true Fathers of the Revolution wished to build their state, and, ephemeral as it was, marks a notable moment in French social evolution and deserves something quite different from the disdain of history.

—Dr. Albrecht Wirth has been before the public for some time as an extensive traveller through the wilds of Central Africa, and also through Siberia and Eastern Asia, with the outlying archipelagos. His latest work in German relates the history of Formosa, and bears the title, 'Geschichte Formosa's bis Anfang 1898' (Bonn: Carl Georgi). Wirth saw the island twice, and gathered valuable information. In writing the above publication he intended at first an historical sketch only; but since historiography in our time needs help and illustration from many other sciences, especially natural, the volume has swelled into a small cyclopædia of the island. Formosa is situated in the China Sea, opposite the Fo-Kien province, and extends northward for 220 miles from north latitude 22 degrees. The spine or crest of the island lies in its central part, and reaches an average altitude of four thousand feet. Its great length and inconsiderable breadth give to the island a form closely resembling that of a huge banana. Its cordillera is of volcanic origin, and the plutonic fires are not extinct, but slumbering, their activity being evidenced by hot springs, sulphurous emissions, and frequent earthquakes. The event which submerged the lands once connecting Formosa with the Chinese main took place in recent geologic periods, and the depth of the ocean between the two is even now not great. The eastern slope of Formosa is abrupt; the western and northwestern parts form plains and lowlands, which are infested by fevers and other distempers for several months in the year, the only healthful part being the southern extremity. A considerable number of different races inhabit the country, five or six of them having settled there long before the advent of the European. There are Mongols, Melanesians and Polynesians, Malays, and Negro tribes, the dwarf nations of the interior belonging to this last class. The ethnic distinctions between all these groups, together with their history, are minutely described by the author, and evidently constitute the main object of his interesting book. There are populations in the centre of the mountains which have never been studied or seen by travellers, and all sorts of horrid stories circulate among the Formosans concerning them. Among the whites the Dutch colonists played an important part in the seventeenth century; then followed an invasion of Chinese, who settled there in large numbers, and engrafted themselves so deeply that to oust them will be

well-nigh impossible. The insular kingdom of Japan has, through its late war with China, obtained hold of Formosa, and is colonizing it now under many difficulties which are graphically and humorously portrayed by Wirth at the end of his 'Geschichte.'

WARD'S WISEMAN.

The Life and Times of Cardinal Wiseman.

By Wilfrid Ward, author of 'William George Ward and the Oxford Movement,' 'William George Ward and the Catholic Revival,' 'Witnesses to the Unseen,' etc. 2 volumes. With portraits. Longmans, Green & Co.

In his two books upon his father's Anglican and Roman career, as well as in other writings, Mr. Wilfrid Ward has shown a mind so subtle and ingenious, and so much skill as a biographer, that our expectations with regard to his *Life of Cardinal Wiseman* were naturally great. If they have not been seriously disappointed, they have not been fully met. The book is large, but it is made so more by the copiousness of Mr. Ward's extracts from letters and other documents than by the abundance of his own matter, which suffers from its failure to absorb the essence of the material in hand, and lacks the color which such absorption would have given. As compared with the books on William George Ward, we feel the lack of personal engagement with the theme, and at some critical junctures fancy that we detect a disposition to shuffle off the mortal tiredness of the whole business with as little pains as possible to make it understood.

Nicholas Wiseman was born in Seville, August 2, 1802, and died in London February 15, 1865. His father was a Spanish merchant, belonging to an English Catholic family; his mother was of Irish extraction, but her name (Xaviera Strange) is eloquent of some Spanish mixture in her blood. An early playfellow was the celebrated Blanco White, of whom Wiseman wrote in 1830 that "he was, without exception, the most pious, the most amiable, and the most clever young man he ever knew, when he took orders." In 1810 Wiseman went to Ushaw College, near Durham, England, and remained there eight years. He was always considered stupid and dull by his companions, and made few friends, and he speaks of his college years as desolate; but they were studious, with much voluntary reading, and his place at the conclusion of his studies was at the top of his class. For six years, from his seventeenth to his twenty-third, he was a student in the English College in Rome, an establishment revived in 1818, after ten years of hibernation. We have some interesting reminiscences of his student life; one of the Abbate Cancellieri, whose works, Niebuhr said, contained "everything that was superfluous," and who wrote on such exciting topics as "Head Physicians of the Popes" and "Men of Great Memories who have Lost their Memories." The event of this period was the burning of the splendid old basilica of St. Paul's. That Wiseman assisted, in the French manner, at the conflagration, added much zest to his participation in the consecration of the present church, which is an elaborate copy of the former one, in 1854. The death of Pius VII. and the coronation of Leo XII. were other incidents that touched the imagination of a youth extremely sensitive to whatever was spectacular or dramatic. His student years did much to make

him that "résumé of Rome" which he was described as being in his maturer years.

Great was his happiness, he tells us, when he was "freed from the yoke of a repressive discipline and left to follow the bent of his own inclinations." He became a dreamy wanderer through the by-ways of the ancient city, soaking his heart in its antiquities and their associations. In 1837 he was made Vice-Rector of the English College, but his talent was far less for administration than for study. His 'Horse Syriacæ' was the precocious but deceitful promise of a life of scholarly activity. His studies won him such friends as Niebuhr and Bunsen, and commendation as distinguished as it was sincere. On the other hand, his laborious defence of that most gross corruption of the Greek text of the New Testament, "the text of the three Heavenly witnesses," suggests a doubt of his possessing that absolute critical sincerity without which all scholarship is vain. Simultaneously with his Syriac and related studies he had "subtle thoughts and venomous suggestions of a fiendlike infidelity which [he] durst not confide to any one." His doubts were not superficial, but affected the fundamental truths of Christianity. But "thoughts against faith must be treated like temptations against any other virtue," and he so treated them—put them away with a strong hand. For twelve years, from 1828 to 1840, he was the Rector of the English College, and the earlier of these years, till 1835, coincided with those of his sceptical anxiety. It was probably some rumor of this that led to Browning's picture of him as Bishop Blougram—a picture which Mr. Ward resents, though it was a palpable hit in various particulars. In conversation he had not always Blougram's volubility. He could sometimes be as "silent in several languages" as at others copious in English or Italian. The latter of these had a bad effect upon the former, making it less correct and forcible, and stitching on it many a purple patch.

The brief pontificate of Pius VIII. was followed by the fifteen years of Gregory XVI., years of reactionary sympathies and reliance upon Austrian arms to keep Italy well under foot. But it was evident, says Mr. Ward, that the temporal sovereignty was in a bad way, and that things would have to be worse before they could be better. "We all foresee," said Cardinal Consalvi's secretary, "what it must result in. But mark! When the old lion shall be restricted to his narrow cage, he will yet shake his bars so as to make Europe tremble." Mr. Ward, in order to make this prophecy more impressive, prints it in italics, and he seems to think it has already been fulfilled. And certainly it does not appear that the present Pope's contention (which is also Mr. Ward's in his Epilogue to these volumes) that without the temporal power his spiritual power is vain, gets any justification from the course of his experience.

An interesting episode is that of the visit of Hurrell Froude and Newman to Wiseman in 1833, familiar to all readers acquainted with the history of the Oxford Movement. "We got introduced to him," writes Froude, "to find out whether they would take us on any terms to which we could twist our consciences." From this year and from this visit dated the rise of Wiseman's hope of great gains in England for the Roman Church. He wrote in 1847 that, from the day of that visit, never for an instant did

he waver in his conviction that a new era had commenced in England. "To this grand object I devoted myself. . . . The favorite studies of former years were abandoned for the pursuit of this aim alone." But no such sudden change is evident in the course of the narrative of the years immediately following 1833. Certain lectures 'On the Connexion between Science and Revealed Religion' were possibly an attempt to silence his own ugly doubts, and we can easily imagine with what bland sophistication he argued the thesis that "the very sciences whence objections have been drawn against religion, have themselves in their progress entirely removed them." But hardly as against the same religion against which they were made.

Mr. Ward's sixth chapter is one of the most interesting and valuable in his book, but it is essentially episcopal. Its subject is "The English 'Papists.'" It is a warm appreciation of their fortunes, their struggles, their disabilities, and their widening liberties, from the time of Henry VIII. until Wiseman's visit to England in 1835. It does not tell the whole story, but so much of it as we should expect from an ardent Romanist, who is well aware that Mary Tudor's policy was a colossal blunder as well as a stupendous crime. To a considerable extent the story is involved in that development of religious toleration which has been so honorable to both Roman Catholics and Protestants in their later history. Newman, however, contended for religious persecution as a reserved right of the Church, the exercise of which she may resume at any time when she can do it to advantage.

The Anglican hankerings for Rome did not satisfy the zeal which Wiseman had for her when, in 1835, his doubts asleep or strangled, he conceived the idea of going to England and starting there a Roman Catholic College and Review. Why not a movement there comparable to that stirring in France, where Lamennais and Lacordaire were doing great things, and in Germany, where Dollinger and Görres and Möhler were engaged in a brilliant intellectual reformation of Roman Catholic dogma? The English Catholics appeared to him to have just emerged from long imprisonment and not to have recovered the use of their limbs. To some of them he seemed too genial in his asceticism, and an Irish servant not only refused to cook him a chop on Friday, but gave warning, being determined not to countenance such impiety even if it had medical prescription. Newman welcomed his preaching as a triumph over the Protestant principles of English churchmen, and rejoiced in it as such. The *Dublin Review* was started, and a Catholic Institute was established. O'Connell was a partner in the *Review*, on condition that he should be a silent one so far as his more radical political opinions were concerned. Returning to Rome in 1836, Wiseman remained there until 1840, when he finally established himself on English ground. Visits from Macaulay and Gladstone assured him of an abatement of prejudice against Rome wider than Oxford's "seclusions ivy-hushed." Gladstone naively fancied Wiseman sympathetic with his view that the Oxford Movement would abate the tendency to Rome, when, in fact, Wiseman's confidence was absolute that Rome was its ultimate goal. In the long run it has done more to Romanize Anglicanism than to make perverts to Rome, so that Gladstone mistook

the future less than he did Wiseman's sentiments.

In his endeavors to help himself from all parties—the old Catholics, the Newmanites, and the Liberals of the *Edinburgh Review*, and their kind, all mutually opposed—Wiseman was obliged to carry water on both shoulders, and, at the same time, on his head. Mr. Ward is nowhere more subtle and amusing than in his discussion of the situation in which Wiseman found himself. How to combine the principles of authority with scientific progress was the problem that clamored for a solution. We have in Mr. Ward's exposition a *modus vivendi* which will be attractive just in proportion as those to whom it is presented are not simple and straightforward. The expression of the Church's dogma must be accommodated, we are told, to the changing thoughts of each new period. Probably we have here a key that will unlock the mystery of Romanism for an indefinite future. Even the dogma of the Pope's infallibility will possibly be so restated as to disarm the criticism of the most scientific, while at the same time the claim of *semper ubique et ab omnibus* will be made for it with an unsmiling face.

In July, 1839, Wiseman published an article in the *Dublin Review* upon St. Augustine and the Donatists, by which, as we read in the 'Apologia,' Newman's theory of the *via media* was completely pulverized. Newman wrote to a friend at the time, "It has given me a stomach-ache"; and thenceforward his view of the Roman Church was different from what it had ever been before. His 'Tract No. 90' gives a title to one of Mr. Ward's chapters, but little is added to what was already known of that famous document. Wiseman recalled the time when Hurrell Froude had called Romanists "wretched Tridentines," while now Newman was insisting that the Thirty-nine Articles were conformable with the decrees of Trent, and that popular Romanism was not. Let Rome reform, argued Newman, and it would be the duty of the English Church to fall into her arms. Wiseman was far too sanguine then (1841) and after Newman's submission (1845) of such a consummation. He did not even think it necessary for Rome to reform herself. Newman's submission has a touch of absurdity here that it has had in no previous narration. A young Unitarian minister presenting himself for installation in a pair of light trousers, Dr. Bellows said: "I know nothing of the young man, but I expect the worst." But when Wiseman sent a friend to report upon Newman's condition on his Anglican "death-bed," as Newman called it, and the friend returned and reported Newman as receiving him in a pair of light trousers, Wiseman expected the best he could desire, and the submission was not long delayed. The light trousers meant that Newman no longer considered himself an Anglican priest. Here is an item for some future editor of Carlyle's "Philosophy of Clothes." In the joy of the great culmination and the spectacle of ten quondam Anglicans in his college chapel at Oscott, Wiseman had a vision of the Anglicans passing collectively into the communion of the ancient church. Meantime, the old Catholics were suspicious of the new converts, and the converts regarded the old Catholics as hopelessly ignorant and inert, and declared Wiseman to be solitary in his appreciation of the great opportunity.

The accession of Pius IX. and his short-lived liberal programme found Wiseman in cordial agreement with Massimo that the Pope's proper rôle was that of a great liberal secular pontiff. Evidently the doings of Pius in 1848 did not furnish Mr. Ward with a congenial topic, and he has not touched them in any helpful manner. For two years before 1849 Wiseman was acting Vicar Apostolic of London, and in that year he succeeded to the office in his own right. In 1850 he was made a Cardinal, and left England "for ever" in great sorrow, but his sorrow would have been more genuine if it had not been qualified by hopes of his returning in some grander style than he had yet enjoyed. The fulfilment of these hopes awaited him on his arrival in Rome, where he was at once informed of the restoration of the Roman hierarchy in England and his appointment at its head as Cardinal Archbishop. The Pope issued a bull announcing the new departure, and Wiseman followed it with a letter "from out the Flaminian Gate of Rome," and shortly after set out on a kind of progress to his new dominion, making much delay to receive the congratulations of distinguished fellow-servants of the Church. There was a rude awakening from his happy dream when he discovered that his letter and the papal bull had roused in England a great storm of righteous indignation. Papal aggression was the only talk, and an ecclesiastical-titles bill was passed, to become at once a dead-letter. Mr. Ward treats the whole business as a piece of frantic folly, but all the foolishness was not on one side. The terms of both the bull and the letter were ineffably silly, conceived in terms of intolerable ecclesiastical bombast, and the manner of their reception was convincing that the Pope and his agent had reckoned without their host to an absurd degree in supposing that Protestant England was ready to "begin anew its course of regularly adjusted action round the centre of unity, the source of jurisdiction, of light, and of vigor," as the Cardinal Archbishop expressed his conception of the new order of affairs.

Roman Catholics object to being called Roman Catholics, but Wiseman was a *Roman* Catholic or nothing. Hence many a difference with the old English Catholics, who tended to the earlier Gallican insistence upon national rights and privileges. Hence, fundamentally, that painful difference with his coadjutor Errington which Mr. Purcell celebrated so remorselessly in his *Life of Cardinal Manning*. Mr. Ward's account of the matter is as much *ex parte* as Mr. Purcell's, and it slurs documents in Mr. Purcell's book which must be reckoned with. Mr. Purcell at least succeeded in making an interesting story of the quarrel, and Mr. Ward has made of it the dulllest reading in his book. Wiseman seems to have been morally hypnotized by Manning, so subject to his will was he even while rebelling against it. Of all Roman Catholics, Manning was the most Roman. Manning and Errington pulled at the moribund Wiseman like wild horses, and his spiritual distraction was most pitiful.

Physically and morally, Wiseman presented striking contrasts to his successor in the Archiepiscopal chair. Where Manning had a thin, hard face, Wiseman's was full, with thick, sensuous lips and bulging eyes. Where Manning was ascetic, Wiseman had, as a Puseyite said, "his lobster-salad side," and he dearly loved to travel with a showy reti-

would modify the argument, or something overstated that carries it too far.

Yet, on a critical examination of Mr. Mallock's reasoning, we cannot escape the conclusion that it is on the whole sound. His error lies in the absolute character of his statements; if he made more allowance for exceptions and modifications, he would be more persuasive. Most people, said George Eliot scornfully, think that the radii of a circle have a tendency to be equal; but, after all, they are right, for in the circles within their perception this tendency to equality is all that can be observed. Hence it is commonly a grave rhetorical blunder to make absolute statements; exceptions at once occur to the mind of the reader, and this tends to make him think that he knows more than the author. To a certain extent the wise author will encourage this attitude in his audience; he will leave them to fill up gaps and to draw conclusions for themselves, but he will contrive to have the result strengthen his argument. The reader, seeing that the argument can be strengthened, proceeds to strengthen it, and his complacency over his success commits him to the author's support. But writers like Mr. Mallock affront the self-conceit of those whom they should propitiate; like Macaulay, they say that every schoolboy knows things of which the reader is conscious of his ignorance, and wind up a course of reasoning that can only establish a probability with an absolute Q. E. D. in the style of Euclid.

As to Mr. Mallock's argument itself, it runs off as glibly as a fishing-line from the reel, having the aid of side-notes on the pages that make it as easy to follow as an avenue with all the cross-streets labelled. His first point is against those philosophers who have tried to explain the evolution of society. They have answered speculative questions, but they have failed to answer practical-questions. This, Mr. Mallock says, is because they have not distinguished between the phenomena of social aggregates and the phenomena of parts of aggregates. Of this offence he quickly convicts Mr. Benjamin Kidd, and then turns his attention to Mr. Spencer, who has spoken harsh words of the "Great Man Theory," even declaring it to be as incompatible as the theocratic theory with any possible social science. Mr. Mallock retorts that Mr. Spencer and the whole school of contemporary sociologists deny the existence of congenital inequalities where they are speculating about societies or races as aggregates, while as soon as they speak of individuals they recognize the importance of their peculiarities. His examination of the arguments of these writers is clever and convincing, and he triumphantly winds up with Mr. Spencer's description of Napoleon as "a soldier whose immense ability, joined with his absolute unscrupulousness, made him now general, now consul, now autocrat."

The next step in Mr. Mallock's argument is to distinguish between the survival of the fittest, due to selection, which slowly raises the general average of efficiency, and the rapid advance which is due to the leadership of great men. Aristotle's brain was as good as Newton's, and the masons who built the Parthenon were as clever workmen as those of to-day; but the enormous productivity of this century is due to the superiority of a number of industrial leaders. They have intended particular changes, and the result has

been the rapid evolution which Mr. Mallock calls "the reasonable sequence of the unintended"—"the unintended result of the intentions of great men." So far as inheritance and environment go, we may say that great men may sometimes exist without accomplishing anything because the conditions are unfavorable; but the point is that whenever anything is accomplished, it is the work of great men. The aggregate of unintended results is what has been observed by sociologists; but what we are concerned with practically is the intended element. Of the factors here "the chief is the great man, whose importance is enhanced rather than dwarfed by the fact that his intellect and his energy are the causes not only of great results which he intends, but also of those others—wider, if not more important—which, though neither intended nor foreseen by himself or by anybody else, would, if it were not for him, never take place at all."

Having cleared the way for ability, Mr. Mallock develops the methods and conditions of its action, showing that progress is the result of a struggle not for survival but for domination, which is obtained by helping others to live, and which involves vigorous competition among employers to get the help of laborers. Many keen observations are made on the part of the masses in political life, that part being generally to fall in with the suggestions of statesmen or demagogues, who really control popular movements under any form of government. The final chapters are devoted to a consideration of the effect of exceptional rewards on exceptional exertions, Mr. Mallock showing that the Socialists claim that their form of government would sufficiently encourage great men to keep on with their production of wealth, while they at the same time complain that men are universally possessed with the desire to own all that they produce. The chapter on equality of educational opportunity contains many suggestions that deserve particular attention in this country, and the conclusion, on "Inequality, Happiness, and Progress," may be read with profit by everybody. Altogether the book is not only clever and brilliant, but also in its main lines sensible and sound. It is safe to call it the most readable "showing up" of Socialism that has appeared, and it contains a strong argument for progress along the ways tried by the long experience of men.

The Training of a Craftsman. Written by Fred Miller. Illustrated by Many Workers in the Art Crafts. New York: Truslove & Combs. 1898. Pages x, 249.

In the little book named above there are three chapters devoted to the general subject of modern decorative art, its shortcomings and its present character, and ten chapters devoted to special departments of craftsmanship. The author announces himself as having begun work in the capacity of an assistant in the department of stained glass and decorative windows, and as having learned what he knows to a large extent by his own mistakes and by his own tentative practice. The first chapter, the title of which is "The Craftsman and Nature," contains an extremely intelligent discussion of the way in which a student of decorative art should study natural form and should utilize the suggestions of nature in his work. This chapter is illustrated by plant studies made by the author, and he insists

(page 13) on the importance of avoiding botanical knowledge and study of plant anatomy, also the analysis of the plant in the way too often advocated by some teachers—that is to say, the making of elevations and plans of blossom, leaf, and twig. The author points out (page 16) that your own drawings, if they are faithful and contain just as much of nature as you can possibly put into them, will be the most valuable aids to your design afterwards, while, at the same time, they are not in themselves designs in any sense of the word. The author would have the student draw from nature with a single-minded desire to get all the facts in each special case, and thus at once fill his mind with knowledge and thought and also fill his portfolios with material, while, at the same time, he insists upon it that one ought never to stop drawing, and that it is altogether a heresy to suppose that one can stop studying nature because assured that he has material enough.

With all this forcible exposition of sound principles there is mingled a curious heresy, which has arisen naturally out of the process of thought superinduced in its turn by the author's experience. He is of the opinion that it is bad to be the pupil of one man, and that, on the contrary, the student of design should study the work of many men, with the idea of avoiding mannerism on the one hand, and on the other hand of securing individuality by means (it would seem) of a wise eclecticism. It is urged (page 11) that mannerism is thus to be avoided, and (page 13) that if the student is trained in a particular style of design, such as Louis XV., he is put on a wrong scent. All training, it is alleged, "should be in the direction of developing the ego," and with this proposition most persons, not metaphysicians, who have thought profoundly on the needed changes in our present system of studying art, would agree. It is, however, very doubtful if they will agree with the author in his assumption that it is best to avoid being the student of any man. Assuredly, it has been the history of all the great arts of the past that the artist has been trained in the artist's atelier. One man succeeds to the heritage of another, not by dint of going out into the world, seeing everything and selecting that which is preferred: life is not long enough for that, nor is the mind of the youth acquisitive enough, or formed enough, for that. The artist is trained, and in all ages has been trained, by sitting at the feet of another artist, absorbing all that the master can teach, and afterwards seeking elsewhere for corrections of the perhaps too great mannerisms which had been gained in youth. This difference of opinion once urged, there is nothing but praise to give to this chapter. On page 16 there is an admirable definition of design—limited in its statement, but unlimited in its possible application.

There are three chapters devoted to metal work, namely, one concerned especially with repoussé and wrought iron, one with jewelry, one with enamelling on metal. It must be understood that there is no attempt to explain all the processes that are now or have ever been used, nor any attempt at the production of a handbook explaining fully the peculiarities of different styles of ancient metal-work. At the same time, the analysis of enamelling (on pages 86 to 89) is sufficiently full; the only difficulty with it being that it is not quite exact. To say, for in-

stance, that the Japanese are the greatest masters of the art of *cloisonné* enamel is certainly to make an erroneous statement. Dextrous beyond others the Japanese masters may be, but their work has never approached fine Chinese work in beauty. It is not in enamel that the brilliant and always satisfying design of the best Japanese epochs has been shown. A curious misprint gives a wholly false classification of enamels, for the term intended as the title of the third class is *basée taille*. Even this is inadequate as a piece of nomenclature. It is not, however, as an analytical account of the art that we value the book before us.

It is curious that the least satisfactory chapter is that on Glass Painters, theirs being the art first practised by the author; but it is evident that he has had no opportunity to inform himself concerning American work in this department. As this is the only department of decorative art in which the United States have excelled as yet, it is well that it should be noticed how inadequate this chapter is. The discussion of wood-carving, too, is injured by the very insufficient examples which the author has been able to lay before his readers. Of all the discussion of technical work, perhaps the most thorough and the most satisfactory is to be found in chapter xi., devoted to Surface Decoration.

The book is one which every person interested in decorative art should read with care. It is full of suggestion, and, if one finds that he can agree with its statements, full of encouragement.

Pictures from the Life of Nelson. By W. Clark Russell. Dodd, Mead & Co. 1897.

This is a small illustrated volume of some three hundred pages, on a subject on which the author is quite at home, he being already the author of a *Life of Nelson*. It contains little that is new except a chapter on "Poor Jack," which shows that the book is brought out for purposes not solely biographical. This essay gives facts tending to show that the British navy is filling up with foreigners ("Scandyhoovians," "Dagos," and "Dutchmen"). In 1896 the mercantile marine was manned by 235,000 men, of whom only 55,000 were British seamen. According to the author, the number had by 1897 dwindled to 30,000. This state of affairs Mr. Russell would reform by legislation. Under the old navigation laws, it seems, a ship-owner was compelled to ship one British seaman to every twenty tons, and in no case was the "foreign element" allowed to exceed one-fourth of the whole. The advantage of this was that, in case of war, there was a ready supply of British tars to man the fleet. The question which will suggest itself to the reader, and which the author does not answer, is whether it is an essential part of the scheme to revive, with the navigation laws, the press-gang and the right of search. To fill up merchant-vessels with British sailors would not help the fleet, unless there were some means of making them serve in it.

The "pictures" of Nelson here given have a certain value because they are the work of a seaman who understands what he is writing about, but Mr. Russell is rather over-burdened with sea-lore, and his marine style, since the day when he wrote the "Wreck of the Grosvenor," has not improved. Public opinion he describes (p. 139) as a

"worthless weathercock," which, however, on a certain occasion, comes "slap into the wind's eye—a very fair wind for Nelson—with a shriek that must have meant joy as the tail of the thing swept to leeward"; and this is merely an illustration of a straining for effect which mars the rhetoric of the book throughout. Mr. Russell has, of course, a good deal to say about Nelson's intrigue with Lady Hamilton, but does not seem to perceive that to blacken Cleopatra does not enhance our admiration for Antony. The clumsy biographer who, in his anxiety for truth, spoils his market, has a genuine vogue in our day and generation, and perhaps Nelson's real greatness has never been better proved than in the security of his fame amid all the disagreeable revelations which his admirers dish up from time to time for our delectation.

Lectures in the Lyceum, or Aristotle's Ethics for English Readers. By St. George Stock. Longmans.

An accomplished Oxonian, author of 'Attempts at Truth' and a hand-book of deductive logic, has hit upon the unfortunate idea of offering the public a dilution of Aristotle in dialogue, under the above title. The result is a free paraphrase and interpretation of the first five books of the 'Ethics' in the form of a hypothetical reconstruction of the original conversational lectures, with disciples Theophrastus and Eudemus, and an extremely naïf son Nicomachus, for interlocutors.

We call it an unhappy idea because the taste for this kind of sugar-coated pill of knowledge is now extinct in all rational beings. We do not want our science Sandford-and-Mertonized. The very children pronounce Rollo and his uncle a bore; 'Friends in Council' has become unreadable; even the genius of Mr. Ruskin fails to reconcile the public to the *miseries* of Flossie and Sibyl and the Old Lecturer in 'Ethics of the Dust.' Mr. Stock's Nicomachus reminds us of Émile Faguet's witty characterization of the rôle of the *belle Marguerite* in Fontenelle's 'Dialogue on the Plurality of Worlds.' He understands, or fails to understand, too obviously in accordance with the author's need of reminding us of his presence:

"I like this equitable man, father. Will you not tell us something more about him?" "My head always begins to swim, father, when I hear of the Pythagoreans: they were so very abstruse." "Wasn't it Circe who said that, father?" "I believe it was, my son, now you mention it. You are fresher from your Homer than I am." "I am afraid, father, I do not remember all you told us in that course: it was so dry."

This is indeed strewing the sands of the Lyceum with flowers.

It is not merely a question of taste. This method of exposition misrepresents Aristotle's manner, and makes it impossible to distinguish his matter from the interpolations and edifying developments of the commentator. Nothing could be farther from what Schopenhauer calls the *glänzende Trockenheit* of Aristotle's style than the sentimental expansion, the would-be epigram, and the sudden lapses into colloquialism of Mr. Stock:

"The happy man is no chameleon, to change his hue with the sunlight of prosperity or the shade of adversity. His house is not built on the sand, to fall when the waves come and the winds blow. No; happiness is a tree which has its roots deeply fixed in the settled serenity of a virtuous

mind. The blasts of fortune may strip its fair foliage and break its branches, but the root of the matter is there all the time."

Is this Aristotle, or Jeremy Taylor-and-water? As an example of more familiar eloquence we may cite Mr. Stock's development of *ἡμετέριον τὸ μακάριον*:

"If Fortune cannot spoil, she can at least soil, our happiness. A dirty coat will serve the chief purposes of a coat—it will cover you and keep you warm; but all the same it is nicer to have a clean one."

Lastly, when the lion is disposed to laugh, mark the playful colloquialism of the style:

"THEOPHRASTUS. Did you follow any definite order in giving us the list of moral virtues? ARISTOTLE. I have hatched many chickens before now, but I never had such a pecking brood as you."

The commentary interwoven with this paraphrase is not wholly without value. Mr. Stock is evidently a devout believer in the entire reasonableness, not to say infallibility, of Aristotle, and has labored to put all his statements in the best light, with the aid of every qualification and illustration that a judicious and somewhat painfully explicit modern admirer would wish to add. This is unquestionably a fairer way of interpreting a great writer than the opposite method of assuming that, wherever his thought is incomplete or ambiguous, it is wrong. In the form of footnotes or a readable interpretative essay, such a commentary would be very acceptable. Inextricably involved with Aristotle's own words as we have it here, it confuses the general reader and irritates the scholar. For example, on page 3 we read: "Let me be frank with you on this subject. The only proof that I can offer you of the existence of a Highest Good lies in the fact that we all desire it. It is inconceivable that man should be cursed with an unsatisfiable desire for an object which has no existence." Mr. Stock must be aware that he is here foisting upon Aristotle a distinctively modern argument for the existence of a kind of Highest Good (with a capital letter) with which Aristotle's highest good, or greatest practically attainable happiness in human life, has nothing to do. But how is the "English reader" to know it? So, when Mr. Stock makes his lecturer say of the *ἡδύμηνος*, "You may regard the wise man as the type of the advancing instincts of mankind," the critic replies, "You may indeed, but did Aristotle? In short, to conclude as we began, the ingenuity and scholarship displayed in this book are virtually thrown away, because nothing less than genius could redeem the vice of its original conception."

The Golfing Pilgrim. By Horace G. Hutchinson. Charles Scribner's Sons. 1898.

Mr. Hutchinson, who is responsible for the greater part of the Badminton book on Golf, is not only a first-class golfer, but also a pleasing writer, and he has here collected a variety of magazine articles bearing on his favorite game. He discusses golf at the shrine—that is, St. Andrew's—and golf in France and the west of England and elsewhere, and points out, with much humor, the peculiarities of the amateurs and caddies in these widely different regions. All that is needed to complete his geographical survey of the humors of the game is a visit to one of our Southern courses, where the comical appearance and wild exclamations of the

negro caddie would be a revelation to him and his English readers.

In these days of rapidly acquired military titles, we can all appreciate the Scotch caddie's description of a new arrival: "I dinna ken his name, but he's a Major something—at least he's no a real major, but he married a major's widow and took the title!" On the other hand, only those who are deeply interested in the practice of the game can be expected to estimate at its proper value the wisdom contained in the maxim, "Driving is an art, iron play a science, but putting is an inspiration." Most beginners have had "bad streaks" during which they have felt like the irascible gentleman whose temper was so utterly ruined by the game that he had to abandon it and take to the game of patience instead, and when that did not come out right he was not on speaking terms with himself. Mr. Hutchinson has a chapter on "The Golfer in Art," in which he makes the apparently reasonable charge that the universality of the instantaneous photograph tends to mislead the artist as to the true drawing of the golfer in the act of making a stroke, because such photography, owing to the difficulty of focussing, cannot be absolutely accurate.

Anarchism: A Criticism and History of the Anarchist Theory. By E. V. Zenker. G. P. Putnam's Sons. 1897.

This translation is a curious little treatise, by a writer whose main fault is that he treats all other writers as equals. He has not discovered that the Republic of Letters is a figure of speech, invented for their own purposes by the aristocrats of letters, and he admits to the freedom of discussion any one who can find a publisher. Hence we begin with a very clear essay on Proudhon, and end with Johann Most's latest teachings on the scientific method of applying explosive bombs in churches, ball-rooms, palaces, and festive gatherings (p. 185). To most American and English readers, the whole development of anarchism represents little more at best than a branch of intellectual error, allying itself readily with crime, and the author himself avows his belief that there is nothing in it. But this, in his eyes, only increases its importance, for he thinks that "it can easily be proved from history" that it is not truth, but "error and superstition" which have been "the most potent factors in human development." The only proof which he adduces is that of the countless blessings produced for mankind by their long continued mistake of thinking it possible to form an *a priori* conception of God; but it may be pointed out that to make us believe that anarchism presents an important speculative or political question, it is not necessary to hold that error is greater than truth, but merely that anarchism is likely to produce important effects. This the author does in another way, by bringing anarchism forward as the counter-agent against socialism, and this is really the point of the book.

Socialism is tyranny, anarchism is liberty, and if the world is to be saved from one error, it must be by means of the other. In the first half of this antithesis the author is quite right; every one sees that the socialistic state, resting on universal suffrage, would be a frightful despotism; but why, the reader asks, should we have to fall back on the anarchists to save us from it? Why not simply preserve individual liberty by vigilance and laws, and by freedom itself, as

we have hitherto done? The answer to this question is that Herr Zenker's book represents a view of the subject bred by despotism itself, in a community in which individual liberty is not understood as we understand it. Speculations about the reconstruction of the state, and the abolition of property, contract, and the family, belong, as the author himself shows, to the domain of error, and the countries where this error flourishes are Russia, France, Austria, Germany, and Italy. For this there must be some reason, probably many reasons, and among them we should put first the low state of public education in economics. Why is there no English Anarchist school? Why are Bellamy's fairy-stories believed all over the Continent to be written by a great American thinker, and translated into half-a-dozen languages? For the same reason, in our opinion, that there is, on the Continent, little or no study of Adam Smith and Mill and the economical doctrines connected with their names. The most wonderful cure ever discovered for the spread of such diseases as anarchism or socialism is political economy; neither can live with it in the same brain. But they have not found this out yet in Austria, still less do they suspect it in Russia; and hence the author, aghast at the danger, evolves the amusing and ingenious theory that one dragon will destroy the other.

The Works of Horace. Rendered into English prose by William Coultis. Longmans, Green & Co. 1898.

This book certainly ought to drive into well-merited oblivion the wretched perversion of Horace contained in the Bohn Library. If it does this, the translator deserves a vote of thanks from the long-suffering body of schoolmasters and college professors. Whether it will do more is grave matter for doubt. Mr. Coultis, in his preface, heartily subscribes to Mr. Balfour's dictum that "translation, however admirable, however excellent, however painstaking, never does, never can, and never will preserve the inmost life and essence of the work of art with which it deals." And he knows also that with Horace of all the Latin poets, and especially with Horace in his Odes, the translator is attempting an all but impossible task, let him essay it in verse or in prose. That *curiosae felicitas*, whether of form, or of word, or of phrase, defies all transfer; and to the man who knows the real Horace, a translation is as flat as the English libretto of an opera, read a thousand miles from singers and orchestra. Fancy Tennyson in Latin prose: *Lacrima inanes quorum causam ignoro, lacrima, inquam, qua, spe prope divina delecta, ab imo pectore voluuntur*. Is this any further from "The Princess" than Mr. Coultis's "Hapless they to whom thou seemest fair unproved" is from the "Pyrrha"? A version, says Mr. Coultis, should be at once literal and idiomatic. But what of "Woe's me, my glowing liver swells with painful bile!" It is literal, it is idiomatic; but it isn't Horace, because Horace's reader knew the metaphorical sense of *liver* and *bile*; to English readers liver and bile mean blue pills and jaundice.

Then, too, how hopeless it is to try to reproduce the wonderful word pictures which the flexibility of Latin lets Horace disclose bit by bit, almost grudgingly. Mr. Coultis is fairly successful with the famous *me esse lupus* of the twenty-second ode; but he

wisely avoids attempting an imitation at the end of the ninth: the

"*latens proditor intimo
gratus poellae risu ab angulo.*"

How it develops, touch by touch; how the thoughts are interwoven! "Somebody hiding—a telltale—in a secret place—the telltale is sweet—the hider is a girl—the sweet telltale is a laugh—the secret place from which it comes is a corner." Such effects are unapproachable in our uninfected English, and yet they make up a great part of the beauties of Horace in his Odes. In his Satires and Epistles, of course, the translator's task is simpler; and here Mr. Coultis steers a safe course between the treacherous attractions of modern colloquialism and the deadly dulness of what is often miscalled literal translation—as if any translation could be literal which lacked the spirit of the original. Mr. Coultis has availed himself of the best commentaries, English and German; in footnotes he warns the reader of the more important variants in the text; his introduction contains a thoughtful appreciation of Horace and a good translation in "deadly parallels" of the ancient *Vita*. But he has not achieved the impossible.

Paul Krüger and his Times. By F. Reginald Statham. Boston: L. C. Page & Co. 1898.

The strife between the earlier and the later immigrants to South Africa has certainly received as much attention as it deserves. The English newspapers and magazines have been full of it, and it has afforded opportunity to several makers of books. It is not surprising that most of this writing should be colored by British prejudice, and Mr. Krüger has been most roundly denounced. Mr. H. M. Stanley, in a book which we have recently noticed, pours forth torrents of abuse of the Boer President, some of it almost too coarse for quotation. Mr. Bryce's 'Impressions,' it is true, are distinguished by impartiality, but he did not go very deeply into the Transvaal controversy, and the defence of the Boer policy may be regarded as a novel feature in the recent South African literature.

This defence might certainly have fallen into better hands than those of Mr. Statham. He complains that "one of the chief difficulties in writing a biography of President Krüger arises from his own reluctance to talk either about himself or his career." As the early records of Transvaal history are meagre, the author has fallen back on Dr. Theal's 'History of South Africa' and Dr. Jorissen's 'Transvaalsche Herinneringen,' and supplemented them with such information as he could pick up. As a result, we have a rather minute chronicle of insignificant events strung together with so little literary art as to be devoid of the interest of a story. Of President Krüger's part in these events we get but a dim idea. There is much bold assertion of his greatness and goodness, but there is little evidence presented in support of it; except, indeed, his determined stand for clemency to the Jameson raiders. Considering the urgency of the demand of the Boers for the condign punishment of these marauders, President Krüger's course was highly creditable to him.

Mr. Statham is equally indefinite in making out a case against Cecil Rhodes, whom he charges with being the *fons et origo* of all the troubles with the Transvaal Republic. It must be conceded that this theory is not untenable, but it is to be established by

other methods than those here employed. In fact, the author seems to have no capacity for stating a case or describing a situation so that those unfamiliar with it can understand it. Concerning the grievances of the Uitlanders at Johannesburg, we make out that there are two sides to the matter; but as to the merits of the issues, or indeed what the issues really are, we are as much in the dark as before. It may be said, however, that Mr. Statham is as coherent as the partisans opposed to him, and more decorous in language than most of them. Of the personality of his hero he has little new to tell us. Perhaps the most interesting fact that he has to communicate is that the Krüger stock is not Dutch, being traceable back to Berlin, while Paul Krüger married a Du Plessis, of the same family as Cardinal Richelieu.

HAVE JUST PUBLISHED:

Congdon's Qualitative Analysis.

By **EMERSON A. CONGDON**, Professor of Drexel Institute. 64 pp. Interlocked. 8vo. 60 cents.

A very concise presentation of reactions and solubilities of the first chemical importance. It covers: Preliminary Reactions on Bases and Acids; Schemes of Analysis for Bases and Acids; Brief Explanatory Notes on the Analyses; Treatment of Solid Substances (Powders, Alloys or Metals); Table of Solubilities of the bases studied. The comprehensive list of questions forces the student to think and the explanatory notes on the schemes of analysis are an incentive to intelligent work.

Meras and Stern's First Lessons in French.

By **BAPTISTE MERAS**, Professor, and **SIMON M. STERN**, Director, both of Stern's School of Languages, New York City. 84 pp. 12mo. \$1 net.

Exercises and conversations having a continuous interest, several of them based on well-known French stories or legends, and teachers are expected to omit from and add to questions given in the book freely; also, when it is desirable, to divide the grammar lessons into more than one session. A short summary of grammar is appended.

Stern's German Lessons for Beginners.

By **SIMON M. STERN**, author of *Studien und Planarbeiten*. 298 pp. 12mo. \$1 net.

Suitable for adults or for children over eleven years old. It is made up of material prepared for classes during eleven years and used experimentally with them for four years. It can be taught by a teacher with no speaking knowledge of German. A summary of grammar in the usual order is appended, but throughout the book itself the usual order is reversed; beginning with the verb and leading from the participle to the adjective and then to the noun, etc.; in general the principle being to proceed from the whole to its part. Special attention is given forms peculiarly German and foreign to the student's mother tongue. It has been found that this book gives the pupils that ability which some call "thinking in the language." It covers the N. Y. Regents' first and second-year grammar requirements.

A number of text books by Professor MERAS and by Professor STERN are described in the Publisher's free Educational Catalogue.

The Nation.

NEW YORK, THURSDAY, JUNE 30, 1898.

The Week.

The first skirmish on the way to Santiago, on Friday, gives us a most reassuring test of the mettle of our volunteer army. There was to be found in that army no more hastily collected or less disciplined force than Roosevelt's Rough Riders. What little training they had received before leaving for Cuba had been as cavalry; yet they were sent into action as infantry, side by side with regulars, and they fought like regulars, leaving ten of their number dead upon the field. It is evident now that the forces under Col. Wood and Gen. Young walked into an ambush in which only their coolness and bravery saved them from virtual annihilation. Gen. Shafter compliments them deservedly on their "cool and veteran-like work" and their "complete victory," but he is clearly determined that no more risks of the kind shall be taken. Gen. Shafter's success thus far in the landing of his expedition has been remarkable, giving strong evidence of his ability to conduct the campaign to a successful issue.

The House of Representatives adopted on Tuesday the conference report on the bankruptcy bill, which had already passed the Senate by a large vote. According to Senator Hoar, it has taken fifteen years of hard work to bring about this result. What was known as the "Lowell bill" was once got through the Senate against the will of the whole judiciary committee, and failed in the House by only three votes when a two-thirds vote was required to take it up out of order. The "Torrey bill" never fared so well, and the present measure is a compromise in which the bad features are almost as prominent as the good. The truth is that the business conditions in different parts of the country are so diverse as to make it impossible to frame an entirely satisfactory general law. There are regions in which it is really oppression to require men to plead in the United States courts, on account of the great distances which they have to travel. The standards of solvency are very different in some parts of the South and West from those prevailing in the East, and many merchants continue in business there who would find it impossible here. When we are told that a single firm in Chicago has credits outstanding to the amount of \$30,000,000 annually, and is able, by securing preferences in assignments, to carry on this business with a loss of only 3 or 4 per cent. a year, we can form some idea of the mul-

titudinous interests affected by such a bill as this. Senator Hoar and Senator Nelson and Mr. Ray of the House of Representatives have devoted a large part of the winter to labors in conference, and they deserve the thanks of the business community. Whatever the imperfections of the bill, it will certainly be a great gain if, as Senator Hoar claims, it enables some 200,000 bankrupts to get on their feet again, while securing a fair and inexpensive division of the estates of insolvent debtors.

It seems unreasonable for the Democratic Senators to grumble because the understanding about the postponement of the Hawaiian debate has been disregarded. In the first place, it seems to have been only an oral agreement. The Democrats were to let the war-revenue bill pass, and the Republicans were to let the Hawaiian question go over till December, but there was no formal stipulation. Hence, the Republicans cannot be held to it. But, under the code of morals which we have suddenly adopted, it would make no difference had the agreement been formally executed and enrolled. We declared that this was not to be a war of conquest, but as soon as Admiral Dewey won a victory, it was announced by many of our clergy that the situation had entirely changed. They never thought of such a possibility as a naval victory, it seems, when they said there were to be no conquests. As Benedick explained that when he said he would die a bachelor he did not think he should live till he were married, so these spiritual guides labor to make it appear that the self-denying policy in regard to conquests was to apply only in case we made no conquests, and appeal to the Almighty to confirm this idea. So the Republican Senators have now high authority for pleading that when they agreed to let the Hawaiian business drop, they did not expect the House to pronounce in favor of it. To disregard the great majority which the joint resolution received in the House would be flying in the face of Providence, just as much as to disregard the victory at Manila. The development of a code of morals appropriate for an imperial policy promises to be one of the finest achievements in casuistry that the world has ever seen.

Senator Morrill, in his speech against annexation, made a strong point of the fact that Hawaii is not fit to become a State of the Union. Some advocates of annexation are ready to admit this, and even to pledge that no attempt shall be made to take it out of the Territorial condition. But the Ver-

mont Senator pointed out that "a square denial and interdiction of this statehood to-day, though embroidered on the breast of a joint resolution or branded on the rump of a treaty, will not bind any future Congress against admission"; and he ventured the prediction that, "if the islands shall be annexed, no matter upon what terms, there will soon be here two men knocking at the doors for admission as Senators." There can be little doubt that this prediction would be justified. The *Washington Post* reports that "there is a belief that great pressure will be brought to bear immediately to admit the islands as a State of the Union," while Representative Maguire of California is quoted as saying that he will "propose at once that the islands be admitted as a full State, and that they be allowed one Representative and two Senators in Congress." Nobody who remembers the ease with which thinly populated Territories have been elevated to the rank of States in the recent past, can doubt that the annexation of Hawaii means the State of Hawaii in the early future.

No more striking illustration of the ravages which such a mania as that now prevailing for extending our territory makes in the human intellect, can be imagined than Representative Hitt's speech in defence of Hawaiian leprosy. It might be supposed that the existence of this disease constituted a weak point in the case for annexation. Not at all. On the contrary, Mr. Hitt maintains that leprosy is rather a pleasant and desirable ailment. Our unfavorable opinion of this disease is due to Biblical representations of its character which have no application to the Hawaiian variety. In the first place, leprosy in Hawaii is a discriminating disorder, attacking only "Asiatic elements" and the native Hawaiians. It "rarely affects people of the Caucasian race of the better class, who use an abundance of soap and water. It is not contagious in the ordinary sense." Mr. Hitt assures us that he has seen the sons and daughters of lepers in Turkey, and that they were beautiful children. The idea that Hawaiian leprosy is a "loathsome, running disease" is all wrong. At the worst it is no more than a "paralysis and withering of the ears, fingers, etc., and they drop away painlessly." This is evidently a much better disease to die of than several of those which prevail in this country, and it is a pity that its blessings should be confined to "Asiatic elements." Perhaps they will not be when Hawaii comes into the Union as a State. As to this, Mr. Hitt disclaimed all intelligence. Congress, he said, would determine, and it would do what the American people desired. When pressed for his personal opinion, he

finally admitted that territory annexed represented States in embryo, and that Hawaii might eventually "assume the quality of statehood."

One of the first difficulties encountered by the Populist Congressmen who pine for empire has been over the charter of an International American Bank. These statesmen are thirsting for foreign commerce, but commerce is very dependent on banking facilities, and a large part of the Populist creed consists of denunciations of banks. One of their leaders has recently published an article intended to demonstrate that as a nation we are practically bankrupt owing to the rapacity of these institutions, whose claims for interest absorb the entire earnings of the farmers. In some cases the savings-banks in California get as much as 50 per cent. interest on the money they lend, and savings-banks are probably the mildest species of bank that is known. For the Government of the United States to charter a corporate monster with a capital of \$25,000,000, in view of these conditions, is enough to make the reason of a Populist totter on its throne. In truth, there is much ground for apprehending future jobbery in connection with an institution of this kind which obtains a special charter from Congress, but the Populists have wearied the public with their abuse of banks in general, and can therefore get no hearing for their objections to this bank in particular. Nevertheless, some of the privileges to be granted were so palpably excessive that the supporters of the bill had to give them up. Under this charter the stockholders would have been exempt from personal liability, and many of the restraints which are imposed on national banks were omitted, while no provision was made for State taxation.

The debate on the charter of the proposed International Bank led to the discovery of a bill introduced by Senator Quay for the incorporation of a national association of manufacturers. Nothing could be more innocent than the purpose of this bill as explained by the Senator from Pennsylvania. The association was not to be a trading company in any sense, but it was thought that in collecting information abroad and in showing samples of American goods, "minor commercial transactions" were sometimes necessary. In order to carry on these minor transactions, however, Senator Quay's bill enabled the corporation to have an unlimited capital stock and to take and hold real and personal property to any amount and for an indefinite time. The purposes of the incorporators under this bill may have been to engage in minor transactions, but their charter would enable them to establish another East India Company. On the whole, it is safer for Con-

gress to spend its time in passing special pension acts than in chartering companies to exploit our future colonial possessions.

The Republican convention in the President's own State was held last week, and its platform must be considered to "sound the keynote" for the party in the fall campaign throughout the country. Nothing could well be imagined which would better illustrate the disastrous effect of war with a foreign nation upon home interests than the reactionary character of this deliverance. Mr. McKinley was elected President in 1896 upon the financial issue. It seems almost incredible, but it is a fact, that the resolutions adopted by the Ohio Republicans in 1898 make not even the most distant reference to the financial issue. They "congratulate the country upon the fact that, in response to the demand of the St. Louis platform and the will of the people, expressed at the polls in November, 1896, protection and reciprocity, twin measures of Republican policy, have been reestablished, and have been embodied into public law by the enactment of the Dingley bill"; but they imply that these were the only "measures of Republican policy" over which there was a contest at the polls in November, 1896. There is not the slightest reference to the plank in the platform of 1896 upon which the real fight was waged—the plank which declared "for sound money," held that "the existing gold standard must be preserved," and favored "all measures designed to maintain inviolably the obligations of the United States and all our money, whether coin or paper, at the present standard." Measures for this purpose have engaged the attention of thoughtful men, both in and out of Congress, for many months, but the Republican managers in Ohio coolly ignore the whole subject.

The national platform of 1896 contained a plank which said that "the civil-service law was placed on the statute-book by the Republican party, which has always sustained it, and we renew our repeated declarations that it shall be thoroughly and honestly enforced and extended wherever practicable." The platform just adopted in Ohio contains a resolution which says that "the civil-service law was extended by the last Democratic Administration far beyond its purpose and intent, and we favor such modification thereof and such revocation of orders as will conform it to the original spirit and object of the law." The national platform of 1896 expressly avoided endorsement of the annexation of the Hawaiian Islands. "The Hawaiian Islands," it said, "should be controlled by the United States, and no foreign Power should be permitted to interfere with them." The Ohio platform of 1898 de-

clares that "we most heartily approve of the steps now being taken by Congress and the President, providing for the annexation of the Hawaiian Islands as a part of the United States, and hereby express the urgent wish that the same be fully accomplished at the earliest practicable date by the passage by the Senate of the joint resolution which has already met with the approval of the House of Representatives."

The platform of the Republican State convention in Vermont is the first indication yet afforded of the attitude which the politicians of the dominant party in New England are disposed to assume towards the questions growing out of the war. The convention in Montpelier adopted its deliverance on the same day with the one which assembled at Columbus, but the committee on resolutions in the Green Mountain State did not altogether ignore the financial question like their brethren in Ohio, for they not only reaffirmed their loyalty to the cardinal principles of the Republican party as enunciated in the national platform of 1896, but specified "especially the doctrines of protection and sound money." The two platforms agree in favoring the construction by the United States of the Nicaraguan Canal, while the Vermont resolution also calls explicitly for its "control" by this nation. The Ohio platform warmly endorses the annexation of Hawaii, while the Vermonters are silent on the subject, out of deference to the feelings of the venerable Senator Morrill quite as much as from sympathy with his opposition to the scheme, in all probability. The Ohio resolutions declare that the people can safely leave the wise and patriotic solution of the great questions growing out of the war, including "the disposition to be made of conquered territory," to a Republican President and Congress; while the Vermont Republicans declare themselves on one aspect of this question, and leave the rest to the officials at Washington, in these terms:

"We are opposed to the surrender to Spanish misrule of any territory which the valor of our army and navy has rescued or may hereafter rescue from the hands of the enemy, and we have an abiding confidence that a Republican President and Congress will so shape the future of such territory as best to promote the welfare of its inhabitants and the true glory of our country."

The Vermont platform has one plank which is a novelty. For many years the two pet aversions of every good Republican in that part of the country were "the rebels" and "British gold." There was no other State in which the platform-makers continued so long to "view with alarm" the prospect that the people down South meant to pay the rebel debt and reenslave the blacks if a Democratic President should ever be elected, or in which the bugbear of "the Cobden

Club" had so terrifying an effect upon the good deacon who happened to think about it when he was late in getting home from the store. Everybody knows that conventions are apt to adopt platforms without a perfectly clear comprehension of all the resolutions on the part of many delegates, and some of those who voted at Montpelier on Wednesday to accept the committee's report, must have rubbed their eyes when they got hold of a newspaper and found that they had approved such revolutionary sentiments as these:

"We welcome the increasing signs of sympathy and unity between North and South, and trust that in this blaze of war all barriers between us may be burned away. We are not unmindful, either, of the hand that is stretched to us across the sea, and in England's sympathy with us at this time we see fresh proof that blood is thicker than water, and feel increased confidence that in the Anglo-Saxon race rests the cause of human liberty throughout the world."

The State Civil-Service Commission will send to the Mayor of each city in the State a copy of Attorney-General Hancock's opinion which virtually annuls Gov. Black's "starchless" law of 1897 by ruling that it does not apply to the cities, and will notify the Mayors that hereafter they must abandon the separate "fitness" examination, and that the appointing officer must make his choice in each case from the three candidates standing at the head of the list on the basis of examinations conducted by the local Civil-Service Commissioners to determine the qualifications of all applicants according to the old standards. As the State Civil-Service Commission, like the Attorney-General, is in accord with the Governor, this circular, following the opinion of the Executive's legal adviser, leaves no doubt that Gov. Black has become convinced that the law which he persuaded the Legislature to pass a year ago is a failure, and, what is more, that he is ready to admit that he made a bad blunder in the matter.

What purports to be a correct outline of Gov. Black's favorite measure for a bi-partisan State Election Board is so extraordinary in character that it is impossible to believe the Governor will recommend its enactment at the proposed extra session of the Legislature. It is nothing less than a scheme to saddle upon the State a great army of workers for both political parties, at a cost of at least \$2,000,000 a year. To bring this about, the entire control of elections and of the final canvass of the vote is to be taken away from the local and State officials who exercise those powers at present, and put into the hands of the partisans of both political parties, to be managed by them to suit themselves, while the State foots the bills. The Governor is to appoint a bi-partisan Board of Elections of four members, two from

each of the great political parties, and is to appoint them on the nomination of the executive committees of those parties. They are to hold office for five years at a salary of \$6,000 a year each. They are to appoint a State Supervisor of Elections, to hold office during good behavior, at \$6,000 a year. When they cannot agree upon the selection of a Supervisor, the Governor, upon the recommendation of two members, may appoint him. The Board will have supervision of county boards of elections and of the registration and elections held within the counties, except town meetings and village and school elections not held at the same time as the general election. The State Supervisor will furnish all the registers, books, and instructions and oaths for the use of county and district boards of election, as well as all other necessary supplies. Certificates of nomination will be filed with him. He is to have plenary police power and authority in all matters pertaining to registration and elections, and all sheriffs, deputy sheriffs, and police or peace officers will be subject to his orders.

This is the mere starting-point. There is to be a Deputy State Supervisor in every county, with power to appoint in each election district two deputies, one for each political party, who, like himself, will have police powers. Any one who interferes with them in the discharge of their duty, upon conviction will be guilty of a felony punishable by imprisonment of from one to three years, and, if he is a police or peace officer, he will forfeit his office. Each deputy is to receive a salary of \$5 a day, and each chief deputy a salary of \$3,000 in New York and Kings, and in Queens and in Richmond a salary of \$2,000. In all other counties the salaries of the members of the board will be fixed by the Board of Supervisors. The chief effect of the measure would be to give to each political machine a great force of workers about the polls, on registration and election days, at the public expense. Under the present election law these workers cannot get nearer to the polls than 100 feet, and the consequence is that most of them have gone out of the business. The new law would put them into the polling-places, with police authority and \$5 a day paid by the State. Bad as this aspect of the measure is, the general or State aspect of it is far worse, for it would put the entire election machinery of the State under the direct control of the bosses.

The final scenes in the Spanish Cortes were almost past belief, such endless recrimination, such fantastic displays of wounded honor, such rhodomontade, such braggart cries, winding up with voting to pay the interest on the Cuban debt in depreciated money and adjourn-

ing, in obedience to the royal decree, without the customary cheers for the throne. Even the reporters had to pose in the eye of the nation, rising in a body and going out when the Minister of Marine intimated that some of his remarks had been "distorted" by a member of their honorable profession. If honor was the universal theme, they would air their own. Such revelations of Spanish character astound the world. If an exhibition like this were to be made in Washington, we should think the war could not go on a day longer; that soldiers would refuse to fight for a country in the hands of such rulers. But in Spain the impossible is the ordinary, the absurd is the characteristic. All these outbursts are supposed somehow to make for Spanish glory and Spanish "honor."

The more the arguments against the introduction of the gold standard in India are examined, the feebler they appear. Much was made by Sir Robert Giffen of the plea that India was a "debtor country," having to pay out more money to foreign creditors than she could easily raise. A correspondent of the *Economist* has been at the pains to see how the facts correspond with this assertion, with the result of completely exploding it. In the first place, he shows that for the half century preceding the closing of the Indian mint to silver in 1893 exchange was regularly in favor of India, and has been increasingly so ever since. Moreover, the statistical abstract published by the Indian Government shows that during the last sixty years India, whether a poor debtor or not, has been quietly absorbing great quantities of gold as well as silver. From 1836 to 1896 the excess of the imports of gold amounted, in tens of rupees, to the large total of 146,685,000, and the net imports of silver to 375,000,000. The silver has been coined, for the most part, but the gold has apparently been hoarded or converted into ornaments. When it is asked how India can afford to adopt the gold standard, it is enough to reply that gold will be obtained in the future as it has been in the past. There is nothing mysterious about the method. It is nothing but the familiar process of selling more merchandise than you buy, and taking the balance due you in cash. During these same sixty years India exported goods of the value of Rx. 3,064,000,000. The value of her imports was Rx. 1,931,000,000. The trade balance in her favor would thus be Rx. 1,133,000,000. The bills drawn by the Government would probably exhaust half of this credit balance, and there are, of course, other remittances on private account. Nevertheless, there would be a balance remaining amply sufficient to enable the Indian Government to import sufficient gold for its monetary purposes.

BLOCKADES AND CONTRABAND.

The Navy Department, with the aid, it is said, of the State and War Departments, has framed an order on the subject of blockades and contraband, which is probably the best compendium in existence of the rules of international law on these subjects recognized as binding everywhere. Of course, neither the Navy Department, nor even the State, War, and Navy Departments together, can give force to a single rule, because no rules of international law can come into existence by the act or edict of a single nation. But, as every student of the subject knows, one nation can easily confuse and impede the natural development of international law by undertaking to act upon principles not recognized by the others, and on certain occasions in their history many nations have been guilty of this species of offence. We were guilty of this sort of lawlessness in attempting to hold the Confederate envoys Mason and Sildell, whom we forcibly took out of the British mail steamer *Trent*; England for many years violated the principles of international law by searching American ships on the high seas in time of peace; in very recent times the non-descript doctrines of "benevolent neutrality" and "pacific blockade" have been invented or taken up by Powers either themselves belligerent, or acting in the interests of belligerents, in order to break a rule while formally acknowledging its binding force. Hence it might have been anticipated that the United States, as soon as it should be engaged in a war with a foreign country, would try to warp the recognized rules, which favor neutrals, and which it, as a great pacific Power, has helped to build up. But there is nothing in general order No. 492 of the Navy Department which bears heavily on neutrals, or which shows any tendency on the part of our Government to bend the law in its own favor.

One of the first practical questions which arose in the present war was that of blockades, and we have adopted, *i. e.*, acknowledged, the validity of the rule of the declaration made by European Powers in 1856 at Paris, that blockades to be binding must be "effective." It is understood that the Spanish Government objects to our blockade of certain designated Cuban ports as not being "effective," the fact urged against its effectiveness being that several foreign vessels have "run" it. This raises the question, What does an "effective" blockade mean? The answer given by the Navy Department is that it means a blockade maintained "by a force sufficient to render ingress and egress from a port dangerous," and that "the continuity of a blockade is not broken if the blockading vessels are driven away by stress of weather or are absent on a chase, but it is broken if they leave voluntarily or are driven away by the ene-

my's force." It may be a question whether the first part of this definition has made the rule clearer than the Powers made it at Paris, for "dangerous" is a rather less definite term than "effective"; we should be inclined ourselves to prefer the original word selected at Paris, and have little doubt that everybody knows what "effective" means. The idea that it means "absolute" or "impassable" has no foundation; it was introduced to exclude the idea of a "paper" blockade, *i. e.*, a proclamation of blockade, as distinguished from an actual patrol and closure of the entrance to an enemy's harbor. If the Spanish Government really thinks that occasional evasion of a blockade by an enemy or neutral ship means that the blockade must be given up, it is only a new illustration of the ignorance prevailing in Spain on the subject. In our civil war, when the Federal Government blockaded all the ports of the Confederate States, "blockade-running" between England and several Southern ports was a regular branch of illicit commerce; but it did not prove the blockade ineffective. It was because the blockade was effective that blockade-running became profitable.

With regard to contraband, the order takes a position which no decision of any court is likely to contravene, and which is in accord with the most liberal views on the subject. There is no subject on which there is more confusion in the popular mind than on that of contraband of war, partly because the subject itself is far from simple, and partly because belligerent nations have generally tried to extend the list of contraband articles. We have never tried to do so, and there is no evidence in the present order that we are going to begin now. The principle underlying the regulation announced is, that while certain things are in their nature contraband, because they are adapted and designed only for hostile use by the enemy, others may become contraband by force of circumstances. Thus, under the head of "absolutely contraband," we have ordnance, machine-guns, armor plate, weapons of all kinds, torpedoes, cases for mines, gun carriages, caissons, cartridge-boxes, canteens, pontoons, range-finders, explosives, machinery for the manufacture of arms and munitions of war, saltpetre, military accoutrements and equipments of all kinds, and horses; on the other hand, under the head of "conditionally contraband" we find "coal, when destined for a naval station, a port of call, or a ship or ships of the enemy," materials for the construction of railways or telegraphs, money destined for the enemy's forces, and provisions destined for an enemy's ship or ships, or for a place that is besieged.

The true test of the right of a belligerent to interfere with neutral commerce is whether the neutral is helping

the enemy. The neutral is bound to see that neither its territory nor its ships are used for this purpose, and the rules of international law with reference to contraband of war, and also with reference to the right of belligerents to use neutral ports, are designed to enforce this restriction. In the first of these cases, the rule is enforced by the belligerent through the right of search and its prize courts; in the second, it is enforced by the neutral. Munitions of war are absolutely and always contraband, because they are absolutely and always designed for belligerent use; coal, on the other hand, may not be contraband, and is, therefore, excluded from the absolute list. Of course, the question of the right of search for contraband coal has nothing to do with the right of belligerents to coal in neutral ports, as Admiral Camara is said to desire to do at Port Said, or as Admiral Cervera is said to have done at Curaçao. The right to do this is governed by the neutral's regulations, and as the neutral is bound to see that its territory is not used as a base for hostile operations, belligerents are rarely allowed to do more than come in for necessary repairs and enough coal to take them to a home port. If a neutral neglects its duty in this regard, it can be called to account only by the belligerent state itself, as England was by us in the case of the *Alabama*.

It is, of course, for our interest that we should interfere as little as possible in this war, with neutrals, but we may claim in our own favor that we have, in our regulations governing our proceedings, taken a singularly enlightened view of our own interest. This is due chiefly to the fact that the Navy and the State Departments are in the hands of exceptionally enlightened men.

JINGO DIFFICULTIES.

It is a curious illustration of the flighty character of the Jingo mind that it does not perceive that in broaching its new anti-isolation policy it is laying the axe at the root of the Monroe Doctrine. All the expounders of that doctrine, from John Quincy Adams to Mr. Olney, have agreed on one point—that it was a peculiarly "American" doctrine, intended to keep Europe and her institutions, and her tendency to encroachment on strangers' rights at bay. One branch of it was that America was to be kept for Americans, and the corollary was no less explicitly admitted, as may be seen by looking at Monroe's message, that with the colonies of Europe we were not to interfere. The doctrine was undoubtedly deduced from the fact of isolation. Commercially as well as politically, for the first fifty years of our existence, remoteness was certainly a marked feature of our existence.

But the Jinges have now begun to

dislike isolation strongly, partly, perhaps, because it was associated in their minds with peace, and they have begun to clamor against it and denounce it, and insist on a policy of alliances and imperialism—imperialism meaning the absorption by the United States of several existing European colonies, on both sides of the ocean. That this is fatal to the Monroe Doctrine any one can see. We fully agree with the Jingo publicists that Washington, were he alive to-day, would not insist on our being guided by a foreign policy dictated by the circumstances of the last century, and it is more than possible that were he redrafting his farewell address for our use, he would point out that steam and the telegraph have made the nations of the earth next-door neighbors in a way that they were not a century ago, and in a way that could not have been, a century ago, anticipated. He would probably say, too, that isolation is a question of fact, not of theory, and that having been brought to an end in fact, we had better recognize the change and act upon it. But we cannot give up isolation and enjoy its fruits at the same time. We cannot warn everybody off from our hunting-grounds, and talk about the "European" system and the "American" system, if we are going at the same time to plunge up to our necks into the former and insist that European colonies must be permanently governed or "protected" by us. If we do not like isolation, we must bid good-by to the Monroe Doctrine.

The Jingo, who care nothing for a dilemma, evidently do not yet perceive that they are killing the Monroe Doctrine, and, to judge by what they are about, would like to keep up the old policy of isolation in one quarter while they abandon it in another. They are pushing their Nicaragua Canal scheme now, and this, it will be remembered, is to be a pure Monroe Doctrine canal. It is to be a canal of Americans, by Americans, and for Americans. It is to be part of "the coast line of the United States," and no European nation is to have anything to say about it. But when the Jingo has got it dug, they will be confronted with the Clayton-Bulwer treaty, which England insists is in force, and which declares that the canal shall be neutral water, for the use of the whole world. Two years ago the Jingo might have replied that circumstances have made the Clayton-Bulwer treaty inapplicable, and that our policy with regard to canals was one of isolation, but this we can no longer urge, because it is part of our new policy to have a cordial understanding with England, and England's interest in the canal, through Canada and her own commerce, is at least as great as ours. In fact, it is plain enough that if there were no Clayton-Bulwer treaty, one would have to be made. Of the beautiful Jingo

dream of a canal from which we could exclude the whole world, the Jingo, with their new policy, are robbing us.

The real Jingo, in his heart, always hated England, and thought that being truly "American" meant to insult England and revile the English Government. We, on the contrary, have always maintained that the two countries were substantially united by the force of circumstances in their aims, ideals, prejudices, and interests. The moment the present war broke out, the essential cohesion of the race was made plain to the world. Even the Jingo saw it at last and "shut up" about England. One of the first results of the war was an understanding on the subject of Canada which will probably settle for ever most of the questions at issue between England and the United States. So far as England is concerned, the Jingo is forced by stress of circumstances to carry out the genuine Mugwump policy of peace and good will. No wonder they do not like it, and seek to cover up their submission to the inevitable by shrieking that they will never give up the Philippines and will never allow private capital to build a canal across the isthmus. But the real destiny of both the United States and of England is beyond their control, and determined by forces which they neither shape nor understand.

HOW THE SPEAKERSHIP LOOKS NOW.

One of the most striking incidents in connection with the Hawaiian resolutions has gone almost unperceived and without comment. When they passed the House the Speaker was not in the chair. He was absent, ill (perhaps diplomatically), but was represented by a friend, who said that Mr. Reed, if present, would have voted "no." That marked the end of a long controversy between the Speaker and the champions of annexation. It revealed him standing almost absolutely alone, so far as party friends were concerned, and as one of a feeble minority, nearly all Democrats. Nor was this the first time that the House had rolled on its way over the prostrate form of the Speaker. In all the questions leading up to the Spanish war—belligerency, fifty-million appropriation, at last the ultimatum—it was known that he strongly wished the House to go one way when it was resolutely going the other.

Mr. Reed's course in all these matters was no doubt deliberately chosen, and has been highly honorable to him. Courage to oppose a popular mania, above all to go against party, is not so common a political virtue that we can afford not to pay our tribute to the man who exhibits it. Speaker Reed has already had, we cannot doubt, evidences of approval which, next to that of his own conscience, he must value highest, and

we believe that time will vindicate his political sagacity. But it is not of Mr. Reed personally, so much as of the office he holds, that we wish to speak at present. What is the bearing of these recent events upon the speakership itself? How does the theory of the Speaker's function, advanced by many of late years—advanced by Mr. Reed himself—appear in the light of the Speaker's overwhelming defeat on the two capital political questions of the day?

What that theory is we have been frequently told since 1889. With Mr. Reed's first election to the speakership in that year, and with the masterful methods adopted by him, we began to hear of the new place and power which the office was hereafter to hold in American government. His party and personal friends explained in speech and article how it was time to give up the idea of the Speaker as a mere impartial moderator of the House. He was to be, not simply a presiding officer, but the Leader of the House, at any rate the leader of his party, as near an approach to a Prime Minister as we could get under our system. When Mr. Reed left the chair in 1891, he boldly adopted this view of the speakership. In his farewell remarks, he stepped forth as the leader of his party, assumed responsibility for Republican policy, and ignored the minority entirely. The book on the speakership written by Miss Follett closes with a statement which undoubtedly represents the position of Mr. Reed. It is this: "All theories aside, no matter what we want or what we do not want, the whole history of the House of Representatives, from an institutional point of view, has been the history of the concentration of legislative power in the hands of the Speaker of the House."

Events of the past year make that dictum sound queer enough. What part of "legislative power" is more important than acts which lead to war? Yet so far from that power being concentrated in the Speaker's hands, it was torn out of them with but little more respect for his wish and will than if he had been only a page on the floor. What greater responsibility can legislative power face than that involved in annexing new territory and so taking a first step in what may be a revolution in the national life and character? But here is the Speaker, Leader of the House, leader of his party, run away with by both party and House, in this transcendent matter, as if he were but a child attempting to hold back a sixteen-mule team. We think Mr. Reed himself must be rubbing his eyes over his broken-down theory of the speakership; and as for Miss Follett's book, a new and corrected edition of that would seem to be imperatively demanded.

The truth is, the theory of the Speaker as an American Prime Minister had always two fatal weaknesses. One was that

it did not contemplate times of storm and stress. In the ordinary routine work of Congress, the conception of the Speaker as absolute dictator of legislation was plausible enough. The facts all looked that way. By his power to appoint committees, by his control of the committee on rules, above all by the power of "recognition," the Speaker appeared to be not the servant but the master of the House. Mr. Reed used to deprecate, though with a chuckle, references to his absolute rule. Oh, no, he was but the creature of the House. Still, in piping times of peace, there was none to stay his hand or say, What doest thou? But suddenly rose the surging passions of the war. The insurrection in Cuba set the House in insurrection. The blowing up of the *Maine* blew up the fiction of the Speaker's supreme control of legislation. Into the war the House dragged him, protesting and struggling, and wild for annexation it rushed, in a way to prove that his supreme control was little more than control of his own vote. The masterful Speaker was mastered.

The other great defect in the view that the Speaker is chief lawgiver lay all along in the fact that he had no direct responsibility to the country and no way of appealing to it directly. His power was largely a tacit power. It was won by management, by something very like intrigue, at least by working under the surface. What his power actually was and how he got it the plain people did not really know. And when the machinery escaped from his control, he had no way of going to the country as a real Prime Minister has. It is noticeable in both these great controversies wherein Speaker Reed has been vanquished that he never once spoke out openly. He wrote letters; he inspired newspaper articles; he labored with friends and associates—but all in private. His position was well known, but it was known only through inference. He might have declared himself in Congress or in public, but he never did. He did his best with the machinery of the House, but when that failed him, he was done.

Many personal and political morals might be drawn from this recital of facts. We content ourselves with only one—a voiceless man can be neither a leader of his party nor a leader of the people. We do not say that Mr. Reed could have changed the result by a bold speech or speeches, by giving the country something to rise to. But the country certainly will not rise to a man who does his work in secret, slipping in and out of committee-rooms, summoning this and that man by night for consultation and persuasion. If ever the speakership is to be what Mr. Reed has asserted for it, it must be filled by a man who not only has a policy, but a voice to defend it. This Speaker Reed has not had in

our recent crisis; and a Speaker who will not speak out is only another name for a leader who will not lead.

CARICATURE TYPES.

The war has not thus far produced much novel caricature, the caricaturists being satisfied for the most part with the old types—and this, too, although there is some complaint of them. A few critics have appeared who declare that there is not sufficient correspondence between the type and what it typifies. John Bull, for instance, it is said, might well enough two generations ago have been regularly set before us as a burly, red-cheeked farmer; and in the days when the "American Cousin" made the fortunes of a theatre, the United States might fairly have been caricatured as a long, lank, lantern-jawed Yankee whittler. But in these days John Bull and we have become more cosmopolitan, and both countries should endeavor to introduce a new caricature type which would be more "up to date."

The same criticism is not made of the types used to represent other countries; but then there is nothing in caricature elsewhere which exactly corresponds with John Bull and Uncle Sam. The French and Germans and Russians and other Continentals have an ideal figure for their respective countries—just as we have Columbia and the English have Britannia—but no provision has as yet been made for them of grotesque national types which typify to the whole world their own anti-ideal view of themselves. We could not possibly admit that Müller and Schmidt of the *Kladderadatsch*, or Jacques Bonhomme, good men as they may be in their way, are in the same class with Uncle Sam and John Bull, the national heroes of a thousand jokes and the heirs of all the ages of caricature. The nations of the Continent take themselves too seriously to produce such types, and consequently, when we wish to caricature them, we are rather put to it for material. Russia as a bear, Germany as a helmeted war lord, France as a little soldier, are recognizable, but not particularly laughter-provoking. When it comes to Spain, we represent that wretched country as a murderous, cowardly monster, half hidalgo, half bull-fighter, while the Spanish caricaturist draws us as pigs. In neither case is a true caricature type, appreciable all over the world, produced. The pig caricature is evidently relished in Spain, but to the average American citizen it is a little too feminine to rankle very much—we cannot help feeling that when the Spaniards know us better the satire will lose its zest, and we even find a hardy American caricaturist converting the pig into a wild boar with two terrible tusks, one of which is called Army and the other Navy, and which together threaten speedily to disembowel the very

repulsive Don who has roused him from his lair.

Without undue pride, we may be sure that it indicates a great advance in civilization when any nation reaches the point of caricaturing as well as idealizing itself. Rome not only had "no waterfall two hundred and fifty feet high," but she had little or no political humor, and the Latin races to-day are unable to see that they lag behind Anglo-Saxondom in this respect. The English and ourselves have reached the point at which humor, going hand in hand with love of country and self-love, may often save us from the fate which might overtake a graver race. No doubt, it may be said that we can afford to joke about ourselves better than some other countries, because we are so much richer and more prosperous, and that a good deal of our jocularity is of the *nouveau-riche* kind; but is it not also true that we are more prosperous than some nations that we could name because we have such a keen sense of humor and like to caricature ourselves? It is a striking proof of the healthiness and value of caricature that the bosses in New York should have determined to suppress it as soon as possible by legislation.

But if the question of novelty is raised, is there any reason to think that our established types of John Bull and Uncle Sam will in the course of time be modified? We doubt it, because, grotesque as they are, there is nothing in our present circumstances to afford the groundwork for a new national type on either side of the ocean. We hear a great deal from the "imperialists" about "new national aspirations," and a "resolute determination to discharge the responsibilities which circumstances have thrust upon us," but this is not specially American or very new; it is at once an echo of the talk of the English imperialists and the "tall talk" of our own native land. Uncle Sam, clothed, as he always has been, in the stars and stripes, long ago described the United States as bounded on the east by the Atlantic Ocean and on the west by the setting sun, on the south by the vernal equinox and on the north by the aurora borealis—a splendid burst which John Bull looked on, and still looks on, as exaggerated. There were annexationists before Grosvener, and Birdofredum Sawin was an imperialist. It must be confessed that the externals of the Uncle Sam type are somewhat antique, and that the typical American of fifty years ago was more like him than the American type is to-day. But, after all, this is a small matter. He is a symbol, and, once accepted as such, we cannot change him every generation or two.

There are advantages about a fixed caricature type which fixity alone can give. John Bull may not be exactly the same sort of man as his father or grandfather, but he is a chip of the old block,

and nobody has the slightest doubt as to his identity. We know that he is honest (his honest expression is, according to the Continental view, only a cover for the most shocking hypocrisy; but then they go too far on the Continent), and will always stand up for his rights and rescue a woman or child in distress, and that he is bluff and outspoken and prudent and saving, and at times a trifle dull, and always English. In the same way, Uncle Sam is still the American type as he existed during the civil war and for fifty years before it. He is anything but a beautiful type—that is his niece Columbia's part—but he represents everything else. He is shrewd, although with a kindly shrewdness which comes from his old habit of aiming at philanthropy and the main chance together; he is preternaturally patriotic and democratic, both in dress, speech, and sentiment, and he, too, is ever ready to rescue females in distress, who not unnaturally cling to him for protection. He is usually suspicious of John Bull, but once in a generation sympathizes with him, and to J. B.'s "Hands all round" gives him a rousing "Blood is thicker than water." He "talks United States," and not, as is commonly supposed, the language of Shakspeare and Milton, but he understands Shakspeare and Milton, and likes to hear John Bull quote them. He is decidedly egotistic and fond of flattery, and though from his appearance a non-combatant like John Bull, he is ready to arm himself at a moment's notice from head to foot, and defy the world. He has, at the same time, a quizzical smile, which shows that he recognizes a certain want of simplicity in his character, which he rather enjoys as a trait different from any of John's. He will outlive us, we may be sure, and, for ourselves, we could not wish him changed. Were he to vanish and be replaced by some new and improved type, we should feel a certain uneasiness. In his society we feel the continuity of our institutions and the permanence of the qualities that make us what we are and must be.

DOUBLINGS AWHEEL FROM MENTON TO STONEHENGE.

YALE UNIVERSITY, June 18, 1898.

The lists of the Touring Club of France contain the names of many new American members, of both sexes and from all parts of the land. Mr. Brown, *secoist*, of Chicago, follows Mr. Green, *restier*, of Boston; and not far away are Mrs. and Miss Grey of San Diego. Now that the war flurry need no longer prevent, all the indications are that people will go abroad with their wheels as usual, and these members will enjoy the privileges of their membership. May I therefore take up my parable, in the hope of being useful to some tourists, and add a few words further to my former account? I left off with the dragging of a pine tree, for a brake, down a pass to the Grande Chartrouse. I wanted at the time to tell about a

certain safety netting the Touring Club has set up to catch bicyclists plunging to destruction at a chasm near Menton, but I had not room for it. There has been considerable mention of the device in the foreign newspapers, and it was one of the features of my visit to the Riviera.

I went down there in the early part of August; it is not the usual season for people to go, but the summer heat need not deter, for it is by no means so trying as our own. I took from Grenoble the Bourbonnais branch of the P. L. M. and then the South of France Railway. The latter is not completed to through connection. A considerable section, over the pass, from near Digne to Puget-Théniers, remains unbuilt and must be covered by old-fashioned stage-coaching. The roads are everywhere excellent, the mountain scenery striking. You are following in the main the route taken by Napoleon on his adventurous return from Elba. I utilized the diligence for climbing the steepest part of the pass. The perferid sun upon the rubber tires of the bicycle, stowed under the hood on top, seemed likely to make them explode. Owing to the ridiculous circumstance that a bulldog, taken on as a passenger, held sway there and refused to let a finger be laid upon anything within his domain, the valves could not be opened, but fortunately he was lured away from his post at a way station, and the danger was past.

A stiff head wind—it is not often a wheelman has cause to bless a head wind—served as a substitute for a brake on the steeper grades, and I descended comfortably to the lower levels. The torrent roared through its wild gorges, after the way of mountain torrents, the road passed under overhanging precipices or cut them by tunnels, lighted with cyclopean loopholes, and now and again a high-backed old broken bridge of the Fra Diavolo pattern half spanned the chasm. Then the hamlet of Entrevaux stood by the very roadside with all the mediæval fortifications that would once have rendered it a lion in the path. I rode across a drawbridge and under two portcullises into the square, about as large as a good-sized courtyard. The entire population, apparently, was assembled in peaceful committee, the women knitting, the men at the café. The landlord received me with a grave welcome; if they wondered at me or my bicycle, they gave no sign of it. I took a cooling drink, mounted, and rode on; no yellow dwarf sounded his warder horn either on my coming or my going, though I do not know why he did not. I dipped into mediæval Entrevaux and out again as into one of the cool patches of shadow that lay across the bright Provençal road. Lower down, the Var and its lateral gorges are lined with such towns, but for the most part remote and inaccessible, standing out in some strong gleam of light, and then dying away into their cliffs as if they had no real existence. The long bridge of Charles Albert is a famous point of view for these dream-like effects. The Var, once the boundary between France and Italy, is from that point a fine wide river-bed with absolutely nothing in it but pebbles and sand. It is an occasion for being struck very forcibly, as the humorist says, with the importance of water to a river.

Nice was more shut up than ever, so far as its foreign guests were concerned, but the gay little bathing pavilions brightened the beach, and the crowds hung in the eve-

ning around the music issuing from the grand cafés. I rode down the Promenade des Anglais, entered a garden embowered in rose laurel, and leaned my wheel against a wall, including some lower shutters. Some friends hospitably threw wide those shutters, to let in a flood of light upon a visitor unseen in those regions for several years, and, *vien!* down went my wheel with a bump, and the result was a broken crank-hanger axle. There was the same old Monte Carlo, going on in a desultory way for the summer, a veritable scourge and bane, quite apart from any moral considerations, for it gives a hopeless feverishness and vacuity to everything in what might otherwise be a sort of earthly paradise. There is considerable stiff climbing to get there, beginning with the rise, of a good kilometre, at Mont Boron just out of Nice. In general I see that my recollections were wrong, and there is little level ground in these smooth roads of the Riviera; it is a mountainous country just the same. The roads, too, in the settled districts, like Lord Salisbury's Beaulieu, are often watered to a pasty mud.

The safety netting I have spoken of is a few miles east of Monte Carlo, below the mountain village of Cabbé-Roquebrune. I had conceived it in advance as like one of those nets stretched under a trapeze performer at the circus; the rescued would away therein over the abyss and reflect with vivid thrills on the narrowness of his escape. But that does not convey the idea at all; it is more like the balcony of a house. The high-road descends very swiftly one side of a chasm or gully that breaks in from the shore; a bridge makes a right angle with it, and the road, having crossed the bridge, goes on down the other side of the gully. A rider, descending at a rapid pace, might lose control of his wheel at the abrupt turn; his wheel would strike the low parapet of the bridge, and he would be projected as from a catapult. This is the contingency that has been had in view by the Touring Club of France. The contrivance by which it stays the luckless victim in mid-air is a stout flooring of iron bars, attached to the upper edge of the parapet, and provided with a railing; upon the flooring is laid a strong wire mesh; a cross-section of the whole is exactly that of a window balcony. There is nothing elastic about it, and the wheelman who should come in contact with those unyielding bars would have cause to rue it for many a day, even though saved from a worse fate. Two lives, however, have already been saved by it, if we may believe the inscriptions (very grateful, though done as yet only in pencil) written upon a board above it. The chasm is full of trees and bushes, and does not appear as dangerous as imagined; I seem to have fallen in with several more perilous places quite unprotected, but no doubt the Touring Club will get around to them all in time.

Returning from Menton, I mounted, with my bicycle, by the cog-wheel road, from Monte Carlo, which invades the once solitary pine-groves and foot-paths, to the upper Cornice Road. The views are glorious down upon the map-like capes and sea, but again there is little of level, and I had a violent contest for supremacy in descending the long abrupt grade to Nice. When I turned from Nice northward again, I spent the first night at a pleasant inn, at Saint-Martin-du-Var, the faithful "vélo"—how many a strange lodging it had!—being housed among the

barrels of a wine-cellar. At that little station the "vélo" was delivered to me with a spring arrangement, attached to it to steady the front fork, broken—the first damage it had ever met with by rail. I sent in a claim to the company. It made no indecorous haste in reply; in a fortnight—I had then pushed on in my travels as far as Brussels—a letter was received. The letter read substantially as follows:

"I have the honor to inform you that the Company considers the breakage brought to its attention as due to causes for which it should not be held responsible. The device in question appears to have been of a fragile nature, it was not protected by packing of any kind, it occupied an exposed position, and, as pivot for the forward wheel, it was subject to be abruptly turned in transportation, without supposing any less than the usual care in handling. I feel assured, therefore, under the circumstances, that you will kindly consent to relinquish your claim for compensation [*J'aime à croire que vous voudriez bien renoncer, etc.*]. Accept the assurance of my most distinguished consideration. [Signed] Blank, Assistant Inspector, for the Chief of Exploitation."

I did relinquish my claim, and I do relinquish it willingly, and would that such courteous tone of response might communicate itself to officialdom, railway and other, throughout the universe! I had made it, indeed, rather to see how such a claim was likely to be treated by a French transportation company than because I felt myself much aggrieved. For although, on the one hand, the spring had gone safely all over France, and therefore was not essentially very fragile, and there was no more reason why it should have been broken in the short run out of Nice than at any previous time, yet, on the other hand, the only wonder was it had not been broken long before. This was the first trace of harm the bicycle had met with in all its two months' travels in France, and it had been transported everywhere, as the French plan is, free of charge. When you reflect how liberally railroads everywhere else remunerate themselves for carrying bicycles, it is evident that those of France are most generous. And, in general, France, both by its roads and its devotion to his interests, is the country that deserves well of the bicyclist more than any other in the world.

I see that the Pennells, in their late magazine articles, have nothing favorable to say of high mountaineering awheel in Switzerland: they were scorched by the sun, choked by the dust, drenched by the rain, and worked twice as hard as any day-laborer. I am the more reconciled, therefore, to having made my main excursion in that country a delightful run around Lake Leman. The Swiss roads and even the city streets are bumpy and bad. Holland I rode the length of from north to south, but, if I had known more, I should have taken it from south to north, as the prevailing wind was energetically against me. Two of my most interesting jaunts were studying on the wheel all the details of the two great battlefields that ended the Napoleonic dynasty, Waterloo and Sedan; I had most delightful leisurely days at both places. Finally, in England, I rode through the New Forest and up to Stonehenge, never sufficiently to be praised for its solemn grandeur, on the bare hills; and so back to Southampton, to take the steamer.

I see the experienced Pennells agree with me in being against mere "fair-weather wheels" in Europe, and they are also against

single-tube tires, which can be repaired only in the largest towns. After my first puncture in France, I had put over the tires a pair of reinforcing bands, such as are much in use there. They unstuck from time to time and it is necessary to have them reglued. In England I managed to get a small puncture from the hedgerow thorns, and a very complete one from the flints, even through this extra thickness. The latter took place on the lower cross-road from Salisbury to Winchester, by Stockbridge. Beware of that kind of road in England; the main ones are so good that you think you can trust them, but they are mended with broken flints like bits of bottle-glass, and only a semi-occasional wagon passes to grind these down. My breakdown was at evening, near a solitary house, some miles from everywhere. I inquired for some gummy substance with the aid of which and my tire-tape I might make a temporary repair. They had never heard of chewing-gum, they said, and they had no tar, pitch, or anything of that kind. "Have you no sticky substance that might serve the purpose?" I made appeal to the people. A woman's face finally brightened as with a happy thought; she went up stairs and brought me down—what think you? Some thin flour paste. I had the puncture mended at Winchester, a man nearly killing himself in putting in a rubber plug—which I furnished him—and charging two and six for the job.

WILLIAM HENRY BISHOP.

THE PARIS SALONS.

JUNE 2, 1898.

By chance, just after seeing the two Salons of 1898, I have read a notice of the one Salon of 1845. That everybody then painted too well was what the critic found desolating. All the world was improving technically, there could be no question of that; but of invention, of ideas, of individuality, the supply was as limited as ever. Take away the date, and you might fancy this written of the exhibitions of to-day, when technical excellence is so universal among painters that even in England, at the Academy, it comes no longer as a surprise. Indeed, the last fifty years have seen a progress so great that, were the same critic still at work, he would have to note—no doubt to his amazement—signs of a reaction against the very perfection for which, during long centuries, the artist has been striving. I do not point this out as something quite new, as something just discovered. For of late the tendency of both Salons, if there has been any tendency at all, has been to conceal technical merit beneath ingenuity of subject, until, among a certain group, the more incomprehensible, the more unintelligible the picture, whatever it might be, the more assured was its creator's claim to genius. Symbolism, Rosicrucianism, Mysticism have been but so many expressions of revolt against that Realism which has for aim photographic accuracy obtained by means of well-trained and skilful craftsmanship. It is late in the day to insist that the basis of great art is technique. The trouble is that, despite the fact, many canvases technically irreproachable are quite worthless artistically, and will not outlive the generation that produced them. To protest against the standards that encourage this sort of excellence is most commendable, but to go to the other extreme, and forget that the artist's invention

is in the use he makes of his medium, and not in the abstruse ideas and subtle emotions he would express, is no less serious an error. When passing fads are the result, you can afford to be amused. But it is matter of regret when you see the masters drifting more and more in this direction, as you do at this year's Salons, more especially in the case of two men—one a sculptor, M. Rodin, the other a painter, M. Carrière.

I almost hesitate to speak of M. Rodin's "Balsac." It has become a byword, a standing joke in Paris. Every one now knows that the Société des Gens de Lettres has refused it, though a definite commission was given; that the Municipal Council will not have it at any price, even as a gift. The critics have been at loggerheads over it, and abuse and praise have alike been overdone. Raoul Ponchon has made it the theme for the most jingling rhymes of nonsense he has ever yet contributed to the *Courrier Français*; songs are sung about it by the clever young poets of the *Tréteau de Tabarin*, the latest rival to the old *Chat Noir* and the *Cabaret of Drumont*. In a word, it is enjoying exactly the sort of *réclame* for which the manufacturer of the *Salon machine* would sell his soul and from which the artist shrinks. If it were nothing more than the *machine*, it might be overlooked altogether. But it is the work of quite the most distinguished sculptor of our day; of one who cares too much for his art to degrade it by a mere piece of *biogues*, or sensationalism. It is really no wonder that the public and artists too have been puzzled by this huge, shapeless, uncouth mass, set upon a pedestal. Balsac stands, his head well thrown back, wrapped in a great cloak, the sleeves of which hang empty. He has large, protruding—I was on the point of saying melodramatic—eyebrows; his massive throat, in its width and volume, suggests some rare and unpleasant variety of goitre. There is absolutely no form beneath the cloak, except where the arms are vaguely indicated and where one casual foot protrudes from underneath the heavy folds. I could defy any one who saw the back of this curious monument first, not knowing that it was the Balsac, that it was the figure of a man, to understand what the statue is meant to represent. I give my impressions honestly, for certainly they are genuine; I had come prepared to admire. If I did not admire, however, I was far from scoffing. And the longer I looked, the more I was fascinated by this strange work; the more I felt the dignity, the emotion, the grandeur really in the artist's intention. Had I seen it in his studio, had it been exhibited as a sketch, I should have detected in it the germs of a masterpiece. But, in a finished statue, as in a picture, we must have more than beauty or greatness of intention, and I cannot blame the Société des Gens de Lettres and the Municipal Council for their refusal.

Perhaps the most curious part of it all is that Rodin should be willing to exhibit as complete, perfect—that is, as he can make it—this figure which artists whisper among themselves is hardly yet begun. There can be no question of incompetence in such a master of form, no question of shirking work in so true an artist. Could we forget the many lovely designs he has already shown, there is in the same exhibition a group, "Le Balser," to remind us of his knowledge. If there is no form beneath the graceless heavy cloak, if there is so little

modelling in the throat that it amounts to disfigurement, you may be sure that Rodin intended it should be so, that the inchoate expression he has given to his conception of Balzac is deliberate. To me it seems but another proof of the modern artist's disdain of technical accomplishment. Centuries ago the Greeks brought the sculptor's art to a perfection never yet surpassed. To-day there are dozens, if not hundreds, of men who can model the human figure almost faultlessly. To escape from the lifeless, the soulless learning of the schools, the master sculptor now seeks to animate his marble or clay with an intensity of emotion or passion that could best find voice in music or in verse. The form counts for little; it is the feeling that must transfigure it. But I think those modern critics come nearer the truth who believe that the real artist is he who divines the secret of beauty in actual life, and can make us see, either by his paint or his clay, how really great and poetical we are in our stiff cravats and patent-leather boots.

It is the same with M. Carrière's pictures. Everything—beauty of color, of form, of line, of composition—is being sacrificed to an emotion which none but the painter himself can explain. This year he shows a large decorative panel for the Sorbonne. Two vague figures peer out from the left-hand corner, over a sea of dull leaden mist, in the midst of which, gradually, phantom roofs and houses take shadowy shape. You stand at the other end of the small room (and certainly a mural decoration is meant to be looked at from some little distance), and you see only the leaden dulness, only the depressing mass of cloud or vapor or haze, which in no sense of the word could be thought to decorate anything. In the "Crucifixion" of a year or so ago, this mist, which is now but a mannerism in M. Carrière's work, did not conceal but intensified the tragedy on the Cross. Through it, in the "Theatre at Belleville," you could still discern the fine curves of the balconies, the statuesque pose of a woman here and there in the audience. But in the new decoration the design is as shapeless, as indefinite, as inchoate as the man enveloped in Balzac's cloak. You seem to be conscious only of some unspeakable sadness, some overpowering emotion, to which the painter has struggled vainly to give utterance. And with Carrière, as with Rodin, you feel that this indefiniteness is not a foolish trick, not the result of indolence or a veil to ignorance. You remember the delicate detail in many of his early portraits, the lovely passages of color in a picture like the beautiful, fierce "Maternité," and you realize that here, too, the sacrifice to emotion has been deliberate.

It so happens that M. Carrière has just furnished us with a clue to his mental or emotional attitude. He is holding an exhibition of his collected work in one of the smaller London galleries, and for the Catalogue he has written a Preface. "So short is the way between the gates of birth and death," he writes, "that hardly shall a man choose the road he will follow, hardly shall he learn somewhat of his own soul, ere the ultimate darkness overtake him." And so, everywhere he turns, he is confronted with this "ultimate darkness," as in Maeterlinck's play he always hears Death at the door; and the mist that, year by year, darkens and thickens in his pictures is but a symbol of the uselessness, the waste, the utter futility of human life. It is but a new

version of the old skeleton that grinned and grimaced and danced through the designs of Holbein; and the painter who has it within his power to create the Immortal, squanders his time instead in preaching one long sermon on Death.

I have written at length of these two men because I think the tendency of which I have spoken is best illustrated in their work, which, though at times—as at the present—we may not be in sympathy with it, always has its special distinction and individuality. It never fails to be interesting. But, throughout the two Salons, you may note the endeavor to escape from the photographic, from the realism of which Bastien-Lepage was a prophet. One way is by subject: mystical ladies wander through mystical glades; a nude, with a few jewels added, becomes an Enigma; the Scriptures are still searched—M. Dagnan-Bouveret supplementing the "Last Supper" of two years ago with the "Supper at Emmaus," which has also, unexpectedly enough, provided a theme for Mr. Gari Melchers, who, however, does not change his method with his subject. Men like M. Besnard and M. Aman-Jean, on the other hand, rely upon treatment; M. Besnard exaggerating the color and the pose and the expression in his Mme. Réjane until, even to be in the fashion, I cannot see in it anything but a caricature, marvellous as it is technically; M. Aman-Jean varying his decorative fancies, experimenting with his color arrangements, until, for the moment, he has lost the secret of harmony. By contrast, there is a dignity, a serenity, a feeling of repose in the "Sainte-Geneviève" of M. Puvis de Chavannes's new panel for the Pantheon, that more than compensate for the somewhat angular harshness of the lines made by the architecture and the tall, thin figure of the saint, who, from her high balcony, looks down upon Paris, lying below, pale and violet in the soft moonlit night.

I have heard the Salons called, and not without reason, an exhibition of foreigners. It is a pleasure to recognize that the strongest of these foreigners are Americans. In the old salons you have Mr. McEwen's Dutch subjects, with a refinement, a charm of color, not to be ignored in the midst of acres of commonplace, and the pastures of Mr. Bisbing. In the new Salon there are the portraits by Mr. McClure Hamilton, who has a keen eye for character and an entirely personal way of recording it; by Mr. Alexander, amazingly clever, but restless to the point of exasperation, so that it is a relief to look from the ladies in swirling skirts to the little girl who sits quietly and simply in front of her doll; by Mr. Humphreys Johnstone, whose "Madame Sara Bernhardt" is heavy and painty, dull in color, to me a disappointment when I remember the same painter's portrait of his mother. Mr. Childe Hassam exhibits here, I believe, for the first time, at least in many years. His landscapes are ingenious, but they have the same fault of restlessness I find in Mr. Alexander's portraits. In the sculpture hall, Mr. MacMonnies is again preëminent. I should like, however, to see his great chariot in the place for which it was designed before pronouncing upon its merits. It is a vigorous piece of work, but it is impossible for it to tell with any effect in its present position.

Had I space, I should have to speak of the landscapes of Casin and Billotte in the new Salon, Harpignies and Pointelin in the old. There is other work, of course, which,

seen by itself, would command attention, but which simply has no chance when shown with so many hundred other exhibits. The drawings and engravings, to have justice done to them, would require a separate article. The artists who have been so active in the recent revival of lithography and wood-engraving and color-printing still persevere, but I note with regret that they are beginning to elaborate their color work, until in certain lithographs and etchings and wood-blocks they seem to be trying to rival a painting. The legitimate use of color, unfortunately, must wait to be discussed; it is not to be dismissed with a few words. But I cannot finish the shortest notice of this year's Salons without at least a reference to the beauty of their new quarters. They have profited by the loss of the Palais des Beaux-Arts and the Palais de l'Industrie, which artists feared as a national disaster. The old machinery hall of the Exhibition of 1889, in which both shows are held, proves that the much-despised iron and glass in the hands of a good architect may give fine proportions, graceful arches, and a wonderful suggestion of light and strength combined.

Correspondence.

THE SPOILS OF WAR.

TO THE EDITOR OF THE NATION:

SIR: The solution of the difficult Philippine Islands problem suggested in the last issue of the *Nation* would be an excellent one—a recognition of the Aguinaldo republic and our abandonment of the islands. The civilized world would disapprove of our restoring them to Spain, and the islanders would have a just claim on us to protect them from such a calamity. But this could be done without any formal assumption of protectorship. The object would be effectually accomplished by our making it a condition, in our treaty of peace, that Spain would never attempt a resubjugation of the islands; and a breach of this condition would be a legitimate cause of war. FRANCIS J. LIPPITT.

June 24, 1898.

TO THE EDITOR OF THE NATION:

SIR: Since we have now learned from those who have inside information on the matter, that it is the Divine Plan for the United States to acquire such valuable property as it may chance to lay its hands on, we ought, in the light of this knowledge, to perceive other parts of the same Divine Plan which have hitherto been hidden from our eyes. We shall then not only piously recognize the hand of Providence in the political victories and defeats of the last few years, but still more shall we admire the astuteness of the Almighty in accustoming us, through the labors of his instrumentalities, Messrs. Platt, Croker, and Quay, to the sight of governments which do not derive their powers from the consent of the governed. B.

ANDOVER, MASS.

THE REVENUE BILL.

TO THE EDITOR OF THE NATION:

SIR: While quite willing to pay my share of the expenses of the war, I do feel hardly dealt with by that tax on tea. If I were to

write down my dietary, placing the articles in the order of indispensability to my comfort and, as I believe, health, I should place tea second on the list, bread only preceding it. In this I may be singular, but I think there is a growing host in this country who place tea very high in the list of necessities, a long way, in fact, above coffee. I also believe that a very small minority of this host are readers and supporters of yellow journals and shouters for war.

Furthermore, 10 cents a pound import duty means an addition of not less than 15 cents a pound to the retail price. That is to say, those of us who cannot afford to pay more than 60 cents, or thereabouts, for our tea, are required to pay a tax of 25 per cent. on one of our most necessary articles of diet, while those who can afford to pay a dollar or more will be taxed only at the rate of 15 per cent. or less, and the coffee or chocolate-drinkers will not be taxed at all. This is surely very unfair.

The framers of the revenue bill had perhaps good reason to believe that hardly any of the 60-cent-tea drinkers were Jingoes or yellow-journal readers, and thought this would be a good way of making them pay for their pacific opposition. The only other explanation which has occurred to me is more creditable to them, namely, that they did not wish to enable the numerous manufacturers of adulterated coffee to add the amount of a tax to the enormous profits which they already make on the substances used in adulteration.

Yours most respectfully,

CHARLES J. GEDOR.

CARPENTRIA, CAL.

THE MODERN-LANGUAGES EXAMINATION AT BRYN MAWR.

TO THE EDITOR OF THE NATION:

SIR: One of your correspondents, in the issue of June 9, took a bold stand in behalf of candidates who came up for the matriculation examination in English and were somewhat staggered at the discrepancy between the subject assigned in the examination paper and the requirement as it appears in the Bryn Mawr programme for 1897. He contends that no college has a right to announce one standard for an examination in its catalogue, and then, without warning, to substitute another. He styles this a positive breach of contract that gives to every candidate a just ground of complaint.

This is not the only instance where such a just ground of complaint could be found. If we turn to the requirements for the entrance examinations in French and in German (page 76 of the programme, 1897), we read that the first "is to test the candidate's knowledge of pronunciation, grammatical forms, and her power to read at sight ordinary French prose and verse"; that "the examination in German is precisely similar to that in French." Now the 1898 French paper calls for answers to eight questions in grammar, including irregular plural forms of nouns (6), irregular feminine forms of adjectives (7), the negative form of a sentence given, the negative plural and interrogative of a second, the translation into French of a third, and twenty-eight verbs in various moods and tenses in full, save the latter form. The German paper calls for answers to three questions in grammar, the first being the genitive singular and plural

article to be prefixed to twelve nouns, the gender of which is appended; second, the declension of the same noun and adjective with definite and indefinite article also given; third, one person of four tenses of twelve verbs.

The French paper calls for the translation of six selections which, according to the programme, should be ordinary French. They consist of passages of poetic prose, dramatic definition, descriptive prose (an essentially French landscape and customs), a portrait (a priest's) by Balzac, a "chronique" from Nice, and twelve lines of verse, the sense of which is apparent only on reading the tenth line. I note a few expressions of this ordinary French: "ces creux vallons superposés," "des aiguillons de glace," "son nez renflé," "sous la ramée," "plaine peu giboyeuse," "mimosa," "le caquetage des consommateurs." The German paper calls for the translation of four passages, three of easy narrative prose (one by Freytag, of which an English translation is in everybody's hands), a fourth of equally easy verse. Each paper is allotted three hours.

Those among your readers who are interested in the matter may be left to decide whether the two papers correspond to the programme and may be considered "precisely similar." The marking of relative averages is of course supposed by me to conform to the one strict standard.

Can our New England schools, public or private, both avowedly of the most thorough character, successfully fit for these tests candidates of the average age of sixteen and seventeen? and is the strain which young minds must stand a weal or a woe?

I am informed that each of these languages counts three points in the indispensable eleven out of the fifteen for matriculation at Bryn Mawr College.

MARION B. HOWDEN.

NEW LONDON, CONN., June 21, 1898.

CARLYLE BIBLIOGRAPHY.

TO THE EDITOR OF THE NATION:

SIR: The six lectures on "Heroes, Hero-Worship, and the Heroic in History" were delivered by Carlyle in London during 1840. In 1841 these lectures were published in book form (12mo) under the above heading, in London by Frazer and in New York by Harper & Brothers. I am not certain about Frazer, but Chapman & Hall, in August, 1846, published the third edition of the same book.

Mr. MacMechan will find reference to the 1841 American edition in the 'Catalogue of the New York State Library: 1855.'

Yours, A. G.

[Another correspondent refers to the Catalogue of the New York Mercantile Library of 1850, containing two entries of the above work, dated New York, 1841 and 1846. One of our readers has placed in our hands a copy of the second edition (12mo), published in New York by D. Appleton & Co. in 1842.—ED. NATION.]

A RECTIFICATION.

AU RÉDACTEUR DE LA NATION:

MONSIEUR: On me communique l'article que la *Nation* a bien voulu consacrer à la première livraison de mon 'Album d'Antiqui-

tés Orientales.' Votre collaborateur anonyme en parle avec une sévérité qui serait peut-être justifiée si j'avais eu, comme il paraît le croire, la prétention de donner un "Corpus" ou une "selection"—c'est à dire un recueil, soit complet, soit partiel—de monuments déjà connus et classés en séries plus ou moins méthodiques. Mais il oublie que mon but est tout autre, que cet Album n'est ni un "Corpus," ni une "selection"; qu'il ne doit s'ouvrir, au fur et à mesure de leur apparition, qu'à des monuments inédits ou peu connus intéressant l'archéologie orientale de toute époque, et qu'il est, en réalité, le complément illustré de mon 'Recueil' et de mes 'Études d'Archéologie Orientale'; il reproduit forcément le caractère extrêmement varié de ces deux publications, et le seul ordre qu'il puisse suivre c'est celui des découvertes elles-mêmes, qui est réglé par le hasard. Les tables qui termineront l'Album offriront, d'ailleurs, la répartition voulue, en séries naturelles, de ces divers documents graphiques présentés en bloc.

Dans toute science, les travaux d'ensemble, pour lesquels l'auteur de l'article semble avoir une prédilection marquée, n'ont leur raison d'être qu'après les travaux de détail, après les monographies qui en font tout d'abord connaître et en élaborent minutieusement les éléments premiers. En bonne géométrie, ce sont des points qui créent et déterminent les lignes.

L'Album ne vise pas à autre chose qu'à fournir le plus grand nombre possible de ces points archéologiques et—j'insiste là-dessus—des points nouveaux; à d'autres le soin d'en tirer plus tard, à loisir, de grandes lignes, plus ou moins harmonieusement combinées en figures régulières. Nous avons en français un proverbe qui dit que la première condition "pour faire un civet" c'est d'"avoir un lièvre." Le plus habile maître-gueux en archéologie ne ferait rien sans le chasseur. . . . En somme, votre collaborateur trouve mauvais que je fasse la chasse aux antiquités, et voudrait me voir cuisinier. Il me sera permis de lui répondre: à chacun son métier.

Il me sert, en passant, un petit plat de sa façon que je ne puis accepter, sous la forme d'un point d'interrogation dont il accompagne malicieusement à deux reprises le nom de la ville de *Narnaka*, ainsi écrit par moi, en effet, au bas des planches xliii et xliiv; cela veut dire, évidemment, dans sa pensée: l'auteur doit estroper le nom, bien connu, de la ville cyprite de *Larnaka*. Or, votre collaborateur ne se doute pas qu'il s'agit d'une ville toute différente de l'antique Citium-Larnaka, d'une ville située dans le nord de l'île et dont le véritable nom est bien *Harnaka*, comme je l'ai écrit à dessein, et comme le prouvent les inscriptions grecques et phéniciennes qui y ont été découvertes. C'est un petit fait que votre collaborateur aurait pu apprendre s'il ne s'en tenait pas aux grands ouvrages doctrinaux, aux ouvrages d'ensemble, qui paraissent avoir toutes ses préférences, et s'il prenait la peine de lire quelquefois ces pauvres petites "monographies" pour lesquelles il professe tant de dédain. La publication de 'L'Album d'Antiquités Orientales' n'eût-elle eu que ce mince résultat de lui donner une petite leçon de géographie antique, que ce serait encore suffisant pour me conférer le droit d'interjeter appel de ce jugement final de votre collaborateur, jugement qui équivaut à la mort sans phrases: "There is no reason for the existence of this Album."

Veillez agréer, Monsieur, l'assurance de mes sentiments les plus distingués.

CLERMONT-GANNEAU.

Notes.

A very limited edition of a work entitled 'Booktrade Bibliography in the United States in the 19th Century,' by A. Growoll, managing editor of the *Publishers' Weekly*, is shortly to be issued by the Dibdin Club, of which M. L. Greenhalgh, No. 110 East Eighty-seventh Street, New York, is Secretary. A curious feature will be a facsimile reprint of the rare 'Catalogue of All the Books Printed in the United States,' published by the booksellers of Boston in 1804.

'A Handbook of Spanish Phrases,' for the use of our army, by F. J. A. Darr; 'Soldier Songs and Love Songs,' by A. H. Laidlaw; and 'The Examination of Horses as to Soundness and Selection as to Purchase,' by Edward Sewell, will be published next month by William R. Jenkins.

'Leo Tolstoy, the Grand Mushik,' by G. W. Ferris, is among the latest announcements of T. Fisher Unwin, London. It will contain a provisional list of the Count's works. The same publisher will provide the first English translation from Brunetière's writings ('Essays in French Literature'), selected and translated by D. Nichol Smith. M. Brunetière contributes a gracious preface.

The new edition of the 'History of the United States Navy,' by E. S. Maclay (Appletons), consists of a rearrangement and enlargement of the previous one rather than a revision. The first volume now closes with the end of the war of 1812, while the additional matter in the second volume brings it down, by the aid of newspaper accounts, to the battle of Manila Bay and the occupation of Cavité arsenal by Rear-Admiral Dewey. The additional chapters include a full account of the action of the *Wyoming* in Shimonoseki Straits, the services of the navy in the suppression of the slave trade, a discussion of the effect of the sea power of the North in the civil war, and the relations of Cuba and Spain with the United States down to and including the first days of the present war. Some other matters omitted in the previous edition are included in the present issue. Taken as a whole, this history of the navy (which we have heretofore reviewed at length) is the best in print, but the perspective needs correction, and this can be appropriately made when the present war comes to an end. The fresh material for an extension of the work would justify another edition, and a systematic revision of the whole publication would then be in order.

A new edition of Sir George Cornewall Lewis's 'Use and Abuse of Some Political Terms' has been printed at the Clarendon Press, Oxford, and is just to hand from its agent in this country, Henry Frowde. Bagehot's essay on Lewis sets forth the essential qualities of his mind and writings; and this little treatise, though an early production of Lewis's, is worth reprinting, and should be a help in clearing the mind of cant and cobwebs.

Volume 3 in the "Biographical Thackeray" (Harpers) gives us Yellowplush, Titmarsh, the Great Hoggarty Diamond, Cox's Diary, and some minor writings. Mrs. Ritchie's introduction takes up the thread where it was broken off in her notes to 'Pendennis,' and shows us Thackeray as law-student against the grain, art-student *con amore*, dabbler in politics, newspaper correspondent, and crony of the Tennysons, FitzGerald, the Bullers, and Kembles. The sketches here

first reproduced are not particularly striking, but the frontispiece supplies a new portrait of Thackeray, after a drawing by D. MacIise in 1832, now the property of the Garrick Club.

The Scribners add a second "German" volume to their series of "Stories by Foreign Authors," and also, undeterred by prejudices of the hour, a "Spanish" volume in the same series. The stories here selected are all of some years' standing, even in the translations now reprinted.

'Workingmen's Insurance,' by William Franklin Willoughby (T. Y. Crowell & Co.), is a contribution of much value to our knowledge of a subject of rapidly increasing importance. The author is in the employ of the United States Department of Labor (although this book appears to be published on his own account), and has thus been enabled to obtain official information of the working of systems of insurance, not only in this country, but also in the principal European States. The schemes of compulsory insurance under governmental management adopted in Germany and Austria are carefully examined, as well as the voluntary systems provided by the Governments of France, Belgium, and Italy. Contrasted with these, in England and France, are two great types of mutual aid societies, while in France and the United States we have the leading examples of insurance funds organized by employers for the benefit of their workmen. It is impossible for us to describe adequately even the general features of these vast and complex systems, or to allude to the profound questions of social development and governmental policy which they involve. We can only say that Mr. Willoughby's book will be found a mine of information, lucidly arranged, and presented in such a form as to illustrate the principles both of voluntary and of compulsory insurance.

Part I. of Jayne's 'Mammalian Anatomy' (Philadelphia: Lippincott) is an elaborate account of "the skeleton of the cat, its muscular attachments, growth, and variations compared with the skeleton of man," "designed as a preparation for human and comparative anatomy." After an introductory chapter of definitions, general considerations, methods of preparation, etc., there are described and figured all of the three hundred osseous components of the cat's skeleton. The figures are original, large, and accurate, and there are tables of measurements indicating the extent of individual variation. Most ingenious and instructive are the representations of man as a quadruped (fig. 435), and of the cat in the erect attitude (fig. 537). A novel and useful feature is the clear indication of the location of each cranial bone upon a separate outline diagram of the entire skull. The costiferous vertebræ are designated as thoracic rather than dorsal; there is a general employment of unambiguous terms like *dorsal*, *ventral*, *cephalic*, *caudal*, *proximal*, and *distal*, and it is to be hoped that the succeeding volumes may exhibit still more numerous and decided advances upon the artificial and obsolescent terminology of anthropotomy. Adverse criticism is called for upon only three points. No one will question the *availability* of the cat in most parts of the world as a subject of preliminary anatomic study, but it is hardly a "typical" mammal in the usual sense of the word. Beyond incidental reference to the 'Anatomical Technology' of Wilder and Gage (p. 13), there is no indi-

cation of prior works upon the anatomy of the cat; presumably the concluding volume of the series will contain a full bibliography in which the treatises of Mivart and Straus-Durckheim should certainly be mentioned. The bulk of this volume is inconvenient on some accounts; space could have been saved by putting certain paragraphs in smaller type, by replacing the numerous millimetres by the abbreviation *mm*, and by the less frequent repetition of full-page figures. Dr. Jayne's work is at once a substantial contribution to knowledge and a valuable aid to students and teachers of anatomy, and the succeeding volumes will be awaited with interest.

No. 6 in the sixteenth series of Johns Hopkins University Studies is devoted to biographical sketches of five men in North Carolina associated with opposition to slavery. The title, 'Anti-Slavery Leaders,' is not quite accurate, but Prof. John Spencer Bassett of Trinity College, N. C., has done well to gather together the particulars here given concerning that queer "abolitionist" Hinton Rowan Helper, Benjamin Sherwood Hedrick, Daniel Reaves Goodloe, Eli Washington Caruthers, and Lunsford Lane (a self-emancipated slave), and the written or printed works of several of this number. It is a speaking chapter of struggle against proscription and mob violence, and, while it involves no tragedy, affords a glimpse of the natural working of the "peculiar institution." Prof. Bassett writes with candor and sympathy, and with no fear that anybody in North Carolina will now take exception to his pursuit of this branch of historical research, even as one who avows his condemnation of slavery.

Mr. David W. Hoyt, Providence, R. I., sends us the second part of his genealogical work, 'The Old Families of Salisbury and Amesbury, Mass.,' which embraces some related families of Newbury, Haverhill, Ipswich, and Hampton. Pages 81-160 deal with the Buswell, Carr, Challis, Chase, Clement, Clifford, Clough, Coffin, Colby, Collins, Connor, Corlies, Cottle, Cotton, Currier, Davis, Dow, Downer, Dudley, Dummer, Eastman, Eaton, Emery, Fellows, Fitts, Flanders, and sundry other families or individuals. Clean work is made by affixing "unclassified records" that do not fit in with the better known stocks. The edition is limited, as the support seems still to be precarious. Mr. Hoyt's method is strictly statistical, and the typography of 'The Old Families' is excellent.

Mr. A. P. C. Griffin, Assistant Librarian of Congress, has completed a 'List of Books relating to Hawaii,' including references to collected works and periodicals, ranging from 1831 to the present year. In the appendix are naturally to be found the controversial arguments respecting annexation. These appear, as we write, likely to possess only an historical interest.

The tenth volume of the 'Histoire Générale,' edited by MM. Laviisse and Rambaud, has recently appeared, with the special title, 'Les Monarchies Constitutionnelles: 1815-1847' (Paris: A. Colin). The eighth and ninth volumes, 'La Révolution Française: 1789-1799,' and 'Napoléon: 1800-1815,' are almost independent works, admirable compendiums, clear, concise, and readable. While assignats and the guillotine are no longer the only images conjured up by mention of the Revolution, while we are not agreed, on the other hand, to date all progress from the Year I., there is much of

interest in the achievements of the Revolutionary legislators and administrators in reconstructing the political, military, economic, and educational organization of France as set forth sympathetically by MM. Aulard, Vast, Chénou, Malet, etc. Even the Terror loses something of its inhuman aspect when we are taught to note it wax and wane as the pressure of hostile armies increases or diminishes, and observe that the name may express the psychological state of the guilty factions as well as that of their victims. In the treatment of the second epoch there is the same effective presentation of every side of the national life, wherein the figure of Napoleon looms large, working more and more for ill as he yielded to the domination of personal ambition. In these volumes interest, of course, centres in France, though the history of other countries is carried steadily forward; but in the tenth volume we return to a broader field in European politics, the growth of democracy and the development of the Eastern Question, both near and far. It is a pleasure to note again the excellence of the bibliographies in this work, and the accurate spelling of foreign names, though we lose thereby one of the lighter pleasures of consulting French books of reference.

Sir Harry Johnston's account of his recent journey through the Tunisian Sahara, in the *Geographical Journal* for June, might well be termed a visit to the troglodytes. The number and variety of the cave-dwellings were remarkable—four types being observed, the purely natural, the improved, the artificial cave, and the chambers excavated in the sides of an artificial pit, twenty to thirty feet deep, and approached by a sloping tunnel "sufficiently high and broad for the passage of camels." There were also curious mountain cities, with "castles" for storing grain, several stories high, and having vaulted roofs. In addition to numerous Roman and Saracenic remains, there was to be seen the strange survival of a still more ancient race in the prevalence of the phallic emblem. Sometimes it surmounts the minarets of the mosques; in other places there are altars or temples, "usually a hollow cube of rough masonry, with the phallic emblem placed above the doorway." The people profess no knowledge of the meaning we ascribe to these monuments; they simply say, "It was a custom of our ancestors to make monuments of this kind." Sir Harry bears most cordial testimony to the success of the French in ruling the Berbers, who inhabit this region, such order being maintained by a handful of police and a few native soldiers that the country is "almost as safe to travel in as France itself." Admirable roads have been made, and every town and hamlet has its post-office under native management. This number also contains a short description of Northern Rhodesia, in which the writer says big game is still so plentiful that lions go about in troops of twelve or more, and he has seen a herd of fully six hundred elephants.

The *Scottish Geographical Magazine* for June opens with an interesting chapter of the later geological history of Europe, by Prof. James Geikie. After a graphic description of the tundras and steppes of the arctic and subarctic regions, their physical conditions, fauna and flora, he shows from an examination of the superficial deposits and the animal and plant remains found in them that tundra and steppe conditions have suc-

cessively prevailed in Middle Europe within the life of man. M. Victor Dingelstedt gives a sympathetic account of the Yezids, or, as they term themselves, Yezd'i—God's chosen—a sectarian tribe of Kurdish origin, living in Transcaucasia and in Turkey. Stigmatized and persecuted by the Mohametans as devil-worshippers, they are fast disappearing—in Russia through extensive reforms, in Turkey by simple extermination. The sect, founded in the early part of the twelfth century by a Mohametan reformer, has an elaborate social organization, of which the most curious feature is its "division into two completely separate castes, *mirids* (laymen) and *rukhs* (clergymen), between whom any matrimonial bond is strictly prohibited, and is considered as incest." They have a sacred volume, according to Mr. Layard, who lived among them, but it is regarded with so much superstitious reverence that it is impossible to obtain a copy of it or even to see it. Their principal prayer, which is given in full, contains some passages reminiscent of the Psalms, and remarkable for their acknowledgment of sin, and their reverence for "the supreme Judge of kings," "the fountain of life and happiness."

A marble slab suitably chiselled, and inscribed in Italian and in Latin, is proposed as a memorial for the late Father Abbot Gaetano dei Negri, the self-denying and benevolent guardian for many years of that treasure-house of art, Monte Uliveto Maggiore, near Siena. Tourists who have visited the convent and recall this old man of heroic stature and gracious hospitality, may be glad to contribute to the above record of his worth in the precincts of the convent itself. They can communicate for this purpose with Miss Helen Zimmermann, 4 Lung' Arno Acciajuoli, Florence. Letters containing money in any form should be registered.

—A newly formed Italian society for the diffusion and encouragement of classical studies has begun the publication, this year, of a bi-monthly bulletin under the name of *Atene e Roma*. The place of issue is Florence, the subscription price eight francs a year. The appeal of the editors, as of the Association, is primarily to Italian teachers of the classics, of university antecedents, whom the conditions of their professional life tend to isolate from their kind, and to deprive of the opportunities that were theirs in their student days. In the opening, double-sized number for January and February, 1898, E. Piccolomini contributes an article on the odes of Bacchylides, capping it with a spirited metrical rendering of xvii., "The Diving of Theseus." The translator finds a needless difficulty in the poet's epithet *λεωτόπρηνος*, slim-sterned, for Theseus's ship. There is a Tuscan plasticity in his handling of the Greek proper names. We have good thirteenth-century Italian forms like *Glove*, *Minosse*, alongside of the modernism of *Athena*, *Apollo*, *Poseidone*, *Amfitrite*. *Afrodite* goes well with the last, but elsewhere in the poem the same goddess figures as *Ciprigna*. Perhaps the strongest article in the number is D'Ovidio's on Dante's indebtedness to Virgil, under the taking title "Non soltanto lo bello stile tolse da lui." Pistelli breaks a lance for the old-fashioned Latin school against the differentiation of the lower secondary schools advocated by Minister Luzzatti, whose recent return to the portfolio of education, in Di Rudinì's new cabinet, lends a special timeliness to such questioning of

the value of his proposed reform. Two reviewers deal, further on, the one with classical philology in Hungary, in 1896, the other with Lutoslawski's 'Origin and Growth of Plato's Logic.' An article on Greek and Latin in the United States does not go deeper than the statistics of the United States Bureau of Education. The author speaks with very guarded approval of the 116,019 girls who were studying Latin in American schools in the year 1894-5. When numbers are so very large, he opines, something more modern and worse than fashion is bound to be at work, "la posa." Nevertheless, he wishes the literary women of Italy were a little more thoroughly steeped in the classical languages than the production of the bloodless and empty stuff which many of them are now writing, demands.

—'A Note-Book in Northern Spain,' by Archer M. Huntington (Putnam), is one of the most profusely illustrated books ever issued on that country, nearly every page having a small picture on it or a large one to face it, and many of them are new. The descriptive matter covers familiar ground for the most part, but the author generally looked at things through his own eyes, except in the chapter on bull-fights, which, instead of describing an actual scene, gives a history of that barbarous sport, dwelling on the vain efforts of kings and ecclesiastics to suppress it, with biographic sketches of some of the most famous toreadors. One of these, it seems, Costillares, owed his success to his making it a point to study each animal before he attacked it, varying his method in each instance. The author believes that the passion for this sport is on the increase rather than diminishing. Another Spanish trait referred to is the indifference to the preservation of the country's resources. On every high-road one meets burros laden with the spoils of the thinly timbered hills, but, though wood is so scarce and expensive, it seems to occur to no one to grow it as an article of trade. The Australian eucalyptus, which has proved such a godsend to Southern California, would doubtless do well in Spain. Apropos of smugglers, Mr. Huntington tells an amusing story illustrating how it happens that the little ones are caught, while the big ones escape: "When a big load goes through," he was informed, "there is enough to pay every one." Spain's medievalism is emphasized in the assertion that "it is only about one hundred years since the stage roads began . . . to have any real existence." The chapter on Santiago suggests a curious coincidence. Just as the Cuban Santiago is, up to date, the chief sufferer in the war, so old Santiago has, of all Spanish cities, most reason to deplore the war, for it derived much of its income from an annually increasing export of olives to the United States.

—Three novels translated from the French of Zola, of Alphonse Daudet, and of Anatole France come before us at the same moment for notice. Each is a book of considerable value, and the literary merits of each have already been considered; so that we need say but little save of the quality of the translations. 'La Débâcle' ('The Downfall,' Macmillan) is without doubt one of M. Zola's chief works, most impressive from its breadth and mass. Perhaps no other man alive save one could have written it. But so far as literary art goes, Zola's writing—his *écriture*, to use a neologism—is often awkward and clumsy. He writes as if all his

fingers were thumbs. Miss E. P. Robins is his translator. We have recently had to do with translation by the same hand in Stendhal's 'Le Rouge et le Noir,' and found in it a certain lack of carefulness and a tendency towards slang. The present work is better done. The command of slang becomes here a quality rather than a defect, and we see no reason why the present version may not, within due limits, be approved. A number of slips of no great importance we have noted—e. g., "earth and débris" is not precisely the equivalent of "mitraille"—but these are of small account. On page 196 four lines are inserted for which no equivalent is found in M. Zola's text.

—M. Anatole France is the possessor of a style, acquired by much labor and much writing, which many of his contemporaries find to resemble that of Renan. One may be pardoned for thinking that M. Anatole France himself agrees with this judgment, and that the resemblance the critics find is to some extent of his own seeking. But the French which was in Voltaire's hand a rapier and in Renan's the wand of a magician, in the hand of M. France is more like a walking-stick, though supple and elastic in itself and handled with much grace. In 'Le Lys Rouge' ('The Red Lily,' Brentano's), with which is our present concern, the reader's attention is less drawn to the form than to the substance of the book, though it cannot be said to be violently drawn towards either. The book is not exactly a novel à clef, and yet some of the figures that move in it can hardly escape recognition. Among them appears Verlaine, who is not to be mistaken anywhere. No translator's name appears on the title-page of 'The Red Lily,' and this is not unwise, for the work is not in quality much better than ordinary hack-work. Omissions abound; sometimes it is a proper name that is left out, sometimes a clause, sometimes a sentence or a paragraph, in one case no less than a page. The book is, in fact, reduced in all by about a hundred pages. In other respects, too, the work is ill done; "très malin," for instance, is thoroughly Americanized into "very smart"; the meanings of *brouillard* and *brume* are confused; the weather is said to be "soft" where the author wrote *doux*, and so on, and so on.

—Of 'The Head of the Family' (Putnams), by which phrase Mr. Levin Carnac translates, not too ill, the title of Alphonse Daudet's last novel, 'Le Soutien de Famille,' not a great deal need be said. The novel itself is not one of Daudet's best. It finds its place rather with 'Fromont jeune et Risler aîné' than with 'Les Rois en Exil,' or 'Numa Roumestan,' or even 'Le Nabab.' Mr. Carnac, like the others, has produced a passable version of his author rather than a good version. It will serve at least for summer reading, and perhaps none the worse because the English here and there gives one a shiver—when we find, for instance, young Maugras "bringing some of his chums down to a family blow-out," or are informed that a girl "won't get married unless she takes her husband something," or that a man is "well posted in everything." The appalling locution, "frightened of him," we kept note of up to the fourth time of its occurrence. Prof. Adolphe Cohn contributes a critical sketch to the volume. The rather clever illustrations are by Marchetti, and the book has an exceptionally good cover.

CAPTAIN JOHN SMITH.

The First Republic in America: An Account of the Origin of This Nation, written from the Records then (1624) concealed by the Council, rather than from the Histories then licensed by the Crown. By Alexander Brown, D.C.L. Boston: Houghton, Mifflin & Co. 1898. Pp. xxiv, 686.

Mr. Brown's long-expected volume can hardly fail of a varied reception from those likely to make the most use of it. His object is to set forth the early history of Virginia, from 1605 to 1627, as contained in the records of the Virginia Company, and thereby to free the colony and the nation from the aspersions and false charges of John Smith, and correct the errors of later historians who have taken Smith for their guide. According to Mr. Brown, the original documents used by Smith in compiling the first part of his history were lost, but most of those for the period 1610-1623 have been preserved, and, though concealed at the time by the Privy Council, are now available. We can readily believe, even without repeated assurances from the writer, that these records are of high importance, but it is trying, to say the least, to be obliged to read half way through Mr. Brown's portentous volume before learning where some of these records are to be found, and even then to be left in doubt as to the sources from which large portions of his material have been drawn. The text of the records themselves, whether those in the Library of Congress or others, is seldom referred to in footnotes or citations, and the student, accordingly, is debarred from proving from that source most of the author's statements of fact, or justifying his conclusions; he must take Mr. Brown's word for it that the matter presented is authentic record, that the transcription is accurate, and that nothing important has been omitted. In point of literary form, the book is essentially unreadable. The narrative, if such it may be called, is made up chiefly of a series of extracts and paraphrases from the records and other documents, arranged chronologically, with little illuminating comment, and no immediate connection, save orderly succession in time and space. Like the old chroniclers, Mr. Brown sets down the facts in their order; like them, too, he intersperses reflections on "manifest destiny" and the mysterious designs of Providence, but varied, as occasion offers, by pointed comments on the mendacity of John Smith.

While these shortcomings, all of which might easily have been avoided, can but detract from the practical serviceableness of Mr. Brown's work, they are, of course, defects of method and form rather than of substance. As regards the subject-matter of the volume, the important question is what new light, if any, is thrown upon the early history of the Virginia colony, and, in particular, how far the case against Smith is sustained? The controversy as to Smith's accuracy and fairness as a historian is of pretty long standing, and has been engaged in with much learning and considerable warmth. Mr. Brown's earlier work, 'The Genesis of the United States,' showed him to be an almost bitter opponent of Smith, to whom, indeed, he is scarcely able to allude without something verging on contempt; and the present volume, notwithstanding a disclaimer of any intention of reviewing all the points of the controversy, is, as its title

indicates, a sort of elaborate *apologie* for its writer's well-known views. Mr. Brown can, we fear, lay little claim to impartiality in the matter; for he is convinced not only that Smith "gave a very ungenerous and incorrect idea" of the planting of Virginia, and that "in many respects his history is manifestly an imposition," but that duty to Virginia and the United States requires that things be set right. Historical controversy is not always productive of immediate conviction, and it is at least doubtful if all who incline to set considerable store by Smith will be converted by the present showing; at the same time, the material presented by Mr. Brown is entitled to careful consideration.

Aside from the Pocahontas incident, which is dismissed in a few words as of greatly overestimated importance, Mr. Brown undertakes to show, as against Smith, that

"the climate was not healthy; the Indians were not tractable; the commodities found during 1607-1609 were not satisfactory; tobacco was not the bane, but really the preserver and support of the colony; and the charters were not changed to the detriment, but for the betterment of the colony. In brief, the real cause of 'the defeilements' was not in the managing of the business, as stated by Smith, and the colony was not brought to a good state of forwardness under the King's form of government by Smith. It is true that he did not ask for the alteration of the charter; that the new charter of 1609 was granted without his consent, and that he afterwards used these facts to serve him a good turn in England; but all things did not go to ruin owing to the changes in the charters, form of government, etc., and so continue until the enterprise was resumed by the crown, as asserted in Smith's publications." (Preface, p. vii.)

We are little inclined, in this connection, to take up the cudgel for John Smith, or to claim that the statements and implications of his history are entitled to any greater credence than is usually to be accorded to those of any contemporary writer who was himself a part of what he records, and who has, moreover, a personal object to serve in writing at all. It is, however, matter of regret that Mr. Brown's method makes it difficult to get a clear or connected view of the evidence which he marshals in support of his contentions. In regard to the mortality among the early emigrants, he insists that the chief cause throughout was the unhealthy climate, whose deadly influences medical science could not as yet control. Some of the figures are certainly startling. Of 775 persons sent out in 1606-1609, Lord De La Warr, in 1610, found only about 200, and those almost destitute of supplies; about 185 of these, moreover, had but lately arrived with Gates (p. 129). During 1619, according to Gov. Yeardley, 300 died (p. 372). A census in March, 1620, showed 887 persons in Virginia, of whom about 700 could be reckoned as acclimated. There arrived during the next twelve months ten vessels, which left England with 1,051 emigrants; yet in March, 1621, the English population of the colony numbered only 842.

"That is," says Mr. Brown, "of 1,238 people (about 700 acclimated and 1,238 newcomers) 1,095 had died en route and in Virginia. As the death-rate among the acclimated was comparatively small, it is probable that over 80 out of 100 newcomers had died within twelve months, showing that the summer of 1620 was one of the most disastrous periods in the history of the colony" (p. 415).

This was, of course, a frightful death-rate, and may well have been attributable at

that time chiefly to climatic conditions and the rigors of the ocean passage, since the administration of the colony, under the charter of 1612, had greatly improved. We do not find, however, any entirely conclusive evidence that the high mortality during the first few years (of which, it should be said, so definite a record is not presented) was not largely the result also of palpable mismanagement, as shown especially in the selection of unfit emigrants, the adherence to an unhealthy location, in disregard of the instructions of the Council, and the impracticable and vicious communal system. Mr. Brown makes the most of everything favorable to his view, though his assertiveness sometimes suggests the advocate rather than the historian; but we are still disposed to believe, in this instance, that if a bad climate started the ball, bad management helped to keep it rolling.

As regards the Indians, also, we could wish that the light of Mr. Brown's learning were always commensurate with its heat. How far the Indians were naturally "tractable," and how far bad handling made them a menace and a scourge to the colony, are questions on which we find the testimony of the records somewhat unsatisfactory. To the English, the aborigines appeared in the threefold light of heathen to be converted, savages to be feared and resisted, and hunters and farmers to be traded with and despoiled. The first speedily became a mere pretence, while the second led soon to wars of aggrandizement, retaliation, and extermination. As to trade with the Indians, the fact seems to have been that the colonists overestimated the resources of the savages, and assumed that their grain supplies were large, when in reality, as Mr. Brown says, "they always lived from hand to mouth, seldom raised more than enough for their own use, and had not much victual for trade at any time" (p. 113). Certain it is that the early dealings of the settlers with them were hardly conciliatory, but we do not find in the records clear proof that the Virginia Indians were noticeably more hostile or ill-disposed than, for example, those farther north. Here, again, the cause of the mischiefs which befell the colony seems to have lain in the essential antagonism between civilization and barbarism, emphasized by the inability of the leaders of the undertaking to get hold of affairs by the right end.

The case for tobacco is more easily made out. In spite of Smith's intimations to the contrary, the early attempts of the colonists to find suitable commodities for shipment to England were not successful, nor was the search for gold very remunerative. Tobacco was the first commodity found that repaid the cost of production and transportation, and not until its cultivation became general was there promise of economic success. Mr. Brown's pages enable us to follow the struggle for the recognition of tobacco-growing as a legitimate industry, hampered as it was by the demagogical but powerful opposition of James I., and burdened with heavy revenue charges. In this respect the volume makes important additions to the information given by Mr. Bruce, in his 'Economic History of Virginia.' Nor do the records confirm the notion that tobacco ever became the bane of Virginia agriculture, in any other respect than to restrict the cultivation of grain, and thereby to give to the products of the colony a less diversified character.

Beyond these specific matters, Mr. Brown's researches have led him to the conclusion, already stated, that Smith's history, while accurate enough in many details, gives, when taken as a whole, a distorted view of Virginia affairs. The painstaking labor devoted to establishing this proposition is apparent everywhere throughout the present volume, and is not likely to fall of appreciation by those best able to judge of its worth; yet it may well occasion surprise that the converse of the proposition should have been at any time strenuously maintained. For, with the exception of keenness of observation and a quaintly interesting style, John Smith had few of the qualifications of a historian. Neither by nature nor by grace did he ever attain to impartiality. His love of adventure, his romantic career, and his assertive personality ill fitted him to pass sober judgment on his contemporaries. Called unexpectedly to the leadership of a precarious enterprise, yet too aggressive for the situation in which he found himself, he made enemies, fell out of favor, and went back to England with charges hanging over him. When he wrote, accordingly, it was with a purpose. He was never again on good terms with the Company, and his history, while making much of his own achievements, sought to find the golden age of Virginia in the years when the colony was most under the control of the royal authority whose favor he sought. Although the shadow of improbability rests upon but few of his statements; none of his unsupported assertions can safely be accepted. That the general tone of his recital is unfavorable to the Company, and that the prosperity of the colony increased rather than diminished under the later charters, is now clear enough; but how great is the divergence between the history of Virginia as interpreted by Smith and the history as contained in the records of the London associators, can be seen only by those who shall patiently make their way through Mr. Brown's book.

This volume, as we have said, is an elaborate defence of the Virginia Company from the aspersions of Smith. Mr. Brown begins the arraignment on the first page, and on the last does not depart from it. As a piece of argumentative writing the work cannot be called a success, the attacks upon Smith conforming less to logical sequence or obvious necessity than to the opportunities of the moment. As Cato is said to have ended every speech, no matter what the subject, with a demand for the destruction of Carthage, so Mr. Brown, at every occasion, holds before us the views of his opponent as worthy of all condemnation. Yet we doubt if all that he has to tell us is likely to change very much the general estimate which has been made of the work of John Smith. However great his failings, there can be no question that Smith supplied to the conduct of Virginian affairs precisely the element of arrogant common-sense of which it stood painfully in need. He knew the Indians' character better than any of his associates, and, in his dealings with them, united boldness, adroitness, and practically with singular success. Beyond all question, he saved the colonists from starvation, and, more than any other one man, kept the enterprise in existence when it seemed near to collapse. His means were not seldom high-handed and questionable, but it cannot be denied that his ends and his general policy were such as marked the progress of Virgi-

nia after his withdrawal. Returning to England under suspicion, he chose to serve the King rather than the Company, and, undisturbed by moral scruples, sought to advance his own interests by enlarging upon his own achievements and belittling those of his former coadjutors. That he should have so stated the case as to impress his views upon historians to the present day, and set the learned at variance over the question of his veracity, is proof, not so much of his skill and adroitness as an advocate, as of the possession of a record for personal success of which many a more honorable man might have been proud.

Fortunately for the success of Mr. Brown's labors, the value of the present work is not dependent upon its connection with the Smithian controversy. We have here, in usable if not convenient shape, a great mass of invaluable documentary material illustrative of the early history of Virginia. The most important parts, those containing the records of the Company, show us in great detail the inception and early progress of the movement, the struggle with strange and unfavorable conditions, the alternations of despondency and hopefulness, the disappointment and discouragement at the increasing expense and small return. As the records become fuller, we are enabled to follow the course of the struggle between the Company and the Crown, and the growth of liberal ideas within the Company itself, until it became, in the royal eye, a "seminary of sedition." We can trace more closely the history of the charters, and the events culminating in the *quo warranto*. We see again, as in Mr. Brown's earlier work, the intimate knowledge of English affairs possessed by Spain, in the persons of its ambassadors. Even in the formal records of official meetings we can see how men like Sir Edwin Sandys, building better than they knew, were slowly and toilfully working out the idea of a state founded on popular sanction, and tending more and more to harmony with the scheme of popular government which a militant Puritanism was later to seek to establish by the sword.

Mr. Brown's book has evidently been executed with great labor and painstaking care. There is the same exhaustive research, the wide range of knowledge, and the close attention to details, which mark the 'Genesis of the United States.' Mechanically, the volume is sumptuously made. That the work will be generally recognized as indispensable, and will add to the deservedly high reputation of its author, goes without saying. At the same time, we can but regret that the wealth of substance has not been presented in better form; for, while Mr. Brown has written what every serious student of the period will need to read, we are inclined to think that the importance of his work will ultimately be seen to consist chiefly in the fact that he has made it possible for some one to write the history of the first republic in America.

SEVEN BOOKS ON MUSICAL TOPICS.

In this category one of the most useful of the group that has accumulated on our table is W. S. B. Mathews's 'The Masters and their Music' (Philadelphia: T. Preaser), which is designed as "an introduction to music as literature for the use of clubs, classes, and private study." The author's plan is to choose a great composer, give a brief sketch of his

life, and then select a representative programme of his works, which can be used at a recital. Each of the pieces chosen is briefly commented on, and hints are given as to the best or the cheapest editions. American composers are not overlooked; MacDowell, Gottschalk, Mason, Foote, and Mrs. Beach being dealt with appreciatively and Sousa extravagantly. Despite some rather amateurish and questionable statements, Mr. Mathews's book deserves commendation. It is illustrated with portraits.

Lovers of Haydn will be interested in W. H. Hadow's 'A Croatian Composer' (Macmillan), a little book of 98 pages devoted to an attempt to prove that Haydn, who is usually ranked among the German classical composers, was not a Teuton at all, but a Croatian. Mr. Hadow's book is based on two works by Dr. Kuhac, and it must be admitted that he makes out a strong case. The main arguments are, first, that the Croatian folk-tunes possess all the characteristics which have been noted as distinctive in the melodies of Haydn; second, that many of them are actually employed by him; and third, that the facts of his birth and parentage afford strong presumptive proof that he was a Croatian by race. Many melodies are cited to illustrate Haydn's Croatian affinities, and the pages are enlivened with anecdotes, including one which relates how Haydn got even with his Prince (who was dissatisfied with the quality of his work, and held up as a model the music given in a certain church), by secretly writing a mass for that church, with the calculated effect of furnishing a fresh instance of the unattainable for Haydn, and his rejoinder: "Your Highness, I wrote it, and I was the organist."

Several books have appeared lately whose leading motive has been to teach that the best way to learn to listen to music, and to discover what is good in it, is to study the technicalities and intricacies of musical form. The folly of this advice is glaringly illustrated by a volume of lectures entitled 'Interludes,' by H. C. Banister (Macmillan). The writer was for nearly half a century a student and professor of musical form and analysis, yet so far was this technical knowledge from helping him to find out what is good music that he could write, as late as 1897, that Liszt corrupted the taste of many young artists, and that "his influence seems to have been wholly pernicious"; that Chopin was deficient "in all that goes to make up greatness"; and that it is hardly worth while to discuss such a delusion as Wagnerism. Mr. Banister was one of the last members of the British Handel-Mendelssohn congregation, which is now fast dying out. His lectures, which are on "The Uses of Musical Knowledge," "Music and Preaching," "Development of Musical Structure," "Counterpoint in Free Composition," "The Music of the Victorian Era," "The Appreciation of Music," and "Musical Composition," might be useful in spite of the author's antediluvianism; but they are so dry that few will be tempted to read more than one or two of them. There is one redeeming flight of the imagination, a joke on Bach, which, however, is intelligible only to a musician: "Our coming back to any appreciation of his works does really seem as though, after all, music history was to be somewhat in Rondo form." The awkwardness of this sentence illustrates, too, the fact that a man may devote his whole life to the study and teaching of "form" without acquiring the instinct

for expressing his thoughts in elegant or even correct language.

Since the appearance of James E. Mathew's 'Handbook of Musical History' (Putnam's) some very eminent musicians, including Franz, Brahms, Gounod, Rubinstein, Ambroise Thomas, and Tchaikovsky, have died. The first edition having been exhausted, Mr. Matthew has now issued a second, brought up to date, with much new and interesting material. There are in this edition no less than 128 illustrations, with many portraits. A valuable feature of the book is a special bibliography appended to each chapter.

'The Homophonic Forms of Musical Composition,' by Percy Goetschius (Schirmer), is a book too technical to discuss here. Students of composition will find it useful, though they may have occasion, here and there, to complain of a lack of lucidity which is too common in works of the kind. From C. A. Ellis, manager of the Boston Symphony Concerts, we have received the annual bound volume containing the programmes of the seventeenth season of that organization. The programmes were made by Mr. Paur, and will hardly serve as models, but Mr. Apthorp's historical and descriptive notes are of value, and would be still more so if there were more of the historical and descriptive element and less of the technical parsing which, while helpful to students of music, is unintelligible to the average concert-goer. Apart from these technical analyses, which are excellent and authoritative in their way, there is much of interest in these volumes in the form of "entr'actes," short talks about music and musicians, in which Mr. Apthorp is at his best. The entr'actes help to make these bound volumes of permanent value.

Freda Winworth has chosen an awkward title for what is a useful and entertaining little book (Philadelphia: The J. B. Lippincott Co.). 'The Epic of Sounds' is vague, while the sub-title, "An Interpretation of Wagner's Nibelungen Ring," is incorrect. Nibelungen is the German genitive of Nibelung. A well-known Viennese critic insists that the ending *en* is not correct for the genitive singular. It certainly is not the English genitive. Why not say 'The Nibelung's Ring,' or 'The Ring of the Nibelung'? The book itself will be found serviceable to those who have difficulty in understanding the poem or the music of the Tetralogy. The introduction contains a novel feature—fifteen pages devoted to a description of the various characters, who they are and what they represent, together with remarks on the sword, the ring, the tarnhelmet, etc. The rest of the book is given to telling the story of the operas, with special attention to the leading motives and their ingenious use. It is all clearly written and entertaining. At the end the leading motives are printed in musical type, and there is an index; the use of several kinds of type facilitates reference. Great as is the number of books on Wagner's operas, this is a welcome addition to the list.

CANADIAN FEDERALISM.

The Law of Legislative Power in Canada. By A. H. F. Lefroy. Toronto: The Toronto Law-Book and Publishing Co., Limited. 1897-'98.

Mr. Lefroy's aim in publishing this acute and valuable constitutional treatise is fully

explained by him in his preface. His object is to present a comprehensive view of the actual working of the scheme of government established in Canada thirty years since, and of the division of legislative powers between the Dominion and the various provincial parliaments, extracting all that is pertinent from the judicial decisions, and citing other authorities where necessary. The result so arrived at he formulates in a number of propositions—sixty-five in all—and then gives upon each one in turn a luminous comment. In this way we have set forth a complete view of the whole law of legislative power in Canada, as it stands, and, in connection with this, of the relation of the Crown to the Canadian Legislatures. Incidentally, the Canadian scheme is compared with that of the United States, and points of difference emphasized. The introductory chapter is devoted entirely to such discrimination, and the author criticises searchingly Mr. Dicey's statement (to quote the latest form in which it is put in his 'Law of the Constitution') that "if we look at the federal character of the Constitution of the Dominion, we must inevitably regard it as a copy, though by no means a servile copy, of the Constitution of the United States."

This introductory chapter is, as we have said, a rapid and comprehensive survey of the points of difference between the American and Canadian scheme of legislative power. It is a very difficult subject, and one in which no one who, besides great constitutional learning, has not much experience also of the manner in which constitutional questions present themselves in actual controversies between man and man, will venture an *ex-cathedra* opinion; but it seems to us that Mr. Lefroy makes good his main thesis, and that no student of his book can fail to perceive that the "British North America Act," passed in 1867 by the English Parliament, constituted in the Dominion of Canada a government in which the legislative power was to be exercised on terms and conditions widely different, at many points, from those expounded in the judgments and treatises of Marshall, Story, Cooley, and Kent.

To mention a few of the points of difference on which the author dwells, he begins boldly with the question of delegated powers. The great canon of interpretation of American constitutions is that of delegation. Not only is the Federal Constitution a government of delegated powers—the powers not delegated to the United States nor prohibited to the States being expressly reserved to the States respectively, or to the people (10th Am.)—but the State governments themselves are always regarded as derived from the people. The primary division of power into legislative, executive, and judicial comes from the people, and there is in every State a reserve of power in the people to which resort can be had on occasion. Inevitably connected with this theory is the American legal doctrine, which antedates the Federal Constitution, that laws in conflict with the scheme of constitutional delegation, division and separation have no existence. Not a trace either of this canon of interpretation or of the connected doctrine and practice is to be found in England; and, according to our author, not a trace of either is to be found in Canada. Not merely is the English Parliament omnipotent, but the Dominion Parliament, and even the provincial

legislatures, are, within the sphere of action conceded to them, omnipotent also (prop. 17).

Another point at which Canadian federalism differs widely from that of the United States is to be found in the Crown veto. The scheme of the British North America Act of 1867 (which is the Dominion charter or constitution) is, after distributing between the Dominion (federal) Legislature and that of each province the general mass of power, to reserve to the English Crown, which virtually means the English Parliament, a general control in the interest of the still wider federation of the British empire. This control is exercised by a veto, which differs from our Presidential veto in many ways. It seems to be absolute, while ours is qualified; it is, while nominally executive, in reality parliamentary; and it is a veto superimposed upon a primary veto on Dominion legislation which the Governor-General may exercise. Besides all this, any laws, provincial or federal, which are *ultra vires*, are void. The very use of this term *ultra vires* points to a distinction between the Canadian scheme of government and ours. We say "unconstitutional" because an American constitution is always the supreme law; in Canada there is always above the Constitution (in England) a supreme legislature from which the Dominion and the separate provinces derive their powers, much as a corporation derives its authority from the chartering legislature with us. Hence a term confined by us to corporation law is there applied to acts of the legislature. There are at every point in the Canadian scheme three separate sources of constant legislative power, while in the United States there are only two.

The family resemblance between the British North America Act and the Constitution of the United States is perhaps most strikingly shown in the enumeration of powers. Speaking generally, as with us, federal questions have been allotted to the federal Legislature, and local questions to the legislatures of the provinces. Thus the Dominion Parliament has jurisdiction over the public debt, taxation, money, legal tender, the postal service, commerce and navigation, copyright, patents, and the Indians; while the provincial legislatures provide for the local administration of justice, taxation for local purposes, municipal institutions, local works and undertakings. But marriage and divorce and negotiable paper are, in Canada, federal concerns.

From what has been said it will be seen that the Canadian judiciary can never attain the power and importance that the courts have attained with us. There is no room for a Dartmouth College case, nor for a Nebraska maximum freight-rate decision, because in Canada if a law affecting a charter or any species of property rights is *infra vires*—i. e., is not repugnant to imperial legislation, and is not vetoed—that is the end of the matter. In the English and Canadian scheme there is for every question somewhere a final legislative power of decision; in ours the legislature has no power of which the courts finally deny the existence (express or implied) in the written Constitution. Within certain limits even the power of taxation—the first and essential prerogative of sovereignty—may be swept away by our courts, as it was the other day in the income-tax decision. An American judge dispenses not merely law, but a "supreme" law.

Into the controversy, if it can be called such, between Mr. Dicey and his Canadian critics we cannot go here in detail. The student who desires to get a thorough comprehension of the questions involved in it must compare the instructive essays of the former on the law of the Constitution with the keen analysis of Mr. Lefroy. He will probably arise from his task—we at least have done so—with the conviction that the real points of difference cover a narrow ground. Mr. Dicey seems to have attached to what he calls "federalism" an importance of function in our system which critics like Mr. Lefroy would deny. Thus, he speaks of three "leading characteristics of federalism" being "the supremacy of the Constitution," the distribution "among bodies with limited and coördinated authority of the different powers of government," and "the authority of the courts to act as interpreters of the Constitution." The reply to this is unquestionably that these three characteristic traits are found in each State of the Union, and would continue to exist if the federal Constitution were to vanish; hence they cannot have any necessary connection with federalism in the United States. On the other hand, Mr. Lefroy minimizes the federal character of the two schemes—the distribution of allotted powers between federal and local legislatures. Here there is that sort of similarity which evidences design, and here no one can doubt that the British North America Act presents a scheme of division, enumeration, and apportionment based on ours, just as both are based on the eternal and inevitable natural law of federalism—that local interest shall be administered locally, and that federal powers shall extend only to matters of federal concern. At some points, as with regard to marriage and divorce, the Canadian scheme seems more enlightened and advanced than ours. To have forty-five different sources of power over such matters is to have forty-five sources of confusion, uncertainty, fraud, and expense. Would that as to this we might copy Canada!

Across the Sub-Arctic of Canada. By J. W. Tyrrell. Toronto: William Briggs. 1897. 8vo, pp. i-vi, 7-280, map and 62 other illustrations.

No such cursed thirst for gold as produced the Klondike rush has driven any one to the Barren Lands, but sheer love of adventure for its own sake, coupled with the more laudable enterprise of geographical discovery. We lately noticed Caspar Whitney's daring dash on snow-shoes into the Barren Grounds after musk-oxen, and apparently for no other purpose whatever; also Warburton Pike's hardly less perilous tour through the sub-arctic forest of the farthest Northwest; and now we have a companion to either of these narratives in the present volume. The story is not quite so well told; more would have been made of the materials in the hands of a more experienced narrator; but the record is that of a deed of daring which commands admiration in the doing, and is not without good result to geographical and ethnographical knowledge. Moreover, this is but the popular presentation of a voyage of exploration and discovery more formally utilized in another connection; it is adapted to the average reader, and in so far fulfils its purpose.

This voyage was begun in the spring of 1893. The author was accompanied by his

brother, Mr. J. Burr Tyrrell, of the Canadian Geological Survey, who had been authorized to conduct an exploration through the Barren Lands, much of which remains as ill-known as many interior parts of Africa. The voyage proper may be said to have begun at the rail's end of Edmonton on the Saskatchewan. The route thence was the well-known one to Athabaskan waters, down the river and through the great lake to the eastern end of the latter, and thence up its tributary to the northeast till was reached the height of land dividing Athabaskan from Hudsonian waters. A long portage brought the little party to the beginning of the chain of lakes—Daly, Boyd, Carey, Markham, Tobaunt, Wharton, and many others—reaching north-northeast into the region of the Telzoa, that great tributary of Chesterfield Inlet and so of Hudson's Bay. We hardly realize the magnitude of waters whose names can be penned so trippingly, till we reflect upon the distances traversed, the numerous arduous portages, the shooting of rapids, the toilsome and often dangerous passage of a handful of men through totally unknown wilds, in a land of desolation, to the home of the Eskimo. In passing, let us look at this picture of a herd of reindeer, without whose flesh the country would be not only uninhabitable, but impassable:

"At this first shot the whole band—a solid mass of several thousands of deer—was thrown into confusion, and they rushed to and fro, not knowing which way to flee. Simultaneously with my brother's shot, I opened fire on them from the rear, and our armed men charged from the sides, while the other two were obliged to take refuge upon a great boulder to avoid being trampled to death. The band was speedily scattered, but not before a woful slaughter had been made and an abundant supply of fine fresh meat secured. . . . After the slaughter of the first day we carried no rifles with us, but, armed only with a camera, walked to and fro through the herd, causing little more alarm than one would by walking through a herd of cattle in a field" (p. 86).

The musk-ox, too, appears upon the scene, in this farthest north of the expedition, and then were met the Eskimo, of whom a long and interesting account is given, interrupting the narrative of adventure. The party reached "the sea" in safety, but congratulated themselves too soon, in view of the very imminent peril which attended their whole progress along the western coast of Hudson's Bay. At the culmination of their direful plight it became absolutely a question of life or death to them all, and only the polar bear would seem to have saved them from perishing. Escaping all dangers, however, they reached Fort Churchill. In connection with this historic establishment we have an extremely interesting glimpse of that extraordinary fortress called Prince of Wales, dating from 1743, captured in 1782 by La Pérouse, long the base of operations of Samuel Hearne, and now a huge mass of frowning ruins, five miles from Churchill. This is, no doubt, the most permanent monument of departed greatness in all that land, of such solidity of construction as to defy effacement for future ages. It is a sort of antitype to the famous Fort Chartres on the Mississippi, or the still more celebrated Casa Grande of the Gila. In the vicinity of Fort Prince of Wales the party visited Sloops Cove, where the *Furnace* and *Discovery*, under Capt. Middleton, wintered in 1741, and we have this very notable statement:

"How two vessels could have been forced into this cove is a question which has given rise to much speculation on the part of Ca-

nadian scientists, for the cove does not now contain more than sufficient depth of water, at high tide, to float a small boat, and it is doubtful if even such a boat could get in through its rocky entrance. The historical fact remains, however, that this cove was the winter quarters of these two sloops, and as proof of the fact a number of ring-bolts to which the vessels were secured may still be seen leaved into the smooth, glaciated granite shores" (p. 214).

There were also found on the rocks numerous inscriptions; among them, "Furnace and Discovery, 1741," and not less notably "St Hearne July ye 1 1767." Our adventurers were not quite out of the woods at Churchill; in fact, they had some very hard times indeed in getting away from that wretched part of the world, and on to decent travelling toward Lake Winnipeg; but thence it was easy to where steam finally relieved them of all further personal exertion. The total distance covered seems to have been somewhat over 3,000 miles.

The whole narrative is readable, though, as we hinted, not a very skilful piece of story-telling. It is handsomely illustrated; the small sketches by Mr. Arthur Heming are particularly strong in representation of types of faces among the natives and other inhabitants of the region. Two appendixes give a classified list of plants collected and a fairly full Eskimo vocabulary. The book is insufficiently indexed, on a singularly innocent plan, which "classifies" the entries under five alphabets, though there are only three pages of it all.

Schopenhauer's Gespräche und Selbstgespräche. Herausgegeben von Eduard Grisebach. New York: Lemcke & Buechner.

Eduard Grisebach, who has edited the cheapest and at the same time most authentic edition of Schopenhauer (Reclam), has now added to the ten volumes previously issued a brochure of 143 pages containing the records of the philosopher's conversations with Goethe, Wieland, Frauenstädt, Doss, Lindner, Asher, Hebbel, Haase, Challemlacour, Gwinner, and other friends and visitors. These make up the *Gespräche* referred to in the title. The *Selbstgespräche* are the remnants of a diary which Schopenhauer began as a young man (1821) and kept up for about twenty years. He called this diary *die Lektüre*, and repeatedly referred to it in his writings. According to Dr. Gwinner, his executor, the MS. consisted of about thirty loose leaves, and was destroyed, in accordance with the directions contained in the last will. A considerable part of its contents, however, was saved and was embodied, without a special explanation at the time, in Gwinner's biography, as Gwinner admitted some years later. With the keen eye of a specialist, Grisebach has detached these remnants from their surroundings and restored them, as far as possible, to the form originally given them. This chapter is therefore different from the section in volume vi. of the 'Nachlass' for which the editor chose the same title.

Schopenhauer was not always in the mood for conversation, but, when he was, and had sympathetic listeners, he astonished them by his fluency, wit, and apt illustration, and made the hours fly like minutes. He liked to monopolize conversation, on the principle that when the lion roars smaller beasts are awed into silence, and he brooked no contradiction. Being able to converse in four or five languages, he found himself at home

everywhere, but he was far from being at home to everybody. Robert von Hornstein called on him one day and was pleasantly received. When he was ready to go, Schopenhauer said: "You owe the fact that I received you to my housekeeper, who said you were a student. Had you been a professor of philosophy I would not have seen you. Professor Weisse of Leipzig came to call on me one day, but I shouted loud enough for him to hear, 'To Professor Weisse I am not at home.'" *Philosophie-Professoren* were his pet aversion. Their tactics of "ignoring" him roused his fury daily, and he actually consulted a lawyer to find out how far he was allowed to abuse these men without incurring an action for libel. Frauenstädt ventured to say one day that he thought there ought to be no attacks in philosophical works on ephemeral contemporaries; to which Schopenhauer retorted that his attacks were like the silken cord which the Sultan sends to those he wants to throttle. In conversation he was of course even less reserved than in his writings. "What do you think of Hegel?" he was asked one day by an American. "Hegel is a charlatan," replied Schopenhauer, turning his back on the interviewer.

It seems rather odd that so notorious a woman-hater as Schopenhauer should have put down among his "favorite quotations," which Grisebach has brought together, Byron's "The more I see of men, the less I like them; if I could but say so of women, all would be well." In his conversations he frequently noted with satisfaction that he had been the first to give proper attention to two subjects neglected heretofore by philosophers—sexual love and spiritism (clairvoyance, mind-transference, etc.). Differing from Lichtenberg, he held that sentimental love is less easily suppressed than physical passion. To Challemlacour he remarked that "women performed a miracle when they spiritualized love." Nevertheless, he writes, in one of his jottings, *die Lektüre*, that "marriage is a debt which is contracted in youth and paid in old age, and Balthasar Gracian was right when he called a man of forty a camel simply because he had a wife and child; for the usual goal of the so-called career of young men is to become some woman's beast of burden." "Matrimony—war and want!" and *pater semper incertus* are other expressions of the pessimist. He was proud, by the way, of being styled a pessimist, and one day called a friend's attention to the fact that in one year the three greatest pessimists were in Italy at the same time—he and Byron and Leopardi. He considered Byron England's greatest poet after Shakspeare, and always regretted that, owing to an accident, he did not deliver the letter of introduction to him he had in his pocket from Goethe.

It is well known that Schopenhauer's high opinion of himself nearly counterbalanced the professional "Ignoriren" by his contemporaries of which he complained so much. He informed Frauenstädt that he once intended to choose for his seal a sphinx plunging into an abyss, because he was convinced that he had "solved the world-riddle." And yet he was not quite satisfied with himself. His theory was that intellectuality has its expression in the forehead and the eyes, the moral character in the mouth and chin. He frankly confessed that he did not like his lower face—probably all

the less because he felt that it did not contradict his theory. On the other hand, he spoke with satisfaction of an Italian, a stranger, who said to him he could see from his face that he must have written a great work, and of an Englishman who insisted on sitting opposite him because he "liked to see his intellectual face." He loved to point out wherein he and his works differed from others and their writings. "The happiness of ordinary persons consists in the alternation between work and enjoyment, but in my case the two are identical." "Most books are doomed to oblivion. A lasting impression is made by those only into which the author has put his own self. . . . In my books my entire individuality is embodied." He was particularly proud of a compliment Goethe once paid him: "Only twenty-six years old, and already so rich in experiences! How much I could have accomplished had I had such an abundance of knowledge at your age." He believed, however, that a man's best works are created in old age. To illustrate his love of work and thoroughness, he said that he devoted a whole winter to reading Greek tragedies as a preparation for a few pages in one of his books.

A few characteristic miscellaneous utterances may be added. Schopenhauer's father was a merchant, and the son had a special respect for merchants, because, as he said, they are more liberal and generous than others. The Jews he pronounced a cheerful, optimistic nation. Negroes ought to put Schopenhauer on their banner, for he believed that man was originally black. The content of history, he said, consists in "European cat-fights" (*Katzenbalgereten*). The four greatest novels ever written are "Tristram Shandy," "Wilhelm Meister," "Don Quixote," and the "Nouvelle Héloïse." "Romanticism is a product of Christianity: ecstatic religiosity, fantastic worship of woman, and knightly valor—God, woman, and the sword—are its insignia." But the most characteristic observation in all this table-talk is what Schopenhauer said regarding his best friends—"If there were no dogs in the world, I should not care to live."

Die Fabeln der Marie de France. Herausgegeben von Karl Warnke. (Bibliotheca Normannica, VI.). Halle: Niemeyer. 1898.

With the publication of the *Fables of Marie de France* we have now all the works of this famous Anglo-Norman poetess in critical modern editions; the *Lays* having been published by Warnke in 1885, and the *Purgatory of St. Patrick* by T. A. Jenkins at Philadelphia in 1894. The late Prof. Mall gathered materials for an edition of the *Fables*, and in 1885 published a preliminary study of the relation of Marie de France to other fabulists of the Middle Ages. After his death, his papers were handed over to Warnke, who, in the present edition, has given full credit for the assistance derived from them, and as a rule has confirmed Mall's conclusions on doubtful points. The chief point on which the two scholars do not agree is in regard to the order in which Marie composed her three writings. Mall, followed by Jenkins, maintained that she wrote the *Purgatory* first, then the *Fables*, and finally the *Lays*. As the *Purgatory* cannot have been written till about 1190, this theory would make Marie's period of writing later than has usually been supposed. Gas-

ton Paris has shown that the Purgatory was certainly her last work; he places the Fables first (about 1170) and the *Lays* second (about 1180). Warnke, however, gives strong linguistic and literary reasons for placing the *Lays* first, and the Fables second.

Born in France, Marie spent most of her life in England, where at this time fables were a particularly popular form of literature. In accordance with the usual custom of fable-writers, she calls her book 'Esopé'; a writer of this name, she says, turned the Fables from Greek into Latin; King Alfred then translated them into English, and she from English into French. Although the English version is not now known, there are sufficient reasons for accepting Marie's statement as to its existence, though not, of course, the attribution to King Alfred. For a number of the fables no source can now be pointed out. Many of them, however, come down in regular descent from Phædrus, through the prose paraphrase which goes by the name of Romulus. The others, more interesting because less known, include monastic tales, comic stories of peasants, episodes from the beast-epic, and stories of Oriental origin; a few show traces of the Greek forms of the fables, as opposed to the conventional Latin forms, and these are especially interesting, for they indicate that the Greek fables descended to the Middle Ages, not merely through the medium of Phædrus and Avianus, but also in popular tradition. Many of the fables in Marie's original undoubtedly had no written source, and some of them are clearly mediæval in origin.

Warnke does not go deeply into this complicated question, reserving it for subsequent investigation; yet he treats carefully the relations of a number of fable-collections which group themselves around Marie, and he argues, frequently in opposition to Gaston Paris, Hervieux, Joseph Jacobs, and other writers who have treated the subject, that the writers of all these collections were directly influenced by Marie, and not she by them. Of the three Latin collections, one, which Hervieux erroneously regarded as a direct ancestor of Marie's, is considerably later than that, and drew from half-a-dozen other collections. In regard to the Hebrew Fables of Foxes by Berachyah ha-Nakdan, the influence of Marie seems well established in at least one instance, but it was limited, and cannot have existed throughout even the fables which the two collections have in common. Since in at least one instance the Hebrew version is of an older type than Marie's, Berachyah may have drawn both from her and from her source. In any case, Warnke is right in rejecting the fanciful views of Jacobs on this subject. Finally, we have a nearly contemporary Italian translation, which indicates the wide popularity of Marie's collection; and the original French exists in no fewer than twenty-three manuscripts. This number is, of course, not comparable to the more than one hundred manuscripts, in Latin and in various translations, of the so-called 'Anonymus Neveleti,' the most widely known fable-book of the Middle Ages. As this work, however, is a regular descendant from Phædrus, and thus semi-learned, Marie's collection is really more interesting, and a further study of her sources will throw light on many points in the transmission and composition of popular tales, fables, and jests in the Middle Ages.

For such study, and for linguistic study also, Warnke's edition is of the highest value

and importance. An elaborate comparison of the manuscripts, abundant critical apparatus, a grammatical treatise, notes, and a full vocabulary, render the book exceptionally easy and pleasant to use. The Fables were previously available only in the edition of Roquefort, 1820. This edition, excellent for its day, has done good service, but the time had come for one in more modern style. There is still much to be done in the field of mediæval fable literature. Of the other Old French versions, for instance, the *Isopet* of Chartres is entirely unobtainable, and two others are to be had only in the edition of Robert, 1825; while only one, the *Ysopet* of Lyons, exists in a modern edition, that of Foerster. It is gratifying to observe that more and more attention is being paid to this fruitful and interesting branch of literary study.

Township and Borough: Being the Ford Lectures delivered in the University of Oxford in the October term of 1897. By Frederick William Maitland, LL.D., Downing Professor of the Laws of England in the University of Cambridge. Macmillan. 1898.

The Mr. Ford who, eight and twenty years ago, left a quite insufficient sum of money to found a "professorship" of English history at Oxford, built better than he knew; for a benevolent Court of Chancery has not scrupled to listen to Oxford's representations, and has permitted the application of the endowment to a far wiser purpose—to the establishment of an annual lectureship which will doubtless bring to the University, year after year, some of the most distinguished historical scholars of the time. As the first fruits of the Ford foundation we have already had Mr. Gardiner's 'Cromwell's Place in History'; and now the series is worthily continued by a work of a quite different sort, Professor Maitland's lectures on the beginnings of English town history, illustrated by the antiquities of his own borough, Cambridge. To a university where, since the departure of Dr. Stubbs, English institutional history has been comparatively little investigated, though taught to increasing crowds of undergraduate students, comes the representative of a sister university, who has cast more fresh light on the subject than any of his contemporaries, but who finds at home comparatively few undergraduates to listen to him.

The present set of lectures forms a supplement to the chapter on the Boroughs in Professor Maitland's recent and substantial treatise, 'Domesday Book and Beyond.' It contains, probably, no idea that is absolutely new to the careful readers of that book. Mr. Maitland abides by his "garrison theory," suggested to him by Dr. Keutgen's essays on German town history—the theory that the "burg" was first differentiated from the rural village by its establishment as a shire stronghold, wherein the thegns of its shire were bound to keep houses and retainers. But he gets no fresh evidence for this contention from Cambridge, and, in deference to Mr. Tait's criticism, he abandons one supposed piece of evidence. He "feels bound to confess," moreover, "not that he had said too much of the borough as a military centre," but that he had "said too little of the borough as a *tēn*," i. e., as an agrarian organization, "and as the market and moot-stow of a shire." Accordingly, he now lays great stress on the agricultural basis of the his-

tory of Cambridge, on its "fields" and meadows and commons. Old Loggan's engravings, showing the "open fields" with an almost suspicious clearness, and the ordinance of 1624, defining the pasture rights of "every occupier of an ancient tenement having of old-time broad gates," come at the opening of the book, and create a rural atmosphere which clings to it throughout. But Prof. Maitland shows, by the aid of a minute analysis of the early *terriers*, that the "shell" of the village community was a shell that was soon outgrown. He finds no trace of "a knot of land-owning patricians, the successors of old hidesmen." "Already in the twelfth century, the burghal society is versatile and heterogeneous. Some wealthy burgesses own land; others own none. The market has mobilized the land."

Of more general interest, however, than the detailed history of a particular English borough, which, after all, tells us little more than we could have guessed, and makes no positive contribution to the vexed question of "origins," are Mr. Maitland's observations on the development of certain fundamental ideas which we are still apt to take for granted. The proposition which Gierke has worked out with so much elaboration in his 'Deutsche Genossenschaft,' that the communities of the Middle Ages only slowly grew into the unity of the "corporation," is here made to unlock many doors, and even furnishes a palliation for the immorality of a certain Cambridge common-councillor in the evil days before municipal reform. "The village community was not corporate. Corporateness came of urban life"; but it would seem that in the minds of some town councillors the evolution of the idea was not complete even in 1833.

Nor is this a mere sophistic distinction. The idea of the "corporation" worked itself out *pari passu* with the idea of "property." As Mr. Maitland makes clear, when King John granted the vill of Cambridge to the burgesses, nobody could have told us whether he conferred "ownership" in the soil upon a "corporation," for the simple reason that nobody could have understood the terms of our question. For "what we have to watch in early times is not a transfer of something, some thing, called 'ownership,' from one sort of 'units'—whether tribe, clan, village community, or individual—to another. It is the crystallization round several different centres and in very different shapes of that vague 'belongs' which contains both public power and private right, power over persons, right over things." This is a view of the matter which, even if it is implicit in Gierke, and suggested in Mr. Baden-Powell's treatises on India, no one has yet stated so pointedly as Prof. Maitland; and if it is confirmed by further consideration, it is bound to have an effect on our notions of the evolution of society which will extend immeasurably beyond the "green balks" of "open fields."

The Arrangement of Atoms in Space. By J. H. van't Hoff. Second revised and enlarged edition. With a Preface by Johannes Wislicenus. And an Appendix, "Stereochemistry among Inorganic Substances," by Alfred Werner. Translated and edited by Arnold Eiloart. Longmans, Green & Co. 1898. Crown 8vo, pp. 211.

Following the title-page, which calls this the second edition, is a "Preface to the First

Edition," dated February, 1894, and beginning with the words, "The first edition of this little book appeared in 1877." Next comes the "Preface to the Second Edition," dated April, 1894. The explanation is that the heading of the first preface was due to a German editor: the Germans use ordinal numbers in a way that is all their own. This book took its origin in the 'Vorsteel tot Uitbreiding der Structuur-Formules in de Ruimte,' published by Van't Hoff in 1874. Afterwards he published 'La Chimie dans l'Espace,' which was freely translated into German in 1877 by F. Herrmann. In 1887, Van't Hoff published 'Dix Années dans l'Histoire d'une Théorie'; and the present work is more nearly a revision of that than of either of the earlier brochures.

The idea of accounting for the properties of chemical bodies by the arrangement of atoms in tridimensional space was started almost simultaneously by Van't Hoff and Le

Bel. There are a great many facts in its favor, and the theory can boast its successful predictions. There are no facts conclusively against it. Nevertheless, beyond a certain class of bodies it offers no great attractions. It is important, valuable, and no doubt in part true. Nevertheless, it is not entirely satisfactory. All that the general reader wants to know about it might be told in one short chapter of the popular modern chemistry which has yet to be written.

RECENTLY PUBLISHED:

BURROW'S THE FIRE OF LIFE.

A Novel. 12mo, \$1.25.

Independent: "This charmingly simple and sweet novel . . . belongs to a class (far too small) of fiction that leaves a good taste in the mind after reading."

Literary World: "'The Fire of Life' is aptly named if excitement and strong emotion constitute its fire. . . . A lively plot with abundant conversation and nothing to be reasonably called dull."

PUGH'S KING CIRCUMSTANCE.

12mo \$1.25.

Boston Transcript: "A volume of short stories, each of which has its own strong, peculiar vein of interest and reality. . . . Each story is in itself strikingly complete. For the most part, also, these narratives are true to life. . . . Each tale has a well-ordered plot. . . . The writer of these short stories displays decided talent."

WELLS' (D. D.) HER LADYSHIP'S ELEPHANT.

12mo. \$1.25

A humorous tale. With cover by WM. NICHOLSON.

R. H. Stoddard in N. Y. Mail and Express: "Mr. Wells has more than humor enough to tell his story in a very natural and laughable way. He has a great deal of comic talent."

New York Tribune: "Smacks of fun which can be created by clever actors placed in excruciatingly droll situations."

Boston Transcript: "On the order of Frank Stockton's cleverest work . . . laughable in the extreme."

Buffalo Express: "So amusing that the reader is almost too tired to laugh when the elephant puts in his appearance."

ELLIOTT'S THE DURKET SPERRET.

12mo, \$1.25.

A romance of the Tennessee mountains. Uniform with the author's "Jerry."

The Nation: "A homespun heroine in whose possibility one is glad to believe. . . . The rich resource of Mrs. Warren's vituperation is delightfully displayed. . . . the author writes of her mountaineers with discrimination born of intimate knowledge."

TARBET'S FIGHTING FOR FAVOUR.

A Scotch Romance. 12mo, \$1.25.

N. Y. Times's Saturday Review: "The movement is rapid and the interest well sustained."

Outlook: "He has a story to tell of bygone times, of love and fighting and praxy, and he tells it with energy."

Brooklyn Eagle: "The idea of the story is well conceived and the tale forcibly written."

William Lloyd Garrison,
1805-1879.

The Story of his Life told by his Children.

Illustrated with over 40 portraits, views,
etc. 4 vols., 8vo, gilt top, \$8.00 net.

This important work (till recently published
by the Century Company) has been reduced in
price from \$12.00 to \$8.00, a remarkably low
price for what is unquestionably one of the
handsomest products of the American press.

"A biography of almost world-wide importance.
It will be a standard work of reference"—
Charleston News and Courier.

"In fact, Southern history is not complete with-
out this work."—*Atlanta Constitution*.

"It is, for the anti slavery record, final; and the
service done to our national history is as great as
that to a father's memory. Its one eminent trait,
however, is its justice."—*Atlantic Monthly*.

"A masterpiece of modern historical biography.
To call the work a mine of information would
be to convey a false impression; it is rather a well-
arranged library in which attendant hands are al-
ways present to point the way to the exact thing
wanted. . . . Finally, the work, while as in-
structive as the driest manual, is as interesting
as a romance."—*Boston Advertiser*.

Love in Friendship

(A NAMELESS SENTIMENT).

With a Preface in Fragments from *Stendhal*.

TRANSLATED FROM THE FRENCH BY

HENRI PÈNE DUBOIS.

1 vol in 8vo, bound in cloth, price \$1.50.

FRANCISQUE SARCEY says in *Le Figaro*:
"Here is a book which is talked of a great deal, for it is
one of the prettiest dramas of real life ever related to
the public. Must I say that well-informed people affirm
that the letters of the man, true, or almost true, hardly
arranged, were written by Guy de Maupassant? . . . I
like the book, and it seems to me it will have a place
in the collection, so voluminous already, of modern
ways of love."

"This correspondence is all powdered with exquisite
things, and is instinct with a subtlety leading one on
and on."—*N. Y. Sun*.

"The device is not new; but seldom has it been car-
ried out more effectively and powerfully than in this
case. . . . Cannot this be called a rather remarkable
story?"—*Boston Literary World*.

For sale by all booksellers.

For Sale—Groton, Mass.

Gentleman's estate, consisting of 62 acres of
land; roomy cottage, stable, farm-house, and other
outbuildings, on the border of a beautiful lake,

School Trustees, Principals, Teachers,

And others interested, are invited to
consider the advantages offered by
the *Nation* as an advertising medium.
School advertisements are printed in
a uniform typography, with the ad-
dress in the first line, classification
being made by States, alphabetically,
unless especially ordered displayed
on other pages.

The *Nation*, in its special field of
political and literary criticism, is un-
like any other periodical, American
or foreign. About 10,000 copies are
circulated weekly, but these figures
do not accurately represent the num-
ber of its readers. It is taken by
reading clubs and literary associations
in a large number of places, and may
be found on file in every library of
importance in the country. There
are probably few weekly periodicals
whose columns offer so favorable an
opportunity for reaching an audience
interested in educational matters.

Advertising rates, 15 cents a line
each insertion, with the following dis-
counts: 5 per cent. on 4 insertions,
10 per cent. on 8 insertions, 12½ per
cent. on 13 insertions, 15 per cent. on
26 insertions, 20 per cent. on 39 in-
sertions, 25 per cent. on 52 insertions.

The *Nation* is sent free while ad-
vertisement continues.

Orders may be forwarded through
any responsible advertising agency,
or directly to
